

Budget Consultation Form Report

Postal Code	Priorities	Savings	Job Creation and Economic Growth
T4C	climate change education health, including treatment centres for drug/alcohol abuse, and mental health	Stop helping out the wealthy	alternate energy sources
T8N	Priorities; Helping English Language learners. Helping Albertans with foundational literacy, numeracy, basic computer skills including Word & Excel, job skills, life skills and financial planning skills. Helping our unemployed get training and upgraded skills. Priority to K to 12 funding and preschool funding. Health care is important to me and my community. Also we need to continue to support addiction recovery and safe consumption sites	We have a revenue problem. Introduce a 3% provincial sales tax and direct the funds to Health Care including mental health, to K to 12 education and Adult foundational education and lifelong learning opportunities.	Training and retraining for adults. All Albertans need to become active lifelong learners as we continue with the fast pace of change, introduction of 5G technology and speed and the beginning of Artificial Intelligence and the Internet of Things
T1J	Health care and harm reduction	By taxing rich corporations more money.	By opening up opportunities for new tech and renewable energies
T5R	Education and healthcare	Stop building a war room and stop giving corporate tax breaks	Diversify! Quit relying on volatile industries.

T6L	<p>Health Care public services and no contracts with private for profit clinics, or surgical businesses. Private for profit cooperations are not transparent and provide lower standards of care.</p> <p>Education that are free from political conservative ideology and influence. Government should get out of the way and leave the professionals and elected Board member do their jobs.</p> <p>Just as the government subsidizes the oil patch, should equally subsidize alternative energy sources. This will diversify the economy and create jobs.</p> <p>Help finance alternative energy infrastructure to support future electrical needs, including charging stations for electrical cars. Again diversify our economy and position our-selves for the future.</p> <p>Further diversification of our economy by putting measures in place that will attract digital businesses.</p> <p>Bring back twenty-five dollar per day per child Day Care. Help Albertans afford to go back to work.</p> <p>Cooperate with the federal and municipal governments in developing a fair transition plan from fossil fuel production to alternative energy sources, use, and find new products that can be produced from the oil sands such as the production of carbon fiber that will be stronger than steel.</p> <p>Finally, introduce legislation that will make AIMco immune from political interference. Allow public sector pension boards to represent their members in deciding whether to</p>	<p>Sales tax, cooperate with the federal government on the carbon tax, digital tax on Facebook, Twitter and other platforms, increase cooperate tax back to at 10 percent.</p> <p>No more tax cuts that contribute to foreign owned oil companies profits. They will not create more jobs without increased demand that would increase price per barrel. Even the Teck Resources will not start building the open mine extraction of tar sands till oil is selling at \$75.00 per barrel.</p>	<p>Besides what's already mentioned, Alberta. Government needs to rebrand itself to one that is less angry, combative, aggressive, and negative. The UCP government should avoid political weaponization of issues, and less whining is in order.</p>
T5Z	<p>They should focus on funding more on the faculty and the children's education support, & to our health care system.</p>	<p>Increase tax on cigarette, alcoholic beverages, prohibited drugs that recently approved to be legalized into public.</p>	<p>Laying off workers like teachers or those in health care system will only hurt society(students and people health)and will just increase government expenditure.</p>
T5Z	<p>They should focus on funding more on the faculty and the children's education support, & to our health care system.</p>	<p>Increase tax on cigarette, alcoholic beverages, prohibited drugs that recently approved to be legalized into public.</p>	<p>Laying off workers like teachers or those in health care system will only hurt society(students and people health)and will just increase government expenditure.</p>
T5C	<p>Education and health</p>	<p>Immigration Infrastructure MLA wages</p>	<p>Promote what ALBERTA has to offer</p>
T5P	<p>Healthcare, and education first</p>	<p>Redundant positions and employee time theft.</p>	<p>By diversifying the economy and growing secondary and tertiary industries. Not tax breaks that don't work</p>
T5P	<p>Healthcare, and education first</p>	<p>Redundant positions and employee time theft.</p>	<p>By diversifying the economy and growing secondary and tertiary industries. Not tax breaks that don't work</p>
T6E	<p>Public healthcare (including mental health but not just psychiatry) and education (including post secondary)</p>	<p>Amalgamate the public and separate school boards already! It's a waste of money to have 2 boards funded by taxpayers.</p>	<p>Investing in public healthcare and education creates jobs now and in the future. Economic growth should be supported via diversification (getting away from relying solely on oil and gas).</p>

A1A	Education, Health Care and job creation	It's hard. But running a province is different from running a company. I understand the government wishes to balance the book by cutting costs from different area. However, the government is responsible for people's well being, too. Please find the balance.	Well, was the NDP's idea really that bad that you can't find ONE or few things that worth considering. I don't believe in any parties trying to ruin our province. Appropriate collaboration with your opposition doesn't really sound too bad to me.
T8N	Health Care and Education!! Our children are our future. Let's invest in them and their learning partners. Support our public health care system. Privatization creates divisiveness between the haves/have-nots. We NEED to build community & bridges not walls!!! Invest in alternative energy!!! We are losing young people to other provinces. Let's keep them in Alberta by creating career opportunities in forward thinking professions. We are living in the 21st century. We need to be creative in our development of new professions, especially in the energy sector!!	Remove the "war room". Introduce a sales tax! Every other province has it. Reduce the "cuts" to private corporations and permit the large wealthy companies to support the small businesses	Diversify!! Gone are the lush oil and gas days. Let's be creative and forward thinking!!!
	Education, health care, and infrastructure.	The war room budget	Expanded apprenticeships and Grant's for small businesses
	As a big supporter of the UCP, I have questioned a few recent decisions. There are enough areas that could be cut and made more efficient, we do not need to make cuts to things like life-changing drugs. When a youth centre, helping at risk youths is about to close, we need to step up in the short term and possibly find a charity to take over in the long term. I also did not agree to cuts to education into the school year. The cuts should have been announced now for next year so schools had time to adjust. I agree we need to reign in spending, but for each decision we need to ask if what we are trying to change is making a positive impact and, if so, what is the best way (most efficient and cost effective way) to continue it.	Healthcare. As someone who is a dual citizen of both Canada and Australia and has seen both systems firsthand, we could spend some time looking at how the Australian's do things and dispelling the myths around there being only 2 extremes i.e. Canada and the US. We need to understand that the system may not be equal, but it will benefit everyone. When someone moves from the public line to the private one, they are not jumping the cue, they are switching lines and making the public line shorter. It would also be nice to see total compensation packages. If a public sector employee makes \$80k per year, but their total compensation package is \$110k per year, that should be listed in the sunshine list. Private sector companies do this so that employees understand that their benefits are significant.	Lower taxes and continued work to fight back the misinformation about our Oil and Gas. Keep the pressure on the Federal Government. Continue to educate the public on what the Alberta Government is doing and why. I am sick of hearing about the massive handouts to Oil and Gas. It would be good to see tax breaks contingent on job creation though.
T1K	Education, health care, infrastructure, aid in the diversification of our economy and industry. We are missing out on so many opportunities hoping for oil to rebound. I don't see why we can't look to the future, I want our province to be innovative leaders not bitter, resentful followers.	Institute a sales tax. Some decisions while not popular are still the right decision. We are the lowest taxed province and we need to address that, we need to leave a strong foundation for our next generation while keeping a handle on our debt. Cutting now to save now leaves infrastructure holes for the future to fix. Strength comes from doing the right thing even when it's the unpopular thing.	Stop giving tax breaks to large profitable corporations with no agreement in place that the money will stay in Alberta. A better approach would have been a tax break based on employees, for example: 1% for a part-time employee, 2% for a full-time, 3% for full-time with benefits. This would keep jobs from leaving and encourage businesses to come here.
T1A	Public Health care Public education	Decreasing incentives to multimillion dollar companies	Invest in retraining for people that have lost jobs in the oil patch Invest in post secondary education for Albertans, stop the brain drain
	Education	Corporate taxes for large businesses	Diversify the economy, encouraging non oil and gas sectors to flourish.

T8N	Justice and social welfare programs, particularly addictions treatment and mental healthcare. The party line on its supposedly increased investment in those programs is out of step with the reality on the ground. For instance, the Enviro program is closing one of the already few residential addictions treatment options for youths because of funding cuts. 17(1) who have finally acknowledged they need treatment but know that they'll be triggered and relapse in the city due to proximity to their friends who use; Enviro is no longer an option for them and they really have no options.	I think the government ought to have actually examined this before making cuts instead of making sweeping cuts across the board. I'm quasi-okay with cuts to post-secondary bodies because they have such bloated administrations. But courthouse clerks work like dogs and were already understaffed, so wage cuts and hiring freezes in that quarter were ill-advised. Corporate tax cuts when we already have the lowest corporate taxes in the country were asinine.	Invest in research and development of sustainable energy in partnership with oil companies ala Suncor (with their windfarms). They need to transition and they have a large retrainable workforce that they could utilize.
T2k	-Mental & physical health initiatives. Healthy people can work and add value to our society. -	-Business needs to look after itself. If businesses struggle, they need to improve their model and adapt to the times. Government need not provide free money to business.	It truly is time to get with the 21st century. -Government should encourage renewable energy and assist in developing/ inventing technologies and methodologies to use less fossil fuels. Why not be a world leader and make money off it as well? Outside of pockets in the US and Canada, it is widely known that climate change is real. To dispute it is ignorant and irresponsible. We will all soon enough realize real problems.
T3R	Education and health care.	I don't know :(.	Promote and try to bring more of the tech industry to Alberta and stop relying on oil and gas.
T4N	Spending priorities should be focused on helping the middle and lower classes and on promoting and supporting the renewable energy sector.	By stopping the fossil fuel subsidies and increasing taxes on the large corporations.	By supporting the renewable energy sector and by stopping the layoffs in the public sector.
T5T	Health care and education	Less managers and supervisors Less meetings and useless presentations Cut out the traveling, it's not getting us anything. For the few that need to travel put their expenses in line with regular people. No 4 or 5 star hotels. Best western and similar kinds work just as well.	Get the pipeline going and give credit to the NDP and Rachel Notley for the hard work they did
	Frontline healthcare services because Kenny is killing the system and low income patients will be receiving healthcare in the street.	From Kenny's wallet. Leave the hard working Albertans, poor and elderly alone.	Stop focusing on a dying oil and gas industry. Focus on the middle and lower class.
	Putting more funding into education - equip the teachers and schools financially to handle more students. Put more money into health care - keep it public and actually try lowering some of the costs.	Cutting their own wages and less funding to oil and gas. Why should they make more and more money but cut a bunch of jobs that are desperately needed in this province. Cutting nurses is always a bad idea.	Stop cutting major sectors like health and education. You're putting more and more people on the unemployment line. And stop handing out money to oil and gas companies just so that their CEOs can pocket it and lay off more people.
T5e	-education (k-12 and advanced education) -health (family medicine)	- specialty doctors such as radiologists and dermatologists	- create more subsidized jobs so businesses are encouraged to hire new and competent workers (more training and development)
T0H	Mental health Education (pre-kinder- grade 12) and post-education Alberta Health Care	—High workloads leading to long term illness leaves instead of having manageable workloads that don't cause people to go on long term leave and cost out health care dollars —the stall of curriculum implementation after years and millions of dollars wasted —tax increase for corporations —farmer- agri-invest- what for? the tax breaks?	—Making post-secondary education accessible to Albertans, financially and by accepting Albertans first into the programs instead of international students.

T7X	<p>Education is a must as our children are our future revenue producers and caretakers. Also, healthcare as at some point in their lives everyone needs it. Green initiatives would be beneficial as the need for fossil fuels will continue for many generations to come.</p>	<p>This topic is more difficult as no one wants cuts which would result in the necessary savings. After having been employed in both provincial and municipal workplaces for over 30 years, I would suggest that middle management/administration is the area where the most savings could be found. In these times of the best technology in the world available to all levels of government, there should not be middle management hired to assist more middle management to make the top administrator look good(or not). Case in point: 17(1) lives in a town of approximately 8000 residents where over the past 2 years administration staff has gone from 21 to 32 positions, with raises every year. This is unjustifiable. Real estate has dropped by 15%, and people are leaving town to find employment elsewhere. How can an increase of 50% in middle management be justified?</p> <p>17(1)</p> <p>This was a total waste of paper, postage and mostly of time for the clerical and the worker who reviewed the application twice, wrote a note to send with the returned forms and also phoned to advise the same. Instead of two (2) forms I now had to submit six(6) which the employees had to review again!! This is ridiculous on so many levels!!! Our tax dollars are paying for this abuse of government employee's time!</p>	<p>Now that I have grandchildren in child care I am aware of the huge discrepancies in child care fees versus family income in daycares with the \$25 a day fee. There are lawyers and other high to very high income persons/families paying this \$25 a day fee rather than the middle and low income families on a waiting list. That is not right or fair. To support job creation this \$25 day fee needs to be available to low income families only and the subsidy application form needs to have the family income amount increased to make it affordable for families to work and provide a better lifestyle for their loved ones. This would allow for more spending and more job opportunities for the families and their communities. If the \$25 a day fee is to be kept, it should be available at all child care centres in the province, not just a select few.</p>
T5Z	<p>Maintaining quality public services and educational opportunities for ALL albertans, not just those who can afford to pay out of pocket for private sector services. Private schools, contract health care, etc. do not serve equally.</p>	<p>Fewer salary increases and bonuses for high level government officials. Not slashing public sector funding which will lead to bigger problems down the road in the future of our province. For example, cutting budgets that have trickled down to cuts in early education, letting children fall through the cracks of the education system and narrowing their future educational and career prospects so they end up relying on some way on public assistance as adults. In sort, not bolstering the cycle of poverty.</p>	<p>Diversify Alberta's economy instead of relying on big oil to save the day. Look into renewable energy. Look into industries where tradespeople who have been employed in the oil industry can transfer their skills without sacrificing their training and experience. Focus on what all albertans will need in a future where climate change is an inevitably.</p>
T5T	<p>Health Care, Education and Infrastructure.</p>	<p>Tax oil and gas more (as well as the oil and gas companies) to bring in more income. Going after public sector pension savings is shameful.</p>	<p>Diversify outside of oil and gas; build tech industries and tourism needs to expand.</p>
T0G	<p>Health Care and Education</p>	<p>Cut funding to things like abortions, LGBTQ stuff etc..</p>	<p>Stop bringing imported oil and use our own</p>

T4L	<p>Stimulating PUBLIC health care</p> <ul style="list-style-type: none"> - we NEED more health care professionals for our/patient safety. - 97% of Albertans can NOT afford private health services. - Invest in public health care facilities and staff. - Keep medical professionals and doctors in the Alberta. <p>Invest in PUBLIC education</p> <ul style="list-style-type: none"> - remove student loan interest. - keep our young adults, our future in Alberta. - invest in youth, bring back music and arts in our schools. <p>Give our kids a positive out reach and focus.</p> <p>Increase law enforcement</p> <ul style="list-style-type: none"> - with Alberta in a depression focus on the safety of Albertans. <ul style="list-style-type: none"> - Mental health awareness and accessibility to programs, counselors. <ul style="list-style-type: none"> - Seniors health and provisions. 	<p>Eliminate the war room!!!</p> <p>Eliminate taxpayer funded travel for premier and cabinet members.</p> <p>STOP using tax payers money for personal and harmful "reports" ..such as the mckinnon and E.Y papers.</p>	<p>Removing corporate handouts!</p> <p>Stimulating our public health care</p> <p>Motivating our youth to stay in Alberta so we can continue with innovation</p>
T5t	<p>-Healthcare & education</p> <p>-Physiotherapy coverage for seniors and low income</p>	<p>Unsure</p>	<p>-continue to support post secondary education</p> <p>-small business cuts and initiatives</p>
T4L	<p>Stimulating PUBLIC health care</p> <ul style="list-style-type: none"> - we NEED more health care professionals for our/patient safety. - 97% of Albertans can NOT afford private health services. - Invest in public health care facilities and staff. - Keep medical professionals and doctors in the Alberta. <p>Invest in PUBLIC education</p> <ul style="list-style-type: none"> - remove student loan interest. - keep our young adults, our future in Alberta. - invest in youth, bring back music and arts in our schools. <p>Give our kids a positive out reach and focus.</p> <p>Increase law enforcement</p> <ul style="list-style-type: none"> - with Alberta in a depression (thanks kenny for no job creation..but hey as long as ya hand out MY tax dollars to your buddies! Maybe remember its MY taxes paying you!) we need to focus on the safety of Albertans. <ul style="list-style-type: none"> - Mental health awareness and accessibility to programs, counselors. 	<p>Eliminate the war room!!!</p> <p>Eliminate taxpayer funded travel for premier and cabinet members.</p> <p>Removal of cabinet spokes personnel</p> <p>STOP using tax payers money for personal and harmful "reports" ..such as the mckinnon and E.Y papers.</p> <p>- Hold an election so we can vote a real government in! On that isnt under criminal investigation, who disgustingly sneaks their hidden agenda through</p>	<p>Removing corporate handouts!</p> <p>Stimulating our public health care</p> <p>Motivating our youth to stay in Alberta so we can grow.</p>

T5X	This province needs to invest in healthcare and not dismantle what took years to build, not privatize these services, I pay my taxes willingly to support these services. Invest in making education free by capping out of touch education fees, hire more nurses to assist with overtime, and take pressure off short staffing, invest in health services, build the multi labs and build jobs at the same time. Keep your hands off our pension. Focus on building refineries in Alberta, keep oil in Alberta, that will build jobs, fix our hospitals, that will add good paying jobs.	This province could find savings by properly taxing the corporations, by building the middle class up, they make money and spend money building a strong economy. The poor and rich don't add to this economy. Stop giving tax breaks to the rich and your buddies, that is just wrong. Get rid of your costly RED TAPE WAR ROOM, its costing too much and a joke. This government needs to stop expensive travel and listen to the people who elected it, cut your group of heavily paid war room. Build Alberta by putting money in our pockets by capping our insurance providers, and CEO's at university and give the money to students to get fee education	This government can rebuild the refineries, fix hospitals, build the mega lab, this alone will create thousand of good jobs. Invest in diversified green jobs. Encourage entrance into Alberta only if companies are willing to invest in good paying jobs not minimum wage part time jobs that don't help the economy. Force corporations to only hire full time. Listen to people not corporations.
T5T	Education Transportation	Stop assisting refugees Cut government employees	Tax cuts
T9e	Education, healthcare , seniors, daycare	Panels and corporate giveaways	A living wage, affordable education
T4N	Education and health care should priorities 1 and 2.	Stop the corporate welfare. This government is very good at giving money to corporations but can't find a way to help the people of Alberta. Add a provincial sales tax.	Diversify the economy. Oil and Gas is slowly dying and Alberta will die with it if it doesn't diversify. Instead of just trying to undo what the NDP did, why don't you follow up on their good ideas. Like trying to diversify the economy. Also trying to expand green energy. Add a provincial sales tax.
T6E	Education and healthcare, also diversifying our economy.	Stop giving tax breaks and subsidies to the tune if 4.7 BILLION to large corporations and oil and gas companies. Stop wasting tax money on idiotic war rooms and flying your buddies around for free. Spending oversight is paramount for this administration as you seem to think it a personal right as part of the Provincial government to buy yourself all kinds of personal things with taxpayer dollars.	By investing in education, stopping oil and gas subsidies and grants and diversifying our economy away from fossil fuels to renewable energy sectors, research and development, infrastructure and healthcare.
T5Y	Private health care initiatives (more options for it), helping small business succeed by funding and cutting taxes, cut some funding for teachers, cut funding for nurses while trying keep funding for senior housing.	Cut useless government programs mainly introduced by NDP and release contracted consultants in all government levels, lower personal income tax and introduce a provincial sales tax on items other than necessities of life like groceries, power water, sewage, gasoline, and services especially for middle and low income. Raise taxes for the super rich like doctors, lawyers, engineers, and all making more than 150,000 per year combined household income.	Fund job creation initiatives from all levels of industry by funding small businesses for the step program where students can be hired with long term employable people being the goal. Fund oil and gas initiatives and for the love of God... ignore Greta Thunmberg. Also let's fund environmental initiatives that look at ways of cleaning the by products and ways our factories work without suggesting permanent elimination ideas.

	<p>Healthcare, must be affordable, efficient and effective with enough experienced and well trained staff to ensure a healthy and productive workforce. Excessive management and red tape needs to be controlled, as well as ensuring services are delivered in a timely fashion.</p> <p>Education, should be well funded and open minded to provide a balanced non partisan worldview, without ideological blinkers. The goal should be to provide albertans with sufficient knowledge to survive in society and the high level skills much in demand in the global economy.</p> <p>Heritage,culture and research should be sustainably funded so the history, stories and objects of alberta's history are protected, preserved and accessible to the people. Novel research into the environment, creatures and landscape of the province should be prioritised so albertans can learn about their natural history and learn from it.</p>	<p>Reduce salaries of high level bureaucrats</p> <p>cut high level managerial positions</p> <p>ensure medical services are being used effectively and not unnecessarily.</p> <p>End corporate subsidies for the energy sector, if an industry cannot survive without government handouts it isn't sustainable.</p> <p>Turn off all lights in government offices at night and reduce office temperatures in the evening.</p> <p>Simplify all government forms and documents, staff shouldn't have to spend all their time filling out paperwork.</p> <p>Save money by not advertising partisan political matters, reduce political travel and political theater.</p> <p>evaluate fully the necessary and unnecessary expenses of all government ministries and departments using staffing resources already present in those area.</p> <p>Refocus subsidies and tax cuts on agriculture, forestry, mining renewables or emerging technologies of value to the global economy.</p>	<p>By looking for alternative and emerging industries to invest in and develop tax credits to support these investments. Tech industries, skilled manufacturing, value added services, energy remediation and reclamation expertise can be sold to other countries.</p>
T0h	Health, education,	Scrap your war room.	Diversify and stop giving money to corporations.
	Education Health care The environment	<p>Stop giving corporate tax breaks to rich corporations who are polluting this planet.</p> <p>Diversify the economy</p> <p>Value all sectors of the economy and stop debasing public servants</p>	<p>Stop treating public workers as if they are a drain on our system. They are an essential component of our economy. Albertas First Responders, teachers and nurses are just as valuable as those who work in the oil and gas sector</p>

T2N	<p>Public services such as health care and hospitals, education (K-12,plus Universities and colleges), diversification planning and training in something other than O&G, roads and transit and connecting rural and cities. You should respect and appreciate the nurses, doctors, teachers and professors who make these systems work.</p> <p>More money and support on police, fire, first responders, guards and court people.</p> <p>Should also fund the guy who was investigating the UCP leadership corruption.</p> <p>Work with Feds, O&G owners and municipalities to start the cleanup of orphaned wells and other environmental issues.</p> <p>Work with Feds to assist in forest management to lessen the risk of wildfires and assist with GHG by planting new trees.</p>	<p>Close down the 'War Room' and fire everyone involved. O&G can promote/defend their own business interests.</p> <p>Stop funding of all religious schools in AB.</p> <p>Stop creating panels for everything. Its a waste of taxpayer money and probably really aren't arms length from UCP govt. Wear your own decisions.</p> <p>Reduce MLA paid and expenses for committee or 'special project' work.</p> <p>Stop or restrict travel for ministers and aids. Use online meetings to do business. Lower the per diem for entertainment, lunches etc.</p> <p>Crack down on business (O&G too) who fail to pay taxes</p>	<p>Stop firing everyone in public service. This is not helping anything.</p> <p>Accept limited shelf life remaining on O&G and start planning O&G Transition.</p> <p>-Work with the feds on orphan wells and other environmental cleanup work.</p> <p>-Work with the feds on Forest management and planting trees.</p> <p>-Work with the feds on Park management.</p> <p>-Work with the feds on creating new "green" career programs with enhanced EI and training options.</p> <p>-Work with the feds to utilize and enhance researchers work from the University and colleges and entrepreneurs. Lots of good ideas if the UCP would bother talking to people other than UCP supporters. This could include plastic and other recycling, mineral extraction from old wells, water recycling including the trailing ponds, agriculture improvements and greening of equipment.</p> <p>-Work with the feds to invest in infrastructure projects, hospitals, schools, highways, electric vehicles and charging stations, renewal energy projects, regional transit options connecting rural and cities, city transit and schools.</p>
T2C	<p>Job creation, stop eliminating and reducing hours for Albertan's who are employed, Affordable Housing for all Albertan's who are lower income, including Seniors, Disabled, and Low income working, Seniors supports focussed on rent calculations who are living in affordable housing, and additional assistance to pay for medications.</p>	<p>If the Provincial Government can find \$30 billion dollars for a war room, and can find \$47 billion for tax breaks for the wealthy, they can certainly could find savings to meet Albertan's basic needs, and this doesn't mean cutting further within our basic needs.</p>	<p>Less focus on the oil sands, creation of jobs could be found in business development, wise investment in concrete projects currently going on in Alberta, working with First Nations development to create employment, possible joint efforts to develop profitable business</p>
T7X	<p>Education. Our children are our future and taking away a decent education from them is a sin.</p>	<p>Tax companies who have the extra funds.</p>	<p>Diversity! We need to diversify if we ever want to stop falling victim to recession.</p>
T3a	<p>Budget priorities should serve all Albertans not just oil and gas</p>	<p>Government management redundancies and expenses</p>	<p>Invest in the future and healthcare and education</p>
T6J	<p>Education Health Services</p>	<p>Redundancies within government</p>	<p>Invest in the children of our province</p>
T5R	<p>Healthcare, Education, Transportation</p>	<p>Taxing oil companies appropriately and ensuring back taxes from corporations are paid in full</p>	<p>Diversify the economy by encouraging tech sector growth and construction of green energy initiatives. Keep up pressure on pipeline approvals and oilsand approvals. Get the Teck oilsands facility built. Just ensure fair taxes are being paid by oil companies, otherwise we are just giving away our non-renewable resources to let the profits leave the country.</p>
T5T	<p>Major municipal infrastructure like technology centres that are available to all and benefit all</p>	<p>Art. To many wasted finds on art that doesn't appeal to the masses</p>	<p>Encourage large organizations to spend less on technology upgrades and more on employees</p>
T5X	<p>Education</p>	<p>City beautification budget</p>	<p>Trade work subsidies</p>

T7E	Services for children and families Services for people with disabilities Maintaining roads Education	Union contracts (UNA) Dr compensation	Diversify beyond oil and gas
T5Y	Education for children	By controlling Ministers expense	By investing in our local businesses
T3A	Get the economy going again by following up on the good start the NDP made. Make it possible for people to get jobs	Keep the nearly Five Billion tax break you want to throw at the rich, and invest it for the betterment of the citizens for Alberta	Allow Doctors to make a decent income and pay them properly to have enough time to see patients so patients are not missing work for repeat 10 minute visits to the DR.
T4c	Home visitation programs, aish, nurses, teachers	Their salaries, hiring freezes, tax increase to come in-line with the rest of the country	By offering training, sustainable work programs
T1K	Support social programs, education, and divest from fossil fuels. Diversify our economy by focusing on the global food security market.	Stop supporting corporate socialism. Wealthy corporations so not need our tax dollars - they are for maintenance, education, healthcare, and emergency services.	Diversify the economy. Stop trying to bring back oil jobs. Focus on tourism and agriculture.
T3B	Front line public services, including public schools and teachers, nurses and hospitals, and government employees.	What about revenue? I don't see the benefit of the corporate tax break, so roll that back. Provincial sales tax would also help.	(Re)invest in a diversified economy, including renewable resources, public sector services, tech development. Stop focusing (and wasting money) on a single industry (oil & gas). There was a time when oil & gas investment made sense, but those days are over, as the global demand for fossil fuel energy demonstrates.
T3C	1) Public Education - reduce class sizes by hiring more teachers, provide additional funding to public school boards to support school infrastructure and maintenance, 2) Public health care, hire more nursing staff, open more mental health spaces, support public health care system	1) Reverse the decision to give a corporate tax cut to large corporations, or at least tie the tax cut to jobs creation (no jobs - no tax cut). Tax cuts should not go to corporations that do not use the tax cut to create jobs. 2) Shut down the Energy War Room 3) Stop subsidizing oil and gas companies, through tax laws and incentives	1) Any corporate tax cut should be directly tied to creating jobs 2) Diversify economy to include incentives for renewable energy 3) Invest in leading edge, forward thinking green technologies that assist in reducing greenhouse gas emissions and solutions for fighting climate change 4) Offer residential and commercial green energy incentive programs (electric cars rebate, home and business energy efficiency programs, etc.)
T4P	Education and healthcare should be the first focus, not a failing oil production.	Stop giving money to multi-billion dollar corporations, and keep it in Alberta.	Diversify with alternate energy and build manufacturing plants here.
T2a	Keeping health care public and investing in it- valuing front line workers	Stop the corporate welfare	Put value on the jobs people have- oil and gas are not the only important jobs
T0G	Provide rebates to Albertans who install solar panels in their homes.	To be honest I think there are alot of manager jobs in AHS that can be reviewed and deleted since they are redundant. I am a front line worker and even I can see this. For example, why do we have site managers and care managers? Why are both needed? Can one person do both?	Yet again provide programs to support and grow the solar panel industry in Alberta. This will create jobs and growth.

T3R	<p>Health care More hospitals and qualified staff are need to care for Albertans Education we need to ensure that Albertas youth are educated and jobs are available within the province to keep our population under thirty growing</p>	<p>Stop spending public funds on the oil companies Stop giving tax breaks to corporation Stop the so called war room which is really a propaganda machine for the government Stop putting our economy at risk and causing a recession So that all governments will be properly able to tax citizens Stop spending public money on companies who are being used as a fro t for UPC budget policies Stop privatizing health care</p>	<p>Support youth and students Encourage and give tax breaks to companies that are hiring and engaging with training new graduates Stop the recession Promote other cleaner industries in Alberta besides oil Build the necessary facilities for public ally run long term care facilities and hospitals that were slated to be built Support the infrastructure of educational and health facilities Look into establishing an Alberta government facility that produces medications for Albertans provide a sustainable way of providing medical coverage and prescription coverage to Albertans As the largest employer in Alberta better fund AHS so that Albertabs receive the care they deserve Pay your professional staff and front line workers so that they are here to look after,educate, and save Albertans</p>
T5W	<p>Re-instate 25\$ per day daycare, keep health care public, support harm reduction, more funding for public schools, cut all funding for private schools, diversify the economy and stop giving corporate welfare to oil companies, raise AISH wages and reverse the decision to pay on the 1st of the month, provincial sales tax, tax oil companies more, and make oil companies clean up their abandoned wells, a provincial housing strategy that stops funding shelters and starts funding housing. Keep the curriculum changes that were under way when the NDP was in office.</p>	<p>implement a provincial sales tax, re-implement a provincial carbon tax, cut spending on UCP cabinet members and their partners flying places on public dollars, ABOLISH THE WAR ROOM. Give the province back to the NDP, when we had more services and a 2 billion dollar less deficit than we do under the UCP. The UCP is a joke. Stop creating "expert panels" stacked with biased people who know literally nothing about the subject their panel is investigating. The UCP is the biggest wasters of of money ever.</p>	<p>Stop investing in oil and gas Stop cutting teacher jobs, nurse & hospital staff jobs, daycare jobs, union jobs, etc. Cut the War Room and use the money to invest in local businesses instead of huge corporations that just take your corporate welfare and run. Stop being the worst government in the history of Alberta.</p>
T2e	<p>It's people! Not multinational companies. These companies leaves the province no matter what the incentives the government gives them.</p>	<p>Government can find savings by not giving all those incentives to those billion dollar companies. And Kenny should stop creating these "committee" or "offices" so called "war room", those are public money spent on non-sense PR!</p>	<p>By now cutting everyone's wages!!! By cutting people's wages, they'll have second thoughts on spending those hard earned money. People not spending money/earning money will stall local economy.</p>
T5Z	<p>Education</p>	<p>Reducing spending within the government like staffing, looking for ways to automate redundant processes so attrition can take course. Limit public supports to ensure they are not being taken advantage of</p>	<p>Limiting public supports so people do work. So many stories of people not working because they make more off of social programs.</p>
T3m	<p>Healthcare, education,</p>	<p>Middle management of AHS. Stop trying to give rich corporations billions in tax breaks when the oil industry is dead and gone.</p>	<p>Continue planned spending, diversify our economy. Focus money elsewhere other than oil and gas.</p>
T2k	<p>Education and health care</p>	<p>Government tax breaks for big business</p>	<p>Dont cut education or health care jobs</p>
T1K	<p>Health, education</p>	<p>Tax corporation at the same rate as families, stop corporate welfare</p>	<p>By being lass drastic</p>
T1A	<p>Health, education and social programs.</p>	<p>Shut down the "war room".</p>	<p>Invest in renewable energy and technology</p>
T2G	<p>Health Care and Education, leave public sector pensions alone</p>	<p>Press Secretaries, travel, the War Room, and stop giving money to corporate welfare bums</p>	<p>Diversify the economy and stop relying solely on oil and gas.</p>
T8n	<p>Education and the environment</p>	<p>Cutting parliament employees.</p>	<p>Put money into nature.</p>

T2Y	<p>Healthcare.</p> <p>1. Consider covering all vaccinations such as those for pneumonia (Pneumovax, Prevnar for all Albertans) while keeping into consideration health status and clinical guidelines. Shingles (ages 50 and up), HPV for all Albertans as well as Hepatitis A and B for all Albertans. If more is spent on vaccinations much less will be spent on hospital stays for these patients as well as the cost of medications to treat the above conditions. Hospital charges for one night stay is literally 500 times the price of one vaccine.</p> <p>2. Increase pay for healthcare providers in private sectors such as pharmacists in pharmacies and nurses in private practice. Pharmacists in Alberta are the leaders of their field in all of Canada and the demand for more of their clinical services has been saving the government millions of dollars by preventing hospital visits or unnecessary prescriptions by physicians. These workers deserve better compensation for their time, effort and effect on Albertans lives. There should be a minimal pay set by the government below which corporations cannot set a pay for these workers.</p>	<p>Reducing hospital visits due to infectious diseases by investing more in vaccinations. Reducing compensation for physicians for a simple renewal of a prescription, reducing the amount of medications which may be unnecessary and abused by AISH customers ex. Ensure meal replacement, all pain killers.</p>	<p>Allow homeless or jobless Albertans to help by doing public jobs such as custodian/housekeeping work for government compensation as this will help reduce the number of Albertans on the street and who are reaching to the government for sustenance when production may be done.</p>
T4p	Healthcare and education	Not giving corporations tax cut bailouts	Diversify the economy
T0G	Education, healthcare, diversification of the economy.	Look at how public services are managed. Top managers are paid obscene amounts of money.	Diversification away from just O&G over the long term. Process our crude into high value products for local markets. Build our own plants.
T0E	Education and Health Care	Stop giving immigrants funding	Lower tuition.
T9E	Education. Keeping teachers and educational assistants in front of students. Continuing to have reasonable class sizes.	Every sector can take the opportunity to “trim (some of) the fat” to balance the budget...over time.	Continue to press forward with further oil sands projects and pipelines. Although ultimately this is more of a national govt issue.
T5P	<p>Education and Health Care</p> <p>Children are our future and by cutting back education funding your cutting their opportunity to learn and grow. Especially in the areas of arts as not all kids thrive in academics but thru Art they can find the way to express themselves and thrive in their learning environment</p> <p>And health care is important to every single person in Alberta</p>	<p>Politicians salary's & benefits, if you feel that you can make cuts to everyone else's pay, you first need to be willing to make cuts to your own</p>	<p>By not focusing on one industry alone, but encouraging all sectors.</p>
T2R	The government should prioritize healthcare, education, agriculture, renewable energy, and diversifying our economy away from oil and gas.	We need a sales tax.	The tech industry, agriculture, and renewable energy industries as well as medical and other types of research should be supported. Calgary has masses of cheap housing and empty offices and excellent health care, though our public transit system needs improvement. This should be promoted as incentive for businesses to move here. Forward thinking is necessary to attract modern businesses not related to oil and gas.

T4R	<p>Government should focus on spending money on PUBLIC health care to keep Albertan citizens healthy! Do not cut front line staff, we have worked short for so long people are exhausted! Invest in more frontline nursing staff to create those jobs and economic growth that you promised! Don't decrease numbers of higher qualified nursing staff for lower qualified and lower paid nursing staff as this reduces health outcomes as has been demonstrated in the United States of America!</p> <p>Don't cut physician's salaries as you cause them to go to other provinces where they can get more money and incentives! Also cutting physician salaries results in decreased service delivery to vulnerable populations! Don't close safe injection sites as this results in our young people, our sons and daughters, dying! It results in vulnerable populations ending up with HIV AIDs Hepatitis and other diseases that are far more expensive to treat than it is to provide safe injection sites.</p>	<p>Savings can be found by merging private and public education so that we stop funding private schools with public monies!</p> <p>Don't cut education and don't change education to meet jobs in the future, this is an American style education and they have terrible education! Don't desecrate our education system!</p> <p>Another way to save \$ would be to cut the tax breaks that are given to rich oil corporations who are for profit only and leave behind a wasteland for Albertans to cover the cost of clean up and reclamation! There should be an investment of money into a fund for clean up by companies up front before they are allowed to drill for oil or gas so that the next generation does not have to pay for their greed!</p> <p>Privatizing does not save money, it is more expensive to pay foreign companies and their shareholders - CUTTING out the IDEA of Privatization would be a great saving for Alberta and Albertans and also keep our jobs and money local for Albertans to reinvest in our local economy!</p>	<p>Government should support job creation and economic growth by NOT privatizing lab services and not privatizing ambulance services. Privatizing these areas will send Alberta's money to foreign private companies and shareholders and result in cutting local positions to ensure profits! It will also increase wait times as services will be cut in various labs and hospitals! Alberta's citizen's money will be funneled to USA and Australian! This will not grow the Alberta Economy but drain it's riches!!!!</p>
T5K	<p>Spending priorities need to be aligned with outcomes and a prudent fiscal plan (which means not only no deficit but also a repayment plan for the outstanding debt over an established period (perhaps no longer than 50 years)). Spending priorities don't also mean which areas to not cut, for example, health care spending is a priority but is also an area where there are significant opportunities to save if done prudently as with education where there is significant administrative costs and inefficiencies.</p>	<p>The MacKinnon report and EY report on AHS provide many actionable areas where savings can be found. The part that stands out the most is in physician payments and nursing costs which should be significantly reduced by ensuring better utilization for all healthcare provider's scope of care. This doesn't necessarily mean physicians should have reductions in their billing ability, but rather, they should have a loss of billing opportunity because residents would be directed to more efficient services for their health care needs. Government should avoid trying to find immaterial savings (such as through limiting employee travel, water fountains, colour copying, extra administration and approval for procurement needs, or hiring freeze) or trivial pay reductions across the board (such as a 5% wage roll-back) but rather tackle areas of misspending in a big way through significant program redesign and innovation. As the MacKinnon report recommended, curiously, government would be best positioned to utilize the skills in the bureaucracy if it brought back pay raises and the ability to reclassify positions and hire into needed vacant positions. Empowering bureaucrats and incentivizing innovation in program design and delivery is essential to finding cost savings, especially at the magnitude needed to fix the current spending issues.</p>	<p>Government's role in this space is ensuring a competitive tax framework that is industry agnostic when compared to other Canadian jurisdictions. Government should never pick winners or losers and incentivize certain industries, rather focus on cleaning up excessive regulatory burdens including at the municipal level which is where most small or new businesses are prevented from even getting off the ground.</p>

T8T	The services that government is suppose to provide Protection (policing/fire fighters), Health care, Reopen mental hospitals, this will reduce the homeless situation, Education (build and fund schools), roads are a mess at one time we had the best roads in the country there was a real difference travelling east. Now we have the worse roads.	Reduce funding to culture and festivities. Let's not have grand celebrations. Who needs them? Stop funding business with tax cuts. They need to pay their fair share. Reduce funding to special interest groups money should go to the greater good.	Support educating people for jobs. High schools should have apprentice opportunities. Let's attract companies developing technology, let's manufacture solar panels and other sources of energy. We need to diversify.
T0C	Education, Healthcare, First Responders	Cut back on tax breaks to the wealth	Diversify economy into renewable energy
T6T	The elderly, the young, the handicapped, and the homeless.	Return money to those on AISH. Cancel the war room and all the other rubbish the upc have established. Let Rachel Notley advise them. Don't privatize anything.	Follow the NDP role in creating jobs.
T5L	Government spending should focus on social programs, education and health care.	Government could find savings in cutting initiatives such as the Canadian Energy Centre (war room), unnecessary redundant panels that produce pre-conceived responses (blue ribbon panel, fair deal). Cut unnecessary trips of government officials outside the province. Make industry more accountable by paying their fair share taxes. Generate sustainable revenue such as: a provincial carbon tax to reinvest in green technologies & other sustainable resources & a provincial sales tax.	Create infrastructure projects. Invest in green technology & other sustainable resources. Create youth employment initiatives.
	Education Maintain catholic education	Have centralized payroll and Human Resources for all teachers throughout Alberta instead of all these little school divisions. ie centralize just like Alberta health - cut the 600,000 dollar salaries of the heads of the strategic network - why are there all these specialists in Edmonton and Calgary that have 1/2 day clinic per week - target specialists that fill up clinic with constipation ie Alberta childrens when connect care could have constipation protocol BEFORE referring to gi. This would make more appointments available to the really sick children - maybe Alberta health needs to change billing code for childhood constipation do it does not pay the same as for a kid with crohns	Technology jobs at ahs- information systems technology is constantly changing is it cheaper to have info tech staff or is it cheaper to pay for connect care....
	Education Maintain catholic education	Have centralized payroll and Human Resources for all teachers throughout Alberta instead of all these little school divisions. ie centralize just like Alberta health - cut the 600,000 dollar salaries of the heads of the strategic network - why are there all these specialists in Edmonton and Calgary that have 1/2 day clinic per week - target specialists that fill up clinic with constipation ie Alberta childrens when connect care could have constipation protocol BEFORE referring to gi. 	NOT on “war rooms” & tax breaks for the wealthy & corporations. Your generosity toward them is Not trickling down.	A small provincial income tax can be used to reduced the debt. Come on the time has come.	Attract technology, renewable resources, give the major cities (Edmonton, Calgary, Lethbridge) some help to bring in new industries. Giving a select group a hand up while decimating other jobs & education is not helping
t8a	education including universities and health care.	reverse the tax cuts on large corporations	They should not be cutting public services.
T4X	Education and health care	Reducing salaries of high level government employees. Getting oil companies to pay proper amounts of taxes.	Good education system, including post secondary funding Diversifying economy, less reliance on oil Investment in green energy
T5e	Healthcare, education	The 4.7 billion tax break from companies Jason Kenney has given	Not sure
T8n	Early childhood education, Family Supports for Children with Disabilities, PUF	Corporate taxes, shut down 'War room',	Spend, not cut, on education, childrens' services, community supports - as helping the individual, helps the whole family become productive members of society & increase their spending capability
T8a	Education and healthcare	Management and executives in all areas of government.	Work to cut red tape on projects, spend money on infrastructure.
T4L	Health and Education	Less tax cuts	Support small business and local companies.
	Health care and education.	Shutting down the ridiculous "War Room" that is an embarrassment to our province and scares away potential investors.	Stop slashing jobs in the public sector. This is actually the time to put people to work fixing the infrastructure that the Conservatives of this province have neglected for 40+ years.
T5N	Maintaining public services through staffing and funding.	Their travel and paying for other premier’s entertainment and travel. Management heavy departments. We hire mgmt with no exposure to the areas they manage- a waste of money and resources as they are slow to learn and create a compounding of problems, liabilities and problems.	Support frontline staff, value the resources that they have and they will benefit from not having high turnover and better efficiencies.
T2M	Health care and education	Tax cuts for oil and gas	Invest in diversifying the economy. Fund renewal energy projects, art/music/film, tech
T5C	Corporate incentives	Healthcare	Cut corporate taxes, red tape.
T0G	Increase funding for Health Care,AISH, Education and start our path to renewables.	We are under funded in every department.Cut your own wages.	Start large investments in renewable energy.
T8a	Get rid of top heavy managers and training and hiring better front line staff	Firing managers!!!! There are way too many in the department of Justice alone! Queen’s bench managers are not qualified	Pay better wages and have it with increase with inflation
T4X	Health care	Cut mla salaries	Keep corporate taxes status quo. Offer tax cuts based on revenue.
T6X	Front line service delivery (health, education, child intervention); alternatives to oil dependency	Get rid of the “war room”; roll back MLA/Executive Council wages; cancel subsidized parking for employees; promote alternative work arrangements (less office space needed)	I don’t know, but putting it all into oil and gas isn’t working anymore

T7X	<p>I believe that the government should focus on two priorities: Albertans/Canadian university and mental health. There are so many people on the streets with mental illness who cannot work, so many veterans who also cannot work because of their PTSD mental illness and so much more! The government can create a housing unit for veterans and the homeless that focuses on helping them mentally while also teaching them school and life tools so that they can get on their feet and work. This could also help foster children out of the system since so many are mentally unstable or are experiencing PTSD. Not only would creating a housing unit for veterans and the homeless and even adolescents aging out of foster care with mental illness create jobs for Albertans, but it would also be very beneficial to the government. These people receiving help could all get their life on track. With a whole bunch more people working, the more taxes are being paid to the government.</p> <p>I believe that the government should also focus on school for adolescents. There are so many gifted young people who do not go to college because they don't have the money and they cannot afford to pay back student loans into their thirties. Instead of giving foreigners free tuition and cheaper schooling, you should be giving that to Albertans. I believe that there should be a system where a student can apply for a certain scholarship for college/university that can both benefit themselves and society. For example, a term on the scholarship application could be that if a student achieves an 80% average or higher they can apply. In order to get the scholarship that could pay for half of their college education, students can volunteer at mental clinics, homeless shelters, or anything that can give back to our communities. That way, students can have half their education paid for and a better future ahead of them, while also benefitting our communities. The more people with</p>	<p>Alberta and Canada's oil is not selling as much as it used to. The world is becoming green and where change is going, fewer and fewer countries are going to want to purchase and trade for oil. The government can keep investing in the oil companies but I would suggest taking money from the oil industry and putting it to the better use stated above. Another suggestion is to have donation charities campaigning for these programs and institutes I stated above to be built. As one would donate for a cause, the government could try raising money as opposed to raising taxes and upsetting more citizens. Individuals donating and feeling like they have a part in establishing these changes will have a more positive outlook and will be more willing to give away their money as opposed to the government raising their taxes and taking it. It allows freedom of choice while appealing to the citizens and getting them on the side of the government instead of against them.</p>	<p>As I stated above, installing mental institutes for individuals that are homeless or out of the system or that are veterans to teach them academics and life skills that will get their lives back on track. This opens up jobs for psychiatrists, psychologists, teachers, and more! When these individuals get their lives back on track, there are then more people working and therefore more people paying government taxes. Establishing a scholarship system to pay for 50% of a student's college or university education allows for poor scholars and more of the middle class to attend school and thus, creating more job opportunities. The more individuals who are well educated, the more tax money being paid to the government to help establish these systems. It all moves around in a cycle.</p>
-----	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

T5X	Government should be focusing on the public sector and education. If there is not the services and programs from the public sector then we lose as individuals and a community. Health services are important and essential to individuals as is police, fire, etc. Education is another essential priority. Whether it be starting in kindergarten to post secondary. If we want are children to get a proper education the school need funding and support. That means buildings for new schools where needed, such as a high school in the north side of Edmonton. It means providing staffing to have proper class sizes. Our kids are the future and if there is not the opportunities for proper education, post secondary included then we won't have to worry about job creation. Teachers unfortunately are taking on a bigger role as parents are not teaching basic life skills anymore. Society promotes and enables kids nowadays to do less but to expect more and parents don't parent like they did before. The expectation is the schools and teachers are to teach our kids the school curriculum but also to parent our children and teach then social skills as well. They therefore need funding and support to do that.	The Government needs to look at how current programs are being run and to make them more efficient rather than cut programs. For example, Emergency rooms could be more efficiently run. Recently being in the emergency department I had numerous nurses checking in on me but no one knew what was going on. After hours of waiting, eventually a nurse came by to say they were waiting on my X-ray results not I had to inform her that I had not even been taken for an X-rays. There is a lack of communication. Another example is busing for schools. I understand there is a public and catholic system but why not share busing services. 17(1) go to a catholic elementary and there is a public elementary across the street. Each school division goes into the same neighbourhood to get kids, why could they not share the bus for those neighbourhoods instead of each school division having each a bus go into the same areas. There are many ways to save money if different departments are willing to work together with each other.	Back in the day one needed a high school diploma to get a job. Then it became that a post secondary degree was required for a high school diploma was not good enough. Now a post secondary degree means nothing for now everyone wants a masters. The requirement and specialties that jobs require now is what causes people to be unemployed. Post secondary is not cheap and it is competitive, unfortunately not all families have the funding for their children. Creating more on the job learning opportunities and movement within companies would go a lot further to job creation and economic growth.
T5E	Aish people aish gets 1798 does need special diet people like dont get special diet they don't believe it lactose free diet I'm one of them	Ambulance ?? someone use ambulance 3 4 times there's nothing wrong with him	Oil gas
T1K	Health care, education, the arts.	By taxing corporations. Making companies clean up their orphan wells.	Supporting green industries. Employ health care workers, teachers and fund the arts.
T2T	Those that align with the health, safety, and knowledge of the public: healthcare and education.	Jason and his Twitter troll ministers could be done without.	Diversifying our economy to keep up with Canada's tech boom. Oil here is dead or dying depending on the type of extraction. Investment in small scale and wide spread nuclear generators could revolutionize our grid and sustain our way of life for generations. It would be doable with an initial investment of about \$4.7 billion... oh never mind.
T2P	Diversifying the economy. Attracting new industries to our downtown office space. Do not cut public sector jobs like healthcare, education, or municipal funding.	Cut oil & gas subsidies. Stop spending money on a "war room" -- it's embarrassing us on an international scale.	Instead of offering subsidies or a government-ran "war room" for industries that are dying, work to attract new industries. Offer incentives to industries like technology development or film/television. Alberta offers high-quality living at an affordable cost. Work to poach companies from areas like Vancouver and Toronto where cost-of-living is driving people out. Do not cut public funding. Having high-quality healthcare and education is essential to attracting the industries we want.
T5b	Education and health	Internal spending and wages	Diversity of economies support oil and gas

	KG to Grade 12 Education, University Education, and Upgrading Education	Taxing millionaires and multi-millionaires, as well as big companies	Job creation is led by educated, capable, and professional people, so supporting education at all levels is crucial. Economic growth increases with the greater education and employment of the population. Alberta needs to invest in retaining quality teachers and university professors. The basis of creativity, business, and progress lies in the teachers, instructors, and professors across Alberta. Investing in public education, trade schools, colleges, and universities will ensure Alberta has a population that is capable of generating job creation, investment, and spending.
T5C	Health and education	Get rid of the war room!	Stop bailing out multi million dollar profit making companies
T0K	Core actual net benefit services	Cutting all net cost services as fairly quantified.	<p>Support grassroots long life initiatives like sustainable environmentally better waste recycling.</p> <p>Continue to seek and encourage private/public partnership healthcare initiatives throughout Alberta. Help as many of the initiatives as possible to become upper world class in the health care service undertook.</p> <p>Take a hard stand against economic theft from Alberta through Alberta's Investors by tactics like injurious Corporate Mismanagement which is nothing more than a thoughtful scheme or two designed to the detriment of shareholders or Albertan's. Get honest, integrity and a higher level of trust back in our capital market.</p> <p>Lead Alberta communities to perform a municipal retail leakage study so as to have accurate measured economic information available to the community so it may better apply the practice of matching it's human resources personal goals and aspirations with those undertaking which benefit the community and the community can adequately support.</p>
T7A	Health, education, social supports, research and the development of new income initiatives. Housing first for all to help alleviate homelessness.	Tax the corporations appropriately.	Diversification - find another avenue of revenue and start to understand that oil and gas are limited as a major source of income. Still develop the industry moving forward in a more sustainable, eco-conscious manner, but not focus and rely on it solely to provide the wealth for the province.
T6B	Education, Arts, Healthcare, First responders, Low income citizens	From the 4.7 billion given as a tax break to rich Albertans and oil companies	Priorize the needs of all Albertans; not only the rich. Stop cutting from only the budgets of health, arts, education; tax the oil companies fairly, and stop giving them all the breaks
T6w	Education and Job creation	Administration costs for changing government parties	Reduce tax for entrepreneur and business
T5G	Education, universal health care, alternative energy sources, diversity initiatives	Invest in infrastructure, invest in forward thinking business, get over the idea that Alberta oil.	By preparing to invest now and accept that a government that invests in its province and people will not be deficit free but invested in the right places

	Public education and post-secondary education	Taxing multi-millionaires and major companies.	Education and post-secondary education are keys to long-term job creation and economic diversification. Economic growth is directly linked to an educated and employed populace leading consumer spending. As a result, the government should invest in quality teacher and instructors at various institutions.
T1Y	<p>I'm wondering about the intent of this survey and how it will be disseminated to the public. I can't convince myself that it's use isn't merely for the UCP to cherry pick comments for the media that support the budget. Please feel free to call me back and let me know how the information is being used. 17(1)</p> <p>I am furious about this budget. Livid. I have absolutely no faith in the UCP to lead us forward. It's such a regressive budget. Talk about going backwards. Seriously, big private for profit corporations and the oil sector in particular, are given huge tax breaks in the billions and that ridiculous 30 million dollar war room that's a lot like something from the McCarthy era. So wasteful and short sighted. Then they try to recoup it by cutting front line nurses, health care workers, and teachers. Jason Kenney has no idea at all what it's like to work one RN less on a busy acute care unit. He has no idea what it's like to see your husband lying in bed after stage four cancer surgery wondering if he will have public health care for him if he survives. The UCP Budget agenda is clearly privatization of health care. Wait until Albertans have to pony up money for private insurance that becomes the tail that wags the dog. Private insurance will dictate what can and can't be done.</p> <p>Our premiere just knows how to play one group against the other. Keep dividing Albertans from others and themselves. All the while sucking up the pensions of the elderly, health care workers and teachers like an autocrat so he can look after his big corporate buddies.</p> <p>Does he really think the municipalities can handle the fiscal mess he's made for them?</p> <p>Kenny's personal issues are so evident in this budget. He doesn't support public health care and education. Can't</p>	<p>Introduce a pst which is a logical step toward financial sustainability. Stop pandering to the foolish notion of the Alberta advantage. Kenney should get rid of some of his consultants. Stop wasting tax payer money on flying out other premiers and their families for party time. Stop excessive travel budgets when his people fly to places like England.</p> <p>That fair deal panel was a huge waste of money. It was so partisan he only needed three people on it.</p> <p>Tax the big corporations. I'm retired and I have to pay taxes. Generate corporate tax revenue rather than cutting health care and education.</p> <p>Get rid of that stupid war room. It's too much money foolishly being thrown away. Put that war room money into health care education and carbon emission reduction technology.</p>	<p>Show the global investors interested in carbon emission reduction that we support it. Stop acting like climate change isn't scientifically supported. Even companies like Shell are on board for carbon emission reduction. Invest in technology. Keep the public sector viable to ensure public infrastructures are sustained.</p>

T5S	<p>Public Sector jobs such as healthcare and education. These are crucial as without these pillars, our public welfare is threatened and the future generation's potential are comprised. As well as diversify the economy, with a main focus on green alternative energy. Stop investing in non-renewables like oil and by extension, plastic production.</p> <p>With regard to the fact that Alberta "spends more" than other provinces, you also have to understand that things cost more in Alberta. Public sector workers are paid more because a lot of people in Alberta are paid higher than other provinces. Life costs more in Alberta.</p>	<p>Say goodbye to the expensive "War Room", cut the expenses of public office, tax corporations (don't give them tax cut as a way to "create jobs", introduce a PST.</p> <p>Stop finding ways to save that just pass the costs onto the citizens of Alberta, the citizens that can't afford your cuts! Sure you are saving more on public services, but now students have to pay more for university, parents pay more for transportation fees for the grade school, the vulnerable citizens who rely on AISH now have to spread the little amount they get now even further etc. If you just raise the taxes on the people in this province that have more than enough money to afford a very good quality of life, then the rest of the province can also continue to enjoy this great province</p>	<p>Invest in alternative energies and education. Stop the inflation of post-secondary tuition fees so people can afford to go to school, get a good education and not be crippled with debt upon graduation.</p> <p>I want to live in a province that I can be proud of. One that is leading the way in a greener, more sustainable future- not one that is stuck in the past that is trying to keep our over-reliance on the oil industry going.</p>
T0A	Healthcare Education	Cancel the corporate tax cut Small provincial sales tax	Funding diversification of the economy - we need more than just oil and gas. Supporting transitions for oil and gas workers into other fields.
T6H	Creating jobs, creating or sustaining jobs in colleges and universities, and helping build economic opportunities in Alberta	Taxes big business and individuals earning millions. The "trickle down" theory (that the ultra-rich fuel the economy through their spending and that eventually trickles down) has been proven false time and time again. This is illustrated by tax havens and other ways to hide or divert money to avoid paying taxes.	Job creation is linked to education, so supporting educational institutions of all levels helps ensure people are trained, professional, and capable. Economic growth is linked to education, employment, and consumer spending. The educated and employed spend money. Alberta needs to diversify by supporting diverse economic fields, from oil and gas to computing science, arts (drama, film, television), fine arts, and education. Education is the path to creating a population who can diversify an economy and help make Alberta a world-class province that people want to invest in, visit, and conduct business
T8N	The foundation of any economy is an educated workforce and the health of its citizens. Invest in public education, K-12, and post secondary. Invest in public health care. Although the government may have had good intentions in its efforts to balance a budget, in my opinion, the government harms our future prosperity when it neglects to fully fund these two essential sectors of our society.	<p>First, all tax cuts to any business should be linked directly to a job(s) being created. If this principle had been attached to the recent actions of the government with respect to business tax cuts the government would have saved tens of millions of revenue dollars that have gone to companies that used the money to buy back shares, increase the dividends to share holders, or increase executive compensation.</p> <p>A VERY strong regulatory framework that would ensure any and all companies drilling wells in the oil and gas sector can never leave the public purse to clean up an abandoned well.</p> <p>Don't give existing oil and gas companies an out on paying their municipal taxes and lease payments. We need the tax revenue and our landowners need their lease payments.</p>	It's not just job creation, it's job creation in the sectors of our economy that will diversify the economy. We don't need to support oil and gas, we need to support industries of the future....solar energy, nuclear energy, wind energy, high tech, geothermal. Incentivize the industries that will diversify the economy. Come on! Let's go! We can do this.
T8S	Healthcare, education, senior care	Taxing the banks, corporations & the wealthy.	Tax breaks for low & middle income, to those who will spend that extra income which will create jobs & grow the economy.

T5R	Maintaining services for all Albertan, especially vulnerable Albertans. This includes AISH, IS, education, health, and Safe Consumption sites.	First, the government should look to increase revenue by implementing a modest PST and ensuring all corporate taxes are paid. The government could find savings by not forming expensive panels.	First, by ensuring basic services are not cut. These workers spend money in the local economy which supports job creation and economic growth. Also, there NEEDS to be diversification. This is not a luxury, but necessary. We cannot put all our eggs in the oil and gas basket.
T2p	Education. Healthcare. Diversification and new industries to the province.	Less tax breaks to top earners and corporations	Diversification and supportive introduction of new industries
T2E	Funding public health and education; preparing Alberta for the decline of oil and gas; diversifying the economy.	Ending all subsidies to oil and gas companies, private/religious schools, and private medical providers; doing away with useless and patronizing programs like the "War Room" and the red tape reduction office; actually seeking new government revenues (consumption tax, carbon tax, higher O&G royalties and corporate tax rates); fighting corruption and irresponsible spending by government/party officials.	By funding middle class public sector jobs that fulfill important needs for all Albertans and make the province attractive to bright young people and new businesses. Stimulate the economy by directing funds to the lower and middle classes instead of to the wealthiest few. Move Alberta into the 2020s by promoting nascent industries like tech, film, and renewable energy. Foster innovation by protecting academic freedom and research, supporting the public education and library systems, and welcoming immigrants. Don't presume the labour market of 15 years ago looks anything like what we'll need tomorrow.
	Health Care, yes saving money is good however a swift axe in the pile of staff is going to cause dissension with staff and encourage people to leave the province to pursue other opportunities. Gradual cuts and no increases and encourage reviews for cost savings. A contracting and in house model is good however in house has many benefits compared to contracted employees that more than make up for the difference in pay. (Training, scheduling, morale, and keeping experience). Money is talking not the quality.	In programs and reviews that cost millions of dollars with little benefit	By not cutting positions at healthcare facilities.
T0G	Health care Schools Northern Alberta highways	Injection sites Unnecessary grants Advertising	oilfield development
T3A	Education, Healthcare, Public Services	Remove the Tax break for large corporations Get rid of the Canadian Energy Centre	Diversify the economy Oil and gas jobs are important to Alberta now but the world is moving away from fossil fuels. Invest in renewable energy development.
	Health care and education	Infrastructure, taxing large corporations	Support small businesses
T3L	Health Education Infrastructure	Eliminate the waste in government, including the expert panels and war room, which would include eliminating some paid positions. Review all government spending as rigorously as they've reviewed health and education Reduce travel, especially the high priced trips to London, that have no benefit	Diversify instead of the one sided focus on oil and gas Offer incentives for job creation and for companies moving to Alberta
T5Y	Teachers, teacher aids and health care, Schools	Pay less to the politicians they are way over paid. Decrease their budget for their traveling expenses.	listening to the people, asking questions

T6W	Healthcare and medications should be kept accessible to everyone as well as maintaining safe hospital staffing. Keep the education standards high for our future.	I think government should stop focusing on cutting front line workers because those are the people that actually do the job. There has been an increased numbers in government management positions in every sector. Government should look into that and reassess how many managers does 1 program need. How much does the executive positions make and maybe consider cutting there.	By not laying off public workers and refrain from giving government tax payers money to corporations. They can encourage businesses by supporting the public to have a job and money to support the businesses.
T0G	Keep teachers K-12 when learning is most important. Maintain nurse, dr levels in rural centres. Provide more funding firesmart grant funding for firesmart communities.	Continuing firesmart grant funding, is proactive measure and reduces disaster funding.	Pipeline
T6V	Education Health Care Social needs	Increase tax on cigarettes, liquor (non-essentials). Higher progress income tax rates. Stop paying the high "war-room" costs.	Introduce tax breaks for emerging industries in technology (like AI, software development, and online security/storage firms), online shopping/shipping centres (for example amazon, but expand to others) and in cannabis (production and processing). Also, maintain the hishest minimum wage, especially among young workers to encourage more young adults to work here. Keep low post secondary tuition (by reduce funding government cuts post secondary) so that young people will stay here for school and will make Alberta their home.
t1y	Increasing support for people on aish and income support, and adding a pst to help cover revenue	cutting corporate handouts to companies and cutting gross spending on investment into oil and gas.	By opening up to tech and other industries as right now if oil and gas crashes again there might not be a recovery
T0C	Debt reduction and health care	Health care, education and various administration	Support apprentice and student work programs
T7X	-More funding and support for education (Post-secondary education in particular) -Fair funding for Alberta's towns and cities. -Taxing the multi-million dollar corporations. The average Albertan's well-being should be the focus of the budget not the multi-million dollar corporations. By taking away funding for universities and tax benefits for post-secondary students the government is making it even more excruciatingly difficult for the average Albertan to obtain a post-secondary education. The cost of education is absurd and if the 2020 budget remains the same as the 2019 budget it will only get worse. Yes trades are absolutely an important aspect of the provinces labor force but the message that has been sent with the 2019 budget is that trades and oil jobs are the only ones jobs that matter. This province should not be making it even more difficult for people to obtain an education that could help them potentially innovate new technologies or industries of the provinces future. It would be nice to see the government work to make changes that help ALL Albertan's and not just oil working Albertan's. Kenney ran on the promise of getting Albertan's back to work and what he should have said was get all oil workers back to work - screw everyone else.	The "war room", taxing the rich more than those of us just barely scraping by.	Encourage technology and innovation in the energy sector.

T6C	<p>Mr. Kenney gave away billions of dollars in guaranteed revenue to the province to corporations in the form of tax cuts. This was not his money to give away to his corporate buddies. This money belongs to Albertans to properly fund for the year 2020 Education, Healthcare, Infrastructure and all other provincial programs.</p> <p>Time to invest in Albertans! Without Albertans, there is no Alberta!</p> <p>This Government needs to focus on Albertans and not corporate Alberta!</p>	<p>Investing in Albertans and not corporate Alberta. Stop undermining Albertans and the economy! Properly fund education, healthcare, infrastructure and all other provincial programs!</p> <p>Put money into jobs and Albertans. Savings will happen when everyone is working and contributing to the economy! Stop bullying the Public Sector!!! These people work hard for all Albertans everyday! None deserve job cuts and wage rollbacks because of You giving away guaranteed revenue! You made this mess, clean it up or it is time to resign!</p> <p>The Government works for Albertans and is accountable to all Albertans.</p> <p>Stop wasting money on the War Room!!!</p> <p>Give back the billions of dollars of guaranteed revenue to the Province in corporate taxes!</p> <p>Bring in a 3% sales tax.</p> <p>Bring in a Healthcare Premium.</p> <p>Invest in Albertans! Our Education and Healthcare systems are world class and the envy of many countries; don't mess with them! Fund them properly pre 2019 election! I don't care if we fund more then other provinces! Just fund them properly!</p>	<p>Properly funding education, healthcare, infrastructure and all provincial programs. Diversify! There is more to Alberta then just Oil and Gas!!! The Technology sector is up and coming! Don't drive this sector away!</p> <p>Invest in Albertans!!! Stop treating Albertans like we are the enemy and need to be punished!</p> <p>Put the price cap back on electricity and auto insurance! You are gouging Albertans!</p> <p>Wages should be higher in Alberta then the rest of the country; keeps people working and living here and then they will pay for goods and services stimulating the economy-Economics 101! Higher wages here bring in more people who also contribute to the economy by paying taxes, buying homes and cars, groceries, clothing, furniture, entertainment and so on! Basic Economics 101!</p> <p>Remember, the Government works for Albertans! You are accountable to Albertans! Time to stop doing whatever the hell you want! Drop the hidden agendas and start Governing!</p> <p>Investing in Albertans and our programs is what is needed. You spend money to make money!</p> <p>This is Alberta and Canada! We do not want American anything! Leave privatization out of our Healthcare and Education Systems!!!</p>
T0M	Budget for oil @40 dollars /barrel.Cut all staff, wages and programs til the budget is met.	Everywhere.	Separate
T7E	Education and health care. Ensuring we keep doctors in rural Alberta (especially those with anaesthetic training) by ensuring they get compensated for being on call. Keeping class sizes manageable especially at k-3.	Raising corporate taxes. PST. Get rid of the "war room".	By believing public sector jobs are just as important as oil and gas. Investing in green energy projects so that we have something to fall back on when oil and gas are not as in demand.
T5C	Health Care & Education	I think they should take a roll back on their wages and pensions	Get our pipeline built as we all have a monetary share in it seeing they used our tax dollars to buy it and to please stop all of their corruption.
T6C	Better funding for public healthcare, education (K-12, colleges, and universities), municipalities, environmental protection (including nature conservation and initiatives to reduce carbon emissions), and economic diversification.	<p>Collect outstanding taxes (including those from oil and gas companies) and cease oil and gas industry subsidies (e.g., tax breaks and royalty holidays).</p> <p>Use a scaled provincial tax system (rather than flat tax) and reinstate a sensible corporate tax rate (e.g., 15%).</p> <p>Invest in diverse portfolios that will create jobs and profits in the future (rather than the declining oil and gas industry).</p> <p>Support initiatives that reduce long-term costs (e.g., accessible housing and food that reduce sickness for the poor and homeless and their consequent hospitalization), increase royalties from the oil and gas industry.</p>	<p>Invest in people-intensive and culturally important industries such as the arts, universities, civil service, IT projects, associations that promote social, physical, cultural and environmental wellness. Our people, our culture, and our diverse nature should be our strongest assets.</p> <p>Abolish performance-based funding for universities. Educated people are the province's most important resource: support freedom of thought and critical thinking over job training (don't penalize government policy critics).</p> <p>Fund municipalities adequately and they will create jobs.</p> <p>Divest from the increasingly automated oil and gas industry and invest in labour-intensive energy diversification projects.</p>

T3M	Health care and education	<p>You need to stop the upper management of both these groups from squandering away the the provincial government funds. example of this and it is factual as I have had face to face meetings with minister Demetrius and would gladly share with you Jason</p> <p>The salaries in post secondary (Sait) are by far the biggest expenditure that institution has no doubt or questions about that by only 46% of that expenditure is in the classroom and I would assume it's much the same in AHS</p> <p>You are spending all tax payers money with out any accountability for the funds</p> <p>Minister Toews needs to do a forensic Audit of these institutions look I support the Alberta is open for business and I support you both now and in your time in federal politics</p> <p>But live up to your mandate and be a responsible government</p> <p>Clearly this would not be the messaging you would expect from a union leader but I am one</p> <p>17(1)</p> <p>These 2 groups are by far the biggest spends in your budget and decades of pc government without accountability has built this dragon that must be slain</p>	<p>Oil and gas is never coming back to the glory days of old . T1H	Healthcare	Less government expenses.	Fair negotiations with unions.
T3R	Education, Health care, Fighting climate change	Getting rid of the oil and gas propaganda centre (IE the war room), and not giving tax cuts to oil and gas companies	Investing in new energy sources such as nuclear, diversifying our economy into sectors such as technology and not killing other areas of the economy to support oil and gas.
T8N	Education & Healthcare. Maintaining an excellent public school system & healthcare access, decreasing tuition costs, particularly in healthcare & education. Early ed: free/low cost childcare for EVERYONE.	Stop handing out cash to oil companies. Eliminate publicly funded religious (Catholic) schools & stop offering tax breaks or incentives for private schools.	Incentivize innovation, offer credits/tax breaks/income credits to tech & green industries. Offer free/low cost childcare to ALL, because that program generates \$4/\$1 invested.
T0I	Education and health care	Reduce the number of managers etc	Help industry develop was to reduce harmful emissions.
T9K	Keep showing your true colors and ensuring younger generations become lifime NDP voters.	Keep showing your true colors and ensuring younger generations become lifime NDP voters.	Keep showing your true colors and ensuring younger generations become lifime NDP voters.
T6V	Education and health care	In government positions	Education
T0G	<ul style="list-style-type: none"> - public education (not private, not separate) - health care (without a 2-tier system which will only further suppress lower income individuals and families) - infrastructure - reducing overhead in bureaucracy 	Seriously, take a good look at ~your~ spending on day-to-day items — travel, accommodations, meals, etc — the waste there is absurd!	Ensuring the protection of rights of women and minorities. When they feel valued, they engage with the economy more.
T3B	A pst tax will solve most revenue issues.	I think they could take back the \$ they gave to their friends-big corporations and put this into education and healthcare. Also put the teacher pensions back with ATRF	PST will be fair and help

T5R	Diversifying the economy. Education, from k-12 to post-secondary. Healthcare. Social services for those living in poverty and those with disabilities.	Eliminating the so called war room.	Eliminating tax giveaways for large corporations. Bring back an Alberta made carbon tax to reinvest in Alberta green companies.
T5Z	Education, Health, park maintenance	I think the government should create an excise tax for sugar sweetened beverages (at least 20 cents per liter per WHO recommendation)- this will increase revenue for the government while simultaneously contributing to reducing obesity amongst Albertans. Currently Albertans have ones of the highest health expenditures rates per capita in Canada at just over \$6500 in comparison to the Canadian average of \$5800. Attached is a article outlining the success of soda taxes: https://arstechnica.com/science/2019/12/the-global-soda-tax-experiment/ □	The government could help to alleviate the effects of the mortgage stress test so that the housing market recovers, which would increase the ability of homebuilders to build and sell homes which would then put to work contractors and all associated suppliers. Furthermore, the government could invest in job training programs and student employment. In addition, investing in other energy industries could increase job creation
	Front line nurses, teachers, caregivers, cut management!	Quit sending all money to Ottawa.	ASK CW Alexander! He has good ideas!
T5T	Health care Education Recreation Roads/infrastructure	Red tape reduction. Task each government department to review and reduce red tape. I think the governments creation of a formal review is a waste- hiring dedicated staff and allocating time and money to it could be spent better elsewhere.	Provide education- educate youth and provide jobs to teachers. Build recreation- provides jobs to build and after building it will require staff. Benefits by also providing health benefits. Also provides activities to youth and adults to keep them out of trouble. Pipeline. Repair roads (hwy 16 west!!) improve infrastructure.
T8X	Cut the partisan and ideological viewpoints out of budget decisions. NO to privatization of public services. NO to corporate tax cuts. Bring back the NDP budget, it was closer to balance than this UCP pointless mess.	Shut down the energy war room. It makes all albertans look like idiots	Stop cutting the public sector jobs we all rely on! Nobody want an American style health care and education! Raise corporate taxes and make all companies pay their tax! I pay mine every time why shouldn't they!
T6L	Post secondary education and education funding.	Increase taxes for large corporations and oil & gas industries should not receive subsidies while they earn large profits	Post secondary funding and invest in green technology
T3K	We need to focus on renewable resources, climate change, but also healthcare, education and supporting non-profit that only helps to sustain our communities with various programs for youth and their families.	We need to see less government kick backs to the oil and gas industry and Jason Kenney's friends, since it is not helping with current unemployment levels and laying off sectors that are much needed such as healthcare and education and non-profit only puts more people out of work. These industries along with oil and gas need to work together.	Stop cutting funding to our education, healthcare and Children's services programs. Support our infrastructures, environment, sustainable resources such as wind turbine, solar panels and electric cars for starters. We need to focus on climate change before it is too late.
T6R	Education (pay increases to teachers) Healthcare (pay increases to all health care staff)	Increase tax to corporations, cancel war room	Provide funding to programs that support job clubs
T7S	Fund Healthcare and education (including post secondary). Stop cutting, take some time to fully understand how these systems work and make informed decisions. If you did not attend public education you should not judge/comment or destroy it. Keep education public! Stop dumping your ideas on municipalities and making them pay for it.	Pensions for MLA's (you should only get equivalent to how long you are elected), private jets, having their friends (oh I mean employees) flying to London numerous times for meetings, not giving private industry huge tax breaks to encourage employment because that did not work!	Diversify into industries of the future like AI, medical and oil and gas innovation.

T1j	Infrastructures such as schools (non-religious),hospitals and health care. Education and cleaning up the environment, and supporting the carbon tax.	Provincial sales tax, and make the wealthy pay their fair share of taxes.	Encourage tourism and support technical innovation. Lessen our dependence on oil and strive towards supporting alternative energy sources.
T5y	Class size Supports for students that are struggling Modernization of information sources ie. textbooks
T5K	Healthcare and education	too many comms staffers and cronies on the payroll. Tax corporations more. Invest in current, evidence based practices. Stop supporting resource extraction companies with public monies.	Re-education for workers leaving waning industries. Support research and development through education at all levels. Stop promoting self-limiting ideologies that cost more in the long run.
T2W	Education and Healthcare Green Technologies Diversification of the economy Budget 2019 - was a terrible farce of supporting wealthy corporations (that money went to shareholders and as far as Albertans can tell not one single job came of it- in fact some corporations said thanks and picked up their offices to leave) and putting more strain on Albertans and their families.	Provincial Sales Tax Carbon Tax A PST is a must should you want to seek support from the Federal government. It's a bit hypocritical of a government to seek support from equalization payments when all other provinces have a sales tax and did not just give 4.7 billion to wealthy corporations. A tax could would allow Alberta to support education, healthcare, transportation infrastructure, diversification and Alberta families- rather than cut essential services.	Support Green Energy, Technology, and diversification of the economy Support small business Support families (childcare \$25/day and publically funded education) Whether Alberta likes it or not - diversification is important and we can no longer rely on oil revenues to support our public infrastructure and services. Privatization is not the answer- STOP!
T3E	Diversifying to a green economy, climate change, healthcare, education.	Sales tax, reverse corporate tax cuts.	Hi Tech/IT sector investment, green job training for unemployed/underemployed Albertans to attract more clean energy investment.

T6L	<p>Funds for education and healthcare are the most important. These are no cut areas. We have excellent Ed. And healthcare needs to stay the same. No cuts to the already disenfranchised eg aish! Also daycare subsidy is a must , keeps the economy going so moms can work and in turn have more disposable income. No to private healthcare, no USA type systems. Infrastructure needs to continue which in turn leads to jobs, construction, lrt etc. Job diversification eg solar, wind, tech industries etc. Student assistance for summer employment so the don't leave Alberta, not to return!</p> <p>Attract other business not just oil and gas no more tunnel vision. This isn't a luxury it is a must!! You are loosing young people like crazy the province won't survive or thrive!</p>	<p>Way to many panels , what for, they are not necessary. The Alberta war room, ridiculous waste of money. Has absolutely no benefit, dollars could be spent a hundred different places. No more guys on twitter doing nothing beneficial except for making Albertans angry. No more tax cuts to big business , it totally backfired on this government. No new jobs, no trickle down , took the money and ran. CEO making millions in bonuses. This money could have gone to Ed.healthcare etc. No wasted money on referendums, no wasted money on moving my cpp! Not interested.</p>	<p>The absolute biggest thing is we need to diversify!! Do the oil and gas no problem, get all the dollars you can from oil and gas. But do not say diversification is a luxury it is ridiculous, it's a must! You will loose population , people want Alberta to be more than a one trick pony! We need other industry, invest in solar wind, forestry, farming, tech. Infrastructure. My husband is retired and has had 3 job offers in Alberta in the past 6 weeks. Re train people invest in your population, oil and gas doesn't have to be the only option. In closing, we are home owners, we are retired, we put a lot of money in the Alberta economy. We are also frightened as are many of our retired friends. We had planned to stay in Alberta, and now we may consider leaving the province. I can guarantee you we are not alone. We have many friends feeling the same way. We are concerned about our cpp, our home prices falling, our car and home insurance going up, our electric going up. Our healthcare being privatized, that wasn't in any of our retirement plans. Ucp you need to get on board for the citizens of Alberta and not big corporations, you need to diversify, you need to have young people want to stay here. Right now you are not accomplishing any of this. Hopefully your direction will change, if not you will see people leaving the province. Especially seniors who have no need to stay, and we have the dollars to help the economy.</p>
-----	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

<p>T6h</p>	<p>Healthcare and first responders</p> <p>Environment</p> <p>Diversifying the economy</p> <p>Seniors</p> <p>Education and PSE</p>	<p>Tax corporations</p> <p>Adjust o royalties so Alberta gets more</p> <p>Reduce tax cuts to corporations and businesses</p> <p>Introduce a sales tax</p>	<p>Fund job training for energy workers to change trades to other trades</p> <p>Provide training on other types of energy (renewables, nuclear) to allow the Alberta energy market to expand and remain a top energy provider</p> <p>Provide grants to home owners and businesses to Install renewable energy devices to put energy back into the grid, require all public buildings to have renewable energy as part of their construction plans.</p> <p>Ensure wages are enough for people to be able to partake in the economy - buying a car, house, appliances or even dinner out is hard for Albertans when they are either living from paycheck to paycheck or unsure of how much their money will be worth in the future. People's wages need to keep Pace with inflation at least.</p> <p>A minimum wage hike is an easy win for helping people have more money to spend on the economy.</p> <p>Protect Albertan students from tuition hikes beyond what can reasonably be paid back and still participate in the economy.</p> <p>New home owner grants?</p> <p>All in all if Alberta is a desirable place to live, work and raise a family in people and companies will move here. For that we need a strong healthcare system, a good emergency response and public safety, well supported municipalites, good educational systems and choices, strong, accessible public service/supports, arts and culture, and recreational activities.</p>
<p>T2l</p>	<p>I value education and health care. I think these are priorities for society in general. I am a healthy person but i like that we have a public health care system that is nothing like the US.</p> <p>I do understand the petroleum industry is an economic driver in Alberta but I never understood how the government. Let's these companies get away with Murder and continually give them tax breaks and low royalty rates so they can compensate CEOs. I just don't get it! So to me this isn't a priority. Same with this ridiculous war room. You want to cut education funding, health care funding and have universities receive funding based on metrics. But you can find a \$30 'Illinois per year war room for your buddies to operate. It just makes no sense.</p>	<p>Get rid of this war room and channel that funding to education and health care. Stop going to court every time Kenney has hurt feeling. I feel my tax dollars are going to courtrooms instead of classrooms. Stop flying other premiers out here to have a party. Cut MLA wages to fall inline with teachers and nurses.</p>	<p>Diversify the economy. Don't know why you got rid of grants and incentives for tech and movie production companies. That makes zero sense but then you give corporations making billions a tax break. It is almost sickening.</p>

T6j	Education. Secondary education. Healthcare. Infrastructure. Environment. Sequeing out of fossil fuels. Creating green jobs	Sales tax. Eliminating tax breaks for the rich and large corporations.	Stop investing in dying industries like oil and diversify our economy. Reeducate oil and gas workers.
T7X	Healthcare, education, economic DIVERSIFICATION!	STOP subsidizing the mostly foreign funded oil investors.	Wind. Solar. Hemp. Tourism. Eco-tourism. Pot-tourism.
T6J	Education including post-secondary, healthcare, senior care	Cut back on studies for proposals that have already been looked at, tried, and failed. Example: 1)Provincial Police force -- the existing Sheriffs are remnants of the failed attempt called Court and Prisoner Security Service. Policing is a Federal jurisdiction, and a provincial police service would have to be approved from Ottawa. 2) Having a made in Alberta pension plan. The AUPE pensions have already been pilfered by previous Tory governments. This is a waste of money seeing if this is feasible. It's NOT! 3) Quit wasting money on court proceedings that are going nowhere 4) Quit wasting money bringing Tory cronies for parties to promote useless court proceedings	Start looking to other industries to support our people. Science and technology are being ignored; medical research and development could use more attention. More funding for home care for the disabled and seniors: the current system is a joke.
	Healthcare and public education	Corporate taxation, increasing oil royalties	Healthcare and public education. Regulating businesses is also a great way. Reinstating the carbon tax and investing that into green businesses (and not just the green wings of existing fossil fuel companies)
T5Z	Investing in public universally accessible education and healthcare as well as petchem diversification.	Eliminate spending on unfoipable private corperatations totally funded by taxpayer money such as the Energy war Room. It would pay for the increases that were determined for AUPE members by the arbitrators because they don't believe your bullshit either.	Aim to stimulate petrochemical diversification beyond extraction. Support a public and universally accessible education and health care system to provide a healthy and educated workforce for the jobs of the future.
T3M	Healthcare Education Senior's Care	Provincial Sales Tax Increase Taxes for Large corporations & persons earning > \$100,000 per year	Lower post secondary education tuition Increase the minimum wage Repair and upgrade infrastructure
T3K	We need to continue to provide the grants that were previously allocated to education and municipal elections governments. We need to continue to find ways to find health care to keep the people of Alberta healthy and productive. It is also important that we continue to support non-profit organizations that provide front line support to our population.	Likely could find savings by taking a close look at their own compensation, including retirement benefits. The government should also focus on reducing fraudulent claims for benefits. We have an outdated paper card system for health care. There's no need to prove you continue to live in Alberta to receive benefits. I'm rarely asked for ID to prove that I continue to live in Alberta when I'm accessing health care. I'm sure there are multiple other ways that the provincial government could reduce spending - like the War Room that Premier Kenny has started.	Certainly joy by cutting grants and funding to organizations that rely on provincial funds. We are losing thousands of jobs secondary to the budget choices that have been made. Alberta needs to start thinking beyond Oil and Gas. This is not an unlimited resource, and we need to make drastic changes to our oil and gas consumption.
T5e	Having the minimum wage increased.	Cut down on some road works.	Minimum wage to higher amount. Low costs on dental work that has no insurance example braces.
t5r	health, education	stop giving tax breaks to the rich	cutting back essential services and money to our children's education isn't the answer

T6T	Public transit infrastructure - its the best way to ensure a low carbon future and reduce congestion on roads. Schools - my neighbourhood's new school is already full. We need to continue building new schools Investment in IT technology programs in NAIT to ensure Alberta doesn't get stuck in its oil and gas rut.	Higher level executives in government get paid too much. Reduce their salaries. No government official should be paid more than 200 to 250k a year. Reduce spending Energy War Room. The oil industry isn't going to magically return to Alberta when the macroeconomic conditions aren't suitable for this.	Reinstate the subsidies for tech companies. I work for oil and gas and know that the future is bleak in my industry. We need to be competitive for the future and the future is Big Data, IT and artificial intelligence. Create jobs in these fields. Try to make it more enticing for tech companies to set up shop here instead of Vancouver or Toronto. Provide transition programs to help those working in the oil and gas industry to easily transition to the tech industry. Reinstate the petrochemical grant for companies building petrochemical plants. This allowed for two large plants to be built in the Edmonton region. I don't see why this can't continue to help diversify our economy. The low oil prices are here to stay. Stop focusing on that and start looking for other attractive ways to grow Alberta's economy
T5W	Investment in university education and research, green technology and jobs, healthcare and I would like to see money put aside to respond quickly to rapidly changing environmental issues such as fire and extreme weather.	I would like to see the government put an end to the energy centre / war room and trolls online. We should also stop subsidizing oil and gas.	Secondary and Advanced Education is key. Funding for scientists and innovation. investment in our health and arts. A happy and thriving population is what brings investment to our province.
T1H	Education and Health care. Not big tax breaks. The people working in these organizations still pay there taxes which pay their owni wages so cutting there wages is like triple taxing them.	The government can make sure no monies in the 2020 budget are going to senior executives bonuses or wage increases. If frontline workers and nurses and health sciences are not getting wages increases no one else in AHS should receive any increases.	Diversification, all companies expecting a big tax break should have to come to the table with HOW they will use the money saved to create jobs and create new innovations in there field. If they don't do what they say next year nothing.
T0B	Education and health care should be the top priority, cuts have been too deep	Raise corporate tax rate, the cuts have done too much harm with no benefit	Build upgraders and refineries
T2R	Healthcare, education, social services such as but not limited to things like AISH, Calgary's DOAP team, etc... Public Transportation as well.	I don't have a copy of their nickel and dime spending, but let's start with government salary, and slowly meticulously work our way backwards.	Stop selling Canadian companies to foreign interests. I'll point you towards Nexen.... oh wait CNOC for more information on that. Create more jobs which can be acquired by allowing for things like small business, technology start-ups, digital is the future, and the old O&G can't last forever.
T3j	Healthcare	Business should pay more tax rather than cut	Create more jobs
T5M	Education and training for those affected by Alberta's recent singular dependence on oil sector work. Higher ed institutes are good investments during economic downturn because of people re-tooling for different sectors. Economic diversification incentives for an economy less prone to booms and busts	Eliminate redundancies. Redirect subsidies for oil sector to support re-training workers and retrofitting energy systems.	Re-training/education for oil industry workers in the field of energy transitions Incentives for economic diversification
t9e	healthcare	education (review each school board and their expenses and wages - it is pathetic what they spend on while the schools suffer ... then they try to play victim, ugh)	Stand up to the Federal Government

T8S	They should do like Ralph Klein did years ago: Set the example by the premier all MLA's, deputy, & managers "all" take a big cut in pay first. Take from the rich & give to health, education & lower our middle class taxes.	17(1)	Diversify into solar farms (as suggested at the Peace River airport area), also helps get away from oil. Also invest in wind & nuclear energy more. Do our own (in Alberta), oil upgrading & making of finished gas & diesel products (less need for our pipelines out of province). Add new rails E-W & N-S, more lines, less bottle necks. Maybe consider a 10 year plan for high-speed 300km/hr rails (as New Zealand did for billions), include Jasper - Banff areas for international tourists to access our great mountain resorts (using under ground tunnels).
T0h	The over spending at the top, to many directors?	In the ESP program does not work for staff or the user	Train the right people for the job
T8H	Health Care Public--not private--Education Seniors' Benefits	<p>Rescind the massive tax cuts for corporations. Such cuts have NEVER resulted in additional jobs or benefits to ordinary citizens. Trickle-down economics is a myth, created and perpetuated by rich people who want to be richer.</p> <p>Shut down the "war room." It's nothing but a propaganda machine. The voters all know this.</p> <p>Alberta's fiscal problems are largely revenue problems, in spite of your government's direction to the committee to look only at spending. Tax increases for upper income earners, the wealthy and corporations are essential in order to put the province on a sound fiscal footing.</p> <p>The draconian cuts that you are introducing are nothing but window dressing to persuade the gullible that you're achieving something. Such cuts, although they are decimating needed, important services, are never going to balance the budget. As I see it, you're playing a dangerous game from which essential government services will take a long time to recover.</p> <p>Stop giving handouts to corporations.</p> <p>Proceed with the super-lab in Edmonton.</p> <p>Drop the ideological support of devolving government services to private business. All this does is remove a significant portion of the money spent to provide profit for company owners, leaving ever less funds for the actual delivery of front-line services.</p> <p>Conduct internal downsizing programs, rather than using external committees. Your employees will have thousands of ideas on how to cut costs while maintaining needed services. If you don't know how to do this, let me know and I'll tell you how to go about the process.</p>	<p>Invest in individuals and small start-ups--not in large corporations that use tax breaks to buy back stocks and give their executives huge bonuses.</p> <p>Economic growth requires a large pool of people who have sufficient funds to buy needed goods and services for themselves and their families. Increasing taxes on the wealthy and reducing taxes for low income earners will put money in the pockets of people who will actually spend it to boost the economy. An additional \$1000 for a low income family will be spent--typically locally--and have a chain reaction in boosting business. An additional \$1000 for a wealthy person who does not need that money for essentials will be stashed away, perhaps invested in foreign stocks, used toward a vacation home in another province or country, used toward a foreign vacation or used in some other way that is highly unlikely to create more jobs in Alberta.</p>

T4G	Environmental - saving the ecosystem and wildlife including funding for alternative (alternatives to oil and gas) energy sources - not coal. Health care and education also need to be re-invested in - a truly public education not private.	Oil and gas revenues and royalties. Increase corporate taxes. Make the wealthy pay their fair share of taxes through increase in taxation for over \$200,000 a year.	Focus on alternative energy sources providing work for the unemployed. Be realistic about proper funding for teachers and health care professional. Now that there are more unemployed teachers and nurses these jobs can be reinstated. Funding for greenhouses growing vegetables for local markets.
T6e	Fixing our obscene potholes. Restructuring of municipal infrastructure and organization. For example, I own a business. I was forced to relocate 2 years ago because my building was being torn down to make room for an LRT. 2 years later, the building is still standing.	Tax corporations like TELUS who overcharge their clients. Legalize magic mushrooms and other psychedelics	Building and maintaining of solar farms,
T1K	our oil jobs, he is not fighting hard enough for the people of Alberta, now that he is in, he's just like all the other liars Jobs are required now, tell trudnope to fuck him self, he does not give a fuck about Alberta, we need "JOBS"	take pay cuts, put yourself in our shoes, you LIED	quit kissing trudnopes ass
T6J	Alternative forms of energy. Solar. Wind. Infrastructure for electric cars. Alternative methods of heating homes. Protection and conservation of forests Healthcare, education, seniors care. Zero waste initiatives, recycling and composting programs.	Increase taxes for citizens in a higher bracket. Increase taxes and royalties on carbon emissions...cut the funding on war room. Decrease 300k salary of head of committee to figure out how to cut spending. Stop legal fees against environmentalists. Stop initiatives to shut down opposition to enbridge pipeline in Michigan. Stop subsidizing the oil and gas industry. Stop wasting resources and destroying the planet. Stop cutting social services and healthcare services that will lead to more social spending down the road. Spread wealth more evenly.

T2X	<p>This government is doing exactly the opposite to what they should be doing. The government is supposed to spend to stimulate the economy, not cause cities in this province to have the highest unemployment in the country and cause people to take huge losses on their homes and leave the province expecting that the situation will only get worse because of the handling by this UCP government.</p>	<p>By dealing with the corruption and deceit within government departments. Children and Families Services are falsifying information and committing perjury to wrongfully apprehend children. The CYFEA requires that they provide resources and preserve the family until and only apprehend if there is a imminent safety risk for a child. They are not providing resources, which in the vast majority of cases should be done. The cost for tax payers for all the illegal apprehensions is astronomical. It costs more to have a child in care for one month than to provide two hours a week of in-home support for one year. They are traumatizing children, alienating children against their parents and purposely destroying the parent/child relationship along with subjecting children to various other forms of abuse. The apprehensions have escalated since the UCP has been in office because the Minister and the UCP government is not inclined to look into the wrongful and illegal apprehensions that are occurring nor deal with all the children and families being destroyed. In addition to the astronomical cost to apprehend children and keep children in care, there is the long term impact on the healthcare and criminal justice systems. Statistically 80% of the homeless have mental health and drug addiction problems as a result of being in care. The National Post reported that 54% of child in care end up in the criminal justice system, which is seriously understated. Deal with the corruption, deceit and abuse of power, position and purpose within CFS and stop the illegal apprehensions that are occurring. The cost savings to taxpayers and society will be massive if this government stops CFS from destroying more children and families and deals with the corrupt and deceitful CFS employees and the breaches of the CYFEA that is occurring on a massive scale. The NDP recognized that there are a lot of apprehensions that should not occur. The NDP were trying to stop the</p>	<p>The cut backs are going to cost a whole lot more in many respects. Additionally with all the lay offs and people leaving this province in droves there will be a much smaller tax base. Plus, with eliminating childcare grants, parents cannot afford childcare so they cannot work and will go on social assistance. The healthcare cuts and changing medications (which in many cases people cannot tolerate other types of drugs than what they are currently taking) it will result in more visits to hospitals and deaths. While this UCP government does opposite to what they should be doing and are creating much greater problems Albertans and this province, some of us have a economic background (which apparently this government doesn't have) the government is supposed to spend i.e. building infrastructure to stimulate the economy, opposite to what this government is doing yet they try to justify doing opposite to what should be done. It is an absolute joke to hear that this government is trying to create jobs and grow the economy when they are causing so many job losses and have eliminated grants which would create economic growth and keep people employed. It this government completely nuts and in a different reality. Apparently so.</p>
T6H	<p>Healthcare and education are what Canadians and Albertans take pride in. We should be working to advance these fields to make our province a better place to live not cutting them.</p>	<p>Stop decreasing corporation taxes. They are the people of the world that have the most money already, we should not decrease their taxes. Look at what husky did, they fired more employees rather than work towards creating jobs with the tax cuts they got.</p>	<p>Focus on a new way of renewable energy. We have the engineers in Alberta to work towards becoming a number one in the world in this field. We need to stop focusing on oil and gas and find new ways of creating energy and we can be the top. That's when people will start investing in the province. Not with new resources that are becoming less feasible with the direction the future holds.</p>

T6T	<p>Education and Health care!</p> <p>Our schools deserve the best support possible because the future of our province rests on the quality of their education--all jobs originate from good teachers who have the resources, materials, prep-time, small classes, tech. support and training, assistance with kid who have special needs, and salary to encourage them to WANT to stay in Alberta! There is no point in supporting teachers in Universities with our tax dollars, then over-burdening them to the point that they are so overwhelmed and stressed that they have to leave the profession. When that happens, we all lose. Before cuts are made, every MP should spend a half day (even an hour)in a classroom (especially and elementary one where the teacher has 6-7 subjects to be responsible for teaching). Things are very different from when they were in school, and they need to fully appreciate the challenges faced by our important, front-line teachers!</p> <p>Our PUBLIC schools are just that--open to all, and should be using that title on their letterheads, buildings, and email. They should be fully-funded. Schools which want to teach religion should be private and funded only by parents, not tax-payers. Quit giving funds and benefits to Private schools! Our PUBLIC schools should have those funds, and need them, because they welcome everyone.</p> <p>Stop considering the deplorable Voucher System which the US discovered only made the schools in poorer neighbourhoods devoid of quality and left poor kids even poorer. It is a fact that children in poverty do not have the advantages of kids from richer families and are not as successful in life. This is why we need to support struggling families and help parent improve their education (free/low</p>	<p>Focus on the people of Alberta, not the corporations that lined your political pockets. 4.7 BILLION in tax savings are being paid on the backs of Albertans...children in poverty, students, AISH recipients, seniors, rural resident, people with serious bowel diseases, low-income parents (many single women with kids) who lost \$25/day day care., etc. Every day, there is another assault on people, many of whom are already living on the edge. The big corporations need to pay their share. Tax them the way they should be and make the Oil and Gas sector responsible for cleaning up old well sites!</p>	<p>We should be diversifying the economy...investing in technology, AI, green technology, robotics, film and digital entertainment, new food-growing enterprises, constructing LRTs, repairing/building roads and bridges and supporting small businesses. Get people back to work building Alberta, not waiting for the Oil and Gas sector to "rescue" us! The days are gone when O & G money will be flooding into Alberta. The Conservatives should have been diversifying our economy decades ago instead of laughing all the way to the bank when money was flowing from wells. We can't afford to ignore the reality of limited opportunities from under the ground.</p>
T1A	Education and health care	Reducing upper management in school boards.	No clue
	Health, education, security, job creation and an URGENT diversification of economy	STOP GIVING MONEY TO OIL COMPANIES !!!!! This is a useless strategy while companies are yet leaving the province one by one. No body wants dirty and not the dirtiest oil from Alberta	Diversify the economy!!!! and stop relying on polluting dirty oil. Invest on innovative education and more universities.
T5W	Education and health care. Education is a future investment into higher skilled jobs. Health care increases our quality of life; this makes Alberta a better place to live and work. (Ensure spending goes where it is needed of course.)	Stop direct subsidies for companies (reasonable low taxes are enough). Ensure government agencies are not top heavy with too many managers (the managers rarely lose jobs in all the cuts I've seen). Encourage efficiency: talk to front line workers for their ideas on what works. Be careful that cuts are done more directly on the "fat".	Reasonable taxation and regulations, not excessive Stick up for Alberta to the federal government. I also like how the tiered income support system encourages work; even the lowest paid workers add to our prosperity. Watch that regulations don't hurt small businesses. Education is a long term investment for skilled jobs needed to grow (and don't forget to keep Alberta a great place so our youth stay).

T8L	Education, health, diversification of the economy, affordable childcare to enable more parents to work	Stop tax reductions for rich and industries	Encourage industry other than oil and gas such as AI , IT , renewable energy/ solar and wind- invest in this education, rebates for use of alternate energy and retrofitting homes and business etc Public education to reduce fear of loss of fossil fuels- same job skills for different purposes - ie drilling for geothermal vs oil,
T3g	Cut everything including your pensions.	Give me a tax cut. Fire mayor of calgary. Don't make me pay high user fees for utilities and garbage you clowns.	I work 2 jobs and you suck. I vote blue but need more cuts. 30 % should be good start. Please send beer.
	Healthcare and education	In tax breaks to big business	Stop putting oil first, invest in diversification of the economy
T6V	Education and Health	Bigger taxes from corporations.	I don't know
T9S	Education, particularly STEM. We are too reliant on our oil and gas resource economy and having an educated population with the capacity to innovate into other industries and technology is long overdue. We have been at the mercy of oil and gas for too long, when we should have used proceeds from more profitable years to set us up to not be so dependent on these resources. Health care funding is also paramount.	Amalgamation of ALL schools systems into a single public system. The waste of having separate school systems in a society that no longer even remotely resembles that under which the Alberta Act of 1905 was conceived is frankly shameful. Furthermore, churches already receive massive tax breaks and privileges and with those advantages should be accountable for delivering religious education to their adherents, not schools.	Support innovation outside of oil and gas.
T2G	This is an outrageous survey--it does not address revenues at all. If only Alberta had BC's tax system we would not have deficits--and most of us would pay lower taxes. Check it out! On a taxable income of \$93, 476 in BC you pay \$2,487 LESS in provincial income tax! So even if we had a 5% sales tax I'd have to spend \$50,000 on GST taxable items to make up the difference!	End all double dipping in the post secondary system: prevent university profs from working for ever, drawing a full salary, AND drawing their full pensions as well once they are over 70 years old. You should either continue working or draw your very good pension--but not both. This is an incentive to just stay on for ever and it prevents younger faculty from being hired or progressing--and younger faculty teach far more than senior profs, and are a lot cheaper! .	Curtail some expenditures and change the whole revenue and tax structure (see above)--just model it and see what would happen. Support the film industry, make a clear deal with the feds on infrastructure funding, and encourage high-tech innovation especially medical and energy-related.
T5X	Healthcare, education, jobs!	Stop giving tax breaks to the rich, while the rest of us are getting poorer every month	Education, pipeline
T2I	MLA waste.	Cut contracts to friends of MLA'\$.	More tech training and development.
T5Y	Government should be focused on providing for its people, not businesses. That means making decisions that prioritize the people. Government should not look to be profitable, but to spend wisely. Education and Healthcare are two important priorities - a healthy and educated population is less costly in terms of costs and able to bring in more with their skillsets.	The government needs to stop focusing on savings and start focusing on the reality - we need a PST. Every other province in Canada has one, and it would provide a significant boost that would prevent us from having to cut valuable and necessary services such as health care, while putting increased resources into education. Start with a small amount every single year - 1% over five years so we end up with a 5% PST. Very reasonable and a viable move to self-sufficiency.	End the focus on the oil and gas industry and look to the future. Renewable resources and new technology. We need a highly capable and educated workforce with a more diverse skill-set that can be more future-proof. We must move away from supplying an industry that is inconsistent and externally dominated to ones that we can better manage ourselves.
T2Z	Health care and Education	The tiers upon tiers of Management at AHS is absurd and could save millions upon millions of dollars	No
T7P	Increasing funding to healthcare and education; limiting subsidies to private oil and gas and other industries	See above	Support technological development in greener energy
	Making sure regular workers (not managers) are compensated fairly.	Letting go of all the cabinet ministers. Cutting down on all the booze and traveling cabinet ministers do. Cutting the number of rural MLA's. Getting ride of municipal governments of all areas that are not city status	Increase the corporate tax and start diversifying our economy so that it is not so heavily reliant on oil and gas.
T5H	Healthcare, education, diversifying the economy.	Get rid of the war room and cut down cabinet size.	Tax corporations and support a "green new deal"

T1B	Public money should be spent on PUBLIC SERVICES	The nearly 5 billion dollars in unnecessary corporate tax cuts? And a provincial sales tax.	Not make horrendous cuts to the entire public sector which leave Albertans sicker and uneducated? Just a thought.
	maintain smaller class sizes	less experienced teachers lower pay *****cut government position wages***** cut librarian wages reduce esl funding by a bit	inspire and support new university graduates who want to innovate their own idea, or set up a program that formulates a chance and opportunity for these young adults, to encourage their own privately ran business or corporation, hence creating jobs with more albertan local residue and corporate innovation.
T5M	<p>Stop union bashing and find a way to lift the lives of middle class Albertans.</p> <p>Make a higher minimum wage work.</p> <p>Raising people out of poverty can only help to improve the lives of Albertans, increase the provinces prosperity, and Alberta's tax base.</p> <p>Why do both Calgary and Edmonton spend so much on Ambulances getting homeless people off the street as opposed to providing housing and access to proper medical support. I have seen too many people downtown with uncontrolled diabetes, that by just being able to access insulin and by having a safe place to stay - certainly would have saved lives, and cost the tax payer a lot less than an ambulance ride and hospital stay.</p> <p>Worry more about the people that are three months income away from being homeless, rather than corporations that have proven to be only interested in their bottom line - not Alberta or Albertans.</p> <p>I do not have children, but I believe in paying taxes for the education of my neighbour's children. I would rather pay a provincial sales tax than see the public sector depleted. As a tax payer it is an investment in the lives of Albertans and my own quality of life.</p> <p>Where is your action on public work projects???</p>	<p>The government could actually find savings by actually and truly investing in the lives of Albertans as opposed to creating a shit-hole province that no one wants to move to. The rich are leaving. 20-24 year olds are leaving. You have alienated and are depleting valuable human resources through austerity.</p> <p>Stop wasting time policing women's bodies and get out of rekindling the abortion debate. What a waste of money!!! Stop being so ridiculously backward thinking and reductive towards women's rights. Invest in the living and not the lives of the unborn.</p> <p>Hiring more nurses and cutting down on overtime and burnout.</p> <p>Help the public school system by properly funding it and hiring more teachers aids. Standardized tests are bullshit. Why did you waste so much money undoing what the NDP had build for education in this provinces as opposed to just getting on with it and moving forward - costly and completely useless waste of money.</p> <p>Don't remove people from life altering medications that allow them to work and be contributing members of society - that is a bullshit move, and not an investment in Albertans. And by cutting AISH, doesn't mean that this government will not still be adding significantly to the number of people that will require social assistance when they can not longer work as a result of being forced onto biosimilars. Shitty and backward thinking.</p> <p>Help our university to be less reliant on foreign investment - and the education of students that have not intention of</p>	<p>Public work projects. Why not be proactive and start a public works project that starts the clean up abandoned wells - that out of work oil workers can get in on.</p> <p>Support the arts. The arts revitalize and bring about so much benefits to other sectors. The 50% cut is a joke and is a publicity stunt. I bet no real money is saved, but will just be re-distributed with losses in other sectors - small business decline that benefit from the arts, parking revenue for cities, marketing and communications companies, publishing and advertising etc. So short sighted.</p> <p>Reinvest in small business growth and made in Alberta ideas.</p> <p>Environmental innovation in clean energy and working on a 50 year plan to move Alberta to cleaner energy sources while not alienating the oil sector.</p> <p>A public works project to build a North South mono-rail from Edmonton to Calgary - that has plans for expansion up to Fort MacMurray and down to Lethbridge.</p> <p>Start thinking ahead and making plans for how Alberta Farmers are going to survive the next liberal attack on industrialized farming - what is going to happen to Alberta's beef, dairy and poultry producers with the shift to more non-dairy, and non-meat products, that are not necessarily healthier.</p> <p>This is what you should have invested in before corporate tax cuts.</p>
T5N	Education, health care, support for low income Albertans	Cut pensions given to all Alberta MLAs, as well as the extravagant benefits they receive - they can have the same health benefits someone on Income Support receives	By maintaining government services; stop giving tax cuts to big businesses & start taxing those same businesses at a rate equal to the Canadian average
T2R	Mental health, jobs	Don't spend on the new arena. You cut the budget for transit, but suddenly you have money to spend on the arena?	Focus more on information technology instead of trades. We're oversaturated with tradesmen.

T5E	Children and education	Taxing big companies more	By educating our children to the best of their abilities.
T6H	-investing in infrastructure to support agricultural, resource, and industrial production -investing in human resources through education -investing in infrastructure that supports workers and their families, including Health Care	Cut the gravy-train to UCP supporters Cut the wasteful Canadian Energy Centre "War Room"	Consider raising taxes on those who extract our natural resources consider raising taxes on citizens who require services. restore corporate income taxes to at least 10%
T1v	Tax cuts and fiscal restraint	Payroll and red tape	Cut taxes, lower regulations.
T3B	Health and education	Subsidization of oil and gas companies.	Diversification. Investing in alternative energy and technology.
T2P	Social services	Stop giving tax breaks to the 1%.	Tax the highest percent and corporations. They don't create as many jobs as the rhetoric states.
T2G	Health and education; growth areas that show return on investment by spin-off activities - tax credit for small business - not large business(!) - arts, film and television production, video gaming design, technology.	Lower the tax credit for large corporations; reduce politicians' salaries and pensions. Increase royalties to build up the heritage fund to match other healthier models such as Alaska, Norway, etc.	Provide tax incentives to other sectors of the economy to lessen reliance on the boom and bust of oil and gas; particularly alternative energy, film production; lower tax burden on small business.
T8N	Education Health care Infrastructure	Cut back on endless inquiries and court cases against the Federal Government. Close down propaganda bodies like the oil and gas "War Room". Smaller government - e.g. Ministry of Red Tape should be a small department in another ministry with assistant director as head. There are too many ministers and deputy ministers.	Invest in infrastructure building. Introduce sales tax to raise revenue for infrastructure building.
T6G	Spending priorities: 1) advanced education 2) social assistance 3) education 4) public health care	Savings 1) 30 million slush fund promoting carbon production in oil & gas sector 2) government advertising 3) require smaller private colleges to share resources with publically funded ones to make the post-secondary system more cohesive and efficient.	1) diversify the economy into renewable energy sources to offset carbon emissions 2) Make Alberta a leader innovative postsecondary education that incorporates online learning 3) support megacity infrastructure to grow Edmonton and Calgary and require bedroom communities to pay their fare share 4) high-speed train between Calgary and Edmonton
T8N	Direct more spending to maintaining publicly-funded jobs. When an economy is shrinking or in trouble, it makes no sense to remove every more money from circulating in the economy by reducing public-funded jobs. Capital is only capital when it's circulating. When money is taken out of circulation to "balance the books," that money is no longer available for investment and circulation.	Given the reductions in government services over the last 25 years, there are few, if any places, that government can find savings without significantly impacting the basic services Albertans need. If borrowing isn't an option, although goodness knows why not since the public is constantly being pressured to go into debt to consume and keep the economy going, taxes for top 10% of earners is the answer.	The government should be supporting infrastructure maintenance and improvement. Much of the province's infrastructure is sorely in need of maintenance/renewal. Government can invest in public works projects that hire Albertans who will spend what they earn in the province.
T2Z	Education and healthcare	Cut the salaries of MLAs	By investing in cities so that they can attract business. By looking beyond oil and gas - we need economic diversification and to keep young people in our province.
	Education system healthcare system Diversify the Albert economy- technology sector/ alternative energy/ biotechnology / blockchain	The government needs to invest in the creation of 21st century jobs, new economy.	Create a short and long term vision for the 21 century. See previous points above.

T1J	1) Economic diversification: technology, green energy, environmental research 2) Social supports: affordable housing, mental health and addiction supports and services 3) Education for the future: respect the curriculum work done previous to the last election	Bring in a 5% sales tax. Problem solved and no need to take from seniors and disabled citizens.	Incentive grants to initiatives providing jobs in the social services sector, such as Safe Injection Sites, tax cuts and support to the arts (film, performing arts centre in Lethbridge), reward green initiatives in solar power generation, reward initiatives in greening of industry (petro/agro)
T2M	Continued support for city infrastructure, schools and healthcare. What we need is consistency to drive efficiencies in RFP's and long term education and health planning.	The War Room - that's 30mil per year Travel - use video conference wherever possible Reduce all government employee personal spending budgets Have oil companies pay their taxes in rural areas - it make sense if they are broke but some of them are not and are still not paying.	Incentives for new industry - example, we did not have much of a Beer industry and now we do. Tech companies need incentive as they have a super high up front cost and tax cuts are not much use to them when they are not making money. What they need is payroll incentives. Re-evaluate the corporate tax cuts. These were meant to drive job growth via investment. That has not happened. If after a year it proves to have no or little return, it should at least be partly recalled and raised. If companies are just going to take their savings and walk, why are we giving it to them? Get something happening on orphan wells. Get them cleaned up!
t5a	health climate	from the rich+corporate	infrastructure green climate
T5X	Job creation.	By ensuring the money is being managed properly at the middle management level. Mismanagement of funds is a major issue in schools, healthcare and other government agencies. We need more accountability at these levels as I've witnessed several wastes in all areas that receive government funding.	Attract businesses to stay and prosper in Alberta.
T5b	Education, healthcare, jobs, seniors	Wages for politicians, stop wasting our money on stupid bicycle lanes, hire fines for criminals who habitually break the law	Stop giving handouts to people who don't work, look into agriculture and diversity energy sector, train students
T5Z	Education Health Care Policing	Tax big corporations more	Build the pipe line finally
T6C	Not gutting our healthcare system and education system. The proposed cuts are too fast, too deep and not being done in a respectful, collaborative way.	Not giving corporate payouts. Consider a provincial sales tax or having Albertans pay for healthcare premiums.	Green initiatives. Diversify industry rather than pouring all energies into pipelines.
T5X	Education, Education, Education!! We need to have adequate funding for all of our schools. We live in a very rich country, but we need to invest some of our riches into our young people if we want our country to continue to prosper. Healthcare, Healthcare, Healthcare! Frontline health services need to be a priority.	Upper levels of management everywhere. People in these positions are highly overpaid for the benefit that they provide. Stop wasteful spending of both time and money. Governments need to understand that the money from taxes is not an unlimited resource. You can't continue to spend money that we don't have and expect tax payers to pay more, especially in this current economy. Budget appropriately, and live within our means. That is what we as families are forced to do, so the Government needs to try to do the same.	Support our resource sector. Continue to advocate to get our resources to market.

T5X	Health and education. If you have a well educated population you are more successful. Health is paramount to who we are as Canadians. My children say to me if we moved to the US a broken leg may cause so to become bankrupt.	Why do we have so many education boards across the province. Health managed to amalgamate all the health regions and it has been quite successful. One Human Resources, one payroll system, one recruitment system. Maybe this philosophy could be expanded across other departments.	We have to move away some of your efforts away from the traditional oil and gas. What AI technology, computer technology. Edmonton had a very successful video gaming creation. Why don't we hear about that anymore.
t3r	putting AISH back the way it was	taxing the wealthy	make it easier for small businesses to get started
T0M	Money for the people of Alberta not you or your rich assholes.	By not cutting all the pensions, AHS, Teachers etc.	Not cutting the wages.
T3C	<p>STOP GIVING OIL & GAS COMPANIES TAX BREAKS!</p> <p>I DO NOT AGREE WITH USER PAY SYSTEMS - especially when the services are contracted out to American vendors. SHAME!</p> <p>INVEST IN DIVERSIFING INDUSTRIES THAT ALINGN WITH TRENDS TOWARDS THE FUTURE!!!</p>	<p>Close the War Room. STOP PAYING OIL & GAS COMPANIES w/ TAX BREAKS! They are taking the money and running from Alberta; NOT INVESTING IN ALBERTA. Get the Oil & Gas companies to pay for cleaning up their messes.</p> <p>Stop talking about separation from Canada.</p> <p>GET INNOVATIVE & INVENTIVE. ADOPT A HOLISTIC APPROACH TO MAKE REVENUE, HEAL THE PLANET, WHERE WE ALL BENEFIT FROM LIVING IN ALBERTA. Current path UCP is on, will only drive business and tax base away.</p>	<p>DIVERSIFY</p> <p>Film, television, streaming services, web production, commercials, gaming, virtual reality, radio, visual effects and other production services are experience a global BOOM with massive revenues being earned around the globe. WE ARE NOT REINVENTING THE WHEEL HERE! Lots of examples of markets where tax credits do work and examples where it didn't. The wealthiest companies in the world play in this arena and Alberta competes with nations and Canadian provinces to attract these jobs (that can employ many currently unemployed). WHY NOT TRY? Remove the cap watch us flourish.</p> <p>Hollywood: Alberta is a favourable location because of the exchange rate and it is a 3.5hr flight from LA. If Alberta could invest in this industry that is going nowhere but growth, we all win.</p> <p>Europe: Labour issues are causing delays in productions. Scouts are coming to Canada to get productions made (at favourable exchange rates). With an uncapped tax credit, watch this business flourish in Alberta.</p> <p>Asia: Japan and Korea have been coming to Canada - especially the Rocky Mountains for a number of advertising campaigns. THEY LOVE ALBERTA! If there was a tax credit in play, watch their jobs come here hiring many Albertans.</p> <p>With the right promotion to other content creators, our province would flourish creating content for communications based industries. We don't harm the planet, we are not tied up in legals and respect everything is about being Albertan, Canadian and a human on Earth</p>
T1H	The Alberta UCP should focus on health, education and social infrastructure.	Stop setting up useless panels, that only look at spending and not income, and actually take care of all Albertans not just rich buddies and oil corps.	By not focusing so much on oil companies and getting more involved in tech and small manufacturing. Help support students in K-12, and also in post education universities and colleges,

T5Z	1. Health Care 2. K - 12 Education 3. Social Services DO NOT SUBSIDIZE PRIVATE SECTOR AT A CORPORATION LEVEL! HELP SMALLER BUSINESSES STAY AFLOAT!	I'm sure there are many areas that I'm not aware of. I'd like to see a plan that goes further than the current term of the government to lessen the pain over a longer term. The budget can be balanced in 8 years instead of 4. Why so much in a short period of time? I've been around long enough to know that this problem can't be solved in a single term and shouldn't.	Long term approach. Not an over reaction that inflicts so much pain in a short period of time. Reducing taxes on larger corporations hoping that they reinvest in Alberta is placing the responsibility in those who are not responsible to us. They need to pay their fair share and we need a long term plan. We're stealing from our future with no real intention of paying it back. Economies cycle, and if you're planning properly you should be able to find a way to be prepared for it when it goes back up. Not voting for a government that takes away my kids rights to a fair shake at learning.
T2Z	Social services, health care, and education	Isn't that your job to figure out?	By putting funding where funding belongs instead of feeding it into corporations where you'll never see it ever again, rather than cutting jobs of innocent people in sectors where we really seem to need it. Like social services, health care, and education.
	Focus on low income and person with disabilities and decent and adequate housing	Lowering all government employees and unnecessary spending on foreigners and focus on natives and adequate housing	Focus on low income and disability people
T1h	Stop trying to be a Donald Trump want a be.	Stop traveling around the world? Telling people that Alberta is open for business. A 12 year old knows that.close down your stupid war room. You are not a leader....you are a follower.	Get the front line workers full support make our real professionals Happy.
T8A	Healthcare	Commercial banking taxes	keep The pipeline in motion and bring back more blue collar jobs
T5Z	health and education	stop selling oil and gas to other countries for less then Canada itself	oil and gas...its the backbone of Canada. Let the pipelines go through!
T8R	Health care, schools, seniors care	Quit the major tax breaks for big business, diversify outside of the oil business. Global demand for oil is on the way down we will never see the huge income from the oil industry again. Alberta needs to find other ways to bring in money.	Support the public sector, quit the bonus for private corporations
T8N	segments of the population who are marginalized, arts and culture and really aiming to diversify the economy beyond oil and gas	oil and gas subsidies	Look at small business and invest in them
T8a	Public Education (not private) Children and family services Public health care (not private services)	Quit funding private education Eliminate the energy board No free passes for delinquent oil & gas companies - make then pay their taxes	Stop cutting government jobs Diversify by instituting incentives outside of oil and gas, such as tech and media
	Education increasing and maintaining. Increase services for as and students with special needs	With payroll.	
T4C	Healthcare and Education Use more Nurse Practitioners in primary care with physicians Utilize RNs for more skilled care in acute settings and case management of complex patients in community.	Cut the PCNs - not cost effective for providing primary care Corporations - stop the tax breaks Government travel and salary Put in a PST!!	Diversify away from oil and gas. Invest in new technologies Invest in young adults starting their careers Provide daycare so parents can work
T3k	Economic diversification	Politicians salaries and expenses	Royalties
T5y	Special needs, class size,support staff	Increase school fees,more private schools, options for at risk youth	Good question? Less dependence on oil industry

T1B	Spending priorities should be to make sure everyone in the province is looked after. That includes those needing public education and public health care as well as low income seniors, people with disabilities and addiction. Pensions also need to be protected. look after our farmers.	The government should be more focused on increasing revenue rather than cutting services through slashing jobs. Diversify the economy, fund infrastructure projects, get people working. I think people would rather a modest premium for health care or a provincial sales tax to continue funding public health and public education and quit giving large corporations handouts without a guarantee to create longevity and jobs in Alberta. As it is many of us are facing losing our homes including this senior.	Infrastructure and research projects as well as a healthy tech sector. These are all good paying jobs and needed to continue moving our country forward.
T6C	Education, social programs, health services, agriculture support, environmental sustainability	Give less money away to large corporations, stop fighting the carbon tax, consider directing cuts to top paid politicians and cut political spending	Support education, social programs, health services, agriculture and environmental sustainability so that more people can be hired within these fields
T5A	Education and Health	Taxes, oil	Encouraging entrepreneurs
T0E	Education (specifically within the schools), healthcare and agriculture. More specifically the rural areas of each sector.	Reducing political leaders wages. Reducing superintendent wages. Reducing university or college Dean's wages. Reducing flying or driving with private vehicles. Reducing political advertising.	By providing more money to education where students start out their learning. If they are successful in school, then they will help with the economic growth. This doesn't just mean oil field related.
t6b	Hire more teachers	Governments could find savings in the "top end " of the education system. It is embarrassing when the superintendent (joan Carr) makes more money than the prime minister of Canada. Not only that, all of her assistants!! If the publicly funded school board was run like a private business, and had to be fiscally responsible, there would be lots of money to hire more teachers! Our education system is definitely in need of restructuring. Unfortunately, the administration gets there hands on funds first, and the teachers get the leftovers. All of the behavioral programs are killing us. Let the teachers discipline kids! Kids do not respect teachers or any authority for that matter.	Charge each student a minimal fee!
T5T	Personally, ensure police and fire and ambulance have what they need. Teachers and education and healthcare then infrastructure.	AHS - need to reduce all this government duplication make it so it is only done once. Political expenses within government all levels for example government pensions should be just like everyone else. Getting rid of the marketing group for oil and use that money for re training programs for vacant job positions in all sectors.	I believe that they need to look at every area not just oil and gas. For instance alternative energy such as solar and electric etc. Tech sectors.
T1Y	Diversify economy! 43 years of Conservative power, still relying on oil revenue....Shameful. Previous conservative governments spent like there was no tomorrow!	Stop wasting money on War Room (!!??) and senseless appeal of carbon tax (upheld by 2 previous appeal processes, you will not win!)	Stop current cuts to education and health, put much more effort into economic diversification, and less effort in blaming NDP for all that ails the current economy
T6V	Healthcare, Education	Rather than focusing on savings, focus on how to bring in more revenue by increased business. Let the business environment have some movement. Focus on the Top line.	Build IT hub in Alberta. Help small and medium IT companies to bring in more business from other province and countries. Many of the spaces are still vacant especially in Calgary. If we bring in proper use of this office spaces and technical capability, there will be a lot of economy movement. Find an alternative to oil business like IT.

T5Y	Education, health care, and social services are the most important in our province. An educated, healthy, well cared for population will save money in both the short and long term.	Government perks, tax breaks to huge corporations, handouts to big businesses. Also, cutting social services to the population actually costs more in increased court times, jail time, homelessness, etc. You need to look beyond your term in office and make plans that will have a lasting impact.	Education education education! We also need to promote our oil industry as a leader in the world, and we need to put in the time and research to be a leader in clean energy, including oil. We shouldn't settle for only meeting clean energy goals, we must be the one other jurisdictions are looking to as being proactive, and a leader in the field.
T7X	Public service Infrastructure Health care	Get rid of the top heavy. Alberta health services has the most managers I've ever seen	Oilfield Get coal back Economic diversification
T6V	Health care and education	Tax the wealthy, and corporations. Kenney's corporate tax cuts have not generates new jobs, as expected!	I don't know
T3K	Job creation and economic growth	Government employees are over-paid, especially in AB Energy and AB Health. Senior benefits are over-paid, many seniors are very wealthy and they are receiving full cash and health benefits from both federal and provincial governments.	Incentives for job creation and tax relief for corporate
T8H	Education and health	Not giving 4.5 billion to large corporations	Support invitation through education
T0A	Spending to support our citizens especially the most vulnerable ones ie seniors, students, children and single parent families.	By cancelling their corporate welfare policies. So far the corporate tax cut has only resulted in corps buying back shares and boosting CEO bonuses. I haven't seen any hiring spree with the billions we've gifted corps. Better to "get Albertans back to work" by spending it on nurses, teachers, and infrastructure upgrades.	Cancel the tax cuts that have gifted billions to corps that aren't hiring anyone with it. Re-instate the STEP program, film and innovative tech incentives and give healthy tax breaks to actual firms creating real new jobs in areas that aren't fossil fuel extraction.
T6W	-Jobs -Health care -personal tax cuts - do not have job losses.	-Cut hours in some areas, that does not need 24/7 operations or 12 hour operations. -do Albertans need to start paying Alberta Health Care again? Pay into health care needs. Seniors not to pay. -Alberta parks to charge more for camping. Reduce yearly operations by closing early. These sites seem to fill up every year. -Hunting Licences to increase. -5% tax on new vehicles.	-Business rebates for hiring people- should have to keep employee for a least for one year. Something to what is available now, where government pays a portion of the hourly wage.
T0E	Healthcare and education	Bring back higher corporate tax rate	Stop threatening healthcare workers. They support the economy too, and many of them have oilfield spouses and have already been hit by the downturn
T4P	Homeless,veterans	Cut all the transfer payments to Quebec and Ontario	Yes
T5a	Education Child care Health care Seniors	Non essential expenses	Tax breaks
T5S	Education and Healthcare	Reverse the Corporate Tax Break given in the last budget.	Stop focusing all of our efforts on Oil and Gas, and Diversify before its too late.
T6c	Healthcare, education	Not so many corporate giveaways and stop wasting money on the war room	The government needs to stop putting public service against private sector!
T5T	Health care ; Education; and job creation	Quit paying ridiculous amounts for consultants use the expertise within. Trim management rather than bottom end	Diversify our economy. Oil patch yes but encourage different industries to settle in Alberta

T5Y	<p>Post Secondary Education Public Education Health Care Economy by supporting small to medium Alberta and Canadian based business and the tech sector</p>	<p>Cut the tax breaks to large multi national oil companies, and cut the bonus/perks to UPC panels, look for legitimate efficiencies in upper management. Cut adversarial politics and work with Ottawa on a national pharma care plan and get moving on the pipelines</p>	<p>supporting Canadian based, Alberta based companies small, medium and large. Diversify but supporting the tech sector and green companies. Work with others to get pipelines moving while building a diverse economy that is less volatile</p>
T5x	<ol style="list-style-type: none"> 1. Cut all meal expenses for ministers. 2. Put a mandatory On all pensions within the government that they must work at least 25 years to collect pension. This is the pensions the minister's get. 3. Instead of cutting senior benefits. Cut benefits on welfare recipients. To drug testing. If they want their benefits they can work for them. 4. Cut the cabinet down to a size it less people. 5. Work our government as a business, not a handout to rich people. 6. Have grants to get people working. There are many businesses out there that could be started to get people working. 7. Our healthcare system is crumbling with ambulance attendants sitting at hospitals for their whole shift because they picked up a patient And can not leave the patient alone. ITriage these patients that come into emergency. Have another area for a quick and simple needs. Have it written by practitioners that can get them in and out. Most of the people going in there do not need an emergency room they just need a doctor to write a prescription to get antibiotics or other such medications. 8. Build in jail way up in the north, Give prisoners greenhouses where they have to sustain their own life. Give them our animals to look after and feed, so that they have food. Give them nothing in the jails other than a bed and toilet with running water. Leave them take care of each other. 	<p>Cutting staff does not find savings. Cut salaries for the upper echelon of these organizations.</p>	<p>First of all we need to expand job creations in upcoming fields of employment. Artificial intelligence, Computer needs, different areas of diversity. Why are we trucking our oil to the US so that they can truck it back to us. Build a plant where we can do with the same as they are doing with our oil. This will get people working, this will save us money and get our growth going.</p>
T5Y	<p>Maintaining/improving healthcare, education, and government services</p>	<p>By stopping financing non government mandates (example private sector) Stop paying government workers for not going to work (example sick days). Stop pandering to pressure groups.</p>	<p>By selling our province's resources on a national level for example the spin off employment created in other parts of the country.</p>

T6C	<p>Spending needs to be increased for ALL of the following: Education, AISH, seniors, Education (At all levels in PUBLIC Sector Only) and Daycare.</p> <p>Need more Assistance in Tech sector and GREEN ENERGY!!</p>	<p>CUT all oil and gas tax reductions as it is a demand of minor issue that will go on for years.. Even if the world was to drop down to 50% level of current consumption. There is no need to reduce taxes because of that issue. \$100 a barrel will never return on the commodity market ever again.. Its days are numbered as the SOLE energy provider. CUT and KILL the oil and energy think tank. That which is doing more "harm" than good of any kind.</p> <p>Cut paying for political party members in Federal when all that province should worry about is its own sections under the constitution. The think tank will not bring back 100 USDN Dollar barrel oil.. Just will not. Make all oil and gas pay taxes which is must even it means going bankrupt.. ALertans cannot sustain bad managed companies any more than taxpayers can support defaults on mortgages and personal equity loans.</p>	<p>Diversify the Economy and and industrys to areas that there is real need for and positive environmental impacts. From creation to reuse or reclaiming process must be thought out. Increase deposits for Oil well leases and every oil well must put down 100% of oil capping fee up front.. before drilling... Interest leftovers will be paid back after the money is uses for capping well.. If this fund is managed right no Oil and gas company will go bankrupt EVER.</p> <p>Start forcing all remaining oil and gas companies to cap all wells be it theirs or not and no bankrupt company can walk away.. The well is capped first or sold to new owner who have to come up with the capping fee... Also make it law that any well sold or traded in the market must have full 100% cost of capping the well fee to paid into the pot.. What the original paid only gets back the original deposit. The interest remains in the POOL of funds for the future assurance the well will be properly capped.</p> <p>Should companies not like these clean deposits in full before the well is drilled or the mine is opened then there is NO market and no desire.. Albertans who are not in the oil and gas industry should not pay for the clean up of other people's messes.</p> <p>Increase and attract manufacturers like Elon musk to build electric cars in ALberta if they do not want him in Ontario. We need more innovators in ALberta on the new tech like electric aircraft, Robotics Auto welders and self propelled electric tractors that can run without humans on board.. Self automation allowing farmer to be more managers and not just slaves to the machine and the system. Encourage new generation of heat pump development and geothermal electric generation and heating systems. Which can be with in city</p>
T2B	<p>I would like to see about the Bow river diversion projects studied - aka the Bow basin water management options. Also, the government should work with TransAlta on the Ghost Reservoir, and ensuring that the contracts for flood mitigation are renewed.</p>	<p>Governments tend to waste a lot of money. Set priorities, stick to them, and put non-essential services on the back-burner.</p>	<p>Hard question. Support the oil and gas industry.</p>
T8N	<p>Education and health care need to be fully and properly funded. They are the foundational building blocks of Alberta society.</p>	<p>By reversing the failed tax break for corporations. The current government created this problem.</p>	<p>By diversifying our economy. There's more here than oil.</p>

T4X	The government should focus on three things. First returning the funding it cut from education and maintaining education in this province. Secondly maintaining PUBLIC health care and funding. Third expending our economy away from oil and gas. This could be done through grants and tax brakes to video game companies and different forms energy. The high number of trade trained works could transfer there skills to 'green' energy sector creating jobs and growing the economy.	Savings could be found by returning the tax on oil companies to where it was. Decreasing funding to charter schools and public schools. If people wish to access charter and private schools then it should be an out of pocket expense. Finally put into place health care premium or PST on none essential items. My way of life is more important than not paying either.	Oil and gas are on there way out. While we should encourage money from this industry we need to understand that the boom days are over. We need to expand through attracting new opportunities. Some of these could be looking at the green energy industry. It would allow many opportunities for trade works to be put to work and would allow Alberta to get in on a growing industry. Alberta also has video game companies that should be encouraged to grow and expand here. This is a growing industry. However laying off our public sector is not the way to go. These jobs allow for money to go back into economy. For many families this is the only person left working. While the UCP seems to have decided that Alberta doesn't want nurses and teacher, they are currently being offered position in other provinces and countries because we have some of the best teachers and nurses in the world. If these jobs are lost these families will leave and there is nothing to bring them back to Alberta. As a province we are failing. Soon you won't have to cut jobs people will have left. The land of milk and honey is no more.
T3B	Please include continued funding for the feasibility study for Bow Basin Water Management Options Please include renegotiation of the TransAlta modified operating agreement during flood season for the Ghost Reservoir	Government administration	Encourage diversity, particularly green technology.
T8S	Improving funding to health care. 0 privatization. Reverse the cuts to health care and education. Start focusing on the needs of Albertans rather than rich corporations.	Reverse the massive tax cut given to corporations. Stop funding private schools. Cancel the idiot war room.	Invest in infrastructure repair and renewal. Support diversification as we transition away from a dependence on fossil fuel revenue. Improve funding to post secondary education to help workers obtain new careers.
T6V	Public health care Public education	Their own travel and expenses	Diversify the economy
T6G	Education Healthcare Moving from oil/gas to other forms of energy production. Sustainability	Provincial sales tax	Education and training for future careers.
T3C	Health Care & Education	By increasing the corporate tax rate	Diversifying our economy & not just supporting oil & gas
T0G	Education and healthcare	Bureaucracy	Govt projects
T7X	Keeping family pyohtans is Essex tusk they the well rug of the family as a whole and the community wins!	Corporations and industry!	Bu not firing and downsizing programs that are working
T4X	Health care and education	Health care and education	Get pipelines built and teck approved

T2Y	Healthcare Technology (Plus re-index AISH recipients. I voted for you but this will likely be my last time after these cold-hearted acts that Mr. Kenney has done.)	Serious? If you want more money, quit giving these so-called incentives away to multi-billion dollar companies; you can't take more away from the poor, sick and working class. More savings? Automation of more services. But that would result in more unemployment and hurt the economy plus be political suicide for the UCP. More revenue? PST. Simple.	Mr. Kenney should quit huffing and puffing and killing off programs like Energy Efficiency Alberta simply out of spite because he doesn't like them. Myself and others had great jobs with a 17(1) company but were laid off because of Kenney. I was an 17(1) but after the recession of 2008, knew that I needed to make changes for my family and our future. Now Mr. Kenney has made life even harder for us and those around us. I was not/am not an NDP'er but at least there was hope at prosperity and economic diversity under the previous government. Mr. Kenney came in and seemed to blow that up with a virtual atomic bomb with his ongoing rants about Alberta not getting its fair share and 'oil first!' etc. etc. My brother's company was planning on moving its head office here before Mr. Kenney came into power but it never came to be. It apparently was common knowledge that the deciding factor was Alberta's sudden drop in popularity among other provinces and states and uncertainty about Alberta's future due to talk about separation and Mr. Kenney not taking a hard stance against it as being the reasons. If those examples of Mr. Kenney causing unemployment and keeping American companies from moving here are happening in my little world, there are obviously hundreds/thousands/hundreds of thousands of other examples of where Mr. Kenney has caused people to lose their jobs and prevented economic growth simply because he is who he is and does what he does.
T0g	Education , public health care ,	Stop all the committees, have government MPs take a large wage cut , starting with Jason Kennedy's wage ...stop spending on trips and expenses, and entertaining your friends, also get rid of the stupid war room . Just another useless expense (very much like Redford and her sky palace)	Diversity and incentives to develop new technologies,
T6C	1. Ensuring decent quality of life, including medical and pharmaceutical coverage and shelter from the cold, to all Albertans regardless of their employment status or financial inequality. 2. Diversifying our economy and divesting our provincial coffers from the dying oil and gas industry. 3. Improving our seriously underfunded municipal infrastructures.	1. COLLECT TAXES PROPERLY. Stop letting criminals off with tax evasion. Return corporate tax rates to a reasonable number like 15%. You won't need "savings" if you collect ENOUGH money to run the province at all. 2. Stop letting Jason Kenney spend our tax dollars on his excessive expenses.	1. Diversify our economy and divest from the dying oil and gas industry. 2. Fund municipalities adequately and THEY will literally create jobs. 3. Employment in our province was on the rise before your latest budget. Start over, you did everything wrong.
T7Y	Spending priorities need to be focused on health care and our our economy. Making life better for Albertan's, not making the rich corporations richer.	The government can use the savings from holding back spending in areas that are not a priority.	Stop spending foolishly where money shouldn't go. Again use common sense! Our health care system is failing us and the government decisions are making it worse!

T2S	Health, Education, Commercial Infrastructure, Flood Mitigation, Agricultural and Resource innovation, Tourism, Immigration	Eliminating organizational inefficiencies within key provincial ministries. Reducing the culture of ambivalence and entitlement among provincial government employees. Incentivizing and rewarding the identification of cost savings among departmental employees	Reduce economic drag of bureaucracy and taxation, then get out of the way.
T6X	Education, Medical	Review Panels, "War Rooms", Unnecessary Government Travel, Wasted money on law-suites with no chance of winning.	Diversify the economy
T8A	PLOWING. PLOW THE ROADS. FIXING POTHOLES WOULD BE NICE TOO.	Professional Development: Teachers and University personnel are forced to participate in these ridiculous PD days that are a waste of time and resources. The University of Alberta dedicates obscene amounts of money to "PD" and so does Alberta Education. PD amounts basically to people who are not in classrooms telling teachers and educators what to do and contributes directly to the administrative bloat that the UCP promised to eliminate!! If you need to make "free days" for educators, give them "inservice" days, that allow them to catch up and make their own lesson plans, without interference from the education apparatchiks who don't even like students!!! They say those who can't teach but really, those who can't teach education!	Not sure, I'll leave that one to the UCP!
T5T	The government should focus on the working class and most vulnerable. This includes children, seniors, disabled and homeless persons. This government is a disgrace, greedy and callous.	They could find savings from the big businesses paying their fair share of taxes. They could also stop spending so much on travel and food expenses for themselves. The haves should share with the have nots.	If the big businesses pay their fair share of taxes and the most wealthy ..the government could support job creation and keep families working.
t5h	Education (Primary & Secondary) & Health Care	Increasing corporate taxes once again - it does not appear to be benefitting the economy as anticipated and is definitely not worth the massive cuts to public services	incentives for green initiatives and small businesses

t6H	<p>Education and Health Care are vital to this province. As a teacher, I would like to express the need for a small class and the extreme negative effects in a large class. By making cuts to the education system, the teachers will struggle to reach those students who need it most. When you have a small class size, you are able to take the time to work more often one on one with struggling students. You put a teacher in front of 30 students, those poor struggling kids won't get as much attention. These kids are the future. I'm ashamed that our province is letting them down. I challenge the government to talk to any of these students and ask them how it feels to not get the attention they need to be successful because their government is making cuts to their education system. It's so sad to think that kids are going to suffer because of an agenda that doesn't take them in to consideration. I feel disheartened knowing that my weakest students will most likely regress next year because they will not get the support they need because their teacher could have a third more students than this year.</p>	<p>Why would you eliminate carbon tax if you needed money? Or...how about introduce a provincial tax until your budget is managed. Don't hurt the kids and their education</p>	<p>Don't cut jobs and you won't need to create jobs. Those who are now, or will soon be unemployed won't be able to spend their money, which certainly won't help the economy.</p>
T7s	<p>Health Education Seniors Environment Infrastructure</p>	<p>Amount of management not supervising people. Limit MLA travel and out of country travel Shut down war room and remove those staff</p>	<p>Don't fire any government workers Have meaningful conversations with federal government Promote the province</p>
T8A	<p>Public Education, Post secondary education, and Health Care.</p>	<p>Eliminate Fair Deal Panel. Eliminate funding to private schools. Reduce number of ministries. Reduce number of rural hospitals. Reduce number of municipalities.</p>	<p>Provide incentives for renewable energies. Provide incentives for start-up technologies. Reduce reliance on fossil fuel industries, because technology has eliminated many of the jobs in that sector. Focus on research on reducing greenhouse gas emissions. Provide opportunities for retraining.</p>
	<p>-Services and supports to lower the rate of Albertans living below the poverty line. -Services for public health and resources for community groups fighting against the opioid epidemic. -Education, including post-secondary, without meddling with school board elections or boards of governors (regarding the possible legislation on municipal elections and involving partisan politics).</p>	<p>This question should be savings/revenue. -Wage caps on public sector salaries over \$200,000 (including ministers and deputy ministers). -Introducing a PST of less than 5%, with rebates for households earning less than \$50,000 annually. -Higher taxes on the top income earners and corporations.</p>	<p>-Diversify the economy. Tourism, the arts, and renewable energy projects should all be better represented in the budget. -Provide re-training programs for workers laid off from the oil and gas industries to give those Albertans opportunities for employment in other fields. -Support for municipalities for infrastructure and large construction projects. -Resume incentive programs for tech industry. This is a building block for a prosperous future in Alberta and ignoring growing industries will only keep us in a cycle of job losses and severe budget cuts.</p>

T6C	Education, Health care, helping seniors and people on AISH. NOT decreasing their already insufficient funding. Keep payments before the end of the month, not moving them to the first of the month to make it look like you're "balancing the budget"!	Decrease travel expenses for Kenney and the MLAs. Make the oil companies pay proper taxes, not giving them tax cuts which do not great jobs. And make the oil companies pay to clean up orphan wells and pay their municipal taxes.	Put in a carbon tax and use that money to support tech and green startups. ...kinda like the NDP were doing before you came in and started the massive job loses.
T8E	Public Education Health Care Environment Economic diversification	Stop giving tax breaks to oil and gas companies. We cannot give tax breaks to giant industry. The ship is turning globally and we need to acknowledge this.	Tax breaks and grants to small businesses and technology. Bring back the tech and innovation grants.
T2x	A move to economic diversity and green energy. Education grants to promote new industry shifts.	Cancel the 'war room' and stop these ridiculous Vanity projects.	Stop attempting to use Alberta's tax money to bribe and pay-off corporate entities who have no stake in our prosperity. Instead, reward new, innovative companies wanting to move into Alberta and provide a more robust suite of services to them and their employees / families instead of cutting health & education. Invest in the future, not the past.
T2p	Infrastructure. Education. Health care. All should get more money not cut.	You could get more money by taxing ALL large corporations more.	Tax large corporations. Bring in other industries like hemp seed/fiber, Technology and movie sectors.
T5S	Healthcare and education	Get rid of war room, increase corporate tax rates	Invest in education and infrastructure
T8N	Not what they are currently focusing on, that's for sure! They should focus on education, nursing, universities and all public services. So many cutbacks have taken place in the wrong areas.	Cut government jobs.	They should support job creation by restoring the previous government's mandates.
T8H	The government needs to find ways to get more money into the public sector - education, healthcare, etc. There's no way that Albertans will be able to receive the education and healthcare that they deserve and need with the budget that was set forth in 2019.	I think that we need to find alternate forms of revenue, not savings. Maybe a PST, maybe increase income taxes at the higher brackets, maybe less tax breaks for big businesses. I think we should also focus on diversifying and find areas outside of oil for revenue.	Find more revenue (as mentioned in previous answer) and put that back into the public sector. Improve public employees ability to buy and add to the economy and this will help with economic growth.
T5L	Increasing support for workers protection from further cuts by your government. Use consultation as a guide and not simply ignore it. We do not and will not put up with another era of Ralphism!	Return control of pension funds to people like the teachers of Alberta....end change based on your conservative polices instead of performance of past fund administrators which had better results in the past than your imposed changes. NO MORE BIG BROTHER TREATMENT OF WORKERS. WE DO. OT NEED A ROBIN HOOD WHO TAKES FROM THE- POOR AND GJIVES TO THE RICH	Provide for greater help for the employees needs and not the employer. Your methods do nothing to create good full time jobs for Albertans only provide for further enhancing the bloated profits of your well to do supporters. Build the pipeline you promised you could do when elected. Also stop pandering to the agricultural sector just to keep your government in power.
T0M	Retaining nurses and teachers.	Stop giving your corporate friends tax breaks.	Supportive subsudized day cares. Mothers can work then.
T8A	Healthcare Education Economic diversification	Cut the red tape committee Cut government travel Cut blue ribbon panels Lower MLA and their advisors wages	DIVERSIFY OUR ECONOMY
	Education, particularly higher education.	Cuts to industry/business incentives. The rich should not get richer.	By stopping the cuts to health care and education and focussing on reducing the bloat in government and industry/big business funding.

T5J	maintaining and improving public healthcare, education, and investing research and finances into diversified jobs, rather than exclusively focusing on oil.	by not investing in the dying industry that is oil, and by taxing larger corporations.	Using resources to invest in alt. energy, environment, and small business.
T5A	Green opportunities health education	Make welfare recipients take drug tests no welfare for drug users	Green opportunities Support entrepreneurs
T6C	Funding enrollment increases in public (those school boards with an elected board) education, funding public health care to reduce waitlists	Increase taxes on private corporations, provincial sales tax	Support alternative energy sector to create new jobs - the oil sands are over. Do not reduce wages - then public has less money to spend on the economy
T5E	Keeping our health care & Education strong, and serving Albertans.	Not giving tax breaks to profitable corporations. The Canadian energy centre is a great place to save money. Big, profitable corporations don't need propaganda help, that money could be better spent on our vulnerable communities. Keeping our health care providers publicly owned, so we don't see profits leave the province for reduced quality of care, which will lead to poorer health outcomes. A healthy population can contribute to our economy.	Properly support health and education, to keep us healthy, educated, and innovative enough to be able to create growth, and not hurt the economy by creating uncertainty in our health care and education professionals.
T6E	Healthcare AISH Education Infrastructure	Higher taxes on corporations Lower wages for high end gov't employees. Stop giving money away to foreign oil!	Provide better services when people need them. More healthcare, more education. Affordable education. Future energies.
	Education and Preventative health care. Cuts to these now end up in higher costs down the road. More mental health issues, crime, higher health system costs	Reduce corporate handouts, implement a provincial sales tax	Diversify Alberta's economy, invest in sustainable industries, green energy, transition/train workers to work in climate friendly industries
T7Y	Post-secondary education, investment into existing research-hubs of both theoretical and applied nature. Universal support systems for childcare, healthcare, affordable housing, and mental health services.	An additional tax- weighted but not limited to the wealthiest section of the population.	Investment into our post-secondary education and research institutions.
T5T	People, not corporations	Lose the war room, and the exorbitantly high-priced totally ineffective "leaders" thereof. Insofar as AHS is concerned, have your auditors look for doctors who do not provide refills for prescriptions which are for long-term maintenance, but rather insist patients come in...when no other work is done other than giving another prescription.	Don't cut education...THAT is the best way forward.
T3C	Post-secondary education Public transit Housing (including rental and affordable housing) High tech	Road tolls on the ring roads Utilizing campus spaces for community purposes, especially in the spring/summer Policing - Does Calgary really need 2 police helicopters when Toronto has none? Subsidies to industry - should be tied to environmental and social/community measures	Invest in education - keep young talent here. Invest in all stages of the innovation pipeline, from start-ups through early growth. Support the emergence of a viable high tech ecosystem - there are a lot of great STEM brains in Alberta, but they are leaving in droves. Invest in vibrant, culturally-alive communities. People move to communities they want to live in, not to low-tax jurisdictions.

T6C	They should be spending their money on renewable energy. They should cancel all further plans to expand the oil sands industry (the world stage will stop it for us soon). They should focus on downstream refining into plastics and carbon fibre within Alberta, immediately.	The government should cancel the \$4.7 billion corporate tax break, and put it back into my child's education, and healthcare.	They should accept that oil sands is a sunset industry, that an inevitable strong international policy response to the climate crisis will cripple our already struggling industry. They should read the papers outside Alberta, and recognize that an energy transition is coming for us, and we're not prepared. They should immediately support renewable energy job creation before it's too late. This is no secret.
T3C	Post-secondary education Public transit Housing (including rental and affordable housing) High tech	Road tolls on the ring roads Utilizing campus spaces for community purposes, especially in the spring/summer Policing - Does Calgary really need 2 police helicopters when Toronto has none? Subsidies to industry - should be tied to environmental and social/community measures	Invest in education - keep young talent here. Invest in all stages of the innovation pipeline, from start-ups through early growth. Support the emergence of a viable high tech ecosystem - there are a lot of great STEM brains in Alberta, but they are leaving in droves. Invest in vibrant, culturally-alive communities. People move to communities they want to live in, not to low-tax jurisdictions.
T2N	Investment into transitioning from resource-based economy/economic diversification Effective and adequate supports for Albertans that need them	The administrative burden/red tape of some support programs that strip the recipients of dignity without improving the programs' efficiency of delivery or effectiveness of outcome (Alberta Works). Not all admin costs should be "saved" as some social workers could support those most vulnerable who need additional supports; other recipients would benefit from having less paperwork. Overall, this province has a fiscal imbalance problem -- one that requires broader tax reform. "A sales tax, for example, could be used to lower income taxes and lessen our dependence on volatile resource royalties," to quote a 2018 <u>expert report from the UoC</u>	Investment into and support for transitioning from resource-based economy/economic diversification, thus inspiring confidence of businesses from outside the industry, and of younger generations and talent from across Canada that Alberta has a future that is not all oil and gas!
T6A	Raising Taxes to fund the \$4.7 billion business give away	Raise taxes - implement a provincial sales tax.	Raise minimum wage so poor people have more money to spend
T3G	Health care(front line workers) Education K-12. Seniors Care and services	Alberta Lottery is now going into general funds. No political raises and limited travel, cut politicians pensions	Wind power and solar power energy, not dependent on oil
T3g	Education!!! On all levels. Homelessness Non profit sector	Probably in the paycheques of themselves	Supporting small businesses
T4V	Public Health care Education Infrastructure Support for the community	Mr Kenny's transport	Ensure adequate staffing levels in the public sector including publicly funded health care

T0E	Since the UCP came into power, our highways have become nothing more than wagon trails. They need fixing. Government buildings are falling down around many of the civil servant's ears, they need maintenance. Stop cancelling all of the projects that were put into place by the Democrats by paying huge penalties to the contractors. Overall, stop lying to the people. It was the previous PC government that put Alberta in this current position.	Stop giving away the 4.7 billion to the oil and gas companies, where we will never see a penny in return. Stop with all the panels, they cost a lot of money for all of these panels; if you don't know what you are doing, then leave. Terminate the war room, Kenny gave his friends a well paying job for those who are involved with it. Stop with the holiday trips for Kenny and his buddies to travel over the world, for what? Stop cancelling all of the projects that were put in place by the Democrats, it cost a lot of money to get out of the contracts.	Go back and review and follow the Democrats' blue print, they were on the right track to diversify, job creation, and getting it done. Stop banking on the oil and gas industry. If anyone has any brains, you will realize that Alberta's "boom" is over, furthermore, the "boom" was a construction boom, and it is done.
T2N	I think debt management needs to be carefully balanced with looking after the needs of citizens. Getting out of debt quickly means vulnerable Albertans are hurt, take it slow& perhaps find other ways to finance this. Dare I say it - a sales tax! Much more stable than relying on royalties.	Take a careful look at school exams. Things like provincial exams are incredibly expensive. Apart from Grade 12, do we really need them? Easy on the fat cat supports. Dare I say it - a sales tax.	We need to get a lot of our eggs out of that gas & oil sector. I agree that the media picks on Alberta way more than is fair but it's time to face the music, oil & gas is never going to be what it was. There should be a planned exit from dependence on that area & explore new sectors that are operating up for growth - green initiatives, technology areas.
T0A	I feel the priorities are maintaining what we currently have till our economy turns.	Eliminate the corporate handouts and pay the people first	Diversification is the key
T6W	Schooling: maintain budget as is and not cut programs and funding that are so critical to the development of our future citizens. Nursing: do not rollback wages or cut back on compensation. It is understood that the UCP want to minimize overtime and generally pay less for nurses' wages. This will not work.	I am not familiar with where the government spends their money in other sectors. I am invested in those areas that affect my family.	Public housing, social services, support growing businesses.
T5N	Spending money to give healthcare workers, the raise they deserve	Quit wasting money on the corporate buddies, which hasn't put workers back to work	Take back the millions that has not decreased unemployment
T0L	Healthcare and a Education first. Second, retraining for out of work oil workers Investing in short term sustainable projects, solar, geothermal, etc Implement a sales tax. If you want recognition from other provinces or the Federal government, then be on the same playing field. Don't whine about lack of oil revenue to cover costs because prices won't recover above \$60/ barrel. Tek Resources won't go ahead with their project regardless of approval. Time to get your head out of the oil sands and move on.	Raise corporate tax to 12%, implement a 3-5% sales tax, you don't need to find saving which means cuts.	Diversify the economy towards sustainable energy. Train displaced oil workers for new sustainable jobs. Invest in farmers who will move towards regenerative farming practices to lower greenhouse gas emissions. And, hands off CPP.
T6V	Education and Environment are paramount.	Savings can be found in being strong and independent. You were bought by the oil companies, they fired many hard working Albertans and blamed Notley just so the conservative voters would put you back in power, that is why you paid them as soon as you had your throne. A strong, proud, intelligent government would have not paid them back but would have instead held them accountable for the damage they had done. Money can be generated in selling the finished product rather than raw resources. Start a program that creates an Alberta Government owned and operated oil and gas facility if you want to save money.	Job creation and economic growth are not feasible. Your economic model is based on an infinite amount of available land containing an infinite amount of resources. We have gotten to the point where the population must be balanced, not the work. This is the education that people need. Zero, one, or two child families must be encouraged and rewarded. A slight decrease in population will free up enough work to take the pressure off of your economy.

T3B	Healthcare, education, economic diversification.	Management levels, money spent promoting one industry (oil and gas), handouts to corporations that should actually be contributing via taxes.	Support economic diversification, maintain education at all levels, bring in a sales tax.
T2w	Healthcare, education, reducing homelessness, infrastructure	Eliminating the "war room", firing several of the political government positions especially matt wolf, stop spending on elaborate trips to "sell" the oil and gas industry	Provide more funding for innovation outside of the oil and gas sector like environmentally friendly technologies. Stop giving tax breaks to large corporations. Trickle down economics does not work!
T2J	Publicly funded health care. Publicly funded education. Don't split hairs in the wording to say the people want private health care.	Stop corporate welfare. Institute Fair taxation on all. Reinstate the cap on insurance.	The economy is supported and run by the people. The people need good paying jobs, not the slave wage jobs UCP want to instill with corporate greed initiatives. Trickle down economics has never been in the best interest of people.
T6V	<ul style="list-style-type: none"> - Education (primary and secondary) needs to be affordable and not just for elitist 1%. - Health care needs to be easily accessible to all Albertans, in a timely manner (PRIVATIZATION IS NOT CHEAPER NOR IS IT ACCESSIBLE TO EVERYONE) - Protection of natural resources (ie. Fighting wildfires, invasive species, flood mitigation, etc.) - crime prevention and response - addictions and mental health - emergency services, especially EMS 	<ul style="list-style-type: none"> - ELIMINATE THE WAR ROOM - reduce all MLA pay by 25% - STOP GIVING TAX BREAKS TO GAS & OIL, AND THE RICH - implement a SMALL PST, ie.2% 	<ul style="list-style-type: none"> - Ensure public services keeps up with the growth in demand (ie. Population growth). - reduce tuition cost for post secondary so more people could access education for better jobs. - ensure ALL worker wages keep up with the annual Alberta inflation rate at the very least. When people can make decent wage, they are more likely to contribute to economic growth with better purchase power. - stop giving refugees better funding/ than Albertans. Albertans FIRST
T3L	Education Health Unemployment	Scrap kenney's giveaway of 4.7 billion to his corporate friends. That is a lot of money and without that giveaway there would be no need for any cuts to health and education. How did Albertans benefit from this giveaway???? Secondly, cut the war room which is a disgrace and save another 30 million!!! Right there you have a savings of 5 billions. Easy?	Cuts in any sector create job loses: don't cut but put more money into the economy to kick start it. Look to what is good for the people of Alberta, not suck up to the corporate and the rich: in other words put Albertans before your corporate-imprisoning ideology. Get real about the day-to-day realities of Albertans needs and wants!!!!
T6G	Healthcare, jobs, diversification of the economy and education.	Corporate taxes or a sales tax.	Diversify the economy by investing in green jobs and train citizens to implement it. Stop giving big corporations tax breaks! Make the vulnerable a priority as well as seniors. Learn from Norway and Sweden re: economy and environment. 17% royalties at the minimum
	Education, Healthcare and infrastructure	Cancel the war room. Cut management staff in all departments. Cut MLA salaries and benefits	Offer small business loans to help diversify the economy. Do not cut income tax rate for big business
T6L	Maintaining social supports across health, education, and supports for low income and handicapped Albertans	Eliminate unnecessary govt depts such as the War Room. Create one education system, eliminate Catholic/public schools duplication	Diversifying energy production, encouraging investment by other industries, supporting small business - all to stimulate employment growth.
T3K	Restoring the services that were cut in the previous budget.	Cut the useless energy war room.	Reintroduce the Alberta SR&ED and expand incentives for digital interactive media and software development. Subsidize university programs in these fields.
T3K	Education, Healthcare, and moving our workforce away from petroleum should be priorities.	split the difference between the NDP high corporate tax and the UCP low corporate tax. Add a PST.	provide tax incentives to boost businesses other than petroleum, Alberta has many skilled workers and smart engineers that would be put to better use in industries that will last. Increase funding for technical schools (SAIT and NAIT). Ease taxes on small businesses to encourage Albertan entrepreneurs.

T4S	Public health can expand efficiently. AHC out of hospital surgeries were not considered or assessed. Private for profit was unilaterally enforced at higher cost, poorer outcomes and loss of jobs. The intention of the UCP is NOT to improve service or balance a budget. Nothing could be more clear. People die, suffer, and struggle their whole lives so corporations can get rich... it is the conservative dream! Nice legacy.	Quit filling the pockets of the rich; ie 4.7 billion tax exemption, corporate tax cuts, more exemptions. Quit wasting billions on oil & gas. Quit wasting time & money ripping everything the people of this province built to shreds and TRY one positive hopeful or useful thing. Search hard to find one honourable UCP MLA that would honour their commitment to serve their constituents; though that is not likely to happen. It would bring hope to the dying rights of all people living in this province; access to essential services, humane care, human rights, unity, peace, hope, trust, respect. Not much hope -that is NOT the Conservative Way. KENNY CARE: WEALTH FOR THE RICH - HELL FOR THE REST	Alberta has brilliant people, highly trained people in various fields with the expertise to offer services locally, nationally and internationally. Many expert personal and developed services have been slashed and pitched like trash by this stupid government. BC grabbed the air drop fire fighters that AB. pitched like trash--a lost opportunity to offer national and international service. Slashed the well operating Edmonton lab that could have tried offering BC and Northern Sask services. Kenney rips and chops everything - no analysis , no consultation, no no thought. Kenney hates democracy, public services, human rights and environmental activism. He loves oil & gas, corporate wealth and absolute government power; a dictator to the core. Kenney has no inclination to diversify. KENNEY IS A FIGHTER AND DESTROYER --- NOT A LEADER OR BUILDER Nothing good will come to this province as long as the Conservative mindset exists.
T6E	Invest in education, healthcare and the culture industry (arts, film, gaming, etc).	1. Remove/radically reduce tax breaks to oil and gas. 2. Collect taxes past due. 3. Initiate sales tax.	Subsidize green energy growth. (Oil and gas companies invest here too.) Entice tech companies. Entice film industry.
T3L	Health, education and getting jobs	Not providing more to the rich and all the cuts to the already poor and putting workers out of work. We were doing better before your government.	Care about Albertans and not just about getting rich
T2w	Health care, education, and stricter tax enforcement. These dead companies aren't stones, they are to pay taxes like everyone else.	Not lowering corporate taxes, which were already the lowest in Canada before you came to power.	By not running another austerity driven budget.
T4X	I think that in times of economic crisis you should look to the people and their needs as a collective. With unemployment rates high, invest in retraining and lower post secondary costs. Invest in lower childcare costs so both parents can work outside the home. Support decent education for the youth of alberta, maintaining early childhood funding. Be conscientious of Alberta's most vulnerable, investing in mental health facilities, safe injection sites, rehab centers, etc. Look at diversification of Albertas economy.	Increase taxes. 1- bring back carbon tax and use some of the money for kickbacks and the rest for diversification. 2- A 10% tax can provide additional funding needed for social programs and infrastructure. 3- Tax corporations. Stop doing useless panels without qualified people involved.	Diversification Reeducation Supporting families with reduced childcare.

T6W	Diversification of the economy. Stop doubling down on oil and gas and move towards funding innovative and novel industries who will solve current and future challenges. Fund start ups and incubators of new industries and technologies.	Stop funding the ridiculous war room. Albertans know it is a farce. The UCP are manufacturing discontent for their own benefit, and that of their supporters and friends (cronyism is alive and well apparently). The bickering is creating uncertainty and therefore discouraging investment. Implement a sales tax; increase taxes for large businesses; enact laws that require oil and gas companies to pay their taxes and clean up their own well sites.	How about NOT focusing on economic growth? The economy grows yet people are still living in poverty, with addiction, and every new generation has to face the fact that we will not be better off than the ones before us. What about health, well-being, the environment, work-life balance, families? How about being creative instead of relying on out of date philosophies and models? In the absence of that...if you insist on decreasing government spending you also have to increase taxation in order to spur economic growth. Fund innovation. Invest in STEM education at all levels. Keep nominal wages above inflation. Improve labour relations. Public sector investment in infrastructure and education. Bickering between federal and provincial government is creating market uncertainty and therefore decreasing economic growth. Stop it.
T6t	Social programs - education, health care, AISH, programs to aid low income and homelessness	Not giving tax breaks to major corporations. Doing more preventative maintenance.	Expand into new industries rather than just oil and gas. Not outsourcing.
	Diversifying the economy. Tax incentives, scholarships, educational funding and infrastructure development should be targeted towards industries like green energy, high-tech software and innovation, service industries and basically anything but oil and gas.	Collecting the unpaid taxes of oil and gas companies in rural areas would mitigate the need for many service cuts, as would re-instating the 2018 corporate tax rate.	Tax incentives, scholarships, educational funding and infrastructure development should be targeted towards industries like green energy, high-tech software and innovation, service industries and basically anything but oil and gas. Urban centres should also be supported in developing their art scenes, recreation facilities, health care and green spaces to encourage a younger and more diverse work force.
T6M	Ensure that our Health system protects the Albertan citizens without further deterioration, and as a state-of-the-art system. Keep provincial tax at zero	Better distributed income tax. Wealthy corporations should pay accordingly. Reducing aspects that are not priority no. 1, such as refugee protection and subsidy, education for free to some sectors, low-priority for free health (massage and others).	Focus where Alberta adds value and promote a competitive environment
T4N	Police and the courts.	Continue to crack down on the school boards and the health ministry to spend their dollars in the absolute best way. They are wasting too much money. No taxes should be spent on abortion, or abortion pills or sex change operations. No tax payer should have to pay for euthanasia.	Get rid of the paid oil and gas protestors. Help people help themselves by lowering business taxes and personal taxes. We can pay for our own needs if we can keep more of the money we earn, also we can donate to others needs better. It is pointless for me to send money to the government, have you skim money and then send peanuts back to my neighbour who needs it.
T5M	Education and Healthcare	Taxes. I don't have a problem paying taxes. I can't expect services without making a contribution. I also don't mind paying more if I make more than others.	Educating the next generation of students to have a variety of skills that cross over different disciplines so that they have greater options once out of public education. Mostly people skills and ability to be open to adapt to change.

T7S	Healthcare, education and diversifying the economy.	I understand there needs to be cuts to healthcare etc. BUT stop handing out money to wealthy companies. Look at the top heavy management of the public sector. We can't afford to loose front line staff like teachers, education assistance, nurses etc. Our children deserve better. STOP or at least decrease equalization payments.	We can support oil and gas and still be environmentally conscious. We can support oil and gas and still encourage and support other industry. We need diversity for Alberta to be a great place to live but most importantly for Alberta to be sustainable.
T6k	Focus on the middle class. All these cuts to public sector jobs are having huge ripple effects. Restaurants are empty and retail is shutting down because people don't want to spend. We need to increase consumer confidence in the Alberta economy.	Pretty obvious. Stop giving cuts to huge corporations. I understand these are big employers in Alberta but the money doesn't seem to making it into the hands of Albertans, the money is just staying with the companies and in the execs pockets. Not the lower level workers.	Focus on other industries like Forestry and renewable energy.
T5H	Reducing our carbon footprint, so blind greed doesn't kill my children.	The bloated propaganda center they built for their oil lobbyists should be closed and turned into something useful.	Fund the creation of sustainable jobs in emerging green industries, instead of handing massive tax breaks to their oil lobbyists.
T5T	Healthcare and education. We need healthy, smart citizens, not sick, and progressively illiterate! Then converting to renewable energy sources as well. We can't ride the oil field til it's dry, we need to start now and be prepared, with plans and a system in place	Switching to renewable energy where possible. Digital, over paper flyers to update citizens. Use public transit whenever possible, because two things will happen. There will be less cars on the road, costing fuel, emissions, damage to the roads, AND, Edmonton Transit will get a kick in the ass, when you realize how awful it is to actually get around with them. When walking times are usually faster than the bus, and driving is 1/3-1/8 faster depending on time of day or if it's a weekend. Like after 6pm or weekends, your trip time will triple.	Start investing in education in renewable energy training and manufacturing. Notley was a moron when she closed the coal mines. We DO need to sfart shifting to more renewable energies, but you can't just flip a switch. There needs to be training on manufacturing, and installation, as well aa maintaining and repair. The older work force won't want to switch, but the younger ones, will jump at retraining, if they're promised a similar income. You can't just start using bio diesel in a car, you have to convert it to be capable of using the fuel first.. Alberta is diverse enough, we can grow the crops for bio fuel, we can build solar panels, and wind turbines for residential and commercial use.. Hydro near rivers like the Bow and North Saskatchewan. We can be both environmentally responsible, and still build our economy.
T6C	Education, Public Health, Social Services	War room, Do not continue with the the \$4.7 billion tax cut for corporations. Ensure the oil companies pay their property taxes to the municipalities. No more panels.	Diversify - A1, support technological companies, new energy - wind, solar, geothermal.
T7Y	Education for all institutions; health care for seniors, social assistance for low income families	High salaries for management positions, CEO's, directors	Cutting red tape; less government involvement
T0g	Getting investors back into Alberta business, establish provincial police force.	Reducing cilvil service. And layers of management..	Eliminate all carbon taxes and fight the federal govt , if need be separate.

T0G	<p>Education. Have a base salary for teachers and give them bonuses based on their class averages individually. As it is now, teachers are paid more and more to do less and less. Child and Family Services Stop paying contracted companies suck as WJS obscene amounts of money to do the jobs of Government workers. Companies like WJS Canada (research WJS -Slave Lake, AB in particular), function with employees who have little to no training, and very little safety measures in place. CFS is paying huge amounts of money to these companies.</p>	<p>Cutting spending on CFS contracted services such as WJS. Stop giving tax breaks to the wealthy and stop increasing taxes for the average family. Make teachers and higher-ups in education more accountable before granting raises.</p>	<p>Focus on renewable resources. Oil is finite. Alberta needs to begin adjusting now rather than allowing Big Oil to take what they can before the markets shift permanently and leave Alberta behind.</p>
	<p>Education and Health Care. Infrastructure and diversification of economy</p>	<p>Stop the tax break given to corporations.</p>	<p>Invest in other industries and get away the boom/bust economy of Oil & Gas. Retrain the workers displaced by automation in Oilsands and be honest about realistic jobs.</p>
	<p>Restore and support the cuts to the public services of Alberta. Their jobs are just as valuable and matter as those in the oil and gas sector. Disgusting that this administration continues to follow the "status quo" of previous short sighted conservative govts and illegally justify cuts to the public sector while facilitating the entrenchment of corporate social assistance and enriching the commercial and private sectors at the same time.</p>	<p>Eliminate the preposterous annual funding of 30 million dollar allocations for "BIG TEX McKenny's "BITUMEN BUNKER" in order to remake himself into the saviour of the oil and gas industry</p>	<p>Continue to support DIVERSIFICATION!!!! Enough with the job creation for the FRIENDS OF THE UPC PARTY with these ridiculous review panels who spend valuable millions that could be used for true economic growth by supporting creditable bonifide industry expansion. The populace of this province voted for supposedly qualified legislative insight and ideas. NOT RUBBER STAMP NON DESCRIPT PANELS.</p>
T7s	Teachers an nurses	Government pay checks iol	Oilfield
T5T	Health care, education, infrastructure, community centers.	Corporate tax cuts. Could have kept the carbon tax that funded Alberta infrastructure and jobs for our tradesmen.	Hire our out of work tradesmen to fix our crumbling roads and hospitals. Replace the Misericordia. Fund our cities. Build a rec center in Lewis estates.
	Education, job creation in it industry and other industries.	I don't know. Maybe It could save taxes by supporting universal income instead to spending so much time on admin costs of individual benefits etc.	Supporting industries that have potential to grow in Alberta such as IT, education sector, or more research into other industries
T8n	Healthcare, Education, and the Environment.	Stop giving tax breaks to Oil companies and large corporations.	Investing in new technology like wind,solar and other alternate sources of energy. Theres been talk about diversification of the Alberta economy, so lets start doing that.
T5a	Seniors lower income and health care	Hiking Corporate taxes. Hiking taxes of the 1% in our economy. Stop telling division of our gov if they don't spend a allotted amount of money this year they won't get that amount next year. Let them spend what they need so they don't over spend to keep that amount.	I think first they need to focus on making it affordable to live again! People are leaving because things are getting out of control. Insurance is a prime example. Stupid to take the cap off. Food cost is crazy. Rent is nuts. So worried about corporations setting up shop is not going to help anyone if we can't afford to stay in the province.
T5E	High speed rail to Red Deer & Calgary.	You find money by taxing the rich.	Go away from oil and find new resources.
T9S	Stop the spending and live within your means - like normal people do stop going into dept, giving money away to oil sands, charity,	in what the government pays out for wcb if a person dies on the job, pay for funeral, hugh payout plus \$5600 for the rest of the spouse life. that's more than most people make	stop cutting peoples pay cheque's. most people aren't making enough money to live on now, everything is going up but wages.

T3H	Public Health care and public education!	Balance your budget with what you have from taxes not including price of oil	Don't cut jobs in healthcare and education as this is the largest employer in this province and the breadwinner in many families who have a spouse that has been laid off in the oil patch
T0G	Micro power generators.	Stop subsidizing oil and gas!	Start cleaning up oil sites and reclaiming the land that has been damaged during resource extraction.
T3P	Education Healthcare Climate Change	Roll back tax cuts Reduce subsidies to Oil and Gas Introduce PST	Diversify economy (IT, green energy, etc) Support small and medium size businesses Job training for oil/gas workers for new economy Create vision for Alberta economy
T4C	Public Health,Public Education,Social Support for people with disabilities and those living in poverty, climate change initiatives, Safe Consumption Sites, support for seniors, post secondary universities and colleges.	Premier and MLA salaries, no more panels and war room. Increase the royalties for O&G companies. Reverse the tax giveaway to major corporations. Less travel for Premier and MLAs and when they do travel reveal their itinerary and success in acquiring investment in this province. Eliminate funding support for private schools and religious universities. Combine Public and Catholic school boards into one public school board.	Introduce a provincial sales tax. Diversify the economy away from O&G industry. Provide subsidies/incentives for the tech industry, movie industry, green energy including solar and wind energy.
T6C	Getting people actually back to work by diversifying our economy. Also health and education spending is important. DO NOT PRIVATIZE HEALTHCARE. It will only cost us more in the long run and those of us who are already suffering courtesy of the Kenney cuts can't afford private health care. Build the super lab in Edmonton - create construction, and medical jobs, while reducing private for profit healthcare.	Stop spending on bailouts for the rich oil companies. Kill the war room. Skip paying six figure salaries to political assignments (committees, directors). Have incentives for the medical systems to work together to be more efficient. Similar incentives for education.	Diversify. Diversify. Diversify. Stop depending on the oil and gas sector. Help the small technology industries as well as renewable resources, and small businesses. By cutting government, health and education employment you are killing my service industry (and many others) as well as creating a huge infrastructure deficit which we will have to eventually pay.
T8A	Health care, education, senior benefits, finding ways to reduce daily costs for average citizens!	Stop giving hand outs to big business!! I do not want my hard earned tax dollars going to corporations that are already profitable. Your corporate handouts have already killed our financial situation and you have absolutely no proof they've resulted in creating any new employment or stimulating the Alberta economy. Want to save money? STOP giving it to corporations period!	By balanced spending on our infrastructure, health care system and education system decent paying jobs can be created and maintained. The UCP's short term knee jerk cut,cut,cut practices are not helping average Albertans find employment. Focus on decent employment and education so average people can make a reasonable living. People earning a decent income will spend that income and that alone will stimulate our economy! I defy any of you to survive on minimum wage. Stop focusing all your efforts on the oil industry. It is not going to ever return to the boom bust days and Alberta needs to diversify and stop being a one trick pony. Start listening to the people who elected you not your corporate buddies!!
t3a	Education - now that you've gutted the education budget my 17(1) r has 39 kids in 17(1) class and 17(1) has 36 in 17(1) class. There is no printing in schools allowed so we have to print from home now and 1/2 of the arts from 17(1) ARTS SCHOOL had to be stripped because of your bullshit budget. If you need to make cuts then you do it slowly - like any household. Since when does someone say 'we're cutting back so were not buying ANY clothes or food this year'? Try governing for everyone instead of just the oil industry.	Stopping the millions of dollars every year in subsidies for the oil and gas sector and give it to education and health care. Why do you have to subsidize a private industry and then take \$\$\$ away from the education sector. This makes no sense.	As an oil and gas worker I am furious that our gov'ts do not reinvest in training people on renewable energy. The oil sector is dying fast and the only thing you are doing to prepare for its eventual end is by subsidizing more \$ to oil/gas and stripping \$ from private industry. If you were really working for all albertans then you should stop selling everyone on the 'our clean oil and gas' (which everyone knows doesn't exist) and spending money to train workers on renewables and instead of subsidizing oil and gas, use that money to invest in green tech.

T2V	Education and Health care	Put in a sales tax Do not put in Standardized tests for grades 1-5 Stop getting panels to audit devices that have just been audited Stop giving handouts to large corporations	Get the pipeline built! Look seriously at the tech sector Give initiatives to companies to hire students and those that have become unemployed
T6B	Stop giving billions to corporations who don't need it. Dumb waste of our tax dollars or expenditures. They never ask for had outs!	Stop the 25 million you are spending on PR for your buddies promoting our oil. The world knows we have oil. Wasteful spending for political buddies. v sedo	Eliminate licence to just start a business , Stop dumb requirements on dumb paper work. which usually cost money.
T6C	Getting people actually back to work by diversifying our economy. Also health and education spending is important. DO NOT PRIVATIZE HEALTHCARE. It will only cost us more in the long run and those of us who are already suffering courtesy of the Kenney cuts can't afford private health care. Build the super lab in Edmonton - create construction, and medical jobs, while reducing private for profit healthcare.	Stop spending on bailouts for the rich oil companies. Kill the war room. Skip paying six figure salaries to political assignments (committees, directors). Have incentives for the medical systems to work together to be more efficient. Similar incentives for education.	Diversify. Diversify. Diversify. Stop depending on the oil and gas sector. Help the small technology industries as well as renewable resources, and small businesses. By cutting government, health and education employment you are killing my service industry (and many others) as well as creating a huge infrastructure deficit which we will have to eventually pay.
T0C	Education, healthcare, caring for seniors.	Taxing the big corporations leaving the poor and middleclass alone.Taxing big	Taxing big corporations. Digging into their own pockets.
T0E	Health care, education and infrastructure.	Stop giving away billions to big business and scrap things like this stupid war room.	DIVERSIFICATION !!!!!
T1H	The front line workers in the education and healthcare fields. Teachers jobs nor nurses should not be cut, bottom line. Cut administrators whose salaries double those of the front lines. With an increasing population we need those public resources for not only a lower crime rate in the future but a safe and healthy one. Providing people with quality education ensures their future success, with drug abuse on the rise it is showing a flawed and underfunded education system with oversized classrooms. Providing quality healthcare also ensures we are taking care of the sick and elderly - those who cannot fend for themselves. Without this there will be unnecessary death.	Administration savings in healthcare and education. AGAIN, not the front line teachers or nurses. When you cut these you are putting a large percentage of women out of work, it is the systematic oppression of women's ability to be a quality earner.	Opening our own refineries and stop selling our oil to the United States - bottom line. We are selling our own resources for pennies and buying them back for 10x their worth. It makes NO sense.

T8R	Education, the UPC budget is sickening. You have bought ZERO jobs for 4.7 Billion dollars and are forcing Educators to take a hit when logic says we need growth. Between 2015 and 2019 there are 50,154 more students in k-12. Even at an outrageous class size of 40 kids we would need an additional 1254 classrooms to house them in. Alberta was built on hard work by family men and women that would be enraged if you went back to the 50s, and 60s and showed them these stats. DO BETTER! We don't need private schools or hospitals we need a government that spends money appropriately. There was a 4.7 billion dollar solution to this problem.	UPC should stop giving tax breaks. Company's don't go... Aww sweet I just saved 50 Million on tax because of the magnificent UPC, hey let's spend it on jobs. BULLSHIT! They buy bigger fifthwheels and toys and cabins and our government doesn't even have the foresight to see this. Don't give tax breaks give job/project incentives. Personally I think that's the won't outlook, a Government entrusted with our taxes to better our province should be investing in project and owning them. Remember AGT? Why doesn't the government build the speed train from Calgary to Edmonton and own it. Then they help Albertans and they can earn money back from the users. I don't think we need to save as much as we need to stop giving it away and build something for ourselves.	Well let's go back to owning a project. Here's a fun one. Everyone hates Alberta oil, so instead of starting a war room to cry about it and instead of throwing billions of dollars at a bunch of companies that are not going to create meaningful jobs. Do it yourself. We have skilled trades people mopping floors and managing coffee shops for crying out loud. Start a project, own a project profit. This isn't that crazy. Did you know Egypt is building one of the world's largest solar power plants. Yup 1.8 Billion and some point in the future they will sell enough power to break even and start making a profile. Why don't we, hell even if we collect half the power we are already giving away twice almost three time that in tax breaks. You know an out of work electrician, I know a few. Hell I know a few engineers that could probably start right away designing the thing. Our problems in this province are simple. Simple people vote for simple government goon and nobody is smart enough to ask How just Why! Why is there no work, why is there no money, why is education and health care expensive. Ask how, how can my government make money, make jobs, make sick people better, make education better.
T0L	where is the promise to help seniors you have done nothing but given breaks to the rich and big corporations.	get rid of half the government who spend money on patying and liquor.	get business back in Alberta
T2G	Education (k-12), Post-Secondary and Healthcare	Not savings but revenue: Taxing polluters, provincial sales tax	Diversify, give tax breaks to industries that don't rely on oil and gas
T5L	Diversifying our economy. It's high time we Albertans shake our dependence on an oil economy and move toward the future which is coming wether we like it or not!	Stop giving tax breaks to fossil fuel companies and rich corporations.	Invest in retraining people for the jobs of the future and embrace the renewable future.
T0G	HEALTHCARE and EDUCATION	BY NOT GIVING TAX CUTS TO HUGE CORPORATIONS, FOR STARTERS.	BY IMPROVING THE HEALTH AND EDUCATIONAL LEVELS OF ITS CITIZENS
T9A	1. Education - especially the gap that exists with those who haven't finished high school, but now need to upgrade to get into post secondary. Community Adult Learning Programs provide learning opportunities to adult Albertans to help prepare them for post secondary. 2. FCSS (Family and Community Support Services): these programs are preventative in nature and help reduce service demands as Albertans age. If we provide services early on, the system won't be stretched so much fixing what could have been prevented in the early years.	Management positions must be cut at all levels. If services were not top heavy with redundant management positions, more front line positions could be created to help reduce wait times for essential services	By listening to what businesses and tax payers are saying. You can't make decisions and support Albertans without ever having been on the front lines working. Many times, policies and economics that look good on paper are disastrous when implemented because listening failed.
T5W	Public Education, Public Health Services, the disabled, more sustainable energy, infrastructure.	Provincial Sales Tax. Also don't give bail out funds to oil companies just for them to turn around and leave the province.	Invest in sustainable energy and public health

T6L	Economy but NOT by cutting services that the average Albertan needs (healthcare and education as an example).	Reducing the number of ridiculously paid upper management positions.	Sales tax? No more give aways to corporations. Keep working on getting the pipeline built, investigate renewable resource trends and perhaps give incentives to companies who will take our province into the future instead of counting on oil and gas to fix the problem.
T6H	Health, education, economy diversification (IT, film, renewable energy)	Bringing back corporate taxes to the level they were at before the UCP got in.	Incentives for IT, renewable energy and film
T5G	Healthcare and diversifying the economy outside of oilfield.	Stop cutting taxes for huge companies that have no allegiance to the province. Most of them already pay far less than they deserve to.	Diversify the economy into the 21st century. Invest in public works and modernizing the energy sector into wind and solar energy with less fossil fuel dependance.
T7E	Allied health	Reduce middle management	Evaluate services that cut down wait times and increase productivity in workers
t6w	Less travel. The government is spending waaay too much on travel *Premier, Minister, etc. level.	Yes - less travel and trade mission work	Support vital programs
T5K	Robust public services (education, healthcare, disability assistance) and the diversification of the economy away from oil and gas.	Institute a PST, Less tax cuts to large corporations, More tax on the upper 10% of earners in the economy, Greater royalties on oil and gas, Less subsidies to oil and gas, End the Energy War Room so that TIER funds can be invested in public services and a transition away from oil and gas	The diversification of the economy, maintaining or growing full-time jobs in the public sector, reducing barriers to post-secondary & trades retraining (ie. tuition, student loan interest rates, government grants)
T8L	Education, health services, and social services.	Stop hiring people to sit on panels and being advisers. Do not reduce the corporate tax rate.	Laying off people does not ensure that the unemployment rate goes down. Edmonton has the highest rate of unemployment across the country. People who don't have jobs, don't buy things which directly affects economic growth.
T5E	Albertans will not take kindly to you messing with our health care, our education, our pensions and any other ideas you have in cutting social issues. I have many friends who voted for you, not anymore and they won't change their minds in the next election either!! This is not the USA and we do not take kindly to you trying to make us like them.	Maybe on some of your crazy ideas like a war room. All your travelling to give more of what we do have away to your cronies here in Canada and the USA. I know PC's love to give all their friends jobs while you stomp on the less fortunate. People are tiring of the same old same old from your party. If you notice your party is not doing well. Taking from the poor to give to the rich never works out in the long run. We WILL Remember come next election.	How about give up on Oil and Gas that is a dying business! Start up some new ideas, like wind and solar business's. If you want to put this province ahead you have to get with the times. Maybe you will get back lash for doing so in the beginning but as the money starts rolling in you will be praised. What you are trying to do for how long now is not working. Try something new!!! If you want some ideas, check out what Norway is doing. They are booming.. Oh and it has nothing to do with Oil and Gas.
	Those initiatives within the health and education system that support the development of individuals to provide years of service to the community as a result of good health and an education that can be used effectively in promoting and maintaining a quality of life that is enviable by the rest of Canada and the world.	Limit travel and expense reimbursements for politicians. Use other alternatives such as phone, Skype, web to meet with those across and outside of the province to accomplish business needs. That is stop face to face meetings over lunches, dinners etc. Only provide coffee, tea or water at meetings and limit the meetings to times between breakfast and lunch or lunch and dinner, and only for the day. That way, meals can be a personal expense.	By focusing and providing incentives for diversified business opportunities such as textile industry, food production industry, tech industry.
t2w	Health care, education, green energy transition	travel expenses	support the transition from carbon based energy to renewable

T0B	<p>Health-do not privatize! It costs Americans 4 times what our health care system does. Education-we do not wish to be a province with backward striding educational policies. Make higher education more affordable for everyone, not the elite few.</p> <p>Stop pandering to the oil companies. They make billions, why are you handling no then more money. Make them pay their fair share of taxes.</p> <p>We look like idiots sucking up and pandering to them!</p>	<p>How about getting rid of that war room. Who needs it. It's a waste of our money. How about getting the oil companies to start gleaming up all their orphaned wells. Maybe put all those oil patch unemployed to work doing that job.</p> <p>Trim the fat in your legislature first. You're hardly setting a good example, making like pigs at the trough. We don't need all these panels studying stuff like the curriculum, which had already been studied and had good improvements in the works. Every one of your ministers I've heard on tv sounds really out of touch. Fire them all, start over with people who care about Alberta and Albertans, not some far right religious agenda.</p>	<p>Diversify. Bring back the incentives program for new businesses that you scrapped. If you don't develop a more progressive platform in line with what's happening In the rest of this world, Alberta will become a dismal backwater of bitter disillusioned demoralized citizens.</p> <p>You turfed so many of the NDP's good programs that were working for no reason other than spite and to cater to your billionaire cronies. Your government looks clueless and destructive.</p>
T6E	Health and Education Diversify	Quit giving it away to Oil companies	Diversify and invest in other ways
T8n	Focus should be on public programs such as health care and education. Cutting these programs and focusing on privatization is ultimately going to divide the rich from the poor more than it already is and will give more supports to the rich. We should be putting more emphasis into proper public supports rather than private.	<p>Stop giving tax cuts to large corporations</p> <p>Make oil and gas companies pay their taxes. As citizens we're required to pay, why aren't they???????</p>	In other areas beside oil and gas! We need to focus on strengthening other resources within this province and letting go of our focus on oil.
T2Z	<p>Our hospitals are understaffed and overworked, and you chose to give cuts to public services while giving benefits to oil companies.</p> <p>Now we're bleeding jobs and these companies are still firing their workers. This is NOT the deal we signed up for.</p>	<p>Stop giving tax breaks to companies like Husky that keep on firing their employees. If you're gonna burden the public with this sort of deal, at least choose the companies you're supposed to be rewarding.</p> <p>Personally, I'm getting tired of being played for a sucker by both my government and the oil and gas industry.</p>	<p>Stop giving handouts to corporations. We lost 18000 jobs with nothing to show for it. The tax cuts were supposed to lure investors in, but that's not happening.</p> <p>For example, Husky Energy got a 233 million dollar benefit from the tax cuts but they're still choosing to invest in Saskatchewan and the US.</p> <p><u>What the heck are you guys doing?</u></p>
T6H	Public Healthcare and Secular Public Education	a 1% tax increase on those earning above 1 million CAD/year	Investing in sustainable alternative industries to petroleum for when the oil runs out. We have a lot of flat land, wind, and sun so maybe we build solar and wind farms and invest in building sustainable batteries for energy.
T5T	Infrastructures and municipalities funding are important.	stop illegal border crossing. I know we are on Humanitarian but the people crossing the border are not in danger. They are just trying to flee USA because they didn't have proper documents. We should help who really needed the help most. evaluate properly before giving free money/ grants.	Alberta is rich in oil, why don't we focus on what we are rich at instead of following the trend..
T0A	This government, and all Albertans, should be focused on a healthy future. This means prioritizing, health care, education, and proper taxation. It's fine to reign in spending, but this must be balanced with proper revenue streams.	By taxing corporations, charging them properly for the land they are profiting from.	By supporting the public sector, and investing in sustainable diverse technologies. Get in on the ground floor - we have the opportunity to become a place people want to invest, but we are throwing it away for the dying oil industry.
T7e	Health care and education	Corporations can pay their full share	Work on the pipeline

T6H	Health, education, agriculture, road construction and maintenance, all done with improved efficiencies as a goal.	Statistical evidence in the media and my own awareness as a non-unionized public servant of some public servants abusing their sick time suggests that some amendment to public servant contracts is in order on this issue. Perhaps the first day or two of sick time should be at zero or reduced pay to discourage calling in sick unless actually sick. This of course would cause a big uproar, especially with those front-line medical staff who are some of the biggest abusers of their sick time. Some make a point of using all of their allotted sick time each year. I know from personal involvement that overtime paid to cover sick-time is huge. Maybe overtime pay multiple should also be reduced.	The media seems to need a constant reminder of the effect of increasing government debt at all levels of government. Delivery of Alberta oil to the market is still a priority. Supporting Alberta corporations of all sizes via lower corporate tax rates works in theory, but may not in practice. Reducing personal tax rates may be more effective at stimulating spending to help the economy. I suggest reducing salaries of government staff to correlate to those doing similar work in other provinces rather than just reducing civil servant occupied positions, which is costly in severance.
T2k	Healthcare, education, and social services.	By taxing the super rich more instead of making the poor pay for horrific cuts.	By not firing nurses and teachers and concentrating on industries that arent currently plummeting downward like fossil fuels.
T2B	Health care,	I think we need to see a roll back in politician's wages & pensions. You people should be required to work the same amount of time as the average Canadian is expected to in order to receive any pension. As for wages, there should be a cap on your wage and you should have to take a 5% roll back, not be allowed to vote yourselves wages and you should be making a public servants wage not a CEO's wage.	Government should force the pipelines any way they can and fight to stop the import of oil from other countries. Government should not be providing tax breaks or subsidies to companies. They should be paying their fair share. Stop importing everything you can from China and start promoting Canadian made products and material.
T6T	Growing economy- creating jobs, supporting post-secondary education, bring back student grants and subsidies. Surveys and more public engagement regarding how funds are spent.	Not providing a \$4.7 B tax break to the rich. If the tax break must be issued - regulation regarding how the savings are spent. If this isn't regulated, the funds will be used for executive bonuses rather than job creation - which is what the government should be thinking about.	issue the 100M funding for artificial intelligence sector asap no more cuts to public schools and post secondary
T2n	Education Healthcare Diversification of economy	War room Mla salaries	Incentives for varied businesses

	<p>This government should focus on education & healthcare. Taking away teachers' pensions when they were getting such great returns was a selfish and greedy ploy. This government needs this money now because of the millions of dollars it gave to big businesses, who in turn left our province. Teachers have not had a cost of living raise since 2012! We can't afford to buy good, clothes, keep up with necessary home Reno's. This government has put Alberta into a recession. And the fact that Kenney continues to demean people who work so hard in education & healthcare reminds us all of Donald Trump. His attitude towards hard working Albertans is shameful.</p>	<p>This is such an easy fix! Alberta requires a sales tax! ?? Any smart government would know this. Then all workers could at least be assured of cost of living increases & no cuts would be necessary. Right now we are losing all of our local businesses because they can't afford the rent. No one is buying anything because of all the cuts, so local businesses can't afford to pay employees. There is no middle class anymore - just the rich and the poor & the margin of poor people is ever widening. These stupid town hall meetings are useless. This government is refusing to listen to the people. I have voted UPC in the past, but never ever again will they get my vote!</p>	<p>If Kenney had kept the carbon tax in Alberta, that money would have continued to be invested in other forms of energy besides oil & gas! Climate change is a scientific fact! We need alternatives & this would create more jobs. This government needs to find a way to keep our excellent teachers & pay them for the hard work they do. Ignorant people think we get paid during the holidays. We don't! When I first became a teacher, the government gave us over 500.00 to buy resources for our classrooms. Now we get nothing! And because we care so much about quality programs, we use our own funds on a monthly basis! My husband & I have talked our daughter out of becoming a teacher because we know the UPC government allows the public to remain uneducated on how much free overtime teachers provide! It's time to show respect to all people who work their butts off because they care so deeply in other people's welfare. This government is clearly bent on lining its own pockets. I cannot wait for the next election. Everyone I know who voted UPC, will not be doing so in the next election. They are appalled at all the broken promises that were made. This government gave away all our money to corporations who left our province. It's gone! Now they want to fund a stupid war room. Again, no one is spending. Local businesses are closing down. Put in a sales tax & then start paying people enough to support their families! We are going to lose our fabulous doctors as well. Sadly, it is becoming increasingly obvious that Kenney doesn't give a crap about the people who voted for him.</p>
T6X	EDUCATION AND HEALTHCARE!!	NOT GIVING MONEY TO OIL COMPANIES!!!	By offeringing I sent lves to small businesses so we stop loosing entry level jobs.
T5K	<p>Fund infrastructure projects. Invest in health care in view of the aging population. Fund post secondary education so that the province can compete in the global economy.</p>	<p>Fine oil and gas companies that leave dead wells for the province to clean up. Increase corporate taxes.</p>	<p>Encourage employers to raise wages so that consumers will spend. Fine corporations that fail to pay a living wage. Enshrine the right to organize and bargain collectively into Alberta law.</p>
T3K	<p>I think that the government should focus on health care and education. I understand that there can probably be efficiencies in the way AHS/CBE run things but these are vital services that can't afford to be left behind.</p>	<p>I think the government should focus on earning more money rather than saving. For instance, why did the government choose to give big corporate tax breaks to companies like Husky who have said they will not be reinvesting in Alberta? This is money that we could use and doesn't sit well with public workers who earn significantly less than a large corporation but are being asked to take a pay cut. We are also the only province not to have a sales tax and therefore missing out on a significant amount of money.</p>	<p>I would say giving funding or tax grants that initiate industries that are NOT based in oil and gas. For instance, tech grants. A number of smaller tech companies had grants that were cancelled last year and so they were unable to expand their businesses within Alberta. New companies like these will likely choose areas/provinces that are more favorable for them to set up in.</p>

T5B	Job creation, and letting the workers keep the job that they have and ensuring that essential services and teachers get the financial support they need.	Drastically Cut back on the corporate handouts.	I don't have the magic answer as to how the government should support further job creation, however by the cutbacks that he is implementing is not a way to go about it. I have a job I don't want to lose it so that he can try to create a new job. I believe that letting the workers keep the job that they have and create more jobs will further grow the economy.
T1V	Education, healthcare and DIVERSIFYING THE ECONOMY!! Stop focusing so much on oil and gas. It's had its time and it's time to focus on other things.	Well, stop giving out billions of dollars to corporations that don't even work/do business here anymore. That would help. Cut all the standardized testing except at grade 12. That would save a HUGE pile of money. Stop with all the top heavy administration in both health care and education and leave the front line workers alone.	Technology industries, alternative energy, gaming, film industry... these are areas we could be enhancing to a degree that could make up for oil revenues and really impact smaller communities and individual families.
T1S	Health care and education. Everyone I know has someone in their life that has lost a job, been forced to move, taken a pay cut or been layed off. I know the goal is to cut spending but you're never going to get re-elected by being an asshole.	Fire Jason Kenney and his entire cabinet and replacement them with monkeys that work for bananas. Same outcome and banana peels are biodegradable.	Invest in clean energy and major infrastructure projects (e.g. build train between Calgary and Edmonton). Promote flexible work schedules for employees across the province.
V1v	Diversify the economy with a focus on green jobs. Retraining for green jobs ie: building and installing solar panels; building and maintaining wind mills; Maintain public programs- health care and education. Support to economic disadvantaged- a healthy population is a more productive population.	Increase the tax rate for the extreme wealthy, a luxury tax and a pst. The wealthy spend more and would pay more pst than the less wealthy.	Assistance to start ups for green technology. Retraining for green jobs Diversify the economy
T6w	Healthcare, education, diversification.	Eliminating oil company tax breaks who continue to make billions in profits every year.	Diversification

T8A	We need more affordable housing throughout the province. Education to meet the needs of all new students, keep classroom sizes smaller and provide adequate supports for students with special needs. Maintain funding to sustain a robust public school system and do not create annual testing for young students, this puts students with learning challenges, mental health issues and children who come from low income families at a greater disadvantage and creates stress for all students. Maintain levels of funding for Program Unit Funding for young children with mild, moderate and severe delays/disabilities. Maintain and increase funding to recipients of AISH to coincide with inflation and do not make individuals wait for PDD, as their parents employment may depend on it. Invest in health care. I have already heard of several doctors who are planning to close their practice and move to the US because of cuts. My child was in the hospital before Christmas and the nurses were already run off their feet. I am very concerned about how cutting staff positions will play out as my experiences already suggest huge problems within the system. Keep education and health care public so quality of care and education is not directly related to how much money someone can pay.	Maintain the corporate tax as Alberta already has the lowest in the country. Decrease all of the travel for the premier and other party members and instead talk over skype, as these have been adding up to huge costs. Shut down the "war room" - a huge waste of money and no transparency in to what is actually going on. Create a PST, just like every other province to increase revenue.	Support the Trans Mountain pipeline. Stop focusing on just oil and gas and invest and diversify in cleaner energy. Many jobs had been created in regards to solar energy but have since been shut down. Invest in infrastructure. What is not invested in today will cost much more in the future. Invest in AI as Edmonton is already recognized globally for their expertise in this area.
T6H	The services Albertans actually use and need; Health Care, Education and other services	Stop giving billions away in tax cuts in the lowest-taxation province in the country.	Invest where the government can make a real difference, and let the private sector do what it's good at. Don't try to duplicate it.
T6a	Education and health services, followed by funding economic diversification initiatives. Certainly not offering tax cuts to corporations. It's been proven over and over that handing corporations money, does NOT create jobs. The UCP must also stop listening to the Fraser Institute. Its so incredibly out of touch with the economic reality of today's global economy. Social economics will save us. Consider a living wage. Stop thinking trickle down economics works!! Reagan brought us that BS and created the 1% earnings gap and destroyed any hope of a middle class. Get with the times!!!*	First off, stop looking for savings. RE-instate the Corp tax cuts. There's your funds to finance diversification and create jobs while not cutting services. Change your ways. UCP is a one term disaster if it doesn't.	First off, stop thinking oil is the answer. Petro is a sunset industry. Diversify. Geothermal. Wind. Solar. Jeeze. Alberta has more going for it, had going for it, than tar sands, which the world does not need or want. middle east crude, Nigerian, cost of producers ton is about \$20.00/bbl and our tar sands is about \$55.00. Math is not hard.
	na	Not government but students. Universities are pushing fees onto students that are not optional but really should be optional. For example student union dues. If I want to support the students union well I will pay the fee, if I don't want to I should not pay the fee.	na
T5T	Education, health care, and social services. Also municipality funding.	Get rid of the war room. Decrease the number of government ministers. Do not give hand outs to oil companies. Limit non essential government travel expenses.	Diversify the economy - tech industry, solar/alternative energy, and invest in government programs. Increased taxes (especially high income) or introducing provincial sales tax would help balance the budget.

T5T	Health care for all equally. Prescriptions for all equally. Education for all equally. Safety for all equally.	CEO's don't need all the money they earn. Dentist's don't need to charge the money they charge. People can't afford to go. Doctors don't need to get rich overnight. They have all stopped caring about their clients. Veterinarian's don't need to charge the prices they charge. Everyone wants to get rich in a short period of time. Our parents worked a lifetime to earn a home ect. Insurance companies gouging customers.	Stop laying off front line workers. Keep small farms going. Help our food be safe and local.
T6E	Health care and education.	Corporate taxes, sales tax and oil and gas royalties	Infrastructure, construction, healthcare
T4B	Care for the elderly. Facilities need to return to the oversight of the Government and operated by the Government and out of the hands of private corporations. Health Care should be a priority. Doctors in this province are abusing the system, requiring patients to return month after month to get prescriptions filled when there is no change to medications and no need to see a doctor. They could provide six months worth at least.	By not permitting doctors to require people to attend every month for prescription refills. Not providing life time pensions to MLAs and the Premier for only a few years in office.	Remove the constraints and red tape for cannabis businesses trying to get started in this province. Work with counties to be more open to allowing cannabis businesses.
t6w	You should be focusing on bringing in innovation and taking on more environmentally-friendly projects.	Stop providing tax-relief for the 1%. Goading companies with tax breaks to fund a trickle-down theory only inhibits our growth as a province	Investing into new technologies in support of climate change. This should be a PRIORITY.
T6C	Education, Healthcare, Infrastructure, Economy, Environment, Technology, Oil Patch, Albertans. All sectors are equally important! Stop cutting jobs and wages, this will allow Albertans to stimulate the economy by buying goods and services. Properly fund the Education and Healthcare systems. These two are world class and the envy of the world!	Shut down the ridiculous War Room and invest that money in Education and Healthcare! Give back to Albertans the billions of dollars of guaranteed revenue that you robbed from Albertans to give to corporations in the form of tax cuts! This was not your money to give away! All corporations, including oil companies, can pay their share of taxes! Bring in a 3% Sales Tax. Bring in a Heathcare Premium to help fund the Healthcare system.	Properly fund Healthcare, Education, Infrastructure, Environment, Technology, Oil Patch and most of all Albertans. Investing in Albertans is always a good thing. Don't cut jobs or wages, this will help keep the economy going as people will have the money to buy goods and services. Diversify the economy! The province is so much more than just Oil and Gas!!!All sectors are equally important!!!!!!
	Protecting the vulnerable by spending on income support and eliminating homelessness and poverty. Diversifying the economy. Public education. Public health care.	No more oil subsidies. No more privatization.	Diversify. Invest in infrastructure. Invest in research and innovation.

T1K	Premier Kenney, why do we not hear anything about diversifying the economy instead of just focusing on oil and gas.Recent story in Calgary papers details why young people are not staying in Calgary because it is trying to go back to the old idea of relying on oil and gas.No future in technology development because oil and gas will never be back like it was for Ralph.The only ones to benefit are the oil and gas companies of the rich.Average citizen see nothing but cuts and unemployment. Also why was an education plan for the future not at least including education stakeholders. Private schools didn't receive cutbacks because the rich can afford any extra costs.	Letting people work and collecting taxes.	Not relying completely on oil and gas. Not cutting new technology development grants. Why are big companies building solar fields, developing new technology. We can't rely on only one industry which you give all the benefits to and they depart as soon as the going gets tough.
T0I	Health care Education	Perhaps savings is not what we need but perhaps a more sustainable tax plan	By looking at diversification of the economy away from oil and gas
T0H	Public sector and technology. We need an educated population to deal with the upcoming changes needed to diversify our economy and tackle changing demands in the world. Not spew out factory workers who can't critically think.	Stop travelling so much on the taxpayers dime. Stop paying for other Premiers to travel in the name of networking. It's called Skype or Google Hangouts. Stop investing so much money in a dying private sector. Oil and Gas will never be what it was. Other countries have oil and technology is replacing workers.	Well A)stop cutting budgets which results in layoffs in the Public sector. A lot of private sector workers are relying on their spouses in the private sector. B) increase public spending in infrastructure to create jobs. The economy will pick back up and then you can cut some spending.
T4R	Education and healthcare should be priorities. Nothing touches more Albertan's then their health and their education.	Stop giving free money away to profitable established companies. It may be time to implement some sort of small sales tax.	Its time to pivot. Technology and knowledge based industries are the future of this province. Quit chasing our tech companies away.
T1K	Rescind all the changes you made in the resent budget. Put cap back on insurance Put seniors back on health premiums Wage freeze should be negated Do hurt front line medical workers with your stupidity Do make low income Albertans pay for your ridiculous tax breaks to corporations whom never created 1 job with them. Trickle down economics has never worked and you already knew that before you started this foolishness.	Anything but on the backs of Albertans.	Resign and let someone else in there that knows what they r doing. Obviously your party doesn't and you don't really care about anyone but yourselves.
T5H	3 things that not only cost money 1. Public services incl. Health Care and Education, 2. Innovation of economy 3. Infrastructure	1. Close the "warroom" as the think tank's are well known. Why pay for them? 2. Reverse the corporate tax cuts. They are not effective.	Support innovation and a green energy supply. Our schools educate great minds. Don't waste that money by letting graduates slip away!
T5H	Education and healthcare, incentives to diversify the economy	Eliminate the "war room"	Create tax and grant incentives for companies that will create diversification in the economy

T9K	Health care should be the number one priority! NO nurses should lose their jobs! No frontline workers should be affected. When you cut nurses, you hurt patient outcomes. If you want to cut AHS, start at the top! There are too many managers and not enough nurses.	You could get rid of some of the managers at AHS. There are way too many managers that make outrageous salaries! AHS needs to hire more RNs and stop threatening the health and well-being of Albertans by taking nurses away! You could create a sales tax!!! A 4% PST would solve all our financial issues! Every sensible economist will tell you a province runs better with a sales tax! Stop worrying about votes and do what is needed! A PST will get us off the Boom/Bust roller coaster! Stop blaming the Feds, the previous government or anyone else for our financial situation and just create a sales tax. With a 4% PST you could pay down the debt, pay off the deficit and fund our much needed, hard working public sector! Then once our books are balanced, you could lower income taxes, making it a little easier for average Albertans! The oil revenues could be invested in job creation and green energy.	Invest in green energies! DO NOT create a two tier health system! Two tier systems only benefit the rich and leave the average person behind! Stop holding onto the idea that the pipeline will save the economy! It won't! Help people train for diverse industries. Invest in tech and make the province more welcoming to green energy companies with initiatives that can economic growth! START LISTENING TO YOUNG PEOPLE! They have amazing ideals and plans!
T2p	Aish an seniors should be cared for an payed 3 business banking days like before. Plus they should get inflation to keep up with cost of living	Stop find saving add provincial sales taxes	Have job training programs
T0M	Public education and health care. More nurses with higher wages and wage increase for teachers to keep up with price increases in the standard of living.	Tax breaks for the rich, over crowded legislator in Edmonton.	Tax breaks for new businesses, scrap the carbon tax for more oil and gas companies want to invest.
t5e	health care.	don't know	supporting fossil fuels
T5X	Education and health care	Large companies. Allowing more oil production and growth.	By not making cuts to education. More educated people benefits us all.
T5M	1. HEALTH 2. EDUCATION 3. JOB CREATION instead of causing the loss of THOUSANDS of jobs across the province.	1. By NOT GIVING AWAY BILLIONS to the UCP's corporate friends who then flee the province and take the money elsewhere. 2. By DISMANTLING THIS SHAM OF A "WAR ROOM" and spending the money on education and health care instead. 3. By CUTTING YOUR OWN SALARIES in line with all of the salary cuts and loss of jobs you are causing throughout this province!	Get your heads out of the oil wells and DIVERSIFY the economy! Fund HEALTH and EDUCATION, instead of killing it.
	The government should always take care of vulnerable Albertans first. Tax breaks for huge oil companies help no one but the 1%. Cutting funding for schools, hospitals, and the justice system are not what we pay taxes for!	Tax oil companies. Cut the WAR room. Instead of putting millions of dollars in promoting a dying industry, perhaps we could "diversify our portfolio" so that our province could have a different avenue of income. That way, when the price of oil drops, our economy doesn't crash.	Stop cutting jobs would probably be the easiest answer! We need a province that has more going on than oil and gas. And a government that cares about people more than money.
T8N	Health and education. It a no brainer.	Taxes the rich at a fair rate.	Diversity the economy. No brainer.
T3N	Health, education and infrastructure development in the province.	Cutting down Government spending and taxing rich more than offering tax benefits to them.	In addition to invest in O&G Sector, Govt should also diversify business portfolio of Alberta.

T2A	All levels of education, supporting a world-class healthcare system, funding innovation through post-secondaries, and letting businesses fund themselves.	Stop supporting revenue generating businesses with corporate handouts and tax breaks. Put the money from the ill-conceived Canadian Energy Centre back into the PC created AER and provide better mandate to ensure industry, the environment, and stakeholders are considerations for energy development in Alberta.	Stop removing caps on all industries when people are struggling with employment and the cost of post-secondary. This is going to reduce spending and encourage migration of Alberta residents to other provinces. This will not encourage economic growth in Alberta. Stop developing unemployment by laying off thousands of Albertans across the province.
T2V	Creating Tech jobs, education, health care, services and our future. You need regular people who see the world in a different light not boardroom junkies who think everyone is financially stable. Maybe taxes on luxury items or a low provincial tax to help kickstart the province, this isn't a booming economy. We look stupid to the rest of the country try to get away with not paying a provincial sales tax.	Stop traveling so much and spending on expensive hotels and panels.	Support Wind and Solar power along with Oil and gas.
	education, health, economic diversification	close the war room, cancel the tax cut to corporations	Get serious about economic diversification - support the tech sector by actually attending conferences and trade shows. Support the alternative energy sectors by reinstating the rebate programs that you cancelled
T0C	Reversing the 4.5 billion lottery win... Er "kickback"? Bribe? Mob payout? To the oil & gas industry. If they can afford 4.5 billion given to this severely profitable industry, they have ZERO excuses to screw over teachers, doctors, nurses, the disabled, social programs, healthcare funding and EVERY other damn spot they've screwed over sideways to justify their payout to the 1%er of industries.	Reverse the 4.5 billion dollar windfall for oil & gas. TAX THE RICH. Implement a carbon tax program that benefits those who aren't extremely rich. Fire the "blue ribbon" propaganda exercises. Fire the "energy war room". Fire Jason KKKenney. Have Jason Kenney confess to his crimes in regard to multiple cases of election fraud, and ban the UCP from running for a decade every time they commit election fraud. Getting idiots like the UCP OUT of the decision making process would save hundreds of billions.	Restore the carbon tax program and the burgeoning solar industry which was starting to boom before Jason KKKenney deliberately sabotaged it. Restore funding to education, healthcare & make the oil industry pay their damn taxes! HIGH taxes are how government CAUSES jobs!
t2c	Public education and health care, stop cutting these priorities. The future of our province relies how our young people are educated, cutting this will only hurt us more in the long run.	Stop giving tax breaks to the richest 1% and large oil companies. I am all for oil and gas but with these tax breaks they are receiving how come large companies are still moving to the USA?	Oil and gas sector is a must and very important to Alberta economy but other industries should not have to sacrifice due to that industry failing. Keep focusing on oil and gas, but other industries are failing due to lack of support. Need to have a balance, not all eggs in one basket. I feel like our young people are going to take the brunt of all the educational cut backs, makes it harder for them to go to school and get educated. They are one day going to be our future leaders, therefor should not be sacrificed due to educational cuts.
T8n	Healthcare and job creation.	Teachers and increasing back the taxes cut he made for businesses. They are leaving anyways.	Not cutting the wages. Continue with supporting environment and ways to cut emissions

T4N	<p>I think that the government should focus on spending to support people to be healthy and active in their own homes as long as possible by expanding homecare, and long term care. I think the government should focus on accessibility of maternity and surgical services in low risk areas as they help to reduce the overload on urban centers, improve patient outcomes and reduce the financial burden to the patient, as well the healthcare providers offering their services contribute to local rural economies, helping to diversify the rural economy. I think they should focus on high quality math, science, computer/technology, and critical thinking at the high school level. I think that free, high quality community programming for early childhood and subsidized high quality daycare with more accessibility and support for people who work untraditional hours across the province and in rural communities are important aspects of both supporting our future citizens and encouraging parents to be fully economically active. Incentivize entrepreneurship and small business.</p>	<p>Health care upper management and salaries of upper management. Salaries of specialist physicians in urban areas who collect on call pay while they are actually onsite anyways and working. Incentivizing physicians and nurses to work in rural communities and provide high quality care close to home - maximizing the access to care locally and reducing the workload of overburdened urban centers. Making an attractive salaried option and paying physician overhead rather than fee for service such as the crows nest pass clinic. cut the "war room". delay connect care until better economic times. Make all the health care zones distribute the same information and use small expert working groups in charge of provincial best practices. Right now Edmonton has their own people, Calgary has their own people, north zone, central zone, etc. Make clinical education and best practice a provincial matter, and make it so that the working groups are accessible to front line staff. Each zone should not be working on their own policies, best practice, education, and protocol separate from a provincial one. Eliminate working groups that cannot demonstrate that they are meeting an outcome that improves the health of Albertans.</p>	<p>Government should support initiatives to encourage students to work in front line health services, trades, small business, engineering, and entrepreneurship. Government should incentivize people who are talented in software, coding, computer technology, and make Alberta a hub of activity - 5G why are we outsourcing to China or Sweden? why are we behind the ball on participating in this key aspect of the global economy? Limit the reach of franchises and incentivize and reduce the barriers to starting a locally owned business or service.</p>
T6I	Health, job creating and senior.	Corporate hand outs and pay raises for parliament employees	support oil and gas ventures.
T3K	<p>Education Healthcare Job creation Low income families</p>	Large corporations. Increase taxes on Alberta's wealthiest.	<p>If you want to start privatizing healthcare services, you must first invest in the creation of private home care/community clinics. You can't cut jobs and expect privatization to occur. Pick services you think could be privatized and encourage physicians ect. to start private companies. Right now your just forcing people who currently work in healthcare and thousands of healthcare students to be broke, jobless, unable to provide for themselves. And essentially throw years of hard work down the drain. I'm a 17(1) student who spent 9 years in university. I have no job opportunities thanks to healthcare cuts and \$70,000 in student loans entering repayment. As a student I work harder then a full time staff in practicum because everyday my department is short 17(1) . We are working with dangerously low numbers of staff to save money. It will be only a matter of time before someone dies your mother, father, infant because there was no 17(1) or nurse to provide critical life saving measures. Don't punish the people who dedicated their entire life's to saving yours.</p>

T1S	The key priority should always be the health, education and welfare of all its citizens. Until every last hungry child has secure food clothing and shelter, we should give nothing to the rich. Spend on people, create infrastructure jobs, diversify the economy, create emerging job markets.	Savings need to come from the less-essential services and industries. Services to excel in providing for the basic needs of the population should never be cut. Savings must come from fair taxation. All corporations must pay sufficient tax to cover the true cost of maintaining basic health, education and welfare for all. Savings from fair income taxes where everyone pays <u>proportionate to their ability</u> .	Spend on infrastructure and oil industry remediation to create jobs for the current work force. Spend on Postsecondary education for R and D for diversifying the economy. Spend to ensure sufficient affordable housing and clean drinking water everywhere in the province, more new jobs. Make starting your own business easy, safe able to create new jobs.
T2Z	Education, Healthcare, Social Services	Why are we paying for a war room? Get rid of it and use the money where its actually needed. Don't hand out billions of dollars to profitable corporations all the while reducing funding where its needed most. Instead of just looking at savings, how about actually looking at other revenue sources other than oil and gas. It's time to diversify revenue streams. And honestly, I would be ok with the introduction of provincial sales tax at even 1% or 2%.	Diversify! More support to environment and green/renewable energies (there's a large market for it!) Actually listen to Albertans and what they are saying are priorities.
T7Z	Health care and Education	By continuing to provide publicly funded health care and education. Do not privatize health care and education, history tells us this does not work.	Diversification of the Alberta economy, now is the time to do this. Affordable education for Albertans. A well trained workforce is what companies want and Albertans need.
t8r	Education, healthcare and diversification	Stop trying to prop up the dying oil industry. And cancel your ridiculous 'war room'	Invest in future thinking industry. Not in dying industry.
T5L	Education and health care are most important for Alberta's future and should be top priority. After that, research and development into alternative energy technology to lessen our dependence on fossil fuels.	Make corporations pay their way like everyone else and stop giving them huge tax breaks. Cut the salaries of ONLY the CEOs and upper management of government agencies.	Improving the standard of living conditions and economic situation for the lower and middle class population will result in more spending, more jobs for the working person, and a healthier economy. Trickle down economics has been proven every time to be a disaster and it's time we embrace "trickle up" concepts instead.

T1H	harm reduction facilities and mental health support. Our health care needs to be exactly that "HEALTH CARE" not "SICK CARE". We need to invest in prophylactic health, verses sick health. Albertans need education to be more accountable of in their own health...ie: diet, weight, exercise.	harm reduction facilities, as prophylactic measure to reduce the weight on ER. Urgent care facilities to decrease weight on ER for non-emergent complaints. Reduction on nursing FTE's that are below a 0.50. Reduction of nursing work incentives ie: RN "x" days and overtime pay. Integration of healthcare aids on units. Utilize the full scope of an LPN. Reduce the significant number of overpaid managers and directors. Decrease the amount of unneeded testing ordered by the hospitalist service in hospitals. Decrease amount of hospital admissions for reasons that can be dealt with at home, or in a care facility. Increase the amount of convalescent beds, in order to move stable patients off acute units. Decrease the amount of "double doctoring" how a physician can charge a "consult" for seeing a patient when their colleague has already seen the patient and a consult has already been charged. Decrease the amount of "needed" G.P follow ups for prescription refills. Invest in long term psychiatric treatments to stop the revolving effect, and actually treat mental health to decrease the use of illicit drugs. Stop allowing "retired" employees to fill fulltime pensionable positions, and fill with younger employees that will actually be contributing to the system. Actually feed our patients with nutritious real life made food, to enhance and support healing. Decrease the amount of ridiculously overpaid clinical professionals being utilized to implement and create "connect care", when really "netcare" should have been utilized appropriately. Increase the quality of care provided in local ER's, to prevent the return of patients for a second time. Decrease the stupid amount of teams created to "assess" our health system...so many dollars wasted on people making hypotheses on healthcare, verses actually providing health care!	By utilizing all health care professionals to their full scope. ie: LPN, Ortho techs, healthcare aids. Decrease multiple minute FTE's and create one larger one, in several circumstances. stop allowing retired employees from filling pensionable positions, to support the younger workforce whom would be paying into a said position. Have your nursing and support staff more accountable for supplies used. ie: the overload of unused supplies taken into an isolation room, which is then thrown away because it can not be reused.
T5E	1. Healthcare 2. Education 3. Community and Social services- children and disability services	Take back the billions in corporate tax breaks. Since it's inception how many jobs have been created? How many big corporations have moved out of Alberta since then?	1.Keystone pipeline restart 2. Environmental projects- recycling, bio-degradable product development,to replace plastics etc 3. Look for other markets besides oil and gas. We're in this crap pile because all governments in the last 40 years rely too much on oil and gas and when things bottom out, there are cuts to services for everyday Albertans, which is completely unacceptable. Do something now or you will lose my support and vote in the next election
T4P	Health care, education and job creation by job diversification.	Charge the big oil companies a fair rate instead of giving them billions of dollars with no return.	Subsidize new industries.
T1J	Healthcare, education, infrastructure, seniors, homeless,disabled	Stop the corporate handouts, review all spending , identity unnecessary or duplicate services. Set priorities and follow them. Introduce a sales tax and use that to pay down debt	Reduce government red tape. Provide incentives for small business to hire

T5T	Health care, education and childcare	Upper level management should be the biggest cuts as they draw the biggest salaries and in some areas there are more than one manager overseeing one are that alone is a waste of taxpayer dollars	Give cost of living wage increases to Government Employees, the more they are able to live at the cost of living increases the more they will spend on the economy.
T5T	Diversification of renewable energy resources- stop focusing on only oil.	Raising taxes, PST- bring us up to date with the rest of the country. Stop taking away from our most vulnerable.	By investing in diversity, not just oil!!
T6X	Education, healthcare, technology - let me be clear. These are the backbones of a strong community. When the population does not have access to quality affordable education and health care it falls apart.	Their own salaries which are ridiculous compared to how the rest of Alberta is currently living. Bonuses to oil companies. Getting rid of Jason Kenney.	By stopping what they are currently doing and thinking outside the box. By not rolling out ridiculous budget cuts to core sectors that are so large they are forced to lay off large amounts of frontline staff. The cascade effect from this will be HUGE! By looking to the future and realizing that Oil isn't the only way for our province to flourish. By understanding how technology is important and focusing on it. By expanding to other sectors and looking for resources that can be exported to other provinces/countries EITHER than oil. It's time for this province to stop being a one trick pony.
T4R	Health, Education and Infrastructure	Stop the war room Reduce the number of press secretaries and "issues managers" if you governed properly there would be no issues Reduce the travel budgets of all MLAs and the premier in half. Meetings can be done by Skype.	Diversify outside of O and G Who would want to come to this province with a divisive government picking fights with everyone, preying in the vulnerable never mind the right wing religious but jobs. Crazy... but we can't afford to treat their craziness cuz healthcare is tapped out.lol.
T2V	Definitely Health and Education, those are the primary functions of a provincial government and are key determinants of human capital and quality of life for every inhabitant of the province.	Small savings to be had from axing the War Room and letting CAPP do their own PR campaigns. Larger savings to be had from cancelling the tax breaks, predictably they've been proven to be ineffective in keeping investment in the province.	I think you need to look at restoring tax benefits for new tech, film and TV, renewable energy mods to houses, alternative economic drivers. Oil and gas will remain volatile and are in long term decline. Also, please realize that trickle down economics are a carny show, they have never worked and will never work. Therefore, be mindful that public sector jobs contribute to aggregate demand. If you cut nurses and teachers, they leave the province as they did under Klein, and they rarely if ever come back and contribute to the Alberta economy. Very few of my colleagues returned from Klein era exile, and my family are considering leaving again, taking with us 24 years of Alberta taxpayer funded post secondary human capital.
T4C	Education, Health care, oil well clean up	Get oil companies to pay taxes, tax the rich	Clean up old oil wells, incentives for drilling, low cost housing initiatives, New jobs in alternative energy
T0E	Education, health care, environmental issues, infrastructure.	Get rid of that useless and insulting war room to begin with. Make sure to tax oil and gas companies, and keep the carbon tax alive. Fund schools and health care institutions so that we have an educated and healthy society. That will save immensely in the long run.	Hire more teachers and nurses, not less!

T1K	Healthcare Education	Combine Occupational Health and Safety with Workers Compensation like other provinces do. Consolidate the current Safety partnerships that issue COR or certificates of recognition to a group of 5. This will lower WCB premiums for business	Keep increasing trades funding.
T7x	I think spending should be focused on all Albertans not anywhere else.	Tax the corporations, instead of tax cuts for them.	Tourism
T6B	People! Before he was elected people had jobs and a living wage. Those who needed it were cared for and has a sense of security about the future. What I see now is far more fear about the future, less hope and more negativity. Alberta has become an unhappy and distrustful place. This has to stop. His cuts to AISH, to healthcare, to education to the environment, to infrastructure and to municipalities are serving no one save his own agenda.	You have to spend money to make money. You have to keep people working so they can pay taxes. You have to ensure that people have health care, education and a hopeful, kind community in which to live. You have to look after their environment. More green initiatives. More transparency. And ... dare I say it? a provincial sales tax would go a long way. To find the monies needed to keep our deficit manageable.	Mr. Kenney should stop with the cuts to the services that people need. These will only increase hardship to our vulnerable citizens. He needs to get back on track with alternative energy programs as even though he doesn't get it there is no appetite to go back to relying on our past ways getting revenue. Robbing Albertans of their environment, their health and their hope.
t5s	How about less spending, honestly Edmonton does not need the Lewis Estates Rec center, heck Edmonton does need the west LRT. See how much the south side is moving along.	Well again less spending, not investing in LRT please.	How about "investing" in employment training
T6C	Healthcare and Education	Implementing higher Corporate Taxes for the very rich	Green energy and infrastructure
t6v	Green energy and creating new jobs	Mandatory enforcement of mudflaps/winter tires.	Creating a new segment of wind and solar
T0E	Education, health care, environmental issues, infrastructure.	Get rid of that useless and insulting war room to begin with. Make sure to tax oil and gas companies, and keep the carbon tax alive. Fund schools and health care institutions so that we have an educated and healthy society. That will save immensely in the long run.	Hire more teachers and nurses, not less!
T6J	Education - I am a regular parent of 17(1) kids and like most Albertans I want a continued strong well publicly funded education system (which is what it was before these budget cuts). Our Education system is the envy of the world, please don't weaken it with funding cuts! Good healthcare and a healthy environment with good public infrastructure are also important.	Increasing the taxes for the richest Albertans instead of cutting them. Carbon Tax. A small PST.	Diversify investment and invest in infrastructure and Education. Our future lies with having all Albertans well educated regardless of who their parents are.
T4A	Public education, health care	Tax breaks for corporate welfare and wealthy individuals	Diversify the economy away from just oil and gas,

T3B	eliminate debt flood mitigation	Public service salaries esp management. Education esp management. Replace existing teacher competency review system with an independent review. Fire anyone who endorsed the new math system Eliminate the "spend before date or lose it" from year end budgeting	Seems like every job "created" by the government, leads to a loss of a legitimate job in the private sector. Taxing healthy companies to fund ones that businesses won't touch is counterproductive. No taxpayer money should be spent to support the private sector. If the banks don't want it; there is a reason (High River Magnesium Plant, Gainer's, etc. etc.) Minimize red tape. Review the impact of the minimum wage legislation - Did it have its intended purpose or did it eliminate positions? Government's only responsibility to industry and job creation is to provide a growth environment free of interference. Also public service jobs are not "job creation"
T6C	<ul style="list-style-type: none"> - Health care within a publicly funded and publicly delivered system - Education and Post-Secondary Education (restore tuition tax credits) - Green energy programs - Social Programs - Economic Diversification (besides oil and gas) - Worker health and safety 	<ul style="list-style-type: none"> - Eliminate \$4.7B tax cut to profitable corporations. - Eliminate Canadian Energy Centre. \$30M to issue press releases and design powerpoints, really??? - Eliminate investigation into foreign funded environmental groups - Get out of lawsuits challenging carbon tax - it's a waste of money since the feds have the right to levy taxes under the division of powers under the Constitution. - Scratch panel investigating provincial police force, Alberta's own CPP - these initiatives will cost \$100's of millions to set up and maintain with no guarantee of federal funding 	<p>Restore economic diversification grants and tax credits put in place by previous government (e.g. film, craft beer, artificial intelligence, green energy technologies)</p> <p>Restore funding for \$25/day daycare.</p>

T0G	<p>Health, Education, Social Services and supporting a broader employment base. Oil has run its course, and it doesn't matter what Kenny and his silly war room does its to late the world is moving forward and nothing we can do but get ahead of it or our economy in Alberta will be done for good.</p> <p>Also spend a few dollars and investigate the FCC in Slave Lake before the province and AHS is sued. What a joke here These guys can't manage themselves out of a paper bag little a hospital and clinic.</p> <p>Also shame on Pat Rehn and Jason Kenny for their absolute failure to support those folks out in Marten Beach. Forestry, Gas, Oil, and Mining have destroyed Marten Hills and the province looks the other way when they are flooded unlike ever before. Shame on Rehn. They have reports back to the mid 1980s that say don't harvest in Marten Hills but what do you let forestry do harvest in Marten Hills plus you have 20 plus open gravel pits up there no wonder they were flooded. Just fly over I have it's a mess. I know lots of the folks our their who are retired oil, gas and forestry workers and there is nothing from Rehn. His sign during the next election will not be in my yard again...</p>	<p>Clear out some of the executive management in Health, Education and other Ministries. You cut back their budget in health by not allowing for normal inflation and all AHS did was screw over front line staff. AHS is the worst at the management game.</p> <p>We need good quality frontline staff in Education, Health and Social Services and all we seen the conservatives do was play the same old game of trying to make it look good by going after front line staff.</p> <p>And for Christ sake have someone look at the way AHS is running the northern health service, this is a dam mess, needs to be sent packing.</p> <p>The idiots they have running services in Slave Lake and Wabasca is criminal. Talk about needing to clean up some senior staff start in these two communities. I've never seen such poorly coordinated management in my life. They have Managers who can't manage from Grand Prairie, Athabasca, Westlock, Morinville to name a few and the sites is left with a few idiots. No one has the authority to make decisions any more. If the VP or one of his 5 directors doesn't sign it off no decision can be made. What they fail to realize is by not allowing staff to make timely decisions they have made a decision.</p> <p>And one last thing here how about you do some exit interviews that the ministers see from that slave lake FCC site. They can't keep staff do to extremely poor management. It's not hard to follow up with them, no one seems to want to listen.</p> <p><i>The fact that I know as much as I do about the goings on in</i></p>	<p>Stop giving hand outs to oil and big corporations and hold them accountable. Use the money they should be putting back into this province for access to "our" yes our resources rather paying the greed games and bailing them out all the time. I want to see our industry do well but get your head out of the sand Kenny is no better than Trudeau in dealing with oil. I was born and raised here yet we seem to care more about making some British or USA based citizens wealthier than our own Canadians and Albertans.</p> <p>Corporations have been screwing over Alberta for years take our money and run leaving the mess behind for us to clean up with unclaimed wells across our province it's just leaving a mess for our kids to clean up.</p> <p>My family is in oil and gas and they laugh every time the feds or provinces step in to bail them out, they laugh all the way to the bank. Forestry, mining all of the large resource corporations are the same. They are only worried about their shareholders in the short term and have no issues bankrupting a company, and moving on to a new one.</p>
T8N	<p>Education and Health Care should be properly funded! I would very much like to see diversification so that our economy is not dependant on oil and gas. I'd especially like to see concessions made for businesses exploring alternative sources of energy and those focused on <u>protecting the environment.</u></p>	<p>No more cuts to large corporations. All the studies of curriculum, etc. are costing money. Get rid of the War Room. Trips for MLA's should be cut.</p>	<p>Government workers, health care workers, teachers, those involved in new technologies . . . public service jobs should be reinstated by increasing funding to previous levels. Losing all these jobs is devastating to our economy.</p>
T5S	<p>Jobs Kenny promised in his campaign instead cuts costing higher unemployment</p>	<p>Asking for the 4.7 billion from his crooked corporate friends with higher taxes and interest on their free money</p>	<p>Diversity of jobs not focusing on one</p>
T3R	<p>Health care - NO CUTS Vulnerable populations - NO CUTS Education - NO CUTS</p>	<p>Elected members salaries, travel, and expenses. War room is unnecessary. Education audit is unnecessary.</p>	<p>Diversify. Invest in alternate/clean energy sources. Oil is dead.</p>

	Healthcare. Waits of 9 to 12 months for CT scan is negligence and very unfair to people waiting. It is also more expensive to deal with more advanced disease. Laying off nurses and other frontline staff will only worsen the situation and more people out of work won't help our economy. Infrastructure, abandoned wells are areas we could put people back to work and help economy.	Get rid of war room, stop trips trying to sell our oil and gas in absence of a carbon tax. Stop all government trips and Skype or use phone calls to lobby. Stop all government advertising. Reinstate corporate tax cuts.	Find a way to reward job creation instead of no strings attached tax cuts. Keep infrastructure in good repair, that creates jobs.
T6K	Seniors, AISH, Teachers, Blue Collar Workers, Alberta's Middle-Class Workers!!	Stop giving Quebec and other Eastern provinces all our hard-earned money and not receiving any royalties. STOP sending monies to foreign countries to help them, service Canadian people first, we're becoming a 3rd World Country ourselves, because of it.	Keep your promises like you said BEFORE YOU GOT ELECTED!!! QUIT spending money foolishly and other part of response reflects back to 2nd Question and Answer!!
T2A	Diversification of the economy, environmental protection, education, health care, and homeless.	Kill the war room, it's a complete and utter failure much like the current budget. The UCP should also reinstate the previous tax rate to ALL large profitable corporations and return those funds to general revenue to help pay for the above.	Creating jobs can come through supporting a diverse economy, education, healthcare, and the environment. Focusing on only a single industry is not only killing us, but also it's causing much of the skill in the province to leave and not return.
T6B	Enhance spending on health, education and housing. The Alberta advantage is having healthy citizens with opportunities to learn and train and live in safe appropriate settings.	Dispense with expert panels that waste time and resources looking into matters that have already been decided by the UCP.	Invest heavily into building and rebuilding Alberta's infrastructure and incorporate sustainable technologies that will a strong basis for future endeavours.
T5P	<ul style="list-style-type: none"> * providing universal health care and reducing privatization * supporting the arts across our province * increasing funding to our universities * supporting the proposed federal gun regulations * providing more support for AISH recipients 	<ul style="list-style-type: none"> * decreasing MLA salaries * decreasing the Premier's salaries 	<ul style="list-style-type: none"> * providing paid internships and increasing scholarship opportunities for students * increasing minimum wages so that individuals will have disposable income to spend in their communities * diversifying provincial focus on energy resources to find sustainable alternatives to expand our economy
T5B	Health care! Why is it that health care management wages are so high and why is there so many of them??	Too many managers! I would love to see the difference in spending for front line healthcare staff vs spending on management.	Programs for training. I would love to upgrade my healthcare training but the cost of school vs the small wage increase isn't viable for me.
T8A	Education. Specifically, the government should fund enrolment growth in metro divisions, and reinstate class size funding. Children with special learning needs must be supported adequately in their schools. School infrastructure is also a concern. Schools are aging and need to be maintained to a safe standard.	With the exception of projects already announced, post-pone new infrastructure projects, such as schools and hospitals. In health care, free up ambulance time so drivers don't have to wait with patients and put pre-screening measures in place so that those who do not require emergency care can be directed to other venues.	Stop the threats of layoffs if unions do not capitulate to your demands of salary rollbacks and don't force children to stay out of school for months if and when school employees resort to job action to get a fair deal. I fail to see how laying off teachers, educational assistants, or other staff will help with economic growth. Although I voted for this government, I am not sure I would do so again. So disappointed.

	Education (both K-12 and postsecondary), healthcare, reducing the unemployment rate, reducing homelessness, supporting people with addiction.	Increasing taxes to corporations and wealthy individuals, reducing the pay of top-level executives	By providing funding to public sectors to allow them to create or continue offering a high level of service to the public. The cuts that have been made to public sector budgets over the last year have significantly contributed to the unemployment rate and put important services at risk. The government has the ability to directly create jobs and stimulate economic growth through the public sector, while also ensuring that Healthcare and education services are some of the best in the world. This will not only stimulate the economy in the short term but will ensure that people are healthier and better educated in the future.
T7S	Roadways	Healthcare and education. Possibly review and find excess spending areas that could be cut.	Less red tape, lower taxes. Keep doing what you're doing.
T1K	Healthcare, education, homelessness, transportation not involving fossil fuels, climate and environment, assistance to the poor—with equal weight given to each.	By stopping the handouts to corporations and by taxing them fairly. By abandoning the ridiculous "War Room".	By investing in people—certainly not by putting thousands out of work.
T5T	Innovation and creating jobs	Digitization and cutting red tape	Tax breaks for small businesses, higher taxes for big businesses
T5s	Widening winterburn rd...and rec centre for the west	There wages	Stop spending my money on stupid things
T6C	Education, healthcare, social services	Stop giving corporate tax cuts. In fact, tax corporations even more.	Invest in social services like hospitals, healthcare, and financial support for students
T6L	Health care and education.	Management levels especially in health care. Government travel.	Obviously giving billions of dollars in tax breaks to big business did not help. Tax incentives and small business ventures that then allow for hiring at local levels and more disposable income to put back into the local economies.
T5T	Better supports for families experiencing poverty, especially if that prevents their children coming into care. More health care workers to decrease wait times and staff burnout. Funding to education for more teachers and special aides to manage all of the challenges that children are facing these days. Infrastructure so all rural and remote communities have both clean water and internet.	a 2% sales tax (we reduced the GST by 2%, I wouldn't miss that 2%), and ensure that the wealthiest people and corporations pay their fair share of taxes and a living wage for their staff.	Bring in businesses that create clean energy jobs. Stop reducing public service jobs. Increase mental health supports and employment programs in the justice system so that once released, they might re-enter society and contribute, instead of taking up police resources.
T5H	public services! i.e. health care, education, social assistance, AISH, etc.	wrong focus. reverse the horribly wrong corporate tax cuts and reverse the horribly wrong austerity cuts, and instead INCREASE taxes on wealthy individuals, businesses and corporations! stop giving away most subsidies, kick-backs, bribes, payoffs, patronage, sweetheart deals and other "incentives" to profitable businesses and corporations!	stop putting people OUT of work and laying off people, and instead employ people! provide an actual earned incentive for companies to employ people, like some kind of tax cut earned for proven job creation instead of just useless undeserved giveaway tax cuts. working people spend on goods and services that contribute to boosting the economy! laid-off public sector workers cannot spend on anything but basic survival. spending on infrastructure improvements would boost economic activity too.

T5N	Support for new technologies - to create an Alberta advantage in industries other than oil-gas Upgrade infrastructure - we do not have a single fast-traffic road in Alberta, and many roads are ridden with pot holes Education - maintain funding for schools and universities Medical care - ensure continuing availability of services for persons who need medical assistance while remaining in work force	Introduce higher taxes on gasoline - for oil operators and consumers Introduce higher taxes for big corporations and the high-earning persons in the society Introduce toll roads	Support for new technologies Support for start-up companies Infrastructure upgrade projects
T2W	Education, Health and Environmental Care.	Big business, no money to cronies, the wealthy.	By encouraging endeavours to stop homelessness, assist training programs for marginalized people, help industries that are suffering.
T0K	Healthcare. Hospitals have been shortstaffed in nursing departments for years. We need more homecare and more training fir the homecare we already have.	Stop giving money to corporations etc. immediately	Listen to the frontline workers, as to what is needed and what should be changed.
T8H	Stop giving money to the rich and stealing from the most vulnerable people.	From the no strings attached 4.7 Billion handout they should never have given out.	By investing in diversifying the economy and not giving free money to the rich and stealing from the poor
	Strengthening public delivery of public healthcare, reinstating that AISH payments are tied to inflation, strengthening public education to continue investing in our young people and our future, diversifying our economy including a just transition for workers in the oil & gas sectors, with their technical expertise in engineering and the trades, to green energy jobs	Increasing public delivery of public healthcare will mean that a portion of the costs to provide services will not go to shareholders in private-for-profit companies; Public delivery of healthcare can provide savings because the much larger public system can serve people more efficiently by spreading work across a whole system (for eg hospital lab technicians can process lab tests overnight in their 24-hr cycle); hiring more nurses would decrease overtime costs; increasing publicly delivered home care will help to keep seniors independent longer and is less costly to our health care system	Stop layoffs and cutbacks to people working in the public systems of healthcare and education where their work is greatly needed. These people will be spending their decent paychecks on keeping the economy moving. Keeping AISH payments tied to inflation will decrease the bureaucracy of having to reassess people's rates.
T3M	Health Care senior services schools	Their silly "War Room" what good has that been ?? Management	Not the way they are doing it it's only lost jobs for albertans

T2E	K to 12 education, post secondary, health care, social services, municipalities, green retrofit and green purchase incentives	<p>Stop corporate handouts.</p> <p>Shut down the Canadian Energy Centre.</p> <p>Increase the corporate tax rate.</p> <p>Implement a modest PST.</p> <p>Implement an "Alberta made" carbon tax.</p>	<p>Make it easier to parents work full-time by making child care more affordable.</p> <p>Incent tech companies for setting up in Alberta.</p> <p>Incent cyber security firms for setting up in Alberta.</p> <p>Incent the video game and film industry for operating in Alberta.</p> <p>Increase the minimum wage and make it equal for workers of all ages.</p> <p>Shift the focus away from oil and gas - diversify our economy by supporting industry that is focused on green technology, distribution, cyber security, clean energy, child care, mass transit. Oil and gas can take care of itself. Companies can hire firms to handle their PR, marketing and communications. The Government does not need to subsidize the industry. The reputation of the Oil and Gas industry is set. The divestment in this sector has begun and that will not change.</p>
T2N	<p>Diversifying the economy (small business, tech, entertainment like video games, app developers, tv and movies..)</p> <p>Public services like healthcare, education, transit, childcare (The less we have to pay for basic needs the more we have to spend. These services also tend to create jobs)</p>	<p>Stop giving money to companies that aren't tied to our province and well-being. Close the fucking war room. It's an embarrassment along with a waste of money.</p>	<p>Public services create jobs, so making sure those are healthy makes for a healthy society along with providing jobs for them. Make incentives for small business and entrepreneurs. Encourage other sectors and stop focusing on oil and gas so much, it's let us down multiple times in the past and it's only going to get worse as it becomes more and more outdated. Stop undoing regulations that protect people from basic needs (like insurance) from skyrocketing. If people don't have money to spend, they won't spend it and thus the economy stagnates. (Insurance is a basic need as even our cities are often too spread out to rely on public transit for jobs and so many of our population require vehicles. Not to mention the transit cuts that have made it even more difficult to take public transit reliably.)</p>
T2B	<p>Health and education.</p> <p>Seniors and persons with disabilities</p>	Tax corporations	Green energy
T4C	<p>Education, Education, Education</p> <p>AISH</p> <p>Seniors</p> <p>Health Care</p> <p>The environment</p> <p>Economic diversification</p>	<p>Add a sales tax</p> <p>Cancel the 'war room'.</p> <p>Cancel corporate give aways</p> <p>Cancel all charter / private schools</p>	<p>Diversification of the economy - I.e. alternative energy & tech.</p> <p>Retraining oil workers to reclaim abandoned wells.</p> <p>Increase minimum wage.</p> <p>Provide universal daycare.</p>

A1A	Money needs to be spent on healthcare, education, infrastructure, and innovation. Cuts to AISH are just mean. Wait times for diagnostics like colonoscopy and CT scans have drastically increased since UCP took over. Nurses and teachers are stressed to their limits ...overworked and underpaid. By putting money into innovative research we can diversify our economy instead of just relying on oil.	Get rid of the War Room! Stop hiring panels (and people from outside of the province and country) to review curriculum and such when the experts are right here in our province (for example teachers currently in classrooms.) Curriculum panel was a complete waste of money. Invest in people not corporations. Stop trying to privatize health care and education.	Invest in innovation and research beyond oil and gas and invest in public education for our youth! We have brilliant students in this province who will do amazing things. Invest in innovation. For example, our world has a plastics problem. China has stopped taking plastics to recycle because they have too much. Why not offer grants for innovations that use recycled plastics. You would be amazed at what people come up with. Or how about investing in plastic recycling businesses (job creation) as there is obviously a shortage of such services here in Canada.
T8A	Job creation health care education	stop the amount of immigrants coming to Canada	By focusing there attention on it and get people back to work.
T2W	The present government should focus on restoring funding to education, health care, the civil service and municipalities. It should not be motivated by an ideology that protects itself and a special interest group. The best government is NOT the least government. Provincial and municipal infra-structure must be supported. Oil companies must pay taxes like every other company and be held accountable for money owing to farmers and for paying for abandoned wells. Hiding behind rhetoric, being deceitful and lying will eventually result in the failure of this government. Climate change and the environment are critical issues that must be addresses and acted on. Spending money to protect the environment is critical. Funding should be returned to non-profit societies. I'm going to spend my money to ensure the defeat of this government. Everything this government has done should be reversed.	The first place is to stop giving away tax dollars to oil & gas companies. This is a good time to do provincial and municipal infra-structure work rather than waiting until costs increase if the economy ever recovers. Taking money from people on AISH is not the way to save money. Reducing the social safety net is NOT the way to save money.	Wake up to the reality that you cannot recreate the past. The world is awash in oil. The price is going to stay low. The province needs to diversify. We need educated, trained workers. Support job creation by ensuring everyone (not just special interest schools) has access to the best possible education. Unfairly targeting the civil service by firing people is short sighted. I look forward to documents found through the Freedom of Information legislation to learn the "truth" cost of work given to companies and whether there were conflict of interest in hiring them instead of using the civil service to do the same work! This government has been a catastrophic failure.
T2J	The government needs to focus more on the public sectors. Instead of giving tax breaks to the rich and handing out millions to companies that LEFT our province, focus on Education and Health Care because they are the areas that benefit everybody. Whether you work in oil and gas or a grocery store, you are guaranteed to overlap with the public sectors. When money is taken away from them, everyone suffers.	The government could find savings by having MPs and our Premier take a pay cut. They are paid more than the majority of provinces. The government could also find savings by making private schools actually be funded privately. When a private school is over 80% funded (more than any other province) by Alberta's government, they are hardly a private school anymore.	The government should support job creation and economic growth by assisting the public sector. Instead of forcing thousands out of jobs in the public sector, the government should be taking their own pay cuts. THE CARBON TAX. If they government had kept their own carbon tax, Alberta would get to be keeping our own money from the tax. Instead, by scrapping the NDP's carbon tax, we have to do the federal carbon tax where the money goes to Ottawa.
T8A	education health care invest in diversity in types of businee	Do not give money to oil companies as has been shown has not helped	Be realistic as to what will be valuable in the future
T0g	Health care funded to meet our booming population and lack of increased services to meet this news over the past several decades (get rid of managers not front line staff), increasing university enrolment so our province's per student spending aligns with other provinces, huge AISH recipients cost of living increases so they don't turn to crime.	Reducing MLA's salaries and perquisites, getting rid of the war room to promote oil and gas, close schools with under 100 kids and a viable option within a 35 minute drive.	Tourism grants, business incubators, leaving the lotter alone because it supports NGO's and other groups that meet these mandates.

T8N	<p>EDUCATION IE Teachers, Teachers Assistants</p> <p>HEALTH We cannot be without Nurses and Doctors which this man does not seem to understand.</p> <p>SENIOR HOUSING</p>	<p>Cutting back on Managers at the Top who have never been educated in the job that they are doing</p>	<p>Job creation will come from Education Economic growth will come from having the right people in charge at the top with some brain The people of Alberta should have been careful for what they wished .</p>

T9S	<p>Healthcare, education, and infrastructure</p>	<p>Alberta does not have a spending problem, it has a revenue problem. Raise corporate taxes and, if needs be, institute a provincial sales tax.</p>	<p>Investing in infrastructure while times are rough puts Albertans back to work. Don't wait until times are good to invest in infrastructure as that is when there's a labour shortage. Do it now while people as looking for work.</p> <p>Likewise, now is the time to invest in education, especially secondary. Investing now gives us the educated workforce necessary for the future.</p>
T4L	<p>Healthcare, Education (elementary, secondary, post secondary), Career Training, Homelessness(big impact on healthcare, emergency visits, policing, courthouse - you get the picture)</p>	<p>Minimize duplication of services (eg career training, multi-healthcare service providers). Contract services. Review Social assistance programs (eg AISH)</p>	<p>Financial assistance with the understanding the funding to be paid back (low interest over a realistic term)if not in full at least a certain %. Begin at grass roots level - starting Junior High if not sooner. Educating the next generation the importance of viable work, education, financial responsibility. Encourage volunteering in areas of interest-training on the job, low financial impact on employer.</p>
T2X	<p>School maintenance and new schools. Continue with transportation infrastructure. Help cities with their shortfalls for transportation needs (LRT)</p>	<p>Quit giving tax breaks to large corporations.</p>	<p>Do not do as all other conservative governments have done the last 40 years, every time there is a drop in oil revenue you want to attack the public servants, teachers, nurses and put more people out of work or cut their incomes. Try something new and innovative.</p>
T3L	<p>Education and Health Care</p>	<p>Return the oil and gas royalties to pre-Ralph Klein levels, and stop allowing the large operators to defer their royalties while their projects are "under construction" for decades. Increase the personal income tax for earners over \$250,000.</p>	<p>Re-direct oil and gas royalties to support sustainable businesses, industries, and meaningful retraining for those of us who have lost our oil and gas industry jobs.</p>
	<p>Funding public health care & education Natural resource diversification beyond oil and gas by incentivizing corporate growth into sustainable means of energy harvesting.</p>	<p>By increasing the tax rate/reducing tax loopholes for large corporations and the ultra wealthy.</p>	<p>Maintaining a healthy and robust public education system Maintaining a healthy and robust public health care system Acknowledge the climate crisis and act accordingly - think further into the future than the next 5 years. Oil and gas will no longer be economically viable in our lifetime - what happens then?</p>

T3H	Healthcare, road maintenance.	The energy "war room".	Employment skills initiatives. I work in Oil and Gas- the people losing their jobs are pigheaded postmodern conservatives. We are hiring at my job and no one has been able to take the position due to inability to spell, inability to deal with authority and drinking and driving on the job. Being trashy is infiltrating Alberta's sense of cultural identity and it's costing us jobs to people outside Alberta who know how to behave in a professional environment. A government sponsored "etiquette course" in the same lines of a safety work ticket could help boltser resumes for Albertans actually willing to work.
T6R	Education and Health Care	Cutting management levels, keep process effective and efficient.	Promote new businesses, attract investments including foreign investments on all kinds of industries, consider tech companies, not limit to oil industries.
T4x	Leave frontline workers along and focus on management.	1 Upper managers bonuses would pay for my wage in a year	Cancel the corporate welfare we all know it's not working. Quite cutting jobs and implement a 2% pst.
T5X	Health care, supporting workers, maintaining our standard of living. Spend money to support the economy. No health cuts.	Instead of finding savings, raise taxes to competitive, normal rates and spend money to support the economy and health care. PST is an option.	Spend money on programs and infrastructure to support and build the economy. Green programs. Focus on nuclear, forget about oil.
T2V	Health, education, and diversifying the employment sector - that means supporting job opportunities like those in alternative energy, the entertainment fields and the arts, health and education	The war room should be dismantled, the unnecessary investigations into the present education system should be stopped (ps I am not a teacher)	As above, support employment in other sectors of the economy than just oil and gas; alternative energy, education, the film and entertainment sector, the arts, the health sector.
T8g	Community development and revitalization. Health care Education	Corporate handouts By not creating an energy war room	By investing in communities to make them desirable places for businesses to operate.
T5T	Education, health, and social services.	Get rid of the UCP.	Not by giving big corporations tax breaks.
T3R	Health care, education and diversification of the economy.	Eliminate corporate tax cuts as these only go to the bottom line of the corporations and do not create job growth. To think otherwise is a fallacy.	Encourage diversification with encouragement of tech sector, clean energy initiatives and the film industry. Pretty much all the things they cut. The oil industry is mature and in decline, need to focus elsewhere.
T1S	The government should focus on spending less money, offering less services.	Cut public sector wages.	Cutting taxes
T5K	Education, Health Care.	Getting rid of the Un-Albertan Activities Commission. Eliminate the War Room.	Properly fund Education and Health Care. Diversify the economy. Spend more on cleaning up orphaned wells.
T8T	Infrastructure should be one of the most important things to get people back to work and quit fretting about what is wrong with education and get the health care system fixed once and for all!!!!	The government should look at themselves first and not take money out of the pockets of their citizens for savings!!!!	This should be first and foremost on the minds of politicians!!!!
T8V	Education and health	Absolutely no special incentives to any business trying to set up in Alberta.	Develop high tech industry around lower carbon extraction and usage to provide to the world.
T3J	Health.Education .Seniors Job cremation	Corporate tax increase.Reduce non productive expenses	Make good relationship with Federal government and convenience all Canadians to use Canadian oil only.Speak with Fed to stop any import of foreign oil in Canada

T0M	education and healthcare front line staff	reduction in AHS middle/upper management, not giving money to multi-billion dollar companies that have zero vested interest in Alberta, not reducing corporate taxes, have a sales tax if need be. The cutting of all of these services is ridiculous and unnecessary, if we were inline with other provinces we could've continued programs to support ALL Albertans without increasing debt. Stop it already- I'm actually thinking I no longer want to live in this province.	Invest in things other than o&g. Support our kids and families. Stop it already with the privatization of services and the religious pandering of the schools.
T3C	Harm reduction sites that save many lives. Focusing on revenue gained from tourism rather than hunting and guide outfitting companies.	Get rid of the war room that is supposed to be transparent but operates in a veil of secrecy and doesn't allow for FOIPs, and threatens freedom of speech by not allowing charities and not for profits to provide healthy criticism of the government's actions. It's a sham spending our tax payer dollars on questionable logo creating companies that copy others work and claims to be manned by journalists, that really aren't.	Allow the transition of fossil fuels to renewable energy. The world is changing rapidly and we're stuck in the dark ages!
T5E	Health Care / Education / Infrastructure	Increase corporate taxes	Build the pipeline Build infrastructure
T3K	education, health care - primary care services	The "war room"	stop giving money to big corporations, trickle down doesn't work.
T3L	Education (increase funding to PUBLIC education), health care and diversifying our economy. Having ONE industry in this province puts us all at risk of staying on this roller-coaster ride that has been decidedly going down for many, many years.	Roll back tax breaks, cut the war room and stop focusing on savings when Albertans are hurting financially. We needs public investment. Make the average, working Albertan more important than the wealthy business owners.	Invest in public works. Create jobs in education, health care and government and mental health!!!!
T9N	To revamp our economy to train former oil workers and invest in non-fossil fuel based energy. Stop giving tax cuts to businesses who are on their way out of the province; support your taxpayers by funding a decent education and proper health care for all, instead of trying to sneak in user pay health care. Stop growing the wedge between the have and have nots.	Go after the oil companies that still owe rural Alberta for unpaid taxes. Stop using private jets to travel, use technology instead. The UCP are the same as any Conservative govt; lining up to the feeders to suck out as much as possible for them and their rice cronies. Tax businesses more; trickle down economics has been proven to be useless.	Invest in renewable resources; train up workers to help transition them for the future. Support the worst off people instead of driving them to suicide.
T4R	-education -health -new technologies -new industries	-increase corporate tax -increase income tax -cut back on management in public sectors -reduce overtime by ensuring proper staffing in public sector	-incentives for new industry such us film and technology -invest in renewable energy -invest in the secondary and post secondary education, scholarships for new innovations
	Education, public healthcare, job security, renewable energy	Cutting salaries of executives, NOT giving tax breaks to the rich	Pour money into the people by funding education, healthcare, job security, etc.
T6G	Social Services, Economy, Job Creation, Housing, Green Energy, parks and recreation, ecological infrastructure.	Investing in green energy, reducing the size of the oil sands, increasing business taxes, crating jobs.	Invest in green energy and and ecological infrastructure.
T3A	Diversifying the economy and spending more on education and healthcare things we really need	Alberta is the only province without a provincial tax, one or two percent would help balance a budget without really hurting anyone. Also making sure large companies aren't getting away with not paying their fair share. Trickle down economics have proven to be very ineffective.	Making us less reliant on the oil industry so our economy doesn't fall every time the price of oil does.

T6R	Public health care, education, subsidized daycares, mental health care, supervised injection sites, housing supports and wrap around services for homeless people.	By cutting the war room, ensuring that no contracts are sole sourced to relatives' companies (including law firms), taxing corporations appropriately, eliminating other corporate handouts.	Investing in diversifying the economy, for example attracting the tech sector to Alberta and creating jobs in the renewable energy sector. Adequately funding public supports, which is a large and necessary employer (our teachers and nurses are vital). The current government's decision to cling to a dying industry is robbing us of our potential to be future leaders and will bankrupt this province.
T8N	Health, Education, and diversification of the economy.	Reduced tax cuts to oil industry.	Economic diversification.
T4T	Diversity in economic futures	Cancelling Corporate tax cuts could boost our provincial budget, and stop using committees to access these, it costs way to much money To find solutions. This is the job we already pay you to do Mr. Kenny.	Diversify, and invest in our students
T0L	Expanded medical accessibility, especially for seniors; capping post-secondary education costs & tuition & transitional training for job creation outside oil & gas industry!	Collect the costs incurred from "orphan well" owners to remediate those well sites, reduce redundant & obscenely overpaid gov't employees & stop forgiving or ignoring multimillion dollar corporate taxes, whether they support your party or not!!!!	Start finding projects that show viable diversity & FUND them - clean air, clean water & clean soil projects that do not involve Roundup, fossil fuel & uncontrolled pollution! Promote organic farms rather than CAFO's & help with transition funding, for example.
T4X	The government needs to focus on education and health care! Fix the error they made in making adjustments for the insurance companies to make it even harder for Albertans to live here! Focus on trying to get our Oil industry back on track before you lose all of the companies in Alberta!	The government could find saving by getting rid of more of the upper crust employees, too many bosses making huge incomes and duplication in their jobs or could be done by less people. The government decreasing business taxes has not achieved anything in fact more companies have left this province since this government has taken power! Quit having boards go over the issues from the last government and wasting tax payer dollars paying to have this done! Quit paying for meetings for your other Premier friends when they are not needed, you will be able to speak with them via the phone or at the Federal meetings when called!	The economy has not moved so I am unsure how they thought they would increase job creation. The progress to this point on oil was the last government and I see nothing but a Premier threatening a Prime Minister and feeding the notion of seperation from Canada. If that happens you will see a quick exit of Albertans and others to the other provinces.
T2M	Health care, education and seniors	Easy, quit giving tax break to the rich, give tax break to seniors and low income earner and health care and education	First quit making it hard for small business to survive so they stay open. 17(1) a mall in Calgary and within 3 days in the middle of January 4 stores closed. Treat everyone equally. Minimum wage the same whether you are 16 or 40. Increase minimum wage by a dollar. The more money people earn the more money they will spend this equals economic growth. The labour laws are ridiculous in some area. How about asking employers to pay for the half hour break. How about asking employers to provide a schedule for a month at a time instead of the employer can do whatever they want whenever they want. Look after the employees instead of just the employers.
	Healthcare and Education. Investments to diversify our economy.	By Charging Corporations their fair share.	larger investment in the Motion Picture Industry would bring many thousands of jobs.
T8N	Education Healthcare Infrastructure poverty natives	NO tax cuts ,without guaranteeing jobs. The Oil differential (WTI vs WCS) , is twice what it was under Rachel Notley . Reduce the number of ridings in the legislature by 20% , and payments Eliminate allfor attending meetings.	Eliminate all subsidies , etc to farmers , oil companies , and anyone else.
T5W	It should be healthcare, seniors pension and the poor.	They could find savings by not do too many buildings and not raise taxes.	Getting people working and being active.

t4c	Education, K to PhD; health care (there is, by the way, a possible pandemic out there in the corona virus); renewable energy of all kinds (solar, geothermal, wind); community-based food security (greenhouses, local markets); a healthy arts community in all arts disciplines makes AB attractive to investment (top-level people don't want to live in a cultural backwater).	Cancel the \$30 million per annum "War Room," which is both needless and embarrassing and a turnoff to new investments and industries. Get back the \$4.7 billion you gave to oil and gas companies to leave Canada.	See question 1 above: education, health care, environmental/sustainable communities, renewable energy (I see you are supporting one solar project -- good for you).
T4C	Renewable energy initiatives primarily.	Cut subsidies to big oil and gas	Promote diversification in Alberta's economy. Support green initiatives and carbon sensitive start ups.
T3A	Creating jobs that are Investing into clean energy and the internet upgrades, Health, Education.	Tax the wealthy and get money back from oil companies, who did not pay taxes. Raise oil revenues as Oil is on it's way out!	Creating jobs that are Investing into clean energy and the internet upgrades, Health, Education.
T2A	Education - specifically addressing class size and teacher student ratios; post secondary costs - why were the grants and loan programs changed? Student funding should be accessible to all and costs should be decreased so everyone who wants and has the marks to attend post secondary can. Health - no privatization of healthcare. Wait times need to be reduced not increased because of asinine cuts to health sector employees.	Reducing salaries of the premier, provincial MPs; reduce expense allowances for premier and MPs Stop cuts to high income earners and tax appropriately and/or introduce a small sales tax or reintroduce the carbon tax to increase provincial tax dollars.	Stop focusing solely on oil and gas. The industry has gone bust and it's not ever EVER going to boom again. There's plenty of green initiatives that were becoming profitable until the grants and opportunities were cut by the Kenny government. We have a plethora of renewable resources here in the province and there aren't incentives for those types of businesses to get up and going because there have been tax cuts to big oil and gas that have made their say clearly - they are pulling out of the province regardless of the cuts. Oil and gas the way it was has run dry. Time to diversify. Reintroduce the capacity market. Look at other means of using what the province has an abundance of.
T7Z	Health Care, infrastructure, teachers, alternative energy, seniors, social programs, post secondary education.	increase corporate taxes stop giving handouts to big oil and gas. Collect taxes from oil companies that have abandoned wells. Close down war room. Tax profits of corporations that make over 10% profit per year.	only give tax intensives to companies that truly hire workers and retain them for a minimum of 6 months. Tax breaks for green energy projects that put individuals to work.
T7S	Mental health, job creation, infrastructure, medicine, education	Government wages, keeping the Alberta curriculum that was developed for the last 5 years,	Infrastructure creation - building new hospitals, roads
T6H	The provincial government needs to ensure that we maintain and improve our public services. Health care needs to be funded to keep up with inflation and Alberta's population growth, which is increasing every year. Specifically EMS, we need more ambulances on the road and stations in our city. In addition, the government needs to invest in public infrastructure.	Stop giving billion dollar tax breaks to already wealthy companies. Tax to the level of the next lowest taxed province in Canada. Bring in a Provincial sales tax.	Invest in public service workers, specifically in health care. Invest in building public infrastructure like public transit as well as local companies that support Alberta tourism.
T0A	Healthcare and education must be the priority	Well, if you didn't give away money to oil companies that take our money and flee the province we would be in a better financial state, how about all MLA salaries become retroactively \$0?	Stable revenue for Healthcare, education, childcare (let's make \$15/day daycare happen!) Stop putting all our financial eggs in the oil basket, diversify our economy, it's already late, but not so late that we can't catch up
	Health Education Social Programs No cuts. GENERATE REVENUE	No more free money to corporations	Diversify the revenue portfolio Be forward thinking Get in line with the future
T9K	Health Care, Education, Seniors	Stop giving money away to big business/corporations.	Stop slashing funding to public sector

T8N	Education, including post secondary. Healthcare. Diversification of industry, particularly in alternative energy	Increase taxes to corporations.	Diversification of industry, particularly in alternative energy. Provide retraining for gas and oil sector workers. Create incentive programs for businesses and homeowners to go green and thereby save on traditional energy systems and create jobs.
T6L	Health	Getting rid of highky overpaid directors, managers and private contractors.	By not focusing so much on the oil industry.
T1L	Education, Health Care, Climate Change	Get rid of the RIDICULOUS war room and rescind the tax cut to corporations, trickle down economics DOES NOT WORK, it has been proven over and over again. Not sure why this government is reverting to this arcane process. Investing in people not corporations will improve the economy.	By investing in the future economy of renewable energy and digital economies. Investment in R&D, Alberta has a huge advantage in solar etc. Investing in a dying industry of fossil fuels is completely the wrong direction.
T3A	Public health care. Public education. Post secondary education.	Fewer tax incentives to giant corporations and more to small business owners. Cancel the war room- I can even imagine the amount of tax payer money that is being spent on that.	Stop penalizing public sector workers! I cannot spend the way that I would like because My wages do not keep up with inflation. Encourage economic diversity. Reinvest in the IT sector and return tax incentives to that industry. Encourage cultural and sporting attractions. Olympic Games. X Games. Olympic legacy facilities must be maintained to allow for world class events back into our city. These events promote our province and our talents and bring in revenue.
	Healthcare, including drug and dental coverage. Education. Hire more teachers and reduce class sizes.	Stop propping up a dying industry. Get rid of the Energy War Room.	Expand youth employment programs. Reinstate seed grants for the tech sector. <u>Invest in high speed rail transportation throughout Alberta</u>
T6G	The government should focus on Education, Healthcare and job creation. Healthy Albertans who are working and supporting our province will grow our economy.	Why do we need a war room. I am sure that keeping people healthy and educating our population is a better use of this money. How about NOT giving tax breaks to those who can afford to pay taxes. Stop hurting vulnerable people like seniors and those with disabilities with your cuts.	Invest in alternate energy. Invest in Research. Make the oil companies clean up and cap abandoned wells. Empower people instead of putting them down with cuts to programs.
	The government should focus on healthcare, education, and helping those who need a little extra help (eg. people with handicaps). I think education is the number one priority.	I think the government could raise taxes or cut down on any unnecessary projects like the War Room.	Support organisations other than oil and gas. Do not cut education funding.
T0M	Health care, Education and social programs that help all Albertans	Stop giving tax dollars to the rich corporation's . Make oil company's pay the taxes they owe,Quit wasting money on the so called war room and UCP panels. Stop the cuts we need more jobs to generate moe tax revenue not fewer.	Support education and invest in industries besides oil and gas
T6R	Diversification of the economy. Educational Support or retraining and options for reduced or free tuition for individuals who can no longer remain employed in industries that are downsizing. Make it the Alberta Advantage.	Eliminate the war room.	Build and support entrepreneurship, new technologies and educational opportunities including Universities. Short term economic pain, just continues to create pain that impacts residents for decades.

T8H	Education, specifically public education.	Roll back needless spending such as curriculum re-write (continue with the re-write that had already been underway for 10 year), close the Energy War Room, eliminate funding to private and charter schools, forget standardized testing for grade 1 through 5.	Reinstate the corporate tax cut. Since it's implementation there has been more job losses than gains. Companies have still relocated despite the cut. Reinvest in diversifying the economy. Get off the oil and gas roller coaster!
T3R	Health, education, SCS and social programs. Giving pension control back to the teachers and LAPP members	Reversing the tax cut to corporations, it created zero jobs anyway (surprise, surprise.....not as everyone outside the UCP knows that trickle down economics is garbage.) Shutting down the pathetic war room and ending those completely biased panels. Stop flying off to other countries on our dime too.	By investing in a diversified economy, bringing back a provincial carbon tax to pay for it. Having a graded tax system so the richest contribute more, works everywhere else. Consider a small sales tax to be invested in health and education and to allow you to stop screwing public sector workers.
T8r	PUBLIC healthcare (not privatizing it like your governments plan to) PUBLIC education ALTERNATIVE ENERGY SECTOR (I acknowledge that some spending is needed in oil and gas, but not in the form of a 4.7 billion tax break as outlined in your own budget)	No subsidies to oil and gas companies Get rid of ridiculous "energy war room" theres 30 million right there Stop fighting equalization (it was kenneys formula as federal minister that's in use today) Stop fighting climate change (FYI it's happening) Stop trying to demolish our world class education system with your corporate ideologies.	Invest in alternative energy sector Dont cut funding to education (primary and secondary) Restore \$15/hour minimum wage AND support wage increases across all industries. Be a champion for all Albertans, not just the wealthy.
T8h	Stop cutting public funds and jobs you crooks	Up their fat UCP asses	By leaving
T4E	The government should prioritize supporting new and growing industries to diversify the Alberta economy and become less reliant on our natural resources.	When a person experiences budget shortfalls they typically do two things, reduce expenses and increase income. The government has focused a lot on reducing expenses but not at all on increasing income. Taxing large corporations, especially those located outside of the province but having operations in Alberta, is a great way to increase revenue. And our taxes are so low that we likely have a fair bit of room to increase the corporate tax rate before getting to the sweet spot that balances new government income to increase financial pressure on corporations.	I think the government should realize that the oil & gas sector is a sunset industry and the rate of return for investments into it will have much lower returns than it did historically. We need to invest in and support new, growing industries that will actually have a positive effect on Albertan's.

T4N	<p>1. Funding healthcare: We have an aging population full of complex healthcare/medical needs. We need funding to provide basic medical needs to these individuals, while also keeping them in home so our hospitals and extended care facilities do not operate on an overcapacity basis constantly. We should maintain funding for nurses, physicians, social workers, physiotherapists, occupational therapists, respiratory therapists, etc. in acute care, outpatient care, primary care, and home care settings in order to provide evidence based practices to all individuals requiring healthcare.</p> <p>2. Funding mental health: We need funding to maintain our current mental health services and expand these services to rural communities. Mental health services should be affordable with reasonable wait times for services. Funding these services would decrease emergency room visits and keep our acute care admissions managed.</p> <p>3. Funding education (elementary, high school, post-secondary): To maintain Alberta's status as a progressive and enticing workplace, we need to fund education. Alberta requires a highly educated workforce to keep up with changing industries, which rely on efficiency and new technologies. We need individuals to succeed at all levels of education in order for them to participate in modern society.</p> <p>4. Funding environmental protection: We need funding to find a better balance of natural resource development and environmental protection. We need new technology and highly trained individuals to develop sustainable energy and decrease our sole reliance on oil production as an income source for our province.</p>	<p>1. Implement a small provincial sales tax in line with the next lowest sales tax in the country.</p> <p>2. Decrease tax breaks for large corporations.</p> <p>3. Implement a provincial carbon tax and use the funds for provincial projects, rather than having the proceeds of the federal tax going to the federal government.</p> <p>4. Decrease middle management full time equivalency, while maintaining funding for front-line workers, educators, etc.</p>	<p>1. Provide funding in terms of scholarships and bursaries to post-secondary and graduate training to find new energy sources and technologies to support them.</p> <p>2. Put together a panel of educated individuals to determine how to diversify the economy to become less reliant on oil and grow other economic sectors.</p> <p>3. Use the savings ideas from the above question to maintain wages to keep people employed in the province in public sectors.</p>
T1K	<p>Diversification of the Economy Public Healthcare Services Public Education</p>	<p>Stop subsidies to Oil Companies that make enough profit to carry themselves along</p> <p>And two collect the property taxes/other taxes these oil companies</p> <p>The rest of Alberta pays their taxes they should to.</p>	<p>Invest in the future.</p> <p>In the short term bring the oil revenues to port. But also invest in future tech industries like solar, wind, and battery based transport.</p> <p>All the people laid off from the Oil Patch should be given the opportunity to re-train in a viable forward thinking industry in Alberta</p>
T2M	Climate Crisis	Stop giving money to corporations	That I do not know but that's why I'm a constituent and you are the politician.
T5X	Health and Education	Create a provincial sales tax. And return taxing to large corporations that were cut	Find alternatives to having oil as primary income eg. technology
T5T	Public health, public education, social services	The war room, the ministry of red tape reduction, paying non teachers to create curriculum, creating "teams" for consultation on restaurant wages that are not equitable	Not cut education dollars, support women returning to work after maternity leave, sustain employment growth in the health industry.

T6J	Medical, Education, veterans, seniors, raising wages and working conditions, tax breaks for the working class not UCP rich friends and Corporations who cuts jobs 37,000, Shaw 400 million dollar tax break 1700 jobs lost. Come up with some green and alternative job creations.	the Tax breaks given to Rich and Corporations of 4.7 Billion, when they cut 37,000 jobs	Go Green and alternative energy, solar panels, empower small companies and mid size companies they should get the tax breaks, they create more jobs, encourage average people to open Companies. Growing our own food, co ops, training in this area. Build our own Refineries in Alberta.
	Health Education, including post-secondary education Supporting those in our community most in need.	Getting rid of the "Ministry of Red Tape" because what says red tape more than a ministry? Getting rid of the \$82K a day "war room" that is not transparent in their actions or achievements. Getting rid of a \$200K social media troll operating under the guise of issues management. There are many far more qualified people who could do this job far better for far less. Do not give tax breaks to big corporations. This does not work. Tax corporations and individuals with high incomes appropriately. Introduce a sales tax, like all of our provincial counterparts. Stop looking just at savings and look at ways to increase income.	Support small businesses with grant programs that support industries directly. Put the film tax credit back into place. Hundreds of jobs lost because of this cut and millions in economic spin offs lost.
T6e	I think that the government should focus on spending money for schools and healthcare and the hep make sure that art programs aren't the first to get cut	The government should stop giving handout to different corporations. That money should be used to help make the people of Alberta thrive not cut the programs that they need to thrive in society today	The government should not raise the tuition of those who are in universities and cut some of the tax increases that they are implementing so businesses are able t keep and add people to their workforce
T6C	Keeping Albertans employed, including those who work in the GOA.	I bet there are more savings opportunities in the Legislature than anywhere else. Yes, I mean the MLA's and the other fat cats.	Not by cutting government jobs! Make it harder for employers to dispose of employees!
T3k	Alleviate poverty and homelessness. Education and health care	Reduce mid and top management positions/salaries in AHS	Invest in infrastructure using Alberta companies. Invest in post secondary. (It reduces unemployment by provide alternatives to seeking employment). Reinstate tax credits for innovation
T5R	Education, health and social services	Removing the Ministry of Red Tape Reduction Closing the war room Stopping Ministerial travel	Restore tax incentives for IT start-ups Support the Arts and Culture Invest more in the innovation ecosystem End subsidies for oil and gas Increase royalty rates for oil and gas Demand that the oil and gas companies deal with orphan wells
T0k	Public Health Care and Public Education	I'm not sure, I would have to look at the government spending and see, but I'm sure it's not giving us an entire and truthful accounting for where our tax monies are being spent	You can't expect too cut jobs and think the economy is going to grow. You cut jobs and EVERYONE starts pinching pennies, not to mention after cutting jobs the cost of people being put on welfare increases drastically
T3B	Front line public services. Developing transit to a more user friendly level. Diversifying the economy. Green energy- shift away from oil & gas- its holding us back.	Putting some onus on Albertans to take responsibility for their own health care. Accessing Emergency rooms for non-urgent matters is unacceptable and a huge source of wasted tax dollars.	Invest in the population. Implement a sales tax. Stop cutting everything and actually make things better. You have done absolutely nothing but piss everyone off since you all came in to office. Stop wasting our time and energy.

T5t	Tax breaks for large corporations in the hope of trickle down economics doesnt work. Focus on education and public services.	Eliminate stupid political initiatives like the oil and gas war room and reduce subsidizing large oil and gas companies will result in increased tax revenues	Education programs to help the transition away from an oil and based economy so alberta is not a one trick pony anymore.
T2P	Maintaining services not cutting.	Rescind the literally criminal giveaway of 4.5 billion dollars to the rich and corporations.	Stop giving our money to the rich. That will promote much growth.
T5L	<ul style="list-style-type: none"> - Diversifying the Alberta Economy so we are not so reliant on the Oil and Gas sector. - Public Health and Education sectors. Strong publicly operated social programs will ensure that Alberta is an attractive place to live and do business. - Climate Change mitigation and adaptation efforts, as spending money on this now will help avoid costly future expenses. 	<ul style="list-style-type: none"> - Stop spending money on the Canadian Energy Centre. The oil and gas industry should be paying for their own communication campaigns, not the government. - Stop providing tax cuts to large corporations - prior to the recent cuts, Alberta still had one of the lowest corporate tax rates in the country. Alberta residents should not be paying for corporate profits through a reduction in public services. - Implement a provincial sales tax - a 2-3% sales tax (still the lowest in the country) would go a long way to a balanced budget without having to cut critical services. - Support harm reduction sites (like safe injection sites) and preventative care facilities. These measures are proven to produce long-term savings to the health system as urgent and critical care costs are reduced. - Require all new energy developments to put up a bond so at their end of life the government (i.e. taxpayers) is not left paying for the clean up of abandoned sites. 	<ul style="list-style-type: none"> - Support re-training of oil and gas workers into other industries to ensure a just transition away from the slowing fossil fuel industry - Increased support for renewable energy and energy efficiency industries. Alberta has excellent renewable energy potential and could be a leader in these industries, rather than be left behind, as the world transitions to a low-carbon economy.
T5N	Education and health care!	Stop giving corporate tax breaks and get companies to live up to their environmental responsibilities and clean up their abandoned oil wells.	Through funding
T2R	Diversifying industry Education	Buracracy LESS TAX CUTS FOR CORPORATIONS - IT IS NOT WORKING AS INCENTIVE FOR INVESTMENT INTO ALBERTA NOR IS IT PROVIDING NEW JOBS FOR ALBERTANS (it is doing the exact opposite)	By spending on the citizens of Alberta, diversifying industry by incentivizing industries other than O&G (Tourism, Tech (biomed, industrial, AI, etc.), manufacturing, alternative energy, ...not giving money away to corporations who pay their CEOs more, then fire Albertans.
T5T	Focus on health services and education	Government should minimize expenses especially streamlining operations and impose taxes on big corporations	Encourage investments and promote local products
T6X	Education and Health	Eliminate corporate tax cuts	Invest in education and investing in alternative energy programs.
T6H	Education (K through postsecondary), health care, air quality, water quality,	I think the government should increase the royalties paid by companies working in the tar sands.	Through diversifying the Alberta economy into alternative energy production. World class research is ongoing at all of Alberta's research intensive universities and this work should be supported to get it to market. The focus should be on re-training workers so that Alberta can shift from our dependence on oil and allow us to become a world leader in green and alternative energies.
T5K	education, health care, social services	remove the tax credit to big corporations	Stop the hiring freeze. When people are working they are spending money
	All social services. Healthcare and Education.	War room. MLA and Premiere travel and expenses. Special committees on absolutely nothing.	STOP CUTS. Unemployment is beyond anything I have ever seen, people are afraid for their lives right now.
T2V	lower Government Debt and lowering taxes	duplication of existing services and administration. AGLC administration is bloated and AGLC should become a revenue source.	lower taxes and cut red tape.

T0B	Public services, such as education, health care, and social programs.	Oil subsidies, corporate tax breaks, and politicians salaries/bonuses.	Give better tax breaks to smaller businesses and do more to support the middle class/lower class workers (EI, ect)
T2W	ensuring overtime coverage for AHS employees (nurses) is appropriate. BC changed their legislation to remove the 'calling in sick after a long weekend and then claiming overtime for incoming shifts.' paying double time, or triple time.	Alberta Court System - create a central registry for 'wills' how much court time is wasted because people move, transfer lawyers and do not clearly identify where a copy of their will is located? A central registry allows people to provide 'notice of death' which could then easily flag the latest copy of the will for the family to properly dispose of assets. Personal Directives could also be housed here. People are aging. The increased demands for wasting court time because families - living in other cities, or locally, cannot find the latest will will rise substantially. https://www.alberta.ca/wills-in-alberta.aspx	help stop urban sprawl? why are we spending money to send a new greenline to the far north when home values are diminishing for people located more centrally. We are spending exorbitant amounts of money supporting new infrastructure and services on the outskirts our of larger urban centres.
T4P	I think the government should focus on reducing wait times in emergency departments. It might be an option to consider to a way that the emergency departments can filter out patient based on urgency. Have different categories of urgency in ED rooms while quickly accessing patients. Maybe some patients can be quickly accessed by a general practitioner and provided a requisition for blood work if required and prescription and sent home rather than having the patient wait on a ED bed for long periods of hours. Save those beds to patients who require more care and actually an "emergency".	Was there a need to separate labs from AHS in the first place? Labs had been functioning well in the past under AHS and possibly can continue to do so in the future. I believe APL did not create any benefit to staff but more stress.	Maybe look at what jobs are required and what are not. For example above APL vs AHS scenario. Can AHS board overlook lab staff and structuring? Is there a need for special APL board?
T5T	Health Mental Health Services for all families, pregnant women, infants, young children. The cost of providing services for these families will be much less in the long run rather than the incredible amount that will need to be spent on them later on as they grow up to be unhealthy individuals.	Not giving tax cuts to rich corporations.	With improved health care services healthier people will be out spending money. Businesses will want to start up in the province if they can have healthy employees and a positive environment due to healthy families being well enough to use their businesses. If we don't take care of children and families and vulnerable persons we won't have people who want to use the businesses in the province. The cost of taking care of unhealthy people and children who did not receive adequate services when they were young, we will end up spending WAY more on helping them heal later on.
T6G	support for industries other than oil and gas; support for social services that work to provide housing for the homeless, safe injection sites, improved access to public healthcare, more support for doctors and nurses in the public system, not less	Reintroduce fair taxes to oil companies ; require that any that have received tax relief in the past must return that money if they leave the province/country; stop sending the premier and others on jaunts to "promote Alberta"; stop charging taxpayers for "blue ribbon" panels to support UCP ideology; abandon taxpayer funding of oil company propaganda ; introduce a modest sales tax to help the revenue problem created by the tax reduction to oil companies;	Recognize, as oil and gas companies already do, that oil and gas will not support Alberta forever and that we need to create jobs in other fields; feeding young people the fantasy that well paying jobs will await them in that industry is cruel; recognize that we cannot predict what will fuel the economy in the future, and that we need to prepare our students by teaching them how to learn, not specific job skills, so that they can adapt to whatever the future brings.
t8I	Health, Infrastructure	public employee salary, management	infrastructure

	Health care including mental health care is the most important. Knowing people affected by the biosimilar exercise or whatever it is called is not a wise move and I have my doubts it saves a lot of spending. Infrastructure in the province is important and maybe creative ways of funding can be explored. Economy and employment should be a focus. I have been unemployed as a result of the downturn and after 2 years still unemployed. Environmental and climate change spending should definitely not be a top priority in actual spending. We do things with this as part of our way of working. It does not need to be high profile. Any project I had been involved in had it built into the project and was part of the way projects were done and there was no need to highlight it. Maybe we could just be like most other countries and just say we are meeting all targets, as there is no reason to not believe them (haha).	Savings cause short term bad decisions. Long term thinking is more important. Efficiencies are important in government and health care. Salaries for government employees including the "politicians" could be reduced as well as doing layoffs. I have experienced this many times in private industry. Also the pensions for government employees are extravagant. Knowing people retired from public employment their pensions are very much better than private industry. Savings could also be found in the education system. It is nice to hear they are thinking of this. It really needs to be changed to teach students critical thinking! Savings can sometimes be done by outsourcing services but through experience can be a double edged sword.	A provincial job bank? Maybe it's time for a sales tax? But not into general revenues. Small business incentives?
T2z	Healthcare and Education	Infrastructure	By lowering taxes on small businesses especially
	Health and Education	Corporation tax increase and eliminate corporate handouts	Investing in education for long term benefits
T7E	To reduce spending on the big ticket items: education and healthcare	As a teacher, you could trim our benefit package. It is so out of touch with the private sector. Then you are not touching money going to the classroom.	Tax breaks for small business. They are the ones employing local people.
T8v	Education and health care	Management savings. Politicians taking a pay cut	Invest in education and keep our families healthy
T3P	Maintaining strong quality public education (I know you hate public education, but the American system is terrible - we consistently outperform them). Keep jobs in health care and education. If we are losing jobs in the private sector why would you be cutting jobs in the private sector as well.	Stop giving hand-outs to big corporations. Prevent loopholes that allow nurses to book way more overtime than they should. Stop giving oil executives huge bonuses when the company is making no money. Stop the 'Fair Deal' panel. It is hurting the economy, fostering the 'Wexit' talk, will not scare the PM and is doing nothing to bring the province together. We have LOST investment because of this stupid idea from your government. Your divisive politics will not get you as far as just getting jobs in the province	Continue to fight for the creation of pipeline - and/or find alternative/innovation. Invest in small business. Diversify - Calgary should be the new technology hub of Canada. You have stopped a bunch of grants to small business and grants that would diversify our economy through invention and innovation. We CANNOT put all of our eggs in one basket.
t3a	Build infrastructure. Maintenance of current infrastructure. Creating new jobs.	Reducing civil servant salaries or at the very least freeze salaries for the next 4 years. Civil servants include AHS, education, universities, doctors' salaries, medical specialist salaries etc. Sign contracts that deter golden handshakes and overspending. Each civil servant department can come up with 5% savings without layoffs. Golden pensions and benefits need to be reduced. Increase productivity among civil servants (reduce sick days allowed).	Entice businesses to set up shop in Alberta. Diversify the economy and make it easier for them to do business in Alberta. Alberta needs to rely less on Oil & Gas (writing is on the wall with this one). Let's make Alberta the capital of research in AI, robotics, and other jobs of the future.
T5T	Lewis Farms Recreational Centre and schools	Not sure	Not sure
T1P	Health Education 0 - 5 years of age services and supports for child and parents	Use money from oil and gas "war room" to help all areas create jobs and services. Support our preschoolers. Support them now or be prepared to spend the money on prisons and social services when they become unprepared adult.	Be open to alternate forms of energy. I want my kids and grandkids to be able to have petroleum products (plastics) so it feels like an emergency to get other energy sources developed into mainstream uses. Support entrepreneurs and developers in all areas.

T3B	1) continued funding for the feasibility study for Bow Basin Water Management Options (2) renegotiation of the TransAlta modified operating agreement during flood season	Get rid of war room!	Support post secondary education
T5T	Disability Services for adults, Barriers to Full Time Employment for all Albertans who receive this benefit, safe-injection sites, and education.	Reducing the paper and printing that is done within government departments. Have all printers set-up to use black and white ink as the default. Continue with a strong push to have departments in all ministries to switch to 100% electronic files. Get rid of or improve the efficiency of the blue-pouch system that moves papers from minister's offices to departments. Have a referendum on the War Room, as this is an expense that may need adjustment, depending on what Albertan's want.	Give grants to small businesses along with lower tax rates; eliminate interest on student loans; ensure educational institutions are properly funded; decrease employment tax and put a cap on rental rates to leave more money in citizens' pockets to participate in the economy by spending.
T6M	Implement non resource-based future income streams. Access to Justice issues - more judges, more judicial support staff. Increase funding to Legal Aid. Increase funding to post-secondary education and lower interest on student loans in order to encourage education, thus moving away from relying on resources or at least being able to refine the resources here instead of shipping them away for a lower income. Reinstate COLA for AISH. Focus on long-term gain instead of short-term returns. DO NOT TOUCH ALBERTANS' CPP! The administrative cost of that, at both the provincial and federal levels, would be a ridiculous and frivolous expenditure. Pay teachers more, not less. Again, an educated population will help us move away from relying on raw resources alone. Re-establish the Heritage Trust Fund.	Increase corporate tax for more income. More cooperation with local governments to find cost savings for infrastructure. Carefully review government positions and their wages and consider cuts WHERE APPROPRIATE. Remove duplication of services and cut the employee pension, as many employers are doing. Change tax laws in order to force certain industries, like banks, to pay more tax.	Provide entrepreneurs with support services at low or no cost. Place limits on rental costs and rental increases so that people can afford to live here. Lobby the federal government to reduce individual taxes or provide better tax incentives to people with children or disabilities.
	Investing in entrepreneurs within Calgary, Edmonton.	NA	Investing in entrepreneurs within Calgary, Edmonton. Every year at the engineering capstone and design fairs for the major universities there is no one from the government looking at these final projects and trying to get these groups to fund the projects and start their own companies. What a mistake. Great networking opportunities to build companies of the future.
	Diversification and investment in technology. Investment in infrastructure projects, and startups to get people back to work. Your current path has lead to LESS jobs for my family than when you were elected.	Saving \$30M by dismantling the war room. Increasing revenue via a Canadian average corporate tax rate. Increasing the tax rate on the top 3% of earners in Alberta. Giving away fewer non-competed for contracts to Donors of the UCP.	Via diversification in investments to the tech sector. Grants to attract startups and businesses aligned with a future knowledge economy. Increasing consumer confidence and putting money back into people's pockets that they can spend via programs that actually help middle class Albertans such as \$25/day daycare my family depended on, re-instating the insurance cap that is now costing me HUNDREDS of dollars a month more. That will grow the economy. Businesses are shutting down and leaving Alberta because of failed trickle down economic policy. Consumers have no money to spend with small and medium businesses.

T6E	Public Education and Health	In areas that have not been explored before	Focus on industries other than oil and gas
T7p	<p>How about stop giving money to the already rich oil and gas industry and actually caring about Albertans and your constituents.</p> <p>Care about the people who actually have a vested interest in this province Day in and day out.</p> <p>Stop giving money to Out of country oil and gas industries and Mgt and start supporting or creating Alberta owned companies!</p> <p>- Building Alberta owned refineries.</p> <p>How about fixing our highways which seem to be falling apart.</p> <p>Get rid of privatization which seems to gouge the GOA anyway with ridiculous and frivolous contracts.</p> <p><u>Look at the HWY maintenance gov building contracts</u></p>	<p>Revamping privatization contracts with the GOA on Hwy maintenance as well as BGIS contracts or maintenance contractors for GOA buildings.</p> <p>Maybe give the Hwy contracts to municipalities they seem to do a better job with maintenance on their roads.</p> <p>Bringing in actual work camps for prisoners to do work ie shovelling snow, cutting firewood, picking garbage and cleaning up crown lands etc.</p>	<p>You want people to stay in Alberta yet you are taxing the living heck out of us with your uncontrollable spending to the oil and gas sector, allowing insurance companies to increase insurance costs without real justification, heating costs go up, power goes up, municipality taxes go up, food costs go up, transportation prices go up.....what are you actually doing for Albertans?</p> <p>Other than draining our pocket books!</p> <p>Support ALL Albertans in regaining our Federal income tax contributions. Take a stand and advise all albertans to stop paying or doing their income tax!</p> <p>Until we actually get our fair share of the equalization payments we shouldn't be paying income tax to the FED's.</p>
T6X	<p>Basic healthcare services - allow 2-4 visits to doctor per year, reduce overuse. Allow 2-4 Emerg Dept visits per year, after that pay per use. Introduce Urgent Care clinics (open from 7a.m. to 8 pm) for non life threatening emergencies, clear these cases from hospital emergency areas (to handle ambulance, MVA, cardiac arrest, births). Schools - back to basic education, reduce number of hours teachers teaching per day, (for other non teaching times, like homework time, reading time, presentations, field trips, use a Teacher's Assistant - kind of like RN and LPN system. Actual pedagogy done by teachers and rest of the day hosted by Teacher's Assistants. Do more online teaching rather than in class teaching if that is where the costs are.</p> <p>Offer more medical procedures where people can purchase them on their own if they want to, I have been on a wait list for 17(surgery consultation (let alone the surgery itself) for 14 months. These wait times are excessive.</p> <p>Establish more Rehab Centres, to get people out of the hospital and back to their homes, and then attend the Rehab centres for Physio and OT from their homes. Having to spend months in the hospital so that they can receive these services is expensive to tax payers. Have a Rehab Centre they can go to. Not wait to get into that Rehab Centre, get discharged from hospital and then have an appointment at the Rehab Centre the following week. Right now if you leave the hospital, you have to pay for your own physio therapy. Which patient would choose that option? It does not make sense. Stay in hospital, take up a bed, to get OT and PT daily, or go home, pay for your own PT or OT (if you can find that on your own) and we will put you on a wait list for Outpatient PT and/or OT. In the mean time you can buy your own PT and/or OT appointments.</p> <p>Of course, patients will choose to stay in hospital. This is taking up a bed, nursing care, unnecessarily.</p>	<p>Reduce Health and Spending accounts from Government employees, from Health Care and Health provider employees. Reduce all travel from employees including within Alberta, unless there is a substantial rationale. Travelling to do home assessments, child welfare investigations, of course those are legitimate travel requirements. Have more virtual meetings.</p> <p>Drop contract field teachers from reviewing curriculum, hire pedagogical experts, not part of the ATA.</p> <p>Drop all culture and tourism grants - these are not required for basic health, education and living. Once the economy is back up then re-engage those contracts and grants.</p> <p>Museums are nice to have, but necessary items for day to day living.</p>	<p>Offer STEP, PEP and other intern programs that help small, medium and even large businesses hire staff with SOME financial assistance from these programs.</p> <p>Attract investment and companies to start factories in Alberta, reduce onerous approval processes to start factories, etc.</p> <p>Can government build upgraders and staff them, and then have a contract in place with a provider that the contractor take it over in 3 years. Short term investment to start and boost economy with long term plan that government is not maintaining that business.</p>

	Health and Education	Reduce the constant cycle of consultations; reduce or eliminate the Canadian Energy Centre; reduce public inquiries that serve a political purpose rather than a practical one	By providing tax incentives to stimulate growth industries, such as the tech industry. Continue to develop energy resources but in an environmentally conscious and responsible way. It doesn't have to be either/or.
T2P	<p>These recommendations are submitted by the 17(1)</p> <p>Given current social, legal, and geopolitical realities, the government should focus on the development of new economies in the Province, such as geothermal energy. To stimulate new economies, the government should reinstate similar versions of certain programs that have been recently eliminated. The government needs to support the small and medium sized businesses that are crucial in the development of those new economies.</p> <p>These programs include the Alberta Investor Tax Credit (AITC), the Alberta Scientific Research & Experimental Development Tax Credit, the Summer Temporary Employment Program, and the Climate Change Innovation and Technology Framework</p>	n/a	<p>Government should support job creation and economic growth through the development of new economies in the Province, such as geothermal energy.</p> <p>Geothermal energy projects produce 6.4 person*year jobs/MW in the manufacturing and construction phase, while creating 1.7 permanent jobs per MW for operations and maintenance.</p> <p>A study sponsored by the Government of Alberta found that among all renewable energy types, geothermal energy projects have the highest transferability rating with regard to Alberta's existing skilled labour force. There are many highly skilled yet specialized workers that remain unemployed after the Province's oil and gas industry downturn – primarily engineers, geologists, and business staff. The study considered the target sectors of agri-business, supply chain, petrochemical manufacturing, high tech/information & communications technology, cleantech, and renewable energy. The study used the assessment criteria of technical transferability (i.e. similarities in skillset), nature of work transferability (i.e. similarities in work environment), and employee value proposition (i.e. likelihood of workers accepting an employment offer). The study found that as compared to other renewable energy types (solar and wind), the geothermal energy industry required the skills, provided a nature of work, and provided a value proposition that were the most equivalent to the oil and gas industry.</p> <p>Furthermore, adding a geothermal project to a local electricity system is an excellent way to stimulate local economies while diversifying and 'greening' the emissions profiles of local businesses. In addition to electricity production, geothermal resources offer a low-cost source of heat as a by-product that can be utilized in addition to, or independent of, power</p>
T5E	Education Health Infrastructure	<p>Cut MLA salaries and staff, travel</p> <p>Cut legislature spending</p> <p>Cut number of travel for mla's, premier and his staff</p>	<p>you want economic growth? don't cut teacher or nurses or any other public sector salaries or layoffs. that just compounds the problem. These people stimulate the economy by spending. Cut them, no spending.</p>
T6V	Education and health services	<p>Stop giving money/tax breaks to the corporations. Collect the outstanding taxes they owe. I have to pay my taxes - why should the corporations be any different?</p>	<p>Invest in research and alternate fuel/energy options.</p>
t2g	Government should focus on less spending and fewer regulations.	Equalization.	For every new regulation enacted 20 should be done away with.

T5M	AISH,SENIORS AND HOMELESS...	THEY COULD DO REPAIRS AND UPGRADES INSTEAD OF BUILDING A NEW	INSTEAD OF GIVING ALL THE JOBS TO PEOPLE THAT ARE COMING TO OUR COUNTRY...GIVE THE JOBS BACK TO THE PEOPLE IN OUR OWN BACK YARD...CANADIANS FAMILY'S ARE REALLY SUFFERING...AND QUIT TAKING AWAY FROM SENIORS LIKE RAISING PRISES FOR THEM....THE BUS HIKE FOR THEM WASN'T NESSESSARY...MOST GOVERNMENT EMPLOYEES DONT SUFFER LIKE THE REST OF US...YOU COULD GIVE THEM A WAGE CUT INSTEAD OF GIVING BONUSSES AND INCREASES....
T8W	Senior Care, Healthcare and infrastructure	Get Nurses back to Nursing. Stop wasting them running programs and office work.	Getting our pension back to Alberta.
T0G	Health, Education and services for people in need.	Closing the Canadian Energy Center.	Diversifying the economy. Renewable energy and technology are growing areas globally.We need to expand in those areas.
T8X	Funding schools in order for class room sizes be 25 or less, making sure our teachers have adequate supplies and resources and that school boards have adequate funds to do repairs when needed. Making sure our hospitals have plenty of nurses on staff. Keeping up with infrastructure repairs.	1. By eliminating/reducing tax cuts to huge corporations, including the energy sector. 2. Cutting inefficient management at Alberta Health Services. Keep you hands and cuts off the front line workers (nurses, lab techs, doctors). 3. Bring back the small healthcare fee. Base it on income as is done in Ontario.	Diversifying our economic base by retraining oil workers for wind turbine and solar panel maintenance, high tech sector jobs etc. The oil and gas industry is too volatile and needs to find a more sustainable level by putting realistic caps in place. Putting all off the provinces eggs into one basket is not a smart idea.
T5R	Healthcare (PUBLIC/UNIVERSAL; NOT PRIVATE); education (PUBLIC; NOT PRIVATE); AISH & Senior's benefits; Living wages & increased minimum wages; Job diversity growth	Take back the 4.7 billion given away to oil corporations and use it to fund all the above. Stay away from American style politics.	Reinstating what the NDP finally got put into place and run the province on diversification and not bank everything on oil & gas.
T4P	Health and education	By investing in the social needs of Albertans through the health and education systems. The evidence is overwhelmingly in favour of a positive return on investment and the means by which a reduction in costs can be realized. Here are a couple of articles that can give you some excellent food for thought: https://jamanetwork.com/journals/jama/fullarticle/2752359 and https://jamanetwork.com/journals/jama/fullarticle/2749417 . And New York City also has much to share in terms of expertise - it has an initiative to fund 'medically tailored meals' (MTM) to promote health and decrease health care utilization by families experiencing low income. The outcome of this initiative was a reduction in overall healthcare costs by up to 28% (all diagnoses compared to similar patients not on MTM) and a reduction in emergency room visits by up to 58% (pre-post MTM intervention). Their low-cost/high-impact intervention? To feed someone for half a year by saving one night in a hospital, i.e., by giving them the money equivalent to one night in hospital to feed themselves with MTM for half a year. I believe we can do better than that here in Alberta, especially in light of the financial impact on Alberta families of the recent economic downturn.	Let's focus first and foremost on the root cause of the recent job losses and economic downturn - putting all of our eggs into the non-renewable resource basket. Let's invest, instead, in diversifying and in the people in our province.

T5H	-Ending homelessness in Alberta (it's cold!) -Providing EVERY Indigenous community with clean water and the infrastructure (aka roads) necessary to allow them to access the resources they need	-successful businesses could receive less support/subsidies/tax cuts	Organization providing support and resources to those at the bottom-homeless people, unemployed people, people with illness or disabilities- MUST continue to receive funding. Preferably more funding. They hire people too. It doesn't make sense to say that you're creating jobs and then cut funding to these organization which also provide employment opportunities AND which are trying to get Albertan's back in working shape.
T2W	The government spending priorities should be focused on providing services to the people of Alberta. Spending should be focused on health, education (post secondary and K12), and programs that help our most vulnerable citizens.	Government needs to understand that there is a difference between finding savings and tearing at the fabric of Alberta that makes it distinct from all other provinces and territories in Canada. To find savings the government should scrutinise its procurement contracts and hold industry vendors and providers to deliver services in a cost effective manner.	The government should be investing in incubators and innovators to build on areas of strength in Alberta. Established highly profitable companies should not be receiving Alberta tax payer dollars. The government should not be perceived as handing out corporate welfare. Our economy requires diversification.
T3H	Education (basic and higher) and health care.	Reducing layers of administration, but keeping front line employees. Stop the war room funding. Stop tax breaks to oil companies	Through economic diversification
T4V	The public sector. I think it's important to allocate funds to make sure that our public services - including health care and education - are serving all Albertans. Further, the programs that care for the vulnerable, such as AISH and medical insurance for the aging, are high priorities for me.	I think government should find savings within the high levels of bureaucracy. A salary cap for the highest wage earners (ie. those on the Sunshine List) is a good start. While it's not savings, an increase in tax or penalties for large corporations, including oil companies, could help bring in income.	I would like to see support for alternative energy sector. Retraining and entrepreneurial and building grants for those who want to switch to green energy sources is where the future of this province lays.
	Spend money on ALBERTANS FIRST....hire ALBERTANS FIRST....stop using companies that hire near shore or off shore. START CARING ABOUT ALBERTANS FIRST!	Cut more upper and middle management in GOA, not front line. Yes, it might cost more to contract with companies that use local resources over near shore or off shore, however, it employs Albertans, which is better economically. Hiring Albertans first means less Albertans are dependent on government assistance.	HIRE IN ALBERTA FIRST! SUPPORT COMPANIES THAT HIRE FROM ALBERTA FIRST! I CANNOT EMPHASIZE ENOUGH, HOW MUCH WE ARE HURTING OUR OWN ECONOMY BY SENDING MONIES TO THE EAST OR OTHER COUNTRIES. You tell us to diversify, but then you turn around an hire outside of Alberta because it's initial cost is cheaper, but overall it's costing Albertan's.

T5E	The government needs to prioritize accessible public education and health care. Without a healthy and educated society and workforce we will be unable to compete on the global stage.	Cutting the public taxpayer funding to private schools and health care facilities will allow us to redirect those funds into high quality public programs. Additionally, the duplication of the administration of public education by having 2 school boards (Catholic and Public) run our public education system is a huge waste of money. The Our Idea campaign shows how other provinces have successfully eliminated their "public" Catholic school systems, making Catholic religious education a private option just like every other religious education choice. The amount of taxpayer dollars saved by eliminating this unnecessary duplication of administration of public education would go a long way to balancing the books. I am a confirmed Catholic and was raised in the church but I firmly believe religion has no place in our public institutions. We also need to stop whining about the good old days and realize that oil cannot be the only thing driving our economy. We need to stop giving huge tax breaks to oil companies that are cutting and running anyways.	We need to start giving incentives to new to Alberta (non oil related) industries that are going to be the drivers of the economy in the next century. My kids are going to need jobs in 20 years and chances are they won't be in oil. But they could be in AI, information and data, or technology. If we don't start attracting these companies and jobs to Alberta we will fall into decay and that's not the kind of province I want to live in. Its time to look to the future.
T3K	Health Care (no cuts), Public Transportation, Subsidizing Housing Costs for young and low income families (first time home buyer), and diversifying the economy including making it easier for tech companies to make a home in Edmonton and Calgary. We have the work force, we need the companies. We should not attempt to sell government entities such as ATB for short term gain. This only benefits the few and not the many.	Political leaders can take pay cuts, get rid of the energy "war room" that unnecessarily uses \$82,000 a day that could be saved for the future of our province.	By diversifying the economy including making it easier for tech companies to make a home in Edmonton and Calgary. We have the work force, we have the office space, but we need the companies.
T6M	Education funding to be adequate, keep class sizes low, fund for adequate staff and resources in schools, front line workers in health care, we need a sales tax to prevent boom/bust in economy and to steadily fund services	MLA expenses, MLA salaries are significantly higher than other provinces, eliminate 30 million dollar war room, administration in AHS,	diversification in economy, invest in technology sector, invest in alternative energy as non-renewable resources are phasing out over the next decades
T0B	Front Line Service Providers - Nurses, Doctors, Teachers, Education Assistants - These services are essential! Find ways to remove costs that do not impact these services - Target redundancies, inefficiencies within the system. Preventative Services - We have a variety of challenges in our society today and I fear that our government can be distracted by immediate savings while ignoring the long term costs of removing programs. I believe that Foundational Learning (Literacy, Numeracy , ELL) programs give Albertans the ability to better contribute to our communities and economy. Education=Opportunity=Prosperity	I believe that the bureaucracy within government agencies can be reduced. The employees that actually work to complete projects (large infrastructure, roads, bridges, dams) need to be there, but is the level of overhead (mgt) excessive? What about AHS? Does it have a high level of management to employee ratio. Do you need a manager, assistant director, director, etc for every department? Remove management that is redundant	Support education programs
T3E	Post-secondary education, public education, environment, health	Unnecessary corporate tax cuts	Invest in Alberta's future economy. Alberta has a huge advantage in energy technology, so support advancement in renewable energy aand stop relying on oil and gas.

T6T	Infrastructure, Health Care, School and Safety	Service Alberta Overhead	Innovation outside the Energy sector. The energy sector is important for an Albertan, we need to diversify outside just Energy.
T2y	Education and Health	Their own salary. As far as I know, comp philosophy is market median, and our Premier + Ministers are sitting well above it.	Diversify the economy. We don't know if the oil will ever rebound. Instead of giving tax cuts to all industries, try to diversify and give incentive for other industries.
T7V	Health care, education and renewable energy.	Roll back salaries for MLAs, taxes to industry	Renewable energy
T3H	Diversifying the Alberta economy. Make Alberta attractive for companies to move here. This should also help us retain more of our young people, currently they have to leave the province to find jobs.	In the higher level positions, like "director" and "executive director" and above. I see executive directors that only have two people reporting to them, how can this level be necessary.	The only way to accomplish this is to do the one thing that all the previous governments have promised to do and never have achieved! Diversify Alberta's economy, make Alberta attractive to tech companies, research centres, etc.
T0H	Priority -reduce spending on non-essential services.	By reducing our bloated civil service, no new hiring, and a careful look at some layoffs! Notley hired 50,000+ new workers and we already had an oversized civil service. Alberta Health is very manager heavy, and the salaries of the President and the 11!!! Vice-Presidents are mind-blowing! Don't let them cut front-line workers to cause an uproar, while protecting these salaries and the high number of managers. Same with the school boards. Did the 5% pay cut for MLA's go thru? Please get the Grande Prairie hospital finished in my lifetime! As a senior, I do not think our grandkids should be left with huge debt AND reduced services, which is what is in store if we don't get a grip on our finances. And to add one thing unrelated, but very important: we want a referendum on separation!! There is no future for Alberta as part of Canada!!	By getting out from under the boots of confederation!! That is the only way we can prosper!
T6A	<ul style="list-style-type: none"> - Health care and social programs such as affordable housing, mental health supports, vulnerable population support programs. - Education, specifically focusing on modernizing the curriculum and supporting creation of schools to manage class sizes. - Infrastructure and construction projects that focus on people care (e.g. hospitals) and moving people and goods around (e.g. LRT, city road widenings). - Grants/supports to encourage people and companies to switch to more environmentally sustainable alternatives for energy use (e.g. residential solar panels and insulation grants to reduce individual household draws on the Province's overall energy supply). - Industries outside of Oil and Gas. Focus on projects to support and bolster other industries (e.g. manufacturing scientific equipment, pharmaceutical research, etc) to allow the province to be more resilient, competitive and healthy during inevitable bust cycles of O&G. 	<ul style="list-style-type: none"> - Continuous but deliberate and calculated reviews of service design for Provincial services. This includes digging deep into specific services to measure service level requirements and funding/resources required. - A cross service (health care, education, infrastructure planning, etc) and understanding what Albertan's highest priorities are. Focus on those. - Don't always look at "savings" being the only option. Alternative revenues should also be considered e.g. provincial taxes, user fees, carbon taxes, income tax increases etc. 	Focus on industries outside of Oil and Gas. Understand that "construction" is a primary driver of Alberta's economy and that construction can occur on projects that aren't O&G related like LRTs, hospitals, major roadways, etc.

T5A	Reinvesting in public sector jobs and services, grants to businesses that are outside the resource sector to diversify and grow the economy.	Cut frivolous spending like the war room (put into something useful like schools), increase taxes on the rich and corporations to an appropriate level on par with the rest of the country. Introduce a carbon tax (we need to generate revenue - not cut the public sector which is already too depleted to provide the budget reductions claimed by this government.	Appropriately tax existing industries to supplies grant and investment into smaller business to diversify and grow the economy away from a single resource. Alberta needs to (finally) become more than a one-trick pony. There is lots of potential in this province and the current government needs to look to the future and not the past.
T3P	Continue the broad spectrum spending so that no programs and issues are missed	reducing duplication and streamlining services. Implement a PST to stabilize revenues	tax incentives
T8A	Education, health care, social services, grants for technology, transitioning away from natural resources	<p>Raise corporate tax rates, raise taxes on the rich, crack down on people here who use tax shelters, stop giving breaks and benefits to oil and gas companies.</p> <p>Stop pretending like it's the poorest of us who should be suffering with cuts.</p> <p>Stop wasting money on surveys pretending that you care what we think. You're going to cut whatever you want and hope the price of oil goes up.</p> <p>Stop wasting money and time pretending that you're going to renegotiate our federal government system. This is a system that Mr. Kenney could have rallied to change years ago while he was a Federal Cabinet Minister, but did not. And it's a problem all of a sudden now? This is a smokescreen.</p>	Support people, support their right to have a living wage, support the rights of all people in this province. Don't just give tax breaks to the rich and companies that may or may not deem us fit to deserve a pittance.
T0K	Economic stimulus	Civil service work force, decrease the number of department managers, and put funds toward more or better frontline workers.	Better communication between the public and private workforce
T3A	Choice in Education. Give equal funding to private and home education too.	Cut the funding to public schools who waste money on smaller classrooms that don't do anything. Or public schools that hand out laptops to the home that never go back to the school.	Increasing school choices and funding would stimulate jobs. For example, tutors would be used more than teachers.
T3K	I believe the spending should focus on Calgarians who are not able to make a living for themselves and have severe disabilities. My son has struggled with his disability all his life and is truly bullied when he does try to be self-sufficient. He has severe anxiety due to that experience and even though he has support to be in the community, there is not enough resources to help him. He volunteers to try and help others but he is unable to maintain his work.	I think that with the economic decline in previous years, there should be a pay cut with the politicians until the economy improves and that Alberta should be exempt from whatever fees incur during the annual period. I don't know how the government runs but I think Alberta should request resources that were paid to the other provinces during their time of need to repay Alberta. Even when banks offer resources, they collect interest from their clients, I think that is what Alberta should do.	The government should allow re-education to those who are struggling to find jobs and offer support to them so they can continue to support their family. I also believe that people who are self employed should have tax breaks if they are working to support the disabled in our community.
	Post secondary education, infrastructure and health care	Stop taking trips. The UCP have stopped all travel for APS employees and should apply the same to the Ministers and the entourages.	Tax breaks for the lower and middle classes. Tax incentives for industry OTHER THAN oil.

t8h	cutting cost of extra managers and directors which are not needed.	cut costs of unnecessary positions. 17(1) Before the NDP government came to power in 2016 we had one Executive director and one manager and 6 team leads. We now an extra manager and an extra director with no increase in staffing levels. These extra positions not seem to be warranted as they do not have any discernable added value within our centre. Really my point is alot of people here do not feel the we need the expense of these extra positions which does not help us in any way. It could be estimated that cutting just the positions which were added since the NDP came into power in our department alone could save \$250,000	Jobs should be given to front lines to support all Albertians.
T1B	Infrastructure, diverse economic development and jobs	Cut the fat in "the middle" of government, health care and education. NOT the front lines. Negotiate a labour index with unions that aligns with economic growth the province. When we do well, they do well. When we don't they don't. Simple and fair economics. Get Doctor's OUT of and spending decisions in Health care. The conflict of interest, corruption and self serving inefficiency is obscene.	This will take time. a 1% cut in corporate taxes will help but not enough. Need to investment in attracting new diversified business to Alberta. Downtown Calgary is only 2/3 full Why not start offering incentives to emerging and growing companies ie. IT and digital. Companies that don't need "location", but cost incentives. For example, I'm sure Silicon valley tax, lease and exchange rates could easily be used as a bargaining chip to get companies to move to Calgary. Just one Example.
T2R	Undo the disastrous and short sighted budget 2019	Cancel the energy war room. They are better suited for making truck commercials. Let Ford hire them.	Undo budget 2019
T3A	17(1)	In terms of savings, one could certainly examine the middle management positions at AHS as I know that some individuals do not necessarily do much there. 17(1) Hardly a good use of taxpayer dollars and it's unclear what their roles are.	To support pipelines and to continue to advocate for albertans so that we can encourage job creation in this way.
	Health care access and excellence Free training and low cost post secondary tuition Diversifying the economy Summer jobs program for students	You gave wealthy corporations tax breaks. Repeal these. Get rid of doctor referral payments. Not needed Get rid of govt scope creep: eg AHS research. Funds should go to universities already set up for research.	Low or free tuition in high demand job areas. Ensuring lowest quintile get to post secondary. Fund medical innovation and alternative energy initiatives. Ensure we have sustainable drinking water supply.

T7y	<p>Maybe should save instead of spending Cutting government wages and pensions</p> <p>Cut arts culture out . Don't need faculties like this when times are tough Specially when The government is thinking of cutting health care back. don't you have children old grandparents they need some care and what if YOU get terminally sick....hospitals are always good and it creates temp work and full time work. We don't need new museums arenas or try leisure centres get people back outside</p>	<p>. Cut government pensions and wages</p> <p>Cut management personnel supervisors don't need a bunch of managers when the boots on the ground know what has to be done and have the means and technology now days .ie : HEALTH CARE</p> <p>Also quit funding foreign country's or UN projects</p> <p>let's look towards home for investments and inivation we have a lot of talent here and leading edge technology.</p>	<p>Government is not a business and should keep there paws out of business or topping up hurt business IE: FORD GM NEWS OUT LETS FORIEN AID</p> <p>The list goes on and on also quit bringing in temporary foreign workers and let are young and old do some of the low income jobs were having a hard enough time finding work in trades and tech already. So some of these lower jobs may be filled with guys who can't get work else where anymore because alot of those jobs are no longer there.</p>
T3C	Trick question. Everyone knows you will never spend money unless it is on yourselves or your friends in industry	Increased taxes on oil and gas. Instead of on everyone else	Stop pretending oil and gas is the only industry that exists. Diversify the economy a little bit for once
T5L	Stop cutting from the bottom and start cutting from the top. Top makes more in wages so there would be more savings and less cuts to services Albertans need.	Stop voting raises for the ministers and cutting wages to the front line staff.	Anyone who watches this government treat it's staff by legislating in what they want would have to think twice about wanting to work with this government. What would stop the government from legislating what they want on a contract from a business wanting to invest?
T3B	There should be a focus on cutting back on non-essential spending and or the elimination of non-essential government programs. Focus should be on core government functions such as health care, education and transportation/infrastructure. The so called "fat on the bones" in non-core, non-essential government departments (Labour, Agriculture and Culture) should be eliminated or drastically reduced.	<ol style="list-style-type: none"> 1) Eliminating or drastically downsizing non-core government functions/departments. 2) Significant reductions to non-core funding programs. 3) Outsource non-core government functions like in Labour, Agriculture and Culture to non-government bodies or even private sector entities. Provide some sort of payment for them taking over services, but at a lesser cost than government delivery. 4) Consider consolidation/mergers of some gov't programs to minimize duplication and potentially cut back on number of departments. 5) Scrutinize government spending and cut non-essential funding programs (where it does not impact people's safety and well-being). 5) Tough decisions on cuts need to be made, but this is for our future. 	Re-focus on core government functions (health, education and transportation/infrastructure) and economic diversification. Enable economic diversification through red-tape reduction and bringing in international talent/expertise where needed and government/private sector partnerships that doesn't involve funding. Government should facilitate business/economic development, but not be involved with funding it.
T5Y	Keeping Albertan's working. Finding ways to help Albertan's keep or start local businesses. Spend money on teachers, nurses, ect, rather than fighting with them. they deserve real pay too.	How about a 10% cut in wages for all Government staff making \$150,000 or more per year? That should help balance the fair wages for teachers and nurses.	Diversify our economy, start phasing out fossil fuels and finding alternative energy sources - that should help create jobs and help the economy, as well as alberta in the long run. The more diverse our economy, the better off Alberta will be, as recessions wont impact us as much - especially if we can provide long term energy for our province and sell extras externally.
T5C	Stop wasting money on a war room, when the funds could actually go to people that deserve it. How about splitting that 30 million between teachers/assistants/support staff, nurses, medics and all the other roles that we actually need in Alberta.	By asking for all the funds back from the oil companies that have left alberta after Jason Kenney gave them a hand out? By not allowing the oil companies a pass on taxes because they are a little short this year - they could have been fiscally responsible in any of the money making years.	I think the only job creation that we've had is in the fast food industry... How about not cutting grants for local businesses? Finding ways to encourage small, local businesses to start up. Investing in technology would be a huge pull for Alberta right now.

T6J	Support those in need, implement a top up for the working poor, get proper health care set up and quit reducing patient care, insist that doctors and other medical professionals get extra education and training for proper assessments, create opportunities such as public meetings for the chronically ill or severely affected by the changes you have made and the changes that you didn't make, quit handing out free money to corporations etc while further crippling your constituents. I'm sure that you wouldn't give huge amounts of your own money away to companies at the expense of your children's welfare. Or would you?	You would find plenty of savings in health care if you were to actually hold doctors and other medical professionals accountable for the results of their services. Why should a medical practitioner get paid if follow up for shoddy work is required thereby increasing their income? Payment should not be forwarded until they can prove that they explored another option at subsequent visits. Longer discussions between doctors and patients are required in some instances. You simply don't find out how lazy or underskilled a doctor is until you become sick. I could write a book. Quite frankly, most mechanics aren't any better.	By paying wages for more students to work in the field of their choice in career while going to school in junior or senior high school. Or, how about giving extra incentives for new businesses to be created in order to put the unemployed but highly employable back to work? Really, there's a lot more but your current actions will stifle this economy and destroy this province. How do you sleep at night? Many Albertans don't because of stress or some kind of serious sleep disorder. I think that you need to live with a sufferer of your decisions for a month. Live how they live. Feel how they feel. Acclimate to the level of restrictions that they live under all while trying to find a way to enjoy life. Restricting cash flow isn't always the answer. Getting more value for the dollars you spend is one step. Don't spend less, expect more. Demand more.
	Health Care and Education (both k-12 and Post-Secondary)	Scrap the war room energy centre and drastically reduce the corporate tax cut. Fund only public education schools. Amalgamate boards. Limit MLA travel abroad	Invest to diversify, diversify, diversify. (Ex. Tech sector jobs, renewable energy jobs) Small business tax should be drastically reduced. Implement a sales tax of 2% to have a consistent stream of revenue to be used for investing. Tax cigarettes and alcohol and gambling
T5s	Power generation changes. Promoting healthier lives. Employment diversity. Roadways to reduce climate problems.	Management level positions, consultation studies, equalization, upgrading provincial properties with better heat or electricity management. cut funding to reclusive arts programs that should be funded by people that want it.	Diversifying industries, look for ways of supporting automation controllers, jobs that require significant over time like corrections hire lower wage staff for easily covered positions.
T2Y	Addiction treatment centers (not injection sites), criminal justice, police services, helping the legitimately unemployed.	Bringing the "public service" costs (especially wages and benefits) under control, but mostly, stop subsidizing the excessive spending schemes and dreams by municipalities, especially those of the "lets spend money like drunken sailors" Calgary city council. Also, look at selling off ATB, either to Alberta citizens or to a real bank.	Not sure, but you seem to be on the right track from what I have seen.
T6r	Education, education, education Health Research to support diversification	Tax increase for private sector and introduce pst	Diversification
T0a	Maintain subsidy for daycares to get both parents back into the workforce.	Cut pensions and salaries for government employees. Reassess government jobs to determine redundancies. Introduce a minimal provincial sales tax.	Support necessities for pipeline development. Cut red tape for small businesses trying to get established.
T4N	Jobs, Diversifying economy, entrepreneurship and self employment training/support; helping build capacity of communities and individuals	Address top heavy government...examine how many leaders and levels are needed/staff member; where it makes sense, have programs/services managed/run out of bigger centres; GOA jobs that do not have measurable outcomes and contribute to identified priorities should be shifted to high priority areas and used to backfill high demand areas that are short-staffed, such as frontline; streamline programs and reduce duplication	Diversify; ensure programs are providing skills needed now and in future; research and evaluation - what are the needs, how can these be addressed, implement and evaluate and ensure have qualified and knowledgeable management and staff in place to implement and support. Programs need to be collaborative and support all unemployed people and communities to help build capacity, skills and knowledge to contribute
T3E	Medications	from wealthy persons	Diversify Economy by encouraging IT startups
T4X	Getting people back to work, education	Cut down on foreign aid	Get the pipelines built

T2z	Health care Education Environment No more tax cuts to big business	End tax cuts to big business, take a strings attached approach instead. PST Stop fighting carbon tax and wasting tax dollars	Diverse economy not just oil and gas
T4h	Health care and education	Firing the premier	Diversify the economy away from oil and gas
T3H	Front line health and education workers, investments in infrastructure, health, education, and social programs.	Eliminate the panels and fake investigations, roll back the corporate tax give-away, scrap the embarrassing Energy War Room.	Invest in diversification of Alberta's economy. Invest in social benefits and programs, cutting them has been shown to eliminate more jobs than a tax cut would. Invest in education. Invest in the future, not the past.
T4N	Maintaining services...health, education, public servants...no need for these cuts	Tax corporations...they need to pay the real costs....trickle down does not work	Diversification, small business incentives that were lost, switching focus away from all oil & gas
t9e	Health and Education	Consultant fees	Tech it up
	1. Education: give Teachers jobs! By cutting back on spending, not only are we limiting the future, we are lessening the room for economic expansion and progression. It is so incredibly vital to give children the resources they need to become the absolute best leaders of tomorrow. Failure to do so will only lead to downfall. Make classrooms safer, more supportive (mental health resources, nurses) better teachers and technology. Introduce students to new concepts through HANDS-ON learning opportunities. Every child has the potential, but so few have the ability to use it to their greatest advantage. So, don't cut back on spending where we need it most. 2. Health care 3. Create jobs!: so many Albertans are out of work, and it's only getting worse. You know there's a problem with the government when nobody is able to retire, and nobody is able to kickstart their career due to lack of jobs and ultimately government limitation. It's so unfair and it's only going to continue to limit us in the future if something isn't done.	1. Tax the rich, alleviate taxes for university students/those who are barely receiving a livable wage despite hard work. Unfair that those who are (unwilling) in 100,000+ debt have to pay atrocious amounts of taxes, when they're only trying to create future jobs. Give them the support they need instead of making them suffer. 2. Cutting unnecessary spending. (Ie. less vacations out of tax payers pockets) 3. Just spend smartly, using the model of Keynesian Economics. When we're booming economically; there's room to spend. When we aren't, just cut the spending. It's that simple.	By supporting oil-field workers. Those jobs help families all over Canada prosper economically.
	Education and Health Care	Discontinue funding to the "Energy War Room".	Support government workers with sustainable employment without threats of layoffs. Government workers pay taxes and support business and economic development.
T3R	Education, health, and poverty.	Save money by not giving tax breaks to large global corporations and wealthy individuals, because they don't need it. Reduce political salaries and the expenses politicians can claim. Reduce new panels to study things that have been studied within the last five years.	Invest in economic diversification. Stop throwing money at companies in a boom-bust industry that is characterized by irresponsibility when it comes to post-industrial remediation of their environmental impact.
T4A	health, education, infrastructure, policing & social services	stop spending money to separate from Canada; stop giving corporations tax cuts; cut salaries, benefits and tax credits to all elected officials	support/encourage companies that are working on cleaner technologies; diversify Alberta so that it isn't heavily reliable on the oil & gas industry for funds; support/encourage more tourism in the province

T7Y	Health, public education and environmental efficiencies including transportation infrastructure, oil and gas	Higher taxes for the wealthy and for big businesses Implement a small provincial tax Stop reviewing the education curriculum as we have already spent a lot of time - many years - money and resources researching, developing and planning for it	Buy investing in the workforce of tomorrow which is our young people today.
t5r	addiction treatment--- 76 additional funding for existing beds is totally insufficient. We need many 100's more treatment beds and Detox beds. The province needs to consult with treatment centres and front line workers if they really want to know what the needs are and address the worsening alcohol and addiction problems in Alberta that costs billions of dollars every year.	The Government needs to Consult directly with people affected by changes you are proposing rather than arbitrarily imposing changes. ie # of addiction treatment beds, funding cuts to educational institutions, changes to curriculum in schools, and in particular changing the date to the first day of the month for AISH and Social Services recipients. This is creating hardships for a most vulnerable group of people.	enhance educational programs and services, affordable tuition fees etc. and increase funding for Aish and social services recipients and Seniors benefits. All of these groups are spending \$ putting \$ back into the economy.
T5A	Education and Health - do not cut budgets on funding for schools, support in schools, and no increase in fees that parents must pay. Keep education public and available for all students regardless of their economic status. Do not cut jobs in hospitals and clinics. We need more workers to cut down on wait times. Keep our healthcare system up to high standards like it is known for.	Have enough workers in each field that can achieve the goals well without having to pay people over-time due to under-staffing. Hire enough people to do jobs well, because they are treated well and treated with respect and trust. Cutting jobs is not the option of saving money, because those people will not be able to afford their basic needs and will not allow the economy to grow. Without consumers, we cannot have providers. Accept projects that are important to our economy right now (such as transportation, tourism, education, health) so that people are drawn to this province and want to live here.	Accept projects that allow job creations for all types of workers. Keep our province growing in all ways, not just in the oil field. Infrastructure, arts, entertainment, post-secondary all need opportunities to grow, and cutting their funding or delaying projects is not the solution to job creation. When people go to post-secondary, we allow for a future of inventors, creators, and innovators. Raising post-secondary costs inhibits the desire to attend post-secondary, and we will not progress as a province or country.
T2G	Social Services	Corporate Handouts	Build infrastructure.
T5P	Education (including early learning) and Health, initiatives to reduce child poverty, supporting child care and community resources, reducing our environmental impact	Increase corporate tax rate, introduce a sales tax, AB government misspending, stop wasting money on ways to separate from Canada or ways to get back at the Liberal gov't	diversification, invest in small and medium sized businesses, invest in new technologies. Alberta needs to move away from such a resource-based economy
T7X	Support private enterprise and get public sector spending under control. The difficulty is you cannot do it too fast or you run the risk of losing support of public sector workers and really the more people supporting the government's plan, the happier everyone will be.	There is an unbelievable amount of waste that happens at the front line level. One example is nurses making more off overtime than they do on their regular salaries. Change the law/policy so health care workers do not get overtime pay until they work more than full time hours in a week. And increase the number of full time nurses instead of having so many part-timers so you save on benefits. Another example is the waste in education - in my local school division, teachers move up into administrative positions that are created especially for them when they are tired of direct classroom teaching, even though these positions are completely useless. Reduce upper and middle management. Audit the books of every PUF (Program Unit Funds) provider in the province - each has a tremendous amount of ill spent money (eg \$95. per day for taxi fare to bring a child to his program each day).	Continue lobbying for TMX and Teck mine to proceed so job creation happens organically. Continue cutting red tape so businesses can run profitably.

T9H	Teachers and nurses. They are underpaid as it is and now they are asking to take a cut. As a nurse, I spend my shift explaining about health care cuts lessening the public's ease of receiving care and now we're waiting for more cuts. Why don't you work as a nurse for one shift and tell me you could do what I do. Believe me your eyes would be opened how easy other jobs are. You think you have a hard job? Try being a nurse.	CEO's and management. When was the last time a CEO got kicked in the chest (true story) by an unruly patient? But please tell me how I don't deserve my salary and more! Limit nurses and it will just be more unruly patients for us to handle. Why don't I just ask the premier to kick me in the chest directly.. it will save time.	Increase salaries to standard of living!!!! We can barely afford to live now as prices are higher here and you're trying to decrease my salary more.
	Public healthcare-front line workers in all areas (nursing, extended care, diagnostic imaging, EMS, etc) Maintaining and upgrading infrastructure (roads, hospitals, other provincial facilities) Education-teachers, education assistance and special needs programs (this are the people training our future citizens)	Find more efficient ways to manage the areas listed above. Ensure all levels of management are accountable for their decisions and spending. Reduce redundancies in middle management. Find some way to require public service work (garbage clean up, mowing/shoveling snow at public areas or for disabled persons or seniors) in exchange for monetary aid where possible Require the same drug testing I am required to submit to at my job for anyone receiving financial aid.	Encourage growth in companies who focus on creating/using VIABLE renewable energy sources. (Electric cars in isolated areas and with our winters does not count...) Promote the value of tradespeople and other skilled workers. Many of ours are reaching the age of retirement with no one to replace them. Make it feasible tax wise to operate a small business instead of just a larger corporation. With the diversity of our communities many needs can be filled locally in this manner if it is affordable to run. This also keeps the jobs local instead of just in larger centers.
T2k	Public healthcare, affordable pharmaceuticals, education, social services	Tax corporations more	Create incentives and support affordable post-secondary education. Create new job sectors for modern industries.
T1W	Climate change mitigation and adaptation, including water and habitat preservation. Cleaning up all the abandoned oil and gas wells and stop this disgraceful UCP cover-up.	By joining the 21st century and stopping all of the big oil subsidies. By ending immediately the preposterous and embarrassing "War Room"	By realizing that Big Oil is over and will never come back. Start a long-term transition plan to nurture renewables, using fossil fuels in the process. Look to the future not the past. Think about your children's children. It is a genuine embarrassment to be called an Albertan under the Kenny government.

That's ridiculous and poor scheduling on their behalf.</p> <p>The amount of vehicles that forestry has sitting around in all warehouses during down times is atrocious.</p>	<p>Forestry - the amount of staff that seem to do nothing during the winter months.</p> <p>- they show up late, leave early for lunch and at the end of their work day. Again no accountability on their staff.</p> <p>- heavy equipment contractors during poor weather. I see this time after time when Forestry brings in countless heavy equipment just to sit there doing nothing but costing tax payers money. I've seen them sitting at warehouses during downpours.</p> <p>They should be Utilizing fire crews during downtime to clean up crown lands ie garbage / putting up signs or doing trail maintenance.</p> <p>Provincial Parks and CO's. Is there a need to have so many CO's? They do little work or enforcement.</p> <p>Do we really need CO's during the winter months? They have five months (May-Sept) of so called busy time, then seven months of down time where little is done.</p> <p>Making all departments share equipment: boats, vehicles, trailers and OHV's. There is so much duplication and overlap of equipment that it's ridiculous.</p> <p>Some departments rarely use their equipment</p>	<p>Create opportunity for students and young kids.</p> <p>There should be a job creation program paid and supported by both the Prov and Federal governments for students to work summer jobs with the GOA. These kids need an opportunity to gain work experience.</p> <p>Albeit they don't need to be paid anymore than minimum wage.</p> <p>Create seasonal work experience programs for kids / students.</p>
T0A	<p>Reinvest in programs that are working at educating and promoting efficiency in the delivery of health.</p> <p>Improvement of our major road ways in the north zone. Hwy 28, Cold Lake to Edmonton.</p>	<p>Re-visit the allocation of lottery funds, to include a percentage to assist local education institutions, schools and etc.</p>	<p>YOU NEED TO BE OUR AMBASSADOR AND WORK AT GETTING OUR PRODUCTS TO THE EXPORT MARKET...We will hire staff if our products have a customer.</p>
T3B	<p>(1) continued funding for the feasibility study for Bow Basin Water Management Options</p> <p>(2) renegotiation of the TransAlta modified operating agreement during flood season</p>	<p>getting rid of the 'war room'</p> <p>so far the money put into has been a total loss.</p>	<p>emphasis on preventative healthcare and woman's health</p>
T0E	<p>Early childhood intervention, family services to enhance parenting skills, K-12 education, post secondary education, health care, diversification of the economy and industries in Alberta,</p>	<p>Reduce executive level staffing as opposed to front line staff, kill the Oil and Gas war room, and quit giving the wealthy massive tax concessions</p>	<p>Invest in diversifying our economy, quit increasing costs of post secondary education to the point that it's only available to the wealthy or foreigners with money, quit cutting front line staff</p>
T0E	<p>Early childhood intervention, family services to enhance parenting skills, K-12 education, post secondary education, health care, diversification of the economy and industries in Alberta,</p>	<p>Reduce executive level staffing as opposed to front line staff, kill the Oil and Gas war room, and quit giving the wealthy massive tax concessions</p>	<p>Invest in diversifying our economy, quit increasing costs of post secondary education to the point that it's only available to the wealthy or foreigners with money, quit cutting front line staff</p>
T6E	<p>Taking care of needy Albertans by providing them with public education, adequate social services, a clean & healthy environment, and a genuinely diverse economy. And not wasting taxpayer money by gifting it to giant private corporations.</p>	<p>Not giving huge amounts of money and enormous tax cuts to giant private corporations associated with dying economic models.</p>	<p>By encouraging new, diverse economic streams rather than narrow-mindedly throwing money at old, outdated, dying, unsustainable industries.</p>

T8X	Restoring health care spending cuts. Restoring education spending cuts. Restore 12% corporate tax rate. Reduce or eliminate private school funding. STOP ALL SPENDING ON ALL THE FAIR DEAL RUBBISH INITIATIVES. LIVE UP TO THE PROMISES MADE IN THE ELECTION CAMPAIGN.	Reduce or eliminate private school funding. Increase corporate tax rate to 12% (NO JOBS HAVE BEEN CREATED WITH THIS NONSENSE). STOP SPENDING ON YOUR PROPAGANDA ORGANIZATION.	WORK WITH THE REST OF CANADA TO CREATE JOBS IN THE OIL INDUSTRY. WORK TO SUPPORT GREEN JOBS IN RENEWABLE RESOURCES AND ENERGY QUIT SERVING YOUR OIL INDUSTRY MASTERS). HAVENT YOU FIGURED OUT THAT OIL IS A TWILIGHT INDUSTRY. CREATE TRUST AMONGST ALL ALBERTANS BY STOP CONSTANTLY LIEING.
T2J	Public education and healthcare	Cut down administration in government, education and healthcare and other public services, and focus your funding on frontline workers, the ones who know what is going on in their areas, and the ones doing the important work.	Make tax incentives for small business owners.
T1V	Health ,education, early childhood. All the things they are cutting!!	The ridiculous energy war room! And by charging million dollar corporations proper taxes rather than relying on the middle class to pay for the ridiculous waste of money war room. And also by not giving our carbon tax away to the federal government!!	By INVESTING in education, renewable energy and government funded infrastructure projects that add value to our economy like roads, hospitals, schools, teachers and support staff.
T8N	Education	With big companies. Not the little people.	Stop cutting jobs
	Public education, public health care, social services.	Tax larger corporations, stop government funding of private organizations.	Stop underfunding public sector causing massive layoffs, stop relying on single industry (oil and gas) to boom and start exploring alternative industries with less environmental impact.
T5Z	Education, Infrastructure, and Mental Health.	Bring back healthcare premium payment. Limit child subsidy grant by supporting only 3 children maximum per family.	Please diversify. Do not rely on one industry: oil and gas. Invest in AI (artificial intelligence) and renewable energy.
T3C	Taking care of it's people. Private Sector cuts means that not only have people lost their jobs in the private sector but now their healthcare, education, child care is being compromised through funding cuts in the public sector.	Cut Private Sector tax credits- use grants instead. Fund research! Finding research has the largest return in investment. Think long term- just not what you can achieve in your 4 year term.	-Diversification of industry -Promoting Alberta as a place to do business and set up their business/company means being able to offer strong healthcare, education, support services, opportunities. You can't expect one without the other.
T2M	Education and health care, particularly seniors	Alberta doesn't have a spending problem, it has a revenue problem. Bring in a modest Provincial Sales Tax and align our income taxes (personal and corporate) with other provinces.	By providing strategic investments in key sectors and seeking opportunities to diversify our economy beyond oil and gas.
t6h	Most important is that we protect vulnerable populations. Elderly, children, children in care, people with addictions. Safety - road safety, food inspections all those things that keep us safe. This includes working against discrimination such as racism, prejudice about sexual expression, piercings/ tattos etc. Next most important is that we help people be the best they can be - so supporting students, student loans, helping people open a buisness and keep it open. Programs to help people who have come out of prision to find how they can be productive members of society etc.	When we support people they will give back. People what to give back. Support the volunteer sector. Help municipalities collect taxes fairly and easily. What about orphaned wells? We need to set up a structure where its not the government that needs to bail them out.	Support on how to open a small business. Also, keep all those union people employed - like teachers and health care workers - they are the ones who spend money and keep the private sector going. Who is paying to get their fence painted? No people who are worried about their jobs. If you help people have stable employment then they spend money

	Education Health Job creation	Government salaries	By advertising not by big tax cuts for the wealthy at the expense of education and health care
	Education Health Job creation	Government salaries	By advertising not by big tax cuts for the wealthy at the expense of education and health care
	Education	Not giving tax breaks to large corporations as they have not helped the economy	Invest in anything but oil and gas
T2T	Education, Health, AISH, other social programs, raises for Public Service Workers, returning the \$4.7B government stole from Alberta's coffers.	Savings are NOT required - just give back the \$4.7B government stole from the coffers of Albertans and everything will be paid for - more money into the economy + greater spending by Albertans = more jobs created to handle the growth. Not rocket science...	Return the \$4.7B Government stole from Alberta's coffers...
T2T	Education, Health, AISH, other social programs, raises for Public Service Workers, returning the \$4.7B government stole from Alberta's coffers.	Savings are NOT required - just give back the \$4.7B government stole from the coffers of Albertans and everything will be paid for - more money into the economy + greater spending by Albertans = more jobs created to handle the growth. Not rocket science...	Return the \$4.7B Government stole from Alberta's coffers...
T4R	Healthcare, education and infrastructure. Diversification into new industries such as green energy instead of the usual unoriginal conservative mindset of putting all their eggs in one basket...ie oil and gas industry.	Find savings? How about instead of giving away money through tax breaks for corporations and the rich, don't do that. Close tax loopholes. Stop privatizing utilities. Tax the church. But instead you cut healthcare education and infrastructure? Pull you ignorant heads out...	By doing the opposite of what you are doing now. What you are doing now clearly isn't working. Also, keep your damn business out of reproductive and LGBTQ+ rights. It doesn't affect you except for your precious beliefs. No one cares about your beliefs so keep them to yourself. Who are you to dictate how someone should live or control someone else's body?
T5R	Money is needed for Education and Health. Do not spend on big business. People are more important. Perhaps focus on other things rather than the oil industry, because we can't control the oil price on the market. Edmonton Public High School completion rates have soared due to the programs they have. By cutting the funding for Education the high school completion rate will be compromised. The UCP halted the construction of the Super Lab. That action is a waste of money. Things are being done without thinking.	Higher tax on big business. It hasn't done anything to give them a tax break. The citizens of Alberta are the ones who put money back into the economy. It's the people that the premier has forgotten when he laid them off, there is no money to spend because of the unemployment. Maybe the premier should not be going to Ottawa so much, and focus on the job at home to save money on travel.	By putting money back into Education and Health care - this creates jobs for the young people. Too many people are being laid off. Tax big business.

T1A	<p>Aside from maintaining resource to maintain the high demand areas like health care and education now is the the time from government to be strategic about trying help kick start our provincial economy by investing in “small” infrastructure projects. The concept of small being less than one million, with even more emphasis on projects up to \$500,000 so that the money can be spread across the province not just in the Edmonton Calgary corridor.</p> <p>I understand that the federal government is trying initiate a an infrastructure program of their own. So to “make the best bang for the buck” of federal and provincial taxpayer monies it is important that infrastructure funding is complimentary not duplicating.</p>	<p>I understand that the government is seriously looking at public service manpower cuts. Historically the problem with past cuts, was that the people being cut were always, the lower paid program delivery staff, which causes problems for both the government and the general public in delivering and accessing government services in a timely manner.</p> <p>I think the politicians.....and not....senior management staff should do an assessment of how many managers there are/to regular staff, in each department! In my experience there are way too many managers (with of course relatively higher paying jobs) than there are other employees....I am sure that there many so called managers that don't even have employees reporting to them other than a subsequent string of other managers! Given the electronic means available today managers should be able to manager/ supervise more staff than in the past.....but in reality I know that the ratio of managers to other government employees is higher than ever!.....and many so called managers instead of supporting and helping their staff do their jobs.....including letting them make decisions that they are qualified and paid to do...many managers spend more time questioning their work and having them provide unnecessary justification for their decisions, while at the same time requiring their staff to “spend more time planning than doing”, actual work!</p> <p>The bonus of consolidating middle management.....and yes even higher management level jobs.....(ie. how many individual departmental Deputy Ministers and Assistant Deputy Ministers are truly needed/department?)..... is that less people would be effected, for the same cost saving to government.....with little or no impact to the delivery of the government's programs and services!</p>	<p>Given the outside forces that are affecting our economy this is a tough question! Obviously there is a need to try to deal with the previously mentioned outside forces which I think the current government is trying to do, and while the job is a tough one our government has to be persistent and just as innovative as the outside forces at getting our message and needs across to the general public...in not only Alberta but across Canada.</p>
T9G	<p>Refined petroleum products to serve Canadian interests. More downstream processing in Alberta to supply energy for Canada and get us off foreign oil.The orphan well program should include Alberta companies only and any oil products in these wells should be salvaged at a reduced royalty incentive if possible and economically viable. Private land should be the first priorit and crown land should be the last reclamations. Also the government could provide a training program for unemployed oil workers to gain training to reclaim these sites so we have a competent work force to complete the work.</p>	<p>Reducing costs in the administrative sectors of AHS, the school boards, and all govt offices. Privatizing any services that we can on a bid program to get best bang for the buck.</p>	<p>We should be looking at a recycling system for plastics and changes tonthe plastic manufacturing business to facilitate these changes, as well as incentives for ppastic manufacturing to use recycled material.imagenif Alberta could be an industry leader in this as well. I could give further details at 17(1)</p>

T4L	<p>-Funding public education, including provisions for increased expenditures such as new students to Alberta and increased transportation and operating costs.</p> <p>-caring for vulnerable populations such as those dependent on AISH and those with health concerns by maintaining adequate services and benefits</p> <p>-subsidizing initiatives which can create jobs in a diversity of fields.</p>	<p>-evaluate the effectiveness of the Canadian Energy Centre</p> <p>-re-consider the corporate tax cut made early in the UCP mandate- has it generated jobs?</p> <p>-consider a provincial sales tax with revenues earmarked for public services</p> <p>-regarding provincial standardized testing, possibly consider having the tests marked by current teachers within their own classroom assessments using standardized rubrics</p>	<p>-look for initiatives that diversify our economy and have collaboration for new ideas</p> <p>-look for initiatives where there is collaboration with groups that are currently challenging each other- ie environmental (green technology) initiatives working WITH oil and gas initiatives</p> <p>-look for initiatives that support growth in needed public services such as Mental Health initiatives- possible partnerships with existing corporations</p> <p>-reconsider initiatives where carbon tax revenues were re-invested in environmentally sustainable ventures such as public transportation projects</p>
T3j	<p>Social services, the vulnerable, the helpless. Lessen the income gap. These services will lessen the financial burden to society and better support society and equality and in the end save money on ambulance rides, policing, crime, health risks/epidemic/breakout.</p>	<p>Not paying out cooperations or wasting time and money with its nose in local volunteer run community farm/foodshare. You guys forced a company that to move, hired a "special" moving company(probably a business friend to be honest) and then deliberated for months putting the farm welllll behind schedule. And waaaayyy over budget for what you quoted the move would cost. You guys went 5 times over the budget what is wrong with the UCP? They even offered to have everything moved themselves at a much cheaper quote.</p>	<p>Simple, Stop cutting jobs, focus on our growing movie and film industry. I believe tied for second in Canada. You folks revised a grant/credit line film makers had access to. Reduced the amount significantly. Bring that back. BC's film market is getting to the point where is more competitive than ours and it's going to start showing. Bring back that grant.</p>
T5T	<p>Education Health care Social services</p>	<p>No more corporate tax cuts Stop funding oil and gas projects to such an extent</p>	<p>Diversify - stop investing so much time and money for the oil and gas sector. Alberta needs to focus on other areas in order to move forward.</p>

T8V	This province could use affordable housing for seniors, vets and the working poor located city centre not out in the bush. The tiny home solution they are doing in the USA is very effective. Get the homeless off the streets put back our mental institutes and house those who need help where they can have 24-hour care. Improving our healthcare so the working poor seniors and vets have the same advantages to good healthcare as you give the so-called disabled AISH (my statement below will explain this comment).	Investigating the recipients of AISH I personally know 5 people who not disable enough not to work and are collecting money because their doctors got 500.00 to write up a really good medical report. These so-called disabled people can go the bar and play music (cash under the table) they babysit and house clean for cash, they take cash driving jobs and vacation whenever they want because these cheques come in steadily no questions asked. They are moving for alway moving so they can not be kept track of and if they take a paying job they have an excuse to quit or get fired within the 90 day period so AISH and CPP do not know what they are doing. I think all government programs that give out taxpayers dollars should all be connected to revenue and it should take more than one doctor's opinion to get them on this cash handout. Having a severe disability is one thing having a condition that is debilitating but not severely disabling is another. Put health assessments in place where they are reevaluated every three months by their doctor and another randomly picked specialist (who is in the field of this person's sickness) by the government. Give them programs that have to go to 3 times a week and if they fail to show they are cut off or fall on regular welfare. Fraud is Fraud and I feel my hard paid tax dollars are not being protected from these fraudsters. Get the field investigator back out there and hire as many as need to weed out these people. Make reporting these fraudsters easier and maybe even a cash incentive would be nice. I am not talking about truly severely disabled people I am talking about those who can still be a productive member of society and a taxpayer. Just think more tax money for the government to spend.	For one freeze government workers pay till the rest of the population caught up with the same hourly pay scale. All Government jobs should be on a rotation of 4 months to 6 months then laid off and a new set of people come in to do the work. This could employ 2 to 3 people per job. Getting pension plans in place for all private-sector workers, sick days the same as government workers and healthcare. No Public service employee should be allowed to strike and disrupt any services that the taxpayers pay to have. If you were doing the rotational employment then if those who are not doing their jobs at 90% efficiency and 90% accuracy let them go and let someone else have a chance at these jobs.
T8G	Health and Education	Higher taxes on optional spending such as liquor, tobacco, vaping paraphernalia and cannabis.	Provide subsidies to workplaces and shops that will take on RAP students as apprentices.
T1S	Education Health Care	Duplication of services War room	Tax incentives for companies to hire workers
T8R	Seniors benefits (including the home adaptation and repair program) Alberta Health care Reduce property taxes for seniors	Monitor infrastructure projects, I see things like hi-way improvement projects where it seems they are disorganized waisting money. Stop giving business tax cuts then relying on the private middle income people to take the brunt.	Create jobs , not cut jobs.
T6W	Education, Health, Economy	Hire better managers and directors to manage the province's money; reduce payments to other provinces from oil revenues	build the pipeline; and invest in refining our oil here in Alberta
T3H	- mental health/addictions services - getting Albertan's back to work	- hopefully more of the AHS budget could be allocated to mental health, as this is going to help save money in the long run	- invest in renewable resources, education, social support and daycare, while at the same time supporting Albertan's who currently work in oil and gas who are suffering greatly
T2K	Public education, public transport, affordable housing, alternative energy	Reduced wages for elected officials, larger taxes for those earning more than a million a year, going after owed taxes from oil companies	Looking at funding for other industries other than O&G, stop treating the province like a one trick pony that will never die, the horse is dead so stop beating it.

T2C	Supporting front line health care workers, more funding for AISH, funding for primary and post-secondary education - reverse the cuts that have been made under the UCP government, invest in other industries so there is more economic diversification in the province. Support child care subsidy so more parents and women can join the work force and grow the economy.	Increase corporate taxes, implement policies to decrease travel spending (no 5 star hotel stays or first class air travel etc.). Not give \$4.7 billion to corporations that end up leaving the province anyways.	Investing in alternative energy and diversifying the economy so we're not so dependent on oil and gas. Investing in construction projects that put people to work.
T2S	1) Elbow (i.e. SR1) & Bow River flood mitigation 2) Removing obstructions to oil field development and pipelines	no comment	Post-secondary educational assistance pipeline and oil field development
T3B	Diversification. New industries like geothermal energy that leveraged Alberta's drilling expertise and infrastructure. Extracting lithium from oil sands deposits. Mining uranium and supporting nuclear energy. Reducing CO2 emissions from flare gas. Solar energy. There are Alberta companies in these areas that need as much support as oil and gas and will provide an economic backstop when the world de-carbonizes energy.	Collect taxes owed to rural municipalities by energy companies. Stop paying for their liabilities.	Diversification. Invest in new industries in stead of fighting a losing battle to save oil and gas. Stop cutting funding for education, nursing, and government services. Good jobs are being eliminated. Alberta should be paying for jobs that serve all Albertans not just one sector of the economy.
T7Y	Anything but oil and gas. Health care, education, social services, arts and culture, tourism, anything really.	Not bailing out industry that is failing because that's how economics work.	Putting time and money into emerging industries (green energy, technology, visual medias).
T2T	As an absolute priority, the government must ensure upstream flood mitigation for both the Elbow and Bow Rivers in Calgary is fully funded. The Provincial Budget 2019 saw a serious reduction in the Alberta Community Resilience Program funding allocation for Calgary and no money budgeted to proceed to the next step of the Bow River reservoir project. This needs to be reversed.	Determine how many meetings mid to senior level management attend, and scrap any position which doesn't involve 80% plus of the time implementing government programs.	Continue to support the oil and gas industry throughout Canada and the US. You must find ways to encourage the return of investment to this industry or we will loose it.
T4x	Infrastructure roads hwys	Stop flooding Alberta with refugees who cannot contribute. They are draining our system with this welfare for life program.	Low cooperate tax. Grants to start small business.
T9g	Social programs like healthcare and education.	Disband the war room and other ridiculous 'blue Ribbon' commitees.	Offer legitimate incentives to industries that will diversify the economy i.e. High tech, i.t., Gaming, tv, film, music/recording and growing alternative energy technology and expertise. Supporting alternative energy is not abandoning oil/gas, but adding to our energy portfolio and expertise to make us a global energy powerhouse.
T5Y	Education and Health care	Less panels, less tax cuts to corporations, no more energy centre	Free training and additional education. Tax incentives based on hiring/job creation results.
T3H	Education - both at the grade school and post secondary levels. Health care. Social services. Public transportation. Infrastructure.	The government could stabilize revenue by introducing a sales tax.	Through supporting education and through infrastructure spending.
T1K	Provide population growth factored into education and health budgets. Business tax cuts are not and over the years proven to encourage business. Oil prices got Ralph out of trouble, not budget cuts.	Eliminating the rediculous WAR ROOM. We are the laughing stock of the world and especially the rest of Canada. Make the oil and gas companies clean up and not use public funds.	Building infrastructure to help move Alberta back to the forefront of technology.

T3B	<p>Economic diversification - subsidies or investment supports to new(er) businesses in non-traditional industries.</p> <p>Post-secondary education grants that ensures broad access for all Albertans.</p> <p>Funding tied to specific skills or industries supports established economic interests and political ideologies but stifles creativity which over time creates a lack of innovation which is critical to our long-term future.</p> <p>People - not “jobs,” which is just a euphemism for corporate tax cuts. People want to work, but propping up legacy industries does not help people transition skills and experience into emerging or previously unknown industries.</p> <p>Alberta’s greatest resource is well-educated, hard-working people, not natural resources. Jurisdictions that have successfully transitioned from boom-bust resource economies have done so through human investment.</p> <p>I don’t belong to any political party and have voted blue in the past. But I grew up in South East B.C., lived all over the world before making Alberta home, and I’ve been through mining and oil and gas booms and busts and the current budget is deja vu circa 1993. The problem is, it isn’t 1993. We aren’t emerging from an era of unrealistically high union wages or unmanageable debt to GDP. And even if we were, those so-called solutions resulted in a generation of deferred human and infrastructure deficits. The disinvestment in the public sector resulted in a shortage of public sector professionals during the next boom, forcing government to raise Alberta public sector wages to compete with the private sector. We need fresh vision and direction.</p>	<p>Focusing only on spending ignores the income side of the balance sheet. Tax is not bad. Taxes are an effective way to pay for services we all need. Corporations are not exempt from needing and using public services and benefit as much as people do.</p> <p>Cutting corporate taxes to keep jobs does not always provide more jobs or attract more corporations when the necessary conditions such as educated, healthy professionals are not available to support their business. Giving away our resources to foreign shareholders may provide jobs in the short term but leaves us poorer in the end (can you spell o-r-p-h-a-n—w-e-l-l?).</p> <p>When we ensure we get value for our money, we (most of us, anyway) happily pay taxes. As we see in many US jurisdictions, lower taxes are expensive when essential services such as health and education are privatized instead of being well-funded, managed, and accountable to the public that pays for them.</p> <p>Rather than focusing on easy cuts to public sector wages or workforce, focus on establishing public sector performance measures so that Albertans receive value for the money invested in and for them.</p>	<p>What a mom and apple pie question. Sure.</p> <p>But unpack that further to expose the ideological bent behind that question. Do you mean trickle-down economic strategies that benefit political party donors or investments that support all Albertans?</p> <p>I’m all for investments that will grow new economies and jobs in new and emerging industries.</p> <p>I’m opposed to more tax cuts, especially corporate cuts (I pay both personal and corporate taxes in Alberta). Let’s establish a sustainable tax - sales tax or royalties or higher personal/corporate progressive rates - regime that funds the excellent health and education services we expect and gives us the resources we need to reduce our dependence on the resource-based economy.</p>
T4X	<ul style="list-style-type: none"> -Health care -Education (both at the elementary/high school level and post secondary level) -Renewable energy sources -Public transportation (ex. The LRT) 	<p>By taxing more heavily large corporations and the wealthiest percentage of individuals. The trickle down effect has never been proven to have positive long standing results for everyone, rather the richer just get richer.</p>	<p>By supporting the next generation through their education and job opportunities, as well as incorporating more alternate forms of energy creation (ex. Wind or solar) in order to support those suffering due to the ups and downs of the oil fields.</p>
T2M	<p>Education and the environment</p>	<p>Think long-term and stop fretting about balancing the budget and tax what you need to spend%</p>	<p>Invest in environmentally friendly processes. Get out of oil and gas it’s time is limited</p>
T6w	<p>Stop giving away money. No one should be entitled to free money because of race or circumstances. Loan the money on case of circumstance if you have too. Everyone goes through tough times but we have created a victim society with people feeling entitled to my hard earned money.</p>	<p>You are on the right track. I have paid for all my kids schooling and bussing and extra activities since the day I landed in Canada. I got no handouts and have used all my savings. I think everyone should be entitled to the same treatment. If they can’t afford it, let them do without it.</p>	<p>Liaise with or eliminate these nonsensical third party hiring companies that seem to only pull the resumes of new immigrants. Give more incentives to small businesses for hiring. Make the tax structure easier and more straightforward. Stop penalties that send small businesses into bankruptcy. Taxes are late because most businesses can’t even afford the accountant but doing the taxes themselves is so difficult.</p>

T1W	Low income families and individuals.	Reduce corporate subsidies.	Sustainable energy R&D. Support small business. Bring back STEP and other programs that support students.
T0E	Healthcare, education, and seniors. People are what should be important to us. Take care of us. Put money into our future, allow our future to be educated, this will bring in money.	Taxes, critique waisted money (ie:was asked to source out a desk for office. Found suitable desk for \$400.00... was not approved, as I had to purchase through contracted services... similar desk was approved at \$2000.00. Look at contracted services. We have to contract for everything to be done at facilities. Maintenance is restricted (ie:moving desks need to be contracted to moving company, putting together desk, needs to be contracted)	You have to create an environment to invest in your province. Economic growth comes from people working. Stop cutting and freezing positions. The more unemployment the less spending.
T0E	Healthcare, education, and seniors. People are what should be important to us. Take care of us. Put money into our future, allow our future to be educated, this will bring in money.	Taxes, critique waisted money (ie:was asked to source out a desk for office. Found suitable desk for \$400.00... was not approved, as I had to purchase through contracted services... similar desk was approved at \$2000.00. Look at contracted services. We have to contract for everything to be done at facilities. Maintenance is restricted (ie:moving desks need to be contracted to moving company, putting together desk, needs to be contracted)	You have to create an environment to invest in your province. Economic growth comes from people working. Stop cutting and freezing positions. The more unemployment the less spending.
T4r	Health, education and roads	By increasing corporate tax rate, reducing The govt spending in dept, not laying off worker, rather by finding efficiencies	Diversify economy, invest in green energy, bring in high tech, retrain peoples, move away from oil and gas on longer term basis
T1Y	Healthcare and education As well as diversifying economy so dependence on oil is stopped. Invest in technology.	Get rid of that stupid costly war room it's an embarrassment to Albertans. Jason Kenney needs to end his love affair with the private for profit big oil companies. Tax big oil companies that didn't save and spend wisely during the boom years.	Introduce a Small PST to get us on our feet.
T2h	We need to focus on child care, women in poverty that are parenting, and please focus on education	Put a freeze on government wage increases, do not offer bailouts to so many big corporations that may in the end take the majority of their business elsewhere	Education and training incentives especially those that are able to work and not working. Train to the gaps in the employment field ain't for the companies needing the skilled labour.
T3B	Police	They could stop frivolous trips to Quebec along with their obscene expenses billed to the taxpayers. Reduce spending in City hall. There is so much waste at every level of government.	Reduce taxes and encourage businesses to the City. Stop spending money on unnecessary infrastructure such as the berm in Bowness that will not work and the new stadium. Many people in Calgary are unemployed yet the City keeps wasting money.
T5M	Education and healthcare. At least give back programs that have been cut. Give teachers more funding to teacher their student.	Tax the corporation that just got big pay out and did not hire more workers	Yes it should. This current government is not.
T6w	Education in all Aspects	Political leaders salaries cut them in half	By having the schools have full access to all teachers and assistants for the students. It all starts in the schools with how our future is determined!! My kids will not fall thru the cracks!!

T2x	Smaller class sizes, updated textbooks, more materials for the classroom ex: pencils, paper etc.	Less money sent to private schools since they get funding from other places. If we were to make 4 day work weeks we could save in busing, lighting etc.	Smaller class sizes, more funds for classroom aids, less money to private schools
T6T	Priority should be on balancing the budget even if some services get cut.	Cutting wages. The private sector has absorbed significant reductions in pay. Cutting the size of the bureaucracy. Focus on providing core services only.	Reduce taxes. Fight the federal government's destructive policies (carbon tax, anti pipeline policies).
T6j	Ensuring services remain easily accessible for vulnerable Albertans.	Not providing new tax cuts for industry.	Demonstrating a stable economy without constant changes/cuts to services that impact standards of living for Joe Albertan so that it remains easy to attract workers when needed and companies know they are entering a stable economy.
T0K	Diversification tourism parks Renewable energy	Increase taxes, Sales tax Made in Alberta carbon tax	Diversification Renewable energy Tourism
T9E	Education, social services, mental health and healthcare	Too many unnecessary changes (e.g. school division name changes) which cost money each time. Redundant policy reviews	Continue to diversify our economy and supporting education in a variety of fields.
T0j	Paying down debt, providing adequate levels of health care and education, road maintenance.	Everywhere, there needs to be both a reduction in compensation for all government employees as well as shrinking the overall size of government.	Get out of businesses way and reduce taxation for everyone.
T6K	Not giving hand outs to multi million dollar companies who can't pay their taxes or provide long term stable jobs.	They wouldn't need to find savings if they properly taxed the oil and gas industry and stopped spending money on a war room that is fiscally and morally irresponsible.	By investing in our communities, with infrastructure and services that we need. Like schools and public programs and transitions to clean energy. This government is taking us back to the stone age. It makes me want to leave this province and ashamed to call myself an Albertan. The problems we are facing are all a result of the poor management of our resource economy. Diversification and transition is the way of the future.
T8N	Decrease classroom sizes, children are our future. With more immigration and ESL children this is impacting classroom learning.	Amalgamate the school boards for a start. Why do we still have a public and separate stream. Complete waste- time to get into a modern model.	By investing in education and health care. You should NEVER underfund this two areas. Yes, investigating where money is being wasted-management for one! In Alberta we are definitely in a recession, lowering taxes to get more money into the pockets of taxpayers would certainly help. Look at all the businesses that are closing. People don't have the money to spend when half their salary is taxed.

t4v	I think the government should be serious about finding ways to diversify our dependency on Gas and Oil revenues. Decade after decade its proven. "The province is too dependent on the oil and gas industry. Diversification is warranted to increase the economy's resilience to the shock of oil price volatility, resilience requires innovation in technology, small business growth, and value-added manufacturing and exporting."	Severely cut MANAGEMENT jobs at Alberta Health. They are so top heavy its ridiculous. Have a look at IT, its insane the amount of redundant projects, huge waste on equipment, licensing of software, operating systems. But more than anything the number of managers is stupid and a waste. The real workers below management are the ones doing the work and are needed. Why cut the contracts like outsourced Help Desk and try to bring in house?. This will just add huge cost and inefficiencies as its a known entry level position. You should be outsourcing more IT. ALSO and this is significant. Many rural care facilities in central Alberta have been reduced to Nursing homes. There are tons of worthy equipment from closed ER's, operating rooms etc, just sitting in dark corridors. Sell this stuff fast before it becomes of no value, or donate to third world countries. That would look stellar in world opinion of Alberta govt. You have many facilities that need to be closed. I cant imaging the money being paid to keep the lights on in some of these just to provide nursing home style care and setting up offices in them for homecare workers, there has to be cheaper alternatives. Shut the doors, people work way more efficiently from home offices, increase that! Sell the properties, make some money instead of cutting legit and needed services. Finally the Connect Care project going on needs to be frozen. Its a huge money pit that is growing by the day. Its insane the size of AHS as an employer (5th largest in Canada?) Really? it's needed for this population base? I think its out of control particularly in rural Alberta.	People here are lazy once on social assistance. Of course there are legit cases but dont mix health reasons for not working with actually being fit and able.
T3B	(1) continued funding for the feasibility study for Bow Basin Water Management Options (2) renegotiation of the TransAlta modified operating agreement during flood season	Education and Health Care	Low corporate and small business tax rate, less regulation
T6J	Education, healthcare, and climate change mitigation.	Stop giving massive tax cuts to corporations.	Continue to fund healthcare, education, and industry diversification programs.
T6w	Education and health care!!!!!!	Top management, why do we need three layers of management to sit in offices.	Stop making cuts.
T2N	Stop giving away money to oil and gas companies. They are not and will never use that money for anything other than lining their executives' pockets.	Stop giving money away to oil and gas companies	Stop giving money away to oil and gas companies
T8N	Education and health care—investing in our people is an investment in our future. Avoid short-sighted fiscal decisions that reduce spending at the cost of Alberta's most valuable resource, it's people.	Increase corporate taxes and implement a provincial sales tax.	Support basic needs, such as education, health care, housing, etc. When people's basic needs are met, they are able to succeed and contribute to economic growth.
T8I	Education and health care to save what we had. The reduction of budgets has had a huge impact on our current users. These services are critical for Alberta's future.	There are always effective ways to modify programs without impacting service levels without disruption to the end user.	Do not cut government jobs and not just pushing all of the financial burden to taxpayers either through user fees or to municipalities.

T1W	climate action	eliminate energy "war room" @ a savings of \$30 million; stop costly and futile court challenges	support diversification of the economy: non-fossil fuels, IT, film industry, encouraging new businesses that use local products, for example, converting waste from hemp production to compostable packaging
T6W	Education Heath	Provincial tax	Investment
T6W	Education Heath	Provincial tax	Investment
T3B	More efficient use of health care and education spending. (Look at other countries and provinces for direction.) Support research and development of all (renewables and fossil fuel and agriculture and forestry) energy resources in Alberta.	Leaner government wherever possible. Government pension changes. Cut red tape at all levels of government.	Cut red tape for all business in the province. Open the provincial borders to all trade in Canada and work hard at bringing the provinces back together as one entity.
T4E	The government should prioritize diversifying the economy, with an emphasis on making Alberta the tech hub of Canada. The government should also focus on indigenous socio-economic issues like clean water, housing, and infrastructure and indigenous procurement opportunities for government contracts. For general Albertans the government should spend additional money on education and health care.	The government should implement a pst like the rest of the provinces in Canada, it really does makes the most sense, and the longer the province goes without one the deeper we'll go into debt. Next time I see a mall parking lot full, like the West Ed, I want to see \$ signs flowing back to the province.	Incentivize industries with tax credits to bring their business to Alberta. Focus on diversifying the economy since oil and gas does not appear to be recovering. Cutting government/public sector jobs will only further increase the unemployment rate which will reduce consumer spending within the province, which will have a detrimental impact on the economic health of the province, and will ultimately put Alberta in a deep recession. Job cuts and cuts to programs and services are not the answer in the economic situation we are currently in.
T6w	Education-health care system -	Reduce funding to unemployed to encourage them to look for jobs	N
	The people and not corporations. Healthcare is necessary for societal progress, our education is more important than oil.	Proportionate taxing of citizens	Infrastructure. Fixing up our province provides jobs and stimulates the economy.
T4B	Education and health care	Cutting the MLA's salaries, combining school boards and not having separate catholic or francophone boards, and stop giving money to private schools	Increasing support for industries that will expand our economic base beyond oil and gas such as renewable resources and tech
T6T	As our population ages we must look after our seniors and the elderly. I think it is long overdue.	Too much Health Care administration and not enough front line workers. The same is true for Education. Students going to university should have to pay their dues and there should be no free ride. After all they will have many years in their future. like we all did. to earn that back.	Encourage schools to teach students that future jobs will be there if they focus their growth in seniors care.

TOM	<p>We need to focus on creating a healthy and happy Alberta for the people here now, and well into the future. Some priorities in doing this should be:</p> <ul style="list-style-type: none"> -getting Albertans into work -funding education and focusing on creating a well educated Albertan workforce that has skills that will carry us far into the future ie. tech, environmental conservation, agriculture -expanding our healthcare coverage to include pharmacare and mental health services: no Albertan should feel that parts of their health are holding them back because they cannot afford to access services that will keep them alive -diversifying the economy -making a standard living wage required of all employers in the province so that all people can thrive no matter what job they have -supporting agricultural producers with incentives and programs to help them make sustainable businesses that have land management plans which include reducing the harm that their practice does to the environment and even reversing some damage or starting pro-active practices that anticipate changes that will need to be made due to climate change ie. planting trees on grazing lands to help retain water and grow better grass for animals -implementing province wide environmental sustainability practices ex. province wide commitment to a ban of single use plastic in all areas where feasible 	<p>Finding savings would not be entirely necessary if the government was taxing corporations the proper amount. Get the oil companies owing property taxes to pay them to the municipalities owed them. Raise corporate income tax on petrochemical companies so that we can take the wealth in this province and use it to better the lives of all our citizens. Same with Amazon - they are well known to be under taxed, not pay their taxes, and to in fact receive tons of tax breaks and rebates. This is an incredibly wealthy corporation who should be giving back to Albertans.</p> <p>Immediately cut the spending related to Alberta's Canadian Energy Centre - this is such an embarrassing use of our Carbon Tax dollars and advertising budget (Carbon Tax should be invested directly into creating a better future for as many generations of Albertans as we can imagine existing).</p> <p>I think this government, and all governments need to more carefully consider feedback loops in their budgets - or how saving a few dollars now costs us more money in the longterm. Big changes in services and budgets can have a negative impact that is not always immediately seen, just as some changes have positive impacts that are not immediately seen. For example: making changes to our healthcare system in which we reduce funding and services, especially with an aging population will cost us more money long term. If some citizens cannot easily access the services of healthcare professionals, or have to change prescriptions, or maybe ration prescriptions as coverage changes we will see an increase of people in poor health that will in turn stress the resources of the healthcare system when we could have realistically kept most of these people healthy with ready access to doctors and treatments that would manage</p>	<p>-Stop cutting funding to important services and the jobs that are required to carry them out. I do not want less educators or less health care professionals. I want as many as it takes for Alberta to be known as a place with an excellent education system that has enough educators at all levels to adequately meet the needs of students of all ages. I want as many doctors and nurses as it takes for all Albertans to feel that their health concerns are met as fast, as efficiently, and as caring as possible.</p> <p>-Start investing in the future of Alberta. We should not place a priority on just now but instead need to think about now, as well as 5 or 10 generations from now. We need to assess the needs of people living in Alberta currently, and how meeting their needs will affect Albertans in a future that exists when none of us are here anymore. This means freeing our economy from a dependance on the boom/bust oil system and the literal lottery that agriculture can be. Alberta is a province dependant on providing energy to the world - nothing is stopping us from diversifying the energy sector and creating jobs by looking to a future of sustainable energy. Solar fields need people to maintain them, wind farms needs people to maintain them. People need to build these things. People need to know how to safely store and transport the energy. A province with as many resources as this one should not be known for being stuck in the past, but for looking to the future and being ready for it by training people, by building infrastructure. Our people are our strength - they are the backbone of the province, their hard work and resilience should not be taken for granted because the government will not consider how our future should look like. Diversifying the economy can also help us create relationships between industries that are not currently there.</p> <p>Right now the oil industry by its nature cannot easily support the success of other industries - it takes up land that could be used in agriculture or forestry and does not really have</p>
T5e	The main focus any government should have is on the health and education of their people. A healthy and educated people are always progressive	The government place is to create an environment for us to grow the economy. The government should be spending on our infrastructure.	Work on diversifying the economy. The money being spent on trying to sell our oil to the world should be given to the universities so they can come up with cleaner ways to extract our oil.
T6w	Education and healthcare	Stop paying so much into equalization	Create pipelines and be mindful of Alberta and it's oil

T3A	<ul style="list-style-type: none"> - front line services in the classroom - lower class sizes - extra aids for special needs students - literacy and math intervention at the early years - more funding for low socio-economic schools in Calgary - more funding for psychological assessments for schools - health care - cut down wait times - public transit - police services - funding to municipalities - fire and paramedic services - funding to municipalities - homeless people - elderly 	<ul style="list-style-type: none"> - Duplication of services - find efficiencies in administration in education and health care 	<ul style="list-style-type: none"> - Incentives for tech companies to come to Alberta - incentives to attract artificial intelligence researchers to our universities - incentives for renewable energy research in our universities - incentives for agriculture research in our universities - incentives for companies and individuals to reduce carbon footprint - grants to companies that are tied to job creation - job retraining from oil sector to renewable energy
T0C	Infrastructure, health care	Welfare recipients need to take mandatory drug tests each month in order to receive any money. If any drugs (other than prescribed) no money. Also people that are not citizens of Canada that commit crimes here should be automatically sent back to their country of birth.	There needs to be some sort of incentive for entrepreneurs.
T6C	Education	The healthcare system	They should help spur innovation, through improving support for startups and supporting the University of Alberta and University of Calgary.
T6X	Transport and infrastructure	Consolidation of government departments and services, as well as assigning ministers who are qualified for the portfolios for effective governance, saving additional personnel to shepherd them.	Incentivize social enterprises to set up in communities.
T9G	Economic diversity,	Eliminate Management positions in AHS, committees, project reviews.COMBINE PUBLIC AND CATHOLIC SCHOOL BOARDS. Stop corporate welfare.	Allow businesses to develop and create new ways to technology for economic diversity.
T0L	Education and health care... negotiate in good faith with the medical and teaching professionals, and cut the upper level management positions if any cuts need to be made. Stop throwing out changes made by the previous gov't just because they were the previous gov't... why reinvent the wheel just because you don't like the person who invented it?	Axe the ridiculous "War Room", stop handing money willy-nilly to large corporations, and stop allowing O & G companies to bail on their municipal tax obligations and to abandon wells. Also, stop reinventing the wheel, just because you don't like the person who invented it. The education system and farm/ranch safety updates were just fine, but we're starting again from scratch for some reason. Leave it alone and move ahead with something that actually needs doing.	Encourage and support tourism and renewable energy initiatives.
T5K	Schools, healthcare, becoming more environmentally friendly and diversifying our economy.	By increasing revenue through taxes, ie a pst. By not needlessly bailing out oil companies. By getting rid of the oil war room.	By supporting new industries, like our tech industry. By ensuring education is affordable. By funding things like the super lab.

T8N	Healthcare and education are priorities the government should focus on. These are the staple ingredients of a healthy society.	I find these kinds of leading questions facetious and disingenuous. Only someone who has an intricate understanding of the complexities and specifics of a provincial budget and the Provinces responsibilities can offer an answer of any value.	Again, this is a highly complex question well beyond the knowledge base of the average citizen(myself included) to adequately answer. I find these type of surveys have more to do with campaign optics than actual facts that would ever be used to construct a functional budget. I fear for any future my children would have should they choose to stay in this province (which I have suggested they don't, not even for family). Alberta governments seem to judge their success on getting re-elected versus creating a truly innovative and visionary society.
T2W	Education and Healthcare	Management and administrative costs, travel expenses, funding to private schools	Look at attracting and supporting industries outside of oil and gas. We need to look to the future where people are going to be demanding clean, renewable energy. In the meantime, find ways to support the existing oil and gas industry, but link that support to jobs.
	Stop giving tax breaks and bailing out corporations! Stop spending money on them and spend money on improving the quality of life of all your citizens.	Stop giving money to corporations.	Encouraging innovation and innovative companies. We need to diversify from oil and gas. Keep public sector workers employed, for the benefit of all Albertans.
T9n	Sustainable industries and companies that have an eye to the future not the past. Our segment of society that needs a hand up not corporations that want a hand out. Education that is forward thinking not backward as is the plan with standardize tests.	Primers office and UCP members hand outs. This seems like a public relations government, take from the public and give to their relatives and party flunkies	Education and infastructure. Our greatest resource is an educated work force in a noted Canada. A small minded government who promotes discorde hurts investment in Alberta more than any other thing.
T8V	Investing in economic diversification to ensure future revenue streams beyond raw resource extraction. We are not a third world country, we should have moved passed such basic revenue streams by now.	Corporate subsidies and tax breaks to the wealthy currently cost our government too much.	Invest in growing industries like film, gaming, renewable energy, etc. instead of those that are dying. Wise investment now will result in revenue in the future.
T6L	-Lowering Childcare cost so parents can afford to work. -Ecourgaging different types of businesses to come to Alberta not just oil and gas related ones -Diversifying Alberta's economy beyond oil and gas to avoid another economic down turn.	Not giving tax cuts to billion dollar companies. Not giving 4.7 billion dollar incentives for companies to pay off debt then leave the province. Not spending money on a war room or the branding and then re-branding of that war room.	Job creation in all types of employment not just the oil and gas industry. Helping Alberta families especially middle class. Since the UPC government has taken power I have lost my job, childcare cost have increased and property taxes (due to lack of municipal funding). Encourage many different types of business to come to Alberta (ex: technology companies). Support program's that support families so parents can get back into the work force (ex: childcare subsidy and supports, daily childcate rates). Childcare cost are so high some Albertans cant afford to work even though they want to be productive and contribute to Albertas economy.
T2V	Continue to support a strong public sector, so citizens receive the services they need and deserve. Then increase support for the seniors and low income citizens in this province.	Spending tax payer's money wisely i.e. not on a "war room". Increasing the tax for the wealthy and eliminating tax savings loop holes for the wealthy would also increase the money government would have to spend.	Supporting new industry to the province, recognizing the oil and gas industry, while important for AB, is no longer the economic engine it once was. Also, by getting someone who can do economic calculations - a 1% raise for AUPE members, for one year does not equal \$34 million.
T6X	Child support, education, healthcare	Closing drag injection house, reconsidering indigenouse funding	creat affordable daycare program so that mothers can go back to work and pay more tax for Alberta economic growth.

T0G	Health Care and Education	Less corporate handouts, pay decreases for Government Officials	Take strain off of parents with more assistance with daycare. If both parents are able to work and afford childcare it stimulates the economy more than anything. Too many single parents have to stay home and live off of Income Support simply because the costs all around are not doable. Perhaps implement a harsher system for collecting on back child support. M.E.P. does extremely little in working to collect from neglectful account holders and it forces the other parent and ultimately the child to suffer.
T2C	<p>Create jobs in green energy, including electrified light rail transit (e.g., the Calgary Green Line, which is now under siege), wind power generation, solar, geothermal, and develop that technology so it can be exported to help with the climate crisis. Demand is growing every day with increased public awareness of climate change, and already renewables are becoming more than competitive with oil and gas for energy. The only reason it's not already far outstripped it is because you keep subsidizing the wrong industry - one that will have limited impact on jobs because the international climate for fossil fuels will never again be the same as it once was.</p> <p>STOP LIVING IN THE PAST. Learn the reality to today's challenges and respond appropriately!!!!!!</p>	<p>The Alberta Government can save money by not giving tax handouts to wealthy corporations who merely pocket the money and pay out increased dividend cheques to wealthy millionaire and billionaire stockholders, thus draining the public sphere of PUBLIC! money that should stay in the public domain.</p> <p>Then increase taxation on the wealthy and corporations so they PAY THEIR FAIR SHARE... ***AND*** for the fossil fuel industry, pay up front the actual externalized costs (health care, property damage, restoration, etc. of the damage fossil fuels cost.</p>	<p>Alberta MUST divest from the fossil fuel industry. SCIENCE, yes "SCIENCE" shows that we have limited time left to curb CO2 emissions, and the fossil fuel industry's job creation potential is a fraction of what would occur if we diverted funding to the rapid development of renewable energy sources and infrastructure.</p> <p>Moreover, the transferrable skills in the oil sector would lend themselves spectacularly well to putting out-of-work oil industry workers back to work and use the skills where they're really needed.</p> <p>FINALLY, invest in diversifying the economy. Cancelling the subsidies the NDP put in place that were beginning to attract high tech to Alberta was the WRONG MOVE. We've lost those opportunities now and told the world we're nothing more than a "banana republic" - staking EVERYTHING on a single raw resource of a dying industry.</p> <p>ALSO, DIVERSIFY, that's D.I.V.E.R.S.I.F.Y. the economy!!!!!! For 40+ years the Conservatives have squandered the opportunity to build a strong, healthy, resilient economy. Anybody who invests in stocks know you have to diversify your portfolio. WHAT MAKES CONSERVATIVES THINK Alberta is exempt from those simple, common-sense economic laws.</p> <p>GET. WITH. THE. PROGRAM.... before it's too late!</p>
T7Y	Increased funding to social assistance programs, particular those focusing on Alberta's most vulnerable citizens. In a climate of rising cost of living and stagnating wages, they are the most at risk.	<p>Wrong question, and you know it: savings does not help in a stagnating economy. Social and infrastructure stimulus spending on jump start sector incentives will help get more Albertans in more varied vocations, back to work.</p> <p>SAVING DOES NOT CREATE MONEY FOR CITIZENS!</p>	Support more pilot programs over the next 2 fiscal years in order to determine the best cost-to-benefit ratio gained from incentivizing emerging industries across the spectrum. As it is, our economic development growth is far too heavily tied to a fossil fuel extraction arm of the turbulent energy sector.
T6T	Education and health care. Taking care of those who need it; ex, AISH recipients. Basically, most of what you've already made big cuts to.	Maybe that \$4.7 billion tax handout you gave to big corporations, many of whom have since laid off hundreds of Albertans and invested outside of this province.	By investing in education, health care, and infrastructure - for example, that superlab you cancelled.
T1H	Health care should be a priority to invest in and not by privatizing.	Arts and clerical staff with government.	Diversify beyond oil/gas and farming. Tourism is 1 that's not been advertised well I think.

T6E	Education, health care, social services, support for vulnerable citizens (youth in care, disabilities, homelessness)	Less "expert" panels that tell us nothing and tax breaks for the wealthy	Diversify. Don't rely just on one kind. Invest in people not rich corporations
	Education Health Care Seniors	Cancel the oil propaganda office. Don't cover air costs for non-Albertan political figures. Drop the ego and work with the federal and other provincial governments to get a pipeline built.	Invest in infrastructure instead of cutting.
T6H	Health care, diversifying the economy, alternative energy solutions, education	Higher taxes on large corporations and oil and gas. Lower salaries for politicians	- funding alternative energy research and development - funding the arts and tourism - support small local businesses
T3B	(1) continued funding for the feasibility study for Bow Basin Water Management Options (2) renegotiation of the TransAlta modified operating agreement during flood season for the Ghost Reservoir	5 - 10% salary decrease for legislators for 18 months, with gradual increase to cost-of-living over 3-5 years depending on increased innovative economic development opportunities (as per below)	1. Grants for educators who can Redesign educational system to offer 'heart-centered' innovative collaborative education model that supports safety in the classroom, creative thinking and skills for youth, teens and college 2. Grants and current Alberta industry sponsors to finance and join heart-centered trained teams of youth made up of rural and urban youth/teens and college students...to apply for and attend summer workshops to brainstorm and collaborate in the development of 21st century quadruple bottom-line innovative economic development enterprises 1) good for people (heart-centered collaborative model), 2) good for planet (green focus), 3) profitable for investors and shareholders -ie a good return on investment and 4)good for local economies by new industries and jobs for local communities which house the new industries.
T6M	Health care and diagnostics Education Infrastructure	Ditch the 30 million dollar sinkhole. It is a Giant leak in the fiscal plan.	Quit laying off civil servants and properly fund public services... health, education, transportation, support for the elderly, disabled and poor.
	health care, education and environment	Salary rollback	Stop giving tax break
T6M	1. Move Alberta's portion of the CPP to an Alberta Pension Plan much like Quebec did. 2. Create a tax collection agency similar to what Quebec has. 3. Allocate more authority to the municipal level of government for revenue generation and spending. 4. Pass legislation to place sunset clauses on all spending bills. 5. Reduce cabinet size to: justice, law enforcement, economic affairs, municipal affairs, finance, highways and transportation, inter-governmental affairs. 6. Obtain control over immigration 7. Allow private medical insurance to cover some necessary health-care costs	1. A reduction in absolute numbers employed in the public sector – see 5 above. 2. Through outsourcing short-term projects 3. Place all new hires in the public sector on a defined contribution pension plan. Stop defined benefit plans and offer those on DB a one-time opportunity to switch to DC. 4. Invest in home care to lessen the need for hospital beds.	1. Advance public-private partnerships for infrastructure projects, focusing on quick completion projects 2. Take control of Alberta's portion of the CPP and have it invested in Alberta for Albertans when economic. 3. Establish free market zones within Alberta to create an export market for Alberta made products by not encumbering those areas with administrative procedures and taxation.
T8V	Crime prevention. Health and education. Jobs. Old folks homes.	School boards. Top tier health employees. Non essential pet projects.	Low taxes

T8N	<p>Education and health. Public safety.</p> <p>The government should develop mechanisms for public employees at the non-management level to provide suggestions for how to achieve cost savings within their places of employment and within their roles. As it stands now, only senior management has input into these decisions, and, as is human nature, these senior managers will have a natural tendency to protect themselves and those closest to them.</p>	<p>Eliminate the Sturgeon School Division's preschool program for "Developmentally Advanced" children. This program has been in existence through two previous governments. I am astounded that it has been allowed to continue to operate for so many years, despite its dubious mandate. Children attending have not had a full IQ assessment - indeed, at this young age, even formal IQ assessment results are notoriously unreliable. The applicants to the program undergo a "screening" to qualify. While a few children that attend this program may indeed be truly cognitively gifted, the majority are just high average children who live in high income and high literacy households in St. Albert and Sturgeon County. Why in the world would the government provide them with free preschool five days a week with a certified teacher, not to mention free bussing to the program? This program was developed as a clever recruiting strategy to appeal to parents. Truly gifted preschoolers rarely require anything beyond what any quality private preschool program might offer. It's only later (grade 3 or 4) that some gifted children require significant adaptations to their educational programming. It's very unfortunate that so many tax dollars continue to be wasted on this needless appeal to parental vanity.</p> <p>17(1)</p> <p>I am not questioning the continuing support for gifted education at the school-age level that require proper cognitive assessments to qualify students such as Calgary's GATE program or St Albert Public Schools' Academic Challenge program. These programs have rigorous qualifying criteria and actually do provide beneficial supports to students that actually do have real special needs</p>	<p>Encourage diversification of economy. Blanket cuts to corporate taxes don't appear to be helping. Support further development of solar power in our province.</p> <p>Each industry would have specific suggestions for ways to stimulate growth in their sectors. Looking at these would seem to be a more effective way of supporting job creation rather broad propaganda programs tied solely to the oil sector. Consider implementing regulations and policies that would tie oil industry to clean up after themselves. When international oil prices are in a down cycle, there is little the Canadian and Alberta government can do to raise it back up. However, if oil companies were required to post clean up bonds, their employees could be put to work cleaning up abandoned sites during times of downtown, maintaining jobs this way.</p> <p>Our province needs to look beyond oil and gas and support the development of other industry. We need to be more visionary and consider the future, and develop other areas in business and economy.</p>
T2T	Public healthcare, public education, infrastructure.	Actually tax oil companies. Stop fighting pointless court battles on the wrong side of history.	See the above two answers. You're making us into a laughing stock.
T6L	Public schools should be the first new schools in every neighborhood as they can serve all students, equally. Public health: lets be proactive in reducing primary care.	End all public funding for Catholic schools, as has been done in Canada's most Catholic provinces many years ago (e.g. Quebec, Newfoundland / Labrador). The only thing worse than wasting money, in this case more than \$500 million of wasted tax money) is also using religion to divide communities and using Catholic entitlement to discriminate against non-Catholics and LBGTQ students and staff. Until the Kenney government addresses this elephant in the room, no other government cuts will have any credibility.	Listen to business owners, economists and economic development experts -- rather than to social conservative ideology.
T2Y	Health and Education	Bureaucracy and mid level management	Stop cuts to front line employees. Job security = retail spending

T5C	<p>1. Occupational, Health and Safety Program (OHS) to ensure government's capacity to promote healthy work environment and protect the Albertans.</p> <p>2. Infrastructure including: build and maintain health facilities, schools and universities facilities and parks.</p> <p>3. Summer Student Employment program in the APS to provide opportunities for university students get ready to the workplace, which support the government's job creation policy and prepare the next generation for the workplace to ensure the labour force availability.</p>	<p>1. Promote equity, diversity, and inclusion in the workplace for Immigrant Populations, which will improve the engagement of immigrant professionals in the workplace to save government funding on related social services and program for immigration populations and other minor ethnic populations.</p> <p>2. Increase percentage of immigrant populations in the management within the Alberta Public Services due to the attributes of harder working from immigrants will improve efficiency and effectiveness of the organization operating to reduce the operating cost.</p>	<p>1. Have pipeline project completed in a short time period and have Alberta's core business (oil/energy industry) developed and back to normal.</p> <p>2. Attract foreign investment on Education, Tourism, Transportation and Agriculture.</p>
T5K	<p>Primary education. We have one of the world's best public school systems and a very young province. With so many children coming into and moving through the school system, we need to increase investment in our public schools so we can meet the needs of students.</p> <p>Universities and post-secondary education (fund more seats so universities can allow more students, provide more non-repayable bursaries for low income students, invest in research at post-secondary institutions).</p> <p>Healthcare.</p> <p>Affordable housing.</p> <p>Social supports.</p> <p>Economic diversification in green energy and technology, healthcare, artificial intelligence, tourism, film industry.</p> <p>Government should move their focus away from cyclical resource based sectors as the backbone of our economy.</p> <p>Putting all our eggs in one basket is a terrible way to gamble with the future of our province.</p>	<p>Close the Canadian Energy Centre - save \$30 million.</p> <p>Eliminate the Corporate Tax Credit - save \$4.7 billion.</p> <p>Aggressive investments in affordable housing across the province and universal basic income for everyone - this will create savings by decreasing costs in healthcare, policing, the justice system, social services. It will also help with school completion rates. A more educated population earns more money which brings in more tax revenue for the province.</p> <p>Introduce a provincial sales tax. Alberta has the highest amount of disposable income per capita in the country.</p> <p>Don't implement performance-based funding at Universities.</p> <p>It is a ridiculous and punitive measure for creating red-tape.</p>	<p>Increase investment in universities, support students to attend post-secondary education, fund research. Support the green energy transition and emerging technology sectors. Invest in affordable housing and rapid transit. Work with Edmonton and Calgary on city charters so they can drive the innovation agenda. Allow cities to create attractive places that people want to live in and that companies want to invest.</p>
T3B	<p>(1) continued funding for the feasibility study for Bow Basin Water Management Options</p> <p>(2) renegotiation of the TransAlta modified operating agreement during flood season</p>	<p>Common sense thinking. The Trans Alta agreement was in place for over 50 years , but was let to lapse prior to the 2013 flood. For those of us who live on the Bow , that meant that the 2013 flood COULD have been mitigated by approx. 1/3 , but wasn't. On top of that , a TAU employee panicked , and allowed a SURGE flood to go through , exponentially causing further flooding.</p>	<p>Again , some common sense. Flooding is always a danger , but drought in Southern Alberta is more common. By creating reservoirs that can be used for flood mitigation , providing needed water in droughts ,water that can be used to fight forest fires , and a huge recreational component, would be an asset to Alberta , and a tax saving answer to extreme weather, dry or wet.</p>

T6E	I think the number one concern of government should be to balance our budget and pay down our debt. This is how I have lived my life and it is sound fiscal policy to pay off debts as soon as possible. Governments in Canada over my lifetime have taken on more and more responsibilities in areas like healthcare and education. My thinking is quite libertarian on some issues and I would love to see healthcare and education returned to the private sector from whence they once came. Realistically such actions would be political suicide for any political party or politicians attempting them but small steps in the direction of making people more responsible for their own health need to be taken. Making it easier for private schools to operate in the province may help in cutting education spending. I educated both of my children in private schools that received less funding per pupil than public schools got. I feel my children received a better education at these schools than they would have received in public schools. The teachers and staff at these schools received less pay and parents paid more money out of their own pockets for their childrens' education and better educated students was the result.	Get away from hiring union labor. Whether it is teachers, nurses or park rangers, union labor costs the province more money than if private sector contractors using non-union labor were contracted to do the job. Again small steps in this direction will make a difference and not cost too much politically. Take small steps toward privatization in many areas, health and education being the most costly of those, so that government will become much smaller and eventually only look after maintaining the rule of law and defence of the realm.	Lower taxes and less regulation (red tape) ! Keep taxes on business low so that business will survive and others will locate here in Alberta. Too many rules, regulations, license requirements, permits etc are barriers to small businesses especially.
T2J	Education and health	Art grants	Strengthen the public school system
T2P	Keep healthcare publicly funded, build and maintain public health facilities, and avoid promoting private clinics.	Within the Alberta Public Service, merge Executive Directors and Directors into a single level of senior management. Keep middle managers in place due to the large workload placed on middle managers, which is exacerbated by the hiring freeze. Privatize some programs and services that are not core government services (e.g., IQAS). IQAS equivalents are successfully run by the private sector in other Canadian jurisdictions.	Be very gentle if reducing size of Alberta Public Service. Move at a slow pace (e.g., rely on attrition) to avoid devastating outcomes related to too much job loss in a short period of time.
T3K	I would like to see monies directed to education and health care.	I believe we need to incorporate a Provincial Sales Tax and should continue with the Carbon Tax. Further closure of the War Room would provide \$82 000/day that could be redirected into services Albertans use everyday.	Diversification is key in this province. We have a wealth of renewable energy opportunities and with the stance that our world is going in terms of the environment and climate change the timing is right. The knowledge and skill set of our citizens who were formerly employed in the oil industry are transferable.
T3K	I would like to see monies directed to education and health care.	I believe we need to incorporate a Provincial Sales Tax and should continue with the Carbon Tax. Further closure of the War Room would provide \$82 000/day that could be redirected into services Albertans use everyday.	Diversification is key in this province. We have a wealth of renewable energy opportunities and with the stance that our world is going in terms of the environment and climate change the timing is right. The knowledge and skill set of our citizens who were formerly employed in the oil industry are transferable.

T6J	<p>Adequately resource core public services, which includes:</p> <ul style="list-style-type: none"> - health and safety (community, workplace, and environmental), - infrastructure (roads, schools, hospitals, electrical utilities, water supply, waste disposal, parks). 	<p>Continue using attrition to gradually reduce the size of the public sector (including the municipal level of government), until the optimal level is reached. (Moving too quickly will be devastating to people, so slowly move back to the path of sustainability -- even if this takes longer than 4 years.) Thoughtfully reallocate resources within public sector to higher value areas. Some new hiring is okay if done for the right reasons.</p>	<p>Job creation and economic growth is a global issue that needs cooperation of our federal government.</p> <p>1) Monetary policy: Put and end to income tax (old thinking) and replace with central bank money printing to fund government (new thinking). This will work because money is no longer a physical commodity (gold and silver as in the past), it is now electronic and can be created by few keystrokes on a central bank's computer. We will still need to live within our means (a universal law) which means working within the productive capacity of our people; excessive money printing will simply lead to a non-optimal reduction in the value of the currency.</p> <p>2) Stop propagating misinformation by recognizing that our climate has always changed, it is not caused by humans. There is no amount of taxation that will ever affect the climate. The only thing we are doing with climate policies is destroying our economic well being and lowering our quality of life. Understanding natural climate cycles is likely a good thing. A valid climate model will look back thousands of years, recognizing cycles, and is able to explain the coming and goings of ice ages - and needs to explain climate change before people drove cars. The main contributor to natural climate cycles is the natural cycle of our sun (once complete cycle of our sun is hundreds of years). Controlling pollution, on the other hand, is something humans can control (and CO2, by the way, is not pollution - it is needed for our trees to grow).</p> <p>3) Keep up the good work on red tape reduction. Consider giving new startups (with first-time entrepreneurs) a one-year exemption from all provincial laws. Be careful not to allow people to create a new business each year to allow indefinite exemptions.</p>
T6W	<p>Affordable health care Pollution reduction, climate change and green technology Affordable education Indigenous consultation</p>	<p>Government and public service salaries Top heavy management and director positions within all public services Taxing big businesses</p>	<p>Vote Notley NDP Promote tourism in Alberta Promote small business by offering incentives</p>

T2E	Environment and alternative energy Technology Education Health	No more tax breaks for companies making multi billion dollar profits - who then layoff more employees and move Scrap the fair deal panel. It's an absolute waste of money and time.	Diversifying the economy through investment in alternative energy and technology. Support the federal government in getting the pipeline built- there is no room for petty partisanship. Invest in frontline education, healthcare and other social services. These services are essential and what make CANADA the best country in the world. Support all post secondary education. An educated workforce is always an asset Work together with municipalities - adversarial, and demeaning rhetoric is shameful and a waste of tax payers' dollars.
T1A	Health and education. Reconsider the spending on the 'war room'... while it has some merit, the implementation has not been effective. Take a long look at the government and how it is hiring people - ensure that there are no conflicts of interest.	I think that the government needs to generate income, not find savings! Consider changing the tax structure (add 1 - 2% on taxes and there is NO deficit). OR implement a sales tax.	STOP considering only oil and gas! IMPLEMENT new tax credits for other industries. END ALBERTA's reliance on oil and gas. CREATE better tourist transportation (like a better train system). Encourage Movie Investment. Look to new technologies, new investment... INNOVATION should be a government department. The 'war room' should be aimed at innovation, investment etc NOT oil and gas. That time has ended.
T5T	Health Care and education	Private sector	Help small businesses grow
t5r	1. Recruiting computer companies to reside in Alberta. Tap into the billion-dollar such as Esports market. Focus on funding technology for innovation. 2. LRT to be easily accessible for everyone. (Less spending on road, less need to buy cars which means more money in citizens' pockets)	1. Road infrastructure. Stop urban sprawling to stop increasing cost for more government maintained roads, snow and ice, sweeping, parks etc which means fewer equipment/buses/other infrastructure required. (Less taxes required = more money in citizens' pockets)	1. People's talents will be realized if means of transport (LRT, BRT) is available and cost is controlled.
t6c	making life better for all albertans, invest in education, health care and public services. Infrastructure; we need it, so what's the difference if we get it now, or in the future? still a cost.	Canadian energy Centre, provincial boards and committees, increase revenue	diversify, invest in infrastructure, create grants for job creating investments
T2J	Economic diversification. Making economic investment in the oil and gas sector make sense again. My company, Husky, spends all its money in sask and offshore that's \$3billion a year. Find out why And fix it.	It's not about saving money so much as the economy - expand it. Start business incubators, provide consulting and training to help people be successful, charge something for the services but keep the cost very low to encourage use. Help identify underserved and overpriced markets in Alberta where people could be successful.	Comprehensive easing of government interference in business at the municipal provincial and federal level. Small business needs more support. Municipal zoning and taxes make new businesses difficult to start out of your home. Business taxes at the civic level are outrageous and rents excessive due to lack of space driving up rents due to zoning restrictions. Intervene.
	Supports for childcare: Cost of childcare is more than what they make at work. Supports for Education: Students are held back by parents because the parents are ashamed to send kids to school without lunch. Kids away from home could get parents to work.	investing in ways our economy can grow to make money. Innovation, tech and green is what we need to stand apart from the rest. When we produce unique product that will bring investments. If gov invests in new businesses and help them get going, they will claim a % of the profits. Like dragons den.	Investing in those that cannot afford to get out an work. Public transport costs, child care, education and other costs that hold back people from beginning work need to be supported.

T0A	<p>All of them. I think that the current cuts are short sighted and irresponsible. I do not want to leave the province and the world worse for my kids. I truly believe that the best way to improve our deficit is to start funding it. This means a sales tax. Just 1% of sales would help reduce the deficits; oil prices are not going to be going to the amounts that the government would like, and Alberta does not set the world market price. So lets start controlling the things we can. I think it is obvious that the government is ignoring the wants of Alberta citizens. The Alberta advantage shouldn't just be to businesses. Families of ALL income levels should be able to feel the the province prosper. Trickle down economics has been proven to only help to a certain degree. We need to make sure that the vulnerable continue to be served, but we should not be cutting off funding to those who are in the middle income grounds. If the province and its tax payers do not continue to support those who are on the cusp of improving the lives, there is no way that they will be uplifted into a better situation.</p>	<p>The Canadian Energy Centre (aka the war room) is the dumbest thing I have ever heard. STOP WASTING MY MONEY WITH THIS.</p> <p>We need to diversify our economy, and make sure that we do NOT just rely on oil. We need to continue to give grants to start ups and the tech industry as those are more sustainable for the future.</p>	<p>Bring back the grants and funding provided to start ups. Young entrepreneurs and companies are our future. They are thinking of the future and trying to improve it.</p> <p>I know we do rely on oil at the moment, but that shouldn't be the case in the coming years. We need to set the example for the world. We cannot continue to say that we emit less than countries like China or India, because, per capita we DO NOT. We need to be the leaders, otherwise we are going to fall behind and our citizens will suffer.</p>
T0L	<ul style="list-style-type: none"> -Technological innovation funding programs. -Bring in the jobs with viable futures. -Green energy initiatives (dont tax the people to reduce, give them a reason to switch their lifestyles). -Road maintenance and safety. -Better transportation alternatives (the high speed rail system between edmonton and calgary was a great idea and should be fostered. I believe increasing the line length to our natural resource hubs would greatly reduce both emissions and vehicle accidents. It could also mean increased revenue for local communities. Plane trips to these areas often result in no ability to find affordable local options to travel as well (perhaps vehicle hauler on train, or electric vehicles at hubs to reduce fuel cost.) 	<ul style="list-style-type: none"> -The 4 year pension system in government costs the tax payer millions per year. While I understand it is used to incentivize quality candidates in govt positions. It is far too much. Military personnel require decades of service for a full pension, how does four years of service in an office equate to decades of service in specialized and dangerous field operations. -Stop giving large tax breaks to corporations that are leaving, underpaying their workers, or bringing foreign workers to fill positions looking to be filled by the local population. -The govt does not require a "war room" to support oil and gas. What an exhorbant way to show these big companies that the province is willing to spend anything to keep them around. Local companies to alberta and canada are just as/if not more important than the foreign companies who are claiming our resources. Spend more on helping create these companies in alberta than giving taxpayer dollars to large foreign multibillion dollar corporations. They don't need our tax dollars right now, we do. 	<ul style="list-style-type: none"> -Tax breaks for alberta based companies to stay competitive with the american companies that are bidding on these large o&g projects. -Perhaps a govt based small business creation project. Remove the entry costs and barriers in creating a small business. -Revert the decision on the insurance companies to where it was or something better. People are seeing huge increases in insurance costs on vehicles and homes. Vehicles are required to be insured by law, therefore the law should protect the consumer from outrageous insurance hikes. The "loss" factors these insurance companies are reporting should be openly investigated by govt, not self reported. If it's required by law it should be protected by law. -Incentivise electric vehicle manufacturing in alberta. The world has opened its door to using these tools, it would be a huge opportunity for us to create them. Become leaders in transportation industry (it's not going to go anywhere). -The affordable day care services. We should have govt run facilities with multiple services in house. This would both create jobs and allow families more disposable income to support new local business.
T0h	Medical, roads	Cut the fat in it's own red tape, and department heads.	Clean up of abandon wells, incentive programs.put boots to ottawa

T3P	Health care, education, growing tech and emerging industries. Extended focus on making Alberta the tech hub of Canada.	Cutting out middle and unnecessary layers of management from health care and education that stall decision making processes and	Grow the tech and emerging industries in Alberta by implementing business incentives that make the province attractive for investors and companies to expand. Encouraging high school and college ready young adults to pursue careers in the technology industry to fill job positions that will be created from the attraction of companies to do business in the province, by providing Grants and incentives to these students.
	Public healthcare, public education, small business, childcare (so parents can work households need two incomes these days regardless!) film industry, arts and culture, renewable energy, and energy research (both finding better ways to extract/transport oil products, reduce emissions, and also move to renewables)	Stop cutting large corporations taxes or subsidizing corporations who are making profits. Only subsidize those needing it with loans or grants they have to apply for. If money or cuts provided did not create jobs, it should be returned in part or whole to government, unless one time emergency funds to keep corporation from bankruptcy (etc). This would increase revenues and save money spent, and still help energy where needed. Start implementing proper means of dealing with orphan wells. Not doing so means billions more in clean up for province down road when private sector not accountable. Start taking longer view that includes the revenue side of expense budget, and investment of expenditures over time re: returns to province, not just returns to one sector. Striking a healthy balance between revenue and expenses is responsible, but not acknowledging the decision to reduce revenues is irresponsible.	<p>Diversify. Stop removing supports for industries like film, health, education, culture, etc., and putting all eggs in one basket. Puts us at higher risk to worsen recession. Example: Film is losing millions dollars, 100's jobs lost just since changes in Oct for 19-20. (Netflix, Disney, Sony pictures are going elsewhere).</p> <p>Very worried Alberta will become a sinking ship as world changes and we don't change with it. Either ride the wave, anticipate it, or get drowned by it. Supporting our energy sector is not exclusive from also others. Calgary has 1000's open IT jobs - why is this not championed? Tourism and ecotourism should be a priority especially during energy downturn.</p> <p>Create job training grant or low interest loan programs for energy sector folks out of work to help build job skills... We have a tent city in Edmonton with many there who are out of work oil guys. Perhaps many would take subsidized training to get other work in between boom bust.</p> <p>Also invest in renewables like wind, solar, etc. Alberta has potential to be world leader in ALL kinds of energy! imagine if we invented the next major renewable energy infrastructure that was affordable in market?? Invest in that future, where we have oil AND... then we can hope to be economically viable in a time of increasing change. Not just being reactive to it. That includes keeping/making jobs and job training opportunities.</p> <p>Cutting frontline health services also undermines a healthy working population, and makes health workers leave Alberta to live. Ontario is NOT a good example for ideal health spending, since they have many Ongoing patients getting "hallway care".</p> <p>Not to mention more job loss to other sectors exacerbate</p>
TOC	Health, Education,	Middle management throughout the government including AHS and Alberta Education. No one on the front lines - people who actually touch a patient or teach a student should be cut. There are too many managers. The wasteful spending in AHS needs to be curbed. Don't cut nurses or teachers - reduce the number of managers.	By creating a favourable climate for businesses to succeed, low taxes, educated work force, less red tape.

T3e	Green line. Education. Health care. Pipelines and oil projects. Environmental research. Not handouts to big business.	Stop lowering taxes to big business. It's already low. Bring some stability to the cities by helping them with projects with positive NPV.	Give funding back to the green line. Stop cutting necessities like nurses and teachers.
T2Y	Renewable energy, education, healthcare and technology	Not propping up a dying industry like oil and gas and evolve to be a leading hub in tech	Revise the education system. The current model was replicated from a chinese model to create workers not thinkers
t3a	health and education	in system improvements	diversify ,dont exclusively depend on oil and gas, set new directions
T5H	Taking care of our most vulnerable: seniors, people with disabilities, students, people with low income, people without homes, etc.	From the people and corporations who already have the most money. Instead of tax cuts for the wealthy and powerful, we should be taxing the most privileged instead of cutting services for the most marginalized.	A reasonable minimum wage; services for people in need; a supportive environment for immigrants; supporting access to education for people of all incomes. When citizens have the supports in place to be able to thrive, they give back to the economy.
T2z	Social Services, Education, Healthcare, Infrastructure.	Cutting out non union, redundant middle/upper management in Public Services (managers of managers). Maybe not spending 30 Million on a "war room". In the future not passing 4.7 Billion dollars to companies that did nothing to create jobs.	Diversify the economy. Instead of chasing away the blossoming Tech industry, support it. Invest in renewables. Don't rely on an industry that the world is clearly moving on from. Maybe don't give a 4.7 Billion dollar hand out to Oil companies that then did nothing to create jobs.
T2T	Renewable energy; healthcare; education.	Reducing subsidies to the energy, forestry, and agricultural sectors; and more efficient systems of tax collection (e.g., changes to municipal tax collections, and higher marginal tax rates for middle-to high-income individuals, thus leading to higher revenue generation per-person and shifting the tax burden to high-income and middle-income earners).	Direct cash transfers to low-income individuals; financial relief and support for education and skill training; and investments in infrastructure, such as public transit, healthcare infrastructure, and roads and bridges.
T2P	Keep healthcare publicly funded, build and maintain public health facilities, and avoid promoting private clinics.	Within the Alberta Public Service, merge Executive Directors and Directors into a single level of senior management. Keep middle managers in place due to the large workload placed on middle managers, which is exacerbated by the hiring freeze. Privatize some programs and services that are not core government services (e.g., IQAS). IQAS equivalents are successfully run by the private sector in other Canadian jurisdictions.	Be very gentle if reducing size of Alberta Public Service. Move at a slow pace (e.g., rely on attrition) to avoid devastating outcomes related to too much job loss in a short period of time.
T2E	Health Care. My doctor calls me in after every test to tell me nothing of importance. I have to go in to the doctor's office to refill every time. If the fed's can't come up with a national drug program like NZ has, then maybe the province should. I don't understand why I have to pay \$100 a month from my own pocket for 17(1) when the cheaper and more dangerous 17(1) would require me to go in every week?? for a blood test which will be sent to my doctor. Surely, this testing and reporting has a higher cost than just covering the 17(1) in the first place, under BLue Cross and offers me a much better lifestyle. It really saved my life if you ask me.	Alberta Land Titles - they must make everything overly complicated to support the lawyers. Registering a caveat myself was incredibly difficult, by design. They could put some sample forms online and save hundreds of hours of explaining in person and over the phone. Their CAV-1 Procedures Manual is unhelpful, ambiguous in every sense. Please try it yourself and see how you make out. I'm sure they could do a rework of this manual to make the instructions simple and straightforward. They could also rework the forms to be completed with checkboxes instead of the dreaded "blank line".	Doing just what you are doing and focusing on paying down the debt. Talk more about the results with vision for the future and please don't get nasty like the American elections who just badmouth the opposition, as the Conservatives are prone to do. Take the high road and focus on the positive no matter how the opposition behaves. I think it will pay off.

t2v	Health care Education Public service (police, firefighters, etc)	Not giving large corporations tax cuts as this has not led to increased economic growth within Alberta. Instead, large companies are taking tax cuts and still moving their businesses out of Alberta.	Not cutting budgets of essential public services like health care, police services, and education. This leads to a loss of jobs which does not support job creation or economic growth.
T1K	seniors	Cooperate with Saskatchewan and BC in delivery of healthcare and post secondary education. Each province doesn't need to be everything to everybody by itself.	Small business tax incentives. Not cuts incentives.
T6W	Education - these are the future minds of our Province. Do we want to be average or even below average? No we want to be great!	Big companies earning over ten million a year.	Support the oil and gas industry. Help small businesses.
T7X	Investment in public services that properly accounts for both population growth and inflation. This includes investing in health and education, but also in childcare. Rather than eliminating the NDP 25-dollar childcare initiative, for instance, the government should expand it. In general, the government should consider priorities that reduce rather than increase the costs of living. Policies that result in increases to tuition fees, school bus fees, museum fees, vehicle registration fees, property taxes, income taxes, insurance, and child care costs, as well as in reduced drug coverage for dependents of seniors and larger class sizes are making life harder for us.	The 30 million war room (the Canadian Energy Centre) can be cancelled. The government should not be limited to the expenses side of the budget. It should consider raising additional revenue. Freezing the basic personal credit increased the real taxes for all Albertans, while corporate taxes are planned to be reduced year after year. This is not fair and does not help the province. The government should also take a look at the many forms of privatization that have been implemented in the health care system over the years and assess how they have affected costs. If these initiatives cannot be proven to have reduced costs (as seems to be the case), privatization should be reversed and public solutions that increase efficiency should be considered. The Edmonton Public Lab seemed to address precisely the type of inefficiencies created by a fragmented privatized system, and scrapping its construction was a mistake. To realize efficiencies, you have to invest money.	Invest in public infrastructure (roads, schools, universities, etc.), support public and private research on green technologies and low greenhouse emissions. Cancel the general corporate tax break and provide instead tax credits for new investments only. Support home buyers through a provincial plan to help the residential construction industry. Companies do not look just at taxes to make investment decisions, they also consider how skilled the labour force is, the affordability of housing, the additional costs of health insurance, how connected a city is, etc. A growth strategy must address all these areas, it can't single-mindedly focus on corporate taxes. Growing the film industry in Alberta should not be overlooked as a way of creating and keeping jobs and growing many different areas. We already have opportunities in the industry but are eroding that base by turning companies away with decreasing incentives, etc.
T5T	Health Education Pension Benefits	Taxes Assets Fund Raising	Invite inventors that invest longterm benefits and give a sustainable jobs for the people.
T5T	Education ,health and creat more jobs for Albertans	Net interest Barrow money	Creat more jobs Increase wages Low price
T1K	Education (primary and post-secondary), health care, mental health/addictions support.	Increase in corporate taxes.	Continue to provide living wages for public service employees; reinstate STEP funding for student employment; invest in alternative energy sources (not fossil fuels).
T6J	Providing free post secondary education to Albertans	Cut out redundant government staff positions and offer early buyouts to public servants.	Promote Wind turbines and solar cell research and businesses. Artificial Intelligence research and business development. Provide tax deductible loans for small businesses 1-120 employees.

T2S	I understand the concept of your \$30 mil/yr "war room" however maybe we need to move forward and not cling so much to the past. I'm still for oil production however it would be nice to start seeing funding for transitional endeavors that can help the 1000s of struggling citizens come into the future??!! This government has an air of clinging to the past for dear life. How has that been working so far??	Basic Universal Health Care for the government. Employees of the taxpayer should not be getting something paid for by taxpayers that don't even get full coverage. Maybe we all would have full coverage by now if our government had incentive to do so. The fact that this government cut funds for AISH recipients, put a freeze on benefit increases from inflation, completely cut AISH rental subsidies for anyone else, just shows what they think of people who are at a severe disadvantage. Meanwhile, insurance is going up at least %15. Internet %10. Rental rates here in Calgary have gone up \$100-200 for a great number of people mostly due to immigration. I'm not against immigration, just pointing out the situation. There are a lot of ways to find savings but seems that people with the least amount of say are the ones expected to bear the brunt of it with the little that they have. \$30 is the difference between eating for the last week of the month or not. I guess when you live in privilege or expect everyone to be as perfect as you then that is just a complete subject of ignorance? I don't know, I'm just trying to understand the logic here.	Go green and actually listen to people. Don't cloak every concern and complaint with your own agenda.
t2j	Rule of law (policing) and protection of country (military)	Review the current roles and special privileges for unions to see if there is any abuse that needs to be addressed -- trade unions are for supporting their members, not economic extortion and political manipulations. Ensure that the government is getting good value for what they pay for, even from other government bodies.	Level the playing field for all honest parties and fight against any blockages against industry created by ideologues and dishonest people seeking dishonest gain. A fair and stable environment should be sought after.
	people.	Stop giving out money to companies that don't intend on staying in alberta. Stop privatizing because that model doesn't work, it's been proven to cost more in many levels, in the long run. Learn from Europe's experience. Look at how contracts in the GOA are awarded and managed, what kind of oversight is there to ensure contractors are delivering and we are not just writing cheques for work that will need to be re done?	stop laying people off, stop cutting funding to most vulnerable, you are just creating more poverty, greater need in people to access social programs, more social problems like drug abuse, sexual abuse, physical violence, theft and overall violence, and then that requires us to spend more on policing and creates more stress on health care (mental illness, emergency, etc) and on justice system to deal with increased criminal activity . Create prosperity by investing in people, through training, supporting small businesses , support our post secondary instituciones by funding fields that will get us to the next level of technology. In the information age, leverage albertan's knowledge and monetize that.

T3A	Health, Education and Investment	<p>More accountability from all departments. Department heads need to realize that they cannot abuse a system because it is Government. These Department heads need to run their like a business.</p> <p>Department heads should not be allowed to blow their budget just to maintain the allocation and the following year budget for an increase. An example would be don't replace computers if they don't need replacing.</p> <p>Drug Dealers, once convicted, their assets should be seized and used to support the Health System. Jailing them without seizure does not hurt as much as taking their ill-gotten gains away.</p>	<p>Unfortunately, the economy of Alberta is oil dependent, and by extension the rest of Canada. With the current talk is all about "climate change", Alberta needs to show that not only are they are taking steps to reduce the Carbon footprint by charging big emitters of CO2, but encouraging diversification into other areas that help with CO2 reduction e.g. Agroforestry, Plants including trees are the only thing that can effectively use CO2. CO2 capture has its place but is not the answer. Economic growth will only be sustainable when we can show that the Energy resources in Alberta can be successfully replaced with " Wind, Solar??,Electric, Nuclear?? and Hydro", bearing in mind that Electric has a disposal problem with the spent batteries, Nuclear the same with spent rods. Downstream industries will have to be developed and encouraged to utilize the expendable materials. Coal may not be as bad as it seems, yes it does release CO2. Sweden's energy comes from the burning of peat, wood chips, nuclear, hydro and garbage, which may be another area of growth instead of garbage going to landfills, use it to generate electricity.</p>
T4X	Education, health care, economic diversification.	Rescind corporate tax break because it didn't work, implement 4% PST.	Diversification and investment in technology and renewables sector. Re-invest in agriculture. Stop relying on oil and gas.
T6E	Social services and supports for the most marginalized. This includes indigenous communities, people living with disabilities, children, youth, newcomers.	Stop giving industries tax breaks. Particularly companies that despite these tax brakes have laid off people.	By supporting small businesses and requiring large corporations to pay their fair share. Also, you cannot support job creation as government when you are laying people off without the proper mechanisms to get them back to work.
T7N	Limit spending in all areas to population growth + inflation at the most. ie areas that we already overspend compared to other provinces should see zero increase. No front line staff need to be cut if they would be willing to accept wage freezes & where necessary roll backs.	<p>Ending defined benefit pensions for gov't employees moving forward. Grandfather existing employees. New hires would move to a self directed model that most private sector workers have.</p> <p>Curtail sick days for public employees.</p> <p>Wage freezes for all depts. until they are in line with averages in other provinces.</p> <p>More efficiency in healthcare by incentivizing physicians to work more to reduce wait times involving a mix of public and private healthcare</p>	<p>Lower taxes on business, small business in particular.</p> <p>Continued pressure on federal gov't to allow our resources to be developed and to gain access to other markets (ie pipelines)</p>

	<p>Economic diversification such as the tech sector and renewables. Alberta needs a well-educated labour pool - an outcome from strong post-secondary institutions. Now is not the time to increase tuitions, interest rates on student loans, or remove tax credits. Please restore tax credits for the tech sector and invest in renewable energy assets.</p> <p>Alberta's dependence on resources revenues predominately is flawed and not a good strategy. Oil prices (and even new pipeline construction) are largely driven by macroeconomic factors, therefore, beyond the control of a provincial government. Exposure to commodity prices is high risk. Although the 2020 budget covers a four-year period, Alberta needs to be building an economic foundation for support well beyond four years. Economic diversification should not be viewed as a "luxury." Consider a portfolio of equities - you would never put all your money and faith in one corporation operating in one geography or one industry sector.</p>	<p>Cancel the "war room" and the "fair deal" panel. Refrain from cutting corporate taxes any further.</p> <p>Government should be looking at the revenue side of the equation. Maybe it's time for a sales tax? The cuts that have occurred so far have only pushed the economic burden onto Alberta's citizens (e.g., civil servants, healthcare workers, teachers, students, Albertan living in municipalities).</p>	<p>See responses to the above questions.</p>
T2K	<p>Health Care, Education, assistance to Homeless and people suffering from mental health and addiction issues</p>	<p>Reduce bureaucracy, increase taxes for high earners</p>	<p>Create jobs to fix roads, create incentives to make Alberta attractive to foreign investment such as reduced costs to producers who want to film in Alberta</p>
	<p>Health, education, Environment and Parks, climate change and renewable energy, the people of Alberta, not the business and industry. Create a better climate for work to happen, more efficient regulation, more efficient management of industry use of resources, science based decision making more than economics driven. You have to allow for both. Business and industry should be able to stand on their own. Government is for the people, not business and industry.</p>	<p>Getting rid of the "War Room" will not build pipelines or change public perception of our oil. What good will it do to show that special interest groups say bad things about some of our industry, so what, you have no authority to stop them and you just look like a whiny little baby. Get rid of the tax break for business and industry. It isn't what is stopping investment, it is only going to cost all Alberta, not help it. You have to find a better solution, one that doesn't cost the average Albertan only to make the rich richer.</p>	<p>Firstly quit treating the public service like your worst enemy, they are your greatest asset. Quit thinking that it will be beneficial to eliminate the deficit and debt in 4 years when it took decades to create. Massive cuts and layoffs will only lead to the need to increase hiring, retraining and the rebuilding of needed programs and services again in the future all of which will be more costly. There are many great talents that will be lost and the work force weakened by blindly cutting. Try working with all levels of government to strengthen our resource economy footing, quit threatening and trying to bully, quit whining about how Alberta supported everyone else in the past and now we are being ignored. BooHoo nobody wants to hear a whiner, that's not the Alberta way, aren't we the pull up your boot straps and get it done folks?</p>
T2J	<p>I feel it is incredibly important to focus on our education system - particularly Kindergarten to Grade 12. Please do not cut funds to education. This is our future.</p>	<p>I wonder about road maintenance and if some road maintenance costs could be managed through tolls?</p>	<p>Continue to look at alternate sources of energy (not such a high focus on oil and gas). Continue to expand solar and wind power across the province. Focus on recycling initiatives and environmental supports. Many countries are looking at how to reduce their negative impact on our planet - perhaps Alberta could become a centre for innovation in environmental initiatives? We are already very astute at addressing environmental concerns in developing our oil and gas resources (some of the best regulations and protections in the world), so perhaps we could expand on this expertise.</p>

T4S	Managing things that make sense to manage at the provincial level. Get out of the business of picking winners and losers - which is exactly the prerogative of the Kenney government.	Stop subsidizing everything that isn't health care or education.	It should not. This is how we got into this mess. Stop subsidizing franchise businesses and development investors.
T2V	Education, particularly preparing our children and young adults for the jobs or lack of jobs in the future. Physical recreation should also be a strong focus, we need more people choosing active transportation modes. Make cycling part of the physical education program (include road safety).	Healthcare: invest more heavily in preventative medicine to reduce costs over all. Also, use health data to identify where best to invest. What would happen if the government offered subsidized ice cleats in communities with significant slip and fall rates? What about an e-bike rebate to keep seniors active and make cycling more accessible for women? Palliative care: Peaceful, compassionate end of life palliative care should be promoted and available to terminal patients to reduce the number of high cost end of life medical procedures. Make palliative care something patients and families are eager to choose.	Invest in emerging technologies through educational investments in Post Secondary School. Research grants, scholarships.
T6A	Spend money on services for our province NOT ON RICH CORPORATIONS. Spend more on HEALTH CARE, SOCIAL SERVICES, EDUCATION and our dilapidated INFRASTRUCTURE!	Increase corporate TAX RATE to 15% and start collecting reasonable royalties from these multinational oil giants!	Diversify our economy so we don't rely solely on the oil and gas industry!
T8A	Health Care costs are out of line. Education system from K to 12 and college. More computer controlled courses show that teachers can be replaced with technology this will en gauge the tech economy. To many courses that do nothing. And reduce the management costs. Show balance sheet to the public. Let the public decide what is fair.	Reduce the number of managers in any department. Health care has level after level. Reduce double overtime and triple over time. Not fair to the tax paying public. Again each department needs to show balance sheet. Have a government appointed independent audit for all levels of service to show true cost and needs. If they resist place it as a public vote to open books. Make it law people can control rules not public officials that help each other.	Anything to support small business. Foreign worker programs should be rebuilt to support new workers. This is the only way to get the lazy workers, eligible workers off the program. If on the program for let say 1 year you must take any job that is equal to benefits paid by the Unemployment program.
T0A	Diversify the economy.	Reduce tax expenditures by collecting the full taxes due rather than tax give aways that are unproductive.	Utilize data collected with respect to the effects of various policy decisions e.g. what are the results of cutting jobs? increasing the minimum wage? investing in a more diverse economy? social housing?
T1P	Education, health care, Long-term economic diversification	Reducing tax breaks for oil companies	Economic diversification - elementary economics - quit putting all the eggs in one basket.
T0k	Education and health care	Combining catholic school boards with public school boards.	Invest in developing new energy technology and efficient engine.
T3k	Health and education, so we have a well and educated society.	Corporate tax cuts!! Not finding the war room. Carbon tax. Health care duplications in service.	Incentives and tax breaks for companies that diversify our province.
	- Healthcare - Education - Infrastructure - Development of sustainable and renewable resources - Economic diversification (bring back incentives for the tech sector, please!)	- Revoke the tax breaks for multi-billion dollar oil and gas companies - Increase royalty revenue from oil and gas companies - Diversify our energy sector so that we are not subsidizing oil and gas companies to the tune of 57 billion dollars - implement a sales tax	- Take the money used to subsidize the oil and gas industry, and implement incentive programs for other industries (renewable resources, technology, film and entertainment) - Implement a sales tax - Equitably fund healthcare and education so that families are not required to pay out of pocket for services that should be provided

T9H	Maintain and even enhance funding to education, healthcare and social services. Create a sustainable fund for infrastructure, mainly roadways, bridges and provincial parks. Time for a modest 3 percent sales tax in Alberta.	Wage freezes in the public sector. Stop giving sweetheart deals to big industry.	Start investing in the Heritage Trust Fund again. Use some of these funds to develop projects related to culture, tourism and recreation. Create an innovation fund By taking a percentage of resource revenue and support new initiatives to diversify so our economy is not just dependent on oil and gas.
T8A	EDUCATION and HEALTH CARE are always priorities. While both are intensive when it comes to labor costs - both can only be implemented by highly skilled and caring PEOPLE. Sure you can make both more efficient ... but just cutting the budgets and standing by isn't going do that. Roll up your sleeves and get involved in drawing up solutions.	Reduce waste on things such as WAR ROOM ... seriously the oil companies are more than capable of defending their actions we don't need public \$\$ going into that. When government officials travel - use ECONOMY CLASS and stay in the Holiday Inn's that we all stay in and eat the breakfast that's provided. SERIOUSLY don't send officials to Britain - they have their own mess to fix we don't need to copy that. STOP creating PANELS on everything ... just roll get to work getting things done. Re-examining everything just because someone else was in power for 4 years is pandering to the UCP base. Where we are today isn't a result of the last 4 years ... it's more like a result of the last 40 years. There are plenty of wise people working in the Pubic service who know what to do ... let them do it and don't waste money on more panels.	DIVERSIFY our economy. Drop the OIL is the only road forward mentality and see the writing on the wall. We need to develop alternative energy strategies and become world leaders in being able to blend fossil fuels with other energy sources. WAKE UP - BIG OIL has been doing this for a long time - the are divesting in fossil only. Start working on getting more of the TECH sector to Alberta. We have a great place to live and lots to offer that workforce.
T8S	Education and healthcare	Upper management jobs	Gov grants to small businesses to hire young adults
T2S	Job creation and diversification of industrial base. Let's grow our economic base by including new industries so we are less reliant on one industry and its cyclical nature. We have had all our eggs in one basket for far too long. Consider spending money on infrastructure in the interim as job creation. Focus on flood prevention and mitigation. The province cannot afford to endanger the Calgary downtown to closure due to flooding a second time. This would create a significant hardship on the companies located there and a further potential relocation of oil and gas HQ out of the province and likely out of the country.	Improve efficiency of providing services without only looking at cutting jobs. Look to improve and streamline process and use technology	Create subsidies and tax incentives to bring new industries to the province. Should focus on ones that can use the significant brain power in this province. Industries that provide value add products rather than straight resource based industry with little value add.
T2T	Keep pace with population growth on social services such as education and healthcare. Also actions that help diversify our economy beyond oil & gas.	Reverse the 4.7 billion corporate tax break and establish a provincial sales tax. It would provide much needed stability, help reduce our reliance on oil royalties and hard to deny when we are the richest per capita province (and lowest dept per GDP). It could also allow us to keep relatively low corporate and personal tax rates.	Instead of the 4.7 billion corporate tax break, I'd rather spend on improving infrastructure (it's a good time to borrow since prices and interest is low and would provide both jobs & growth). Incentivize economic diversification by giving assistance to startups and businesses outside of oil and gas. These actions would require a provincial sales tax, but there are many examples of relatively high tax areas with high economic growth - such as BC, California, or Oregon.

T2j	Employment and investment in Alberta. This drives growth and will provide much needed tax revenue..	The big 6 Canadian banks make more than 5 billion dollars a month in revenue off the backs of hard working Canadians. Alberta should grow the Alberta Treasury Branches to become competitive and pass legislation that will prevent any other bank from doing business in Alberta. This can be done by passing legislation and implementing a big bank tax in Alberta that would grant exemptions to the ATB. This would make the ATB more competitive and would drive business and profits for the province instead of the big banks. Advertising that ATB profits help make Alberta revenue grow would also gain public support to use ATB. This is a great province but we need To keep the spread from savings to loans in the province for the benefit of Alberta.	Cutting fat public service employees when 80k people have lost their jobs is a start and sends a good message. Every aspect of the government needs to be reviewed and efficiencies found. Run it like a business. Ask the question, does this make economic sense? Efficiency equals profitability
	Really focus on transforming primary health care. Let go of the stronghold that physicians have in this province and turn towards workable solutions such as interdisciplinary health teams and the use of other health care providers such as Nurse practitioners.	Nurse practitioner save the health system money. Look at the evidence and research invest	Investing and supporting rural Alberta. Where most of the oil and gas activity is.
	Health care, education, special needs, sports	By taking a pay cut from their own salaries,	Keep minimum wage equal to the standard of living,
	Sustainable energy, social spending. Stop cuts to Aish.	Stop giving money to oil companies.	Renewable energy, and stop cutting public sector jobs. Also reverse cuts to aish
T2M	Maintaining spending on government services (which includes increasing spending due to inflation) to prevent the loss of public sector jobs.	MLA Expenses and Salaries.	Raise Taxes.
T1S	The public sector, we need schools, hospitals, nurses, teachers, special needs helpers. We need these people to have a successful society in the future. Also helping to get people back to work in the oil sector.	By increasing taxes on people that make more than \$300,000 a year. And corporate taxes. I think we need to push more on dying with dignity, if all the people that are living in misery in dementia wards and old folks homes could decide they want to end their lives, we should be letting them. It would save so much money for the government and families, second only the ending the suffering of these people and their families. We would be charged with animal cruelty if we let our dog live like some people are forced to live.	Pushing for more pipelines. Technology in renewable energy/cleaner energy Food technology Spreading world wide awareness about the environmentally conscious oil industry we have here. Supporting aboriginals/low income people to start working, take away benefits unless some work is done. It's unbelievable how much money is wasted on social assistance, foster system, etc. If the money was focused more on providing programs, addiction counselling, parenting courses, rehab, job/trade training, I feel like in the long run the government would save so much because the people that needed social assistance and other benefits would be working, have self pride, wouldn't have as many addictions and would be better parents
T6R	Public safety, healthcare and infrastructure.	Efficiencies to bureaucracy, policy and government process. Privatization of services is not a good solution.	Diversification of the economy through education and innovation grants.

T0L	Self efficient farms for our own produce to deliver to our own provinces. For example wind turbines solar panels and hydro electric .	Charge america more money to film movies in our country as well as charge more property taxes on american companies. Also quit using our resources on the united states of america and let them fen for themselves because they can't take everyone's stuff because they broke theirs.	Make it easier for local people to sell their own local items or let people create their own jobs that can run on a barter system.
T3J	Education and health care	Government salaries and government office budgets, not re-doing curriculum that was done with NDP, and get rid of the war room.	Invest in new technologies as opposed to only oil and gas, more funding for local agencies that support parents and families, and become a leader in dementia prevention and treatment.
T2N	Education, economic diversification (make business investment from all sectors attractive again)	Cutting administrative levels in public work (school board - not teachers, health board - not nurses and doctors, less government) Sales tax	Lower corporate tax Invest into making the universities world class in science, research, and tech, Broaden tax credits for small businesses and innovation Invest in infrastructure and high speed transportation between calgary and Edmonton and maybe into SK.
T0E	Healthcare, education, infastructure	Healthcare, government, bring back corporate taxes and or health care premiums	Higher education will bring more jobs.
T4N	Paying frontline healthcare and other government staff a fair wage.	By not slashing corporate taxes and costing hard working Albertan 4 billion dollars.	Where's the 180 000 jobs that your trickle down economics was supposed to create? Your plan failed. You want to blame the NDP for this disaster, it's been nothing but worse under your government. I hope for your sake that your corporate donors have set you up with a parachute job.
T0H	Healthcare and Education. Healthcare facilities are very important, especially in Northern Alberta, because of the distance between them. An hour's ride by ambulance could mean life or death for some. Education is of utmost importance to our youth because they are tomorrow's leaders, workers and producers. I believe we need to get back to the basics in teaching students and show them how to make a life, not just a living.	I know that sports and the arts are important to some, but they can be taught and funded by the people participating in them. Healthcare and education are basic essentials that everyone needs and cannot be provided without government help. Perhaps a hard look at the salaries of the "top dogs" could provide some insight as to where to begin to find savings.	More emphasis on trades would teach students valuable skills to find jobs in their field of choice. Small businesses, especially in smaller towns and away from the big cities, are important for the local economy of that area. Training and professional development are important to keep abreast of new trends and if that training can be provided right in that area, so much the better. Technology is such today that on-line workshops and seminars are a convenient means of learning. Also, sending one or two instructors to teach in person is cheaper than several students travelling out to a larger centre for training. Many can not afford to take days off work plus pay for travel and accommodation so they miss out on the training which could lead to lack of promotion and possibly even their job.
T0C	Health priority Injecting money in business in alberta	Stop supplying immigrant no more free housing and Medicare Canadian pays for are house and pay assurances benefits they have to do the same Not cheque for ather province for equalization Reduce the size of the political machine You work for us not the opposite	Should support the small and medium size companies Get the oil company to refine are hone gas t0
T1L	Education, health care.	Stop bailing out companies and giving corporations tax breaks.	By continuing to treat workers like they are important regardless of their industry.

t4A	Education Mental health Addictions	Take the carbon tax we are paying Trudeau and invest this in our people...the greatest resource societies have	Cut carbon tax (keep fighting) Invest in People Diversify
T8n	Focus on spending money on vulnerable populations, on children and adults with disabilities, spend money on special education, family support for children with disabilities etc etc spend money on education and health care. Your cuts are ruthless, cruel and reckless and will lead to huge social and economic costs. And your rights are also violating human rights. We as a province need to care about the vulnerable, the disabled, the sick, the homeless, abused women and children attempting to flee violence etc etc put more money into supports for children and adults with special needs, put more money into health and education, build more shelters for survivors of domestic violence etc etc you have broken all your promises and have not created a single job. We will not forget this next election.	- eliminate war room - eliminate government travel - eliminate high paid advisor positions etc - eliminate hospitality budget - stop handouts and tax breaks to companies and the wealthy - take a wage roll back yourselves - do not attack the vulnerable, the poor, the sick and our children to find savings	Stop causing economic chaos Trickle down economics doesn't work Stop directly causing job losses Stop attacking people's ability to work, particularly women. Support affordable child care so people can work. Stop destroying social systems, your cuts will destroy the economy People don't spend money when they are fearful they will lose their jobs You haven't created a single job yet
T5z	I think they should focus on health spending and spending on schools	Find savings by creating jobs to help with infrastructure and funding more public programs that give people more jobs	Don't put all their eggs in the "oil field basket"
T9G	Health care and Education	Spending cuts are not the answer. The government needs to generate more income. Health care premiums, School fees, and PST are all great options.	Economics 101. You have to spend money to make money. Get some infrastructure projects going.
T4L	Public healthcare/ libraries. Investing in technology and industry that reduces carbon. Helping small towns get good recycling facilities. Increasing minimum wage.	Not spending money advertising Alberta oil in other provinces.	I work on a small town that relies on AB oil. I know it's important. The thing is Alberta's oil industry won't be sustainable. Also, new jobs are almost always part time or temporary; not one of my colleagues or friends get benefits as businesses don't have to provide such things to part time or temporary workers. A decrease in health support for example doesn't help me as I can't afford services outside of emergency. Jobs that need to grow are ones that can survive for many years, give enough hours, pay more than minimum wage, and provide some health benefits. Albertans shouldn't have to work 2-3 part time jobs/ 7 days a week so they can earn enough to cover living costs. 1 job should suffice. Helping small towns maintain employment centred would be useful. Provide tax reductions to companies that help fight carbon and/ or give full time work.
	Education Health Care Subsidized Daycare	End corporate tax breaks and Hand Outs	Support Small Businesses
T8S	Health & education	Upper management wages	Support oil sands

T3E	job creation and economic growth while maintaining other services.	I think there is a lot of waste in various areas heavily subsidized by government such as education, healthcare, etc., . These areas are important but should be analyzed for better efficiency - specifically look for cuts to higher admin.	Fight for the oil patch while being open to alternate energy as a smooth transition. Lower taxes/ less regulations to attract other businesses to Alberta.
T2B	Education Health care Renewable energy	Increase the corporate tax rate	Invest more in education. Educated people will find innovative ways to create jobs. Scrap barbaric ideas like grade 3 PATs and making students more "job ready." We want critical thinkers, not robots.
	Going our children the basics- early learning and child development Health care Support municipalities Care for the vulnerable	Less process - no war rooms, blue ribbons panels- seems like a waste of money.	Support learning Diversify Support the small business . Not the large corporation Stop blaming Ottawa and take actio
T2J	Education. Healthcare. Park Services.	Review the non-essential services in all government funded operations and establish what size and budget % should be spent in these areas. Non-essential are HR, communications, fund development, IT, finance, etc. 17(1) Second, union contracts must be reviewed. The local at the University of Calgary has a 3% increase embedded in their contract as "merit". This means despite negotiating 0% increase, these staff get a raise. When there is an across the board increase, they get that plus 3%. In 2014-2016 they received 6%! Unbelievable	1) Do not raise minimum wage. 2) Increase tuition in post-secondary to match other provinces, especially international tuition. 3) Continue to support Alberta Oil in other markets. 4)
T8S	Everything related to children. They are the future. We need the government to have a long term plan. Support education, health - including addiction and mental health services, ParentLink centres, and affordable quality daycare.	Increase the tax, depending on income and reduces the number of supervisions and managers in all government programs. There is too much hierarchy and not enough frontline staff.	Support job creating initiatives and projects in high unemployment areas. Provide financial supports to Albertas pursuing higher education within Alberta in needed professions.
T6W	The Government should focus it priorities on Early Child Care. The first 5 years of a child's life is crucial. They are the foundations that sets a child's life.The first five years of a child's life are fundamentally important. They are the foundation that shapes children's future health, happiness, growth, development and learning achievement at school, in the family and community, and in life in general.	Perhaps the government officials can take a cut in their wages.....Or a freeze in their salaries.	Proper training/education Lower University fee's Look forward to sustainable energy
T3L	Health care and education funding should not be cut or frozen - it should rise with inflation and population growth. Early intervention services for kids with disabilities and other programs that support vulnerable populations should be a priority. Do not cut PUF or FSCD funding. Balancing the books on the backs of disabled children is shameful.	The government needs to look at the revenue side of the balance sheet too - it has been far too focused on spending. It's time to create a sustainable taxation regime that is not dependent on resource revenue to fund operational expenses and important programs.	The across-the-board corporate tax cut should be reversed and replaced with targeted incentives for companies that operate in desirable industries with bright futures, or that commit to investing in Alberta. It is wasteful to give large tax cuts to companies who lay off their staff, relocate their head offices out of province, and don't pay their municipal property taxes.

T2M	Kids and economic diversification. Think future talent.	Provincial Sales Tax.	Restore our reputation so companies will move here. The world is a progressive place. We need to be to attract talent and investment.
T3A	Education, healthcare, housing.	Road infrastructure	The tech industry is on the rise everywhere else, why isn't the Alberta gov supporting a growing industry so essential to future progress?
T3A	Healthcare and early childhood education and support	Administrative management, removing corporate tax breaks	Diversify the economy away from oil and gas
T0J	Healthcare and education, and economic diversification. Implement our own carbon tax again so we have a say in our own green initiatives. No more healthcare cuts!	Ridiculous tax cuts to big corporations. Barrel price justifies the cost of extraction - tax cuts can't.	Diversify the economy, invest in green sectors to offset the carbon footprint of our oil sector. Do not cut in healthcare as this anchors our economy while we wait for oil to rebound.
T0J	health care, and education (up to grade 12) and stop equalization payments to Quebec from Alberta	Cut their salaries reduce the number of members of government	build a pipeline and get us back to work
	Healthcare, education from elementary right through post secondary.	Stop giving themselves wage increases. If no one else is getting them why should they?	Put money towards retraining programs rather than towards industries like oil that are able to replace people with computers and machinery.
	Jobs for everyone not just your oil friends honestly what is wrong with you? Do u really think laying off people fixes the economy? We are all Albertans and you dont treat us like it. Your creating an upper and lower class and honestly I will leave this province if this keeps up like all the other young folk who have. And also education since you decided to make it inaccessible for people. You realize that we already cant afford houses cause of student debt. I feel sorry for the young folks.	Stop handing out money to oil corporations and give that to new industries. Why doesnt the politicians take a 50% wage cut since they suggest everyone else does. Destroy the war room cause its childish and honestly reminds me of one of those third world tyrants. That money can pay for someone's job.	Give the money back to the service sector. Invest in new ventures like technology, urban farming, programming, tourism, lithium, recycled goods. You know support your local businesses it's like all you are living in the 1900.
T6W	Education Health Transport and infrastructure	Administration expenses Ad hoc projects and Events Marketing and advertising and travel expenses	Support small business and entrepreneurs through reduced tax or credit Diversify industries by encouraging investors from various sectors Encourage manufacturing, IT and tourism sectors
	1. Research that will provide incentive to diversify the economy - e.g. agriculture, renewable resources and value-added markets for products that we currently produce e.g. oil and gas. 2. Infrastructure - maintain and invest in infrastructure projects that will create jobs, increase efficiencies for movement of product or enable a more healthy, safe environment for Alberta's residents.	1. Disassemble the Canadian Energy Centre because organizations are already in the space it is duplication of efforts. Put the money back to general revenue. 2. Stop taking the federal government to court spending significant funding in legal costs. 3. Watch making decisions that have unintended consequences which add to the spending versus cutting e.g. referrals for X-rays from physiotherapists and chiropractors allow it as it only has one charge versus three when you have to go from doctor to x-ray and then back to doctor.	1. Focus on small-medium-enterprises for value-added development. 2. Reduce provincial trade barriers to ensure efficient trade province to province that will create jobs. 3. Encourage competitiveness with highly educated personnel and attracting them to Alberta through engagement in research. 4. Find time for investment attraction work to bring new businesses to the province.
t2e	Health care, sustainable energy programs, EDUCATION	War room	Courtship with innovative companies, encourage alternative energy. Technology.

T6W	Health and education	Increase large corporate taxes, pay freeze for government employees, eliminate unnecessary government travel and soendingy	Decrease small business tax, support job creation in clean energy development
T6B	Health care, education and supports for low income and people with disabilities.	Reduction of parliamentary spending. Increasing taxes rather than calling them fees would help in improving our comparison in the the transfer payments. AB are paying higher rates it's just hidden which hurts us more.	By providing incentives to industries that are growing such as tech, education, health care.
T6w	Education and health care	Health efficiencies and politicians wages and travel expenses	Infrastructure
T6W	Children's education-tuition, transportation. Lower cost on food.	Cooperate organizations. Government spendings.	Create opportunities and support SMEs. Encourage avenues for talent showcase and support good initiatives
T0A	University	Big corporations, the rich	Supporting university's
	Healthcare, education, emergency services, environment	Reduced capital expenditures outside of schools and hospitals. Reduction in travel and expenses. Reduction in number of ministers and combine ministries.	Support industrial growth, diversify from a natural resources only economy, protect private and public sector jobs, reduction in regulatory barriers
T1Y	education - K to 9 and post-secondary levels. Do not cut budgets. sustainable/renewable energy sources diversification of economy / less O&G, more technology & AI supporting small businesses to be able to keep viable supporting local/Alberta-produced products	-tax O&G companies who are making BILLIONS, don't give them tax breaks. - disband the Alberta energy "War Room". waste of money with inept employees who just make Alberta look bad to outsiders - Nursing (UNA) and HSAA collective agreements - scale back shift premiums. No need for a premium of \$5/hour for working overnight, and scale back evening and weekend premiums. It's health care - 24/7 services. employees knew this when they choose to enter a health care field or work within health care service provision. Do not roll-back their wages - this will create ill-will among employees and affect patient safety & patient care.	-invest in sustainable/renewable energy technology -invest in non-O&G sectors; Alberta needs to diversify its economic base; hi-tech, renewable energy, artificial intelligence; biomedical innovation -invest in our farming/agricultural sector, focusing on plant-based protein alternatives
T4C	Children, health care, education, minority groups.	By accepting the fact that there's going to be no more days of oil selling at \$100+ a barrel. Get rid of that ridiculous war room.	Investing in the technology sector.
T6K	Implementing a 2% sales tax. We need to get off the energy revenue boom and busts. Improve indigenous relations and build with them. It is embarrassing that private industry can find \$50 million to invest in northern indigenous communities and our federal and provincial governments cannot. Education, seniors and Health are major areas. I am getting older and I wants a doctor who is well educated. We cannot forget those who are disabled or mentally challenged, leaving them in poverty is a disgrace.	In private business we need to review workflows, reduce redundancies/duplication and find innovation. Government can do this with their staff and industries. We need less high salaried executives and more front line staff. Stop giving handouts to corporations who leave the province with our jobs.	Stop the "us verses them" attitude. We all want energy development and strong environmental protection. Work with Ottawa. We need to grow green energy jobs, research, invest in film/TV, make it easier for Albertans to start new businesses. Stop giving handouts to corporations who leave the province with our jobs.
T8x	Infrastructure	Cutting government workers	Lower taxes and criminally charging eco terrorists
T0H	Bringing back the Alberta Advantage by being proactive and reduce child poverty and provide a workforce by continuing to fund the Early Learning & Child Care Centres in Alberta and expand the program.	By reducing child poverty you can reduce the costs of Health, Education, Justice and Social departments in the long term.	By providing reliable, affordable, quality child care for families. Being proactive instead of reactive, business's need to be able to hire to provide services. We need to have a reliable workforce which is available if they can access child care.

T3H	Education and support for those with disabilities and the vulnerable people.	There is no reason why Alberta doesn't have a sales tax or medical insurance tax.	Invest in Alberta children.
T0K	Education	Reduce those government departments that the NDP increased in the Edmonton area.	Stop funding or giving student loans for university degrees that do not have a chance of getting a job in degree's field. Bring back the AHC monthly fees for individuals and families.
T2H	Health care Education Diversity First Nation support Infrastructure	Ministry Première office budget Cancel war room Increase royalty on gas companies	Diversify economy New technology economy Attract companies to come here that are not oil and gas
T1L	Public health care and education	Tax breaks for corporations and oil companies	Reversing tax breaks to corporations. Using this to fund public healthcare and education. Bring back solar panel rebate and green energy initiatives
T3A	Education. The budget cuts have been explicitly mean spirited and also discriminatory towards people with disabilities. Funding needs to be prioritized to those in need and those that need support. Stable education funding is needed to support the good work our education boards are doing. As it is, one of my children who has Downs Syndrome along with his age group cohorts are finding no schools will commit to taking them in the new school year because of the lack of funding and uncertain funding from the government	Introduce a small sales tax. Simple	Stop being mean spirited and vindictive. I work in oil and gas and am disgusted at the treatment public sector workers are now getting. Demonstrate humanity and confidence! Invest in people rather than punishing them.
T9G	Job creation	Within the government	Realistic platforms
T6R	Education - they are our future! Healthcare There is fiscal responsibility and most importantly social responsibility!	I would be happy to pay PST if it meant more stable funding for education and healthcare.	Add money for infrastructure which in turn leads to other jobs.
T6W	Restore all education funding and increase it for student enrolment. Education and healthcare should never be cut, never!	Aboriginal services, funding corporations like Husky and increase taxes in luxuries like tobacco, alcohol and marijuana.	Build more schools, hospitals and roadways. Bring back the Alberta innovation program.
T6K	Health care, education and environment	Do not know of any big savings that could be found. Problem is with revenue stream. Need to seriously consider a provincial sales tax to raise enough revenue to balance the budget. There is no Alberta advantage while we are cutting education, health care and supports for the vulnerable	Need to balance the budget by being realistic about revenue and taxes. Need to support diversification and transition to a low carbon economy by embracing an Alberta Carbon tax and using the money to help support green energy and nuclear power.
T0L	Healthcare, education, senior care & hospices (NOT EUTHANASIA).	Years ago the Conservative government stopped charging healthcare premiums. We all want quality health care and charging similar amounts that were previously assessed is reasonable. It shouldn't have been stopped in the first place.	Make Alberta a province that the international film & television industry want to work in. Make Calgary the new Atlanta.
T7x	Education health care child protective services Homelessness	eliminating or lower funds for safe injection sites	Not be so focused in bringing in outside investors
T5K	Education and healthcare	Cut OT in hospitals	Get new prime minister

	No corporate hand outs	Cancel "war room" Implement a sales tax	Diversify
T8H	Renewable energy industry and environmental management, affordable post-secondary education (college, university, technical schools), free and affordable child care, building the pension program, and reliable transit.	Higher taxes on large industries and companies and the wealthiest 5% of citizens.	Reverse the changes made to public service hirings, making it once again realistic for an incoming employee to fill the position of an employee who recently retired or quit. Invest in renewable energy industries (ex. Solar, wind, hydro). Although developing these industries will cost money at first, it will allow for hundreds, if not thousands, of jobs to be created, and will function as a new reliable source of income for Alberta. Reverse policies of performance-based funding for universities, as this only favours current market growth and status, and does not account for sudden changes in the workforce that may alter the industries in which value is placed. Reverse the removal of the STEP program. This program prepares individuals in post-secondary education for careers and without it, these individuals will not have the experience, knowledge, and skills necessary to pursue jobs that keep Alberta running.
T0K	Get us out of debt. Fight carbon tax.	Keep cutting back on spending...short term pain, long term gain.	Support the pipe line.
T0A	University, hospital, and public works. Fund those, and the crime rate will drop.	By not paying corporations to operate in Canada. They won't leave, they make their money here.	By funding schools, teachers, and community programs that expose youth to a variety of skills and culture.
T0H	An economic and feasibility study to give us total independance from the east	SEPERATE	Seperate
T4X	Number one should be health care. The work force should be in the best health possible to enable top productivity. This includes children because they need to the best educated work force in the world.	Delete overlap of duties between ministries. Organize ministries so that they are as efficient as possible.	Support Alberta's developing tech sector, as well as agriculture and oil. The people working in these areas will have lots of ideas as to how to do this.
T6R	Ones that create value. If it's wasteful please don't spend it.	Running options in schools that are not full. Many option classes seem to have much lower enrolment than the core subjects. I agree options are important but if not enough choose, please don't run the course.	Create environment where people want to invest in this province
	A balanced approach	-No more war room (Canadian energy center) - less school curriculum review & re review - don't increase quantity of standardized tests - less panels - costs associated with these surveys - it's foolish to think that the data from these surveys will be crunched and have an influence on March's budget.	More environmental, research grants
t6h	Post secondary education, renewable energy, looking towards the future, climate change	Not handing out tax reductions to multi-billion dollar businesses who don't create jobs, put the savings back into the economy.	renewable energy, make post secondary education cheaper, support the average Albertan and not the multi-billion dollar companies.

	Focus on 1. health and wellness in addition to illness prevention 2. Early childhood years - especially children under 5 years of age	Do not cut frontline staff but find efficiencies through getting staff involved in decision making	Impose a sales tax and use the monies collected to support job creation
T0C	Education, health and public programs that support all Albertans	Consider implementing a sales tax. Cutting upper management/management heavy areas. Stop giving big business huge tax breaks, the money isn't trickling down to the typical Albertan.	Tax support and grants to small business
T5B	Education and health care.	The "War Room".	Diversifying energy and moving away from natural gas and oil.
T3L	The government should focus on diversifying the economy so that it does not solely rely on the oil and gas sector. This means funding education and research in other fields.	The government should stop cutting funding education and other activities to diversify the economy. Giving a billion dollars worth of tax cuts to large companies is depriving the government of lots of money to make this transition happen.	Like I said before, keep funding education and initiatives to diversify the economy such as residential solar rebates which create business that are not tied to oil and gas.
T1P	Increase spending and supports for Public Education (including post secondary), Health Care (including reduce times for surgeries with best practice care and affordable medications for ALL), more supports for low income, mental health, and disabilities.	No more committees to write a report saying what you paid them to say. Reduce government (Premier and his colleges) expense accounts. No more high priced hotels and wine fountains. No more unnecessary trips out of Alberta when a teleconference or a few phone calls will do. No more war room - who needs to spend \$30 Million Tax Payer dollars per Year, with no accountability!! STOP giving away incredible tax deductions and money away to wealth corporate. Especially when there is no Guarantee of New Full-Time Long Term decent paying jobs or any benefit to Albertans. Seriously! \$46 BILLION given away to those that don't need it and then cut education That's ridiculous!!	Diversify more. Stop being so reliant upon oil and gas. Greener solutions. More money in R&D to come up with better solutions instead of killing our environment for a few temporary jobs.
T6R	PUBLIC Health care PUBLIC Education Diversification of the economy Supports to vulnerable (AISH, seniors, etc) Basically everything you've cut so far.	Corporate tax cuts (4.7 billion!) War room, or whatever you're calling it now Matt Wolfe Cronyism Contracting out work to supporters Useless review of curriculum Standardized testing in schools Not subsidizing PRIVATE education	Take back cutbacks to post secondary schools (except the religious ones that weren't targeted of course) Support technology innovation companies
T3B	Why are we propping up Oil and Gas Companies that continue to make huge profits while they cut their workforces. They consistently demonstrate that they don't care about Alberta jobs and are not adding to their workforces.	Cease all activities of the so called War Room.	Focus on two priorities: Transforming the legacy industries we have to be competitive in TODAY'S digital economy. Build a competitive environment for the digital jobs of the future.
T8A	Do NOT bring in a provincial sales tax.	Cut the extravagant pensions of the civil service including teachers' pensions.	Get the brilliant engineers and other professionals to use their expertise to develop new ideas and industries and find the answers to climate change. Let the private industry do it. Governments only confound, dither and increase taxes with no solutions.

T3B	Why are we propping up Oil and Gas Companies that continue to make huge profits while they cut their workforces. They consistently demonstrate that they don't care about Alberta jobs and are not adding to their workforces.	Cease all activities of the so called War Room.	Focus on two priorities: Transforming the legacy industries we have to be competitive in TODAY'S digital economy. Build a competitive environment for the digital jobs of the future.
	<p>focus on helping low income families, individuals</p> <p>improving our medical care, hire more nurses, and our money into the system to support those who need it rather than taking away supports from those who need it as it will inevitably cause greater future strain on the government when low income and disabled peoples can't afford necessities or medical care</p> <p>investing into our provinces future by investing in post secondary education because that is the future and always will be the future of civilization and economic prosperity</p>	<p>there is not fast solution, it takes money to make money, but here are my thoughts</p> <p>stop spending money on ridiculous crap that's not useful to citizens, protect those who need it and equalize the playing field, tax those who can afford it, and help those who can't, consider all factors and stop trying to benefit the government for the government, the whole point, the ONLY point of the government the to help the citizens that reside under its law if the government help people the people will help the government</p> <p>bring back carbon tax, yeah most people think it's stupid but as the end of the day it creates a lot of useful revenue to invest back into green energy (which is where to money should be going) which will ultimately cut costs for energy in the future and protect our environment</p> <p>sort through useful and unnecessary employment within the government sectors, but don't fire entire departments the government will be worse off</p> <p>start moving away from oil energy and investing in renewable natural energy like solar, it will save money in the long run, and will create an entirely new job market while maintaining employment within the oil industry and keeping those jobs able.</p> <p>spend money to make money invest in people and people will will support a proper government that looks out for them more than one who cuts supports and</p>	<p>through the infrastructure, education, and supporting influential businesses in the community that facilitate growth and sustainable practice in execution and employment</p> <p>by investing in green energy, the government can create an entirely new job market, support environmental influence which is necessary to sustain human development, and maintain jobs in the oil field, while creating new opportunities</p>
T1W	encourage business, cut spending, fight for pipelines	probably everywhere but you seem to be doing a good job	reducing the business tax was essential
	Focus on health care and education instead of cutting those essential areas. Solidarity to the nurses and teachers. I don't believe in this government or any of it's policies it has put into place. I will continue to fight against this government and hope they get pushed out of the legislature.	Tax the corporations heavily. Go after the corporations they can afford to pay more taxes to facilitate your agendas.	By putting more money into education and health care don't cut these essential services.

T6H	Education, health, job creation and infrastructure in cities' stop bailing out and providing money or tax breaks to private corporations and others with significant vested interests.	Less travel and less costly travel for premiers (and other leaders)- only travel for purposes where proven benefit to the people of the province or country can be demonstrated; when they do travel, they do not take a large contingent of others with them; stress on prevention re health care; provision for early education supports as they are proven to have long term benefits.	Encourage local ideas from local people; create the environment where small business can thrive; look for areas where amalgamation of services can be beneficial (e.g., eliminate two public school systems (catholic and public can be one); support public works (road construction and repair and similar projects keep cities in good order and keep people employed in the construction and supply side); Have a provincial sales tax. Minister Toews, in his recent phone line consultation and on radio, stated that if Alberta spent like BC and other western provinces, that we'd be (in effect) in the "black". He failed to mention that all of the western provinces have a provincial sales tax of between 6 and 8 % which provides reliable, consistent revenue to these provinces. even a 2% sales tax would do wonders for Alberta's fiscal health.
T3p	Education New technology innovation Mental health	Oil and gas subsidies	Job creation in new fields not old resources based ones.
T6E	Restoring services to Albertans, particularly funding for education, seniors and those with disabilities.	Raise the corporate income tax, force oil companies to pay their bills, implement a PST	Support new sustainable industries like technology and renewable resources. Look to emerging industries and the future skills needed for those rather than prop up the dying oil industry.
T8n	Economic development, oil and gas	Cutting nurse overtime. If they want to work full time then that's ok. But don't let them all work part time and take overtime to get more than full time work and pay. Also do a major hard line analysis on management in the goa and agencies. There are several managers and directors with little to no staff working under them. Hire more people who actually do the work	Don't cut jobs. Just cut inefficiencies, especially in government. Lower taxes for all businesses and people - more spending equates to more economic growth. And lower the minimum Wage to be in line with other provinces. There is no need for having \$15 minimum wage
t6a	education and health need to be looked at but I believe the Government needs to give time for consult and decision making. Budget 2019 cuts 6-7 months in to an existing cycle was not a great way to start the process. 2020 needs to recognize this. Growing Industry diversity is important - not sure the 4 billion tax party for big corp is the way :(specially in light of the cuts made to education and others.	simplification of taxation process. if that means a SMALL sales tax to support an area of service support then make it so. claw back some of the over the top corp taxation breaks and make them a little more specific to qualify for. le if dividends are being generated then no tax break required. if leadership remuneration packages are above industry average then no tax break.	start up tax breaks for those that meet criteria for first 2 years. less red tape continue to press Federal Gov and agencies to back off thick policy and process, or at least stick to the original requirements and not continually change the landscape of requirements once into a process. start date should be the policies a project should be held accountable to.
T0H	Getting us out of equalization.	Cut of the leeches of the east	Free markets
T8W	Prevention and early intervention supports Supports for children's, youth and families women's shelters low income housing opportunities	administrative costs and streamlining efficiencies	utilize the resources we have already in Canada
T6R	Education, Health and infrastructure. Eg. Public transport, roads and highways, schools.	Please increase corporate taxes and add 5% provincial sales tax.	Support alternative energy industries and jobs generated by such.
T0L	Health care. Natural resources.	Cutting the fat. Not the easiest hanging fruit being front line workers. Stop the needless programs in health care that does nothing for our industry except give a job description. Cut red tape.	Cut red tape. Keep fighting to abolish carbon tax. Aggressively promote our clean energy vrs foreign oil.
T6W	Health and education	Public administration	Making industries taxes lower
T6W	Health and Education	Decrease Management inside Government	Diversity away from Oil and Gas

	Areas of unsustainability, but minimize effects on those lower-income public sector workers. Any cuts to these folks could be life changing.	Certain areas of health without hurting lower-income workers.	Focus on leveraging the infrastructure and resources of the energy industry to develop clean tech.
T6W	Reducing spending on what we need to get back in the black - previous governments gave away more money than they brought in!!! Somethings gotta give. Start cutting more labor heavy public spending jobs	Stop cutting grass in the ditches - only trim 6-10 ft off the road. Transition to a grass free highway or roadways . Get your spending under control on the needs and cut the wants!	To a point - just make our province attractive to investment again and you don't need to spend government money to make jobs!! They will come in the private sector ! Get frontier project approved and that will stimulate the market like you wouldn't believe!
T3M	Education Health care	Their salaries	Offer and provide information on relevant and appropriate courses/employment/job searches and legitimate online sites for people to access.
T5T	Health & job creation	Eliminate half of the Vice President positions at Alberta Health Services. Reduce the perks of the remaining Vice Presidents, such as expense accounts, salaries and benefits. Currently the head of Alberta Health Services makes more than the Prime Minister of Canada! Cut her salary, expense account, and other perks. Further reductions in upper AHS management are also another way to cut costs.	Tax cuts for big businesses do not seem to be working. Smaller business tax cuts might help. I do agree with the government standing up to Trudeau and the eastern-based Liberal federal government.
T3C	job creation and debt reduction	They are doing fine.	Support oil and business
T5X	Public healthcare, education and childcare as well as infrastructure	Investing in greener energy and not depend on oil and gas as the main funding source for Alberta. Making oil and gas companies accountable and paying their share for cleaning abandoned wells. It is not fair that Albertans has to foot the bill when oil companies drill for oil and damage the environment.	Greener energy and support public health care. Ireland had private healthcare from public health care and they want to go back to public healthcare since it cost more money and is not really saving them money in the long run.
T4J	Infrastructure, which is generally very good compared to other provinces, but needs to be constantly maintained and brought into line with modern transportation needs.	One example is salaries and benefit packages of senior government managers, and positions in Alberta Health and universities, which are utterly obscene. These do nothing to deliver quality services. I cannot see how any fiscal conservative can tolerate the present situation. Additionally, \$290000 for someone to head a flood abatement panel is clearly unnecessary. Patronage has no place in a responsible government. We do not need to go back to the old days of the Progressive Conservative Association members automatically being given jobs on commissions, and getting first pick of privatised liquor stores and license agencies.	Competitive taxation and regulatory levels. Generally leave job creation to the private sector.
T4S	Education, health care, and infrastructure.	Reducing the number of high-level management positions and maintaining lower-paid front-line staff where needed. Considering low cost-to-consumer options for certain currently free expenses, such as toll roads on busy highways like the QE2 or day use areas at large parks.	Reducing the number of public sector jobs seems to be creating more issues in the private sector because there are now more people competing for jobs. Trying to attract new industries to revitalize small towns and utilize existing spaces instead of allowing for the building of new spaces. Creating a plan for better ride-sharing or public transit to reduce the number of people having to travel by vehicle. Incentives for people to return to school to better contribute to the workforce. Incentives for people to offer affordable childcare to bring skilled workers back into the workforce.

T1R	Healthcare - more frontline workers, walk-in clinics, allow Nurse Practitioner more privileges in hospitals and clinics Seniors housing and supports Mental Health Education - BUT Get rid of managers and layers of bureaucracy and hire more people to work front line!	Management - government departments in Edmonton too many bureaucrats, civil servants, managers and layers of bureaucracy! Trim government departments and use the money for frontline workers!	Yes however not by hiring more civil servants!
T1P	Health care, arts, libraries, community infrastructure (roads/bridges), rural infrastructure & policing, adult education to ensure relevance.	Utilize the funds allocated for a defective 'energy war room' or just stop giving money away to Oil and Gas corporations. Maybe we don't pay coal corporations to shut down active plants that produce electricity and provide jobs? What if government leaders used via video conferencing to attend summits instead of spending thousands on travel and hotels? Maybe look internally before you cut anymore out of public services.	Utilize the funds allocated for a defective 'energy war room' on employing or retraining out-of-work Albertans to better their communities. Enable Albertans in low-growth or no-growth jobs to retrain proactively rather than wait until they are unemployed. Invest in the growing tech industry instead of the failing energy industry. Or support diversification like sustainable fuel sources such as bio-diesel? Reinstate the cap on insurance rates and electricity because when you're taking the money out of the pockets of every day Albertans so we can not spend on anything to support the economy.
	Employment, education, healthcare	Highly paid officials and government positions who don't actually do much. Admin positions who have admins to do all the work should be eliminated. Don't cut the front line workers who actually do the work!!	Help the small, independent businesses. Less taxes for those with lower incomes. Reward the hard working class.
T3G	Education - please do not cut per student funding. We have the best education in Canada and there is a reason it is the best. People from other places know this and they come to Alberta on purpose so their children get a good education and supports if they have kids with special needs. Please keep the per student funding the same; no cuts! We have ever increasing diverse learning needs in our kids' classrooms, along with refugees and many new immigrants who need optimal learning conditions. Keep our kids and their education IMPORTANT! It's our future! Please do not cut health care. 17(1) just had amazing help with an extreme health condition. I would hate for someone else to not be taken care of the way they did to save 17(1) life. Do not cut nurses or services. We need them for our ever growing population.	I think our government should seriously look at adding a 5% sales tax. Almost every Albertan that I talk to, whether they are NDP or PC, are in favour of this. it would cover the short fall that our current government is saying we have. It is a way to have everyone contribute so pay for our services. Then use the money wisely to fund health care and education and other services that are needed for Albertans.	Tax breaks for companies who will employ our people. Get the AER to work towards approving more work for our industries in this province. Continue to work with the prospect of having the pipeline so we can get our oil products to international market.
T3K	Education should be priority number 1! If we don't invest in our children, what will tomorrow be like?	Travelling expenses of top managers and support for hydrocarbons industries.	Looking at green energy investments
T5Y	Increased employment opportunities. Decreasing homelessness. Better mental health supports. Increased funding for legal aid. Alternatives to incarceration of the mentally ill.	Less bureaucracy. Decrease payments to physicians and/or link payments to performance metrics and improved health outcomes. Address social inequities and the increasing gap between the upper class and the remainder of the population.	Rethink how procurement is done. Accepting the cheapest bid is short term thinking. Support local businesses. Support made in Canada. Invest in SME's here and be less focused on countries with no respect for the rule of law.

T8H	Education Health care Social programs aISH	Politicians salaries, and expense accounts Get rid of the war room Raise corporate taxes Implement a PST	invest in the tech sector Invest in infrastructure Cap insurance and energy rates
T6K	Education, Health and diversifying the economy. The writing is on the wall for oil. Wake up and smell the roses. It's like the first stages of the coal industry being phased out.	Lets see, the Alberta Government has already made it more difficult for low income families, people on AISH, adult foster children trying to support themselves, grabbed the \$300 million Cancer Legacy fund, cut back on Health spending and moving towards a two teared privatized system, raised corporate income tax (opps wrong on that), cut out spousal benefits when one spouse is 65 and the other one isn't, stopping buying breakfasts and paying for transportation for other premiers, so that just leaves. Stop spending money on: - the so called "War Room" - paying friends of the government huge amounts of money on things that don't matter (like the \$900,000 spent to that law firm in Calgary) - setting in motion plans to separate from Canada by taking over pension plans, creating a Provincial Police force and establishing a separate tax system Maybe raise corporate taxes - the trickle down effect never works. If I was an Alberta Company, I would use my tax break to pay down debt, buy back shares, pay corporate bonus' and then bank the rest because the Alberta economy sucks. I would not expand, increase salaries or hire new staff. Companies run on greed, they are not charitable.	Maybe stop firing people from the Public Sector, causing job losses through spending cuts (18,000 job losses in Dec.). Too much focus on the oil industry - what about our tech companies and farmers - lets diversify (out used phrased by Conservatives - nothing ever gets done) Lets not focus so much on having to have a balanced budget RIGHT NOW. Interest rates are low, lets get something that is workable and not live under a Kingdom where the peasants are always squeezed for more.
T6V	Creating jobs Healthcare Education	Review and reduce Executives bonuses Review and Postpone Sports and Recreational Project Funding Almalgamate services/building/infrastructure Utilize inhouse / local services instead of external or international contractors for services / products that can be produced in AB by Albertans. Eg.Engineering, project planning, etc.	Return minimum wage to national average over the period of 2 years Subsidizing hiring of skilled workers Tax credit for new entrepreneurs/new business development in AB region Tax credit for career change of skilled workers Alberta spending tax credit where spendings at local businesses can be counted for tax credits. Aimed to stimulate spending local, increase AB business income, ultimately stimulate hiring.
T2A	-health,education & infrastructure. In this order of most to least.	-top heavy educational institutes.	infrastructure, incentives for filming in Alberta, push tourism to the U.S. while Cdn dollar is low, so many people go to Montana for vacations, golf trips - should promote golf rates to people from Alberta when golfing in Alberta - should try and bring our friends from Montana north for vacations, golfing. love this province and sad to see the shape it is in. Thank you for this opportunity to share thoughts/ideas.

t8v	<p>Definitely your people. Alberta residents and their needs.</p> <p>Education for all children/youth.</p> <p>Healthcare for all - if we are going to a system where patients pay for services if they can afford it then the Healthcare practitioners/Drs have to rotate and be available to all at some time. It will not be a just and fair society if only the rich have access to the best. I prefer a system that is open to all. Consider regionalization again. That system worked; local decision making and priorities;</p>	<p>ask your people. They probably have answers, they are capable of thinking up solutions. I get it we need to balance the budget. We also need to invest in our future. Particularly our schools. There are models of success working in other countries. Check them out. Don't slash and burn. The consequences are severe and the rebuilding costly.</p>	<p>Diversify. Moving into the future consider there is more to economy than just oil.</p> <p>Be "Intelligent" . Listen!</p>
T6W	<p>Health and education are priorities. In the Health Sector:Do not replace Registered Nurses with Licensed Practical Nurses. Also, do not add more LPNs to the staffing ratio. It is clear that the literature shows that when this happens the outcomes for patients are poor. In the Education sector: reverse the cuts made to post secondary education.</p>	<p>Immediately, rethink the need for having a balanced budget in four years. It is unfair to burden Albertans with the fall out of this plan which is constantly taking something away from us. It is not the way to help a province who is dependent on oil and gas for revenue. Savings could be recovered by closing the Canadian Energy Center in Calgary. This is clearly a waste of money. Reversing the corporate tax cut. There is little or no evidence it will help the economy.</p>	<p>The government should support job creation outside of the oil and gas sector. Efforts need to be put into technology, tourism and farming. We need to diversify our economy so that in hard times with the oil industry we are not affected.</p>
T0B	<p>Healthcare Spending should be top priority. Pharmacare must be implemented as soon as it's viably available.</p>	<p>Raise Corporate Taxes to be match the highest elsewhere in Canada. Maintain Carbon TAX.</p> <p>Shut down the ridiculous TEXAS USA Calgary War Room. It is a waste of my taxpayer money. It is a shameful display.</p>	<p>Support start up IT business and Alternate Energy sources primarily GEO thermal energy and solar energy.</p> <p>Initiate to Move away from the Oil and Gas production and consumption FOCUS. Diversify our economy so we are not as reliant on Oil and Gas and susceptible to its BOOM and BUST perils. This 100 year continuous cycle creates nothing but havoc in Alberta. Stabilize it - CONTROL IT. We still need it but not on a BOOM level.</p>
	<p>Education</p>	<p>- Taxes on junk food - People with illness related to poor lifestyle choices (drinking, smoking, drugs) pay for their health care costs</p>	<p>Make it easier to have our kids in school, rather than cutting funding to the point that grades need to be split up and moved to other schools, that the logistics of bussing schedules and working full-time doesn't work.</p>
	<p>Making life affordable for the average citizen . Stop lifting caps. Stop threatening public sector workers. If gas and oil isn't working invest in clean energy and train the gas and oil workers . By</p>	<p>By taxing the rich . By cutting middle management in hospitals. By examining how ahs actually spends its money . By keeping alberta jobs in alberta ..this grows the economy. By looking at MLA pension and wages . Cut top down .</p>	<p>Not by threatening layoffs to public sector workers. Invest in clean energy ... its carving its path. Oil and gas has its place but diversify.</p>
T2T	<p>Healthcare and education</p>	<p>Tax big corporations</p>	<p>Need to look at alternative energy for job creation</p>

T8H	<p>Increased education funding</p> <p>Increased healthcare spending on tech that reduces later costs of supplies</p> <p>Increased climate change pro-active spending</p>	<p>Stop cutting taxes for companies that are turning profits</p> <p>Tax companies that lay off Albertan workers while turning profits</p> <p>Stop giving out bonuses to government employees in any sector</p> <p>Cap upper management government job salaries relative to private sector</p> <p>Changes to corporate tax system that make it more cost beneficial to pay workers more and provide benefits.</p>	<p>Albertan's with good education get better jobs. So fund post-secondary education. Companies will not pass on their profits to employees unless they're mandated to do so. All tax breaks should be tied to increased wages for employees, it makes no sense that companies can pay workers so little that they need government assistance AND have a huge profit. Corporate taxes should be tied to how many full-time jobs with living (not minimum) wage INCLUDING benefits jobs that the companies create. No tax breaks without demonstrated change.</p>
T5N	<p>Infrastructure and spending investment is necessary in times of downturn.</p> <p>Post secondary education and retraining are key to spend money on when old economic models fail us.</p> <p>Access to affordable childcare is key to "getting Albertans back to work". Most middle income families require both parents to be working to contribute meaningfully to the economy.</p> <p>Children's education is key to providing foundation for the future. Cutting education during this time is pretty much the worst thing a government can do.</p>	<p>We could charge huge multi-national corporations the appropriate amount of tax. That would save millions and millions of dollars. This comprehensive tax cut that is available to the top one percent is an insult to many struggling Albertans. No jobs have been created by this so called incentive.</p> <p>Consider the introduction of a provincial sales tax.</p>	<p>Provide grants to encourage growth in industries like TECH! We had a major opportunity to be a centre for the tech industry and also see growth in industries like film and television. The budget destroyed that potential.</p> <p>Invest in green energy. Move away from oil and gas. Over dependence on one industry has resulted in our credit rating being downgraded.</p> <p>Provide infrastructure spending to municipalities. FUND EDUCATION and EARLY CHILDCARE.</p>
T6J	<p>Education and health care</p>	<p>Looking at the overall budget situation, is this really about finding savings? If the government continues to download costs and responsibilities that they have previously held, upon lower levels of government and the citizens of this province, then no savings have actually been found. Stop cutting and downloading.</p>	<p>Continue to push for the transportation of natural resources to markets.</p>
T2x	<p>Education, healthcare, diversifying the economy</p>	<p>Their "energy war room"</p>	<p>By increasing funding to municipal governments & providing grants for innovation & supporting industries such as tech and renewable energy</p>
T1k	<p>Education, Child care, Sports and arts for kids. Health.</p>	<p>Burocracia in administration, and keeping projects focused in education , sports, recreations for children. Health support.</p>	<p>Supporting education and construction of places for children. Health care, day care.</p>
T4C	<p>The needs of people in this province. This means prioritizing education and health care services for all Albertans. Ensuring that the vulnerable population have the supports in place to be successful.</p>	<p>Look at upper or mid- management positions to see where there is misuse use of time and money.</p> <p>Review infrastructure costs.</p> <p>Review the priority of the new arena.</p>	<p>Build the pipeline and get jobs back in the oil industry.</p>
T6E	<p>Education- from K to grade 12.</p> <p>Update textbooks and provide more teachers, materials, and sports programs</p>	<p>By appropriately taxing corporations, and collecting taxes from corporations in arrears in all areas of taxation</p>	<p>Economic development in alternative technologies (all sectors), lower mortgage rates and increase minimum wage</p>
T1W	<p>-Education</p> <p>-Preventative health care</p> <p>-Ensuring everyone has equal access to quality health care</p> <p>-daycare</p> <p>-programs like parent link</p> <p>- not privatizing healthcare</p>	<p>-Less travel expenses</p> <p>-more preventative health care vs reactive</p>	<p>-job creation by aligning bbn our sales tax with other provinces so we don't have to cut jobs</p> <p>-allowing healthcare workers stuck as pharmacists and nurses to practice to full scope</p>

T5X	Education, specifically addressing class size and teacher workload.	Being mindful with THEIR spending on things like trips to promote the oil and gas industry at the expense of citizens health and education.	By spending, not cutting.
T0L	Social services including: Sexual Assault Centres including treatment (therapists and children's therapists in all regions especially rural); Forensics such as SANE and SART; Domestic Violence Shelters and counselling; housing; mental health (outside of AHS). Education - K to 12. Environment - clean up the abandoned oil wells; invest in solar and wind; Health - front line response	Reduce top levels and management in Health Services - reinvest this in front line; invest more in solar and wind; charge large corporations more tax - they have not invested that much in jobs; charge a Provincial Sales Tax	Stop reducing supports and funds to the poorest of the poor - honestly this doesn't save you money - in the long run it will cost society more; invest in NPO sector; reduce union stress on budgets; invest more in environmental initiatives - saves money and creates innovation
T5K	Public education Public health care Public infrastructure	Reduce your own salaries even more.	Diversify the economy, focus on renewable energy projects, stop propping up a dying industry and invest in literally anything else.
	Mental Health Funding and Health Care	Oil and Gas	Mental Health and Health Care
T8V	Health and education - find additional sources of revenue to better fund these sectors.	Do not reduce salaries. Look for efficiencies and remove redundant staff.	Diversify the economy and develop alternative energy sectors. We have a lot of flat ground and usually strong wind and it is usually really sunny here, which are great opportunities to build a solar farm or a wind turbine farm.
T2E	Health care Education (K-12) and Post-secondary Municipal funding (operational and infrastructure)	Increase corporate taxes - the decrease has not had a positive impact on employment rates. History has shown that cuts to corporate taxes are the least effective way to create jobs and investment in our economy.	Invest in infrastructure, public services and education. Jobs are created when governments spend on roads and public works generally. Investment in education has been shown to result in higher employment rates.
t5y	Education, Health Care, Diversification of Economy	Further Cuts to MLA pay. Not giving away corporate tax cuts (trickle down economics doesn't work, that has been proven again and again)	Diversification of the economy, Support of government sponsored projects on infrastructure to get albertans back to work (basic keynesian economic stimulation), return tax credits to our once growing tech sector that you stifled this year. Stop placing ALL faith in oil all together (yes we must regain footing to get product to market and return to being able to price oil competitively, but we must also strengthen other areas of the economy so that albertan families have opportunities in oil restricted times such as now)
T6R	Education and Health care	Do in depth review by independent efficiency experts of how health care/education dollars are spent by school boards/hospitals to have major overhaul of systems or ways to cut spending without affecting the front line workers and the quality of care/education. le: Put money where it directly impacts the students/patients and cut out unnecessary bureaucracy/administration. Left alone to handle budget cuts, school boards and hospitals cut teachers and nurses, close down beds, and cause class sizes and inclusion of special needs students in regular classes to sky rocket and create long waits for health care. This directly impacts the quality of the best public education and publicly funded health care systems in the world!!	This is not my area of expertise, but I would like to add that I strongly disagree with massive budget cuts, like are being proposed for education and health care. Yes, we MUST balance our budget, but I would like to see a slower cut back that allows for perhaps a 5 year plan to decrease spending to allow for no more debt accumulation and gradually pay off debt without massive cut backs to crucially important systems like education and health care, which directly impact our society and quality of life.
T3E	Education and Healthcare	Donations to oil companies and big business.	Encourage and support small businesses.
T5E	Funding for education to be restored and match enrollment	Stop cutting the corporate tax. Find a balance there.	Quality funded education

	Education and healthcare	Roads, War Room Panel, MLA Salaries, Panel to study Alberta Pension Plan.	Diversify the economy!!! Oil and Gas cannot be the sole industry the province relies on.
T0H	Infrastructure, education, health care	Look at itself first. MPs budgets, government travel budgets, etc. Do not ask others to cut where you are not willing to cut yourselves. Bureaucracy, very high levels of administration.	Infrastructure spending creates jobs, roads, schools, hospitals. Grant programs for facility enhancement. There are so many public facilities that are in desperate need of upkeep and repair. Rinks, pools, gymnasiums. Many are shutting their doors because there is no money to repair, renovate and enhance. Cutting small business taxes and hiring incentives instead of cutting large corporate taxes. There's no guarantee large corporations are putting those savings back into our economy. Small business are the backbone of Alberta. If small businesses find savings, its going back into our economy since they are Albertans, they're based here, living here, spending here.
T8C	Health care and education	Elected representatives wages, benefit and expenses	Explore industry and business that supports Albertans and Canadians
T3C	Health, Education, Infrastructure.	Fair Deal panel should be disbanded, the cost of consultants, travel around Alberta, etc, would save the tax payers a lot of money. Also the \$30 million dollar War room panel created to intercept negative comments with regard to Alberta dirty oil production, all \$30 million could go towards Health, Education, and Infrastructure spending.	Job creation and economic growth can be achieved by making sure the Province of Alberta offers the very best in Health, Education and Infrastructure. No company is going to want to invest in a province, where the leadership demonstrates no insight into investing in the future, which is going to mean renewable energy sources. Why would any company looking to invest in Canada want to come to Alberta, when money is being taken away from all the important stuff like Health, Education and Infrastructure, and tax breaks are given to huge corporations, tax money which should go towards supporting our society in Alberta.
T6E	Education and Health Services.	In non-essential service areas. It is also probably time to implement a sales tax in the province to raise funds to support budgetary shortcomings.	Alberta has long needed to diversify its economy. The need for diversification has become increasingly obvious as the move to limit the use of fossil fuels globally in the coming years and decades is inevitable. Supporting diversification and innovation is key to supporting job creation and economic growth.
T2T	Education, health, creative industries	Please get rid of the War Room and any language/ activities that pits Canadians against each other. Also, I think there should be consideration of a sales tax. Perhaps small but we cannot rely on oil & gas revenues as it is a finite resource. Even energy companies know that and are beginning to look at other revenues include	Provide incentives for the creative industries, entrepreneurship and technology to diversify from reliance carbon-heavy industries. Preparing for the future is key. Looking back to what used to work is not beneficial.
T0K	I think we should spend our money on agriculture, education, and business sector. We need to increase revenues to go forward to dig ourselves out of debt.	I think we need to be harder on the rest of Canada and stop or cut significantly all the equalisation payments. I think the last government was extremely top heavy and we need to cut the fat from our useless spending and make people actually do a job. We have way to many people who don't have to do very much to make a large useless salary.	We need to make it possible for us to sell our products in an efficient economical way, from oil and gas to agricultural.

T5N	<ul style="list-style-type: none"> - health care - education - diversification of industries - green energies (we have energy resources - the world is increasingly looking towards green solutions. Qatar, an oil COUNTRY, is investing heavily into green energy solutions. That is the future. We have a wealth of people with transferable skills and knowledge, we have sunshine, wind, water and technology - we should be advancing in that area) 	<ul style="list-style-type: none"> - sales tax - increasing the corporate tax rates - ceasing operation of the war room - defunding private schools entirely 	<ul style="list-style-type: none"> - s.t.i.m.u.l.u.s spending - raising the youth minimum wage back to \$15/hour - diversification - stop focusing ALL of your attentions on only ONE industry - stop cutting public service jobs! How can you POSSIBLY claim to support job creation while actively seeking to decimate the public service? These things are directly antithetical
T3L	<p>Social services and public sector to support communities (especially marginalized groups). Diversifying the economy away from oil and gas. In particular, focus on supporting and attracting technology companies. Climate change and sustainability initiatives.</p>	<p>Stop providing tax cuts to oil and gas. Put in a provincial sales tax to generate new revenue for the provincial government. It isn't about finding savings but building a more comprehensive approach to managing and balancing the budget.</p>	<p>Diversifying the economy away from oil and gas.</p> <p>In particular, focus on supporting and attracting technology companies. The removal of incentives for technology and start-up companies was a huge mistake.</p> <p>Companies that were looking at cities like Calgary are now going elsewhere in Canada and the province is not providing any incentives and simply do not believe in the direct the provincial government is taking out province.</p>
T0H	<p>by making education more affordable in the province. there are alot of out of work oil field workers who should focus on reeducating themselves for a different career that needs to be attainable for them.</p>	<p>a PST. a provincial carbon tax.</p>	<p>by not just focusing on oil and gas. we have a young workforce they are adaptable.</p>
T8h	<p>Education, health care, social services. More specifically ensuring small class sizes, adequate teacher compensation and adequate facilities. For health care, ensuring adequate staffing levels, fair discussion with unions, safe clean facilities. Also making sure social services such as medication subsidies and resources are not made inaccessible to our populations most vulnerable.</p>	<p>Corporate handouts, examining wages of top government organizations.</p>	<p>Funding infrastructure, health care, education, social services.</p>
T4B	<p>Education (PUBLIC education, not private education!), health care (again, PUBLIC health care, not trying to create a two-tiered system!), other social services, supporting communities and families, funding for families with children with significant needs (e.g., PUF, FSCD), organizations such as parent link centres, diversifying the economy, fighting climate change.</p>	<p>By not giving massive tax breaks and handouts to the oil and gas industry and large corporations!! By getting rid of the "war room"! By reducing the extremely high salaries and spending accounts of high-level government employees. By introducing a small sales tax rather than cutting essential services.</p>	<p>By not cutting essential services in education, health care, and other social services. By diversifying the economy so that Alberta is not relying solely on oil and gas; oil and gas is NOT going to be the way of the future and we need to be prepared.</p>

t3c	<p>Social programs diversified investment (beyond oil and gas) Retraining - ie funding attendance at post-secondary Transitioning reliance on oil and gas in Alberta to help shield us from the swings (and upcoming downturn) in this industry Spending on increasing income for example from taxes - income in good years from oil and gas used for infrastructure and other programs and reliable income from taxes used for day to day services to create stable</p>	<p>I am not sure I think the government should be finding savings. In times of economic need, social programs are of utmost importance to help transition and support people in times of need. It costs a lot more to let people fall into disaster and then have to step in to help instead of keeping them from getting there in the first place.</p> <p>Not using taxpayer dollars to fight worldwide messaging and scientific evidence on the critical and urgent need to reduce reliance on oil and gas.</p>	<p>Provide funding to transition the economy with programs to retrain out of work individuals in new trades. Support development of programs at post-secondary institutions that train people for trades to help us transition our economy away from a massive reliance on oil and gas.</p> <p>Provide funding to develop non-oil and gas-related industries to help diversify the economy.</p> <p>Institute a sales tax where low-income Albertans will get exempted and a carbon tax where the tax is fully returned to Albertans - to help change decision-making habits.</p> <p>Don't give tax breaks or giveaways to industry without a guaranteed plan to achieve the outcomes that are expected. <u>Money to be refunded otherwise for example</u></p> <p>By not cutting education and healthcare budget which in turns cuts jobs</p>
T2K	<p>Education Health care Social services</p>	<p>Get rid of the war room</p>	<p>Take a look at what the NDP came up with and follow their plan</p>
	<p>Public education Health care Post secondary education Cities (in that order)</p>	<p>No tax cuts to corporations (especially as they accomplished nothing) No wasting money promoting industries that have their own PR budgets Limiting travel expenses from MLAs Introduce a sales tax! (Increase revenues and savings are more easily found)</p>	<p>Through investment in education at all levels but not in specific "job training" as this fails to adequately equip people in our present day economies. Through investment in cities (Edmonton and Calgary) as the drivers of our economies. Through finding ways to diversify our economy so that we are not putting all our eggs into a 20th century basket (aka fossil fuels). So support creative industries and renewable energy economies and ways to mitigate the effects of climate change.</p>
T6E	<p>I think the government should consider spending on our very important institutions such as public education and healthcare. The health of the province depends on each Albertan and each one of us should be given the same opportunities despite financial inequalities.</p>	<p>I think the government could find savings by re-instituting tax revenue from the wealthiest among us and from big corporations who can afford to pay taxes.</p>	<p>Putting money back into healthcare and education and by bringing back positions that have been cut due to your devastating budget.</p>
T1K	<p>I think the government should focus on Education, keep the program for kids like Family Center, school. Support educational programs for children. Education is the base in early year for a great future.</p>	<p>Stop give too many money the support drug addiction , also a lot people</p>	<p>I think to work more in tourism, transportation.</p>
T2J	<p>Post-secondary education, education, health; innovation</p>	<p>Stop giving tax credits to corporations; get rid of the oil & gas war room!</p>	<p>Innovate the economy; invest in innovation in the province (Alberta is more than oil & gas)</p>
T8L	<p>Education and Health care. Please reverse all cuts and freezes. I am happy to pay a sales tax to pay for this and to have tax rates comparable to the next lowest province. I would love to see a much higher tax rate on earnings over \$250,000.</p>	<p>ending subsidies to fossil fuel related industries, reversing corporate tax cut, cancelling funding to build highways and freeways. Eliminate all standardized testing. Legislate the end to free parking. Charge full cost for every km driven in private automobiles.</p>	<p>restoring tax breaks for tech and creative industries, investing in infrastructure projects including public transit and active transit networks, green energy etc</p>

T1k	Keep programa for children like the family center. Programs for dance Art	Stop giving money to programs that support drug addiction.	Support educational programs for children! Education is the base in early year for a great future.
T3B	Education, healthcare and public transportation.	Focus on cutting AHS administration and not frontline services. For example, AHS Managers have their CARNA annual membership paid for by AHS, while nurses pay for their own membership.	Build great cities that will attract new businesses (i.e. build the Greenline LRT).
T6W	Public education matters. Every child deserves access to quality education with the appropriate resources to ensure their success. The government should NOT fund private and charter schools, this is creating a two-tier system that will ensure the success only for the wealthy.	Carbon tax. Combining public/catholic school systems and find administrative efficiencies. No funding to private and charter schools.	Supporting alternative energy industries. Spending on infratstructure projects.
T6C	The government should focus on climate change protesters who are impeding the growth of our economy. Spend money on research and development sector, the new start up businesses and our oil industry.	Each department should save. The savings should go in a reserve and if a particular department needs the money in the future then they can request from the reserve pool. Stop creating unnecessary employment in government departments. Allow your employees to make decisions. Cut down the red tape and bureaucracy. A lot of businesses and residents waste their time on bureaucracy. Work with the federal government and the municipalities to cut down on red tape.	How about refining our own oil here in Alberta and selling to rest of the country? If pipelines are not getting built then we can still sell our resource by refining it here in our province. That will not only create jobs but also will result in economic growth.
T9S	Health, Education, Jobs, Making life easier for Albertans instead of harder. Make those organizations receiving public funding responsible for their spending. Make those organizations and the overall govt responsible for finding efficiencies in the ways they do business instead of always finding the money on the backs of their employees and those that pay taxes, etc. Put some priorities on the group of taxpayers that make enough to pay their way but aren't rich, as this is currently the group that is the most affected they make enough but not enough and support the rest while suffering the consequences for their own families but there is no place to turn for them. Stop prioritizing programs that promote bad behaviour in society. Raise the limits of what is considered low income. The reality is that what is considered low income currently is too low and there are many individuals suffering out there and aren't able to afford to live day to day. The govt should not be taking the blame for everything that is going on. If people want everything then it has to be paid for somehow. Stop supporting unnecessary programs, focus on what is important day to day, think differently and come up with some new ideas (look to other successful countries if necessary to see how they do things), work on putting expectations in line within govt and outside, market programs more strategically.	Business efficiencies, cutting out unnecessary programs, stop making programs that reward or continue bad behaviour a priority, stop increasing funding if funds are not appropriately accounted for	Make organizations accountable for their spending. Put programs in place that allow organizations to reward all employees and make lives better instead of only the top 1-2%. Think outside the box and come up with some new incentives and tax regimes that are appealing to all. Support small local business. Make Alberta appealing to Canadian investors as well as international investors. Support buying local.

T3H	<p>Getting our natural resources to market. Fighting the federal gov't tooth and nail on the ill conceived carbon tax. Whatever it takes to stop the exodus of major projects/investments in our province.</p>	<p>How about just getting our dollars back from the ridiculous equalization program. Leave seniors, nurses, etc. alone. Following is email I sent to 17(1)</p> <p>With regret I feel compelled to have to send this email...</p> <p>17(1)</p> <p>Your provincial government's plan to eliminate benefits for senior's dependents has really hit a nerve.</p> <p>I truly hope your government re-considers this action as you are targeting a group of people that are "low hanging fruit" and do not get much sympathy from the majority.</p> <p>I have supported this program for the last 40 years of my working career and now when I can realize the benefits, you are taking them away for the sake of saving \$36 million from your budget. I doubt \$36 million is even a decimal point in your overall budget calculations.</p> <p>I would suggest your government focus its energy elsewhere when it comes to helping the province's bottom line – i.e. equalization payments?</p> <p>For every action, there is a reaction. I have been a loyal conservative voter my whole life. If your party continues on this path, I will never vote conservative again. There is a principal here that I have to speak up about so as to keep my own self-respect.</p> <p>Regardless of how incompetent I think the other parties are</p>	<p>Unfortunately confederation is a bad joke - not working for Alberta at all. I would say the quick answer is to separate and take back control of what we have. Alternatively, close the taps for whatever period of time is required to get these other provinces acting the way confederation was meant to. Harsh reality may bring back some common sense.</p>
T6X	Primary Education, Health Care and Infrastructure	Reduce funding for Post Secondary Education, Increase fees	Increase government spending on Infrastructure. Give incentives to oil companies.
	Public education, infrastructure, healthcare	Maybe lower the size of tax cuts in order to increase revenue?	IT, renewable energy, infrastructure spending
T6e	Supporting public education. Small class sizes, well funded accessible public education, excellent teachers. Don't cut education budgets. These are the most vulnerable members of our communities and the future of our society.	Keep inhouse counsel and stop farming out legal work to expense private law firms.	Support higher education. A highly educated work force will bring tech and new energy sector jobs to Alberta. Support public education at the primary level. Small class sizes, and happy healthy children lead to lower costs down the road.
T0G	<p>Seniors and disabled Albertans. Seniors receive less than minimum wage, & yet a lot are trying to stay independent in their own home. Majority are under poverty line.</p> <p>Health care, remain or make improvement oft current AHC.</p>	Keep money in Alberta rather than support 3rd world poverty.	Give small business incentives, more businesses would be able to hire, p/t or f/t employees.

T0B	Supporting small business, job creation supports, infrastructure projects, health and education.	Health system changes. Controlling salaries.	Tax incentives to job creators. Apply reasonable regulation, but pull back in areas that restrict without cause. Control wages in public sector.
t6I	Animal protection.	money given to private business	supporting local businesses
T8S	Open access, non-tiered healthcare and social support for ALL Alberta.	Continued efficiencies in our current healthcare system. Slashing funding and mass-privatization are not the solutions. Contracting out some services such as hospital transfers and the logistics of moving medical equipment and supplies will likely save money. Selling off huge chunks of AHS will result in a weaker system. We have one of the best and most efficient cost-per-capita systems in Canada. It is at the forefront of most medical innovations due to its close ties with the universities. That research power is at risk due to the decreased funding the education systems now have from the UCP's cuts.	By not freezing wages. A wage freeze with continued provincial inflation is a wage cut. Combine that with all other service increases and the result in a weaker economy because people's wages go straight back into utilities and feeding their families.
	Adapting with the changing climate, environment, healthcare, humans, education, the arts. Basically redo everything that the UCP has eviscerated in the past 3 months.	Not giving oil companies huge tax breaks for a start. Maybe tax the wealthy just a teensy bit more?	Move towards sustainable energy. Look at what the rest of the world is doing - Instead of pretending that a dying industry is going to bring back jobs for the small percentage of the population that held them in the first place.
T4R	Daycare, road safety, and reducing crime.	Education. Stop retirees from double dipping, by lowering their pay scale this would discourage them from returning to work and open jobs for new teachers.	See above.
T8N	Health care and covering the cost of prescription drugs.	Eliminating the over abundance of Management positions in the public sector that cost millions of dollars. Front line staff do the work and Executive staff guide policy. Too many managers!	Focus in innovative training in new industries for young people.
T2G	Education, Climate Change and Transportation	Employee efficiencies. Too much red tape and lazy staff	Tax credits/incentives for tech jobs and other green industries
T8S	SOCIAL SERVICES - EDUCATION + HEALTHCARE + AFFORDABLE HOUSING + MENTAL HEALTH	Cut corporate taxes. Trickle down therapy has NEVER worked.	Educated + house people. Robustly. Thoroughly.
T8S	SOCIAL SERVICES - EDUCATION + HEALTHCARE + AFFORDABLE HOUSING + MENTAL HEALTH	Cut corporate taxes. Trickle down therapy has NEVER worked.	Educated + house people. Robustly. Thoroughly.
T3B	Flood mitigation. In particular upstream flood mitigation on the Bow River.	Travel expenses for Premier Increase taxes to big businesses	The government should provide programs to support vulnerable populations within Alberta and not be so focused on business.
T2Y	1. Fair Deal for Alberta in this Canada. 2. Get jobs back in Alberta. 2. Fight misinformation on oil industry and carbon tax. 3. Build pipelines. 4. Infrastructure.	1. Public sectors employees / unions contracts & size. 2. Identity based groups funding (i.e. gender based, nationality based, race based, etc.). 3. "Art" projects funding. 4. Economically unfeasible "green energy" projects funding.	1. Cut taxes for small business and encourage shared income. 2. Actively lobby foreign investment in the oil patch. 3. Actively mediate deals with the Chinese and Canadian natives for pipelines and for refineries. 4. Force/legislate O&G operators to P&A "orphan wells". 5. Invest / allow tax breaks for new technologies in the oil and gas industry.

T2J	People - their health, education, and well-being. Infrastructure - our roads, bridges, buildings. Keep upgrading our energy system based on clean burning natural gas. Wind and solar are unpredictable and inefficient.	Give everyone a tax cut, not just the big corporations. The trickle-down effect is a fallacy. Put more money in people's pockets, they will spend it, and the economy will grow. Also, please don't be hoodwinked into spending money on "climate change" and incentives for electric cars, solar panels and wind farms. In 25 years when these things break down, there will be no money to replace them and we will have a massive landfill problem getting rid of that junk. These initiatives are only political talking points and expensive ones at that.	Build that pipeline and we will be swimming in money. We need to make more money and grow the economy, not reduce the economy. Cut-backs will result in a negative economic atmosphere and a shrinking economy. Everyone is important in the overall economy, not just big business. We need a healthy, well-educated population to create the economic juggernaut of which Alberta is totally capable.
T5B	Education, Health, Public services	Managing resources better, supervising expenditures	Investing in more sustainability-related jobs, slowly transitioning the workforce to other areas beside oil. Help small businesses with incentives...
T6R	Environmental Initiatives (Carbon reducing inventions)	Public Employees Unions/Overhead much too high.	Investing in new technologies and environmentally wise inventions
T5x	Let's pump some public money into healthcare, education, and major transit projects	Tax some billionaires and billionaire corps and our budget will be balanced in no time	Incentivise growing industries like green energy, technology, and film through grants
T2Z	Healthcare, Lowering taxes	sending money to refugees	Build pipelines
T0G	Fully fund education. Increase based on student enrolment. Continue to fund \$25/day daycare. Increase funding for Healthcare.	Get rid of the War room. Cut MLA and Premier salaries and perks	Fund diversification of the economy. No more tax breaks for oil and gas
T8A	Education, healthcare	Corporate handouts	Diversify economy
T4P	public health and education	Rather than find savings, consider a low sales tax, like 1-2%. that would ensure that all Albertans share the burden without any one group or population bearing the brunt alone. Also, consider not spending millions of our hard-earned money on consultants, like Ernst and Young, as this money could be far better spent on investing in Albertans. It is very frustrating to see my money wasted on this type of thing. Those millions could go a very long way toward helping families put food on the table. Also, families like mine are already saving the Alberta an estimated \$4 billion in health care costs by bearing the brunt of care and costs associated with elderly and terminally ill family members who are living in our homes. For those of us who are informal caregivers, when will we see the savings trickle down to the frontline informal caregiver level to support our ability to continue to save the government \$4B?? The \$2M the government just spent on Ernst & Young could go a very, very long way toward helping us.	Start by recognizing that putting all of our eggs into the non-renewable energy sector will just bury us even more...we are at the mercy of American bullies and global monopolies, so lining the pockets of Alberta companies that have no control over the global market isn't going to stimulate economic growth. use that money, instead, to reinvest in creating renewable resource sources, in educating the workforce currently tied to oil and gas to learn skills to support these new energy sources, and start to invest in Albertans instead of in companies that aren't going to stick around our province if it's not "economically feasible" to do so. They will simply take our money and run to a cheaper place. Finally, learn from history. Corporate tax cuts aren't going to stimulate growth. As Einstein said - Insanity is doing the same thing over and over again and expecting different results. Try something new for a change. And learn from those countries and economies that are trying something new and thriving because of it.
T0L	Funding public education and rural policing without downloading it into municipalities.	Not funding private or charter schools. Not letting oil companies get out of paying municipal taxes, paying full lease agreements, or completing mandatory abandoned well remediation properly.	Treat all sectors equally with out favouring the oil and gas. Make sure public education is the priority as that is our future workforce. Incentivise apprenticeship programs to draw more youth into the jobs that are needed now.
T1V	Health care, education, are some of my top priorities. We also have the less fortunate that we can't forget about.	REDUCE the size of government. Management is top heavy and steps should be taken to eliminate unnecessary positions.	Reducing red tape and costs for small business

T7s	Debt repayment	Institute private healthcare options alongside public options.	Bring back flat 10% income tax
	There is overlap and duplication in a number of departments. Review the grants, contracts and programs relating to non-profit organizations, and make some serious reductions. You have Seniors and Housing, Children and Social Services, Culture and Multiculturalism and others. You need to minimize or eliminate the duplication. Some of the same services are being provided by non-profit organizations themselves. Focus on the need to have versus nice to have.	Eliminate some programs (and or ministries)and/or consolidate into a single program area (or ministry). Consider transferring functions to nongovernmental organizations (with some sort of fee for assuming the services/programs). There are excellent organizations in the non-profit sector that could take over the functions of some of the ministries like Culture and Multiculturalism. Organizations like Calgary Chamber of Voluntary Organizations and the Edmonton Chamber of Voluntary Organizations offer programs duplicating the government. Why does government need to continue doing what others are doing?	Get out of the way of business. Continue to cut red tape. Refocus/redirect wasted resources on non-impact programs in the "fluff" ministries like Culture and Multiculturalism, and redirect to new value-add industries like Artificial Intelligence, Medical Technology, Renewable Energy, Bio-tech. Focus on technology and commercialization through partnerships with the private sector and universities. Bring in experts from other countries to help us diversify our economy into high-value sectors. Stop wasting money on fluff programs and ministries and put into ministries with a mandate to move the economy. Set up crown agency responsible for the tech/value-added economic diversification initiatives. Staff the organization and board with seasoned private sector individuals.
T5r	Education, healthcare, public service, aish	Stop giving tax breaks to oil companies. Use this tax money to support our public services. These tax breaks have not created jobs.	Diversification, including green technologies. Bring back the tax credit for people getting solar panels and other green tech. This will create jobs.
T6E	Infrastructure Healthcare Education Emerging industries like technology and renewable energy Social services	But not giving tax breaks to oil and gas corporations But goingFor savings are not the right plan of attack. Spend more. Keep people employed and contributing and in doing so keep businesses alive and taxes flowing into coffers	Focus on new markets, emerging markets, the arts and social industries like education, healthcare, small business grants, etc Keep people working. Austerity measures are proven to be more harmful than not
T6E	Infrastructure Healthcare Education Emerging industries like technology and renewable energy Social services	But not giving tax breaks to oil and gas corporations But goingFor savings are not the right plan of attack. Spend more. Keep people employed and contributing and in doing so keep businesses alive and taxes flowing into coffers	Focus on new markets, emerging markets, the arts and social industries like education, healthcare, small business grants, etc Keep people working. Austerity measures are proven to be more harmful than not

<p>Education, Health, public/social services, alternative energy. If we keep going on the trajectory that this government has planned for us, we will forever be victim to the boom and bust cycles of the natural resource sector. While I agree that it is not something that we can give up entirely, serious and targeted steps need to be taken to diversify our economy.</p> <p>I would also note that the current cuts and lack of spending on public services will lead to a serious brain drain for Alberta. Both my husband and I are well educated, hard working, professionals in our communities and have serious intentions of leaving the province due to the values and steps taken by this government. This is no longer a place where we want to raise our children.</p>	<p>From the money gifted to the natural resource sector. Also I would keep in mind that it's entirely natural for a government to be in deficit and that there is no extreme push to lower spending all at once. Government savings should be gradual. Additionally, further investing into diversifying the economy (i.e. grants or scholarships to new sectors or alternative energy) will help boost our economy over the long term.</p> <p>These cuts that your government is making are short sighted and severely harming the most vulnerable members of our community.</p>	<p>Through investment into public services, health and education. Additionally, we should see support for diversification in the energy sector. Investing into local infrastructure and services is the best way to ensure more jobs, thereby leading to more disposable income, thereby leading to increased ability for individuals to engage with the economy and more economic growth. Please consider the failed attempts at austerity in Europe after the 2008 recession.</p>
<p>Education. I am very disappointed that the government funds private school by 70% when public schools need money to support learning in complex and diverse classrooms. More EA support and school counselling is needed. Public schools cannot refuse students (publicly funded Catholic schools can refuse students as can private schools). If schools are funded according to their results this could be devastating for schools where there are high needs.</p> <p>We need public schools that serve the needs of students (choice within the public system). If Catholic schools were abolished (should religion really be taught in a publicly funded school?) and all dollars went to creating awesome public schools this would be good for all students. Public schools could then offer basic curriculum with specialized focuses (sports school, arts school, tech school, drama school, project based learning, Christian school, Leadership Academy etc.)</p>	<p>Amalgamate Catholic Schools and Public Schools into one school system (less central office staff, would have to fill all schools in a community before building another school). DO NOT FUND PRIVATE SCHOOLS. DO NOT OFFER A VOUCHER SYSTEM FOR HOME SCHOOLERS.</p> <p>To save on overtime in hospitals - open up more part time and full time nursing positions.</p> <p>Have Nurse Practitioners work with physicians to manage healthy check ups and minor concerns (screening). They are cost effective and can take time to provide education on healthy choices etc. which could save health care dollars if we have a healthier population.</p> <p>Ensure people on AISH are severely handicapped.</p>	<p>Diversify. Be a leader in new technology (educate our young people). If oil is not sustainable we need to adapt and change with the times.</p>

	<p>Education. I am very disappointed that the government funds private school by 70% when public schools need money to support learning in complex and diverse classrooms. More EA support and school counselling is needed. Public schools cannot refuse students (publicly funded Catholic schools can refuse students as can private schools). Be a leader in new technology (educate our young people). If oil is not sustainable we need to adapt and change with the times.</p>
T6E	<p>I think the Alberta Gov't should focus on social programs such as AISH as they are hardest hit by all the cutbacks.....the Gov't should be serving the people not the government. They should certainly not make it worse for those who already have it the toughest.</p>	<p>The Albert Heritage Fund.....it belongs to all Albertans.</p>	<p>I think the Gov't should support job creation and economic growth in the area of renewable energy sources. The climate crisis is real and very scary. The Alberta Gov't must not live in denial about this.....we must make the transition and start now. It is ignorant to ignore this. How dare we treat future generations this way.</p>
T6W	<p>Public education</p>	<p>Cutting down expenses for Alberta government employed individuals with a salaries higher than 60'000 per year. - Food, Transportation... Reduce unnecessary traveling, video conference is a thing</p>	<p>Good public education with solid funding. This will create smart kids. Those smart kids will create businesses with their smart ideas. And that will drive the economy</p>
T1h	<p>Healthcare! Social services, stimulating renewable energy sector and green innovation.</p>	<p>Roll back the corporate tax cut to what it was before, close down energy war room</p>	<p>Invest carbon tax in renewable energy sector.</p>
T7P	<p>As a government devoted to Christian values it would seem that concern for the less fortunate should be paramount. As such, education, health and social services should be a priority and inviolate.</p>	<p>The first "saving" should be cancelling the proposed corporate tax cuts. As a companion action, there should be serious consideration given to a sales tax. Such a tax would be a way of spreading the tax load more fairly as people with money to spend would be taxed at a rate that was equal to their spending; the more you spend, the more revenue is generated for the government.</p>	<p>Incentives to new technologies should encourage people to create businesses that are not so dependent on fossil fuels and that push the boundaries to new and growing fields in addition to established, but waning industries.</p>
T5H	<p>Spend money to support vulnerable Albertans, e.g. those on AISH and Income Support and children who are hungry; No one wants to be mentally or physically unwell, disabled, or unemployed, or living in poverty and we should not be stingy in our support for those with very difficult daily lives. We should help them live their best lives.</p>	<p>Disband the "war room" it's an embarrassing waste of money; Reduce the high cost and heavy impact of homelessness on people, our police, health and social systems by investing in affordable housing and rent supplements for Albertans with low incomes to be able to access market housing.</p>	<p>Invest in affordable day care and help women, especially solo parents, gain employment that provides a livable income; Provide incentives to expand the tech industry, movie & arts industry, expand local food production through greenhouses, expand solar energy usage, support small business and social enterprise development. Invest in the non-profit sector with subsidies to create more jobs, especially to employ Albertans who face barriers to mainstream employment. Support Indigenous enterprises.</p>

T4V	Government should not cut any programs for Persons with disabilities including day programs and home support.	Cut the red tape in health care too many high paid bosses on not enough worker that work with the sick Why do we have to go to two or three doctors to get referred to a specialist that is such a waste of money cut the red tape there as well. This would save the Albertans a lot of money. Probably though the doctors would like it.	Build the pipeline get the oil moving
T2N	Social programming, expanding medical care/services, higher education, providing full-time work opportunities for university/college graduate	By taxing big corporations, curbing rampant and predatory capitalism, investing in the economy and not hoping that greedy business people will use trickledown economics	By investing in the economy, fund internships and post-graduation positions and holding corporations accountable
T3G	Healthcare	Not healthcare	Yes
	helping the vulnerable seniors and disabled	adapting all the NDP accomplished before he was elected	resign
T9A	Housing and Aish.	Take back the 4.7 billion you gave in welfare to rich oil corporations. Get rid of the stupid 30 million dollar Energy propaganda board.	TAX THE RICH OIL CORPORATIONS NOT THE POOR!!! See if you can live on 1600 bucks a month Kenney
T0K	Should privatize more healthcare and lower spending.	Healthcare, Education, Infrastructure—short term pain for long term gain	Lower taxes cut red tape. Make the province competitive to other spots in North America in regards to tax rates and red tape.
T1Y	Education, healthcare, and education...	No more hand outs to large companies. Trickle down economics is not a real thing. Any extra money stays at the top as insurance for the super wealthy.	Invest in education and renewables with what we have left of the fossil fuel industry, and any other prosperous industries we have. Short sightedness will destroy Alberta, if it hasn't already.
T1H	<p>maintaining medical access and treatments... and improving access to emergency treatment in larger cities where wait times are in the hours...trying to reduce wait times for surgeries to remediate painful conditions.</p> <p>education- maintain front line workers and student/teacher ratios to ensure Alberta students continue to get a quality education.</p> <p>reduce taxes to the middle class.</p> <p>reduce grants and incentives to big business at the expense of increased taxation on the average family.</p> <p>deal with this nightmare re SCS's- the fallout to communities and access to the pillars required to assist addicts who want to rehabilitate</p>	<p>Cut the fat. Start with government. If there are cuts to basic level services such as health and education, do it at the administration level. Do not trim front line workers.</p> <p>Cut some of the incentives and grants to big business. Of course job creation etc is important but today the average family is struggling- with crime, with financial sustainability, with access to effective health care in a timely manner...and the addition of extra expenses not previously required- eg medical exam expenses for those over 75...</p> <p>Senior health plan should never have covered spouses, children etc who are not seniors... So some cut backs make sense. Some just do not.</p> <p>cut back on expenses to build new...USE the space which is already there. Get creative with the use of what is there.</p> <p>What about pensions to government- expense accounts etc?</p> <p>There are so many abuses of foster care payments and " relief care" payments made. Why can't those be taxed? They are wages earned....</p>	<p>I understand the desire to sink money into big business to lure them here... to create jobs. However, are those jobs - \$ for \$ bringing the necessary economic growth to Alberta or are they merely paying a large portion of the wages for the employer?</p> <p>As the mother of a sole proprietor, I know he pays a great deal in taxes. There is little provided for him in support. Once he can hire a few employees and incorporate, there might be more. BUT, there are a great many self-employed sole-proprietors out there who are paying a great deal in taxes with little support.</p>

T6M	<p>To help fit crime & promote rehab, keep illegal drugs out of jails by whatever means necessary. Smarten up the justice system. I know of a case that has been before the courts for 10 years because of a bad decision made by a Master who believed a lying lawyer despite no evidence ... waste of court time for all parties ... should have been guided to negotiate a settlement out of court.</p> <p>Keep pushing for the new & expanded pipelines. Keep the interest cost on prov'l debt in the media to help sell budget balancing.</p>	<p>17(1) I believe that all public servant salaries should be cut by at least 5 %, with higher pay levels (management) cut by a greater %. Some staff could still be cut, but this pay cut is a better alternative than widespread staff cuts with big severance packages.</p> <p>Stop the waste of money with the anti-oil lobby investigation! Charge an admin fee of e.g. \$25 per emergency room visit to slow the attendance by those with non-emergency cases. Consider bringing back a monthly health care fee. Ban e-cigarettes!</p> <p>Consider to swallow hard and charge a temporary prov'l sales tax.</p> <p>Offer provincial debt to Albertans to keep the interest to be spent here. ATB (& Credit Unions?) could administer.</p> <p>Further reduce spending on non-essential items (culture & leisure).</p>	<p>Cut personal income taxes before another cut in corporate taxes. Consumers spend extra money here while big corporations are still leaving Alberta. The small business corporate tax rate gives them an unfair advantage compared to non-incorporated small businesses.</p> <p>Tear down interprovincial trade barriers. Ensure that large utility companies are not unfairly advantaged; smaller providers and REAs should be encouraged.</p>
T1H	<p>maintaining medical access and treatments... and improving access to emergency treatment in larger cities where wait times are in the hours...trying to reduce wait times for surgeries to remediate painful conditions.</p> <p>education- maintain front line workers and student/teacher ratios to ensure Alberta students continue to get a quality education.</p> <p>reduce taxes to the middle class.</p> <p>reduce grants and incentives to big business at the expense of increased taxation on the average family.</p> <p>deal with this nightmare re SCS's- the fallout to communities and access to the pillars required to assist addicts who want to rehabilitate</p>	<p>Cut the fat. Start with government.</p> <p>If there are cuts to basic level services such as health and education, do it at the administration level. Do not trim front line workers.</p> <p>Cut some of the incentives and grants to big business. Of course job creation etc is important but today the average family is struggling- with crime, with financial sustainability, with access to effective health care in a timely manner...and the addition of extra expenses not previously required- eg medical exam expenses for those over 75...</p> <p>Senior health plan should never have covered spouses, children etc who are not seniors... So some cut backs make sense. Some just do not.</p> <p>cut back on expenses to build new...USE the space which is already there. Get creative with the use of what is there.</p> <p>What about pensions to government- expense accounts etc?</p> <p>There are so many abuses of foster care payments and " relief care" payments made. Why can't those be taxed? They are wages earned....</p>	<p>I understand the desire to sink money into big business to lure them here... to create jobs. However, are those jobs - \$ for \$ bringing the necessary economic growth to Alberta or are they merely paying a large portion of the wages for the employer?</p> <p>As the mother of a sole proprietor, I know he pays a great deal in taxes. There is little provided for him in support. Once he can hire a few employees and incorporate, there might be more. BUT, there are a great many self-employed sole-proprietors out there who are paying a great deal in taxes with little support.</p>
	<p>Support for the vulnerable. Health care, education, advanced education, prevention and early intervention. Investing in these things saves money in the long term, and actually improves quality of life.</p>	<p>Stop the useless "panels", cancel the war room, quit undoing good work, and solid programs, and quit giving the richest people all the tax breaks. Learn there is no such thing as trickle down economics.</p>	<p>By creating an environment where people want to work. One with good schools, health care, arts, social safety net, clean environment and a culture of respect for diversity.</p>
T8N	<p>Reducing excessive non-productive spending on health care and education</p>	<p>Reduce pay and pension of government employees</p>	<p>Reduce bureaucracy</p>

T6T	Health care Infrastructure	Contracts Performance & absence management of government employees	I'm not sure this is as much in the government's control as you like to think it is.
T2Y	Education Municipal infrastructure Safe injection sites Health care Green energy Vulnerable people	The war room for oil industry.	Diversification Support tech start ups Green energy Higher education
T3H	Education (see below) Health (see below) "Rat Patrol" (billions in dollars of crops/damages saved by the work of this specialized team) Police, ambulance, paramedic and fire critical services Infrastructure (see below) (A BIT OF BRAINSTORMING AND/OR DISCUSSIONS WITH OTHERS THAT I AM THINKING WILL GENERATE SUPPORT FOR AND/OR IMPETUS FOR OTHER CREATIVE IDEAS. SIMILAR TO ANY COMPANY, GROUP, ETC. WE ALWAYS NEED TO STRIVE FOR EFFECTIVENESS AND EFFICIENCY WHILE CONTINUALLY IMPROVING IN A POSITIVE MANNER OURSELVES AND EACH OTHER. THANK YOU FOR ALLOWING ALBERTANS TO INPUT!!!)	1. Streamlining, elimination of redundancy/inefficiencies, and/or consolidation of government bureaucracy in all Ministries (similar to AER review). Consideration for zero based budgeting and/or non-profits type "Programs" accounting. Prioritize elimination of 'air jobs' created by previous NDP government and/or redeployment of work force based on skills, qualifications, designations, experience and/or knowledge supplemented/aided with electronic position descriptions, interests, upgrade training(s), performance reviews/goals and/or electronic resumes. Strategic use of AI, data analytics and/or audits (esp. follow the money spending and time usage). Temporary hiring freeze with urgent/positions requiring sign-off/approval by Ministers and ADM's. Elimination of defined benefit pensions instead moving towards matching/RRSP plans. 2. Health care system: more upfront MRI's/machines to eliminate misdiagnoses and/or time wasting; elimination and/or early retirement of incompetent/deadwood doctors, nurses, et al in the system through well-designed patient electronic/AI surveys/ratings, peer/professional association reviews, data analytics et al (e.g. doctors not professionally aware of infection symptoms would lead to higher 'Down-the-road' costs and/or patient issues); bring back use of nurses aides and/or 'Candy Striper' volunteers for menial tasks to free-up higher paid/qualified nurses; eliminate 12 hours shifts and/or seniority overtime by going to 8 or 9 hour shifts for hospital personnel and better inter-generational mix of staff. 3. Education system: Global Licensing for Teacher Materials/Curriculum/Software (especially/example. Educational books, Music, Disney, Chrome Books, Microsoft Office 360). Designated/Program funding (e.g. Teachers aids for	Bring \$210 billion CPP to AB to wisely invest say 1/3 in Alberta revenue generating projects. Sample Project: Nuclear reactors (similar to ON and SK programs) way up north (for safety and security reasons) in willing/able communities especially with training and/or jobs for qualified indigenous professionals/trades also. • Funding say JV one third CPP, one third Indigenous organizations, one third Industry. Revenue split 50/50 to CPP & Indigenous with Industry having first rights to say 50% of the power generated (barring force majeure and/or public system emergencies). • Electrical costs from nuclear deductible from taxes, royalties, etc. at higher level/percentage and likely would be offered to communities/Industry in the Far North to reduce onerous electrical transmission costs. Allows ability to stabilize the AB grid in times of peaks loads (e.g. frigid weather as happened in January). Changes in the Federal Equalization system as UCP currently pursuing so that all provinces can obtain infrastructure projects equally on say a per capita basis (e.g. LRT projects, hyperloop project trial for eventual use between Calgary-Red Deer-Edmonton-Fort McMurray for starters). Tolls on major road upgrades and/or improvements (similar to what BC did with Coquihalla) until paid for. Thinking more up north where Industry uses more and/or roads that for safety and highway accident/death reduction need to be improved (for example thinking of highway 8 to Bragg Creek). Roads with higher mortality/accident rates to be prioritized.
T1V	Providing Healthcare	Scrap the Canadian Energy Centre (war room). Private groups like CAPP or the Fraser institute can do this work at no cost to tax payers.	Tax incentives, and infrastructure investment.
T1V	Infrastructure, education - especially post-secondary institutions, health care, seniors' benefits, environmental protection	The so-called "war room" is a waste of taxpayers' money. Begin supporting the inevitable transition from an oil-based economy to a wider range of industries and enterprises.	Invest in green energy initiatives and IT businesses. Tax relief for small businesses, and greater taxation of large corporations and wealthy individuals.

T8H	Get to a balanced budget as soon as possible, so invest only on necessities like road repairs, add an extra lane to the QE2. Cut all middle management positions from all government run entities that have more than 2 levels of management, for example if there are 4 levels including the frontline workers, eliminate one completely, if there's 5 levels; cut 2 completely. Stop all LRT funding from the provincial government, let the city councils sink or swim on justifying their spending <u>directly with their own electorate</u>	1) Eliminate all non essential departments and their managers. Many of these government so called services have taken on a life of their own. Make all services be competitive in the same way that private businesses have to be competitive. Make all levels accountable for the jobs they are given to do on behalf of their employer; "the tax payers, the actual people and businesses that actually supply the funds"	By getting out of the way, except where necessary to enforce laws and compliance
A2B	Carbon tax	Carbon tax	Carbon tax
T0K	Getting economy back on track.Helping businesses and people hurt by economic times with financial support immediately using Heritage trust fund with grants or low interest loans.	Administration at all levels.Welfare recipients,aish recipients make them take drug and alcohol tests and part time work.Tax environmental groups.	Give short term loans for small businesses to keep employees working.Lower taxes on fuel get rid of carbon tax.And lower taxes overall will help with more money for more investment.
T2A	Debt	Government salaries	Refine our own oil, build pipelines.
T3Z	Education, police and emergency services, health care, infrastructure.	For one: we do not need a very expensive dry dam in Springbank. This is a ridiculous waste of taxpayer money just to appease a few of Calgary's most elite. The economic, social, and environmental costs are too high to justify this project now or ever.	We need to see support from the government in both private and public sectors, and across a variety of industries.
T3m	Early childhood intervention and education PUF funding - helping children and their families who have a range of needs - as children are our future . It's crucial we help children become active participants of future society. Without the PUF program, children Won't get the support they need to be properly educated for their ability to work and help the economy.	Infrastructure	Fostering involved early childhood education and meeting the needs of ALL children
T8N	Healthcare, Education, Infrastructure, Technology	Smaller Government, less regulation, Administration levels of Health and Education. Cut maximum allowable expenditures by MLA's and other Bureaucrats.	Less red tape and regulations. Continue to try and attract more private investment in all sectors.
T7N	Enhance assistance to the poor and unemployed. Continue to fund post- secondary education as before. Work on diversifying the economy.	Reduce tax breaks to gas and oil corporations.	Support diversification by supporting and not cutting funding to post- secondary education.
T0L	Education and Health Care. Increase funding and turn back the cuts you have already made. These departments need stable funding that they can count on every year instead of the mess the UCP has made of the budget this year. And municipalities need a stable base of funding for communities.	Perhaps by not cutting taxes to big corporations? Reverse at least half of the tax cuts to bring more balance to the provinces finances. We need to have a grown up conversation about true tax reform in this province and having a sales tax. We need stable funding that isn't just reliant on oil and gas booms and busts. Also if we must pay a carbon tax call it a sales tax take the control back from Ottawa. In a province that is losing its collective mind over equalization payments why are we giving Ottawa yet more tax dollars?	Go back and review the job creation programs that started under the Carbon Tax. Progress was being made in jobs in green energy. We need a combination of Oil and Gas jobs and Green Energy to move this province into a stable financial future. Also stop slashing and burning government jobs. This government is dragging us into a situation where there are no public or private jobs.

T1L	education, health care, seniors, social services, infrastructure	Get rid of the war room. Let the oil and gas industry pay for their own propaganda. Alberta MLAs are the highest paid in Canada. Cut their pay. Pay for people over 60 to get the new shingles vaccine instead of paying for their doctors' visits, medications and hospitalizations. That would be cost effective. Take care of the vulnerable in Alberta instead of giving tax breaks to the rich.	Support innovation and alternative energy source initiatives. Stop giving tax breaks to the wealthy and corporations while cutting services to the rest of us. Support job creation for disabled persons and educational opportunities to the underemployed. Get with the people.
T5T	Job creation including the oil and gas sector Seniors - including the Seniors Plan (Group 66) Health Care Education	I have to be honest, our spending was/is out of hand and has been for a very long time and we need to get it under control. I do believe we have many redundancies within AHS, the school boards and all governments, including wages and benefits - a deep dive is necessary to determine efficiencies and cost savings. I do believe we need to be realistic when it comes to perhaps developing our own provincial pension plan and police force, I cannot imagine the cost of setting up and maintaining these necessities. The baby boomers are either retiring or planning their retirement with what they have contributed to the Canadian Pension Plan, don't mess it up!! As well, the Seniors Plan (Group 66) is being counted on by many as retirements are planned, look for efficiencies and perhaps some reasonable cost sharing, but a seniors benefit plan, including drugs, is needed. The current provincial government needs to watch their own spending habits including travel, spousal travel, etc., the PC government was well known for their spending concerning "entitlements", transparency is a requirement.	Stand up for Alberta, collaboration with all provinces and the Federal government. Listen to Albertans, be transparent. Pipelines
T2L	Supporting innovation with an eye to environmental benefits; we need to diversify our economy so we are not so dependent on oil and gas Job creation - Education - some classrooms are bursting with overcrowding; we need well educated students who are given the attention they require to succeed! -perhaps we could become a province whose post secondary universities are highly sought after due to innovation as well as research Health Services - because we all deserve to get the care we need.	Health services - ensure the cleaners at hospitals use sanitary cleaning methods. I have watched as they used the same dirty water going room to room. Makes no sense if we are trying to contain contagious germs. Cost savings should be realized with fewer people suffering from prolonged illness from being in the hospital - stop constantly reorganizing Alberta Health Services. Each reorg must cost a substantial amount. - keep front line workers workers. Lives are dependent on their care. Government pensions - the private sector has moved from defined benefits to defined contribution.	Supporting innovation with good science behind the ideas Eco tourism - growing trend Movie Industry - attract more big movies to film in Alberta Education - cannot be stressed enough
T6E	Green energy, public education and health system.	Taxing oil industry. Introducing a provincial tax. Auditing public education and health system to make it more efficient for the children and the patients.	Developing green energy (solar and wind), public transportation (train from Edmonton to Calgary for ex), renovating buildings to be more energy efficient
T8L	Education and healthcare	I would be in favour of a 2% sales tax.	Support innovative and progressive technology.

T0m	Education and healthcare as well as senior care, post secondary and infrastructure spending. Should also implement a pst as well as carbon taxes. Revenue is important!	Cut the war room, the communication neophytes that are employed by the ministers, they are terrible at what they do. Eliminate spending on private schools. Let the rich pay for their kids education out of their pocket. Don't fund religious schools, waste of money. Eliminate the writing portion of the diploma exams. Eliminate all standardised tests, they are not useful and cost too much.	Spend on infrastructure, borrow money to stimulate demand, Keynes is the way to go. Tax incentives for a variety of industries other than oil and gas. Diversify! Tax cuts to middle class would help more than a failed tax cut to American billionaires. We spend our money! Stop the trickle down nonsense! There is no trust in this government, there poorly planned policies has created another recession. Stop paying people off and threatening wage cuts. The Kenney Recession is caused by a lack of intelligence and dogmatic policies.
T4L	Health care stop cutting job and making wait times longer. Education- the cuts to education already have been atrocious and I don't look forward to what I am going to have to pay next school year	Top executives that do not need to be in there a position	Support technology and innovation
T5T	Community programs and services	Stop giving oil companies free money and handouts to all the UPC's buddies	Diversify the economy instead of focusing on a dying industry.
	Public Education (not private) and Healthcare	Add a small gst, this would give extra money instead of having to cut in other areas	Diversify! Move away from such a heavy focus on oil and gas and private sector.
T8N	Healthcare & Education	Unnecessary spending	By supporting the educational services
T4P	Education (Poor education , poor future) and Health care	Evaluating everywhere outside of Education and health care. But also school board consolidations taking in accounts for city , rural and indigenous communities. No one group representation has a stronger hold than the other. How much money is given by districts to staff to upgrade skills but then they go back into same role but draw bigger salaries. Example Masters degrees.	Alberta needs to diversify outside of only focusing on OIL. I don't mean this in a negative way. It's just to much can go wrong if the only source of revenue is all in one basket.
T0G	The police, the court system, especially family court support services in places that won't be served by a unified family court	Stop giving breaks to oil companies	Support the public sector, support small business, stop assuming that the big oil companies care anything about us or about job creation or quality of life. They care about their shareholders, and the shareholders care about money, not about Alberta or Albertans.
T8H	I feel that we need to look after our seniors, and investing in better apprenticeship programs	I am frustrated with the middle management in both school systems and health care. The front line - nurses and teachers need to be there, and maybe more of them, but get rid of the high priced bureauocrats, and people making stupid changes to curriculum. There is so much waste in both systems, but don't get rid of the front line.	Keep pushing for pipeline, negotiate better deal with Ottawa, (stop sending our hard earned money to Ottawa), make it easier for businesses to come here and new ones to open. Entrepreneurs have always been the economic answer. Get the message out there that Alberta IS open for business even if Canada isn't.
T3A	Green infrastructure, including public transit and infrastructure for electric cars. I would also like to see rebates that encourage homes and businesses to improve their energy efficiency (i.e., subsidies for solar panels, rebates for high efficiency appliances, etc.). Education should also be a priority, with adequate funding provided to all boards of education.	Rather than attempting to find savings through service cuts or lay offs in the public sector, I believe the government should introduce a sales tax.	The government should provide incentives to attract and support green energy companies, including those specialized in solar, wind, and geothermal energy. Companies that provide retrofitting services to increase energy efficiency in homes and businesses should also be supported through incentives.

	<p>Nuclear power.</p> <p>Research and Development initiatives through private sector loan guarantees rather than grants.</p> <p>Hospitals to serve American and European customers for profit.</p>	<p>Permit overnight stays in designated medical clinics allowed to deal with routine medical procedures.</p> <p>Permit prescriptions to be issued or renewed for limited classes of drugs by limited classes of properly trained nurses.</p>	<p>We may overthink technology. Think new agriculture ideas. There are many interesting but largely ignored plants elsewhere in the world which are healthy for people and would take to our tough climate. Desert plants like Prickly Pear Cactus and others grow in dry climates. Alberta could also support Saskatoon berries and other hardy berry plants. Parts of Alberta with poorer soil could also support Lomatium cous and breadroot and other tubers, some of which can also be planted amongst other edible plants. We should research carefully however in advance. Don't want a Sprung experience.</p>
T2Z	Health and education, funding for children and families of children with disabilities	Increase taxes for big businesses and high income individuals	Provide re-education and support health and education programs, which create jobs, support small businesses
T1K	Education and mental health. Current budget direction is taking money directly out of schools which will directly impact the quality of education. Funding stoppages have already affected programming that supports our most vulnerable populations; specifically, children and families with economic struggles. In order to make our economy viable in the future, we should be supporting families and children within schools, to ensure a successful future.	Instead of cutting essential services to schools and hospitals, apply a provincial sales tax. Do this instead of a carbon tax and then provide the needed money to what matters to Albertans. Create greater taxes on items that end up costing our system; cigarettes, marijuana, fast food, pop etc.	We need to be more aggressive in getting our natural resources to market and be able to compete on an international level.
	<ul style="list-style-type: none"> -negotiating the end of transfer payments to ottawa -creation of more seniors housing -increase the accountability in public servants -increase the enforcement of corporate tax collection and fraud -personal accountability of provincial boards members (human rights, wcb, lerb, etc) -traffic safety programs and education. Eliminate photo radar and red light/speed on green cameras 	<ul style="list-style-type: none"> -drastically reduce funding to public transportation such as LRT -reduce subsidies to public transportation fares -reduce funding to the arts and museums -eliminating school tax on the general public and putting the onus on parents of children or capping how much a person pays on school tax in their lifetime (ie 12-13 years). -eliminate funding to pro sports teams -eliminate funding to indigenous programs -reduce salaries of public servants -reduce AISH payments -eliminate all subsidies to day cares and place the entire onus on parents 	<ul style="list-style-type: none"> -control property tax increases imposed by municipalities -cap terms of city counselors and mayors to two terms -reduce gasoline taxes
T3A	Education and Healthcare	Canceling the war room, lowering minister's pay and making ministers work year around.	Stop laying people off and stop privatizing public services. Jason Kenney needs to resign if Alberta wants to grow.
T0J	Making life better for Albertans	Upper management in AHS	Agriculture
T2E	Vulnerable people such as those relying on Aish or other benefits, health services, etc. Public schools and affordable university are also important.	War room, private schools. Tax large companies higher. Tax small companies lower.	Higher tax on large companies. Lower tax on small companies, but they should be required to earn eligibility and meet requirements before being given the money.
T6H	Health, education, Seniors, disadvantaged (AISH, Disabilities, low income) and the government staff who work hard to support them, municipalities - so AB government is not offloading (as they currently are) to lower levels of government.	War room (outdated idea and not keeping Alberta in step with the rest of the world in terms of dealing with alternative energy). Not providing sole source contracts to UCP supporters.	Look way, way, beyond UCP's and Premier's current focus on oil and oil sands to actually keep the good paying jobs we already have in health, education, government supports. It does not serve anyone in Alberta well to eliminate good paying jobs -- who is going to pay for the services in the community when there is no income?
	Health care PUBLIC Education	Ditch the "war room"	<p>Stop giving tax breaks to large oil and gas companies</p> <p>Support public education</p> <p>Support the disadvantaged members of society</p>

T4J	Healthcare and decent relationships with unions	Wasted over spending on travel, food, drinks, and fun for diplomats here and visiting.	Stop budget cuts on essential services!
	<p>1. maintaining and funding our public health care system</p> <p>2. maintaining and funding our public school system</p> <p>3. job creation by attracting more industry, solar energy project on lands not suited for agriculture, Alberta coop for generating electricity from irrigation canals, attract film companies into Alberta, promote the arts and sciences</p>	<p>1. Pass a law that goes after operating oil companies that are not paying their taxes to recover much needed tax monies for the municipalities, foreclose on those that do not pay up</p> <p>2. Quit wasteful spending on trips to New York as nothing comes of it as an economic benefit to Albertans, chartering a plane for a meeting in Saskatchewan as two examples</p> <p>3. Approve the Teck Mine for 5 - 10 years only if the owners put a cleanup deposit up from before any mining is done and that cleanup becomes ongoing if they owners meet their commitments then their mining operation gets another 5 - 10 operating permit</p> <p>4. Cut top heavy middle management in school division central offices instead of front line teachers and assistants</p> <p>5. Make investments that pay a good rate of return unlike the poor weak investment returns of AIMCO</p> <p>6. Quit hiring consultants for health care such as the Duckett</p> <p>7. Quit selling our oil and gas for next to nothing to the U.S.</p>	<p>1. diversifying Alberta's economy away from dependency on oil and gas which should be phased out over the next 10 - 15 years and focus on a green economy</p> <p>2. get unemployed oilfield workers back to work cleaning up the 6400 abandoned wells using the \$30 million being wasted on the 'war room' propaganda machine for the UCP</p> <p>3. Find new markets for Alberta's produce and become less dependent on the United States</p> <p>4. Properly fund post secondary educational research and innovation</p> <p>5. Support more greenhouse operations like the one lettuce plant east of Coaldale and the slow food movement</p> <p>6. Oil refinery plants in Alberta that could be refitted for other industries once dependency on oil is phased out</p> <p>7. Produce plastic drinking bottles and containers from sugar beets at the sugar factory in Taber</p>
T6X	Wellsite abandonment job creation at its best.	Cuts to health care and the civil servant .. too many civil servants are way past retirement.	Fund wellsite abandonment ... province needs a sales tax that goes directly to infrastructure projects and not general revenue.
T8N	More refineries	Stop handing big corporations tax breaks	Build refineries
T5R	Creating jobs. Not cutting them. Our province has one of Canada's lowest provincial debt. Fix our infrastructure while interest rates are low and people need those jobs. Hire a good economist that knows when to spend to bolster the economy and save in the good times when jobs are plentiful. Stop creating so-called independent panels and spending money on them. Give your government employees their value in pay and let them do their jobs; they know the programs they administer.	STOP THE BLUE RIBBON PANELS and all the other panels and committees!!! As a economist I know this is the time to spend on keeping your citizens working; all of them.	By NOT cutting jobs. By spending money on infrastructure. By giving people grants to upgrade education not tying their hands by cutting programs for education. Post secondary universities and colleges could learn from other programs like apprenticeship. From people I have spoken with, my understanding is the Alberta government administers industry directed programs for apprentices which trains them what industry wants them to know and not what the post secondary providers think they should know. Government at its finest; delivering what industry wants. Kindergarten to grade 12 could take a lesson from this small sector of education.

T2G	<p>Invest in diversification of the economy, to ensure Alberta's long term economic health, and to provide opportunities to a wider range of the population.</p> <p>Care for our most vulnerable citizens - seniors, the disabled, the homeless, the unwell. Support affordable daycare so that women can stay in the workforce and provide for their families. Keep safe injection sites open so that people don't die.</p> <p>Make sure that every child in Alberta has access to excellent *public* schools, so that we have the most consistently well educated population in the country. They are the future.</p>	<p>Make oil companies pay their property taxes and pay for clean up of orphaned wells, so that taxpayers are not burdened by their irresponsible behaviour.</p> <p>Raise corporate taxes.</p> <p>Institute a 1% sales tax.</p>	<p>Stop firing public sector workers. Those Albertans can continue to feed their families and contribute to the economy.</p> <p>Encourage up-and-coming industries such as alternative energy production and high tech. Boost the Film Industry tax credit to ensure that our province is able to cash in on that booming industry.</p>
T2C	Anything OTHER than oil. Diversification. Film industry & Tech.	Stop giving money and handouts to oil companies. Stop wasting money on war rooms and stolen logos.	Diversify. Support tech and film industry.
T2M	Orphaned wells Providing essential infrastructure to rural areas (roads, internet) Education / help for learning disabilities and special needs	<p>Sell off small agricultural leases to reduce administrative costs (i.e. less than 100 acres) and to keep land in agricultural use.</p> <p>Cut government costs and improve municipal service efficiency and service by eliminating small municipalities (e.g. parts of MD Big Horn to Canmore and remainder to adjacent MDs (Rocky View, Mountain View).</p>	Support agricultural, tech and tourism industries
	Priorities like keeping taxes low for Canadians (not just corporations) and ensuring sustainable social programs — like health care and education — well into the future. As well as ensuring sufficient safety and security to Albertans - by increasing policing in rural communities where the crime rate is a growing issue and keeping repeat offenders in jail.	Doing away with waste, creating efficiencies, and streamlining operations. Look for how to do things better rather than simply how to cut. Look for waste or inefficiencies in areas that don't have budget line items (its the small things that add up). Within a portfolio there is always the opportunity to identify re-purposing of funds.	<p>Invest in areas other than oil (i.e., stop putting all eggs in one basket)! Encourage growth in a variety of areas. Attract business in areas of the future such as renewable energy, and make Alberta a technology hub.</p> <p>--</p> <p>Leave the current Canada Pension Plan alone!</p>
T4R	<p>Education</p> <ul style="list-style-type: none"> - smaller class sizes - inclusion DOES NOT WORK!!!!!!!!!!!!!! - budget to have educational assistants - restructure school board so it is not so top heavy. Put more money towards schools and "front line" workers <p>Health Care</p> <ul style="list-style-type: none"> - wait times to get into specialists needs to be cut down - finding a family doctor is very difficult and cannot get into walk in clinics unless you are waiting at the door at 7am <p>Rural Police Presence - crime rates are soaring!!!!!!</p>	<p>Removing Safe Injection Sites</p> <p>Remove high funding to private schools</p> <p>Having tighter restrictions on social funding such as AISH, Unemployment, etc. So many people need this assistance BUT there are so many that abuse the system!!!</p> <p>Tighten the belts on high salaries in all sectors.</p> <p>Offer tax break incentives for people wanting to invest in our publicly funded programs such as education and health care.</p>	Stop sending our money elsewhere! I understand this is more a national problem but we need to be taking care of our own before sending our money to other countries. Lower tuition rates and look at acceptance levels to different programs. Offer more hands on training. If you put more support into educating our youth, you may find that you have a much more motivated and qualified work force. If you do not value how children are educated, what can one expect from the future work force?
T2m	Heathcare. Social work. Education.	Tax the rich.	Diversify resources. Invest in nuclear energy.
	healthcare, education, social supports	Management, committees, "war room" not redoing work that has already been done just because NDP did it	diversification

T2N	<p>Education and Health Care</p> <p>Diversifying the economy away from our dependence on the oil and gas industry.</p>	<p>Eliminate corporate handouts and subsidies for oil and gas companies. Have a made in Alberta carbon tax that will invest in the province and create incentives for energy efficiency.</p>	<p>Creating well paying jobs by investing in infrastructure, education and health care.</p> <p>Keeping income taxes low.</p> <p>Creating a modest PST.</p>
T5K	<p>Healthcare (DO NOT convert to biosimilar drugs)</p> <p>Justice system and related issues (increase number of judges, prosecutors, police, etc)</p> <p>Education</p>	<p>Mid-level management in various sectors that are not necessary</p> <p>Decrease "personal expense" allowances to political members</p> <p>Decrease payments for social assistance and create conditions such as drug testing requirements</p>	<p>Infrastructure and transportation needs</p> <p>Continue building pipelines and supporting oil and gas</p>
T4S	<p>At this point I am concerned that some of the current practises are not indeed making life better for some of the most vulnerable Albertans.</p> <p>a) in light of the increased number & diversity of Albertans that has led to an increase in number & complexity of needs for those with disabilities (for example)...spending needs to be accountable and sustainable but also take into account the realities of the increased numbers & complex needs..perhaps years ago the 'slash' brand of cutting spending was acceptable however not any longer in our province. In the input for the formation of our social policy framework...it was articulated that we want to strive to increase business and jobs, we want to have good fiscal budgets however decisions to achieve this, we in Alberta, did not want to have those most vulnerable left behind...but to be taken care of...and so in that light to look most realistically at the needs, the costs, the increasing numbers and act in a manner to best serve thosewe as Albertans did not want the most vulnerable left behind.</p> <p>b) in a similar vein...decisions re: freezing and now changing the payment date of AISH cheques...this type of action only serves to increase the pressure on already vulnerable populations many of which do not understand the 'strategies' of politics (eg...changing the date so as to record different expenditures in differing fiscal years)..all they know is they need their money, on time, when it is to be expected and to try and pay their bills...mostly rent, utilities, taxi, some food...please don't put these people in that position</p> <p>c) I do know that fiscal responsibility is a reality however - in other provinces perhaps it's different - however here we are still a caring people about the most vulnerable in our population and that our fiscal management reflects that - here in Alberta we are acting to cut spending but the</p>	<p>In the light of the above ...I'm not sure always 'finding savings' and 'cutting spending' for certain line items is the best option. But perhaps a better collaboration of services to make the dollars do more, perhaps a longer plan of recovery or acknowledging that some realities have made our plans not as feasible as we thought before. Also in the light of the current fiscal climate we realize that our people are struggling and more are turning to crime to meet their needs and so in the light of that we do need to enhance social spending, policing spending, etc. in order to keep our communities attractive, functioning well and safe. I don't believe that it should be an 'all or nothing' budget...but a budget that acknowledges some of the changed realities in our province and needs that have to be addressed as we still work towards economic growth and job creation.</p>	<p>I understand that we are still struggling to get our energy sector back to near previous levels of functioning and in the light of that trying to work to overcome some of the obstacles currently being encountered by such things as trade partners, getting products to markets, climate change/environmental lobbies, etc. I thank you for your efforts to continue to pursue this during these difficult times.</p> <p>I wonder if we could gain jobs and economic growth by working to become leaders at use of our innovation, technology, expertise to become a leader in ways to clean up land fill sites, clean up safeguard clean water sources and water ways, so that we can show how to transition between older tried and true energy sources and as well new sources of energy perhaps from our ecological efforts. Could we then be offering other markets - say such as China- ways to use their energy differently, finding cleaner energy, find different ways to dispose of garbage, waste, etc. I guess I feel at this time we are somewhat in a 'we are victims' mentality within our place in Canada and the world...but to somehow move ourselves out of that to be leaders, innovators, to be Albertans...to be more.</p>
T4N	<p>Education. Health care. Public infrastructure (highways, etc.).</p>	<p>No billion-dollar payouts to businesses that leave the province immediately. (Or any buyouts at all). Not giving themselves raises - in fact, it is time they make some major cuts in their own salaries.</p>	<p>By not cutting major public employment positions such as teachers and health care. Economic growth would come from EXPANDING out into NEW economies, thinking of the future, instead of only focusing on one industry that will become obsolete.</p>

T3H	Please expand your support of arts and culture in Alberta. Film particularly, employs many people and draws temporary residents who spend money in local economies. Beyond artists and filmmakers, even electricians and construction crew to restaurants, caterers and hair, makeup and clothing designers, so many Albertans benefit from government focus on arts and culture.	Stop spending so much money on studies and focus groups and take action!!	Incentive big business to set up shop in Alberta.
T3P	Infrastructure Education Health Job creation	Some services could be contracted out.	Incentives for companies and industries to do business in Alberta. Support should be for incremental growth.
T6H	Education, both K to 12 and post secondary, need appropriate funding, not cuts Health Care, with a focus on long term care, mental health Poverty and Homelessness Generally making life better for Albertans, not worse.	The government should disband that office promoting the oil industry. It is just a waste of money, lots of money. They should retract the tax cuts to businesses which are doing nothing to promote jobs, based on the fact companies are leaving Alberta and Canada for other reasons, and that money could go elsewhere.	Avoid slashing public sector jobs, as this leads to even greater unemployment and joblessness. Get creative, and have an open mind about researching alternate forms of energy. Support medical research. Develop high tech industries.
t2z	reducing deficit	cut unneeded staff and duplicate mla jobs	only fund necessary items
T5K	Charge corporations more tax not les!! Don't only focus on helping Calgary... all Edmonton gets is cuts! Do not pass taxes to Albertans and municipalities!!! That is not a saving. Get rid of the war room. That is a waste of money. Continue to support rural areas that have serious crime problems.	Centralize and standardize Education and Health - two large ministries that get most of the money yet have the worst processes. support centralization and standardization of IT. Cut the large number of high paid executives that are CIO's	Diversifying the economy by investing in clean energy. Support wind and solar power. Support small business.
	What difference does it make, regardless of what any of us say you're just going to do what's in YOUR best interest, not Albertans'.	What difference does it make, regardless of what any of us say you're just going to do what's in YOUR best interest, not Albertans'.	What difference does it make, regardless of what any of us say you're just going to do what's in YOUR best interest, not Albertans'.
T7X	Diversification away from oil dependency.	Streamline management in the public sector. Promoting a healthy population to decrease dependency on health care through sport, art, social services, nutrition.	Financially sponsoring grassroots initiatives in sustainable environment initiatives, public health initiatives, school graduation initiatives, travel and tourism initiatives.
T7X	Education Healthcare Financial help programs for Albertans Diversifying the economy	Not giving tax handouts to corporations Not spending extravagantly when taking business trips Cancelling the war room Payouts for government officials and other public sector workers besides teachers and nurses.	Putting money into education and healthcare to create jobs for people related to those fields. Diversifying the economy to create jobs in other sectors instead of focusing on oil and gas.
T3G	diversify the economy; protect the environment; stop gutting the public service and infrastructure	Reverse tax cuts to industry. Stop funding PR exercises like the War Room and Fair Deal panel	Diversify the economy; support post secondary education

T4V	FOOD SECURITY FROM CANADIAN-GROWN FOOD/AGRICULTURE INITIATIVES,INCLUDING LOCAL ,INDOOR PRODUCTION ACROSS THE PROVINCE!FUND COMMUNITY ORCHARDS. HOUSING PROJECTS WHICH ARE ACCESSIBLE,MODERATE SIZED, ENERGY-WISE, AND PROVIDE EMPLOYMENT FOR WOMEN AND MEN. Plan for Ab. Conservatives Orphaned Well clean-up after all these years!	CHOP UP THE WAR ROOM IN CALGARY/ STOP BIG OIL COMPANY \$\$\$ FROM TAXPAYERS.PUT BIG TAXES ON JUNK FOOD AND BOOZE FOR HEALTH SUPPORT. SUPPORT SMALL REGIONAL PROJECTS FOR EMPLOYMENT. Collect \$ owed from big oil for municipalities.	FOCUS ON HEALTHY ENVIRONMENTAL SMALL PROJECTS - BE PROUD TO PROTECT AIR, WATER, AND SOIL.FUND TRAINING FOR 40 NURSE PRACTICIONERS AND REQUIRE THEM TO PROVIDE REGIONAL, RURAL SERVICES. FUND TRAINING FOR MANY MORE MENTAL HEALTH PROFESSIONALS AND SUPPORT TEAMS.FUND AB. STUDIES RE BOOOZE/CANNABIS PRODUCTS FOR PERSONS OF ALL AGES.
T8S	Childcare and education	Texas spending on trips and holidays.	Pipeline.
T6E	Education, AISH/Income Support, Healthcare	Taking away tax incentives for Oil/Business. Fair taxation. Freezing government and political salaries.	Stop pretending the trickle down theory is a real working option.
T8v	Environmental stewardship, services (eg. health care, sanitation, education, mental health support), health promotion (eg. subsidies for fruits and vegetables, discounted fitness classes).	Promoting tourism	A provincial sales tax would generate economic growth. I'm not sure how to support job creation.
T3B	Health care, education, social programs, economic growth	Cut severance package, cut inefficient and duplicate IT programs such as myhealthportal, promote and increase funding to primary care and prevention programs to improve health of Albertans and cut costs in health care for chronic disease (eg treat obesity and diabetes to prevent costs of treating end-stage kidney/heart/eye disease). Tax sugar-containing beverages and highly processed snack foods and subsidize vegetables to help Albertans be healthy and cost less in health care spending. Add recreation centers. Support aging in place to reduce spending on LTC and hospitalization. Increase Taxes on alcohol, cigarette and vaping products. Ban Vaping products from being sold.	Use principles for promoting and incentivizing individuals and corporations to create growth mindset, Alberta-pride, spend within Alberta to keep profits local. See ideas in the recent book 'Switch'
	Health Care, Education, Seniors, Re-training opportunities for displaced natural resource sector workers (the jobs are likely not returning).	The government should have a Provincial Sales Tax like every other jurisdiction in Canada. The province misses out on a significant amount of revenue from tourists coming to Alberta buying goods as well as higher consuming Alberta's who can afford to pay a consumption based tax.	Take a long-term strategic and sustainable approach to job creation and economic growth. The corporate tax credit is putting funds in the pockets of highly paid executives and the government's ongoing narrative that significant resource sector jobs are returning is not informed by any reasonable economic outlook. Any decisions related to job creation and economic growth should be informed by evidence, not rhetoric and new policies or programs should be stress tested through a competitiveness lens that accounts for the types of economic and tax incentives available in other North American jurisdictions.

	The twinning of HWY 40 should be a top priority and was passed by the NDP government. People who drive this hwy take their lives in their hands every day, mostly winter time but also in summer. I believe if the transport minister had to drive this hwy every day for a year, he would quickly change his mind. But no, he doesn't live here, so it is so very easy to scrap it in the UCP budget. Sounds to me like northern lives don't matter. What else is new, same old, same old. Maybe we need the NDP back again, at least the danger of hwy 40 would be eliminated!!!!!!!!!!!!!!	Our health care system is in dire straits, due to the fact that doctors and dentists and hospitals have abused the fees they charge for their services. Need to put a cap on this.	Provide trade school courses to people who have lost jobs in the oilpatch at no cost to them. You will recoup the money back by the high taxes they pay to live in Alberta.
T9H	Education Health Seniors	Administrative costs	Stop giving all the tax breaks to big corporations. Look after the citizens, the small businesses and let corporations take care of themselves
T3k	Health, Education and infrastructure	Get rid of "committees", War room, and all "reexamination" of previous studies and curriculum. Add a Provincial Sales Tax and raise corporate tax rate	Invest in tech, innovation, healthcare and education. The better the quality of life is the more business will be attracted to Alberta. Make it a place people want to live
T3E	Taking care of Albertans from 1-99 years old. Current and pending legislation does little for it's citizens. HEALTH CARE already underfunded - CUT: My parents and other family members are already feeling the crunch. EDUCATION cut: how are supposed to produce a society of well educated, independent thinkers and a work force that is ready to deal with future needs. The cuts to education hurts ALL people from parents who have to pay more bussing, teachers who have already made a significant contribution to Alberta by working as committed professional for 8 plus years with no wage increase [they need to gas up their cars to], general public with cuts to services they need which also contribute to a modern society. Education needs to be well funded. The new curriculum is archaic, is not researched based and had no input from educators. SERVE ALBERTANS not big corporate companies.	Wage reduction for the premiere and all MLA's. Limiting their expenses. Make big business and corporations pay more taxes. Under your new regime the UCP has drilled Alberta's debt into a bigger hole. WHY? A 2-3 % sales tax would collect money from ALL Albertans and services such as education, health & public services could be well funded, progressive and successful.	OIL is the thorn in Alberta's side. When prices are high life is great. When prices are down everyone is negatively impacted. Why can't governments learn to budget with consistent income? NDP were on the right track researching, planning and implementing ideas for economic growth with limited reliance on oil. Your government is backwards and rigid in their thinking and disastrous policies.
T3P	Education and Health. We cannot cut their budgets. It hurts too many Albertans.	Eliminate tax cuts to large corporations as it hasn't created jobs and hasn't helped our economy. Relook at panels to improve oil and gas image. We cannot be spending money on panels when education and health workers are being cut due to budget cuts.	We need to look for jobs outside of oil and gas. Technology and green energy is a possibility. In the short term infrastructure may be the best possibility
T6j	Retaining innovation investments and supporting InnoTech Alberta. We as taxpayers have invested dearly in that infrastructure and you are destroying a 100 year old institute that supported all energy research.	Eliminate managers... and Middle managers. We literally have entire org charts of managers managing managers.	Investment into innovation at InnoTech Alberta.

T6V	<p>Maintaining high quality and well funded public education and public health and ensuring sufficient funding is transferred to cities for policing. These 3 things work together in concert for a safe and well-functioning society. Healthy people work better and live longer, educated people are healthier and live longer and both groups are less likely to engage in crime and policing transfer funds are critical because as our cities get bigger so do the number of gangs and cartels operating in those cities.</p>	<p>Get rid of the entire written portion of the diploma examinations for major savings. Only keep the multiple choice. This would save a substantial amount (exam development, administration, marking costs, building lease, printing, etc.). OR to save 30-50% of the current cost - take the diplomas in Social and English down to just one writing assignment rather than the current 2-3. Put all your provincial boards/regulators/etc. into two high rises one in Edmonton and one in Calgary and sell off all of your other government buildings to private developers and get rid of all other leases. Plus cheaper to pay insurance and maintenance on two properties rather than 30-40. Easier for the public as well - one stop shopping and all of their services should be accessible on-line. Keep major storehouses like ALGC as they are.</p>	<p>Start building more senior residences now and staff them so it does not topple our province in the future with our aging population and bring in more innovation, tech and new fields of development so that you can actually attract more young educated workers here in the future so we still have a strong enough tax base. Need to offer incentives for more service based / delivery business. The young upcoming generation wants everything delivered to them/home - you need to start changing models of delivery and they are willing to pay for experiences. Much retail will die out over the next 20 years. You need to support the jobs of the future and they're going to be driven by the young generation and where and how they are willing to spend their money (housing, transport/travel, food delivery, vehicles, technology, cheap home entertainment, vices).</p> <p>The middle class is stressed with increasing costs and we drive the economy as we are the big regular shoppers/spenders. With caps coming off of natural gas and power and insurance - that is about \$1500 of my money that is now just going the their profit margins and it is 1500 less per year I will be spending in the stores and restaurants in my city. So those of us in our 30s, 40s and 50s will spend more time at home now just watching Netflix and gaming because we can't afford to go out and spend regularly even though we are in the top 10% of income earners in the province.</p>
T6C	<p>Education, health care, and services for the less fortunate citizens. As well, diversifying the economy away from oil</p>	<p>#1 should be to eliminate the War Room, which has already proven to be a waste of money.</p>	<p>Diversifying the economy away from the oil industry. Alberta can still be energy focused, but there is no reason to double down on oil in 2020 when other nations in the world are proving renewables are the way of the future.</p>
T1S	<p>17(1)</p> <p>We know the importance of profits, meeting budgets and general fiscal skills. Practising good financial policies allowed us to employ over 800 staff, pay over \$10 million in wages and over \$4 million in taxes as well as giving thousands of dollars a year to charities.</p> <p>What should the gov't focus on? Getting your fiscal house in order for the short and long term benefit of all Albertans!</p>	<p>For too long unionized government employees have suckled from the generous gov't teat. This is not only unfair to the private sector but an obvious waste of money. AB government must hold a referendum re the unfair Canadian equalization program.</p>	<p>Small business is the heart and soul of AB and Canada. Tax incentives will help. Also by making employee efficiency a priority in the governments jurisdiction and using some of the money saved to encourage small business to hire and train new employees. Unlike government unions, small business tends to employ and remunerate based on merit!</p> <p>As a side note, do what you can to bring about a change in federal government! The joke (joker?) is over; there is a great country to run.</p>
T2X	<p>I am so disappointed when I see how are money is being spent. We are being taxed for everything. there is nothing left for most of us to live on. So very very disappointed.</p>	<p>How about the government stop taking from people who are paying their salaries or have they forgotten that the people they are so busy trying to tax are they very people who are paying their salary.</p>	<p>Know what they are supporting. Know which groups are valid or which ones are only lining their own pockets or their own families pockets.</p>
T6J	<p>Heath care and education</p>	<p>Corporate taxes - the corporate tax rate should not be lower than my personal tax rate</p>	<p>Stop cutting funding to K-12 and post-secondary schools; the only way to diversify the economy is to have skilled individuals of all kinds to do so. A university degree is NOT the same as trades certificate!</p>

T7x	Diversifying the economy and investing in local job creation. Stop pitting the environment and the economy against each other, being truly prosperous includes a healthy environment.	Help to realistic look at how are money is created in debt and understanding that we will never be able to pay for our social services unless we find ways to generate revenue. The debt will always be larger than the incoming dollars. Selling off all of our public assets , while it may give us a temporary Fiscal boost, is not the answer long term. Publicly owned assets greatly benefit us all as income generation , and if we could invest public dollars for our own future and include proper social profit motivation it would benefit us all	Invest in Alberta! Spend money to keep our infrastructure growing. Perpetual economic growth is an impossible standard to maintain. We need to find new approaches to our current issues. Business as usual has left us vulnerable and hurting.
T0C	Healthcare, Education... all levels, Seniors programs, Climate change initiatives... diversification of the economy and meaningful sustainable job creation.	Scrap the Canadian Energy Centre. Total waste of time and money! Quit subsidizing profitable oil and gas corporations!	Diversify our economy. Invest in alternative sources of energy.
T2G	Rapid mass transit throughout the province.	-ATA teacher grid significantly higher than the rest of the country. Teacher salaries are crippling quality education delivery and increasing student numbers per classrooms. -The Jubilee Auditoria are both government owned and operated, with three ministerial branches and the Jubilee Friends Society providing various management and oversight functions. The government should explore maintaining ownership over the facilities but operating them at arms-length. This could potentially secure a solid revenue stream without the overhead and redundant layers of bureaucracy. Conexus Centre in Regina may provide a valuable example for comparison.	Champion the oil and gas sector into the world leader of alternative energy creation. Pooling of geo- and engineer talent that already lives in Alberta could be the next Alberta Advantage.
	Health care, education (both K-12 and higher education), and infrastructure (especially public transportation) are, in my opinion, the biggest priorities the government should focus on. Stop cuts to public service workers; we need the best and the brightest working in public service. Cuts and wage rollbacks will just encourage people to leave, and cripple our province's social systems.	By eliminating tax cuts and subsidies to corporations, especially resource (oil and gas) companies. I shouldn't have to pay a higher tuition for my kids just so some struggling oil companies, who refuse to pay their taxes, can get a free ride from the government. Alberta does not have a spending problem, Alberta has a revenue problem. Increase corporate tax rates (they'll still be among the lowest in the country), change our income tax system to a more progressive one, restore the carbon tax, and seriously consider introducing a PST. Then we could use our economic good fortune in this province to actually invest in our province's future instead of just barely scraping by with inadequately funded public services.	By investing in research, education, and critical infrastructure, including supporting industries other than oil and gas. We need diversification, desperately. Like any financial adviser will tell you, diversification is the key to a healthy portfolio. For example, the recent drastic cuts to Alberta Agriculture are shocking, and should be reversed. Agriculture is one industry that deserves government support, including through research and monitoring. Another example is the recent elimination of grants and tax credits technology companies and startups. They deserve our support too.
T1H	On seniors, those with disabilities and low income families/homeless. You are looking at possibly getting rid of the safe consumption sites and yet have you taken into account that this may be your child/children or family members at some point.	At the top!!!! Rather than cutting those that need it the most, why not cut at the top. You cut school funding - I'm sure there are those at the top that could be cut. You cut nurses funding - hmmm is there anyone at the top that can go rather than those that are the front line. What about cutting funding for large businesses rather than giving them tax breaks.	By looking at the needs of the people rather than looking at how to find ALL those savings. I'm conservative and have been for years however I will NEVER vote conservative again in our province. It saddens me the way you are operating, with very little care for the common people. If we want economic growth, we need to support small businesses, the mom and pop stores that have helped grow Alberta for years. Instead it's all about BIG business!

T4J	education and health	I think they need to look at all departments and see if they are top heavy and what is the need not want	By giving incentives for small business to start and hire in small communities to keep them growing and being active
T4L	Should focus on research, in all areas. Because of my background, Agriculture should be prioritized for the importance in job creation and other spillover effects in the economy.	Bureaucracy, decreasing regulations, finding cheaper ways of doing and buying things. Using more common sense, Public Service employees must work harder.	Investing in areas with high return, creating infrastructure, transportation (e.g. a light train between Lethbridge and Fort MacMurray, etc.) RESEARCH
T1W	To save money in health care with an aging population, we need more long term care facilities. So many acute care beds are full of people who need nursing care/assistance with activities of daily living. Also- these should be government fun facilities to ensure these vulnerable patients get the care they need/deserve.	Amalgamate the catholic school system into the public system. Decrease overhead of running 2 school boards. using public money to fund religion is not appropriate. It is also discriminatory to provide funding to 1 religious group and not others.	Diversification. It is unrealistic to think that our economy doesn't need oil and gas, but also very shortsighted to think we can go back to how things were. We need to keep the economy going with the oil sands while at the same time finding other ways to create jobs in the renewable sector.
T2G	By supporting vulnerable Albertans, e.g. low income individuals who cannot afford legal counsel for civil or criminal matters. Make the system more efficient and enable people to resolve their problems without complex court procedures and delays. Alberta should also be looking at improving the revenue side of the equation. Reinstate the corporate tax level and loot at other possibilities without rejecting them out of hand.	Fund proven strategies such as community courts that address the root causes of public disorder, save costs in prosecuting offences against people with no funds and who need other help, and save costs down the line in social services and justice costs that won't be needed because individuals' underlying issues are being addressed and they won't reoffend.	Keep funding at the local level where services can be more responsive and keep people employed, rather than gathering up all the available funds and spending it from government offices in Edmonton.
T9N	Education Getting people back to work Oil and gas	Clean up all the departments. AHS needs to be stream lined. Too many middle management Deputy ministers are over paid.	Reduce red tape
T3C	-fund low cost affordable housing -stop draining the pockets of seniors and persons with disabilities -reinstate coverage for prescriptions and necessary medical supplies for spouses of seniors -admit the pipedream of attracting corporate investment and job creation is false, especially as you have done it. It is crippling and breaking the backs of Alberta workers and seniors.	- significantly cut pay of Premier and Cabinet Ministers	-treat Albertans with respect, not with indifference, disdain. -stop lapping things up with your corporate buddies at the trough. Stop being arrogant and patronizing. We see through your duplicity under the guise of being concerned and showing leadership. The only leadership you are demonstrating is how to protect your own selves and how to ramp up divisiveness. How about really working cooperatively instead of trying to score political points?! So far, all you have done is lead Alberta further into the abyss, just like so many of your Conservative party predecessors.

	<p>Social programs to support Albertan's when they are in need (both to support transitions in structural unemployment and to support those with permanently low socioeconomic status).</p> <p>It should stop insinuating that we should expect a return to salary levels seen in the Oil boom, which were unsustainable in the long run and out of line with national income levels. see Canadian Income Survey, 2012 Released: 2014-12-10</p> <p>This is the first release of data from the new Canadian Income Survey (CIS). It is based on annual income information for the 2012 reference year.</p> <p>Median after-tax income of Canadian families of two or more people was \$71,700 in 2012.</p> <p>Four provinces, Ontario, Saskatchewan, Alberta and British Columbia, saw families of two or more people with higher median after-tax income than for Canada as a whole. Families in Alberta had the highest median (\$92,300), followed by Saskatchewan (\$77,300), Ontario (\$73,700) and British Columbia (\$72,200).</p> <p>Families in Alberta not only had the highest median after-tax income, they also had the highest median market income at \$102,700. Since the tax system is directly tied to income earned and some transfers are tied to income, families in the province also had the highest median income tax paid (\$15,600) and the lowest median government transfers (\$2,400).</p> <p><i>This was also the case for unattached individuals, as those</i></p>	<p>Stop subsidizing those realms that are truly private (religious and private schools, subsidies for private industry, etc.), dissolve the Canadian Energy Centre, and tackle inordinately high physician incomes.</p> <p>Rather than focus on savings it should instead focus on increased revenues through institution of a provincial sales tax</p>	<p>It should institute a provincial sales tax to support continued public employment, allowing for attrition, negotiation and inflation to deal with income disparities. It could also then focus on retraining persons for new economic realities.</p>
T3A	<p>How about Investing in and Supporting The Tech. industry !!!!</p> <p>A diverse economy is a far better investment then total reliance on Oil & Gas. \$ 30,000,000.00 FOR WHAT ??????</p> <p>Give me a Break !</p>	<p>A balanced budget is important- do it gradually! Many, Many people are at the end of their rope in Alberta not just the people in oil & gas! Giving tax breaks & incentives to create investment is a good idea - making the hard working people who voted for you pay for those incentives is a bad move. You have to find a way to govern fairly,that's what you were elected to do !</p>	<p>Get out of your offices and talk to the people of Alberta. Talk to the private sector, small business, self employed, the unemployed. Ask them what are the obstacles they are encountering, what do they need from their Government to grow and diversify. An on line town hall discussion that sounds like the the participants were coached and planted is sad. I believe you will be a more successful government listening to your constituents participating at an open public forum.</p>
T8A	pay down the debt	salaries	continue to make it easier & less expensive for job creators
T4P	Public sector	Taxing corporations and the ultra rich. Fire Matt Wolf	Spending money, basic Keynesian economics
T3B	Health, Education and Climate	They could increase revenue by raising taxes and/or imposing a sales tax.	By investing in Education and Health

T2T	Maintaining existing spending for all programs, but expand spending that is based on population growth (hospitals, schools, highways)	Close down rural hospitals that are not required. For example, there is a hospital in Castor (pop 900 people), 35 kilometers from there is a hospital in Coronation (pop 940 people), 51 kilometers from there is a hospital in Consort (pop 729 people). I get there are people in between, but there are three hospitals within 100 kilometers. By keeping them open, you are punishing people in the cities where the populations are expanding.	By encouraging Albertans to diversify the economy. Stop being all in on oil and gas.
T6T	Children Addiction and mental health Community services Services in rural areas Roads and services among towns/cities Arts	Health Municipality	Diligent partnership with private sectors Hire locals for bigger roles in organizations
T6E	Health care and education - laying off front-line workers in these sectors should be absolutely unacceptable.	Higher tax rates for large corporations and reduced spending on unnecessary travel for government officials.	Companies should be rewarded for creating diverse economic opportunities for Alberta. We can't invest solely in oil and gas, and technology & innovation should be a key pillar of Alberta's economic policy.
T3G	Public Education	Healthcare	Subsidize renewable industry to make a Green Deal that will make Alberta a world leader in the Energy sector once again.
	Spending priorities should be on education, support for the most vulnerable member of society such as those on income support and AISH, and protecting the environment.	Reinstating previous tax rates for large corporations and adding a sales tax.	It is important to focus on the diversification of the economy and develop strategies to decrease reliance on the oil and gas industry.
	Community Adult Learning Programs having enough funds available to support staff who can offer full-time, year round programming to adult learners. Help families with costs of living/tax cuts as financial stress is a strong contributor to mental illness which has numerous consequences to our society and workplaces.	Greater accountability for the money/grants given to Metis Settlements.	Supporting Community Adult Learning Programs to work with employers to train and equip their employees to open up further employment opportunities for them. With helping families in this economic situation, it would provide more income for them to re-invest in the economy or in further learning to equip them for other job opportunities.
T1B	Funding education including universities. Reverse cuts. Move to tuition free	Stop oil subsidies. Track accordingly. After all free market rules or does it?	Fund education and universities. Bring back student work programs. Encourage oil workers to retrain.
T2J	Education - K-12 education needs adequate funding, including transportation to/from school. Downloading transportation and other education costs to families is a burden, essentially a tax on children. Education - post-secondary education is critical to preparing the workforce for future jobs, adequate funding and student loan programs are essential. Seniors - health care funding for seniors is necessary, including prescription drugs and dental.	reduce corporate subsidies	Support education 1) post-secondary education is critical to preparing the workforce for future jobs and 2) post-secondary institutes are centres for innovation and research.

T8G	Health care, education, and infrastructure.	Stop giving oil and gas corporations huge tax breaks. They've always known oil and gas is a boom bust business.	First of all, stop cutting government, educational, and health care jobs and funding. Government, educational and health care jobs are stable positions that enable people to pay taxes, work, and have good health care. What you have done so far is the opposite. Even fewer people are working now and many more will soon be out of work. It is horrible. To support job creation and consequently economic growth, first stop eliminating jobs through cutbacks. Work to keep the economy as stable as you can by enhancing what we have first and then take well researched steps to slowly move the economy forward. Economically this province has always been a boom and bust economy because of oil prices based on the world wide economy. The big oil and gas companies are well aware of this. I have lived here my whole life and my father worked in the oil and gas industry here and world wide. He always talked about the companies knowing exactly what they were doing. Stop giving them tax breaks.
T2M	Education, health, economic diversification	Better idea: government could look at increasing revenue.	Economic diversification. I have a job in oil and gas and everyone in my company sees the writing on the wall for this industry. It will never be the gravy train again that the UCP government wants it to be. Make this a province that new industries want to relocate to. Quit picking on teachers - we need an educated workforce.
T0K	Education k-12, early childhood education 0-6 year olds, PUF programming, Post Secondary Education, health care.	Cut budgets in Professional Development, not front line staff in Education. The Carbon Tax spending is ridiculous. Spend less on government advertising and mail outs. Administration staff cuts rather than front line cuts.	Please get oil and gas up and going. Any helps to free restrictions on new business.
	Essential services (police, fire ambulance funding), healthcare, education and justice system (specifically, the courts and prosecutions).	Disposing of the "War Room" and related spending, increasing corporate taxes and implementing a PST. We do not have a spending problem, we have a revenue problem which has been caused by the sharp downturn of the oil and gas revenue. This loss of income needs to be made up for somewhere and increased taxation is (unfortunately) the best way to do so.	Invest in our people, our infrastructure, our essential services and our public sector workers (being healthcare, law enforcement, court staff and government lawyers). Cutting jobs in these areas puts Albertans out of work, many of whom who currently have spouses who work in the oil and gas sector but are currently unemployed or facing a reduction in hours. In situations where both spouses are affected by public sector layoffs and oil and gas layoffs, these families cannot support themselves, nor spend their money locally and support the local economy. Invest in infrastructure development and upgrading. Maintaining and upgrading infrastructure creates jobs in the short term that will get Albertans back to work while either the oil and gas sector improves or other industries become an economic driver. Diversification of our industries outside of the oil and gas sector. This requires the promotion and support of industries outside of the oil and gas industry

T0K	<p>1.) Spending should take place where it will stimulate and grow the economy(ie. energy and agriculture).</p> <p>2.) Innovation and product development.</p> <p>3.) Infrastructure.</p> <p>4.) Some social programs.</p>	<p>1.) Let local municipalities operate the ambulance with volunteers. Having full time EMT's on site 24/7 is too expensive. Using volunteers on an as needed basis will cut significant costs.</p> <p>2.) Require a nominal fee to see the doctor or to go to emergency excepting those of low income. This will encourage residents to think twice about the need to seek medical help and only go when absolutely necessary.</p> <p>3.) Get rid of the safe injection sites. They are expensive and result in increased crime putting the law biding citizens more at risk. We seem to be more concerned about those breaking the law and making it easy to do so while forgetting about those who keep the law.</p> <p>4.) Cut back on unnecessary government jobs. Keep the jobs that help to maintain and grow the economy and keep citizens safe and healthy.</p> <p>5.) Cut back on excessive government salaries. Administrators are being paid way too much.</p> <p>6.) Find ways to encourage the repayment of student loans.</p>	<p>1.) Promote our natural resources as a high value product and environmentally friendly.</p> <p>2.) Provide incentives for growth and development.</p> <p>3.) Offer to pay partial costs for retraining those who have lost their jobs.</p> <p>4.) Support research and development in agriculture. Everyone needs to eat.</p> <p>5.) Provide incentives for small businesses to hire people.</p>
T6J	<p>AISH</p> <p>Alberta Innovates crown corporation</p> <p>Health Care</p> <p>Education - in particular elementary education</p> <p>Legal Aid</p> <p>Alberta Justice - in particular the legal team handling child welfare matters, and the Maintenance Enforcement Program</p> <p>More staff (and higher proportion of nurses to residents) in nursing homes.</p>	<p>Slash salaries derived from MLAs sitting on committees.</p> <p>Introduce a provincial sales tax.</p> <p>Eliminate the tax cut on oil companies - it has failed to create jobs or spur investment.</p>	<p>Boosting spending on infrastructure, including public transit.</p> <p>Investment in Alberta Innovates crown corporation.</p>
T8N	<p>1. All levels of education- from elementary through to post-secondary and trade schools.</p> <p>2. Healthcare delivered in a not-for-profit system.</p>	<p>hold taxes steady for corporations (i.e. don't reduce them). By reducing the corporate tax, you haven't created jobs, you just sped up corporate debt repayment. At the same time, those companies that were close to the line and had some tax-loss-carry forward credits, your tax cut just devalued those credits. So you pushed them over the line. All too often, those businesses are small businesses, which drive the economy.</p>	<p>focus tax relief on those that actually consume and spend the most- the middle class.</p>
T9A	<p>on diversification and innovation. should not continue with cuts to human services eg wish and seniors.</p>	<p>recind some of the tax relief given to business and corporations.</p>	<p>ensure gas and oil pipelines are completed in a more timely manner. assist people and organizations who have innovative ideas for diversification of the economy.more thought given to government involvement in future technology such as for climate change.</p>

T2M	Providing high quality public services	I don't know where you can find savings, but I do know that cutting the education budget and health care spending at the front line is going to result in higher costs in areas of the health and education budgets and other sectors, and it will hurt individuals, children and families.	Diversifying economic portfolio away from energy sector. Investment in education at all levels.
T1J	Public education Public healthcare Supports for low-income families Supports for the severely disabled	Stop giant handouts to corporations	Invest in public services Invest in green energy
T2M	Education and health care. Incentives to establish new industries (like film, tourism, culture and technological start-ups) that do not involve tax cuts, credits perhaps. We need to focus on what people care about (education and health), what will help our population compete (education) and how we transition (in the next 10, 20 years) out of an economy that is dependent on oil and gas.	There is no need for the "war room". Also, tax cuts for corporations will not create the jobs in Alberta. Instead of being stuck in the past (in terms of our economy being driven by oil and gas) we need to consider a transition plan that encourages diversification. For example, tax cuts do nothing for start-ups. Instead, we should be thinking about how we can offer things to those companies to encourage those businesses in Alberta.	Incentives to establish new industries (like film, tourism, culture and technological start-ups) that do not involve tax cuts, credits perhaps. We need to focus on what people care about (education and health), what will help our population compete (education) and how we transition (in the next 10, 20 years) out of an economy that is dependent on oil and gas. We should be thinking about how we can offer things to those companies to encourage those businesses in Alberta.
T6L	Health, education (K-12 and post-secondary), supporting workers getting back to work and protecting them from abuse, and stimulating business development/investment through incentives (not tax breaks).	Rolling back on the tax cuts, review new possible revenue streams including diversification of revenue streams. Reduce the reliance on revenue from oil industry so that we have less of a boom and bust environment for provincial revenue. Avoid privatization of anything since that doesn't actually create savings for Albertans. Review whether PST is potentially an option.	Incentives (not tax cuts) should be given for new business types to promote new business investment in a diverse range of industries. Support post-secondary education for those industries we are trying to support. Once changes are made, avoid changing tax rate and incentives so radically in such a short period so that businesses aren't scared away from potential investment. Alberta needs to be viewed as a stable place that supports both employers and workers.
T3E	Education and health services as well as support to senior and handicapped people.	If they were to implement a provincial tax or stop tax cuts to corporation, we wouldn't need to "find savings" and cut in important services.	By trying to diversify it's economy and stop focusing only on the oil and gas industry.
T8A	Education- lowering class sizes and supporting all students and healthcare- lowering all wait times and supporting low to middle class citizens ability to access all healthcare needed including mental health resources.	Taxing higher class wages and big corporations.	Look at diversifying portfolio outside of Oil and gas....more interest in technology and environmental positions.
T5G	Economy diversification (Artificial Intelligence, film & television, green energy). Climate Change. Arts & Culture. Infrastructure.	Increased tax revenue (PST). Automation and efficiencies in health care administration that does not reduce resources to front-line workers.	Remove the cap on the film tax credit.
T5T	Spend as much as required on Medical/ Health services. The rest will fall in place when the population is functioning well.	Make sure that all the government functionaries are doing their work, and do not keep adding more civil servants to the overloaded offices. Reduce the spending in this area.	Do what you can with the money available , do not look for more cash from the middle class tax payer. Tax the luxury items not the food and essential needs. People will move to other provinces where the living costs are more affordable. Get the economy growing with new ideas and energy saving business plans.

	Providing services for vulnerable populations, such as people with disabilities and people living in poverty. Diversifying the economy, including encouraging development of renewable energy sources. Education for all of Alberta's children and youth. Ensuring quality health care access for all Albertans.	Eliminating the war room, stopping tax cuts to large corporations and increasing taxes closer to their previous levels for large corporations and those in high tax brackets, instituting a 1% PST while providing more tax credits to people and families in the lowest tax brackets.	Diversify the economy by supporting renewable energy and investing in other areas such as technology and the arts. Ensure education for all Albertans, including affordable post-secondary education. Prioritize affordable public transportation so that people with no access to a personal vehicle, including youth, can work. Subsidize day care to allow more parents to return to the work force.
T2V	Health, Education, and Energy both traditional and green. Make the pipelines more eco friendly so that they are a better sell to people. Show that you have a plan for when they leak and do a better job controlling the oil companies so that people believe in them.	Discourage people from going to the Emergency room when you have a respiratory infection, and/or the Flu, provided you do not have complications like inability to breathe or pneumonia. Quit wasting money on bring premiers from other provinces here for a pancake breakfast. Do not go to London to talk about oil when you have nothing to show for it and cannot prove who you talked to. Quit hiring so many EXECUTIVE at AHS and school boards.	Encourage education and support entrepreneurship in the province.
T8N	Health, Education, and Infrastructure.	There are many inefficiencies in any government. Look for streamlining the delivery of services, rather than eliminating them. Refrain from handing out money to private concerns when it is fairly certain that that money will never be recovered or will not be effectively used.	Develop local industries to process our resources, preferably with measures to reduce our carbon footprint. Develop industries for a time when the use of fossil fuels will be greatly reduced. Remember the Ripple Effect from Economics 101.
T5M	Health Care, Financial Supports and Services, Infrastructure	Stop giving the Energy Sector tax cuts - that \$4 billion dollars didn't kick start the economy, nor did it create more jobs for that sector. Let of of the \$30M Canadian Energy Centre. That \$30M could have gone towards AISH and you didn't need to punish them by indexing their pay.	Raise the minimum wage for youth. Bring back the Carbon tax. Invest in a program to clean up and convert abandoned/orphaned wells (I am sure there are several good plans out there).
T9k	Daycares, schools, health and put more money into Infertility clinics	Stop paying for immigrants and start paying for Canadians	Pipeline and support child care educators
T1S	Getting children and youth active to reduce healthcare costs in the future. If the trend of inactive children and youth continues the healthcare system will not be sustainable in the not too distant future (if it isn't already). The preventative measure of getting kids active is the only solution to the rising cost of healthcare. Investments in sport and recreation for kids should be a priority.	The healthcare budget can have savings in the future if children and youth develop healthy active lifestyles. A small investment in sport and recreation for youth will have huge cost savings in the healthcare system down the road. There is no quick fix for cost savings in the healthcare system, but an investment in sport and recreation for kids will find savings.	Diversification while continuing to use our natural resources to develop jobs and economic growth
T2X	Non profit mental health organizations for all ages, mental health agencies and organizations in general.	By not building new sports arenas	More eco-friendly endeavors, better road care in communities, use local artists and local businesses for all community related needs.
T5X	Jobs and Social programs including health care, AISH, and Seniors.	Stop suing other governments if you have already lost in a lower court. Stop giving handouts to corporations. Reduce waste.	Diversify. Invest in alternative energy and manufacturing.

T5T	Health Care, Longterm Care for the Elderly, K-12 Education, Post Secondary, STEM Research and Innovation, Orphan Well Clean up, and Infrastructure	Middle management, top heavy ministries, amalgamation of Catholic and Public Schools, removal of public funding for private for profit schools. Reinstate the Alberta Health Care Premium	Create a Peace Corp style of Civic service - legislate and demand Oil and Gas companies to clean up their well sites. Bring back tax credits for new tech development, expand Tourism potential in Northern Alberta. Build an ultra fast rail link between Edmonton and Calgary. Invest in new Agriculture.
T7V	Family support services Disability support services Clean energy and industry diversification Better support for single income families	No war room Royalty increases on fossil fuels Increase taxes on large corporations	Diversity of industry Create tax breaks or incentives around diverse industry
T3Z	The principal priorities are health and education. Of high priority is the reclamation of orphan wells and preventing new orphan wells.	Consolidate small MD's such as the MD of Bighorn No. 8 with the surrounding municipalities. Divest small grassing leases (say less than 100 acres) buy selling them at agricultural values to the current lease holders.	Keep taxes low and improve infrastructure.
T0L	Focus on helping the most vulnerable - AISH recipients, disabled, low income, elderly.	Continue to look for areas to streamline. Cut deep in bureaucracy, middle management in health and education, as well as other ministries. Are we not able to tell a ministry they are not allowed to cut front line? I see unions doing idiotic cuts in order to gain sympathy from voters, while they clearly protect the bureaucracy jobs.	Temporary royalty holidays on oil and gas. Continue to remove red tape. Remove interprovincial trade barriers. Even if the other provinces do not join, it helps Alberta's economy. Remove or reduce our tariffs on extra-provincial imports. Please do not close safe consumption sites: can we be adults here and admit that we need them, and work on improving their locations and their wraparound services. I will think highly of this government if every once in a while it actually says some existing government programs are a necessity and a good idea, and not tainted just because they were set up when the NDP were in power. We set ourselves up to have other programs removed every 4 years if we play this game, to the detriment of Albertans.
T3B	Education, Health Care, Addiction and mental health	Make oil industry accountable for abandoned oil wells and unpaid taxes. That's a lost revenue that I can't even believe the government is trying do without.	Stop trying to save oil and gas and invest in new technologies that mitigate climate change and promote sustainable energy.
T1J	PUBLIC Health and PUBLIC education. The current budget is a travesty.	eliminate the "War Room". What a ridiculous waste. the UCP should cease all activities related to "fair deal" panel. This is also a waste of resources. Albertans did not ask for pension changes and its own police force.	INVEST in Education. Incentivize businesses to hire PSE students through tax-credits. Every other province has been doing this for decades. We should be funding innovation and collaborating with PSE to harness new energy and tech initiatives. Visit: cewilcanada.ca
T2M	Education, Healthcare	Consolidate small municipalities (e.g. MD Bighorn should be dissolved with urban parts to Canmore, agricultural lands to adjacent rural MDs). Sell off existing small agricultural crown leases to current lease holders at agricultural land prices to save administrative costs (e.g. parcels less than 50 acres) and keep land in agricultural use.	Support significant sporting events and tourism activities that put Alberta on the map as a place to be.
T1R	Healthcare, childcare, and education!	Require fiscal responsibility from overpaid oil and gas industry and align cost of living for rural and urban centers.	Invest in education so individuals are employable. Focus on careers that are sustainable and demanded by the people to support the next generation (health, knowledge, and child development).

T2S	Springbank Off-Stream Reservoir	Health Care	Get new pipelines flowing out of AB
T7Y	Health care, education, social services such as AISH, seniors benefits.	<p>Not by cutting AISH payments. It is concerning with the approach the government is using, don't we remember the Klein years that did not help anyone, the revisit to the various things implemented by the former government. That seemed wasteful and costly and some of it was unnecessary, eg school curriculum, already started by the conservatives originally. Cuts to the public service will not be beneficial either, you should be getting ideas from the public service folks who work day to day and see things that could be cost saving. If there weren't so many ADM's and upper management we might be able to keep the employees presently working as there are some areas it is difficult to staff too, especially in the social services world.</p> <p>I think these threats of slash and burn are going to create more issues for the government in the long run and will not assist with savings or promote growth. I think it may be time for a sales tax BUT it should replace all the taxes that seem to be added to many of our purchases now we just don't call it a tax but a registration fee/administration fee.</p>	<p>We should continue to diversify our economy, I think there is a lot going on in Alberta in that regard. I don't think the government acknowledges that as they should. I think we should be working with the opposition and present government as well as business together ideas, I don't think some businesses should get tax breaks while others don't, regular taxpayers don't get breaks and oil companies should be cleaning up their wells and towns should not have to be responsible as it all gets downloaded on Albertans. I am very concerned with our oil and gas sector as we still need gas and not sure what answer is when we don't have support of feds or other Provinces but Wexit is certainly not the answer.</p>

T5R	I think that the government should focus on spending in the areas of health care, education and social programming. Spending money in these areas reduces long-term costs by reducing crime, health care expenses, and social support programs. Adopting a preventative strategy to social spending always results in social health increasing.	Kill the war room and allocate those funds towards social programs. Retract the tax break for all O&G companies that have pulled their headquarters from Alberta and put regulations around those tax breaks to guarantee employment, investments into communities where they operate, and guaranteed investment into the Alberta economy. Accept the reports that government employees generated over the last 4 years rather than starting the process over again, i.e. education reforms, adoption processes. Adopt a preventative approach to social programs to save costs associated with homelessness, crime, mental illness, addictions, and chronic illness. Between 2012-2013 AHS spent 4.25 billion on caring for people with chronic illness. Much of this cost could be prevented if people with chronic illness were able to access resources that would allow them to manage their illness with greater competency. Make mental health services accessible, affordable, and available. We have failed to properly partner with organizations that can provide mental health support at a fraction of the cost of AHS or other government agencies.	Change agricultural regulations so family farms can be self-sustaining. Give tax breaks for businesses that employ hard-to-employ persons. Work with tech and business to create new businesses. Bring reliable, high-speed internet to remote areas so citizens of all ages can benefit from access to video-conferencing mental health care, health management, continuing education, and business information. Come up with a plan to support urban centers who are being flooded with displaced rural Albertans. 17(1) Increase the wages for personal care attendants, Find ways in the education system to destigmatize and correct for gender discrimination in health care. These are good careers that are being unfilled or workers leave the field due to lack of respect and poor pay. Do something to increase teacher autonomy and freedom to teach because 40% of all Education grads leave the field within the first 5 years, which is stifling innovation in education. Remove regulations that make it impossible for restaurants and grocery stores to donate left-over food to shelters and social agencies for redistribution. Weigh the social cost of closing injection sites (government paid funerals, hospital stays, ambulance, policing and crime) with the cost of running the site. Create a Farm Mental Health line to curb male suicide rates, which costs society lost taxes, loss of labour in the workforce, increased child care, and social services. Take a look at what areas of the Alberta economy were starting to get a foothold (film, tech, community-based research, telehealth, community-based social programs) and support those new areas of growth. Sell the coal internationally. Look at joining SK, NB, and Ont. in bringing nuclear power to remote communities to bring jobs, a reliable power source, and immigration. Explain to Albertans the value of immigration. Balance the international, commodities-based economic model and with supporting domestic growth. This government is
T4L	Public sector needs to be priority. It is the public sector that spends money locally. Look at Portugal for a terrific example of growing the middle class and its positive effects on the Portuguese economy, cleaning up oil and gas wells	Too many panels, consolidate bus transportation for public & catholic school boards!!, reduce UCP government staffing, reduce o&G giveaways, standardized 1-5 tests will cost millions!	Stop trying to woo the big oil and gas, we have enough incentives -they are leaving for a reason...it's time to be realistic, invest in green energy, hemp products in lieu of single use plastics, geothermal heat, bring back tech incentives, open up agriculture markets, we have other resources than o&g, it's time to focus on them
T5J	Diversifying our economy, local business support, and social services. In particular, the new study released by the Association of Alberta Sexual Assault Services indicates that 43% of Albertans have experienced sexual violence, and I believe that more spending should be in this area as a result.	We are too focused on oil and gas sector and should take money from that industry to fund social services.	By supporting efforts to diversify our economy and supporting local businesses and entrepreneurship in our province.
T5H	Funding sexual assault centres and related services to help support the 1.8 million people who've experienced sexual assault and abuse in this province.	Stop subsidies to oil companies and investing in a dying industry!!	Invest in green technologies

T6E	Low income housing and student debt relief	By getting rid of the loopholes that allow large, wealthy organizations to pay less than their fair share of taxes. Start taxing unsustainable items - increase tax on all companies who produce, distribute and sell plastics and other harmful materials.	Forgive student debt or at least forgive a percentage of student debt. Create an educational incentive program for new students and current professionals in the sustainable energy field.
T1k	Education, health care, diversifying the economy.	Tax big polluters. Cut unnecessary government positions. (Streamline Gov.)	Education funding increase to hire more teachers so students have a chance of learning in a class that is not over crowded. Cap tuition increase by 3%.
T4P	Education, health care, and diversifying our economy. Putting all our eggs in the oil basket won't cut it, and the rest of the world moves forward on investing in the development of new technologies, so should we.	Tax corporations more than a measly 8%, frankly. Companies come here and profit massively off of OUR resources. Letting them pay next to nothing in taxes to support the province they're getting rich off of is pure stupidity. Also maybe don't waste money on a shady, highly partisan, unaccountable propaganda "war room". Seriously. Cut it and spend the money on things that will actually help the average Albertan, like keeping our health and education systems robust, because I guarantee that in 5 years, 10 years, the money spent on the "war room" will have amounted to absolutely nothing, whereas the health and education of the citizens will.	Diversify the economy. Invest in the tech sector, invest in arts and culture, invest in education. The government seems to be creating an environment that's unappealing for any industry that isn't oil and gas (or auto insurance.) which will be cancerous down the road as the global demand for oil will not return to its former glory. Why not go through with building the medical lab around Edmonton that was in the beginning stages? Either that or perhaps try to mandate that companies have a responsibility to invest a certain amount of profit back into research and engineering. Canada has a pretty poor record of companies investing in R&E.
T1K	Waste in health care. Too much bureaucracy in AHS. Stop the corporate "gifts". Trickle down economics has never worked.....	Eliminate multiple school districts. Is not need for public, separate and private schools to all duplicate the same thing. The "expansion" of this waste under the guise of "choice" should not be continued. One good public system. If individuals want a "private" experience they should pay for it.	XX
T2Y	Social services like education and health care.	Why do other provinces have a provincial tax and Alberta does not. It seems as if the government is trying to bring all the services that we are better at down to the same standard as the services offered in other provinces, yet if we had a provincial tax we could maintain the quality of our services. Shouldn't we be setting an example for other provinces?	The government would benefit from not putting their eggs in one basket. I come from an oil and gas family so I understand the pressure; however, people in that industry have skills that can be used in another industry. The government would do right by these individuals through the exploration of other industries that would support job creation.
T6M	Primarily I think the government needs to focus on spending money to diversify our economy and invest in clean energy initiatives. We not longer live in a world where we can solely rely on oil and gas revenue to be stable and depended upon. We need to create jobs for the future, in new and innovative sectors. We also need to make education and healthcare spending our priority. A well educated, healthy society benefits everyone! The long term effects of an underfunded education and healthcare system are detrimental to society.	I feel the government has wasted a lot of money creating a war room, and giving corporations a huge tax break. I also do not feel it is the job of the public sector to pay for these things. The government is wasting a lot of money on defunding or cancelling initiatives that were already in place, to just reimplement them. For example: supportive housing in Lethbridge, the school lunch program, and grants to people producing TV and movies in Canada. These things already existed, the money was cut, and then it was reimplemented. This is a waste of time and money.	I think a good first step is to stop cutting initiatives and grant money that were creating jobs; like stopping the construction of the super lab in Edmonton, cutting grants to tech companies, and getting rid of the carbon tax. What we should be doing, is investing in new resource revenues like tech startups, and green energy initiatives. I also think that a small provincial tax should not be out of the question! I realize this hurts our low income people first, but I do not think it should be out of the question. It would generate a predictable, dependable stream of income.

T5P	Improve health care and ensure adequate levels of civil servant staff. Address issues affecting Canadian seniors.	Reduce the size of caucus and expense allowances.	Promote development of plastic alternatives, continue supporting oil and gas export, promote population control. Don't waste time or money on carbon hysteria.
T6W	Supporting inclusion and early intervention to build a foundation for young learners is vital. Without those building blocks in literacy and numeracy, and a focus on social/emotional learning, young children are less prepared to find success in school. I strongly encourage our province to become leaders in the field of early learning and consider developmentally appropriate ways children learn. Some theorists that the panel would want to look at are: Piaget and Vygotsky, Brofenbrenner and Dewey. The idea that children are a blank slate or 'tabla rosa' that can learn by absorbing concepts through direct instruction is a fundamental behaviourist stream of thought and is archaic in nature. This government is using the emotions of the general population to promote their agenda by implying that the education methods of the 60s, 70s and 80s are still current. Children are not mini adults who are capable of learning concepts like the mature citizens. I am disheartened to hear that the government is ignoring a child's right to have their unique stage of life honoured and is not supporting learning in a way that is most meaningful to him or her. Constructivism is a methodology followed by global frameworks including New Zealand, Italy, England, Australia, Finland etc. It is a proven methodology that takes into account developmentally appropriate practices. Children learn best through natural inquiry and hands-on experiences. The government will save money by recognising this already proven stream of practice and not waste taxpayers money to implement an antiquated method of teaching that will put our students at risk for not meeting the current global standard of learning.	Using the experts already employed in the education field to showcase the current work that is being done and take into consideration those front line workers that have meaningful contributions to make on how to improve education through practical experience. By not wasting time looking at assessments that expect children to regurgitate information but rather find ways to show meaningful learning that builds on prior knowledge. By investing in education and post secondary institutions to raise the level of awareness in our citizens, our province will save money through the autonomy, not the interdependence, of the individual. I realize that it is a detriment for this government to have a society that is able to engage in critical thinking, however since Plato and Socrates, it has been proven that this is what strengthens a society.	By recognising that the oil and gas industry is not a viable solution for economic growth moving forward and finding a diversified, more sustainable way to promote economic growth in our province. As well, by acknowledging that all field of professions begin and are rooted in education and quality teaching. It is impossible to have innovation and professional growth without understanding that curriculum must include both convergent and divergent thinkers. A strong, forward thinking education system is key to building a strong, forward thinking society that can impact global trends.
	Education and health care.	Cutting down on travel expenses, taxes on the bigger/global companies working in Alberta.	Support small, local businesses with some sort of incentive. Stop education and health care cuts (resulting in so many job losses)
T8H	Healthcare and education spending need to be maintained at least at a level that increases with inflation, so, they need to increase enough to make up for failing to increase with inflation in the first budget and then increase with inflation for this year. Same goes for AISH.	Get rid of the war room. Reduce the extremity of the tax cut. Leave it at 10. That's already among the lowest. We gain nothing from further reduction.	Support other industries besides O + G. This single minded approach to have us more dependent on this industry will just lead us to future hardships.

T6J	<p>Provincial governments have been telling us for decades now that we need to diversify our economy to stop our dependence on the fluctuating oil and gas prices.</p> <p>So what are you doing about this in a positive way to move forward on this issue? Not much in my opinion.</p>	<p>Reduce subsidy payments to oil and gas companies to oil and gas companies that owe millions to the government for wells not being used and abandoned.</p> <p>Has the government looking into a UBI policy for Alberta where they can become the author of their own lives rather than depending on civil servants that appear to be out of touch with reality with funding cuts that are directed at the poor.</p>	<p>Yes, it should and why is it taking so long.</p> <p>As usual, when the times are good governments at all levels are first in line to accept praise, pats on the back and monies for all the good decisions and policies they are involved in.</p> <p>However, when the tie turns and governments fail to react in positive ways, as they usually do, they are suddenly looking for places to make cuts and those cuts nearly often fall on programs to assist the voiceless and poor in society.</p>
T6E	<p>Arts & Culture Healthcare Education</p>	<p>Management level within the bureaucracy, all departments Cancel raises & bonuses for middle management and above and for all MLAs Require post secondary institutions to cut high level management salaries by 25% minimum (Deans, Associate Deans, President, VPs) Put a salary cap on Full professor salaries</p>	<p>25/day daycare tax cut to sole proprietorships and small business with less than 40 employees institute the Arts Professions Act, with mandatory use of contracts, and support of minimum fee schedules for work, tie AFA funding to use of CARFAC fee schedule</p>
T4V	<p>I think the government should focus on regular families and small businesses. These are the people pumping money into our economy every single day. When we give tax breaks to large corporations, they are not spreading this wealth around Alberta. Trickle down economics does not work.</p>	<p>I think we need to ensure large corporations are paying their fair share. We could also save huge amounts of money if the UCP stops wasting it on fruitless endeavors like the "War Room" and re-evaluating an education curriculum that was already ready to go.</p>	<p>We should be focusing on new, green technologies and starting to implement plans to lessen our reliance on oil and gas. We should be supporting the "everyday" Albertan so they in turn have the money to put back into the economy through everyday spending, open businesses, attend university, etc.</p>
T6L	<p>Education and Health Care</p>	<p>Cut back their wages</p>	<p>Do not cut jobs</p>
T5K	<p>Health care and education! Why are we heading towards American-style policies when we should be heading towards Scandinavian-style policies? People in the Scandinavian countries seem wealthier, healthier and happier. It has been that way for decades. Yep, they have high taxes. The average, middle-class American is in a very different boat, and it's sinking.</p>	<p>STOP HANDING OUT CORPORATE WELFARE!!!!!!!!!!!!!!!!!!!!!! The 4.5 billion dollar Christmas gift to corporations will not create jobs. Husky Energy has bolted from Alberta and left us with an abandoned well legacy that taxpayers will pay for. From what I can see, the Alberta government is no different than the fiscal moron that is our current Prime Minister.</p>	<p>Encourage education! Educated people tend to be entrepreneurs and thinkers. They help solve problems and create solutions or alternatives. Dictators hate when the masses are educated. Uneducated Albertans are just dumb followers. That's what a dictator wants.</p> <p>You want to drive economic growth in this province? Stop bending to the will of racist, gay-hating, religious wingnuts and hicks. As long as those fools are driving policy decisions, we will never be viewed as a place where the next "Silicon Valley" could happen.</p>
T2E	<p>Social Service/front line programs that provide much needed supports to Albertans in these hard times</p>	<p>in a small PST and reducing the payouts to oil and gas</p>	<p>Grants to attract new sectors (film, tech etc.) outside of oil and gas</p>
T6E	<p>Supporting the less fortunate and the early years</p>	<p>Fewer jamborees away from Alberta by government ministers, fewer perks for the rich.</p>	<p>Capital investment in infrastructure. You should invest in a recession otherwise you make it worse.</p>

T2V	Diversification of Calgary's economy. Move emphasis from oil and gas to renewable energy. Stop trying to divert public attention from difficulties in oil and gas sector by cutting into health and education. We have lived through this once already and the results were not good.	Why do we need savings? Why is there a necessity? Can we never just sustain ourselves. I never understand from one government to the other - one government there is no problem - and then an election and another government comes in and there is nothing but money problems and cuts to health health and education. As an Albertan, born and raised, I don't understand. Years and years of living through destructive cuts and constant recessions caused by dependency on an oil and gas sector prone to fluctuations. I finally get a job after two years of unemployment - election/government change - cuts to education and I'm laid off. What do I think of the current government - not much at all. I have never had a job in oil and gas and have never had the rewards that I have watched other people in this city enjoy. It's an elite community of business owners and difficult to get entry for jobs.	Look to technology and sustainability efforts as a new movement evolving in the Canadian culture. Small family run farming operations, online businesses - there is a growing interest. New energy sources, less dependency on oil. Gaming industries and education technology, software developers - we have a beautiful city; leverage our lifestyle to bring in new industries in the tech area.
T4R	Medical, schools, roads.	A mentality has been created that Governments can look after people from cradle to grave. We need to get people to be more self sustaining. I am told that Japan does not have a welfare system, children are expected to clean the schools (a life lesson) (It would be drastic to implement but should be explored)	It is critical that the oil and gas industry get back to work. We need to challenge the Federal government to get more of Alberta oil flowing East and stop the foreign oil imports. People in the oil industry working means income tax being paid by individuals an corporations. Employed people spend money on necessities, housing and on an on.
T2X	Education Health care Vulnerable populations Seniors Medication coverage	Alberta "war room" Taxation for oil and gas companies	Renewable energies Tourism Farm and agriculture development
T5W	Supporting our workforce and industry in the transition to a sustainable energy industry (geothermal, solar, wind); investing in net-zero affordable housing; ensuring quality public education for all Albertan families; investing in universal public health care, especially prevention and public health, including supporting positive brain development in the earliest years through early learning and parent support programs.	Avoid P3 partnerships which require higher interest rates for borrowing and must return profits to investors. Primarily, the government needs to replace revenues that are volatile and cannot be counted on to rebound, due mainly to global market forces and the impact of climate change. A harmonized sales tax, like all other provinces have, would accomplish this. Savings are most likely to be found in future years through investment in the early years, which results in reduced addiction and criminality in later years.	Supporting our workforce and industry in the transition to a sustainable energy industry (geothermal, solar, wind); investing in net-zero affordable housing (in part to create jobs and also to support those transitioning into the new industry). Focus on supporting local small business through all means possible - procurement, tax cuts, red-tape reduction, grants - while minimizing or eliminating similar benefits to large, multi-national corporations beholden to shareholders, whose profits will not be retained in Alberta.
T2X	Health care Education	Oil and gas tax credits Government expends	Health care Education Renewable energy
T6E	Tax credits to stimulate wage growth. Increased spending to healthcare. Employee health increases efficiency and productivity, which increases deliverables. Healthcare cuts attack small business owners by shifting responsibility for employee health to the same.	Close the Canadian Energy Centre. High salaries given to individuals promoting a particular platform are unlikely to pay dividends to the public interest.	Make employee training costs tax deductible when onboarding new employees

T2S	Publicly delivered K-12 education should be priority #1. Cutting, or creatively freezing, public education funding only shows the partisan, extreme near-nearsightedness of government.	Anywhere other than publicly delivered education.	Yes, but it cannot be the government's highest priority.
T2S	Social programs and the Springbank Dam	Rather than focusing on finding savings, the government should increase revenues. Implement a sales tax.	Acknowledge that the oil and gas boom is coming to an end and implement policies that encourage diversification. Talk to realistic and visionary people like Jim Gray and Charlie Fischer as to how this might be done.
T2J	Small business incentives. It is a struggle right now to stay in business with the increase in municipal taxes and lack of stability for consumers. Some sort of Alberta Investor Tax credit could stimulate the economy and drive revenues.	Why find savings? We should be investing as opposed to cutting, and advocating for a larger share of the equalization payments. A sales tax should be considered.	Small business incentives, Alberta investor tax credit.
T5E	New renewable resource projects	Get rid of the war room. Tax individuals higher that make salaries over \$200K/yr.	Stop investing so much into dying industries like oil and gas and invest in new technologies for the future.
T4J	health care, creating jobs, getting the economy on the right track	expenses incurred by MLA's	keep pushing for the pipeline. Lower taxes.
t2e	social services, medical, child welfare, schools, social programs and not for profits.	In the budget and spending of upper government officials, anyone making over 100k receive a 20% pay cut.	by funding social services and training programs so that people have the opportunity to be in a stable place to enter the work force. social programs also create jobs and invest in the future.
T4V	Health Care , Senior care, Education, Persons with disabilities	Cut some of the arts funding. Changing names of departments which causes new business cards, new letter heads, new signage etc. which is a huge cost Cut out the Christmas decorations at the legislative grounds, and extras that truly are only for show!	Minor funding such as part subs for wages do help employers hire. All the red tape and protected leaves are a burden as much as a employee may deserve them it is a burden to go without a staff , having to replace them , let someone go that you have trained for one year plus to bring back someone who has now missed a year of daily workings of a business. Maybe come back with Alberta health care premiums at the level they were. That income was a huge loss to the income of the gov't . This income would be internally restricted to go only to health sector funding be it facility, equipment or staffing positions. look at wages of high level gov't employees, I find it hard to believe that a staff (with benefits, pension, expense accounts) need in excess of 250,000 a year.
T3R	Education Social Services: Domestic Violence Prevention, Mental Health Support, accessible and affordable housing to reduce homelessness.	In government offices where efficiency is questionable.	By promoting small businesses- reduce small business tax. Tax the corporations more. It should be a sliding scale vs. richest pay the least. Investing in infrastructure.
T3B	Education and healthcare are the main priorities but I agree with the policy of addressing the fact that we pay so much more than most other provinces. More efficiency is required. Reducing the deficit follows closely behind in importance.	Reduce administrative costs in both fields - as opposed to front line reductions. My strongest feeling is that is time to introduce a 3% sales tax in Alberta. We struggle with big deficits and targeting sector by sector when we would benefit far more with a true user tax - a sales tax. We should swallow the short term political pain and join the modern world.	Once we have a sales tax there will be greater flexibility to incentivize business, etc.
t0j	1) school and child care funding 2) health 3) low income family support	1) upper management in health organizations 2) tax rebates to large organizations	1) small business grants for hiring and training new employees

T8X	<p>Education, cutting jobs here is not the answer but efficiencies may be possible, there are many opportunities in local areas to visit industries that many schools do not take advantage of to expose children to the working world in their own backyard. Healthcare, investment in technology can greatly improve efficiencies and cut costs, we need to improve on this in a big way. BC has significantly lower wait times for surgeries, it is pathetic that Alberta lags behind on this, figure out what we need and get it done so people can work and live without pain. Infrastructure must be maintained, smart decisions on upgrades should be made not just done for the sake of doing them and quality control must be improved. Example: A large culvert was replaced East of Grande Prairie about 5-6years ago and it had a massive set of AB government signs put up by the Former PC (waste of money) now the road is sinking and it's a big bump on the Hwy, this job was not done correctly, what a complete waste of money. Investment in future growth of industry, when the AB carbon tax was put in place a rebate program was setup but it did not allow industrial facilities to utilize any of the rebates, it was only for residential or commercial. How is industry going to change if the incentives put out are not for them. A business case to change out equipment would have made sense if the rebate actually applied to industrial companies. What a joke. As a resident I did try to take advantage of the program but never received anything from my rebate claim for spray foaming my basement for \$6000.00. Thanks, pathetic.</p>	<p>Travel, overpriced accommodations, efficiencies of processes across the board. Eliminate biased and cumbersome bidding processes on large projects to avoid delays and inaccurate low bids forcing overspending as projects progress. Example: Grande Prairie hospital.</p>	<p>In a measured manner that generates growth and provides incentives to industry to improve efficiencies be them energy based or wage based to drive more cash flow in the economy. If more people have more cash in their hands they will spend more.</p>
t6c	<p>Keep your hands off of public service pensions.</p>	<ol style="list-style-type: none"> 1. you could find savings by amalgamating Fish and Wildlife Enforcement Branch with Park Conservation Officers. You have 2 different agencies, with different uniforms, different training teams that basically conduct very similar duties just on different landscapes in the Province. No other Province in Canada has 2 resource law enforcement agencies. 2. instead of negotiating with health care/teacher/public service unions in the media you should do your business behind closed doors. 3-4years with 0% for everyone and no job cuts. 3. Start with Provincial consistent policies for GOA employee transfers. JSG employees who transfer work locations within the Province are able to use upto \$10000. AEP employees have no \$10000 cap on moving expenses. Made it the same for every employee in GOA. 	<p>Quite comparing public service employees to private sector.</p>

T0C	Education-more teachers, smaller class room size Health care-more front line workers,more home care,less privatization of long term care Justice-more police officers and judges Stop passing taxes down to the local government	Cut out the "War Room". Stop trying to undo everything that the previous government did as there are some good things that they did. Our public servants do an excellent job. Pay them a decent wage and they will out preform any private company at a much less cost.	Not everything is oil and gas. Our farmers need support. our arts and culture sector needs support. Our technology sector needs support.
	Health and education.	Stop decreasing taxes for oil and gas. Those tax dollars could be put towards health and education.	Expand beyond oil and gas, and support diversification of the economy.
	Public education Health care	No MLA cola No war room No corporate tax breaks	Diversify (support sustainable energy, medical research, technology, small business, arts, film industry)
	Public education Health care	No war room No politician travel No corporate tax breaks No MLA cola salary increase	Diversify (support small business, post secondary education, technology, sustainable energy sources, film, art industry)
	Getting out from the feds	There wages, more of a cut than 5%	Trade schools, easier to get into one
T7Z	Health Care, Education and fixing our ever crumbling roads and highways.	Cut upper and middle management and any and all severance packages. Encourage businesses/government agencies NOT to cut the "little guy", these are the people who continue to work hard each and everyday to try and get ahead. These are the people continually not receiving raises but are still trying to do the best for their families and trying to pay their bills as best as they can. They're living paycheque to paycheque and can't afford any more cuts. Expense accounts and mileage rates - people are making money on these, in my opinion, this should not be happening. Bring back health care preminums - if and only if it goes right back into health care.	I'm sorry I don't have a quick answer for that one. Thank you for your time!
T6L	Healthcare, education, renewable energy research and implementation, job re-training for the dying oil and gas sector, funding harm reduction (SCS sites and more!), re-index AISH, subsidized accessible and affordable housing	Not funding panels that consist of people with all of the same perspective, not funding the war room, holding corporations accountable to paying their taxes, not funding CEO vacations or the relocating of their businesses by making them pay a fair amount of taxes instead of handing them a few billion dollars.	Re-train the people who have lost their jobs because the oil companies are automating and downsizing their operations here. Allowing for appropriate staffing in the public sector: hire more teachers, nurses, healthcare workers! Create new renewable energy projects, fund literally any other sector but oil and gas so that our tech start ups can grow their businesses, the arts can grow their appeal etc.
T0B	Lowering debt education health care	Spend wisely. Why do we have workers in the health records going to work on long weekends, and stats where they get paid over time to accomplish work that can be done during regular business hours? We have too many layers of management in health care who are busy covering their backsides and not looking at the big spending picture.	The government does not create job growth. A healthy economy does. Get the government out of business and just govern wisely. The economy will improve. We cannot tax ourselves into prosperity.
T0M	Agriculture research.	Cut MLA pensions.	Build pipelines.

	Health care Public education Infrastructure	No war room No MLA cola No corporate tax breaks No politician travel	Diversify (sustainable energy, tech, arts, film industry, small business)
t3r	Health care and education should have dollars spent on the boots on the ground - not management.	Health care - not fund abortions, sex change surgery. Arts and culture - no need for the nice to haves when we're in debt!	Kill the carbon tax. Approve resource projects.
T5A	School and Health care	Government salaries and perks. Traveling for meetings. Meeting locations. There is so many programs to do meetings over computers and there's no need to have weekend meetings in places like Banff.	Jobs need to be created in new technologies in both Oil & Gas and Environmental sectors
	Diversification of economy, tourism, education k-12.	Municipal spending, health care.	Tax incentives for business, lower taxes for working Albertans, innovation and business grants for growth and entrepreneurs.
	Diversification of economy, tourism, education k-12.	Municipal spending, health care.	Tax incentives for business, lower taxes for working Albertans, innovation and business grants for growth and entrepreneurs.
T2G	-Mental health support (for families)	-Higher corporate taxes	-Investment in alternatives to oil and gas industry (e.g. solar, wind farms, electric cars)
t3b	Social spending- health, education, social services, health and social issues including domestic violence and sexual assault, affordable health benefits and stable housing	Increasing taxes for higher income families, less spending on unnecessary projects that do not benefit the well-being of ALL humans	Finding other avenues besides oil and gas to boost the economy, social programs to help people find work and obtain education- this is ultimately less expensive than paying for unemployment and health care costs.
T3H	Education and health care	Corporate tax cuts, 'war room'	Invest in alternative energy sources, educate oil and gas workers to prepare them for jobs in other fields.
T6E	Education, innovation, healthcare, infrastructure	Administration Stop creating useless panels to look at every other thing. A budget has two columns, spending AND revenue. Decreasing revenues with tax breaks for large companies and then slashing spending everywhere else to make up for it is not my vision of balancing a budget.	Keep fighting for the oil sands (though the 30 billions for the CEC could have been invested more wisely) but also diversify the economy. Oil and gas will not last indefinitely. Cutting funding for higher education and the likes of Alberta Innovates is shooting ourselves in the foot. Also, trickle down economics has been proven time and again to be totally ineffective (just look at the mess in Kansas). Tax cuts for the lower and middle classes will result in more money being spent on local businesses.
	Public education and health care	Standardized testing No war room No politician travel no MLA cola No corporate tax breaks	Support diversification of the economy (arts, technology, sustainable energy)

T2L	Fix the idle and orphan well issue. With over 90,000 idle wells and over 3500 orphan wells, this is a huge liability for future generations.	<p>The gov't could quickly save \$30 million each year by eliminating the taxpayer funded Canadian Energy Center (the "war room").</p> <p>A yearly revenue of \$30 million typically supports a team of 150-200 people (I know, I used be an owner of a 175 person professional consulting firm). I see only 8 people identified on the CEC website, where are the remaining 170 people?</p> <p>This is an absolute boondoggle with no measurable deliverables to the taxpayer except for glib feel-good articles. I know Kenney rightfully criticized the Fed Liberal gov't for the sponsorship scandal, but this "smells" just like a UCP version of political taxpayer-funded slush fund (It has no oversight by the auditor).</p> <p>Please respect the taxpayers. We pay your salaries, not the other way around.</p>	Support diversification. The downturn in oil and gas is global and may remain low for many years. Support post-secondary education, this is where innovation starts and resulting diversification. From my experience, many of my contemporaries started non-oil & gas companies from the seeds of their work in AB universities.
T6X	Government should focus on improving HEALTH & EDUCATION services. Support small businesses.	<ul style="list-style-type: none"> • REMOVE 4.7 BILLION TAX CREDITS from big organizations. Look at their profits for last 4 years. With this credit they will make more profits rather than creating new jobs and new investments. [FYI, BIG corporations haven't and will NOT going to invest money in Alberta even though they are getting tax credits. Albertans are getting poor with less revenues now.] • STOP privatizing services from government (School boards, Alberta government Departments, Alberta Health services) that costs more than hiring employees. Remove contractors and hire more employees. • Remove war room, we don't need that. It's absolutely not giving Albertans any benefit except losing money. • Remove committees who does nothing to improve any inefficiencies. • Remove all contractors from government's organization, most expensive services provided by multi layered vendors. 	<ul style="list-style-type: none"> • Support small business groups. Explore businesses with Asian countries such as India. India and other Asian countries would be a big market and investors for plastic, canola oil, Tourism, timber etc. • Create more jobs under Government services, which way services will be improved and new jobs will be created. • Don't just focus on Oil industry, get out of the past. We need alternative energy and new businesses to support such as Tourism, Plastic, timber, video games, film, solar industries. • Time is changing and Pipeline is not going to solve all your problems. <p>DIVERSIFY ALBERTA'S ECONOMY!</p>
	Environmental protections (including Extended Producer Responsibility & more broad carbon tax), healthcare (increase services for home healthcare, caretakers, primary care, chronic illness services, etc.), public education, infrastructure investment.	Eliminate funding to separate, private, and charter schools. Reduce subsidies for oil & gas. For increased revenue: Increase corporate taxes & implement a sales tax.	Infrastructure investment. Reliable grants for technology companies, arts/media. Investment in new energy technologies/stop investment in traditional oil & gas.
	Public education and health care	No war room, no politician travel, no MLA cola, get the corporate tax break money back	Support small business, support diversifying economy (sustainable energy sources, film industry, arts, technology, medical advancements), support post secondary students

T2N	<p>Vulnerable people, therefore community and social services, AISH recipients, those with chronic diseases, those needing retraining to get work, poorer seniors, etc. So, more social workers, more police, more EMTs -- more educated and trained people helping others.</p> <p>Education, both K to 12 and PSE.</p> <p>Infrastructure, as a way to put people, esp young men experiencing high unemployment, back to work and to improve the safety of highways, buildings, bridges, abandoned wells etc for all</p>	<p>Shut down the embarrassing War Room and fire its incompetent staff - \$30/year is a high price for embarrassing Albertans. Shut down the Inquiry into Un-Albertan Activities and save the \$970K on lawyers and more. Stop wasting money on blue ribbon panels and consultations and surveys where you know all the answers ahead of time and ignore all of our input. Make decisions that are evidence based, not ideologically driven.</p>	<p>Where is the question about raising revenues? Where to cut and where to spend, but if this was a serious survey instead of a PR exercise, you would ask where to raise money. A 3% PST. Leave the corporate tax rate at 12% -- your little experiment didn't work and only the rich got richer. Stop cutting the public service -- someone needs money to buy things from the private sector and you have destroyed the private sector economy. Infrastructure spending for job creation. Do that orphaned oil and gas well work now -- a good make work project that will only cost taxpayers more in the future.</p>
	<p>Public education and health care, maintaining infrastructure</p>	<p>No war room, no MLA cola salary increase, no politician travel, no corporate tax breaks</p>	<p>Support post secondary students, any company that received a tax break should be required to provide jobs, support small business, diversify economy, support technology initiatives, art initiatives, wind/solar power initiatives</p>
T2a	<p>Sexual violence, homelessness, counselling</p>	<p>Asking the federal government for money</p>	<p>By diversifying the economy, moving to cleaner energy to create new jobs, lowering student loans so people have money a home.</p>
t2z	<p>Legal Aid. Increased funding. Help fund the greenline in Calgary. Fund municipalities properly, including infrastructure projects so that Calgarians can thrive. quit cutting public sector jobs.</p>	<p>maybe in the 4.7 billion dollars of lost tax revenue by giving corporations tax cuts. Most of these corporations are doing fine, and many aren't even Albertan. Albertans did not ask for tax cuts for the rich and they did NOT ask for increased schooling fees, insurance, income tax, cuts to AISH, Cuts to Legal Aid, cuts to municipalities.</p>	<p>invest in municipal infrastructure projects. Lift the hiring freeze in government and create more public sector positions that help people stay out of jail, get jobs, get housing, and help addiction. If people aren't homeless, aren't in jail, etc they can contribute to the economy and work. When you cut services, our economy tanks. It's a fact. Invest in the public sector, which generates a healthy society and a healthy social and justice system.</p>
t3n	<p>Healthcare</p>	<p>higher taxes on oil and gas companies</p>	<p>healthcare AI</p>

<p>T4H</p>	<p>Health including mental health, education, services for the disadvantaged and disabled Albertans. Do not move in the direction of the United States where under performing schools are penalized and high performing schools are rewarded. Do not introduce excessive testing. This is a waste of resources and does not lead to improvements in performance. As a former teacher in both the US and Canada, I have seen how this merely adds to the stress for both teachers and students without leading to performance improvements. Alberta schools are doing well already. The recent survey of schools around the world put the US at 35th whereas Alberta was 6th. I'm sure you have heard the saying "If it ain't broke, don't fix it". If Alberta wants to maintain its "advantage", we cannot go the way of countries that under perform.</p>	<p>Disband the War Room and other initiatives to silence opposition and target those who speak out. Canada is a democracy. Please respect what that means. Do not privatize public services. This will ultimately increase the cost to government as companies increase prices to improve their profit margins and attract investors. Do not offer tax advantages to companies and industries that are doing well. As can be seen by the recent move of companies to the US and other provinces, tax cuts do not lead to increased investment or loyalty. Don't only look at finding savings, look at how you can increase sources of revenue to sustain public services.</p>	<p>Encourage economic diversity. As I am sure you are aware, many large investment companies are moving away from the fossil fuel industry. When you have people like Mark Carney and Black Rock Investments doing just that, and when the New York Times reports that fossil fuel investments are dragging down portfolios, we need to take notice. 9https://www.newyorker.com/news/daily-comment/citing-climate-change-blackrock-will-start-moving-away-from-fossil-fuels). The Guardian recently published an article stating that fossil fuel divestment has reached 6 trillion dollars. That is significant. (https://www.theguardian.com/environment/2018/sep/10/fossil-fuel-divestment-funds-rise-to-6tn). Meanwhile Alberta's government is courting resource companies that refuse to pay their taxes, and have left the province with billions to clean up orphan wells. This is scandalous and puts rural municipalities at risk (https://rmalberta.com/news/unpaid-taxes-owed-from-oil-and-gas-companies-to-rural-municipalities-continue-to-increase/) Focus should move to the development of IT, alternative energy source, eg. solar, wind,geothermal, and any other viable initiatives that present themselves.</p>
	<p>QUALITY Child Care, Education, Health</p>	<p>Bring back photo radar - people who break the law are making a choice and should have to pay! Stop all these panels i.e. education panel - waste of money! Spend money on the system! No funding to private school - such a waste to have so many different schools instead of building one great school system. People in rural communities do not have these options. Reduce spending for out of province expenses by government ministers Do not bring in testing for grade school - this will add costs! Bad for children's mental health! Teachers will teach to the testing! Spend money on ELCC quality - saves money later! Bring in a sales tax</p>	<p>Diversity - oil will always be needed but jobs will not come back due to automation!</p>

T6R	renewable energy housing markets - get rid of means test pipeline public education - we have one of the best public education systems in the world, why do we fund alternative education models? public healthcare	Pharmacare, drug savings Fix the nursing contract - get rid of overtime paid, unless there is more than 38.75 hours/week worked. Streamline education - fund only public education, take religion out of schools - they should be non-partisan Get rid of your "war-room" - I DO NOT support this spending, governments by their very nature should be advocating for the province and the provincial economy I do not support the extremely low business tax, we should be competitive but not give away our resources etc.	Stimulus spending I believe there is room for a small provincial sales tax
T5T	Education and Health care.	Anything that is not education or health care. Especially front line services. Administration and other non essential services!	YOU are giving too much of a tax break to big businesses when you cut the corporate tax rate form 12 to 10 %. Small business get no break...they are the backbone of our provincial economy.
	Healthcare Education Climate change Tech industries	Eliminate the ridiculous war room. Waste. Stop messing with the curriculum for our children. They require critical thinking in Social Studies. Pushing your addenda on them is small minded and awful. Climate change is real and something this generation needs to fix. Now. It doesn't mean they hate oil and gas. But oil and gas ain't lasting forever. We need to focus on industries that will replace it.	Support for early childhood education. Support our healthcare professionals. Education. When you hurt women dominated industries you hurt the economy. Women are forced to stay home. Support our tech industries and stop making it harder for them to survive. Alberta is facing a MAJOR brain drain because of this small minded government.
T6J	I think that the government should invest more in healthcare and education.	The government could find savings by reducing the amount of tax cuts given to large corporations.	The government can support job creation and economic growth by investing in infrastructure projects like building more hospitals and schools. Additionally, the government should focus on finding a balance between investing in the oil and gas industry as well as investing in alternate sources of energy that will help preserve our environment and allow us to meet the United Nations Goal of the 2030 Agenda for Sustainable Development.
T8N	Education, healthcare and protecting Alberta's vulnerable populations	Eliminating the "War Room" and looking for efficiencies in current operations. Reducing politically associated staff. Implement a sales tax.	Understand that the oil and gas industry is never going to return to is previous heights and start looking at other way to create jobs. Advance projects that stimulate the construction, and associated jobs. Implement a sales tax.

T2S	Diversification of the economy. Away from Oil and gas and into high tech, A.I., renewable energy, recycling/conversion and tourism.	Reverse the corporate tax reduction By 2% Get better deals on bulk purchases of medical drugs and supplies. Pharmaceutical and medical supply companies are ripping us off. Rising health care costs are hiding in the materials and drugs we need. Tighter management of construction companies that are building Infrastructure projects for the province. They are always over budget and late. Health, Finance and infrastructure all deal with billions of dollars. We need to stop wasting those dollars by bringing in more corporate taxes, reduce expenditures in medical supplies and tighten our oversight on large infrastructure projects to reduce cost overruns.	Support education, we have to develop researchers, entrepreneurs, new skills and retraining.
T2w	AISH, education, healthcare and the environment.	By increasing taxes on big businesses and the rich.	By diversifying. Bringing in tech companies.
T0C	Free healthcare with no premiums and better funding to maintain our amazing public education system. I don't think this govt will hear anything we say and will do what they want to anyway. This is a farce.	Implement PST and tax companies more as well as higher earners. Stop providing subsidies for O and G as this is beyond ridiculous. Start shift to green by shifting subsidies this way. Again... deaf ears that won't listen and have already decided who to pay favors to.	Shift to green. Maintain o and g but hold companies responsible to reclaim orphan wells and do what should have been done decades ago.
T0A	Education and Health Care	Look at Revenue as well as expenditures. You can maintain the level of service we enjoy by adding a reasonable level of taxation given that the revenue from oil and gas that used to pay for a significant portion of these services is now less.	Find ways to support diversification, small business, and secondary development of our resources.
T2V	Spending? Spending is a problem because this Government chose to slash REVENUE. Trickle down economics was discredited decades ago. The tax relief provided to corporations is benefiting owners and shareholders — not creating jobs. Most of that money has left the province. Creating scarcity of dollars and then bleeding critical government programs through a thousand paper cuts hurt the poorest and most vulnerable. Increasing the deficit on the backs of our most vulnerable is a despicable act of ideological bankruptcy. Your leader may be steeped in some form of solitary philosophy but it is unrecognizable from a reasoned, compassionate, and ethical standpoint.	\$30 million is useless, stale, inaccurate, unsubstantiated verbiage from the “Canadian Energy Centre”, elimination of all propaganda positions otherwise known as “Issues Managers”, elimination of the Red Tape initiative, another pointless, ideologically driven effort, restoration of funding to AISH, rental subsidies, homeless programs, health fee schedules — Sending people to hospitals is not cheaper than these programs. Give up your relentlessly anti-intellectual and ignorant desires to deny science and stop meddling with education curriculum and post-secondary funding. You are trying to decide who wins and loses with the narrow-minded choices you make. Governing requires listening and leadership skills, instead you supply misinformation and a steady stream of ideological invective.	By supporting people. Government is for all of the people of the province, not just for oil and gas. There is no future for a government that denies science, does not support equity and growth in all sectors; and refuses to champion integrity over narrow ideology. I was a Progressive Conservative supporter all of my life; I do not recognize this brand of bigoted, social, so-called conservatism. Come to your senses Government of Alberta — we have to face the future. We are a part of a diverse, expansive, incredible Canada. I do not choose to be alienated.
T6C	-Healthcare -Education -Public services	-Increased taxes -Increased corporate taxes -Stop wasting money on the "war room", it is obviously not working.	Stop cutting public services, layoffs do not support job creation. Government support for post-secondary and re-training of unemployed trades people would help unemployed workers find new lines of work.

T8A	Health, infrastructure and alternative energy opportunities.	The government should look at post secondary schools more closer. Years ago we went from a number of health regions to one Alberta Health Services, saving money and creating efficiencies. This could be accomplished with post secondary creating efficiencies. Why do we need presidents/ VP, management type roles in both places? It makes no sense. Keep U of C and U of A. NAIT and SAIT should be made into one called Alberta Institute of technology. Let these hands on learning partner more with indsutry to get people in the work place and start their careers. Smaller colleges should be joined together as well.	This example above would create more jobs for albertans.
T2X	Increasing teacher to student ratio in education and creating a sustainable future for those who will live it.	Take it from the war room	By balancing the needs of the province with needs for non bias education that will serve future students in the world crisis they will face.
T2G	Creat jobs and provide incentives for those who are working, not to those who are not working. People who contribute deserve the tax break not those who refuse to avail themselves to independence.	Income Support Program, too many abusers, no unit in place to investigate fraud cases. Enforce, lifetime maximums, especially fleeing abuse, drug treatment program funding, even income support services, many are programmed to death with no positive outcome, a waste of investment and tax payers dollars. There are two many people accessing same services without any marked change. Why are we supporting the influx of seniors who are entering Canada and never will contribute to the workforce, if children want their parents, they should be responsible for funding them. Many of these seniors have property abroad, can collect some form of pension and there is no way to prove and or monitor holdings outside Canada. Why are people who reside in Public Housing entitled to so many benefits especially those that have so many children, receiving child tax benefits, getting rent subsidy, getting social utilities paid, accessing food banks, collecting exempt child tax benefits are getting rich off those who working. There is no incentive for these people to exit program. It has always been the responsibility of parents to feed and cloth their children not tax payers!!!!	Reduce monies to income support program and direct these monies to employers to creat jobs.

T7Y	Major focus should be done on getting oil and gas moving. Get tough with Ottawa. Real tough!!	Obviously an over bloated government and overly high wages and massive pension plans has to be curtailed. Teachers and the union need a correction. Teachers have less students and more helpers . That needs a major correction. Reversal in fact. Nurses also need a new lesson in economics. They have been bleeding the system for years. Privatize a number of health services. Do not hire 500 more police. We don't need more police. We cannot afford more personal on the payroll. It would mean more offices, more cars, more secretaries, more pension plans, more insurances and who knows what more. Time to reduce employees, not expand the system. That's an NDP plan. We voted against NDP! No more funding or grants for fake or false green energy projects. Let's get real. These ideas bankrupt countries or provinces.	As said earlier. Get oil and gas on the move. Other countries are capitalizing on oil and gas exports. In fact, eastern Canada buys from foreign countries. Unbelievable and difficult to understand. They don't even buy from our own country. Hard to believe that we must pay a tax on gas just to heat our homes. Get rid of Carbon Tax.
T9W	Health Care, Education, Foundational Learning and Employment.	Selling underused building - One example would be the courthouse in Wainwright, that's only used once a week and the Provost Provincial Building that's mainly used (underused) by Alberta Health Services.	Diversifying our resources. I am a firm believer in the Oil and Gas industry but we also must invest in clean energy - solar panel, etc. Both sectors can and should work together.
	education	in upper management	by creating more jobs in supporting roles and reducing managerial staff wages and positions
T9S	Health care, education, diversifying the economy	Not sure	Not sure
T6R	I agree Making Life Better for Albertans is a priority but what the government is implementing is completely opposite like, reducing senior's health care benefits, not increasing education funding and removing the cap for insurance companies.	I worked in government for 17(1) and saw unnecessary department spending like lunch hour meetings where lunch is provided (schedule meetings during regular hours), travel (use communication technology) and unnecessary purchase of office equipment/supplies (i.e. a department I worked with purchascd 8 I- Pads and were never used) There are controls but not followed. It all adds up. The government should legislate the number of departments and no changes, continually government creates new departments, merges departments and dismantles departments. The cost is huge, also it creates confusion with the public.	Government and many older Albertans only see the oil industry the main driver. Oil sales will continue to fall as younger people are electing to use public transit and not purchase a vehicle and if they do they look at electric vehicles which is a growing industry or purchase a small vehicle that gets more fuel mileage. We need to diversify and not in a small way but huge changes. Agriculture and not just growing grains, the world population needs food and the demand will increase. Technology and continues to grow. Something some Albertans do not want but is a good source of income is a provincial sales tax, big bucks.
T9V	Infrastructure and rural policing. Continued vocal support for the oil industry.	Everywhere. Clean out inefficiency and frill expenses.	Reducing taxes and regulations on small and medium-sized enterprises.
T5R	Education, Health The cuts in Education are not what I voted for	Bureaucracy; continue efforts to reduce paperwork and redundancy	Petroleum is important but we really need to focus on diversifying our economy. Focus on initiatives to innovate.... lots of intelligent people in Alberta to support new, less environmentally-expensive ways to grow our economy.
T9k	Health care, education, and infrastructure modernization.	Stop paying for the "war room". Find a way to utilize the same card for healthcare and ID card/drivers license.	Offer incentives to new industries like petrochemical manufacturing or tech to locate in Alberta
T5C	Health care (including mental health, reproductive health, and disability support), education, support for small businesses and entrepreneurs (including farmers)	Cut the war room. Travel via first class instead of private planes. Tax corporations.	Support training for a conversion to green energy.

T1H	Education Seniors Healthcare	Disband AHS superboard Why is so much overtime paid at AHS hospitals. Look into management at AHS hospitals. Overload. Directors for everything.	Diversification.
T0B	Jobs, health care and environmental	Increase corporation taxes	More job training, help got middle class workers get work, lower taxes, increase wages
T3L	Education Medicare Pharmacare Supporting those who are unable to look after themselves Senior Citizens - particularly Pharmacare The Environment - protecting wildlife and preserving our wilderness	Cutting subsidies to Oil Companies	We need a sufficient number of civil servants to provide the services ABs need. Build infrastructure that connects communities and businesses; Tourism support
T6L	Rural Crime	Any gov't funded art programs	Alternative energy advancement
T6M	Diversification of the economy. We need more than oil and gas	Abandon the war room	Help fund research and development in new technologies such as AI and non-carbon based fuels. Look to the future needs of Albertans and not the past.
T4R	Increase health care spending Increase support for education Keep it public. No private for profit. Increase the strength of the middle class	Increase taxes on the wealthy Increase corporate taxes It's not an expense problem but a revenue problem because of your economic plan. It's not working. Pretty easy to fact check daily on the stats available.	Diversity mitigates risk Learn from the past and don't put all your eggs in one basket Your plan is not working
T3R	Education and healthcare	Travel expenses for gov't employees, pay decrease for higher up gov't officials (everyone is expected to take one so why not them), tax breaks for businesses	Invest in different sectors that will allow for diversification of alberta's industry - not just oil and gas
t1w	economic diversification	war room, accept that trickle down economics doesn't work, oil & gas subsidies	help parents return to the workforce through supporting childcare and early childhood education, diversify our economy, invest in renewables and green technology.

T5T	Health Care (especially for Seniors) Education - Fund for increasing enrollments. Support front line Health Care providers including HCAs, LPNs, Nurses and Doctors. Support Teachers, Teaching Assistants and school support professionals.	Stop creating and funding independent advisory panels and patronage appointments!	Invest in renewable energy Invest in infrastructure and support municipal initiatives Build that pipeline Tax major corporations and increase taxes to the top 1% of individuals Stop corporate giveaways
T9A	Bolstering resource extraction and distribution. Education while eliminating waste in the system. Health care while eliminating waste in the system.	Eliminate middle and upper management bureaucracy in all of the services (reduce number of public service managers, do not cut front line workers). Eliminate wasteful spending: cell phone/data bills.	Reduce corporate taxes.
T6H	Public education and public healthcare	Implement a sales tax.	By not canceling needed projects such as the super lab that was needed and ground had already been broken
T2N	It should focus on health care, public transit, and higher education. These are important to maintaining the engines of Alberta, cities, and its dependency on the health of these centres for it's longterm prosperity.	The government can cut the \$30 war room immediately. It's a global embarrassment. I'm the last days, I've not seen a tweet receive more than 20 likes or retweets and all are from Alberta. If you want to cut, there's a cash cow!	Yes and it should support jobs outside oil and gas. Even I got jobs will be radically altered by Digitization of extraction. The current policies make little sense as the rig count shows. More drilling but no job recovery.
T9A	Healthcare and education	At the top! The public sector is very management heavy.	Tax the corporations you are giving tax cuts to, no more corporate subsidies. Guaranteed income of at least 22,000 dollars for all Albertans. That money goes back in to the economy, trickle down economics DOES NOT WORK! Opt in to a federal pharmacare plan, so many Albertans cannot afford their medications.

T3M	Publicly Funded Education- funding for growth, supporting inclusion of all students in the classroom, Program Unit Funding needs to be fully accessible to all qualifying students with medical diagnosis and severe communication delays. Continued elimination of standardized testing before grade 6, school districts already assess students in areas of literacy and numeracy using diagnostic tools to best support the teacher's understanding of the student's needs.	Not funding private schools... It's private, they can pay. Their choice to attend.	Diversify the economy.
T4b	Education	Oil companies	Investing in education
T6E	Education (all levels), Health, infrastructure	Delete the war room, Recoup tax breaks to corporations	Diversify the Alberta economy, particularly in high tech
T4B	Education and healthcare	Travel costs of government employees.	Business tax levy, pst
T1k	Not spending we are in debt we need cuts	Cuts in politicians and services	Create an open and free market, reduce regulations, taxes etc
T6H	See savings below	17(1) Patients on AISH/Social services get free coverage for Boost/Ensure. Patients often get it free (physician writes a prescription for say 1 bottle three times a day) and the cost of these is 30-50\$/box. The patients then sell it online on Kijiji. It happens VERY regularly and should be removed from AISH/social services coverage	See savings above
T1k	Health and education	Greater taxation for high earners and larger corporations. Decreased earnings for high government positions (e.g., leadership roles in AHS)	Diversification.
T7y	Health care and education	Reduce travel expenses and bonuses for provincial employees. Increase taxes on large corporations, they already have the advantage of 0% provincial tax.	Being back carbon tax but funnel the money directly into alternative energy solutions. Offer incentives for the cannabis industry to thrive in Alberta.
T2M	Social services, public health services, public education. Supervised consumption sites are an important part of a system of care for people who use substances. There is plenty of scientific research that shows they save lives and prevent the spread of disease. Services like these are necessary and cutting them will only endanger people and put more pressure on other systems (hospitals, courts, shelters, etc.).	A war room IS NOT needed. We should be working together, not creating further division in our country. Also, corporations do not need as much tax breaks as they are getting.	Stop cutting social services that the most marginalized and vulnerable of our community need to be able to survive (e.g., AISH). When we are faced with hard economic times, like now, we need social safety nets to rely on. Stop cutting public service jobs, as this just creates more unemployment in our province. Also, an oil and gas economy is a thing of the past. Stop making long term investments in it and diversify our economy with green energy, or else our economy (and our environment) is only going to get worse.
T0C	Education and health care	I think in all areas if the fat (upper management, study groups, made up jobs) were trimmed it would save an incredible amount of money. It is the front line workers who always seem to get cut, while people pushing paper and seemingly making useless work for workers already too busy, seem to stay.	Create opportunities within emerging markets such as clean energy, waste reduction. How about creating government positions in which workers go around and clean up/take down/reclaim abandoned oil and gas sites?
T4L	Education	Central office in school division ...cut each one by 30% and put it into teachers and educational aides	Diversity outside of the oil industriesmake other resources more marketable
T4b	Education and nurses	Stop spending on big trips, fly economy and stop funding spouses on trips. Stop making unnecessary grants and providing cuts for big business.	Stop hurting the economy so badly that everyone gets laid off. The damage is already done.

T6C	Focus on getting Oil and Gas business back in Alberta. Fight the federal government and get rid of the Carbon Tax. We need foreign investments into Alberta oil & gas and industrial projects. We need jobs for Alberta Engineers and tradespeople. We are well trained but out of work.	In the public sector - education and medical services. While times were great in Alberta and everyone was working and making good money, the government invested into the public sector as it should have. But those days are over. Times are not so good for most Albertans anymore. 17(1) Why should the public sector get a raise? Where do they think this money is coming from? I'm not even getting an income because there are no jobs for engineers in Alberta anymore and they want more money and more pension? The public sector needs to make cuts just like everybody else. If you asked me, the public sector employees take their jobs for granted while they are oblivious to others that are suffering in Alberta. 17(1) There are a lot of ways these schools could save money.	Tax incentives for foreign investors into the Oil and Gas sector. Get rid of the ridiculous carbon tax. Find ways to sell and distribute the oil and gas to foreign buyers. Continue their fight against negative media and propaganda against Alberta Oil and Gas. Definitely find out who is behind funding the so-called environmental groups that tell lies about Alberta Oil and Gas sector. So far I totally support everything that Jason Kenney and our elected government is doing.
T9H	Education, health care, infrastructure, post secondary	Why not increase revenue? Why is the focus ONLY on cutbacks? Or get rid of MLA pensions.	Create jobs through infrastructure projects, getting pipelines built so oil sands can produce more, maintain funding to education and healthcare.
T6R	Education and health care	4.7 billion payout to corporations	Education and child care
T4b	Education - we need to stay current and up to date with the world. Look at Finland Health care - same as education. We need to look to some countries that are having success. Employment Industry	Tax businesses and the wealthy Cut corporate spending Reduce overhead & management Put money on the ground where the workers are	Support small business ? Not my area or the expertise
T8N	more funding for mental health treatment and addictions treatment. More provincial funding for low income/affordable housing.	Limit organizational changes -- they cost taxpayers millions -- IT system changes, logo changes, stationery changes, website changes, etc. Get rid of the \$30 million PR elephant in the room -- give that money to PDD and AISH. Don't send multiple politicians when one can do the same job -- as in Ottawa visits - huge waste of money. Apply the same scrutiny to political expenditures that you do to the public service and you will save immediately.	Laying off thousands of government staff isn't going to help -- in fact it will put us in recession. Who do you think the spouses of all those oil and gas workers are employed by? Make maximum use of federal funds aimed to employment. Don't drive scientists and high end professionals out of the province (e.g. from government or universities) -- they won't come back when you change your mind.
T6X	Health Care Education	Untouched Oil Sands Royalties	Explore alternative energy sources; we need to diversify and stop depending on oil.
T6J	Health care and education. You know, to care for current & future generations	Stop giving tax breaks to oil and gas. Also introduce a pst like the rest of the country	Diversify. Tech corps would be good idea. How about giving them a tax incentive to move out of Vancouver and into the many many empty buildings in downtown Calgary
	health, education, infrastructure, public services	Cut from the top i.e. president (not front line workers) Cut unnecessary positions e.g. clinical nurse specialist Consolidate positions i.e. one clinical education for a service Cut excessive pensions Expense limit for public officials Hire more front line workers to decrease overtime and burnout, also for safety and better patient care	Diversify the economy (e.g. technology/IT, green energy)

	<p>PUBLIC Education- lower class sizes, bring back low class initiative.</p> <p>Health care- keep funding public health care, nurses and hospital infrastructure.</p> <p>Programming needs to be continued for social and mental health programming for youth and families or our province is going to suffer even more in this area in about 15 years. This is so important. The needs in a classroom are changing to mental health, basic needs model. Curriculum is not able to be a priority until these needs are met and these programs and low class sizes need to be implemented.</p>	<p>Be consistent with programming. Ex. Curriculum being stopped and re evaluated is such a waste of funds. Just because Gov. Changes we cant restart program creation, jobs and research.</p>	<p>Create more jobs with funding public health care, infrastructure for hospitals and schools, mental health and social work programs.</p>
T4N	<p>Drug addiction, drug rehab, drug treatment, more judges and harder penalties for crime.</p> <p>Employment, economy, education and health services</p>	<p>Hospital administration, travel for politicians.</p>	<p>Programs to put rehabilitated people back into the work force. Close safe injection sites.</p>
T6C	<p>Green energy</p>	<p>Reduce oil & gas subsidies</p>	<p>Green energy alternatives</p>
	<p>Education and Health care.</p>	<p>Get rid of the war room.</p>	<p>Diversify the economy.</p>
t2N	<p>1) Stopping all spending on Canadian Energy Centre and put that money in too clean tech and energy transition planning.</p> <p>2) Reinstate all funding and tax credits to arts and technology incubators</p> <p>3) Reinstate funding to public education and post secondary</p>	<p>1) Cancel all religious schooling funding</p> <p>2) Fire Matt Wolf</p> <p>3) Cancel War Room</p> <p>4) Reverse tax cuts to oil and gas companies and car dealerships</p>	<p>1) Fund and promote clean tech companies</p> <p>2) Fund arts and movie productio</p> <p>3) Reinstate Tax breaks for tech companies.</p>
T6W	<p>Improve education and health services. Our kids, youths are our future, having better education will bring more money, innovative ideas to have better life in Alberta.</p>	<p>Remove contractors, committees and war room.</p> <p>Reduce multiple assistant deputy ministers and deputy ministers positions which should be only required one per ministry.</p> <p>Remove vendor management services and hire more employees than contractors or vendors that way we will save money and increase job positions for Albertans.</p>	<p>Reduce taxes for small businesses rather than big corporations. 4.7 billion tax credits to big corporations is definitely a bad decision, it hasn't created any new jobs in Alberta, rather we lose our revenues. These companies were making profits before and will now make even more profits. No new investment or project has been initiated, thus, remove those credits.</p> <p>Don't just focus on oil industry! Support on other industries such as solar, plastic, video games, film indusry and other small businesses.</p>

T8N	<p>Education, education, education. Cuts affect the quality of the education provided: special needs students don't get the support they need; teachers are taking stress leave; parents are finding that extra-curricular activities are disappearing. Alaso, to scrap the curriculum developed by the N.D.P. (that included input from teachers) and begin again is duplication of use of resources - that's a huge waste and smacks of gerrymandering. Many schools had purchased or developed resources that they now can't use. Spending money on helping Alberta business build refineries to lessen our dependence on shipping crude - and the dependence on pipelines is also important.</p>	<p>Save the money, time and trouble it would entail to take over the ARTA pension plan. The plan figures show that for the last three years, at very least, the plan outperformed the LAP fund. Do you think people - teachers and anyone who can read the comparison figures - believe that would be a good move? Money could be saved by not courting big oil firms in the U.S. and by cutting administrative positions within the government.</p>	<p>Support for the environmentally sound development of our petroleum industry within our province, which would include supporting research into the best possible ways to do this. This would foster the re-generation of service industries and research at our universities/colleges.</p>
T1B	<p>Support the front-line staff (teachers, educational assistants, counsellors, school admin, as well as mental health workers, SLP, OT, & PT) who work directly with children in public schools!! The complexity of student needs in the classroom has increased faster in the past 3-5 years than I have ever seen in the past 30+ years. If the government fails to recognize & adequately fund such staffing, the learning of all students is being jeopardized significantly.</p> <p>Although I am less familiar with Health Care needs or funding, I would suggest that front-line workers in health care also need to be supported adequately in order to avoid greater health issues.</p>	<p>Perhaps there are significant savings that could be made at the Provincial Government management level, and School District or Health Region management levels, and perhaps some savings in the schools & health facilities, but it should NOT be made at the expense of front-line staff working with students and patients.</p>	<p>Invest in education and health care!!!! Supporting education and health care creates a stronger, healthier, more capable population for the present as well as for the future.</p>
T6R	<p>1. Health care and education 2. Infrastructure (including municipal grants) 3. Diversifying the economy</p> <p>I hope the government will decide shortly to discontinue the energy war room and to provide no more corporate payments to entice businesses back to Alberta. It feels like our province is throwing good money away in hopes it will come back, but without any evidence that that money will be <u>invested back into Alberta.</u></p>	<p>I would be willing to pay a sales tax so that we can properly fund health care and education. I am very concerned about the current and proposed changes in funding.</p>	<p>Invest in diversification of our economy (e.g. technology, tourism) so that our economy can move toward less dependence on the oil industry. It's disheartening to see the government continue to pursue oil and appear resistant to other ideas.</p>
T5T	<p>Education (including post-secondary) and Health care</p>	<p>Don't give tax breaks to corporations. Especially rich corporations where the money went to already rich share holders instead of promoting more jobs. Learn that trickle down is a theory - but not actually something that works in real life.</p>	<p>Stop the layoffs in the public sector. Support the tech industry. Build infrastructure - create jobs for construction workers. All these people pay taxes. If you take away their jobs - you lose the tax revenue from their wages. People living in fear of losing their jobs stop spending - and the economy stalls.</p>

T1A	Education and health.	Stop with all the surveys and panels to try and make it look like you care about opinions, when we all know it's only the opinions that align with those in office that matter. I don't know this might seem crazy, but govern?	Child care that's affordable for all. I've seen misguided things said in the news about child care and the \$25 a day. I have a good job. But paying \$25 a day vs \$35 for 2 kids adds up. I'm not subsidized so I paid it all. Those parents that don't have as good as jobs were subsidized. I pay a lot of tax. So tax and child care were my biggest money out items. However as finally a full time kid was in school I could buy other things with my earnings. Like a car. Which is driving the economy no? But by taking that away and continuing to marginalize a big portion of the work force you're biting yourself in the face as they'll just stay home and buy 2 loaves of bread a week as that's all they can afford. Where is the common economic sense with this government?!
T2S	The Springbank Dam (SR1) Public education Health services Social services	Immediately stop the bail out to large corporations whose accountability is to their shareholders, not the citizens of Alberta. Remove funding to private schools (has been done in other jurisdictions without significant repercussions).	Immediately begin and sustain research into economic diversification. Get rid of the "all eggs in the oil and gas" sector. Support public education, which will lead to well educated Albertans.
T4P	Crime and creating jobs..	Shutting down safe injection sites .. Sending home temporary foreign workers to create jobs for people on income support .. Lowering the amount people receive for income support , lowering the amount people receive for aish..	Cut small business taxes .. Lowering minimum wage..
	Education, healthcare and capital expenditures	Improve internal inefficiencies by streamlining processes and reducing expenses	Invest in education and provide more incentives to encourage people to start their own businesses
T3C	Healthcare, education, social programs, infrastructure; start re-investing into the Heritage Trust fund.	Claw back the tax breaks you gave to the oil corporations, they've done nothing to generate jobs, and walked away from the mess they've created Find the courage to look into a provincial sales tax and actually use that to fund programs.	Invest in repairing public infrastructure, stop attacking public education, invest in new technologies
T1X	Health and Education	Increase corporate tax	Alternate energy such as Solar installation subsidy . Video game industry, plastic plant subsidies.
T3B	Diversification, social welfare, upstream flood mitigation	All levels of government need to change the concept of use or lose with budgets. No department will come under budget because the following year they may not be able to ask for funds needed based on their history. Perhaps if a department comes under budget the unused funds can be banked for future unforeseen needs. Somehow we must break the established pattern of use it or lose it causing wasteful spending at year end.	Diversification Support the film industry and tourism and any other renewable resources Support alternative energies Encourage secondary and tertiary development of our natural resources Promote small businesses
T5M	Education, increasing health services, diversifying the economy.	Implement a sales tax to increase revenue. Eliminate vehicle benefit to elected officials. Double tax on cigarettes and liquor.	Invest in start ups. Invest in post secondary education to expand opportunities in emerging opportunities. Buy out public servants over age 60 to create opportunities for new graduates.

T2A	Public Health care Mental health Supervised Consumption Sites AISH Education	Amounts used to short corporations and oil companies. I'm not against oil but people could cut back on oil product used. Diversifying the economy beyond energy is important, and rather than helping big corporations, help smaller companies. If AHS and the courts have to cut back on things like pens, paper, and Kleenex, none of this should be provided in government office and the legislature. Cut back on MLA and premier salaries and travel costs.	Support organizations like Momentum and Prospect. Create grants for small start up companies. Fund life skills and work skills training programs for individuals with mental health or physical disabilities. These individuals have lots to offer.
	Investing in Education, Advanced Education and health care, public transportation and cities	Add a sales tax and increase corporate taxes	Restoring funding to the public sector. Where will all these unemployed public sector employees find jobs?
T1M	Public education and public health care	Pensions, expenses or pay of MLAs. Private jet trips for Premiers of other provinces. Wasting money fighting the carbon tax when if we implement our own we could keep the money in Alberta rather than giving it to the Federal government.	Focus on new technology and energy. Fund education.
T2K	Youth and adult mental health programming plus making getting financial assistance easier for families experiencing homelessness or unable to afford the cost of living.	Cut your own salaries	I don't agree with the recent layoffs to social services and education. Why great new jobs when you just canceled a bunch that were really necessary
T4N	Should focus on the future of Alberta. Diversify, energy is here and needed but don't lose out elsewhere. Albertans are already hurting, quit kicking us.	Raise corporate taxes.	By not centering only on oil and gas.
T0M	Education Health Care	Increase Corporate tax base Introduce Provincial Sales tax	Invest in our Universities
T4T	health, education, public workforce; focus does not mean providing more money, it means taking a look at the funding to ensure it's efficient and effective	governmental departments, multi-layers of management in government agencies, union contracts	provide a balanced playing field for all industries; i.e. don't give more incentives to oil & gas, alternative energies or technology, rather let the entrepreneurs and existing corporations determine what is their best option for success. This will lead to job creation, economic growth and organic diversification of the economy.
T4R	PUBLIC health care, PUBLIC education, and diversification in the energy sector are important. The War Room and financing large private corporations should not be a focus at all. Privatizing the public sectors (including EMS, Medical labs, policing) is the wrong way to go.	Closing the war room and the ridiculous wages paid to those who are employed in that capacity. Reversing the big spending this government has taken with regards to reversing all NDP programs. Quit blaming our last government - who were doing well without marginalizing people and industry. Reducing /eliminating the ridiculous number of PANELS Kenney and his entourage should travel far less. So many going to Ottawa before this past Christmas; Kenney's Texas trip; Kenney's and 'friends, trips to the UK	Diversify!!! Support businesses that are implementing green energy; many out of work oil and gas persons could be using their talents and know how to clean up the orphan wells. It is a double whammy that Kenney supports/sympathizes with nonpayment by the companies. If you start to respect other professions in the province and quit attempting to demoralize and downsize all areas not in oil and gas, you might actually retain a healthier tax base. KEEP YOUR PROMISES, QUIT LYING, HAVE SOME INTEGRITY.
T9E	Long term care facilities (including utilizing under used hospitals) Schools, roads, hospitals	Stop pampering prisoners. Make them get out and clean ditches, fight fires, etc. Allow front line health care workers to tell people that there illness should be treated at a Dr.'s office not an ER. People should be told when on social services that if they get pregnant while on SS they get no extra. Birth control is covered.	Corporate tax reduction is a good start. Incentives for retrofitting plants, mines etc for going green.

T5E	Healthcare, including prescription drug coverage for all Albertans including all ages. Free Flu shots for all people in Alberta, including those visiting from another province, or just moved here and has not changed AB Health Card information.	Allowing those that work part-time under 30 hours a week, who can't find full time employment or another job to make up to 40hrs a week, a tax break, as in a form of some kind of rebate, monthly to ease the burden on the worker's mental health that costs thousands in healthcare. Worker can eat better than then turns the healthcare system around for long term health issues.	By providing those that work under 30hrs a week, but has permanent employment (more than 3 months)and can't find full time work, a rebate to ease the burden,which in turn allows the healthcare system a break, and the worker then can contribute to the overall growth of the private sector and economy. More money equals,more spending and supporting retail economies that ensure job success.
T8X	Social care. the environment, societies most vulnerable. Are you thinking about the future and the aging population? Baby boomers will lead you to your future considerations, but you should know that.	Saving on oil and gas theatrics, either there is a real plan for oil and gas or not. Get thinking about other resource avenues of business other than oil and gas. Get real.	Yes, so what is your plan for employing Albertans. Give us some details of what your plan really is??? Oil and gas should not be your only plan. Develop new strategies. Stop speaking to only one industry. The rest of the world has options, where are you??
T7x	Education/healthcare	Tax the wealthy	More Grant's and tax breaks
t9g	Education and health care	Stop giving giant tax breaks to billion dollar corporations in a dying industry	Stop layoffs of public sector workers
T3B	The elderly (seniors), people on AISH and not de-indexing or cutting AISH, or changing the payment dates for supports e.g. AISH, Income Support, getting people back to work through providing quality affordable childcare and housing. Education from kindergarten/preschool to post-secondary and specialization training. Healthcare (cutting health care cuts jobs for professionals.) Valuing and respecting people of every income level and background. Using the Charter of Rights as a basis when making decisions.	Government expense accounts (e.g. hotel, apartment costs while MLA's are attending legislature meetings), government members to use their own vehicles and pay for own gas, rather than taxpayer funded transportation. Carpooling. Appropriate corporate taxation. If corporations are going to stay in Alberta, they will do so without the province bending over backwards to keep them here. Savings should not be on the backs of the most vulnerable. We received a pamphlet from our MLA that had the words "protecting the vulnerable". Not indexing AISH to the cost of living and changing the payment dates for supports are not strategies that lend themselves to protecting the vulnerable.	Look at expenses across lifespan stages. This means individuals at every stage need some form of income whether it be from employment or from supports. Rather than decreasing AISH slowly over time, it should be increased as it would allow individuals to put money into the economy e.g. grocery buying, paying rent and mortgages, bus passes, recreation, schooling, etc. Add focus on sustainable and renewable resources. For example, some crops such as alfalfa put nitrogen and other nutrients back into the soil and tree roots help hold soil in place (a factor in the depression of the 1930's). Focus on cooperation between industries rather than competition. Oil is not something we can grow every year. There are pumps that are no longer used. As the saying goes "we should not put all our eggs in one basket". Alberta has potential to diversify. Focus on quality affordable post-secondary education to meet the need for professionals and tradesmen. Maintain high educational standards and help individuals of all backgrounds and capabilities to meet their potential. That would truly be an Alberta Advantage.
T5y	Education and support for the teachers Child abuse and the kids in non safe homes	All the money they spend on let expanding Taxes breaks for the rich Big coe pay cuts	Take care of our kids they are our future Pay what we need not what we want if we got to cut things let's stop spending for awhile
T0A	Fish stocking Education	Trimming down elected government (MLAs) Eliminating 'war room' (waste of money) Stopping these phony panels (your decisions and agendas are pre-determined so these panels are a complete waste of money)	Deregulation Prioritizing diversifying the economy Implement a sales tax
t7n	long term care, building of facilities, low income housing, highways in rural alta. rural infrastructure, don't always give Calgary and Edmonton money, their dreams to big and costly. Beef up agriculture processing of a final product to export and sell locally.	reduce the size of alberta's government, less mla's, reduce management in all dept's. sell off cars, trucks, suv's, that alta dept.'s have an lot of, see lots in parkades at gov. offices. All dept education, health, etc. 30% size reduction. but still do the same work, to many freeloaders.	increasing royalties to clean up abandoned wellsites, set sights on teck industries, bring alta to the 21 century, final producing of our ag products, manufacturing, wood, steel, more refineries sell finished product.

T3K	Getting rid of their waste of money war room and invest that money back into the demographics that have been robbed by them like those on AISH, seniors, and front line workers.	In their unbelievably expensive war room.	Stop the hyper focus on oil and gas and STOP CUTTING JOBS for the majority of Albertans! They are hurting families!
	Social services, health, housing	Eliminate the war room.	Attend tech conventions! Embarrassing we weren't in Las Vegas
	Education, health care, industry and tech innovations	Not overhauling the curriculum for K-12 schools Instating a provincial tax Looking at fee structures for doctors (referral fees for doctors i.e. dermatologists who see 80 patients a day, they should be paying instead of going after family docs, and primary care workers)	Discount programs that enable consumers to make their homes more environmentally friendly, subsidize companies that have tech/energy innovation as a mandate
	Health, education, major infrastructure and housing	Closing the war room, ending the creation of expert panels, keeping legal services inside government (instead of contracting out)	Stop down sizing the public sector! Focus on developing other industries outside of oil and gas, stop the political rhetoric
T9A	Education Health Renewable energy Diversification of industry	Business subsidies for dying industries (gas/oil/coal)	Investment in renewable energy Investment in knowledge based industries Investment in recycling to create new products
T3k	Upper management	PST Health premium s	Give cost of living allowance to all contracts
T8X	EDUCATION!!!!!!!!!!	Cutting some current wages in government positions!! Everyone else is taking pay cuts so should they!!!!	By backing out oil and gas industry and getting trade deals in place!!!
T9N	Maintaining our provincial infrastructure, i.e., highways. They are getting in terrible condition. It is false economy to reduce spending in this area. Remember Edmonton's Mayor Reimer's folly? Edmonton had to spend inordinate amounts of money to bring back its streets. Is still doing it.	Reducing the bloated management structure at Alberta Health Services and Covenant Health. Find some method to avoid management deciding on staff reductions without reducing their numbers. As an example, no front line cuts without management cuts on at least a 5:1 ratio, management vs front line.	As unpopular as it is, continue with tax reduction for businesses. Maybe some some small business incentives of some sort. Also do not kill programs such as STEP that help small and other businesses/organizations employ youth.

T0J	Job creation, pipeline, revamp health care spending	<p>-There should be a limit put on how many times the Government pays for individuals to be in treatment for their addictions. There are cases where individual have treatment approved 10 times with no success. For the individuals that really want to recover the treatment program should be minimum 1 year, not 3 weeks to 3 month. Most of these individuals spent majority of their lives intoxicated this can't be fixed in 3 weeks to 3 months. For those who really want to recover, they will commit to the year.</p> <p>-Put policy in place for people applying for income support they must be up to date with filing their taxes, why should tax paying people pay for non tax paying people.</p> <p>-Why can Income support program provide assistance within 48 hours, but Employment Insurance takes 4-8 weeks, then those EI people are forced to apply for income support while waiting for EI, that shouldn't be happening with today's technology.</p> <p>-Do something with empty buildings, waisted energy.</p> <p>-Re-evaluate our medical system. Mental health is on the rise, things we as children dealt with, most children today can't handle. We have created a very needy dependent generation, there is no basic life skills, street smarts anymore...what on Earth happened? So many children are seeing therapists and are on antidepressants, Why? It's like children are no longer given the tools and encouragement to deal with conflict. What kind of a future are they going to have?</p>	Stimulate the oil patch by finding different markets, get the pipeline built.
T3B	Education, first responders, health care.	Cut down on higher government spending. Higher big business tax	Diversifying the economy so we're not so dependent on oil & gas (i work in oil & gas, but it needs to change). Green incentives for businesses as well as for different industries to make Alberta their headquarters.

T3H	<p>Education--Getting people back to work is a good goal, but you can't really do it without a good education. Think both long and short-term here! In the short-term, programs for people who are unemployed to retrain. In the long-term, investing in the public education system (elementary, secondary, and post-secondary) so that people graduate with the confidence and skills to enter the workforce.</p> <p>Funding for people who really need it--while I do not disagree with incentives for companies to create jobs, I found that in the previous budget, tax breaks to large corporations came at the expense of funding in other areas that are desperately needed. When I heard that PUF funding for young children with special needs was being reviewed and possibly cut, I was heart-broken. Why? This funding is used for early intervention, and can prevent strain on the system further down the line of a child's life if you invest in them early.</p>	<p>Likely Bureaucracy. I think the government is doing the best with what they have and trying to cut spending in a way that is trying to maintain the status quo (and not going all out like Klein). That said, if the government puts it to their employees and unions to help find the savings, it would promote a more collaborative (rather than adversarial) spirit and allow front-line employees to take some ownership of how to address the province's financial reality.</p>	<p>See previous responses.</p>
T6J	<p>Public education, healthcare and disability services</p>	<p>Reducing corporate funding, reducing tax breaks, add a provincial sales tax</p>	<p>Give incentives for new graduates to take jobs here, make living affordable</p>
T5K	<p>Healthcare and education. Stop taking away from healthcare. We need more schools, and more out of school care so parents are able to work while their children get educations.</p>	<p>Healthcare premiums Provincial sales tax</p>	<p>Stop deciding that cutbacks are a way to go. The people deciding who to cut will never cut from the top, which leaves frontline workers. Which will turnaround to lack of proper healthcare and proper education for ALL albertans.</p> <p>Try to refine the oil here so we can stop shipping it elsewhere to buy back at a higher cost.</p>
T1K	<p>Education, AFTER you have repaired the curriculum. 17(1) it was really sad to see the quality of employee drop over the years. 17(1) can home from school one day and informed me that he had asked a teacher when they were going to start to learn how to spell and was told not to worry that he would pick that up on his own later! Metric system is nice but the real world still uses inches and feet day to day. Especially in the trades.</p>	<p>Cutting red tape and the agencies attached to them.</p>	<p>Very easy! Take the blinders off and take a look south of our boarder. Love him or hate him but follow the lead of Donald Trump! Get rid of 10 regulations for every new one! Removing red tape and freeing industry will not cost the taxpayers anything. Industry knows better how to run itself than ANY government.</p> <p>Thanks for the opportunity to express my opinion. 17(1)</p>
T2R	<p>Education; diversification</p>	<p>Raise corporate taxes</p>	<p>Invest in education and diversification - clean energy, the tech sector</p>
T0H	<p>Health, education, advanced education</p>	<p>Get rid of the war room and reallocate that spending elsewhere. By not giving corporations a huge tax break.</p>	<p>Diversifying the Alberta economy. I repeat, DIVERSIFYING THE ALBERTA ECONOMY. I wouldn't invest my money in one thing, why are we doing that with the economy???? Can someone please answer this for me? The GOA is literally like "we must save oil & gas" and guess what, because of all these cuts there are companies (who support oil & gas on top of other things they do) that are going to go out of business, but they're not a straight up oil & gas company, so who cares right? Alberta is a joke. We look stupid on the world stage. I will say it again - DIVERSIFY THE ECONOMY.</p>

T2Y	Education and HealthCare	sometimes we need debt - in senior positions in government and health care and education	Tax incentives
T2M	Education, arts, and public services, especially public transportation.	Stop trying to prop up oil and corporations.	Investing in education, renewable energy jobs and infrastructure, and arts.
T9N	Education, health care, and working to expand our provincial economy outside of the oil patch.	Corporate taxes.	By investing in our children, and their educations so they are well prepared to build a more innovative Alberta.
T4a	Families, education, health care	Politician salaries and benefits, use the taxes wiser	By not cutting thousands of jobs and funding for early childhood educators and health professionals
	Reducing childcare. Investing in infrastructure and front line staff	Raise corporate tax to increase revenue	Tax credit to tech sector.
	Diversify revenues. Don't rely as much on oil and gas industry only. How about tourism?	Cancel expensive war room. Cancel review of curriculum in the absence of actual educators, especially since it was already recently done by the experts and the education system here is excellent. Invest more into upstream public health measures to prevent the use of expensive acute care services. Reduce monies put towards students utilizing private schools.	Invest more in post secondary education, make this option less expensive for future economic earners and contributors in our province.
	Diversify revenues. Don't rely as much on oil and gas industry only. How about tourism?	Cancel expensive war room. Cancel review of curriculum in the absence of actual educators, especially since it was already recently done by the experts and the education system here is excellent. Invest more into upstream public health measures to prevent the use of expensive acute care services. Reduce monies put towards students utilizing private schools.	Invest more in post secondary education, make this option less expensive for future economic earners and contributors in our province.
T9E	Education and health care.	Amalgamate or eliminate school boards, allow principals to make real decisions that benefit students, not just follow the school boards agenda.	Not cutting public services as this will, and has already, made it harder for Albertans. Restaurant chains have left, oil companies have left this is causing a trickle down effect and businesses are hurting. Keep more people employed by capitalizing on workforce available to build infrastructure.
T9E	Education and infrastructure	Get rid of school boards. Moo one including the superintendents can tell me their role.	Infrastructure and education. Both attract investors
T7Y	Road repairs (TENDERS) no more cost plus jobs, performance based with long term warranty, senior housing, job apprenticeship programs, alberta first opportunity program,	All unions specifically management and administration, punish criminals to full extent to quite the revolving cost of dont want to make anyone unhappy, maximum exposure and revenue from highway patrols,	Subsidized apprentice program for first two years and employer gets tax break but has to employ until red seal completed in 4 years. Carbon rebate program for all business and homeowners to build solar and emission free infrastructure. Companies competing for Alberta contracts must be owned and operated in Alberta. Alberta first always.
T3b	Incentives for tech companies	The government could work with aurora to make the clement with kemp that will last longer	Incentives for small businesses and tech companies
T8s	Environment, Education, health care, actions to fix climate change,	Tax breaks for corporations Subsidies for oil companies	Through supporting social Infrastructure and education
T0A	Education & healthcare and infrastructure.	Cut stupid hands out to big corporations. Stop paying tones of money to lawyers and panel members to get the answers the UCP wants instead of common sense.	Diversification. Complet already started project like super lab...

	Diversifying the economy away from oil and gas. Increasing investment in tech and green technologies. Education (at the primary, secondary, and post secondary levels). Healthcare (especially front line workers). Developing a strong policy to address human-caused Climate Change.	Start with their own salaries- the fact that there are ministers assigned to portfolios in areas where they have NO relevant experience is ridiculous. Cut the War Room. Stop giving handouts to oil and gas companies, car dealers, and other Conservative cronies. Pull all funding from private religious schools and charter schools that don't follow public guidelines.	Unchain the province from the dying oil and gas industry. Pour funding into post-secondary institutions. Stop acting like overgrown diaper babies, constantly crying about how hard-done-by Alberta is- we are an incredibly prosperous province, full of smart, innovative, progressive, urban people. Despite decades of provincial Conservative mismanagement, we have prevailed- stop destroying our progress for your own amusement.
T0H	Health care and primary education	All departments need to be analyzed and have the "fat" trimmed. Also the unionized workers need to be sent a message that our economy is in tough shape and many Albertans are taking wage cuts or losing jobs. The public sector should be grateful for having good paying jobs and lose their entitlement attitude.	Industry will take the most economic attractive path, favourable tax rates, less regulatory hurdles, more stand up against central government and NGOs. Wherever industry is willing to do business, the jobs will follow and economies will grow.
T4C	The austerity program the Alberta Government has us on is taking funds from the poor and middle class and giving money to the rich. Whether it is taking \$320 from me for each child because I have to pay for the school bus despite living more than 2.5 km from the school (a little far to walk and there is no safe path) or giving me a whopping 0% pay increase which is really a - 2% increase due to inflation, I have less money to spend in our economy. The rich companies are just going to take their tax savings and continue to save it. Many companies will take the savings and leave for the United States or to other provinces. The province is actively shrinking the economy rather than growing it. A balance needs to be found, this has not been found by the government.	The government should first find savings in their own bureaucracy. 17(1) of teaching, I've never once felt like Alberta Education was actually doing much to improve education in the province. They jump on the pendulum and just go for a ride. Most of the people in Alberta Education are there because they don't want to teach, so we have very poor teachers leading the province. The same can be said for the bureaucracies of School Divisions. There are way too many people getting paid to do some stupid job that nobody cares about or to write some report that nobody reads. Again, most people who are in the central office are there because they could not hack it in the trenches. Some of the people in central office have never really taught, they are just academics. More important than savings though, is revenue. Our government cannot continue to run the province based on a natural resource that is so prone to swings in value. A sales tax needs to be brought in but no government in Alberta will do this because it is political suicide and governments in Alberta are way more interested in staying in power than actual good governance. The UCP can blame the NDP all they want for the problems that Alberta has but anyone with a brain knows that many of these issues started a very long time ago. The Conservatives in Alberta mismanaged the province for a very long time and the federal Conservatives did the same. Harper did a really poor job of getting pipelines built and so did our previous Alberta Premiers. At this point, 17(1) you have already labelled me a "special interest group". You could say the same for any citizen in Alberta. Business people are also special interest groups. You might also think that I am a big NDP supporter. I'm not. I'm actually a fiscal conservative with progressive leanings on social issues. I am a Red Tory or a Blue Liberal depending on which way the winds are blowing. I actually	Alberta needs a real plan for the realities of the global market right now. I'm not against oil & gas. 17(1) was in Turner Valley for the original boom there. 17(1) spent most of his working life in oil & gas. Alberta needs to support oil & gas but we should not be artificially propping it up at the expense of other industries. Oil is a dying industry. It is going to become a dead industry at some point. Other countries are not going to invest in "dirty oil" and it doesn't matter if we say it is clean or not. They will believe what they believe. Alberta needs to continue to diversify. We have more sunlight than anywhere else in Canada. We should be world leaders in solar energy and not just Photovoltaic Cells but also using solar energy for heating. We have a tremendous opportunity to utilize geothermal energy in this province. We need to continue on with manufacturing, high tech., tourism, agriculture, forestry, and entertainment industries. We have to diversify and plan for the day when oil is no longer. We cannot control the price of oil, it has a lot more to do with world pressures than what we are doing. 17(1) was a blacksmith and farrier. When it became clear that horses and horseshoes were not going to cut it, he reinvented himself and became a mechanic. Oil & gas is the horse.
T4L	Healthcare, Education, and protecting vulnerable populations.	Cut the war room, stop giving tax credits to corporations. Trickle down economics isn't working.	Public infrastructure seems like a good idea.

T3A	Balance between economic development and social/health programs	Perks of senior officials of government and government supported institutions in health care and education.	Diversification - a topic talked about for decades.
T1K	decreasing our overall debt making education affordable for post secondary students	enforce higher up in the health care sector and public education to take a pay cut, and not firing the teachers and medical staff that we need. stricter regulations for receiving welfare.	Build the pipeline!
T6J	Health and education. Stop cutting funding to health and education.	Stop gov. Trips to Europe , US and any unnecessary trips. Stop giving tax breaks to large companies. Stop reversing all the improvements made by the previous government.	Promote railway traffic for oil and other produce. Support small business. When gov cuts civil service jobs it creates stress and uncertainty in the workers and general public. Constantly making statements about how economically deprived Alberta is creates pessimism and depression. It also does not promote investment in our province.
T0B	Abandoned wells: Cut and cap, reclamation. Clean up this mess	The government should ask front line employees inside the civil service where savings could occur. (not managers) AISH is a case in point.	High tech. Albertans are innovative, but mentoring is essential. Mentors are needed to see companies survive and thrive.. Government employees are not suited to this role. A centre for consultation, past manufactures, accountants, people with a proven record of "making it work".
T8x	Making Alberta more internal like Quebec (cpp) taxes , police .	Getting out of equalization	By putting a stand to ottawa and stop feeding them money
T5K	Health, education, cities	Stop subsidies to oil companies. Stop corporate tax cuts. Decrease number of rural M L As	Funding for Arts, gaming companies, alternative energy, film production. Hire more nurses for proper staffing
T8N	Education. Supports for students with disabilities, extra needs. These kids are OUR future. And we need to continue to support their growth,mental health, and education. Not give tax cuts to large corporations. Health care. Taking care of our elderly. Proper mental health care.	Not sure.	Not take away teachers jobs? Not take away educational assistants jobs? Not take away nurses jobs????
t8x	I think the government should be focusing on education- especially for inclusive education it's severely underfunded and classroom sizes continue to be too large. We also need to make health care a top priority.	I think the government should institute a 2-3% PST for the province. It's not savings we need its income we need.	Offering incentives to businesses and try to regain interests from technology companies to move back to Alberta. We need to expand our palettes.
T3R	PUBLIC education.	End the war room. That \$30 million should go towards public education and healthcare	Diversify the economy — invest in other industries, such as tech

T7Y	Rural crime prevention Reducing tax increases for ordinary Albertans Integrated service delivery at the local level Tax employees working in Alberta but not a resident & not paying taxes here	Limit per student funding for high school graduates to cover 100 credits (which is what you need to graduate) & charge to extra credits - develop a strategy for this - there are savings here & it encourages students to move to post-secondary or the world of work. Reduce the levels of management in government (no need for executive directors - did not exist 10 years ago) it would improve communications including understanding implications based on front line experiences rather the filter now applied which is not an accurate picture. Review benefits for unions (e.g., there should be no pay out for sick days not taken ... this is not the intent of sick days) All future tax increases should go to plebiscite for people to vote on.	Encourage innovation & continue to reduce red tape & over-regulating. Provide incentives to industries experiencing downturn which is based on external factors outside of Alberta's control.
T2w	Health, education and social services. Health, education and social services Health, education and social services	Raising taxes on oil companies and canceling the canadian energy centre Raising taxes on oil companies and canceling the canadian energy centre Raising taxes on oil companies and canceling the canadian energy centre	Hiring more teachers, nurses and social workers. Hiring more teachers, nurses and social workers. Hiring more teachers, nurses and social workers. Hiring more teachers, nurses and social workers.
T4C	Economic diversification - eg. job retraining and investing in renewable energy and alternative industries (including the film industry, for example)	Eliminate the energy war room	Funding toward retraining and small business development
T2S	The highest priority for me and my family is flood mitigation.	My advice is to go after big ticket items. Don't nickle and dime small organizations.	By lowering taxes and promoting smaller government.
T0A	Public Education and health care	Taxing large corporations	Stop cuts to education and health that are causing more job loss. Get that pipeline built while also looking into future more sustainable energy sources
T0A	The government should focus its spending priorities on healthcare, education, and renewable energy. There should be more focus on investing in police services, especially since crime is increasing with the current Alberta recession. There should be more research and development put into renewable energy as well. Just because we have oil in this province doesn't mean the government can't be progressive and think about future generations.	Get rid of the war room, lower salaries for MLAs, implement higher taxes on International corporations. Stop wasting money reversing all of the bills that were passed by the NDP and focus on the needs of Albertans rather than cutting all of the programs that were implemented to help them.	The government should be investing in renewable energies like solar, wind and geothermal energy. There would be plenty of jobs created while continuing to implement these new energy sources, as was already happening before the UCP government came into power.

T0A	The government should focus its spending priorities on healthcare, education, and renewable energy. There should be more focus on investing in police services, especially since crime is increasing with the current Alberta recession. There should be more research and development put into renewable energy as well. Just because we have oil in this province doesn't mean the government can't be progressive and think about future generations.	Get rid of the war room, lower salaries for MLAs, implement higher taxes on International corporations. Stop wasting money reversing all of the bills that were passed by the NDP and focus on the needs of Albertans rather than cutting all of the programs that were implemented to help them.	The government should be investing in renewable energies like solar, wind and geothermal energy. There would be plenty of jobs created while continuing to implement these new energy sources, as was already happening before the UCP government came into power.
T4J	Actual teachers and Aids in the classroom	PD activities	Hire more front line staff
T1B	More income for Senior Benefits 1200\$ is not enough. More income for people on income support. Better drug coverage for seniors. No more bail outs for oil and gas.	By cutting g funding to programs like "choices for change" by mcmann . Change overtime pay for Nurses. Change over time pay for Nurses.CHANGE OVER TIME PAY FOR NURSES. Again CHANGE HOW OVER-TIME WORKS FOR NURSES.	Green Initiatives. Build a train line for transport from Medicine Hat to Calgary to Red Deer to Edmonton. Increase spending to roadways ' increase spending for jobs supported by PPD ' increase spending RCMP for jobs and create a trash force to help educate people on how to use the blue bins effectively. Help funding for more plastic plants to create desil fuel .
	Education and health care	Not giving corporations handouts.	Offer grants for businesses to hire more staff and increase wages.
t4b	While jobs are important, we will not get far if we continue to cut programs and allow corporations to take the money and run. We need to invest in infrastructure to support growth, this includes acknowledging we need to support the population increases and their stress on our education, health, police forces. It isn't logical to accept more immigration into the province, allow them to cheat the system by living together and not pay their fair share, and then not even prepare buildings for them clogging up the stresses they put on our system. It's irritating this is happening and I want answers.	Keep corporations more accountable for the funding you are giving them. If you are using my tax dollars to provide opportunities for job generation, I would like to see some accountability. It bothers me large amounts of cuts are being made and companies like Huskie take your money, lay off staff and run. Just as every other organization is responsible for how government dollars are spent, there needs to be a better understanding and language in place if the citizens of alberta are going to sacrifice their wellness for this job generation opportunity.	Look into technology and coding skills. Wind power. We have so much wind, let's use it!
T4N	Expanding our energy markets to include way more greener energies and get in line with the rest of our world. Fossil fuels are being used less and less and will continue to do so around our world, so don't focus so much on it.	Oil markets ... quit spending so much money on a market that is, and will, continue to lose support all over our world.	Invest in people and greener energy programs. Look after people so they can be productive members in our society.
T1R	Health, Education and employment opportunities.	Get rid of some of those high paid executives,especially in AHS. Leave the front line workers alone. The idea of limiting a Doctor's time to 10 minutes per patient visit and only 1 issue per visit is ridiculous. What about patients with 2 or 3 conditions which are all related and affect each other. What about patients in rural areas who travel miles to see a Doctor and have 2 issues. Are they expected to make a second Appt and travel again for a 10 minute visit. The changes you are making will make current Doctors leave and certainly won't entice new ones. PLEASE RETHINK THIS!!!!	Fight for our natural resource and farming industries. University is not for everyone. Entice younger people into trade schools with incentives to them and to industries that support them.
T4V	Education (K-12 and Post-Secondary) Health Care	From the \$30,000,000 spent on the Canadian Energy Centre (or whatever the 'war room' is called)	By being involved in alternative energy innovations which would enable jobs and diversify the provincial economy
T4R	Education, Education, Education	Not enabling people with safe injection sites.	Putting money into education so that the future has the ability to create jobs.

T1r	Health care, education (including post secondary), and the environment.	Cancel the war room and big tax breaks for oil and gas.	Look at diversification of our economy by becoming leaders in environmental responsible energy.
T1X	Education and health care. Give the teachers a raise they deserve.	By not letting any immigrants into Canada. Take care of our seniors, military and homeless. They have paid into CPP.	Lower tuition at universities and provide mentoring especially in the trades.
T0H	Elder care. Subsidies of some form should be made available so people can care for their parents at home or find suitable caregivers. It is a travesty. Green technology initiatives. Continue with the slow process of shifting the emphasis from fossil fuels - so much is possible if more money was available for research and development.	Start charging fees for Alberta Health Care, sliding scale based on income. Should never have been eliminated in the first place. Put that money straight back into health care.	Sales tax PLEASE. 2.5% This is not political suicide, just do it already.
T4J	Education and healthcare	Continue to analyze the red tape initiative. Look at restructuring government organizations that are top heavy.	Strive to attract businesses to Alberta. Be careful of lay offs in education and healthcare.
T6E	Education Protecting the environment	Support public early education. It decreases poverty, incarceration and unemployment. Increase funding to health initiatives (e.g. nutrition, exercise). Healthy citizens are more productive and save the healthcare system. Fund wellness.	Fund education. Educated citizens have the skills needed to generate business and innovation.
T8A	- Putting money back into families (not just low income) pockets. - Education and healthcare support - Bringing businesses back to Alberta	Duplication of services in government. If required to reinstate a carbon tax program then reinvesting that money into program support	- Hiring funding programs to support student recruitment and work integrated learning i.e. a revised STEP or co-op tax credit - Tackle the carbon tax and environment issues by offering green practices and green research tax credits or rebates - offer re-education programs for hard hit industries or supporting employment outcomes for all levels of post-secondary, not just trades - revisiting the minimum wage (and not paying different amounts for students)
t5t	Construction of municipal (public) and private buildings (infrastructure).	Public relations focusing on international exposure regarding the Oil & Gas industry.	Support in construction of buildings (infrastructure) to target small, mid and large scale demands.
T0C	Public education and public health care	Stop giving tax breaks for large companies. Decrease government spending.	Invest in sustainable energy sources
T3H	1. The continued construction and maintenance of highways & bridges as necessary BEFORE they deteriorate to the point that costly major construction and grading is required. 2. Health & Drug coverage to be continued for critical expenses... such as the cost for insulin pump sensors that currently cost about \$3800 per year. Life saving drugs, equipment, and appliances should be covered by the Alberta Government. 3. Health Care professionals (nurses and front-line staff) as well as Teaching professionals (teachers, aides, support staff) must be kept employed... whatever it costs because there are too many vulnerable Albertans (seniors and students) that are being negatively impacted by staff reductions and cuts.	1. Implementing higher taxes on the high-income taxpayers (such as 15% for earnings greater than \$250,000 per year). 2. Begin phasing out Government Pension plans.	1. There seems to be many cases where prospective immigrants are being denied visas and the opportunity to work in Alberta. This talented group rarely are a 'drain' on government services and they contribute to the tax-payer base. 2. Encourage innovation and entrepreneurial businesses by offering a special tax exempt status for a 1 to 5 year period. 3. Implement Toll fees on a few of our major highways... TransCanada Highway, Yellowhead Highway, QE11, and Highway 63. This would also generate the creation of many job opportunities.

T8N	Education, individuals with special needs, homeless and health services	Upper management. We are top heavy! We should be eliminating higher administrative jobs and keep our front lines working!	It seems that a number of “higher” administrative staff make decisions based on protecting their own position. Perhaps an avenue could be explored to allow our front lines to offer suggestions on how their area could be improved and also save money. Suggestions made by front lines are often ignored! We need to focus on getting albertans rather than immigrants working
	I am concerned that the government is decimating education and healthcare. I think you should focus on these areas. There are more students, so there should be more money.	I am concerned that the government is just focusing on spending without looking at revenue. If we had an appropriate level of revenue, we wouldn't have this so-called “spending problem”. Savings could be found by charging appropriate taxes to oil companies, by expecting oil companies to pay their property taxes, and collecting the money needed to run our province. I think you could find savings by closing the war room, and stopping all your commissions that are given limited <u>mandates to rubber stamp UCP policies</u>	By investing in education and health care. Cutting thousands of education and health care jobs doesn't help job creation and economic growth. It reduces the number of people employed, and reduces spending in the economy.
T6R	Increase spending on healthcare, education, incentives for growing industries, and green initiatives.	* Cut all funding to the Canadian Energy Center. * Cease frivolous lawsuits, such as those against the federal carbon tax. * Introduce a small provincial sales tax to help make the provincial budget more predictable and less sensitive to the state of global energy markets, which is largely outside of its control. * Stop giving tax breaks to highly profitable corporations <u>without tying it to investment in the province.</u>	* Create incentives for newer companies/industries in the province (tech, green). * Stop actively trying to cause job loss in the healthcare, education, and technology fields. * Increase funding to education (primary, secondary, trades) to ensure that we are preparing qualified individuals to enter the job market. * Increase funding to research.
T4L	Public Education and Public healthcare	Add a Provincial sales tax and diversify Alberta's economy - oil and gas are NOT the only energy resource. We need to start looking beyond oil and gas to ensure a sustainable future for our children and planet.	Fund public education and public health care appropriately and effectively. Add a Provincial sales tax and do not make tax cuts for private business. Decrease funding to the 'war room' and fund public services for the people of the province.
T4B	Education Health Care Post Secondary	Eliminate the unnecessary expenditure of the "war room." Stop giving tax breaks to big rich corporations that LEAVE!! Stop wasting funds trying to separate. That will not be financially responsible long term.	Diversify. Stop putting everything on oil and gas. There is so much talent in this province. Stop the very real brain drain. There's a lot more to this province than rig workers.
T9A	SUPPORTING ALBERTANS NOT CORPORATIONS	claw back the monies from oil and gas company welfare, give Albertans the monies for the programs and DON'T MESS WITH AISH and INCOME SUPPORT! SHAME ON YOU WE WILL BEGIN THE IMPEACHMENT PROCESS HERE IN ALBERTA IF THIS RECKLESS OBVIOUS GREED IS NOT STEMMED IMMEDIATELY!!!	Investing in Albertans NOT COMPANIES

T7X	Education and Health care. Putting money into these services does not make a province socialist. I do not understand what the government is so worried about. It has been proven true that Trickle Down Economics does not help the middle class but increases the number of wealthy and makes life for the lower income earners much more difficult.	Remove the money from the so called War Room and put it back into services. Stop spending money trying to bring back the Oil Boom unless you are prepared to make the Oil Companies pay higher royalties. My friend works in the oil patch and he is prepared to receive a steady lower wage instead of the 6 figure amount that he previously earned. He wants to ensure that his children have teachers and if they are sick, doctors and nurses who are not overworked and stressed out.	Encourage entrepreneurship, stop cutting education, health care and other government services. When their funding is cut, jobs decrease and unemployment rises. How can there be such a high unemployment rate right now when the government has paid the large oil companies money. This money went into reinvestment and raising the price of their stocks. This did not create jobs. To top it off, these companies are not paying their municipal taxes, not taking responsibility for old wells and ultimately moving out of the province. The government has lost <u>money on this scheme.</u>
T4B	Education: funding schools and paying teachers. Medical: funding hospitals and paying nurses! Stop replacing RN's with NAs!	Corporate tax benefits should end! It's not working, businesses are leaving anyways!	You can't have jobs growth without educated people to fill those jobs! Find education properly! Value teachers! You can't have successful businesses who hire educated people without funding schools and teachers! Go to the root, educated people work, open businesses, employ others!
T3h	Health and education. Providing essential services to seniors. And stabilizing of the job market by diversifying alberta's energy sector.	Cut administrative costs, not frontline services. Talk to actual frontline workers where healthcare and education money should go, and where cuts can be made without sacrificing the quality of services provided.	Diversify our energy sector. Oil and gas is only one opportunity, and by diversifying we create more jobs, stabilize our energy sector and our economy so we do not boom and bust with the price of oil. (Increased job security and financial stability for Albertans)
T0H	1) Healthcare; 2) Education; 3) Infrastructure.	They could find savings by not by cutting health care services but the ridiculous chains of command they have. My example is at a hospital. They have the nurses, then a supervisor, as well as shift supervisor, a team lead, a manager, a regional manager, district manager, a provincial manager(probably). This is insane amount of middle people. Just think about the amount paid out in wages at all of the hospitals. Cut them back. All they would need is a supervisor, and a manager for that department. I do not understand why housekeeping needs to have a team lead and a supervisor and a manager. These positions could be combined. With these cutback alone you could afford new medical technology to help our patrons of alberta. There would hundreds of thousands of dollars. I'm not saying to cut nurses or doctors, that is not the answer.	The government should support job creation and economic growth by supporting small businesses. Small business is the bread and butter of the small communities, especially in Northern Alberta. Many end up closing their doors due to high taxes and cost of running a small business. This is backwards. We should be taxing major corporation like walmart and loblaws, and large businesses more and lessen taxes for small business so that they are able to employ more of their local community, and wont have to end up closing their doors in times of recession. If we can create small business, we can create steady paced economic growth.
T0J	GETTING PEOPLE BACK TO WORK AND INCREASE QUALITY OF LIFE AS MANY FAMILIES ARE NOT ABLE TO MAKE ENDS MEET	REVIEWING THE MANAGEMENT LEVELS OF Alberta Health Services and Alberta's teachers and governments. NOT cutting front line teachers and nursing staff	reduce the costs of living and invest in job creation
T7V	Defund the "War room" immediately. Fund education and health care to reflect the needs of our citizens and our population growth.	Defund the "War Room."	Very easily- institute a PST of 4-5 %. We have a revenue problem- not a spending problem!!!
T5E	Adding more teachers, investing in technology, providing tax break to individuals	Dismantle energy war room, increase corporate tax rate for companies that have not increased hiring as a result of tax break, eliminating premiers trips to other countries and provinces	Provide grants to technology innovation companies, support education by funding schools more, ensuring child care grants continue to support women in the workplace

	Get Albertans working. You've lost 50,000 jobs so far. Get your hands off my pension.	Give back control of pensions plans to LAPP and cancel your new department. Stop cutting education and health care! Stop the tax cut for the wealthy- it never works. Reduce red tape within the government. Projects that already have been approved have many layers of approval over and over. Let your managers be accountable for their budgets.	Broaden our horizons. Look to innovation and new technologies. Support them. Build more hospitals or allow doctors to build their own clinics that specialize in things. and let them run them. Find a way. Wait times are horrible!
T0C	Obvious areas of Health and Education but use existing dollars more effectively. As a farmer do not forget areas such as Agriculture Research - very necessary to keep our industry viable and competitive for years to come and as the second largest industry, a driver within the economy	Wage freeze would be in order. Wage reductions are tough with the cost of living. If wage reductions done they should be adjusted for the wage level - high end salaries 150k and up should be reduced at a higher rate than those making less. There seem to be so many levels of managers throughout the system, especially in health and education. Surely some efficiency can be found there.	Putting a bunch of gov't staff out of work at this time won't help employment numbers in the province so wholesale cuts could be bad. Select reductions are probably needed. Investment in research and development of our major industries,(Energy, Agriculture, ect),would help drive new opportunities and generate employment.
t0m	develop more private sector partnerships to deliver healthcare - improve service, save money. economic development - attract industries - Oil and Gas and other - high tech, agrifood, etc.	privatize some healthcare - why are people flying to private clinics in Ontario for hernia surgeries? So many examples of ways we can deliver better service in a different delivery model	incent target industries from abroad to expand into Canada through Alberta
t8s	Infrastructure improvements. We still need people to get to work and we have an infrastructure deficit. Health and Education Funding. Healthcare and Mental Health need a boost - there are insufficient resources for both regular medical care, doctors, nurses, aides and even less resources for mental health and addictions. Court and Solicitor General funding to do away with backlog - more lawyers, judges, clerks, both federally and provincially.	Government Salaries, including politicians. Reversing the cuts to corporate income tax. We can do this when the economy turns around. Reversing cuts to oilfield companies. We can do this when the economy turns around. Abolish all school funding other than to the public schools - two or three tiered education is ridiculous - the cost of maintaining a public and a private (Catholic) school system is prohibitive. Have one school system, and divert all funding to that. Increased funding can have special classes for the Catholics or other religious groups - way cheaper than setting up all of the groups with their own schools and their own teachers. Funding for home schooling or other private schools should be abolished. It would solve so many problems and save oh so much money. If we set up more mental health and addictions treatment and healing centers, there would be a reduced need for correctional centers, officers, RCMP and the court system.	Incentives to private business for actual job creation, not a tax cut in advance in hopes that the company will create a job. If my business creates a full time job, my business should get a tax cut or tax credit or reimbursement. It costs money to create jobs, train and pay an employee in a fragile economy. However, if I just get the tax cut in hopes I will create a job, I may just use the tax cut for myself, which does not help the overall economy as much. Trickle down economics does not work.

T3H	Health Care, particularly mental health for Adults. it is far easier to get affordable mental health care for children than it is for adults with mental health issues. Also when you fix roads, do it properly. In Calgary for example, a bunch of work was done on glenmore trail, but the road still isn't flat and the lines aren't even visible; it is extremely dangerous.	By not funding private schools! They are absurdly expensive already, and should not receive any tax payer funding. PS: The carbon tax was not a problem for any middle to lower class people! I got far more money back from the rebate than I spent. We won't survive to make the economy better if there isn't a world to have an economy in it.	By not cutting minimum wage! It is hard enough to live off of minimum wage as it is. Paying youth workers a lower minimum wage is COMPLETELY UNACCEPTABLE. As someone who started working at 16 years old, I was taken advantage of countless times in the workplace due to my naivety and lack of experience or legal knowledge. Youth workers are by far the most vulnerable in the workforce, and people should not be incentivized to hire then by making their labour cheaper than someone older. I worked harder than people twice my age in my youth, and had I better understood labour laws at the time I would have had to sue several employers. Additionally, the energy sector needs to be incentivized to invest in research and implementation of sustainable energy resources. My father worked in the oil and gas industry for 25 years, and my brother works in the industry now; I know how many people depend on the energy sector for their livelihood, but oil sands etc. are not a sustainable source of energy. We will kill our planet and ourselves for greed. Corporate tax cuts DO NOT CREATE JOBS. Corporations will not spare their employees if they aren't necessary for making money, regardless of the taxes they need to pay. Large corporations and the wealthy should be paying more taxes, not less.
T0C	a) More Policing to prevent theft. Monitor recycling businesses to find the thieves and harsher punishments and or fines for vehicle thefts. This should avoid insurance premium increases. b) Keeping all the pavement highways in good condition, especially the older ones. c) Focus on the oil and gas industry, to get a fair world price for our production. This will keep companies from going bankrupt, inturn keeping people employed and paying taxes.	a) Review the grant system. Offer loans instead. b) Review Social assistance applicants, by doing random drug, alcohol and tobacco testing. If found positive, reduce or deny benefits. Healthy people do not need medical intervention. c) Go back to charging a health care premium, based on a person's income. d) All private doctors salaries and services should be monitored or capped.	Keep helping young people get a trade by subsidizing part of their tuition. Trades make everything happen and the whole world benefits.
t4s	getting the economy moving	In the public sector, from top to bottom, do a statistical comparison of wages, benefits, pensions, sick time, holiday time between bc,ab, sk and the private sector	this minimum wage for kids shouldn't be anymore than 10/hr. Also, these large oil and gas companies should be upgrading more of our oil and gas than just sending it down the pipeline.
	After many years, it is essential that SR1 flood mitigation make significant regulatory progress this year. Whatever funding is necessary in order for this to be achieved, must be so allocated.	Reducing the seemingly ever-increasing bureaucracy.	Focus on the number one thing that makes Alberta, Alberta and Canada, Canada - growing the energy sector.

T6R	1. Education 2. Environment 3. Economic Development and Tourism	Pursue 'alternative service delivery' with the private sector (creates jobs and opportunity too) in health care and some government services. Reduce the number and scope of rural hospitals, incentive the private sector to build more local assisted living housing, utilize P3s or private infrastructure funds to build public infrastructure like roads and hospitals. Rationalize 'innovation' spending. Downsize civil service (but offer buy outs).	Support job sharing programs for employers (instead of lay offs). Attract industry leaders in new industries with incentive programs. Develop targeted, supportive low tax and reduced regulatory burdens strategies for new industries - e.g. AI/ML, rare earth mineral projects, biotech/health care, forestry, value added agriculture, renewable energy
T5K	All public services, including healthcare, education, public transit and more	Probably in not giving tax breaks to oil companies and other large corporations who already don't pay their fair share	Better social services will make Alberta more appealing to everyone living here as well as to people from other provinces.
t5y	Childcare, Education, small businesses development, healthcare, tourism	Increase tax bracket for the oil and gas section	Encourage small businesses and individuals with ideas that can be beneficial to economic growth
T6A	Red tape reduction and finding efficiencies, rooting out redundancies. I can't figure out how we're so concerned about Alberta's healthcare but identity theft with ridiculous paper slips of your healthcare number isn't a priority. Put the driver's license people on it, get a picture and make the health care cards last.	Government consultants and managers, including in the Teacher's unions. 17(1) That's insane! In public life a manager would be required for 10 or more people. 17(1) Teacher's aren't the problem either, but all the silly consultants writing reports, how about getting an educational assistant in to help a teacher out instead of a interpersonal play consultant?	Reduce business taxes and make it easier for people to open up businesses and employ folks. Let capitalism do it's best work.
T8R	Front line medical workers and teachers.	Punish departmental hockey stick spending with a 10% reduction. That being folks that spend their budget in the last 3 months of the fiscal year. Audit all departments. Why were they started? Did they meet their goal? If not why? If yes, why are they still around? End sole sourcing. End sole sourcing. End sole sourcing!!!! Publish all public contracts, work rules (this one is important), perks and benefits, and pensions payable. ALL of them. We are paying for them. We should know what we are paying for.	Separate from Canada

T3M	Education (in contrast to what you have been doing) Public Health/Health Promotion/Data Systems (note this is NOT clinical/health system investment but an investment in prevention so there will be less burden on the system) Housing (access to housing has been shown to offset costs in other major areas like justice, health etc.) Children 0-5 (universal childcare like the UK model because investment in this age group has the highest returns again in terms of cost-savings for education, health, justice, social services and long term economic productivity)	Corporate tax breaks	By investing in education and creating a diverse economy. What saved AB in the past (i.e. oil and gas) is not what is going to save it in the future.
	Health Care Education Economic Diversity Incentives	Stop giving tax breaks to large corporations and wasting millions to buy out existing contracts for things like oil transportation by rail. Stop funding private Education and Health Care when there are already publicly funded systems in place. Amalgamate the two public education systems (Catholic and Public) into 1 system with Catholic schools (or other denominations) as an option for a school within the same division.	Support economic diversity and less reliance on the volatile oil and gas industries.
T5T	Healthcare, education, disabilities, low income.	Increase taxes for big corporations. Seeing how it's failed to create jobs and proven when husky laid people off with a huge tax break.	Putting more money back to lower income so they can afford things, even basic things. Thus cycling money through the ECONOMY. It is said the more people spend the more it stimulates the economy. If they do not have to spend economy will become stagnant.
T8S	Education and infrastructure	Fewer corporate tax giveaways	Investing less in oil and gas and more in alternate industries, to diversify our economy and reduce our dependency on a dying industry (Oil and gas).
t3h	Create jobs, attract foreign investor to invest clean energy industry, think about attracting or introducing other sustainable high-tech industry to settle here (such as research and development based pharma or biotech company, start-ups with support and collaboration with UoA or UoC) and promote the Rockies scenes for tourism	Calgary Education Board	infrastructure build-up, outsource and privatize the rail construction between Edmonton and Calgary. Create entrepreneur immigration provincial program to attract foreign funding from the other countries.
T0M	1. Helping to keep people employed. 2. Public healthcare system that is sustainable without duplication. 3. Education system that is sustainable without duplication. 3. Open and transparent government not driven by ideology. Both the NDP and UCP are guilty of this.	Get rid of duplication in our healthcare and education systems! Why do we have two healthcare programs (AHS and Covenant??). Two CEOs and two executive management teams means twice the salaries. Get rid of the duplication!! Same argument for a single education system instead of a catholic and public one.	Support our oil and gas industry AND diversify our economy. We need to stop this reliance on a single type of industry. Oil and gas industry is an important part of our economy but don't make it our only major source of economic growth. Everyone agrees we have a limited amount of fossil fuels we need to think about Alberta's future and use our Alberta problem solving skills to prepare for the future. Let's get er done!
	EDUCATION HEALTH CARE	Not spending it on War Rooms. Dropping MLA salaries Diversification of resources (not reliant and investing in Oil and Gas... invest in sustainable resources)	Invest in sustainable resources Have a PST (seriously... 3%)

T1J	Education and health care. Stop making it more difficult and expensive to live and go to school.	Stop handing out 4.7 billion dollars in handouts to oil and gas companies. Have you read any kind of research about the trickle down theory? I'll save you some time - everyone agrees that it. Does. Not. Work.	Stop thinking that the trickle down theory is going to work. It won't.
T0K	Stop cutting front line workers.	Middle management of so many areas could be reduced, saving front line workers. No more "retreats" for Government meetings....use Skype!	Reduce corporate taxes and encourage companies to move back to Alberta.
T2E	I like your approach, show me your efficiency and your result of your work 17(1) I will comment on Education, immigration and health care. In education, I agree with the government about seeing what the result of the students. Are we just passing on knowledge or are we training the students to be upright, moral persons with integrity. Do we truly educate the students and not helping them to pass exams. Do we teach lessons or do we train people. Like a physician, do we treat illness, or do we care for people?	17(1) In an attempt to reduce wait time the government has increased the fees and attempt to hire more physicians. and indeed more physicians have come into Alberta, but the pay is good, so the physicians have simply work fewer hours. In terms of surgeons, if you do not increase the operating room space, the is not going to be more operations even if there are more doctors. 17(1) he full time salaried hospital based or university based physicians have only one clinic space, so even if you have 5 physician you can not have 5 physicians in the same space, so you end up with one physician per day. In short it is not salary or fees increase, but space that will need to increase to prodce efficiency.	Immigrants and particularly refugees need support. A lot of them likely have experience violence, death. Afterall the worse violence is war. If we are so concern about Post traumatic stress disorder in our front line workes, health care worker, police, EMS, firemen, why are we putting so few resources to get the traumatized refugees, and without support they are much less likely to fit into our society and be productive.
T1k	Education and health care - not handouts to oil companies.	Not giving out 4.7 billion dollars in handouts to oil companies.	Stop cutting funding to education, health care, and other public sector work. We need MORE job opportunities not less. By cutting all these positions, you are nearing halting economic growth for goods and services. It's only a matter of time before Alberta heads into a recession.
T2Y	Healthcare, climate action, education. Prepare for a future, not try to return to a fictional past.	Shutting down the war room, spending on NDP attack ads	Tax corporations, create a sales tax. Repurpose these funds into education schemes.
T6L	health care, emergency shelters, home-care/ care facilities for elderly and/or more vulnerable (ie; women's shelters)	tax the higher income makes or big business corps	better advertising to schools/universities. less outsourcing outside of the province. Less cuts to healthcare and social services.
T9A	Health care, education, crime prevention/policing, protecting and supporting the most vulnerable in our society (the disabled, homeless, First Nations women and children for example)	How about we stop giving giant tax breaks to large corporations. They don't need taxpayer subsidies and the trickle down effect has been proven over and over again to be ineffective in stimulating job growth.	Well, we could start by not firing hundreds of nurses and educational assistants. I'm rather flummoxed that this is a "job creation focused" government and one of the first things they've done is destroy a bunch of jobs. Private or public sector a job is a job! We also need to be working on cultivating more accessible and affordable advanced education and training so that we can have more permanent residents working full time and stop bringing in temporary foreign workers to fill positions.

t2g	Restore Education Funding diminished Improving access to affordable Healthcare Fighting Climate Change by investing in renewables	Cancelling corporate monetary gifts and enforcing corporations to pay taxes due would be a place to start.	Attracting industry to Alberta with incentives, such as film industry, computing industry, investments in renewables.
T5W	Building innovation - supporting growing industries and diversifying our economy to move solely away from oil and gas. Stop the drastic cuts to education and health care. It's not good to make things worse in a weaker economy.	Increasing the corporate tax rate. Stop spending on propaganda. I'm very disappointed in this government to date. Very divisive instead of uniting Albertans.	Building innovation - supporting growing industries and diversifying our economy to move solely away from oil and gas. Stop the drastic cuts to education and health care. It's not good to make things worse in a weaker economy.
T2K	Public Education and public health care	By not giving tax cuts to corporations or the wealthy, by insisting outstanding taxes be paid	Investing in diversification of the economy, ensuring accessible education, providing incentives to tech and Arts industries to move here
T4B	<p>Education and Program Unit Funding available to families in the private sector as in programs registered as private schools and early childhood service providers. Preschool early intervention programs are imperative resources for families with young children to access support in age appropriate settings to support their individual child's needs. Early access at these young critical developmental ages is extremely important in supporting the child for kindergarten readiness. This support allows the child to be successful in all areas of development. Specific areas of development may include:</p> <p>Speech and language support such as working with a child with a receptive or expressive language delay. This type of delay impacts a child's ability to understand and express certain language skills and concepts such as understanding and following directions, routines, and expectations or being able to effectively express their own needs and desires. If a child receives early intervention support, they will be more successful in following the kindergarten routine, expectations and following directions by the time they start kindergarten. Challenging behaviours will likely decrease if the child understands what is being asked of them and can follow through on the expectation and routine independently.</p> <p>Occupational therapy (OT) supports help the children with fine motor skills such as effectively holding a writing utensil, using scissors, and increasing hand strengthening to independently operate academic tools successfully. Physical and emotional regulation strategies are also important pieces an OT may teach a child to be able to sit appropriately for longer periods of instructional time which decreases distractions to other peers and increases</p>	N/A	Keep early intervention programs registered as private schools and early childhood service providers. These programs employ thousands of extremely caring and passionate workers who are contributing to the success of our future working class which in turn helps establish positive and effective economic growth.

T5C	Go with the BioSimulars, but except Jansens offer of lowering the price of Remicade, especially for high risk patients that have adapted to Remicade. Many children these days are having health problems and learning disabilities than ever before. This is going to impact spending on health care and Education needs. Investigate why this is happening.	Let Albertans buy fuel at a lower price. For us to live here, we need to heat our homes. We have long distances to drive. Give us the Alberta Advantage. This would be a savings for Albertans and would help them economically.	Increase Market Gardens. Farm vegetables to sell locally first. Manufacture petroleum products. Create biodegradable bags from petroleum.
T1K	Education and health care	administration, CEO's, do not privatize	Diversify
T1K	Maintain spending to health care and senior health benefits, don't slash and burn government employee positions outside of retirement only to rehire down the road when the financial outlook improves, while causing heartache and financial uncertainty in the province at the same time; maintain historical funding levels for operations to municipalities rather than downloading provincial budget shortfalls onto them (capital funding can be reduced for now)	Increase limits to (i.e. reduce the) salaries and perks of post-secondary senior officers (presidents, vice-presidents down to deans) that the NDP initiated as well as the board members, reduce the number of administrative (non-faculty or support staff) positions in post-secondary education which have mushroomed over the years; eliminate the drug self-injection sites as an experiment gone terribly wrong; freeze salaries of all government positions including MLA's and all related political positions and related support positions; review, identify and correct abuse by teachers and teaching assistants in the public and separate schools in taking stress leaves and sick days; reduce the number of professional days taken in the school systems; increase the required time that MLA's have to be in office to be awarded pensions and bring the pensions in line with those of the public sector; tie corporate tax reduction to the number of full time jobs that they create and maintain in response to receiving the reduction, subject to annual review and increase of taxes if no job creation results; enforce oil companies actually paying their property taxes; increase the bond oil companies must post for well abandonment; review and reduce capital funding to projects with limited public benefit, such as a replacement for the Saddledome, and maintain or increase it for those which benefit the public, such as Calgary's green line; perform and publish a cost-benefit analysis of the war room strategy and be prepared to abandon it as an experiment gone terribly wrong while engaging in cronyism if no benefits are found; reduce the funds for legal support for the war room - it's a conflict of interest and was not properly vetted.	Hold corporations to account for the reduction of taxes they receive: no increase in jobs, no sustained reduction of taxes; ask for support from the indigenous groups who are interested in buying the pipeline as a job-creation mechanism for their reserves in fighting the groups that are still opposing it; maintain funding for economic diversification such as technology, tourism, alternate energy sources that have a clear advantage over other provinces; improve and increase the message from the war room fighting for the oil industry - eg. I've heard very little from them in pointing out the hypocrisy of environmentalists who drive gasoline vehicles and heat their houses with gas while advocating the use of electricity, nor have I seen much in pointing out how little Canada represents to the global carbon emissions compared to China and the USA while receiving an inordinate amount of criticism from environmental groups - the message must get stronger;
T8A	to focus on providing front line staff at all levels of government to be able to provide excellent service to Albertans	to implement a sales tax of 2% would cut out the cuts which are hurting Albertans. to have the oil companies that are given tax breaks and leave the country have a clause that they have to return the money to GOA look at the sunshine list and see where some of these could be cut. look at upper management and management positions and see how to cut here rather than front line staff.	to provide funding to programs for Albertans to retrain. not cut public service jobs that are front line. to fill the full time jobs and positions that are currently not being filled in GOA - staff can't keep be given extra duties which then can lead to health and stress and impact their work which can lead to more staff shortages. ask the front line GOA staff where they see efficiencies and cost savings to help with red tape reduction within the GOA itself.

T8N	Education, Healthcare, Social programs, infrastructure, proper allocation of funds for municipalities.	Get rid of the Energy Centre(\$30 million/ year)	Diversify economy in sectors outside of energy. Do not keep trying to rollback public sector salaries .Stop attacking doctors. This is an experienced and educated workforce that we all need. This attack on the public service will drive many out of the province and they will be hard to attract back.
T2V	Focus on a good diverse economy,stable and even economy. Does not need a balanced budget that is not reasonable in today's economic environment. Stop lying and breaking promises. The UPC and PC governments are the worse for doing that. You are to do what the people want and need. Read our Constitution and Charter of Rights.	Cut government officials spending such as travel to place that you can use Skype for meetings. More cost effective you use the technology that is right at your fingertips. Reduce the overall officials expenses eg car rentals, meals, entertainment, hotels etc. Look at your top heavy level of government offices and not in health care or education. Think out side the box instead of the old cutting of which does not work.	Through a more diverse economy not all oil and gas. Stop the insane cutting of health care and education and essential services. That is a short term fix that does nothing for long term plans except causes people to leave the province and reduce the services that is drastically needed by all people. This does not promote for any type of growth it just destroys.
T7S	Cutting spending and tackling debt problems.	There are many ways to streamline bureaucracy for example enabling the Alberta Association of Forest Management Professionals to be granted the right to practice would free you many government checkers and foresters for other duties or reassignment. Another example open up more exclusive practice rights of doctors and allow RN's to do the same thing, eg: Prescribing birth control.	1) Alberta needs protection from Ottawa influence, and their over-reaching federal jurisdiction. 2) Taxes need to be kept low. 3) Reduce red tape and over some bureaucracy. 4) The AB government needs to invoke the not-withstanding clause on the SARA legislation and the caribou
T0L	Oil and gas industries, they provide the employment, employee's pay taxes and keep the economy going.	Look at government jobs and organizations across Canada and see what they pay for salaries then compare to the private sector and adjust accordingly.	Support the oil and gas industries, promote pipelines, support ranching and agricultural jobs and companies. If these and other industries are healthy the economy will also be healthy.
T7Y	Education K to post secondary; Ecological Investment; Supporting the emerging alternative energy sector and micro-generation of energy in our communities; Reclaiming the health of our waters, air, and soils; Health	I think significant savings have already been achieved in public spending. The focus turns to income: taxing the over-use of resources to keep encouraging citizens and businesses of all sizes to live within our financial and ecological means. Ensuring taxes are fair, progressive, and PAID! Bring in a sales tax for Alberta.	Incentives for local businesses at the level of our communities to find energy cost savings, to promote micro-generation of energy, to reduce consumption, re-use resources, and recycle effectively.
T6I	Go fuck yourself Jason Kenny	Up Jason Kenney's asshole	Stop the war room
T2M	Healthcare, education and safety (police & fire especially).	Cut back on administration at all levels of government. I worked for a charity for years and when we filed our federal return we were only allowed to spend a small percentage of our annual budget on administration. Most of the funds raised had to go towards fulfilling our commitment the same should be said for all levels of government. I find it really frustrating when government departments are asked to cut their budgets and the only people it seems to effect are the workers on the front lines not the fat cats at the top.	Lower business taxes and offer interest free loans to start ups and successful Alberta businesses looking to expand. I'm sure this is being done already but I'm not sure how well it is advertised
T6L	pension, healthcare and education	Not losing lower level staff will put fewer people out of work, that means fewer people dependent on social assistance. Families are struggling to get by as it stands, retrench from the top down. These people (directors, presidents, exec directors, vice presidents) are more likely to find work quickly, and with the same pay or higher.	Alberta should keep their money, other provinces should work harder to drive business opportunities and investment. Make certain the pipeline is built.

T3L	Education and Health Care remain priorities, but efficiencies have to found in both areas.	The GOA could save hundreds of millions of dollars if it abandoned the Springbank Reservoir (SR1 - trending towards \$1B) and built a conventional dam on the Elbow River in the McLean Creek area (MC1 - solid estimate at ~\$400M). Both provide protection for Calgary, but MC1 also protects Bragg Creek and Redwood Meadows (not having to build berms and dykes in those areas would save another \$100M or so). The SR1 project is a never been done before billion dollar experiment that might not even work. The Bow River is the greater threat to downtown Calgary, but previous governments gave in to pressure to look at the Elbow River before the Bow	NOT by creating more public sector jobs. Get government out of the way and make it easier for private enterprise to create jobs. Lobby the Feds to do the same. Contract with private companies to clean up abandoned wells. Continue to champion our energy industry - it is world class.
T6H	Education, healthcare and pension	Retrench from upper management instead of from admin, admin is lower to middle income and are struggling to make ends meat as it is. If you retrench one executive director, you can save 8/10 admin jobs, admin losing their jobs cannot just walk into a job of the same or higher income, yet a manager/director/exec director can walk into a job much quicker for an equal or higher salary, depending if its private or government. Don't touch pension plans as most people wont be able to save the equivalent if it is lost.	Ensure the pipeline is built!!! Another look at the equalization formula so that Alberta can keep more of its hard earned money.
T2M	Health Care, Education and Infrastructure.	The "War Room" needs to go, waste of money. The panels set up to reinvent the wheel could also go.	Invest in infrastructure, re-training, tech sector. Support Education & heath care. We don't need layoffs in any of those areas.
t3h	Prioritize the courts and justice.	Find savings by cutting retirement packages.	By investing in education and students.
T1A	Education and healthcare are paramount. Cutting either will only result in a race to the bottom...use Manitoba and Newfoundland as your guideposts if you choose this path.	Cutting MLA salaries is a nice picture...however, when you create a number of committee positions for them to serve on to make up the money cut, the hypocrisy shows. How about only providing pension based on the number of years served rather than a full pension after 2 terms....that would be a real demonstration of commitment to savings	Just keep taxing the middle class...great way to boost economic growth. How about a provincial sales tax.....nope can't do that....rather lets dumb-down education and health....it's cheaper
t1m	nursing and education, our children are the future, they shouldn't have their education taken away from them	on their own salaries	stop giving money to people to come into our country to live for free, and take over our jobs, maybe start with taking care of our own people first.
T5H	Education Health Environment Cities Economic diversification	1. Implement a provincial sales tax 2. Cancel the Canadian Energy Centre	By encouraging economic diversification. We've had all our eggs in the energy sector basket for far too long. We need to face reality and acknowledge that there is no oath to long term economic stability without greater diversity.
T8V	Senior Services - Housing Support and Health Care.	Inside Health and other services under government oversight.	Get free of the oil and gas mentality and look at other manufacturing corporations for investment in Alberta.
t2k	Infrastructure, public safety and arts and culture.	I'm a little unsure.	Make the province a place where business want to be. I think through solid infrastructure, public safety, arts and culture support and supporting of the oil and gas industry
t3r	health care, education	reverse corporate tax there has been enough layoffs, none justify the savings they received	small business grants this is the time to spend on people to support them so they can support each other

T3B	Post graduate education, health	Civil service, health care	Grants and tax credits for innovation in batteries wind power and using natural gas to generate clean electric energy
T6w	Education. Decreasing class sizes and building new schools Health care. Maintains or increasing nurse(rn) to patient ratios	Flawed question. Reinstate previous corporate tax and institute sales tax to pay for programs	Cut red tape and cut duplication of environmental assessments on any new projects. Have one set of clear rules for industry to follow
T5A	Investment in public services to ensure that our province maintains and improves our current health care and education systems. I feel that the freeze on student spending announced in the 2019 budget will result in cuts to student transportation and support services in the coming years. Investment in a stable future for the Alberta economy should be a priority as well. With the world moving away from fossil fuels I feel that it is important for our government to invest in new energy infrastructure, economic opportunities and skills for workers so that the province isn't left behind.	I feel that the government can find savings by NOT setting up things like "war rooms" and "studies" which prove nothing and accomplish even less. Raising corporate tax rates to a level where these companies are paying their fair share of tax like the citizens of this province will also generate income for the province. The most important objective of the government should be maintaining funding to public services to ensure that Albertans have access to the public services necessary to thrive in a challenging economic landscape. Cutting funding to education will be a detriment to future generations. Every dollar spend on early childhood education pays back six future dollars. Investments that promote health and well-being today though income supports, higher wages, better working conditions and health care are cheaper than treating illness, depression, and/or poverty at a later date.	Reversing the 2019 budget cuts. Plain and simple. These cuts could result in the loss of up to 7000 jobs. This is not a job creation agenda in the least. Government spending is an important component of GDP and economic growth by reducing the amount of money cycling through the economy through pay cheques. These people live in Alberta and Alberta services provided ensure that Albertans can work and be productive citizens who pay taxes and spend money which boosts our economy.
T4B	Education, diversifying Alberta's economy (moving away from oil & gas)	removing the war room, tax the top 1%	Education, diversifying Alberta's economy (moving away from oil & gas),
T7Z	1) Infrastructure (roads, walkways, bike paths, etc...) 2) Green technology (lighting, transportation, energy generation)	Cut down on "executive bonuses" in healthcare institutions and other public institutions	1) By providing the needed capital/grants/loans to small businesses 2) By providing better opportunities for small businesses to thrive (example: less red tape, more contracts awarded to small businesses, etc...)
T4A	We should focus on healthcare, education and climate crisis	Well I attended the town hall in ¹⁷⁽¹⁾ this past Monday and they supplied Good Earth coffee. Probably double what Tim Horton's would have cost. We need to limit government travel and discontinue giving big corporations tax cuts	Invest in other resources besides oil and gas
T1K	Capital projects, particularly those that include innovative funding models and involve multiple party collaboration. Schools where the board and municipality partner to improve the space or bring down costs, for example. Rewarding departments, agencies, municipalities for pushing the envelope and doing things better/smarter by funding their projects as a means of encouraging innovation.	I would challenge middle managers to present a budget with a minimum 3% spending reduction, and I would have them present those budgets to a group of their superiors. Whomever produced the best plan I would reward with a cash bonus (say \$25,000 to the lead manager and \$25,000 to be split amongst their team) and I would likewise fire (or at least seriously consider) whomever produced the worst plan. As a conservative I'm not against spending money, as long as it's results oriented, and I believe competition is healthy. Let's inject competition into our bureaucratic systems, at least periodically.	I don't think any additional tax decreases are necessary. Low taxes are important, but as long as we are low relative to our peers then additional reductions aren't worth it. I believe getting our long term fiscal house in order is the best way to signal to the market that Alberta is a stable and viable place to do business, so to that end my focus would be on deficit elimination and debt reduction.

T2S	Flood mitigation for the City of Calgary, including the completion of the long overdue SR1.	improve technology and efficiencies in the health care sector.	Lower taxes, execute Canadian wide public campaign to correct misinformation about the oil & gas sector, its impact on climate change, and its relevance in the 21st century global economy.
T2z	Business development and diversification, front line services not administration.	Reduce management levels In government.	Lowertaxes
	I am concerned that the government is decimating education and healthcare. I think you should focus on these areas. There are more students, so there should be more money.	I am concerned that the government is just focusing on spending without looking at revenue. If we had an appropriate level of revenue, we wouldn't have this so-called "spending problem". Savings could be found by charging appropriate taxes to oil companies, by expecting oil companies to pay their property taxes, and collecting the money needed to run our province. I think you could find savings by closing the war room, and stopping all your commissions that are given limited mandates to rubber stamp UCP policies.	By investing in education and health care. Cutting thousands of education and health care jobs doesn't help job creation and economic growth. It reduces the number of people employed, and reduces spending in the economy.
T3K	Consider upstream thinking, not just stopping programs that are working to save money now in relationship to healthcare spending management. Not reframing entire governments, but utilizing strategies that are already in place. Ask the people that do the job now. It's very evident when this isn't done and workers are frustrated.	Programming for at risk parents, money now... save money later. We have to work on creating a better infrastructure to invest in the future. Every minor should have access to resources they need, their parents supported (good wages/low cost of living) and creating healthy children/youth. These people will access the system less when older. More Nurse Practitioners, get those GP's out of clinics. Extensive research (from Ontario) shows more time is spent with patients, they have better outcomes!!!! and they cost 1/4 the cost of MD's	We do well with the Primary Health Care model (in Calgary), now it's time to transition to nurse practitioners caring for patients. Does the government know that nurses know more than MD's about caring for the whole person and not just the smaller focus of medicine (caring for the physiological body). This is a rah-rah for NP's; give them jobs! Economic growth will follow with healthier Albertans and all the money we will save not paying MD's.
T6k	The supports that Albertans need: healthcare, education (k-12 and post-secondary), AISH, mental health supports. Maybe just consider every Albertan, instead of only those with money.	First, stop giving corporations handouts and blatantly disrespecting hardworking Albertans. Work with AHS to streamline their current organizational structure (do we need managers managing managers, and what does the president do to EARN \$500,000 +?) Work with AHS/ATA/Unions instead of forcing them to try to balance a budget by cutting front line workers and creating unsafe working environments that will hurt patients. Stop trying to dismantle public healthcare which with only create a larger disparity between the rich and poor. Put in a <5% PST until we are out of this situation. I'd way rather pay on items I use than have my tuition increase, have less time to pay it off at a higher interest rate AND not be able to find a nursing job when I graduate (I'd like to stay here and love my job but at this point I will not work in Alberta. I will take a loss in selling my house and move where I am valued for the care I provide my patients).	DIVERSIFY. Oil is not going to come back the way it was. Start to support green energy and encourage Alberta's innovators.

T3G	Education, Health Care, government services (i.e., children services, seniors, AISH, law enforcement). Tax the corporate sector higher and bring in a PST. We need to look after our most vulnerable people.	The UCP needs to stop looking in the rear view mirror and relying on the oil and gas sector. Where are the jobs he has promised, all I see is jobs in both the private and public sector being lost. Public sector workers have always made the same salaries. Nobody was complaining about Government workers salaries, pensions and benefits when private sector employees were making bloated salaries.	Kenny should be removed from the Legislature over the questions and allegations about his involvement in the leadership race for the UCP. How can we trust a man that has been involved in this type of allegation. Request him to take a pre-employment polygraph like police officer applicants and fire recruits before they are brought into the service. If he is being honest and has any integrity for his position and responsibility as a leader he should have no issues with a request of that nature? right?
T0L	Spending for social services, health and education. These are the backbone of a decent society. It has been demonstrated over and over that "trickle down" economics do not work. Money given to poorer people stays local and makes a real economic difference.	Stop giving incentives to the oil and gas sector (tax cuts, royalty gifts, etc.). It is time to recognize that this sector is a dying one. We probably have some time yet, but this time should be used for a successful transition to a new economy, not the place to "put all our eggs" as your government is currently doing.	Focus on diversifying the economic sector rather than sinking all support to the O&G sector. Stop using people's pension money to invest in a dying sector.
T1X	Public education and healthcare	Useless Twitter bots, bloated cabinet, corporate tax giveaways	Bring back the tech tax incentives and move to support renewables.
T0G	Healthcare and education	education of public re: their personal accountability and responsibility.	Get with the 21st century and look at renewable resources NOT oil! S
T3B	Alternatives to greenhouse emissions. Programs for solar panel installation etc that will give employment. In person community open houses. Healthcare	Cut the yearly senseless days of orientations and information sessions and silly tests about the AB Govt hierarchy etc for seasonal workers where none of the info has anything to do with the seasonal field persons job..i.e firefighters, tower people etc. On the very rare occasion any questions that have could be easily and directly asked to a supervisor during the season with a 2 min answer. A program that only allows a person to see max 2 doctors for a health care consult.	Alternative energy growth. Forward looking instead of falling to the past solutions where a 20 year old with no education could make 100,000 annually.
T5M	Climate Action, renewable energy, quality education, healthcare. We should make Alberta the province with the best services in Canada.	Actually collect corporate taxes, cancel the corporate tax break, shut down the energy "war room".	Economic diversification: jobs in tech and renewable energy - take guidance from the path Texas followed to diversify its economy and became a leader in tech.
T3B	Healthcare and Education, both should have their outcomes measured against the dollars we are spending versus the outcomes we are obtaining. That should be examined as to how other similar jurisdictions are doing. Adopt what works and use innovation when possible.	Start with the small items travel etc and incentivise the front line workers to find savings. Look at larger purchases vehicles etc and work to get the best deal, and utilize them as long as economically possible. Lastly and the biggest one are wages and benefits..	Obviously the number one thing our Provincial government must stand up to the Federal government and at some point that will require more than talk. Secondly removing red tape and making existing rules and regs easily understandable. Lastly balance your budget and therefore keep taxes low...

T7Y	<p>Increase funding for education, Albertans children are our future. Cutting budgets reducing teaching staff will create bigger class sizes and less quality education.</p> <p>Agriculture change the wage structure to pay employees overtime why are they paid flat rate makes no sense. It would make the industry more competitive. Agriculture is an industry that has a shortfall of employees which struggles to recruit when comparing to industrial jobs.</p> <p>Healthcare</p>	Create more income by increasing corporate taxes.	Get pipelines approves will create jobs
	Building major infrastructure projects while debt is cheap. You do not need to go on a big spending spree. However it would be foolish not to take advantage of sustained low interest rate debt to build 100 year usable life assets. While providing employment opportunities in Alberta during the down term.	Updating its procurement processes for government purchases of supplies. Playing hardball with the suppliers of these goods for long term contracts with stable low cost prices for these things. Like say toilet paper, office supplies,	Spend reasonable amounts of money when debt is cheap on major capital intensive projects, like infrastructure.
T6J	<p>Helping people that have lost their jobs to retrain to work in a diversified economy.</p> <p>We can have an incredible future in alternative energies.</p>	Stop trying to find saving, and focus on revenue.	Imagine the incentives that could have been seen if the tax reduction to companies, who subsequently left the province and/or laid off large numbers of their employees, had instead been used to assist new initiatives in this province.
T2C	Funding education and health so that all Albertan's have access to a proper education and a fully function health care system.	The Canadian Energy Centre.	Support education and health services so that teachers and health professionals don't lose their jobs in the first place.
T3E	<p>Re-indexing income assistance programs</p> <p>Economic diversification</p> <p>Energy efficiency and GHG reduction</p>	Fire Matt Wolf and over overpaid twitter trolls. Shut down the farcical, incompetent, unaccountable "war room".	By investing in tech, renewable energy, film, and let go of failed trickle down economics ideology.
T2k	Health care	Infrastructure	Tax breaks
T2N	Healthcare, education, arts & culture, environmental conservation	add a 2-5% PST	Focus on diversifying the economy so people in the oil & gas sector have other options
T4b	Public services. Public education. Public healthcare.	Private services. Private education. Private healthcare.	Diversify. Oil is dying. We need to use our advanced education system to develop innovative energy technologies the world will want to buy
T1A	Government employees -Nurses / Teachers - Child Care support	Mass media / propaganda initiatives ie. War Rooms; stop tax cuts for large cooperations or top wage earners	Stop cutting essential services / Partnership Initiatives for Industrial development
t2J	Seniors long term care!	<p>Education.</p> <p>The government needs to hold school boards more accountable for spending on administration and school supports. For example, there are too many "area office" positions and system positions in the CBE.</p> <p>Alberta Foundation for the Arts and most arts in general. Great idea, and I support the arts, but it is an area to cut back on in times of fiscal restraint.</p>	Restore funding to the film industry. This was a healthy, growing industry that was hit hard by the recent budget. It is an industry that creates jobs and helps local economies.

T2w	-police -emergency personnel	-green line spending!!	Quit raising taxes on businesses and homes
	Education, health care, and climate should be the top priorities.	Bringing back the carbon tax would definitely help. There should be less of a focus on business and more on community support	By placing more funding in areas like science and education, more opportunities are presented for Alberta's youth to train and work.
T2a	Schools! Our children need to have more spent on their education. More teachers and Teacher assistants	PUBLIC ART WORK	Stop give all the job to the "new Canadians" and stop letting the new Canadians come here to take our jobs, houses, and our medical care!
T4C	PIPELINES	Cutting teachers and nurses. Exactly what they are already doing. There should also be some consultations with the people remaining in these positions to gain more efficiencies in their jobs. I know a lot of time gets wasted.	Cut transfer payments and push through pipelines.
T0K	better coverage for seniors, special needs, people on AISH, better surgery times for knee and hip replacements just general better health care and education affordable housing is an issue in all communities	tax the rich more, make doctors be salaried like Taber primary care and one in Calgary. Pain clinic wasting money by charging gov't 200.00 per injection when family docs can do. only use them for difficult issues, cut the carbon tax. cut the arts--- that is gravy, God is in control of weather and will get worse as Jesus time comes closer read the Bible	focus on local businesses, implement greener ways but oil is used in most of everyday items must get oil and gas to market
	Education. Education is our future. Healthcare	Subsidies for oil and gas companies The government could increase revenue by increasing taxes.	Subsidize growing sectors such as software development companies Don't cut funding for health care and education which causes job losses

T2P	<p>*Roads and Bridges, our infrastructure is turning to crap to many cuts for too long of a period.</p> <p>*go back to building schools and hospitals for functionality instead of aesthetics.</p> <p>* the province following the MacKinnon report is biased and does not compare apples to apples in a lot of circumstances. Holding the line on spending is more important than cutting back items.</p> <p>*Get rid of the war room looks to be causing more damage then making things better.</p> <p>* bring in our own pension plan and police force.</p> <p>* eliminate funding for Safe Consumption Sites and move that to detox/rehab priorities.</p>	<p>*Management at Alberta Health</p> <p>*Getting rid of the College of Physicians and Surgeons</p> <p>*Getting rid of the College of paramedics</p> <p>*reintroduce the Alberta Health Care premiums, when people pay for service they don't abuse it as much.</p> <p>*Do not have doctors and nurses in charge of their budgets, bring in business people to run the health services. Same goes for Education.</p> <p>* employee attrition needs to be at the senior management levels.</p> <p>*Do a review of AGLC and how their archaic policies relating to gaming and use of proceeds are more job creative then protecting the charities.</p> <p>*look at how many municipalities are in the Province and look at the Manitoba model of eliminating smaller municipalities to gain efficiencies. This would be a lot more effective then the mandated ICF's which are only creating problems.</p> <p>Use the infrastructure that we currently have to its full potential.(use rural hospitals for different procedures instead of bringing people from all over into the city)</p> <p>*post secondary education is bloated and needs to be reviewed. Do we need as many universities/colleges in the Province as we have?</p> <p>* eliminate funding for Safe Consumption Sites and move that to detox/rehab priorities.</p>	<p>*Providing Infrastructure funding for maintaining the Infrastructure that we have. Not enough money is being put towards the roads and bridges in the Province which are essential to getting our resources to market.</p> <p>*The downloading of expenses onto municipalities is going to lead to higher property taxes which is going to further cripple the oil and gas industry. the decision on police funding and industrial assessments have to be reversed.</p> <p>*look at the cost of electricity and natural gas in the Province. The distribution and transmissions fees are killing business.</p> <p>*Support all industry like you are supporting oil and gas. Agriculture, Forestry and the tech sector have tremendous potential in the Province if they were to receive the same attention.</p> <p>* don't be stuck in the past embrace new industry and innovations to grow current industries and creating new ones.</p>
T8L	Education, healthcare, AISH, etc	There's about \$4.7 billion as an unnecessary corporate handout that comes to mind. Trickle down economics does not work.	Not with corporate hand outs. Supporting technology based sectors especially is been known to help lower the level of unemployment
T2J	Infrastructure, health, education, and environment.	The bureaucracy and red tape needs to be reduced those employees would be let go or used where needed in other places in the gov. I would love to see the management side of Healthcare, and Education especially at the post secondary level. All things Climate Change for now. Please leave the Drs, nurses, and teachers alone.	Cutting taxes for Albertan's and Alberta's businesses letting them spend their own money will be the way to kick start the economy.

T2K	Education will give the most payback. A better educated populations is more productive and healthier. Start by finding effective preschool programs and making post-secondary more affordable.	<p>1. Far fewer MLA,s. It is ridiculous to have 87 people to consider legislation. 24 would be plenty and make no difference to decisions made. Ontario has 147 with a population of 14 million. To be comparable we would only have 1 MLA for every 100,000 . With a population of 4.1 million we should have at most 41 MLAs.</p> <p>2. We have far too many government employees administering ineffective and inefficient environmental legislation.Less people, less red tape.</p> <p>3. Why do I need to renew my Licence plate every year. How about every time I change my car?</p> <p>4. If you sent every Albertan a copy of the budget like a bank statement, I am sure you would get plenty of useful suggestions</p>	<p>1. This is very simple and a proven strategy. Lower taxes= more incentive to create jobs, more people working, = more revenue.</p> <p>2. Increase spending on infrastructure where there is a long term cost/benefit ratio.</p>
T5g	Health and education	Sales tax	Education
T5R	Education first and foremost. Better education reduces many other costs to society, including healthcare and policing. Healthcare should be second priority, with a focus on health-specific education (how to eat, why being fat increases healthcare costs etc).	By not having given a 4.7BN dollar handout to companies leaving the province. Also, wasting \$30million on a propaganda machine was beyond stupid.	Incentives for new and upcoming industries. Removal of the tech industry tax breaks was stupid. Edmonton is well placed to take advantage of its place in the tech sector and should not have been hamstrung. Incentives for diversification should have been in place 20 years ago, but there is no point in not starting now.
T6H	change the way hospitals are run by replicating what the Cross Cancer Institute does in the way of one stop health care. You have an issue, the hospital is set up to take care of it all. The cross does that - surgery, xrays, checkups, blood and urine work, heart tests, injections etc. Every issue is logged and appointments for all necessary consultations are set up automatically until your medical issue has been resolved.	stop duplication of consultations, stop giving out grants, stop all expense accounts. Parking, mileage - eliminate! take a bus and buy your own lunch like the rest of us. Use conference calling for all meetings - no more flights!	build a solar panel manufacturing plant in Alberta and all Albertans a discount when purchasing panels for their homes or business. Drop the cost of gas at the pump for all Albertans.
T4V	Healthcare, transportation, sustainability projects	Less money funding the federal government.	Invest in new technologies and infrastructure.
	Education, health, infrastructure, development of renewable energy.	<p>Collecting taxes owed from oil and gas companies.</p> <p>Trimming the excess in management positions, NOT frontline workers.</p> <p>Eliminate the separate school system. Case in point: small towns that don't have the population to support two school systems. Instead of great programs for all students one school has French, the other has excellent trades options. If there was one public school system everyone could have both. This would save the province so much money.</p>	<p>Diversify the economy.</p> <p>Ex. Tech companies, new innovation in green energy, explore using the lithium we have for EV batteries (and support companies that are doing this already).</p> <p>Support and encourage public education and post secondary education. A well educated society makes for a better, smarter, harder working, more productive society overall.</p>
T7X	Education and health care	Eliminating big company tax cuts	Supporting small businesses

T0G	<p>Attaching Albertans to the workforce and attracting those from other parts of the country and outside to build the economy (and tax base). In addition to job creation tax credits, further incentives need to be in place to hire an unemployed Alberta, especially for small business.</p> <p>Greater degree of partnering between Ministries - sharing information that will support the completion of all Business Plan goals.</p> <p>Health services availability Highway safety Broadband connectivity Addictions/mental health - which leads to crime/unemployment/other social factors that affect the economy negatively</p>	<p>GOA: Ministries pooling resources and shared use agreements - multiple government vehicles not moving for 6+ months while other ministries have to pay for rentals or pay staff to use their own vehicle at .505/km.</p> <p>Sharing office space or similar resources (for example rental for copiers/fax machines, etc) on the same floor - especially in smaller communities.</p> <p>Education/Health: Continue to review viability for schools & health care programs that have minimal usage (for example schools with under 100 students that could easily be bused to another school less than 1/2 hr away). In small communities, work with the various school divisions to partner up to create a solid school program and share resources, instead of 2 smaller ok programs (example Grimshaw AB).</p> <p>Work with the AHS staff to avoid OT</p>	<p>Incentives for small business to take on new projects. Work closely with municipalities to encourage red tape reduction & ensure that growth opportunities exist...we need to be in this together.</p> <p>Incentive for municipalities to have someone focused on economic growth (this duty is ignored often in rural Alberta)</p>
T3K	<p>There is money in other industry other than oil. Oil and gas will be Alberta's back bone but AB needs to find other means to generate revenue. Medicine Hat is building a very large marijuana facility. How about refining our own oil?</p>	<p>The GOA has talked about cutting positions. Some of the first ones to go would be training positions since we cannot hire anymore. 17(1)</p> <p>Why is the Judges budget not affected. Why are they on a different budget and not affected....courthouses cannot order paper but they can? Judges still get Culligan water, post it notes, pens etc to do their jobs yet the actual admin staff who are tasked to deal with court orders etc are not afforded the luxury of a post it note?</p> <p>The "Sunshine list" contains over 13000 names of people whose base salary is 100000 or more. Why do they not take the roll back. These people have the same bills I have only they have double to work with. The GOA needs to realize front line workers have been cut, staff attrition, supply orders being cut that results is people being off sick, GI and LTDI claims. Small things will make employees go above and beyond. Why is it only some areas are allowed to have EDO? 17(1)</p> <p>seems it depends where you work in order to be allowed the benefit. Double standards causes resentment especially when the GOA preaches work life balance.</p>	<p>Privatizing does nothing other than assist those with money. Cutting jobs in the health care sector and the GOA in general should be done to a point. When people's lives and liberty are at stake one should think twice. The GOA turned a blind eye on people's liberty a few years ago and the fifth estate has brought to light the GOA inability or inefficiency to make things right after the powers at be hired an independent review board to review a medical examiners findings. I am sure there will be some major lawsuits and payouts. Perhaps the GOA ought to follow the visions and values they preach (accountability, integrity, respect, excellence) so instead of paying out major lawsuits they could use the money to stimulate economic growth!</p>

T8N	Education and Health care are priorities. Cutting the transportation grant has increased my education fees by \$400. The freeze in funding will not help innovation in schools or improve classroom learning. With more students in a classroom and less resources the education system will decrease in quality.	The government can find savings by implementing a P.S.T. This will raise revenues to support public services such as health and education.	By providing students with the education they need so that they can implement their entrepreneurial spirit when they graduate.
T0C	Job creation. Ensuring Large Corporations (including all Banks) pay fair share in taxes.	Reduce administration. Cut funding to schools and health care with instruction for them to do the same.	Get back to our natural resource development and sell to the highest bidder. That's the only way to create a competitive market.
T5L	Investment in Social Services (Housing, addictions, health, and mental health support). This is an ecosystem and investments in these areas will reduce overall need for higher cost services such as intensive health (ER, EMS, LTC), police, courts and correctional costs.	Stop reducing gov't staff and ask them to do the same lines of work. Take a hard look, find 'nice to have' programs, and cut them. Doing the same work with less people will diminish the ability of the GOA to get real work done. For example, cease Fair Practices Office, split Seniors and Housing as those two divisions can be absorbed by other Ministries, cease Operations and Machinery of Gov't, downsize PCO, CSS has a number of policy shops all duplicating work, etc. Post secondary tuition should increase - its an investment in people's future and they should pay more.	A blend of tax cuts and incentives. Bring back low cost tax breaks for sectors that encourage growth such as the video game grants and breaks for small beer brewers.
T5N	Education - it is our only truly renewable resource. Anything else will hobble the Alberta economy now or later. Quit giving allowances to corporations that can't make a go of it in a real economy - that will allow the innovative and successful to rise and fill the needs of our Province. Start funding the necessities in healthcare and put some accountability around the projects you do fund. Want to shorten waitlists - make sure you leverage ALL of the aspects of the system. Quit making silos of communication / projects and utilization. IN addition to administration that only has 50% of the story - the public facility and not the other side the publically funded community clinics, you're making dull, inadequate decisions that cost lives.	Making sure that autonomy, personal growth and the feeling of contribution are essential aspects of any endeavour. Quit trying to control from the top. You're not good at it - not personal, no one is. If an endeavour can't get insurance for their downside, I don't want you to be insuring any costly legacies either (i.e. defunct oil wells - I doubt Lloyd's would have insured those losers but oil companies should have had to have the liability insured. If they can't get an insurer to accept the liability of their pipelines, the people (usually least able to) shouldn't have to.	Making sure that autonomy, personal growth and the feeling of contribution as essential aspects of any endeavour.

T6T	<p>Health care, we need our nurses and doctors. Need to look at higher management. Gov't funded education... teachers, EA, support staff. We need to lower the classroom size. Need more schools, to support the growing population. Need to focus on the environment ... more resources into protecting a preserving the environment. Monitoring what industry is putting into the environment...industrial pollution is so toxic to our air, water and land. We need to keep a close eye on that. We need to protect our older and weaker population ... people who can't work and need Gov't assistance... weather it come in the form of money, benefits (health, medication).</p>	<p>CUT the WAR ROOM... seems like a waste and there has been no real advantage to the people of Alberta that has been seen yet. Why does industry get hand outs?? Government has to be more accountable to there spending. Expensive trips etc seem very unnecessary, when all so many area are experiencing cuts.</p>	<p>Government has to put more money into the economy to promote job creation. Cutting the super lab did not make sense, lose of jobs!</p>
T8X	<p>The Gov should consider ALL Albertans, and the future of Alberta In the long run. Properly and adequately educating this up coming generation and dealing with social and behavioural issues now, that come up in the schools, will build a safer well rounded future Albertans. This leads to less crime, less drugs, less homelessness. 1. More not Less money in all levels of PUBLIC EDUCATION & secondary PUBLIC EDUCATION. Health care should never be compromised and should be for everyone. Medication of choice is a right, and should not be dictated to us. PUBLIC HEALTH CARE & PUBLIC HOSPITALS is a right for everyone, not just the few rich. 2. Invest in health care and the seniors who built this province. 3. Invest in alternative energy while still supporting oil and gas. 4. Encourage the oil and gas sector to “ work more efficiently and environmentally</p>	<p>MAKE Companies pay there Taxes MAKE Provincial Gov officials reduce their spending and bonuses. Stop giving hand outs to CEO's and Corporations</p>	<p>Think big picture and the long haul. Think down the road at their grandchildren's future. Act now on supporting No plastic invest in the 5 R's New jobs will be created where old ones close.</p>
T2A	Health care and EMS	Cutting upper management. AHS is very top heavy	Diversify. Stop grasping at oil and gas
T2W	<ul style="list-style-type: none"> - Providing social and financial supports for low- and middle-income families - Research renewable energy sources and phase out oil/gas industry - Develop public transportation to increase range and quality - Meet and work with First Nations communities - Increasing funding to childcare programs 	<ul style="list-style-type: none"> - If funding to daycares increase, more women will be able to (re)join the workforce. The taxes on their wages will generate funds for running the daycares, as seen from the Quebec example - Cut any subsidies given to oil/gas industries - Increase taxes on high-income families and companies generating the most revenue 	<ul style="list-style-type: none"> - Fund childcare centres - Fund education at all levels - Fund research into and development of renewable energy sources - Provide affordable education and training for different job sectors
T0K	Education and Healthcare	Streamline the ministries. Too many “issues managers” who seem to do nothing but tweet all day.	Bring back affordable daycare. No more handouts to companies that just leave the province anyway. Reinstate \$15.00 per hour minimum wage. Put money back into education and healthcare. That will save countless jobs.

T2Y	The Govt is missing out on a multi-million dollar opportunity by cutting budget and tax credits to the film and TV industry.	By cutting their own pockets or staying at current rates they make.	By jumping on board the Film industry. Calgary is a major hub and could stand to make as much as Vancouver and Toronto. Hemp farming for sustainable clothing/textiles. Oil and gas are no longer sustainable and the province would do well to diversify into newer energies.
T8x	Healthcare - focus on educating more physicians in Alberta and getting more physicians in northern/rural Albertan communities. Reduce wait times and healthcare quality. Education - providing the best education possible for our youth, including having sufficient support staff.	I'm not sure	Making the province a financially attractive place for large organization to do business, while trying to be environmentally responsible. Incentives for new entrepreneurs.
T2G	Universal childcare Education Healthcare	Cut back spending on oil and gas promotion. Focus on diversification of the economy	Diversification of the economy. Support to small business owners. Support of a strong social service sector
T8X	Putting money into support staff in schools. If you have not helped out in a class you really should. It's eye opening and the 'reg' kids are getting left behind and not cared for. It's quite alarming!	By reevaluating the AHC and all scamming from the top end and dr.s billing protocol.	Getting more support staff / teachers aids in schools.
T8n	Education	Less travel to conferences by upper government electorally and smaller entourage . More can be done by video conference. It also lessen a carbon foot print.	Small and medium size business and local production of everyday goods first rather than China and US through education and economic support
T6X	Education and Health	Accommodation cost - increase density and modernize workplace	Support economic diversification into technology and increase apprenticeships recognizing that 4 year programs no longer keep pace with speed of change
	Health Care, Education, Diversifying the economy, and supporting the transition to a low carbon economy.	War Room. Professional Twitter trolls that are paid \$200k/yr such as Matt Wolf. Appointments based on UCP connections. Panels to study issues with predetermined outcomes.	Diversifying the economy & not just focusing on Oil & Gas. (Ex. Restoring incentives for tech and film would be a start) Funding Cities properly and investing in public transportation. Invest in being a leader in the renewable energy industry. Investing in education.
T6W	Education, post secondary education, (you really screwed up the PBF model by copying Ontario's when there are way better models of PBF out there that you didn't get consultation on), and healthcare	Government pensions for MLAs (full pension bullshit for 1 term of service), government travel expenditures, reign in spending on the government employee side and then start to the park on financial impacts to essential services	One trick pony economy with oil and gas, need to diversify and innovate the economy rather than going all in on a pipeline - pipeline is important but is not the answer to our economy - diversify it so we aren't relying on a single major revenue stream to better manage the ebbs and flows of economic upswing and downturn
T8A	Making life better for those Albertans who have no voice such as seniors and low income people. Look at ways of working so that systems are integrated rather than stand alone to better meet needs such as Health working with social supports, putting the money into community rather than pour more money into Homecare to provide those social supports.	Look at the spending of officials as they attend meetings, luncheons rent planes and travel abroad. They should not receive more compensation for travel than others in the not for profit sector. Look at the programs run by government and put those dollars into programs in community as community can provide those services at a much lower rate.	Make post secondary education affordable so that not only the wealthy and elite can attend, support hiring and training of young people in the trades, do not penalize those on social assistance if they get a minimum paying job until their income is above what they make on assistance, including health benefits. Work towards ensuring the pipeline issues are resolved.
T0L	Rural health care, rural education, rural economic development	Government wages, politicians, assistants etc	Supporting communities in economic development opportunities. Build the pipe line
T4L	Education is a must! Come into a classroom and spend some time seeing how teachers must modify lessons with minimal support and diverse needs.	Stop giving money out as a way to make things better. Healing does not happen through money. Change does not occur with money.	Support Alberta Oil and Gas sector. Employ local people.
T2N	Health & Family Services The Arts	Limit tax breaks for those above a certain income.	Invest in young people and build the arts and culture sector.

<p>T8H</p>	<p>1. Job creation for post-secondary graduates. As parent with graduates with distinction from University of Alberta in OT and Engineering, they are unable to gain employment and unable to pay student loans. This is not the future for young Albertan and what is the government doing to strength the economy and Alberta's future.</p> <p>2. Health Service, the population is aging. The need for excellent health care will always require. Government needs to focus and improve on this area. Improvements in health care sector will have consequential impact and bring business to other industry in many ways.</p> <p>3. Focus on improvement instead of elimination (blaming previous PC and NDP shortfall) all government have shortfall. They should focus on improvement and consider dollars and impact before cancelling project on taxpayer dollars spent.</p> <p>POLITICANS ALWAYS BLAME PREVIOUS GOVERNMENTS IN MANY WAYS. THESE WILL BE ONGOING BECAUSE OF THE ENVIRONMENT. IN REALITY, GOVERNMENT WILL ALWAYS BE IN A DEFICIT.</p> <p>STOP COMPARING ALBERTA WITH OTHER JURISDICTIONS AND JUST FOCUS ON THE GETTING THE PIPELINE PROJECT DONE.</p>	<p>Savings can be achieved in some practical changes. Turn off some lights at night, all the bright lights are on in government buildings.</p> <p>Review your internal surplus supplies, there are many value items sitting idle or is being auction off for less than market price.</p> <p>So many idle real estate, halls conference rooms not being use to generate revenue.</p> <p>Stop job elimination, services are already stretched with bad services.</p>	<p>Providing incentive to employer to create position.</p> <p>Economic growth is possible if pipeline issue is resolved quickly.</p> <p>Lower income tax rate is only beneficial if you get there which is unrealistic for small and medium business</p>
------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

T8H	<p>1. Job creation for post-secondary graduates. As parent with graduates with distinction from University of Alberta in OT and Engineering, they are unable to gain employment and unable to pay student loans. This is not the future for young Albertan and what is the government doing to strength the economy and Alberta's future.</p> <p>2. Health Service, the population is aging. The need for excellent health care will always require. Government needs to focus and improve on this area. Improvements in health care sector will have consequential impact and bring business to other industry in many ways.</p> <p>3. Focus on improvement instead of elimination (blaming previous PC and NDP shortfall) all government have shortfall. They should focus on improvement and consider dollars and impact before cancelling project on taxpayer dollars spent.</p> <p>POLITICANS ALWAYS BLAME PREVIOUS GOVERNMENTS IN MANY WAYS. THESE WILL BE ONGOING BECAUSE OF THE ENVIRONMENT. IN REALITY, GOVERNMENT WILL ALWAYS BE IN A DEFICIT.</p> <p>STOP COMPARING ALBERTA WITH OTHER JURISDICTIONS AND JUST FOCUS ON THE GETTING THE PIPELINE PROJECT DONE.</p>	<p>Savings can be achieved in some practical changes. Turn off some lights at night, all the bright lights are on in government buildings.</p> <p>Review your internal surplus supplies, there are many value items sitting idle or is being auction off for less than market price.</p> <p>So many idle real estate, halls conference rooms not being use to generate revenue.</p> <p>Stop job elimination, services are already stretched with bad services.</p>	<p>Providing incentive to employer to create position.</p> <p>Economic growth is possible if pipeline issue is resolved quickly.</p> <p>Lower income tax rate is only beneficial if you get there which is unrealistic for small and medium business</p>
T0M	<p>The poor People on AISH should not be penalized because they are handicapped, stop it Kenny You keep hurting people who need your help the most and I for 1 am sick and tired of you always taking what pittance we are given you try living on what we get then you would see some real bitching won't we, Old people who are expected to work until they are 70, when do they get to enjoy any of their old age 70 is old..do you plan to work them into the grave,then you don't have to pay any benefits....</p>	<p>get rid of his think tank room and war room biggest waste of money ever....</p>	<p>if he got rid of his was of the war room and think tank he could use that money to rehire all the people he made redundant who were contributing to society paying taxes buy groceries, not loosing their houses their cars living on the street.....moving out of province...</p>
T5X	<p>Education / More teachers : my child has close to 40 students in her class rooms, there is no chance she can get the extra help she needs to succeed. the teacher cannot spread themselves that thin.</p>	<p>City / Government expenditure, there is no liability. Projects constantly go over budget and over dead lines with no penalties. This does not happen in the private sector, you are held to budgets and fined for missing dead lines. how is this possible.</p>	<p>We need to slow down our immigration numbers and make sure we are taking care of of our existing population.</p>

T8N	<p>Instead of dismissing workers from necessary gov't positions, teachers and assistants from schools, etc, because of "cutbacks" that are supposed to help balance the budget , let these people work so Alberta,s unemployment rate does not keep increasing. You, the Alberta government, are creating unemployment . You, the Alberta government, are the problem in this province.</p>	<p>Take a realistic look at where we were when you took office. Was it really necessary to cut the previous government's projects just because you could? You have spent millions of dollars to drop policies that cut jobs just because they were another government's policies. That decision has caused a great deal of unemployment . Getting rid off the "War Room" would save millions of dollars that could go to education and health care.</p>	<p>To support job creation, stop " firing" people and cutting jobs. When will this government realize that gas and oil and coal are from the last century? We must develop alternative energy Sources to diversify our economy.</p>
T1C	<p>Health and education.</p>	<p>Less money spent on administrative functions that could be easily streamlined. Cuts at higher level government salaries and expense accounts. Less money wasted on over-the-top specs on government construction projects. Less money wasted on appointed committees to research things when professionals in the field could easily be consulted.</p>	<p>By supporting the health and education sectors instead of undermining them. Healthy educated Albertans, that are not drowning in educational debt, are the key to reliable and sustainable economic growth. Building a strong foundation of citizens is far more effective than trickle-down type economics.</p>
T2G	<p>Health, education.</p> <p>Would be nice to see a real re-organization that improved systems in both areas, thus reducing costs smartly over time. For example, nurse scheduling is a mess. Hospitals are really not that clean.</p> <p>Also, the school boards should be combined.</p>	<p>I am ok with a major public sector layoff IF it is well planned. The administration of grants, ETS for mining, any website I log into is old-fashioned and hard to use and not helpful, resulting in calls to multiple staff to address. It's all so hard! Some of this needs to be fixed and then let's clean house.</p> <p>Note that of course they will resist because it seems that people want to protect their jobs at all costs.</p>	<p>Would like to see the technical economic development programs reinstated.</p> <p>Regarding traditional economic development: There is something not working with Calgary Economic Development, for example. They are completely out of touch with Calgarians and the tech sector. They don't connect with regular businesses because they always seem to be striving for something fancy and glamorous. They seem to do a lot without results and blame the provincial government.</p> <p>Also, 17(1) and reached out to numerous local economic development groups. One admin reached out to let me know her senior people would be in touch. They have never contacted me. One person sent me some really good information and then tried to push me on a \$14.7 million land purchase; I asked for technical details and her engineering department never got back to me. The rest never responded.</p> <p>So, to support job creation and economic growth I'd say it's time to find a better structure.</p>
T4N	<p>Education and job training for the new age. While trades are important, some of them are the way of the past.</p>	<p>By keeping education public. The government should not fund or limit funding to private schools and those with religious affiliation. Religion can be taught within schools (K-12 and post-secondary) but should not be a requirement. Areas with multiple school boards should be consolidated e.g. Calagry public and Catholic school boards, there should only be one.</p>	<p>Diversity with a focus on technology. Alberta could support the IT and tech industry.</p>

T1J	Front line workers, Public Education and renewable resources.	Cut CEO wages. AHS CEOs and Covenant Health CEOs make more money than any frontline workers, frontline workers save lives. School Board members make more money than the teachers, the teachers have the ability to shape our children, our children are our future.	Support Healthcare, see the need for more HCAs and LPNs in all areas of healthcare. Support our teachers. Support our oilfield while opening up new areas of renewable resources. Increase wages for the inflammation while freezing those whose wages are larger than life and they sit in management positions.
T9A	Spending on helping our most vulnerable (homeless, addiction clinics, people on AISH, non-profit program enhancement etc). Support for schools and hospitals.	By NOT giving away our tax payers money to big corporations. By making those big corporations pay their tax!	By diversifying the energy sector, increasing the \$25 childcare programs, enhancing non-profit programs and services, supporting hospitals and health services, increasing the services in schools for children and youth etc.
T3M	education, health and wellness, social services. Treat sport and recreation like a social service.	remove the war room. Pay for the future to find future savings	Stop paying big companies more money. Diversify from oil and gas.
T1A	Health care Education Child Care	Sales tax	DIVERSIFY our economy
T8V	Education. How can we make AB a great place to live and thrive if the kids are stuffed in extremely large classes, with a lack of resources? They are the future of this province and the Gov't is really hindering that.	Get rid of your war room. It is a ridiculous waste of money.	Put the exact amount of energy into other sectors as you do with the oil and gas. I am pro oil and gas, however, there can be more to AB than that.
T1A	Post-secondary education, education, and healthcare	The War Room, stop giving corporate tax breaks that are ineffective and have corporations move anyways	Diversify the economy, following our last government
T3E	Education [all ages and stages], health, social services. Our only provincial resource we can count on and should invest in - is our people!	Cut more pay and expenses for Premier and MLA's. "Even at \$121,000, Albertan politicians make more than their closest provincial rival, Ontario, at \$116,550." Then "find money" NOT "find savings". Restore tax on wealthy corporations, make oil companies pay taxes and clean up oil wells, get rid of "war room" and it's \$30 000 000 ANUAL budget.	Educating it's citizens to the fullest extent; support small businesses [read AB Gov. documents to see where the real money comes from in AB]; then monetarily encourage new and original job creation made by those educated citizens so we stop being dependant on oil and gas.
	Children, youth and post secondary education/services. Prevention efforts related to health and wellbeing.	Reduce redundant levels of organizational oversight within departments. Reduce duplicated services by requiring meaningful departmental cooperation and collaboration.	Put the province on a path which shows vision beyond immediate political expediency. Have the courage to make unpopular choices, but be clear and transparent regarding short and long term reasoning.
T0L	Health & Education	Stop with tax breaks for corporate entities. Quit rolling back on initiatives that have already proven they work. Get rid of the "War Room" Cut \$\$\$ from MLA's and Premier's salaries	Look forward to climate change and alternative energy.
T2T	The arts are suffering and are integral to a healthy and prosperous society. Please continue to invest in and promote the arts or we will lose more organizations.	N/A	Build a pipeline!
T2t	Communities, in all forms. We need investment in homes, arts, and public services.	Stop privatization of simple services. When government is paying 16-18/hr for basic roles, there are no savings from transferring them to private enterprise. They will also have to pay 16-18, plus earn a profit. So either it will cost more, or you will get less so that they can pay for less hours.	Targeted grants and tax cuts that reward desired behaviours and not just being profitable.

T9C	Sustainable and sufficient funding for healthcare, education, and other government services. While I cannot speak to healthcare and other funding, this government is not being honest with the residents of this province in regards to education funding. Cutting back on grants such as the class size grant while freezing funding is NOT "maintaining education funding", no matter what this government may keep saying to the media. This government should also focus on maintaining the wages and benefits of public sector workers to avoid the loss of talented Albertans providing essential public services to other provinces.	Eliminate the energy war room. This organization appears to do nothing more than infringe on the free speech rights of Albertans. Terminate the employment of paid online trolls such as Matt Wolf.	Promote more than one economic sector. Reintroduce tax credits and incentives for industries such as high tech, the film industry, and renewable energy. As demand for fossil fuels continues to fall in the face of social pressure from citizens concerned about the reality of threatening climate change, Alberta needs to promote the growth of other industries at the same time as it meets the demand for energy in ways that won't lead to damage to the planet and ourselves.
T2v	Spend on Education and Health care and end corporate welfare, including the ridiculous 30 mil a year "war room"	Eliminate the War room, raise corporate taxes and stop handing cushy contracts to your financial supporters	Reinstate tax credits for tech and film work. Think beyond oil and gas. Invest in green technology
T6E	The province should focus on diversifying the energy industry. Promoting innovation in energy efficiency, renewable energy and community generation would have several benefits for the province and it's people. Bolstering this industry would a) show the province's commitment to mitigating and adapting to climate change, b) promote innovation in the industry, c) help communities diversify their revenue sources and provide cost savings.	I am assuming this is only in regards to financial savings. Diversifying the government's funding for the energy industry with community generation, energy efficiency and renewable energy would result in cost savings in the long term. Supporting these programs helps communities find cost savings, and in turn helps the province save. Why spend money on a really expensive war room that just shouts hate, and that employs only a handful of people, when that money could be spent supporting people and communities directly. Climate change is so expensive and we are living the consequences already. Fires, floods, and other natural disasters are going to keep happening more frequently and dramatically. Reassess your priorities. Is your priority a marketing campaign or is it managing the risks of a changing climate? We have the people and resources in our province, and in Canada, that can help and advise on finding cost savings, while mitigating and adapting to a changing climate, let's listen and support them.	Innovation is happening in the community generation, energy efficiency and renewable energy industries. More people are employed in these industries globally than in the oil and gas industry. I'm not saying get rid of oil and gas, but diversifying where we get our energy from, supporting retraining of oil and gas workers, and providing opportunities for mitigation and adaptation projects, would showcase the ingenuity of our people, and create jobs across the province. Why be left behind in the low carbon transition when we can be leaders. Let's take advantage of this opportunity in a bigger way, and think farther into the future than just a four year term.

T0C	<p>Getting people educated and employed or back to work should be the focus. Government services in this regard are too scattered, disjointed and even conflicting to be effective.</p> <p>As an example: Think amalgamation of Adult Learning and Employment Centres. In small towns, there are no places to provide employment services anymore and towns with CALPs (community adult learning programs) do not have the required funding to provide this.</p> <p>Even though it's a little bait and switch, offering this combination of services increases the likelihood that Albertans needing essential skill development, basic to post-secondary education or retraining can find the help they need in our centres and will actually come to us.</p>	<p>Amalgamating and streamlining services. It's crazy how ridiculous it's become.</p>	<p>Until there is something tangible, an affordable, sustainable and readily available alternative to fossil fuels, bring back a supportive environment for the oil and gas industry. Like it or not - it's necessary.</p>
T0K	<p>Agriculture Research, Innovation and technology Education Energy diversification Preventative medicine and well-being</p>	<p>Stop funding private schools Combine the Catholic and public school boards Shut down the Canadian Energy Centre Reduce public sector upper management salaries- ADMs, DMs, Exec Directors Fire Matt Wolf Strategically sell off small pieces of public land</p>	<p>Government needs a long term plan- what do you want Alberta to look like in 10 yrs? 20yrs? Need to support cleaning up orphan wells, or re-purposing them Invest in Research, innovation, entrepreneurship, technology development, energy diversification Reduce personal income tax, establish a PST Invest in new training programs- automation technicians, etc. Re-instate tax credits for innovation investments/businesses</p>
T2V	<p>Public education, higher education not just trades, incentives for doctors not forcing licensing choices, cutting religious education and private school funding, not taking pensions to pay for conflicts of interest, healthcare, proper AISH funding, development of the Agri-food industry, incentivizing tech companies and non patch related business to re-locate to Alberta, put the insurance cap back on</p>	<p>Cut the ineffectual war room boondoggle, cut Matt Wolf's salary in half, no more pet trips for the premier and his friend like London, no jetting cabinet around the country, cut the Premier's Stampede Breakfast and all major social events like it, attach performance based funding stipulations to MLAs until Alberta's unemployment reaches 3% - reverse the corporate tax giveaway that has done nothing for employment and caused hardships for the rest of us</p>	<p>See box one. Stop being focused on just the patch and to all your other donors. Stop the punching down, sniping and supporting the yellow vest/red cap mentality - it sends potential investors elsewhere. Do what you are paid very well to do-support Albertans not just</p>
T2T	<p>ensuring vibrant communities - education, health, arts, social services</p>	<p>stop the spend on the provincial governance review work. We are part of a Federation - the balance of privilege and responsibility ebbs and flows. I believe we get tremendous privilege in being part of the Federation</p>	<p>diversify.... we need to develop other industries, and spend money to support retraining. support small businesses not the large corporations - they don't create jobs, they only support their shareholders (most of those are south of the border)</p>

	Quality Child Care, Education, Health Care for seniors	<p>Do not create more private health care. Sales tax would mean that we do not have all the fluctuations that put us in a mess regularly. Quality child care has many economic benefits - if we build the system now, money would be saved later. Reduce money spent on lawyers i.e. fighting carbon tax Stop cutting back on photo radar - if people speed they deserve a ticket as it is against the law - why is there a law if it is not enforced? No funding to private schools - if it really is private then parents should pay for it. Reduce all the school choices - why do we need a system that has Catholic and so many religions, private, sports schools, charter schools. This is very costly! This is what the education minister should be looking at for reducing costs. If parents feel they need these choices they should pay for them. Government should only be paying for a public school system. We can't afford them in rural, why in urban? Why should only urban families have choices for education?</p>	<p>We do need oil and always will but because of technology we will not get enough people back to work there. Diversification is important.</p>
T0K	<p>Irrigation districts provide wealth for all Albertans. Continued funding support for irrigation infrastructure is paramount. A reliable uninterrupted water supply acts as an economic engine for the Province. Lethbridge and area do not feel the squeeze as do other parts of the province due to a strong irrigated agricultural sector. Irrigation farmers must still invest a great deal of money within their own farms to take advantage of the water supply. They cannot pay for both infrastructure and on farm needs. Please continue to assist irrigation districts and the head works system with needed funds to keep the infrastructure in good shape.</p>	<p>Down size government particularly management employees and expect more from front line workers and interest groups.</p>	<p>Lower corporate tax</p>
T2b	<p>Health, education, arts/culture (not public art, associated with infrastructure projects) Clean energy investments not associated with fossil fuels</p>	<p>Cutting governments own wage. Not giving tax breaks to corporations. Giving tax breaks to people.</p>	<p>Invest in green/clean technology ie. Wind infrastructure, solar farms, solarizing private property, investment in grid resilience, reforestation with fire management best practices as recommended by fire science.</p>
T5M	<p>Jobs...not in oil or gas...environmental only Healthcare- no layoffs continue on Education - no layoffs</p>	<p>Upper management AHS- look at the sunshine list anyone making over 150,000red circle, no raises ever....layoffs with no "package" Superintendentso in Education -red circle and anyone over 150,000, cut job, no package</p>	<p>Tourism Solar and windpower Cannibas, food greenhouses</p>
	<p>Jobs...not in oil or gas...environmental only Healthcare- no layoffs continue on Education - no layoffs</p>	<p>Upper management AHS- look at the sunshine list anyone making over 150,000red circle, no raises ever....layoffs with no "package" Superintendentso in Education -red circle and anyone over 150,000, cut job, no package</p>	<p>Tourism Solar and windpower Cannibas, food greenhouses</p>

T5x	The middle class working government people need a raise. They are the front line workers and have been keeping the province running through good times and bad. The cost of living is going up and it is more difficult to support a family.	The reorg of government is a good start to trim the fat (lay off upper management) and move appropriate money to the people who do the work. This will save money by getting more productivity and delivering services to Albertans.	Hire people. The Government is not hiring and is doing less but with more work. The economic growth comes from spending money in your pocket but there's less spending to stimulate the economy. All small businesses will suffer when there is no money in people's pocket.
T5Y	Health care is the most important priority. Some of us paid lots of taxes in the past. Only to wait months and months for some services.	Start looking at the top, trim some of the gold plated pensions. All the Alberta politicians and high income managers should cut their salaries by 10-20%. Then start trimming down to the poorest people.	By handing out tax cuts to business is the wrong way. Corporate welfare should be stopped. When I was young they had programs called winter works. Which built needed projects by local communities. Many prisoners would like to work at outside jobs. Many seniors need jobs also.
T1W	The public school system (not some half baked charter system which has already been shown to fail in the States) and health services, obviously. More support services in wilderness areas. Research funding for universities. Renewable energy innovation.	Corporate handouts which clearly don't work. Political percs. Advertising. Reinventing the wheel, which is very costly. Maybe a sales tax?	Support Innovation. Ask smart people. Incentives for companies to get on board with the future.
T1j	Healthcare and Education	Corporate Taxes and Government Travel	By looking into other industries besides Oil and Gas
	Education, health care.	Not providing handouts to the oil companies and other big companies in the province. From the "Energy War Room" budget.	Find ways to diversify the economy rather than continuing to depend on oil.
	Cutting budget on upper management in healthcare rather than the front line workers.	Cutting budget on upper management in healthcare rather than the front line workers. Look into units that have assistant manager and more than one unit educator. Do we need them?	Stop laying off Frontline healthcare workers.
T0J	prioritize saving; not spending	I retired from nursing at a long term care facility about 1.5 years ago. I was appalled at the over-time paid out - sometimes as many as 5 HCAs on one shift on double time. The manager was totally unconcerned. So who is accountable for this? Don't managers have to justify such excessive spending any more? They used to.	I am puzzled by the term job creation. If there is a need, don't jobs arise as a natural consequence to fill the need?
T8A	Human services, Aish , schools	huge tax breaks and handouts to big companies and corporations	invest in its people
t6t	Healthcare and Education! The cuts to both are going to do little for our future.	Management structure. Meetings for no reason and wasting money on connect care, the project is out of control. The amount of time and energy(which equals money) wasted is staggering.	The cuts and potential job losses will not benefit economic growth. If the residents of Alberta do not have money they cannot contribute to the growth of the economy.
T5A	Healthcare, national pharmacare and education	by cutting the support of private schools, by stopping all subsidies to large corporations, and by cutting the Premiers salary to \$1 per year	get involved in "green" energy projects such as solar

T3R	Essential services only. Get your budget under control first. Then prioritize capital plans.	I tried to get Notley interested in making changes to Procurement. They didn't have the jam. I did email the Premier prior to his being elected. 2 things you need to do. Combine the procurement of major procurement commodities, like electricity and natural gas. Goods and services that all departments need to operate, could be centrally provided. Secondly, set up a Shared Services department, for IT infrastructure and HR essential services. Having all government departments doing their own procurement, providing services, and trying to keep up with technology is an enormous waste of money, and the inefficiencies are clearly evident.	Keep going with making Alberta a place to do business. It's working in the US
	Medical, education, infrastructure	Don't spend money to build new arena in this economic	Develop more programs for new grads without experience
T0e	Tourism, mainly campground revitalization. Attracting businesses. NOT ON EDUCATION OR HEALTH.	Eliminating cel phones for employees, public servants and in healthcare for nurses. I know 2 nurses who only have their AHS phone and use it as their personal phone as well. Eliminate management positions. Reduce the number of the education divisions, this will drastically reduce the cost of administration in our education, amalgamating 3-5 divisions together would put more money into the classrooms. DO NOT GIVE INTO UNION DEMANDS, this two tiered system of employment (public vs private) has to end. Eliminate all private pensions for public servants, education and health employees. If CANADA pension is good enough for private sector it is good enough for them. Opt out of cpp and start a made in Alberta pension plan. Stop spending money on art in our government buildings. When doing government builds (schools, hospitals included) they need to meet basic standards not architecturally designed and costing millions more dollars.	Lower taxes for individuals so they are able to start businesses and they will spend the money that would normally go to taxes. Put money into tourism, our campgrounds are old and dated. Putting money into them will increase tourism.
T1J	Providing supports to people with disabilities, helping small businesses succeed, providing SCS with the additional help they need in order to provide a full range of help to people with addictions	tax cuts provided to large corporations and wealthy people	support small businesses in being able to hire, and taxing wealthy people and corporations
T2G	Supporting vulnerable people, education, health	Corporate incentives	Education incentives, support economy diversification, invest in social services

T3L	<p>Children who have IPP and classroom sizes. I would say getting teachers educated on IPP as some are really good at it others not.</p> <p>We were with CCSD and they really weren't educated with working with them. Our son switched to CBE for high school this yr and they have been fantastic.</p>	<p>Sending teachers on sabbaticals. We just had a friend go and 17(1) Other private corporations this isn't happening but we are doing this on the public sector and for gym. It really makes no sense and she was part of that board that was going to let over 300 teachers go.</p> <p>Also, PAT. They don't show anything. Our son we paid in grade 8 for Psych-Ed assessment to find out he has an Learning Disability. He passed his PAT always before that with nobody ever flagging anything. It really doesn't show much.</p>	<p>As our kids are in high school, I truly see the need to get more support at a younger age for Learning Disabilities detection at a young age. This way when the child gets to high school they are aware of their disability and able to advocate for their needs.</p> <p>I would have more psychologists in the school to help detect these things. We did have to pay for our child psych-ed assessment but a lot of parents are financially strapped and can not afford. This is the first step to helping a child and without an IPP you can not get these services.</p>
T2S	Health care ,sport ,education,seniors mla	MLA salaries and trips create	Create more opportunities for youth
T4P	Education and healthcare Public sector	Canadian energy, social media, MLA salaries and increase revenue by taxing corporations the same as other provinces	Public sector and technology
T0L	Health care in rural areas. Job creation in private sector. Keep cost of living down. Real Tax reductions don't just shift taxes to municipalities etc	Federal government should be contributing to switch out of coal. Keep fighting federal government carbon tax.	Promote what Alberta offers to attract business to Alberta. Identify and Focus on strategically important industries. Encourage federal government to pass legislation to force Canadian companies to purchase only from countries that have high moral and climate change policies. Ie. no Arab oil, no Chinese imports etc. Canada should use Canadian oil not imported oil.
T4C	Education Mental Health Addiction Health Care Human Services Field - prevention vrs reaction	More at top levels of management within different government organizations.	Not tax small business to death.
T5e	Health,Education and taking care of the less fortunate. Diversifying.	Not privatizing because it always costs more and quality is far less as a profit is needed.	Not giving corporations 4 plus billion dollars. Not crippling municipalities. You have not created any jobs. Your methods are working for many to lose more jobs! We were on the right track!
T7x	Healthcare, social programs, investments in new energy sources and less oil	Less handouts to oil companies, less committees of useless government buddies	Diversifying energy, not cutting jobs seems like a very obvious place to start
T1R	Healthcare & Education	Remove the gift you gave to the corporations - they need to pay those taxes - they have already made it clear they are not bringing Albertans any benefits or jobs.	Be open-minded. Save our "public" healthcare. End your war room. Stop stealing our pensions & make Alberta a place people want to live.
T2J	Continue to support Public Education and Health Care to keep up with our growing and aging population, as well as inflation. The reason we don't have ER issues is that we are well-staffed. If you want to cut the fat, cut the upper management, not the front line. And don't think that privatized services won't cost the government just as much, it will just put less money in the hands of the staff and more in the hands of the business owners.	Don't give billions in payouts to corporations that are still laying off staff and lining the CEOs pockets. Take a pay cut in office- the NDP voted in an 8% raise, you took a 5% cut, that's still up 3% vs. asking everyone else for a rollback from their 0 or continuing at 0.	Don't privatize- by giving contracts to companies that aren't local, you still spend the money here, but nothing stays. Invest in public health, public education, and public transit. Pay local staff and companies who will then pay local taxes. Consider opportunities outside of oil and gas. Alberta had a thriving tech and film industry. Consider giving them back some of their perks. We are a province of entrepreneurs-support that!

T8H	Putting people back to work is what I want to see.	Reduce management size and if possible offer a step down to a workers position. Most people can self manage in the public sector,	Instead of laying people off....try changing the public sector to four day work weeks. This keeps everyone working although with a little less money but enough to keep going. Call 17(1) for more great ideas
T2E	Health care, education and prevention services for families and children.	International spending, wages of political individuals.	By decreasing cut backs for things such as education, health care, social services.
T3C	Education & Health care	Corporate taxes	Diversify industries, not pin all of our economic strength on oil and gas.
T4G	getting people back to work. Increasing child care subsidies to help parents afford to go to work.	cutting redundant positions and some of the middle managers while keeping the front line people that actually work.	increase child care subsidies so parent can return to work. Support the early childhood workforce by putting restrictions on the private unmonitored babysitters. Help create new regulated licensed quality child care spaces to support families.
T2W	Education and Health. Shortfalls in funding to school boards result in fewer teachers and educational assistants to work with students. Funding needs to be specifically earmarked - if you leave it up to school boards the money may not be put where you would hope. With that said, you still need to fund the maintenance of the building. Inclusive education costs - it must be funded to be of any success. Health Care is the same. Senior citizens should not be worried about whether a procedure or medication is covered. They should not worry about their fees going up.	Get rid of your 30 million dollar "war room". Start there. If you're worried about Alberta's economy then take that money and invest in diversification of our economy. We cannot control the world's need for oil and gas. Yes, we need to build pipelines and get our product to market. However, we need to be ready for when a downturn occurs again. Learn from the 1980s and learn from the 2000s. Also, look at Houston and see how they diversified without selling out oil and gas. Let's broaden our thinking. Savings can be had in wage freezes. Rollbacks are not recommended as they could cause labour issues. An agreed upon freeze time, with the promise to look at wages in the future, could go a long way. Rolling back says that you do not value the work of these people. I often hear government saying that "our workers are the highest paid in Canada." Maybe. We also have the BEST in health care and education in Canada. What's more important to you? If you want the BEST you have to PAY for the best. Slow, and purposeful spending in all areas will help to find savings. Frankly, we have no provincial tax and your government gave the carbon tax to the feds. Shame. You perhaps need to find ways of generating revenue rather than cutting.	Help fund retraining. Create new and diversified industry rather than relying solely on oil and gas (which unfairly is not looked upon kindly on the world stage). Continue to be supporters of our oil/gas, but let's start creating some alternatives. With advances in technology, geography is no longer a barrier to the tech industry. We need to say that Alberta is Open for Business and make it exciting and practical for the tech industry (and others) to come here.
T4C	Health care such as hospitals, doctors, nurses and equipment. Not health care as in a program for every special interest group. Education	Expensive programs that help a small number of people. Programs should be looked upon as a cost per person helped with limit on what can be spent. If a program is helping very few but is costly then it should be scrapped	Reduce corporate tax rate to encourage businesses to set up in Alberta
T4R	Child care Health care How to diversify Alberta's energy sector-in addition to oil and gas how can Albertans produce energy	Stop some programs such as ARCQE Rather than creating new programs invest further in the programs that work...for example increase child care subsidy so more family's can qualify and stop the \$25/day care centers	This is a difficult one...I would recommend taking a look at how other countries do this well and adapt their policies. Social agencies that help our families save money. Why do Albertans spend so much more on dental care, University Education and child care??

T8N	Education (no privatization, no tier)	Within the organization itself. Attend a project meeting at infrastructure 10 people show up. Not necessary. Reduce your govt footprint - people and space.	Don't take away what draws people to Alberta. You can reduce taxes for corporations but if the education and healthcare is poor for these families why would they move there business here.
T2W	A no brainer, the pillars of our society. Health, Education, Environment and Economy.	I can only speak to where I work. Currently our government thinks it can save by not funding pens, kleenex, and note pads. I kid you not. Also by not replacing workers who are sick. I have worked on a team where we have worked short staff for 5 months. The savings need to come from redesigning complicated computer programs. It used to take e 2 to 3 hours to admitted someone to homecare.Now it takes 8. Also privatization costs more than doing , "in house," meaning personal care. Management needs to change. Oh did I mention although are working short staff they did manage to hire a manager to tell us how to do things(she is nice I must say). SO long as foxes rule the hen house nothing will change.	Diversification.Innovation. Stop cutting taxes. Look at BC companies do not leave that province.
T0K	Public sector workers and services to protect the vulnerable.	Stop giving tax cuts to big corporations	Reinstating incentives and promote small businesses and do not cut or roll back public sector jobs.
T7X	Healthcare and children's education as well as social programs	Increase corporate tax	Allow tax breaks for non oil and gas companies to diversify economy
T2L	Health care and education	Hand outs to large corporations look	Look to the NDPs models. They were working.
T5t	I thing transport projects and new Hospital for west End.	Make sure unions have fair deals like the private sector. The unions are screwing the tax payers	I think the Petro chem tax credit was a great program
T0L	Job creation. Not handouts to select big business. You are spending taxpayers dollars. Not your own. Respect that. Seems to be a conflict of interest when you hand out cash with no strings attached to corporations like Husky and cuts to the average citizen.	Administration. The manager at the facility my Mother resided in certainly didnt do his job when my Mother was in care this summer. She spent an extra week in hospital due to an administrative oversight at the facility where she was paying for care.The staff at the facility corrected the oversight when I made a complaint.They did their job and more. The mangement made a huge oversight and didnt delegate the responsibility to anyone. I was disgusted with his performance. Pretty sure the day to day workers in administration do most of his job. But he wasn't accountable for his lack of action in any way shape or form.	They should not focus on one particular company when making handouts available. And there should be an expectation of job creation in return.
T0L	Job creation. Not handouts to select big business. You are spending taxpayers dollars. Not your own. Respect that. Seems to be a conflict of interest when you hand out cash with no strings attached to corporations like Husky and cuts to the average citizen.	Administration. But he wasn't accountable for his lack of action in any way shape or form.	They should not focus on one particular company when making handouts available. And there should be an expectation of job creation in return.
T6H	Education, health care and getting us out of our dependence on oil	Stop using government panels for political purposes	By spending on large infrastructure project

T6j	Education in the public schools and support post secondary education Diversifying the economy	Reevaluate how physicians are compensated. Start looking at revenue-a sales tax and stop big giving big corporations tax cuts Get rid of the energy war room Get rid of two separate school boards Stop supporting private schools and bring public support of these institutions in line with Ontario who provides minimal public funding for students who choose alternative schools	Diversify the economy/ we cannot rely on oil and gas. Our oil has a lower value and higher environmental foot print. It is not likely to come back and we should not be relying on it.
T6j	Education in the public schools and support post secondary education Diversifying the economy	Reevaluate how physicians are compensated. Start looking at revenue-a sales tax and stop big giving big corporations tax cuts Get rid of the energy war room Get rid of two separate school boards Stop supporting private schools and bring public support of these institutions in line with Ontario who provides minimal public funding for students who choose alternative schools	Diversify the economy/ we cannot rely on oil and gas. Our oil has a lower value and higher environmental foot print. It is not likely to come back and we should not be relying on it.
T1J	Health (Including drug coverage), education and social services, public works	Crazy travel expenses for Premier, MLA's.	Change corporate tax decrease to be a cut to payroll tax for new hires
T1H	EDUCATION. Please prioritize our students and staff. Make the boards more accountable for where the money is being utilized...make them put it directly in the classrooms. Health...continue to fund health and again, force the administration to keep the money where it does the most good. Economy...keep our families thriving please.	Safe consumption sites shut down and funds allocated to other pillars. Make administration of health and education more effective while maintaining school choice...private schools are a great option. Less abuse of social programs. Less abuse of WCB programs. Just more accountability overall I believe for funding being received and make parents more accountable for their choices. Also, funding special interest groups for social agendas is not beneficial to all residents. I think the current UCP is on the right track. Thank you for that. Please help regulate insurance rates as that's hurting alot of people immensely.	continue to explore our oil and gas sector and promote it. The money that is available to create jobs or keep the current jobs definately helps to support our local economy. I leave this in the experts hands but know it is a hot topic that has people very worried currently in our area.
T0J	Leaving Canada.	Leaving Canada.	Leave Canada.
T3B	The government should focus on divorcing ourselves from Canada. The extra revenue we would hold by preventing massive outflows of cash to this foreign culture would amply fill our coffers. This ambition dwarfs all other budget line items.	Health care presents a significant opportunity. Reduce nurses and hospital administration pay. Consider restoring user fees as a way of unloading the health care system.	Get out of Canada.
T0C	Healthcare, education, disabled, oilfield - pipelines. Diversify economy- tech, etc.	LDo not give your friends and big business tax cuts. Do not attempt to balance the budget on the backs of families, the poor, students, frontline workers, the ill and elderly. Duplication and poor management of services in all areas - this happens in even the best run facilities/departments.	Instead of giving \$ to big companies treat us all the same. We are all Albertans and should all be given equal opportunities. By caring for our most vulnerable citizens, our families and elderly we can show our humanity. Do not through us away.
T0C	Healthcare, education, disabled, oilfield - pipelines. Diversify economy- tech, etc.	Do not give your friends and big business tax cuts. Do not attempt to balance the budget on the backs of families, the poor, students, frontline workers, the ill and elderly. Duplication and poor management of services in all areas - this happens in even the best run facilities/departments.	Instead of giving \$ to big companies treat us all the same. We are all Albertans and should all be given equal opportunities. By caring for our most vulnerable citizens, our families and elderly we can show our humanity. Do not through us away.
T6J	Education and Health Care	Corporate taxes	Diversifying

T0L	Policing, healthcare, sustainability in municipal funding.	Absorb the war room And forget about savings by chopping and set budgets to live within. 17(1) I support a PST for sustainable funding model, stability will bring business slash and burn created boom and bust government has provided that for our business over the last 12 years please contact me at 17(1) if you need real data based decision making verse ideology.	Economic development sustainability
T0L	Policing, healthcare, sustainability in municipal funding.	Absorb the war room And forget about savings by chopping and set budgets to live within. 17(1) I support a PST for sustainable funding model, stability will bring business slash and burn created boom and bust government has provided that for our business over the last 12 years please contact me at 17(1) if you need real data based decision making verse ideology.	Economic development sustainability
T0E	People, health care, education,	Actually better to ask where to get revenue not find savings. For savings cut out useless government offices I.e. war room. Shut it down. Cut consultants and boards.	Invest in green energy and technology. Show business you are not divisive and that Alberta is a great place to set up with a happy supported populace and forward thinking. Right now you get an F- in that area
T6K	Pay off the deficit.	Cut spending money on unaccounted people.	Build the pipes. Ignore climate alarmists scammers.
T6t	Education Health care Public services	Oil & Gas	Yes within reason. Support growth in renewable energy, education and health care. Services that set us up for a better tomorrow that take care of us in the long run.
T4A	Alberta needs to ensure that young people have a path to furthering their education. Alberta needs a highly educated workforce to innovate and create diversity in our economy.	Cut your own salaries. Find the incredible waste that goes on in the government. For an example, A.I.S.H. denied me additional funding of a few thousand dollars (contact me for more exact figures). This refusal now costs Alberta Health hundreds of thousands of dollars. Make sense to you? Not to me.	Retraining programs for unemployed Albertans so that they can find steady, long-term well paying jobs. Government can look into diversifying the economy; we're a one-trick pony province, who without oil and gas cannot survive. 45 years of conservative mismanagement and lack of foresight ensured the deep recession that Alberta has been reeling from. Economic diversity is essential
T1V	Salaries for leaders and government must be reduced and payments to unions must be cut back, it is time to stop taking from the lower income Albertans.	Stop paying equalisation payments that they cannot afford. Stop giving money to large corporations and their shareholders. Reduce over the top wages and pensions for government workers to similar to most people in the workforce for same types of job. There are many overpaid workers within the government departments.	Continue their fight to get our oil industry back even if it means separation from the rest of Canada. Alberta's oil industry is one of the cleanest in the world and yet we are importing dirty oil from Saudi Arabia. Stop allowing the federal government to steal from and abuse our province.
T9K	Education and Healthcare these areas are expected to do more with less all the time. These 2 areas are vital to everyone's well being. Teacher funded classrooms are bright and vibrant, but shouldn't be teacher funded. That's the government's responsibility. Teachers should not be paying for resources and materials themselves. Nurses and teachers are expected to do tasks on their own personal time to cover shortages. Jobs based on volunteerism never last.	The War Room would definitely fund these shortages you are talking about. You over spent by 30 million and did not do adequate research which cost more money. Start by wage freezing and rolling back wages of government officials not front line workers to meet with economic times. The inflation rates dont match with the economic times. We have all seen the huge raises and then your small decrease which still equals a raise. We arent blind.	By not cutting nurses and teachers and blaming the school boards and hospitals for these layoffs. These cuts come with the reduced budget. Oil needs to find alternative ways to get to ports. If ya cant go west go east. Diversification of our natural resources would be could focus on wind and solar power to support our energy needs or sell to our friends to the south. We need to put more energy into all parts of our economy and its sectors not just oil.
T5n	Health Care, education, infrastructure as in roads	Looking at the wages that government employees are paid	Education
T1J	Education	Corporations	Yes

T5M	Education--need to maintain the public education system as good as 2019/20 status or better--having well rounded students to maximize their potential at all grade levels in all capacities is of utmost importance for the future of this province--these students are going to look after you and me in the years to come. Monies to be tied to performance "tasks" at all education levels makes no sense.	Need to look at efficiencies in each department as a team not having a "dictator" in making those decisions. In education, eliminating diploma exams for all high school students could save considerable money as only about 20% of students continue on to post-secondary institutions. Post-secondary institutions should have their own entrance exams. Grade 3 PAT Exams are totally not necessary. Unless the Grade 6 or 9 PAT Exams are used as a diagnostic evaluation for the next grade level, they serve no purpose. Diagnostic Evaluation is much more beneficial than year end exams especially when most Grade 6 and 9 students change schools. I think Diagnostic Evaluation in Grades 5 and 8 may be more useful for the student to be successful in Grades 6 and 9, which are considered to be "end" of the division grade.	The approach that the UCP has used as a new government is totally unacceptable. For at least two years, the UCP should have familiarized themselves with the current situation of the government before being "a bull in a china shop". With more understanding of how the Albertan government was working, more informed decisions could be made.
T0H	Healthcare and avoiding cuts to frontline staff Agriculture needs some attention. I have not heard any support for farmers from this government	Stop giving money to oil companies who then leave the province. Reduce mismanagement of funds. The government should not be wasteful with the money and expect Albertans to take the cuts.	Diversification efforts. We can't rely on oil. It no longer pays. Grants and ways to attract businesses to the province.
T7x	Health care, education, personal government spending	Cutting back on their own wages/salaries	All jobs are equal. One sector should not be taken from to support another.
T3K	Health care Education Post secondary Oil and gas	In higher levels of corporate structures Their own salaries	Give hiring incentives
T1Y	Education, health, infrastructure.	Perhaps taking back last year's corporate tax cuts. Also, bring in a sales tax to increase revenues. Or raise corporate tax rates to be more in line with other provinces.	Diversifying the economy and support new industries. Invest in job re-training and infrastructure development.
T0G	Education for children, healthcare, elderly subsidies, post secondary education, policing	Politician wage freeze for 5 years minimum, reduce expense claims of politicians, meetings can be online rather than in person,	Subsidize post secondary education especially in sectors of high needs eg. doctors, healthcare workers, engineering, research, robotics... Provide tax breaks for small businesses Promote robotics, coding & engineering in the education system starting in elementary school...these children could provide innovative ways to improve our energy sector in oil, gas, and solar power but we need curriculum & teachers to facilitate the learning!
T4R	Healthcare & education.	Getting rid of the 'war room' Or, as it should be called, The ministry of propaganda. Start being honest, the savings on Lawyers would be substantial.	By attracting industries other than oil. Alberta conservatives always put their eggs in one basket. Green energy, the film industry & tech companies. You know all the ones that the closed minded UCP have done their best to chase out of the province.
T0k	Education and health care	Government spending on staffing, meetings, food, etc- if you are the leaders, please lead by example and cut your own wages and spending first.	Invest in Alberta's people! Be realistic about what society and the economy dictate and be willing to diversify.
T0K	Reduce salaries of AHS CEO, managers and similar people, not the day to day workers with patients. Similarly with education, the managers need their salaries decreased.	Work on paying less equalization payments. Give Home School parents less as many don't actually teach and there are ones who can't talk English.	Encourage more apprenticeships at highschoools. This could also be interns in many businesses too. Encourage people to support and buy Alberta products.

T2J	Balancing the budget and pay down the debt (as soon as revenues improve).	Cut the bloated civil service.	Streamline regulations and reduce bureaucracy to make Alberta a better place to do business.
T4B	Education and Health Care	This government should be creating a long overdue provincial sales tax. They also need to stop giving tax breaks to oil companies as these come at the expense of the average Albertan.	Increase funding to the public service sector to create jobs in education health care and social services. This services benefit Albertans and will increase spending in the province. Also work with companies that are exploring alternative energies to oil and gas as the province needs to move forward in lowering emissions and it makes financial sense to do so.
T9K	social sectors, Social work, secondary education, helping type agencies	I think taxation is ok, within its means. If it is helping the people stay off the streets, equally employed and working for the better of people I think we could save long run if we had taxes. We could also continue with the photo radar as it does bring in money at a municipal level which saves from other areas.	Support training our vulnerable population. May that be singles moms, new to Canada, Indigenous population, People who want to move from diplomas to degrees, to help with better careers and access to better career choices. Stop making the venerable fight with each other in a struggle to survive but make it a fair play ground for all to survive. On site child care for some. Look at trends and train for the trends to come.
T4P	Education and childcare, health and safety,	Taxes, natural resources	Invite investors, enhancement of natural resources,
T9E	Public services, innovations/industry that is less dependent on global demand for natural resources	Increase revenue via PST, etc.	Fund infrastructure projects rather than cutting them.
T3K	Public services	By not handing out tax cuts to corporations Implementing a Provincial Sales Tax so that we are like every other province in Canada	Use the income from PST to create jobs focusing on infrastructure and public services
T9K	Focus on education. Focus on health care. Focus on infrastructure. Focus on the citizens and people living in Alberta. Focus on their well being.	Savings ? Look for new sources of revenue. There are 2 parts to this equation. Why are we only looking at the one?	Invest in education, health care and the people. Invest in infrastructure. Stop being short sighted and think long term.
T3J	Health, Education, Public Transit	Cancel corporate tax cut, close down the energy war room	Diversify the economy , get off the oil and gas roller coaster , 5% PST to create a 10% HST all monies to health and education
T2L	Diversification of economy and education	Increase revenue	Education and diversification
T8a	Health Care and Education	Stop subsidizing the oil and gas industry. Ridiculous that the government is paying 35% of their taxes.	Invest in green technology that will save us all in the future.
T7X	Education for our children. I am worried the cuts to the education system is going to leave us a lot of illiterate children who will one day be in charge.	Oil companies. Carbon tax. Stop giving tax breaks to the one bracket that doesnt need it.	Diversity! Diversify oil and gas. Diversify the job market so a bust in the economy doesnt affect everyone again the next time it happens.
T2H	Public services. Public education, public healthcare, seniors care, AISH, etc.	Increase corporate taxes. MLA pay cuts. Increase income taxes for the wealthiest in the province.	Diversify the economy.

T1C	<p>Public service.</p> <p>Public education. Supporting public school boards to continue to provide excellent programming for all children.</p> <p>Quality programming for young children. The most vital part of a person's future is from birth to age 5. Supports for children with additional needs need to stay in place.</p> <p>Health care is important. Front line health services need to be maintained as they were more than a year ago.</p>	<p>Stepping in with AHS and school boards to remove the top level jobs that are not always necessary.</p> <p>A small Provincial Sales tax (2-3%)</p>	<p>By providing quality public service. People are going to continue to leave our province if power continues to be abused as it has been the last few months.</p>
T5N	<p>Health care. We should provide funding to assist the federal government in implementing a single payer universal prescription drug plan for Canada.</p>	<p>Government needs to find more revenue - not make more savings. Cutting the corporate tax was not a wise move. It just angers Albertans when they are told to tighten their belts and suffer cutbacks in services, only to see billions going to corporations, who do not invest in jobs for Albertans.</p>	<p>By supporting initiatives for green energy projects. It was a big mistake to eliminate Energy Efficient Alberta. That was a great way to make use of the provincial carbon tax, which was a negligible amount of money for Albertans to pay - especially since that revenue went directly into energy efficient projects, businesses, and rebates. Alberta needs to begin to go to the future - even the oil industry recognizes that - and not get caught in a dying industry - so let's not be left in the dust when the oil revenues decrease, the world begins demanding more alternative energy, and we will have none to offer.</p>
T3A	<p>Lower income people. Students. Healthcare.</p>	<p>Vote out UCP. They have no vision. Corrupt as the day is long. Only care about power. JASON KENNEY IS A SNAKEOIL SALESMAN.</p>	<p>QUIT SLASHING EDUCATION. Focus on the PEOPLE. If you keep cutting, eventually people will leave. Nobody will be left to work in Alberta.</p>
T9E	<p>Education - specifically PUF funding as every dollar spent on early intervention saves huge money later on for our most impacted kids! Also healthcare.</p>	<p>I think some savings could be found in healthcare just not at the expense of patient care. Reducing government positions that are not necessary (I believe there are many of them and they make huge salaries).</p>	<p>Invest in our economy.</p>
	<p>STOP abusing the vulnerable with your heartless cuts which hurt struggling people.</p> <p>STOP attacking our post-secondary institutions with the aim of making them job mills. It won't work.</p> <p>STOP gambling with our public money on schemes that you have no way of knowing will actually work. You are being reckless with public funds.</p>	<p>NOT by creating chaos and disruptions to our systems that we have created for the good of society.</p>	<p>Listen to reputable economists and people well educated in public finance. Study issues thoroughly before implementing them.</p>
T1J	<p>Health Care and Education</p>	<p>Top AHS management , cancel War room, put pensions back in ARTA</p>	<p>Diversify-encourage gaming industry, lure back movie industry, growth in Agriculture industrial</p>
	<p>Basically anything other than what the current government is focusing on. The only type of debt out there isn't fiscal - there is such a thing as social debt at well. Please, I implore this government to focus on health care (mental health as prevention, gender-based violence, emergency supports, hospital staffing, etc.), education (do NOT touch the current funding model and implement the curriculum that was prepared under the NDP - put your ego aside), and diversification. These will all have trickle down effects that are nothing but positive.</p>	<p>Reducing MLA salaries and examining their pensions. Don't attack the public sector and claim they should take pay cuts, when that "up to 5%" means a lot more to my \$75,000 salary than your \$125,000+. There are also cost savings through technology and finally looking at implementing a minimal sales tax. We're ignoring a major revenue problem - stop kidding yourselves. Also the war room is an insane waste of money that should not be paid for by taxpayers.</p>	<p>DIVERSIFICATION AND TRANSITIONING OFF OIL. No one is saying we have to do this tomorrow, but to ignore this reality is ignorant. We don't want to be on the wrong side of history, and while I'm a born and raised proud Albertan, this is the first time in my life I am ashamed to be in this province. I will consider moving if things continue the way they are.</p>

T6W	Use public funds for what community needs and not for profit private companies.	Savings can possibly done by frugal use of public funds for the essential services and by reduced budget for less prioritize expenses.	By supporting oil and gas business, and build markets beyond North America.
	Education and health	Their own wages	Supporting industries that will have jobs for a lifetime
T8H	<ul style="list-style-type: none"> - Supporting early learners especially PUF code 47. Must stay as these kids make it because of the early support otherwise will cost the government more for support of complex behaviour arise. - Reinvest funding and services to restore our health care system - introduce a progressive tax system for all that is based on income - introduce a provincial sales tax - reinvest funding and services to restore public education - introduce a living wage standard for all albertans 	<ul style="list-style-type: none"> - tax multi million dollar corporations - don't give away money to large corporations! - invest in renewable energy source - drop AimCo. Let the Lapp and Atrf manage. <p>Investing in an oil pipe line is a dead end. The federal gov't did that last year. Did not get them anywhere.</p>	<ul style="list-style-type: none"> - focus attention on renewable energy and provide incentives for business to invest in - clean up the mess of oil wells no longer in use. This will keep our oil people working until we transition to more renewable energies. - Always fund education, our young bright minds will be our answers -
T7X	Healthcare, education	Their pockets, their tax breaks to major corporations	By ensuring to not cut from social programs that people depend on to live.
T8A	<p>Health and education, social supports. When folks are out of jobs, they rely on social supports. Their spouses might have the only paying job (in the public sector), and cuts here will hurt every Albertan.</p> <p>We need to stop spending money on panels and commissions, stop providing unbelievable profits to the upper echelons of O&G, and stop paying for things like redundant audits, or paying to rebrand school boards. This is the epitome of red tape.</p>	<p>We need to stop spending money on panels and commissions, stop providing unbelievable profits to the upper echelons of O&G, and stop paying for things like redundant audits, or paying to rebrand school boards. This is the epitome of red tape.</p> <p>Standardized testing is expensive and proven to be ineffective.</p> <p>Understaffing health care results in insane overtime for those few remaining.</p> <p>Stop funding pickle ball</p>	Hold O&G companies accountable for their taxes (maybe taxes before dividends or bonuses?) and employ people to help clean up abandoned well sites.
T5S	Education and Health care.	In its own spending for trips taken by our premier; add a provincial sales tax.	By diversifying.
T7V	Education and health - and not cutting them! Even though the government says they're not cutting, I don't know how this could be possible when we are losing services left, right and centre.	How about MLA salaries, which are the highest in Canada, even after the rollback.	Not giving money to giant corporations, who then turn around and walk away with our money. Supporting small businesses. Paying public sector workers so they continue to spend money, buy things in the stores, and support the local economy. OH, AND ACTUALLY PUBLISHING ALL THE RESULTS OF THIS SURVEY!
T2n	An efficient education and health care system - it appears that the 2 biggest expense items are also the least efficient and most bureaucratic. As a tax payer, I am tired of hearing of about immediate cuts to front line staff any time budget reviews are conducted.	Working in the private sector, it seems very obvious that there are incredible inefficiencies and unnecessary overhead. If one reviews the sunshine list, there are some very high salaries paid with little transparency regarding results. An easy example if the pay structure at ATB. The return of this organization is not even close to a publicly traded company yet the compensation schemes are excessive given the return. A review needs to be done on ATB.	Ensuring that taxation is minimized and unnecessary bureaucracy and regulations are minimized

T6m	-Education- smaller class sizes, proper support within the classroom to address all students needs. If our education suffers our future will suffer. Preventative measures should be a must for the government. -Health care and infrastructure.	-Cut spending on Big corporations with a big carbon footprint. -Raise taxes on the bigger corporations and not smaller local businesses	1. Instead of cutting, Provide jobs for people to apply to and not have 300 people applying for same job. 2. Quality training in certain fields. The training standards are not being met and people are feeling inadequate for a job once hired on because of the lack of quality training. 3. promoting Canada's resources and matching the inflation.
	Education and healthcare, grants to stimulate local businesses, technology industry and more green industries.	Raising corporate taxes on large scale companies and adding a PST. Or giving out targeted grants to corporations where they must hire people with that money as opposed to automation.	Provide grants to small businesses to enable them to be able to create jobs and grow. Ensure that large companies are not automating all their jobs.
T1M	Infrastructure as it gets people working	Getting rid of war room....	By keeping promise of not cutting front line workers and not privatizing lab.
	Increase spending for education and health	Shut down the war room. Increase corporate taxation to reasonable levels.	Dont cut spending for public sector.
T1w	Education Health care	Oil and gas	Infrastructure
T4b	Economic diversification including refocus to cleaner energy business Stabilize education funding, education accessible to all, not just those that can pay fees	Removal of red tape	Use carbon tax \$ to provide incentives to develop technologies that will reduce environmental impacts.
T8H	Health, Education, Supports for those with disabilities, homelessness.	Provincial sales tax	Introduce and support green technologies.
T2E	Education (getting class sizes down, returning to the curriculum re-assessment) and helping new types of careers become a focus, such as the tech sector.	Less wasting money on repeat investigations and advertising campaigns.	Invite and support new types of product and service industries into the province to help build up the economy for when oil and gas is no longer a viable resource to depend on.
	Middle and lower class, families, education, health care. These are jobs that turn around and support the community and local economy.	Stop giving large handouts to corporations. Why does everyone but oil and gas need to pick themselves up for themselves?	Tax credits for families. Tax credits for a variety of industries. Debt forgiveness for adults that completed degrees to encourage house purchases.

T2Z	<p>I believe the province of Alberta should focus on re-evaluating our fiscal responsibility to confederations equalization payments. We need to re-evaluate our last 4 years of mass layoffs and begin to develop and rebuild the economy we had before our previous provincial government and the current federal one. Alberta has always been one of the biggest financial supports of this nation. Over the past 6 years our province (Alberta- the economic driver of this nation) has been smothered and smeared by not only our prime minister but our previous premier. Canada, Alberta in particular, produces the most environmentally friendly and safe energy in the world. So why is it that in a time of desperate need this federal government is the last to defend our integrity? I would ask that premier Jason Kenny stand behind his campaign equalization promise today and not wait to hold a referendum. Albertans have waited long enough for this change.</p>	<p>The province of Alberta shouldn't have to look for savings due to our federal government spending more than they can afford. The previous 4 years of over expenditures has now caused the current government to make cuts (savings). It's time for all governments, provincial and federal, to practice what they preach to Canadians; live within your means and save. As a tax payer, I'm tired of hearing how I should save, meanwhile, our government spending above and beyond what they can afford. Saving today is a short term answer; we need the government that we elect to start thinking long term much the same as we do for our personal finances. Just because last year was a great one doesn't allow a family to over spend and I would expect the same fiscal restraint from the government that we put in power. So I think the question should be: how as a people can we stop any government from over spending? It seems that the constituents concerns are loudly during a campaign but rarely answered during a budget.</p>	<p>This day and age, our youth and upcoming contributors to the economy are brainwashed by the mass media to believe that a social system will work. As evident by the current situation in Venezuela, this has been proven not to be the case. I think as a people, we need to start teaching basic financial constraint to our youth. Canadian/Albertan debt is at an all time high, I believe that this is partly because we do not focus on educating our youth on the economics of a household. On average, every person (our family included) live beyond our means in hopes that tomorrow will be better. The fact is we don't expect tomorrow to be worse. It should be our responsibility to focus a little less on the novelties in our curriculum and teach a little more about the basics of living in this great county. Tomorrow's government will come from today's youth; over spending is easy because we don't teach fiscal responsibility. When I think about having a government that can't manage personal finance, I'm very worried that they will be responsible for a budget that they are ill prepared to manage.</p>
T2R	<p>Education and health care.</p>	<p>-Reconsider tax brackets/breaks for large corporations. -Work WITH AHS not against to find efficiencies.</p>	<p>Foster small and local businesses. Continue infrastructure plans that help stimulate our economy. Stop US vs THEM mentality between private and public sectors. We need both to succeed and excel, it's proven that large corporations look at infrastructure and public services that support their employees and business. Why not work to improve both aspects instead of pitting them against each other with all the vile rhetoric.</p>
T3K	<p>Diversify economy- tax incentives/breaks. Expand tech sector, engineering and other STEM post secondary programs(korenoff them more access).</p> <p>Mental Health initiatives.</p> <p>Police & justice</p> <p>Healthcare and education- dont spend more spend smarter. Dont cut salaries cut bulging bureaucracy.</p>	<p>More private money healthcare. Access and quality should be maintained, but there is a market for private clinics and even hospitals. There still needs to be a quality public system but, there are people across the country that would consider private care and insurance. What if, Rockyview Hospital in Calgary, was sold and operated privately except for the ER. Whats there anual budget being taken off the books?</p> <p>Cut bureaucrats not salaries.</p> <p>We don't need the Canadian energy center "war room". Why not just spend that money on legal teams to sue for libel and/or defamation if there's a case.</p> <p>Keep Post Secondary cuts, but expand access through scholarships and Ggrant's to job creating programs.</p>	<p>Low taxes</p> <p>Expanded programs for post secondary STEM degrees, with promotion across canada and internationally.</p> <p>Energy. More LNG. Expand Uranium mining and nuclear power. More local uses for our oil and gas.</p> <p>Agriculture: Expanding olds college agriculture programs to focus on plant genetics, urban/vertical farming, fertilizers/pesticides. Then use low taxes to draw companies where the talent is.</p> <p>Transportation/distribution hubs. Ensure online shopping juggernauts use Alberta as a storage and distribution center for western and northern canada. Attract transportation innovation companies</p> <p>Tourism.</p>

T2S	Infrastructure including flood mitigation projects Healthcare Education	Bringing government services and the pay for civil servants in line with what is "common" for Canada. During our boom times the costs of these service increased in line with everything else and there are saving to be found.	While oil and gas need our support and hopefully will pick up, in reality that cannot be to sole source of our future growth. We need diversification and need to ensure that all the talent that came to Alberta during boom times will stay. Look forward and not just in the past; the Can-Do mentality needs to come back.
T6r	Education healthcare	War room dissolution.	Stop taking money away from public service /civic projects
T2S	-Education at grade school levels K - 12 should be prioritized as the payback in cost savings is massive (less crime, better work force, less social and societal costs as we nurture people to contribute to our economy) -Flood Mitigation for Calgary; we can't afford another disaster like 2013 ... we'll become the backwater of the country if we don't protect the economic heart of Alberta.	- Amalgamating the Public and Catholic Separate school boards would have a massive cost savings in economies of scale and bring us into this century. Even the savings in bus transportation alone would be huge. Please don't create an American style voucher system of education ... Even among conservatives such as myself we value public education and consider it a core value of Alberta and the prairies.	- Keep making Alberta a great place to live and raise our families! That will keep us here and finding ways to open our new business and create work and industry!
T6X	Schools and Health Care!	Tax the rich!	Yes
T8N	Education and Healthcare	Quit giving tax breaks to big corporations and the wealthy. Stop spending so much money on PATS and DIPS. These tests do not help kids learn. They are a complete waste of money.	Invest in the people through education and healthcare.
T3a	Health care, education, low cost housing.	Eliminate the "war room" fiasco.	Build necessary infrastructure for the future.
T5W	Health, education and environment	Stop providing tax cuts to large corporations and get rid of the UCP Canadian Energy Centre.	Explore and invest in new technologies.
T0M	Support for programs like AISH	Cutting salaries of those in office.	Not by cutting fundamental support services like AISH.
T3B	Education and Health care Early childhood care and parental supports Diversification of the economy	Progressive tax and increase tax savings - not cuts. Less MLAs And bonuses to govt workers	By ensuring public employees are well funded - (Education/healthcare workers) they can maintain and spur the economy. Infrastructure funding and projects Tax credits for diversification of business NOT tax cuts for one industry (oil and gas) DIVERSIFICATION

T2Z	<p>1)infrastructure spending but only where needed 2)post secondary education 3)supporting the jobs of the future 4)diversifying the economy</p>	<p>Govt employee compensation and pensions: 1)for all govt employees - teachers, nurses, etc, convert pension plans from defined benefit to defined contribution plans 2)if the above is not possible pension payout should be based on lifetime contributions instead of last 5 years of contribution. 3)eliminate early retirement with full benefits 4)fund pensions to only replace 50% of pre retirement pay instead of 70% 5)Four year wage freeze</p> <p>healthcare: 1)eliminate double time for overtime 2)outsource to private sector for cost savings where possible 3)bring overall healthcare costs in line with other provinces 4)make it possible to fire incompetent care providers</p> <p>AUPE employees: 1)Improve efficiencies with aim to eliminate at least 15% to 20% of jobs. The private sector does this all the time, I'm sure govt can too 2)make it possible to fire incompetent employees</p> <p>Education: 1)make it possible to fire incompetent teachers 2)bring education costs in line with other provinces</p>	<p>1) Attracting high tech jobs 2) Post secondary education is the path to future prosperity and jobs. Improve post secondary education 3)Implement revenue neutral 5% sales tax, divert royalty payments to the heritage savings trust fund and use the fund to support the jobs of the future.</p>
T1K	<p>1. Finish projects that are partially done: ei: Lethbridge hospital new wing has several floors that are incomplete. This has left the old wings over full with no storage. This leads to poor cleanliness and increased wait times for emergency surgery and a bed. Also difficult conditions for staff to work in. 2. To save money on new schools and bussing use Portables for schools in new communities instead of permanent schools. Build the gym and new add portables as the community changes adding more or less portables. Use the gym as a community centre as well. 3. Treatment centers instead of Safe injection sites.</p>	<p>1. Reduce the bureaucracy in organizations. For example reduce the levels of Supervisors, (Assistant)Principals, and CEO's in healthcare, education and publicly funded services. 2.Eliminate the government employees(including MLA's) transition or severance package and gold plated pensions. Make it equitable with other industry benefits. The benefits are excessive. 3. Change the school system to all year or 11 months a year. The teachers union contract has reduced the number of teaching hours over the years. Skip PD days every month and have the teachers take them at the Christmas or spring break or over the summer break. 4. Utilize school assistants to deliver more of the extra curricular programs so that the higher paid teachers could teach the core material longer. This would decrease the class size by having half the students with the assistants and then rotating the groups to see the teachers. More assistants could be hired at less expense than hiring teachers.</p>	<p>1. Instead of cutting numbers of front line workers in unions look inside at the contract benefits and make them more like other industry standards. For example number of sick days and personal days. Also, OT is not paid until you have worked over 40 hours a week. 2. Export more finished products rather than raw resources could create some new industries and jobs. 3. If we can't get some cooperation from the federal government by getting the green light on Teck, and Transmountain (no more court cases or elder minorities)holding up progress; reevaluation of the transfer payments etc. Have a referendum to become a sovereign province with benefits similar to Quebec. Set a deadline to do this. We feel they will not be ready to decide on Teck and delay some more. If nothing is able to move forward there is no improvement in job creation.</p>

T6W	Education, front line care workers and diversifying the economy into new and growing business sectors.	Savings is not as important as revenue - impliment provincial sales tax and a provincial carbon tax. The government should be spending to generate jobs not cutting them	Infrastructure spending and incentives to grow technology, AI and entertainment business sectors. The faster Alberta adapts to the declining Oil & Gas sector, the better off we will be. We need to stop putting all our eggs in one basket.
T3e	Health and education. Diversifying the economy away from oil and gas.	Reversing tax cuts to corporations.	Pay public sector workers what they are worth. Tax cuts to small business and tech companies. Support post secondary funding so citizens can find work in diversified and highly paid fields.
T7X	Diversify the economy. Health care and education.	War room, tax breaks for oil companies, private school funding,	Diversify the economy by encouraging new ideas and businesses to work in Alberta.
T1J	Healthcare - increase access to care and increase positions for Registered Nurses in community care - Public health	Upper management and supervisors and CEOs- cut or combine some of these roles.	Support Alberta oil. Keep your nurses and teachers. If you cut positions in these areas, workers go to neighbouring provinces
T1H	Work on ways to integrate non-fossil-fuel energy sources. Ensure health and education are fully governmentally funded in their entirety. Health coverage must be extended to include, vision, dental, mental health and medication. Governmental programming to finance inventions.	The amount of redundancy created because privatisation is preventable and must stop. Here is a quick example: A section of highway needs replacement. The job goes to the company that offers the lowest bid. Alas, the quality of the work is not impressive and the highway degrades within a year and needs to be redone. The companies again bid and the lowest does the work. This bid, work and repeat continues for several years, keeping paving companies employed but at the expense of the government and ultimately the taxpayer. (The highway example is on Hwy 12 just west of Spruceville Rd) This is one example, though there are many more, from oil exploration sites that are not properly restored to the spraying of forests to prevent aspen growth, which adds to the probability and intensifies forest fires. A lack of oversight and follow through is costing this province and taxpayers. I assure you the lack of management and expectations of quality work costs this province an exorbitant amount of money.	As I mentioned creating programs for invention will instigate new business opportunities. With the Alberta energy sector secure in their value looking for funding that goes beyond fossil fuels will be a start for future employment. Also, like it or not, finding alternate energy creation opportunities are the direction the rest of the globe is trying to go. Not investing and getting Alberta's 'foot' in the door is not looking to the future.
T5z	Healthcare and education	Fundings should be cut from climate change for once	Allow the construction of the pipeline
T6a	Education, healthcare and keeping jobs	Making companies pay there tax's and not giving tax break to cooperations.	Funding education! Investing in the environment
T0B	Education Health care	Cuts at the upper end, and strategic planning	Keep people employed. If they feel their jobs are in danger then money isn't spent.
T6T	Education. Health. Environment. Diversification of economy. Honesty and integrity in government, neither of which UCP has shown. Stop lying to the public.	Close down the war room. Stop giving away \$\$\$\$ to big corporations who don't reinvest here. Understand that the trickle down effect is NOT REAL. It just just a thing big business says to get government \$.	Diversify other than OG. Create a positive climate instead of this negative apocalyptic disaster you've created. What decent company wants to invest with liars and crooks like the UCP? Take care of the middle class. They spend. Build the super lab to create short and long term jobs and to create a reliable lab for Albertans health. Stop being so spiteful.

T4R	Emphasis needs to be placed on Properly funding health care and public education (not private schools), restoring proper funding to post secondary institutions. Also, invest in diversifying the economy instead of waiting aimlessly for the oil and gas industry to recover to what it was in the good old days. Those days are gone.	Trickle down economics don't work! Stop giving tax breaks to the O&G sector-they are reinvesting their profits elsewhere. Getting rid of the war room will save at least 30 million per year. Get rid of your social media trolls including Matt Wolfe- another waste of money.	Look beyond oil and gas- the boom and bust cycle it pushes Alberta into has gone on long enough. Renewable energy? High tech industries? Manufacturing? Tourism? Research and development industries? Look to the future- don't dwell on the past.
T3B	- Post secondary education - Emphasize education and training on science - Encourage trades training and internship programs - Change our health care system to focus on staying healthy and prevention rather than as a repair shop for many health issues caused by people's poor life choices	The savings can be found in all levels of government. Reduce the size of government and simplify red tape.	Incentivize companies to start business in Alberta by tax rebate for number of jobs created and profit earned. Do not give out money first and hope the new companies make it. The provincial government should collect carbon tax and invest the money in Alberta rather than give the money to Ottawa and hope they send it back.
T5T	Education k-12	Infrastructure, post secondary education, census, arts	NA
T0A	Education Health Diversifying the economy	Fire Matt Wolfe Cut the MLA salaries Add a sales tax	Diversify the economy
T8N	Education Health Care Social Services	Streamlining government ministries Eliminating tax breaks for wealthy	Providing incentives for new businesses Providing opportunities for education
T4N	Small business to promote local growth, social programs that are over capacity due to continued economic downturn, education and arts to ensure we retain the local talented youth.	Reducing the amount of eligible deductions to avoid having to pay high taxes on passive income earnings. Expecting municipalities to cover the cost of reclaiming abandoned sites results in increased taxes for even those with low income. The standard must also be held on those corporations at inception that create the reclamation issues in the first place; corporations should be unable to report a financial position without presenting the liability it would cost to complete the reclamation on the site they own or lease.	Spending in industries with positive economic outlooks in the future to obtain a sustainable return on investment and related educational training to ensure we retain our local population while providing them with adequate tools for success in these industries.
t1s	Healthcare Streamline the top and middle management... get back to the basics of excellent frontline care. Do not allow cellphone phones during work in hospitals!!!! Excellent salaries should provide excellent care at the bedside not in front of a computer.	1.no more part time doctors that leave messages on their machine to call 911 or go to nearest emergency!!! Is it any wonder emergs are jammed!! When did practising medicine for a doctor become a part time lucrative, no call no evenings job???	Streamlining government!!! Set an example! Streamline municipal government jobs that are not necessary in small towns. Less regulation and red tape for private business. More trade schools.
T5T	Education and healthcare	The war room Government travel	Diversify. Don't put all our focus in a handful of industries. Expand and diversify
T3k	Education and health care.	War room , stop giving tax cuts to oil companies. Introduce a PST cut salaries of the MLA assistants	Education. Diversify the economy.
T9K	Education, health care—cutting funding (or removing government funds and stating that funding hasn't been cut is not okay).	-Tax breaks for companies -advertisement	-by not having cutbacks to public sectors and forcing people out of jobs and increasing the number of people out of work -encouraging investment into Canada's oil
T8N	Public education and public healthcare	Spend less on private companies	Educate people, invest in green living

T0E	Hospitals The Yellowhead highway. Schools	Initiating a "lean" process. Reviewing all processes to see what really needs to be done. Utilize this to determine what jobs can be eliminated. Ensure this is done through AHS	Keep doing what your doing. Get oil flowing. Get the businesses back in business. Let them hire.
T1K	Education, Health Care, Economic Innovation and diversity	I suggest that the government look at where they can find revenues and not solely look at where the government can find savings. If we looked at both sides of this coin (revenue and savings) we could support the essential services needed in our province and deliver them with efficiency. The present method seems to only look at defunding public services and in doing so creates an narrative that makes public sector workers look inefficient and wasteful, which is not the case at all. I feel that this just sets one Albertan against another. This is unfortunate, and frankly, irresponsible. If you want to find savings, look to revenues.	Invest in research and development across the board, including renewable resources.
T2K	Pipelines. What about a law on energy to force self sufficiency if possible. This would have to be a federal bill that would benefit the entire country.	Reduce staff at least shrink government by as much as the NDP Increased the employee count. Allow unfunded medical clinics where people pay. Hospitals will continue serve everyone however a surgeon will be able to operate privately on the days they don't have an operating room and other s move up the cue.	High tech and oil and gas alternative fuels.
T1A	Healthcare Real healthcare for the real working class. The working class without benefits who are stuck in limbo unable to afford their own personal care. It is fundamentally ridiculous that unemployed people collecting government benefits, drug addicts and prisoners receive better care than the real working class.	Cut government funded benefits. Social assistance of all forms including AISH. Not eliminate but recipients must qualify under more stringent guidelines and regulations. Rather than slap a label on a person's problem so they can collect a government cheque, individuals need to learn to get up and support themselves. Also - do away with the safe injection sites. We have an opioid crisis because there is no longer anything to fear. No consequences for stupid choices. Someone will bail them out with narcan right?	Divert AISH funds and welfare funds and narcan funds into any other industry.
T7Y	Healthcare Education	Why don't you bring back taxes for big corporations and the carbon tax might be stupid but now that money is going to the feds	Perhaps investing in people so they feel valued and can spend a little more in their neighbourhood
T6R	Education and health care	Corporate tax breaks that don't even work, like the Husky debacle. MLAs and Premier could take a pay cut as well.	Prioritizing education

T1B	There should always excellent funding provided to the public services sector. This funding should be monitored very carefully to ensure it is used wisely. Front line workers teachers and nurses, should receive regular wage increases based on the Alberta wages earnings index as well as keeping in line with inflation. Front line, public employees should never be considered for a wage roll back or wage freeze, unless the government employees making those decisions are willing to consider those options themselves first.	* Government officials Making more than 6 digits, taxing big cooperations and making sure it's collected..., fight for reasonable equalization payments, inefficiencies in upper management (administration training), giving out money to refugees too easily.	*lower taxes on small businesses. *fight for pipeline, sooner the better. * put money into education, so our Alberta students can be smart in the future. *Give incentives to new business adventures. *Cut the red rape.
T2j	Education	Seniors & doctors	Education and retraining
T4L	Healthcare, secondary education (university, college, trade school) and sustainable energy initiative	Cutting spending by freezing or reducing MLA salary, reduction in money given to large corporations, increase in corporate taxes, freeze wages of public sector workers	Increase training and support of sustainable energy sector to encourage jobs in a new up and coming industry and become leaders in a new political climate, build oil refinement facilities for the current fossil fuel-based energy sector, create recycling facilities in the province rather than shipping it elsewhere (there is a market for these facilities), support small business in local communities.
T0M	Timely deliverance of health care	In health care, I believe there are too many in management and supervisory positions and possibly not enough front line workers	By getting a fair deal from the Federal government.
T0H	Healthcare and Education.	Stop giving huge corporations tax breaks, reduce MLA and Premier salaries.	Invest in sustainable energy sources.
T6W	Education Healthcare Diversifying the economy	Elimination of wasted tax payer dollars on failed initiatives such as a \$30 million war room, a \$4.7 billion giveaway to big corporations with no visible improvement to the job market.	Use the \$4.7 billion next time to CREATE jobs and not increase the deficit by \$2 billion.
T2X	health and education	government travel and expenses	Support adding extra oil refinery capacity in Alberta. Reduce need to rely on pipelines. Convert or replace coal power stations with local natural gas. Attract new industries to Alberta with venture capital offers and matching with private venture capital offers.
T5X	Education. Funding for all public students, supports for teachers, managing class sizes.	Not giving money away to corporations who take the money and leave Alberta.	Support social services.
T9K	I am really struggling to understand how the current government can feel that investing in education isn't going to further our economy in the future. We don't know what kinds of jobs will be in the future, but stuffing classrooms isn't helping students become the type of critical self driven individuals we will need to fill these positions. I'm appalled at the way that Jason Kenny speaks about curriculum, and how he thinks introducing more standardized testing will improve overall learning. Students need to be able to solve things on there own, not be taught to a test. I know that there are other sectors that require attention, but I think that the current government is disgracing the future of our province.	I think that companies that produce the most emissions should be taxed higher. I also understand the need for a carbon tax on commercial products. I believe in funding Albertas oil and gas industry, but I also feel that we do need to start considering how we would sustain our province should we have to move to a more sustainable energy resource.	We need to support the future of Alberta, our students.

T8R	Maintaining public service spending and employment, especially for front line services.	Reduce corporate tax breaks that do not result in greater employment.	Stop cutting so much and realize that sometimes deficits are necessary for maintenance of employment and economic stimulus.
t2w	Pipeline access to either of the 3 Canadian coasts, and then access to the US Gulf coast. There should not be a social or economic issue that is greater than this for our province. The Alberta government should be primarily involved in putting pipelines in the ground immediately.	Cut every aspect of federal transfer payments, taxes, GST, carbon tax and anything else possibly we can use to stop the bleeding of cash from Alberta. This needs to happen tomorrow. The only other option is separation and nation state building.	By stopping the cash bleed out of Alberta. I have lived in Alberta my entire life - I love this place as much as my family, and probably because they are intertwined. If we don't take control of our destiny, I am out. I can't exist in this state watching us let everything our forbearers worked for die. Please take control
T0M	Education, healthcare, safe roads	Reduce tax breaks for large corporations.	Support retraining and upgrading programs for under/unemployed individuals and provide additional supports to families in transition.
T1J	Healthcare and Post Secondary	Less consulting	Healthcare
T3E	The value of healthcare provided - rather than simply looking at the biggest numbers in the healthcare budget (complex modifiers, primary care), this government should look at the value of these investments. For example, consideration of the value of certain services such as cataract surgery and diagnostic imaging instead of cutting primary care physician payments. Also, please remember that RNs are a four year, professional degree, not unlike engineers, geologists, and business majors - no one would look twice at this compensation if it was from one of these professions. These are people who work overnight, on Christmas and holidays, and who put themselves at risk during epidemics (like Ebola, SARS and novel coronavirus, sticking to the past 20 years only)	Cataract surgery and diagnostic imaging.	Funding medical therapy for alcohol use disorder and opioid use disorder; both of these illnesses cost the province more in lost wages and healthcare costs than heart disease in Alberta.
T1A	quality public education and public healthcare	immediately disband the Canadian Energy Center	-diversification efforts such as film industry, instead of cuts to film industry and other diverse, non-petroleum related fields -reduce narrow focus on oil industry and pipeline and look to increase diversification of sectors
T0M	- to our disabled persons, physically and mentally, PDD and AISH funding - rural public transit - forcing rural communities to get onboard with composting	I don't know	I don't know
T1K	The priorities should be in areas that impact high numbers of people - Health Care and Education	Salaries, positions and spending accounts of those holding leadership positions in our government. Also, implementing a "no-tax reduction" for those businesses and corporate organizations that are already wealthy enough.	By not reducing budgets in Education and Health Care such that jobs can be secured not reduced. Economic Growth - continue to make this province an attractive one within Canada.

T1M	Healthcare (save the RNs) we need more not less!!! Education Up stream approach Diversify our economy	—Cut wages of elected officials in government. —Cut wage of CEO of AHS. Don't cut front end staff!!!! You are killing people by doing that! —Stop corporate handouts that don't result in jobs! —increase spending on public service that focus on an up-stream approach as this is the most cost effective way of spending money. Prevention is the key!!! —consider bringing back healthcare premiums on a sliding scale based on income so that we can still have healthcare services!!!	Don't lay off teachers, nurses and auxiliary staff through budget cuts. This will hurt Alberta's economy even more!!! Stimulate economy by creating jobs— not cutting them!! Don't Lay off workers as this creates more job instability will not lead to economic growth as people do not spend or invest their money when their job is at risk!!!! -Create a province when jobs are secure, but policies that promote job security not instability! -don't lie about your promises!! No one can invest in a province built with untrustworthy politicians — upstream approach problems save the most money down the road
T6R	K-12 Education, classroom funding	Restore a higher corporate tax; lower persona income tax and establish a provincial sales tax	Invest in sustainable resources
T2W	Job creation!	Get rid of some of your twitter trolls, Matt Wolf for instance. Shut down the Canadian Energy Centre.	Support green energy and emerging technologies.
T3A	Supporting more oil and gas projects and make sure that work stays in Canada as corporations are acquiring govt fundings and still outsourcing work to different countries which is unacceptable , diversifying industries in Alberta to generate and Tap potentials of different skill sets.	Monitoring wastage of funds reviewing the processes and work flow charts , people involved in govt organizations, and mandatory retirement at certain age in govt institutes specially health care where people are still holding jobs in their old age with lowered efficiency give chance to new graduates	Diversifying industries in Alberta like IT, manufacturing , pharmacy etc
T5e	Healthcare Schooling Elderly/AISH	Stop spending on stupid stuff like a war room :) Or taxes ?	Public sector jobs and invest in new energy and commercial developments
T3M	maintain inflation linked budgets on health and education key to maintain well being and minimize disruptions to our future generation of working Albertans. Revenues have to be broadened beyond current streams. More steady revenue stream such as GST is easily applicable and is crucial to minimize deficits and avoid large fluctuations and provide longer term steady stream of income.	reduce managerial/administrative tasks or duplications of health, education, government agencies. engaging with professional associations who have unique insights on their area of expertise on investigate potential savings without compromising care/service delivery to Albertans.	diversify economy is the key for longer term prosperity and future growth. Consider incentives or grants for new industries potentially uniquely suited for Alberta to develop
T4L	1. Health care 2. Secondary Education University and trade school. 3. Road maintenance	1. alberta provincial representative Pay cuts and freezes on these expense account 2. Get rid of subsidized childcare.	Alberta should have plants that process all our recycling. Creating jobs in solar energy. And substantial resources.
T0C	Health, education and law enforcement. The education system needs to go back to teaching students how to read, write and spell, never mind equipping classrooms with computers, if students don't have them at home, the libraries do. Put money into hiring more judges, as our justice minister has recommended, so offenders don't get kicked back out for having to wait too long for trial	I think people have to realize that they are ultimately responsible for looking after themselves. I believe that too many people expect financial support from the government, not taking into consideration that that money comes from our taxes and the more that people expect, the higher our taxes will be. For example, I agree with not covering spouses on seniors health insurance, if they are not seniors.	Encourage and support diversification. Alberta has relied heavily on the oil and gas industries and now we are in a similar position to the maritimes and the fishing industry. Support training and education in new technologies such as 5G.

T1A	Green technology Education Health Care	STOP subsidizing oil & gas, tax breaks are subsidies. STOP giving tax breaks & cutting taxes for big business. STOP paying such huge salaries to top management in health care, government & education. Disband the War Room what a waster of money Stop any further funding on separation & DON'T touch CPP!!	Green technology. Elon Musk has stated that Arizona could have a solar instillation that could power the US, why are we still so backward with oil & gas ? Oil is not the future its over, we need a transition plan.
T5R	Ensuring the health, education and thoughtful and environmentally respectful use of resources for Albertans.	Stop spending money on panels (eg. blue ribbon) that are run by overpaid partisan dictated persons. A War Room run again by "friends of Premier Kenny" is a waste of money. No more tax breaks for companies in a province with the already lowest taxes.	What has been done so far by the UPC government to create jobs and invest in the people of Alberta is NOTHING. You shut down job creating endeavours such as the Superlabs. Your fight with the Federal Liberals has further alienated our province. Work together. Diversify the economy and stop putting all of your efforts and investment into the oil and gas industry.
T6E	Front line staffing AND building and maintaining the infrastructure that Albertan citizens (your employers, the taxpayers!) need and deserve. Shandro... you need to realize you work for the people of Alberta and not the other-way round. Listen to the people and professionals in the field (of which you are not). Enough with the bad faith negotiations (or lack thereof) and while I'm being candid, stop trying to be disruptors and line your pockets by making shady deals with private corporations.	How about not providing billions of dollars in corporate welfare to companies that take the money and run (right out of Alberta). Also ditch your propaganda 'war room', Quit dragging our taxpayer's dollars into lawsuits you either cannot win, have no standing in (are already being fought by others before the supreme court) or for copyright infringement. How about not blowing taxpayer's money on lavish trips everywhere without disclosure of your itinerary and outcomes? Get rid of all of your phoney cronie paid panels with predetermined outcomes. Simply put, operate properly, ethically, for the people, transparently, with accountability, OR stand down. You are thus far a terrible government full of corruption and rude, unqualified, and unaccountable ministers. Truly the Ultimate Corrupt Party	You have annihilated any potential Alberta had for this. You have chased industry after industry away. Please do not pretend you have ANY concern for job creation or economic growth now.
T4N	Children, seniors and disabled. Increase funding to these groups and support services.	Over paid executives in government, school systems and Alberta Health Services. And not giving money to oil companies and another company or organization who are not investing back into Alberta and not hiring employees	Yes
T3N	Infrastructure, Emergency Services (all), Healthcare, Education	Education to encourage citizens to be less reliant on emergency services and the health care system in general.	Keeping taxes as low as possible to encourage business viability and growth. Education is key to resolve our current situation.
T8N	Keeping up education funding! A democracy cannot survive without an educated populace. what happens in todays educational institutions governs what happens tomorrow. Remember, a school is four walls with tomorrow inside!	Get rid of the "War Room" for a start!	Attempts must be made to diversify the economy. Look to the future - not just next year! We need to become less dependent on gas and oil. Even Saudi Arabia is doing that!
T2B	I believe that any infrastructure , Teck if approved should have Alberta content when buying products so support the provincial economy .. not having out sourcing to China etc.	Duplication of paperwork and service's stop looking at the low price as it is not always the best choice and ends up costing you more money- make room for Alberta first in these transactions .	by providing a strong message that we are open for business supporting small businesses

T4L	<p>1. More Crown Justices and more police, especially in the rural areas. Fight rural crime.</p> <p>2. Health Care, especially for seniors and children.</p>	<p>1. Build more pipelines to get our oil to market.</p> <p>2. Moderate climate change activism by presenting valid counterarguments so that we can realize greater profits from our oil and gas sector.</p> <p>3. Support agriculture to increase access to world markets and thus increase profitability. For example, rather than importing cheese from Europe, why don't we develop our own cheese that we could export back to them?</p> <p>4.</p>	<p>By supporting small businesses and entrepreneurs, thereby strengthening our local economies and providing jobs in the outlying areas.</p>
T4L	<p>1. More Crown Justices and more police, especially in the rural areas. Fight rural crime.</p> <p>2. Health Care, especially for seniors and children.</p>	<p>1. Build more pipelines to get our oil to market.</p> <p>2. Moderate climate change activism by presenting valid counterarguments so that we can realize greater profits from our oil and gas sector.</p> <p>3. Support agriculture to increase access to world markets and thus increase profitability. For example, rather than importing cheese from Europe, why don't we develop our own cheese that we could export back to them?</p> <p>4.</p>	<p>By supporting small businesses and entrepreneurs, thereby strengthening our local economies and providing jobs in the outlying areas.</p>
T4L	<p>Post secondary education Public Healthcare Green Energy</p>	<p>Alberta Government representative cuts and cut expenditures. Cutting the amount of managers in healthcare . Cut subsidy daycare. Wage freezes for all government workers .</p>	<p>Converting oil field work into sustainable green energy. Create jobs that recycle all waste . Convert waste into opportunities.</p>
T4R	<p>Education and health in the first place. Education (K-12) because it helps to build the next generation of leaders so that they will be able to develop the economy. Moreover, a well trained leader is key to promote a growth mindset to be able to create a job in the society. For health, because the baby boom generation are retiring now and they are so many. These people need nurses to take care of them so their children can go to work. With this increase demand of nurse and caregiver, the active population will suffer or will not be efficient at work.</p>	<p>Government could find savings from taxes, from EI and CPP as well as any contribution from the population depended on the needs. From international trade as well.</p>	<p>Government should promote small and medium size businesses by giving them subsidies, tax incentive. The government should also promote export and reduce tariff on import product.</p>

T3K	Health Care and Education	Eliminate the Alberta "War Room" and other research Committees. Consolidate departments.	Diversify. Support Renewable Energy Projects and the Tech Industry. Why is our oil not sold at fair market value?
T3G	Basic Services needed for day to day life	By increasing efficiency and innovation	By attracting more businesses who has a good growth potential
T5N	Health care. Education.	By not depending on oil for its only revenue stream. Have multiple streams of revenue. As far as savings, cut unnecessary internal government spending such as travel and accommodations. Also, reverse the corporate tax cut. That would bring in a lot of revenue.	Invest in tech. Bring tech companies here. Invest in research. Invest in many things. Bring investors to Edmonton.
	Education Healthcare Creation of jobs	Get rid of the War Room Do not give big corporations tax breaks Do not make cuts to the most vulnerable in society	Invest in children and education. Encourage post secondary education (trades or other occupations) by lowering tuition fees. Support middle income earners. Invest in job training opportunities. Encourage business to hire low income earners, by providing a subsidy/ grant
T0K	For every dollar the Province invests in Irrigation infrastructure nearly three is returned to the Province. Only 4% of the Province is irrigated but that 4% returns up to 20% of the Provinces agricultural products. Thank you for continuing to fund irrigation rehabilitation with Irrigation Districts. It brings wealth to all Albertans.	Cut Injection site funding, health care could charge a small fee for all Albertans to see the doctor.	support all aspects of the oil field and irrigated agriculture
	Job creation, reintroducing health care premiums to fund healthcare deficit. Stop cutting services resulting in job losses - people are hurting already, look for cost efficiencies within current systems.	Reduce severance pay & pensions for government. Incentives for recycling Stop trying to reinvent the wheel -Leave pension plans alone. No provincial revenue agency- no benefit. Introduce PST tax	Stop making same mistakes and relying on oil and gas to come back, diversify. Stop making policies that kill jobs. Offer incentives for businesses to move here.

T0L	<p>Developing the Film Industry because it employs many people with a wide variety of skills. As well, film productions spend large amounts on local hotels, vehicle rentals, gas, food, supplies including lumber and hardware, services of many types. There is a huge amount of money in the film industry.</p> <p>I can't help but look at what at what Georgia has done. Unbelievable investment has gone to Georgia, even from Pinewood Studios in England because business and government in Georgia got together to give tax credits and grants to make this work. Now the high budget Marvel films and so many more are produced there.</p> <p>Our film production grant system needs revision. It is easy to look online to see what B.C. and Ontario are doing now in terms of grants and tax credits. That is what the large film studios do. They compare regions and prepare budgets based on their findings. It is competitive. I refer you to the president of IATSE Local 212 for more information on specific improvements to the grant system that would really help a lot of people. Please keep in mind that many people who were working in oil and gas are now with us in film. It really is a great alternative for employment for many people with diverse skills.</p>	<p>Cut some administrators in education. I think the separate years and public school systems should be combined as they were in Nova Scotia. Now I realize that is not for everyone. May not be workable.</p> <p>Reduce the number of people- not all- from the after degree program of teacher qualification at Alberta Universities because their graduates are not being hired in Alberta as they are too high on the salary grid. (Too many years of post secondary education. They are great teachers but principals want to hire those with the least amount of post secondary education; lowest on the salary grid.)</p>	<p>I think the developed and supported film industry would help greatly. Many diverse trades and skills are required in film production.</p>
T1V	<p>Supporting post-secondary education, as the anticipated increase in tuition fees is going to vastly affect students seeking a further education. Why do the students have to suffer in the province's plan to become debt free, by lowering minimum wage for people under 17, and raising the tuition fees for post-secondary education? The fees were previously high enough, so raising them is going to be a huge cause for concern for students and getting themselves out of debt in the future, and additionally through the raised interest rates on student loans. Also, continue to support low income families, as well as maintain (without raising) the funding for services such as mental health.</p>	<p>Get rid of the carbon tax, lower the corporate income tax, reduce or cut the red tape, either maintain or lower services for issues such as mental health, but continue to support them through lesser costs. As well, instead of attempting to "raise the paycheques so individuals can further support their families", maintain them so that the youth don't have to suffer through the cuts to minimum wage.</p>	<p>Increase subsidies so that high-risk workers are at a lower chance of being laid off. And furthermore, lower interest rates by adapting the current monetary and fiscal policies.</p>
t4r	<p>Health care. Please build a new hospital for the Red Deer region. The hospital in Central Alberta has been trying for more than a decade for an upgrade to the existing hospital. I believe we in Red Deer need another hospital. The hospital in Red Deer serves people from all over Central Alberta. Planning for to build/construct a second hospital will itself create 100's of jobs for various tradespeople over the years that it takes to build another facility. This includes employment for the many professionals who would be working there post completion.</p>	<p>The government could find savings from withdrawing funding for various private interest groups.</p>	<p>Please support job creation and economic growth by investing in public infrastructure such as newer or additional hospitals for smaller centres such as Red Deer.</p>

T4N	Job creation. Research. Debit repayment	That's a tough one, every time you make cuts someone whines. Good luck with that	technology and innovation
T4L	Public health care and post secondary education.	Pension plan cuts	Find more environmentally friendly ways of thinking which in turn will open up more economic growth and jobs
T1A	Making our government departments more efficient and productive. Cut unnecessary spending but start at the top not with the most vulnerable.	Cut the layers and layers of top management. For example, Presidents, Vice-presidents, executive directors, directors and far too many managers. Cut the salaries of the Premier and the MLA, why are they still the highest paid in Canada?	No ideas here.
T5T	Healthcare, education, post secondary, ENVIRONMENT, diversifying energy, pharmacare. All these are important as I do not wish to live on a filthy polluted planet with stupid people.	STOP giving corporate tax cuts to filthy rich people who don't care to pay their fair share of taxes and take their money offshore anyways!	Seriously?! Stop threatening to lay off frontline workers and government workers! There are already 50000 job losses to date....clearly corporate tax cuts are not working. Hands off our pensions too...that money will prevent us from being a burden to the system in the present and future. Also, please diversify economy and not pin all our money and hopes To oil and gas.we need to be ahead in tech and planning for the future. We need to think BIG! Not put all our eggs in one basket.
	Health care and education.	Eliminate the "war room". Make government salaries and severances and pensions reasonable. i.e. You don't get a pension for serving less than five years. You don't get a severance when you quit or are fired. Severances shouldn't be in the millions of dollars.	Incentives to small business and new technologies.
	Stop spending money to support the rich. Priorities are Education., Healthcare, social programs , supporting the vulnerable who need our support	Where? Stop giving the rich corporation tax cuts, higher tax for the rich, lower income on politicians	Making education accessible to all, an educated society is a healthy society. Create jobs that promote the environment, stop depending in oil, stop lowering the min wage to the most vulnerable people
T1J	Investing in Southern Alberta's economic growth: expanding the requirements to support this growth and provide support for expected/continued GDP expansion. Example: create a Dedicated Program (budget bucket) to make progress toward the Twinning of Highway 3 from Medicine Hat to Taber and Fort MacLeod to Crowsnest Pass, as Hwy 3 is the main corridor for transportation of Agriculture (West), products prepared from the Ag (East & West), mining and Tourism (East). With a 3-1 ROI, a small allocation (\$800,000 to 10 Million) each budget cycle will keep this project moving forward and capture a cost-effective period of competition between Engineering companies. Additionally, a Dedicated Program allows for stakeholders and Southern Alberta Transportation to determine the most cost effective sections- yet maximum return, rather than providing 100% funding for only one section when completion of one section can take 5 to 8 years to complete.	Increase Registration & License renewal fees to help fund Twinning of Highway 3 :) Red Tape reductions, finding efficiencies, auditing hospital food orders & waste (huge waste), audit Provincial Boards for repetition & combine, audit Provincially funded programs for overlap & combine, audit IT replacement management within Healthcare & Schools (computers/equipment is disposed of due to potential germs - but if used in the Hospital are not the same germs open to the healing? And some equipment is never near the sick. Evaluate a system to re-sell equipment in working condition. Equipment is replaced when still working. Cost of software not managed well).	Southern Alberta needs Twinning of Highway 3. Companies are concerned about shipping along the corridor, which can keep them from expanding further. Companies looking to start-up in Southern Alberta have heard concerns and may impact the ability to draw new business to our Region. Companies committed to expansion have considered the Hwy 3 transportation route as inadequate and a concern with any expansion. Increase lending to Businesses by expanding into greater risk clients with significant increase in interest rates. Start-ups often cannot fund through BDC or traditional banks, but have a valid/exciting product and business plan. (for instance the wife of 1 investor had 'bad' credit, and the company did not have 60% of the loan to put down - they found a private investor who wanted 49% of the company to provide 25% of the 60%... even though product was amazing. Can the Province become Shark Tank?)

t6k	provide enough funding for teachers and assistance teacher, have class sizes of around 25 kids	bus transportation	by not affecting front line services like healthcare, education and government services, by eliminating jobs or reducing services the economy in overall gets affected
T4L	Stop over spending in Education. There is enough money there, its just poorly managed.	Look into using other countries for health care till we get things under control. Why not give people the option to go to Thailand for joint replacement with full government funding? It will save us money and reduce the wait time.	1)By being less involved. 2)More grants for entrepreneurs without the typical government racism. (treat everyone as equal, no special grants for certain people of skin color or chosen lifestyle)
T3E	Health Care, Education and Transportation	Eliminating or downgrading ADM's to DG's or less	Continue to support the development and export of natural resources but only if there can be more refinement of those resources beyond the raw state.
T1K	On creating jobs, boosting economy, retraining for the unemployed.	Instead of getting CEO and administrators to do cuts in their areas as they just cut the front line workers the government needs to go in and do the cuts to administration and ceoc's. I am in a private sector job but I am disappointed that the government did not do the hard work of weeding out from the top!!!	Tax cuts for all so that spending will create more jobs and taxing robotics so that companies who replace a worker still contribute to taxes
T2s	Flood mitigation	Smaller cabinet size	Diversify beyond oil and gas.
T0H	Public healthcare and Public Education are the two most important government services.	Many efficiencies were lost when AHS became such a large organization. Local managers are no longer able to efficiently and effectively respond to local situations as time has to be spent getting approval higher up. Policies developed often do not reflect the needs of rural Alberta. Time and money goes to high level positions who focus on Edmonton and Calgary. Restructuring the top levels and pushing more authority back down to managers who work more closely with front line staff would be less expensive and more effective than the status quo.	Grants for alternative energy development would be one area; supporting the growth of the microtechnology industry. Rural Alberta needs more daycares - grants for that would be helpful. Continuing to build infrastructure at a steady pace rather than boom and bust. Create more seats in healthcare training programs (e.g. Rehab) as these positions work in both the public and private sectors and there are never enough in rural areas.
T4R	1. Healthcare -Red Deer's hospital needs to have enough beds to look after the needs of Central Albertans (fund the expansion) plus a cardiac Cath Lab. Central Albertans should not have a higher cardiac mortality/disability rate just because of geography. In addition, increase funding for Addiction & Mental health initiatives. 2. Increase Affordable Housing Stock/Beds & Rent Subsidies 3. Enhanced Policing in the non metro cities	1. Decrease the size of government & boards and vastly reduce government travel for officials. Travel should be by the few and only if tangible & measurable results can be achieved. 2. Stop the tax free ride for oil companies we all must pay our fair share 3. Oil companies must put up a performance bond to ensure proper clean up, payment of taxes etc.	Divert the oil information funding to support alternate energy services and tech! These are the next engines of growth, those that do not see this will be left behind!
T0L	Protection of wilderness Education	Great question Maybe less self promotion in a non election period	The NDP had great incentives with allocation of provincial carbon tax dollars T0LT0
T2A	Education and health care. I am so disappointed to see the fall out of education cuts affecting my young children. Staff reductions have been taking place at their school and class sizes already increased. They will continue to increase next year i	Other ministries.	Tax incentives.
T3L	Education, healthcare, infrastructure, job creation in all fields. Alberta is more than oil and gas. Invest in making the future of Alberta great.	MLA wages. Useless war room. Paid twitter trolls. Stop Handouts to corporations!!	Encourage small businesses, tech firms, invest in education, alternative energy sources as well as oil.

T1A	Economy, domestic violence, rehabilitation centres with follow up and court ordered treatment	Cutting some administrative positions through retirements, cutting some funding for arts, recreation, etc.,	I think the government is trying to do a good job in this area.
	Education and healthcare. Uninformed, unhealthy population is a shit idea Kenney.	By cutting salaries of MLA's and Kenney. 186k + expenses, really? Reinstating provincial carbon tax.	Diversify. O&G is not it. Cutting wind and solar subsidies in favor of sucking big oil dick isn't helping anyone.
	Healthcare Education Infrastructure	Elected officials travel , salary and pensions	Invest in post secondary education Provide tax incentives to medium to small businesses
T2B	Mental health, education, Meds for low income Albertans and infrastructure.	Less jet setting and politicians pay and pensions. Less handouts to big corporations.	Have incentives and credits in place for all industry's not just oil and gas.
T8G	Health care Infrastructure Education	Increase tax	Be open to a variety of industries
T4E	Crime prevention and Private Sector jobs.	Both Education and Healthcare have numerous opportunities to increase efficiency and lower costs.	Competitive tax rates and red tape reduction. Continue to support the energy industry and diversify where we have an opportunity to be competitive.
T4C	Education and healthcare. Reducing salaries for healthcare workers is not conducive to a positive economy and financial culture in Alberta.	Salaries of high end managers in public systems should be capped. Fewer managers. Tax non-Albertans living in and visiting Alberta more. Our services are for our Canadians/ Albertans. Tourist tax? Immigrant tax?	Alberta is unique. Focus on our assets and celebrate them. Oil refineries and pipeline infrastructure, nuclear energy development, forestry, mountain tourism.
T8s	Education. Support for students and those in rural and remote communities.	By not running vicious campaign ads that promote bullying behaviour in our leaders. By partially funding private schools. They save the government money; Look into it. Stop giving bail outs to major corporations that haven't been fiscally responsible.	Reexamine the trades boards which limit apprenticeship opportunities and competition. Continue finding entrepreneurship initiatives and look to multiple sectors for production opportunities.
T1S	Climate change prevention, healthcare and education	Ending subsidies to fossil fuel companies. Closing the ridiculous war room.	Bring back Energy Efficient Alberta to create green jobs, stop the cuts at Alberta Universities, pay your municipal taxes, stop the attack on the public sector. Your government has lost 50,000 jobs and counting and ushered in the Kenney recession. Stop ruining our province with your ideological stupidity. Trickle-down economics does not work to create wealth for the people... Just the rich and corporations.
	Child Care Support, Education, Health Care	Health Care by letting Albertans know how much doctor visits, health tests, etc cost for each visit. Cut back on expenses allowed by government employees. Cut back on pensions of government employees. Put in an Alberta Tax Stop taking ministers	Quality Child Care supports. Diversification rather than only supporting oil.

T3G	Invest in the future: Public Education and Post Secondary Reduce poverty: Invest in affordable housing Ensure Health Care is available for every Albertan without extended wait time. Ensure the right talent is retained to provide the services.	War room.	Invest in infrastructure projects and protect them while the cost of doing so is lower than during inflationary periods.
	I am concerned that the government is decimating education and healthcare. I think you should focus on these areas. There are more students, so there should be more money.	I am concerned that the government is just focusing on spending without looking at revenue. If we had an appropriate level of revenue, we wouldn't have this so-called "spending problem". Savings could be found by charging appropriate taxes to oil companies, by expecting oil companies to pay their property taxes, and collecting the money needed to run our province. I think you could find savings by closing the war room, and stopping all your commissions that are given limited mandates to rubber stamp UCP policies.	By investing in education and health care. Cutting thousands of education and health care jobs doesn't help job creation and economic growth. It reduces the number of people employed, and reduces spending in the economy.
t3e	Economic diversification, tech industry.	Public expenditures	Incentivize economic diversification. Attract health care and tech industry.
T0L	Health care and education	Lower number of top end government jobs, reduce waste costs, decrease travel and expense for elected officials	Diversity is the key to long range success, how do we get our oil to hold the same value as other countries, refine it in province?
T1H	Reduce government employee wages and union increases. Many of us are out of work let alone getting above other provincial incomes. And then yearly increases add to this hurt.	Reduce unions employee pay.	No sales tax. Instead hold corporations accountable for paying fair taxes. We are being hurt badly with consumer energy costs.
T2S	In order to promote a healthy long term downtown Calgary, the completion of the Springbank Reservoir is essential. Without the completion of this project there will always be a flood risk in the Calgary core, which is not healthy for long term investment.	Health Administration	Promote innovation and entrepreneurs, who develop new technology which can become a world leader especially as it applies to the oil and gas industry. We have the opportunity to be a world leader in "clean" oil and gas production.
T4B	maintaining and improving health care access while minimizing excess management roles within the healthcare system. removal of middle management IF you cut costs here, NOT front-line staff.	advertising for travel Alberta could be cut. the mountains are full and I cannot see where additional tourists would come.	With investment in innovation and creativity through proceeds of a provincial sales tax to tax consumption or carbon tax to tax use of vehicles and emissions.
T1J	Economic diversification and employment Health system-maintaining health of AB and comprehensive approach to drug use Education of kids and young adult	Get rid of the War room and Matt Wolf	Diversify and quit the shady backroom deals. Get to work.
T3N	Number one is education, number two is healthcare, number three- let's support our families. They need safe, reliable daycare for starters.	How about we start with the bureaucracy and bureaucrats. Maybe it's time they took a pay cut like the rest of us. And let's get the corporations to pay their fair share	We need to look to the future- families and SMALL business need our support. When people are able to feed and clothe their families without having to work 3 jobs, society will do better. Instead of trying to keep the status quo for the 1%, let's help the rest of us get back to living again. Something needs to be done for people wanting to purchase a home. Where is the help that was promised from the UCP for that? And what about student loans? Something has to be done to make education more accessible not something for just the rich and privileged
	Affordable housing, education, healthcare	In the alberta parliament	Stop cutting services and jobs

T4P	Healthcare in rural areas and smaller cities Rural Crime	Upper Management in healthcare Multiple layers of management in healthcare Professional practice leads and new positions created.	Implement PST
T5X	Education and enhance support to seniors and people with developmental disabilities.	Review positions and processes for redundancies and efficiencies. Grants to big corporations should be removed. Excessive gov't employee benefits.	Diversification into other industries like manufacturing.
t4V	Health care, education, social services and services for seniors	No out of country travel. It is a waste of money in these frugal times	Invest in new technologies
T6X	<p>Government should focus on incentives for employers of labour and new investors, especially diversification from oil and gas. And most important, free training for skills in new sectors for those that have lost their jobs overblown the years.</p> <p>We can promote investment in other types of mining of precious metals and other usable resources under the soil of Alberta, including new surveys for other usable minerals in Alberta.</p> <p>In Ontario for instance, there's a lot of various mining in precious metals and that transcends into diversified jobs, a lot of jobs. Oil is not the only thing to extract from the earth.</p> <p>Renewable energy sector is also another good, but have in mind, the number of people that can be employed by one renewable company is very limited and hundreds of thousands in Alberta have lost their job and not just 20,000.</p> <p>In summary, spend more in attracting new types of investment, free or hugely discounted cost for training for Albertans on new technology, and other new sectors being attracted by the government.</p>	<p>Reduce government misplaced spending, reduce excess cost from bureaucratic processes or levels, a lot of people are paid to do irrelevant things in government.</p> <p>Another important thing, Alberta government should stop the habit of building structures that will end up becoming a nightmare for inhabitants in the future, trying to correct these type of mistakes turn into excessive wasted funds.</p> <p>Example: When population forecast growth is expecting in an area and the government wants to enlarge the access roads.</p> <p>During feasibility, design, approval and construction, you don't approve expand few kilometers and hope to re-Mobilize another company in the next 3 years to come back all over again, to expand the remaining portion of the road.</p> <p>Re-mobilizations is a huge expense that need not be repeated over and over again. Best is to have a long term plan and agreement on how "continuous" section by section expansion should be done without having to pay mobilizations 2 to 3 times on just a short kilometer of road way.</p> <p>Another future waste I see in Alberta, in this modern century, we can't be building "surface" rail lines in old neighborhoods, that's a future disruption disaster waiting to happen.</p> <p>If it's about cost, for instance, if the government plans to build 20 kilometer of rail-line, It's better to build an "overhead" rail line of 5 kilometers each new budget cycle than trying to build a "surface" rail line of 20 kilometers in</p>	<p>Make favorable polices, modify tax incentives for new companies and create incentives to companies to that hire large number of functional new "permanent" staff.</p> <p>That being said, also create incentives for existing companies to keep on their existing staff at least for some time, when things get harder for those companies.</p> <p>At times, companies fall into hard times which may end up lasting for may be one year or two, however, they are always too much in a hurry to lay-off people in just one to two months when things get tougher</p> <p>If there is some form of relief for these companies if they hold off a bit on lay-offs to see if things get better, that would be a way to keep the economy going, as purchasing power of citizens will remain and in turn feed positivity into other consumption and service sectors.</p>
T2A	Education, teachers and health	Raise corporate taxes if needed. But these sectors cannot be neglected.	Raise corporate taxes.
	What the NDP was doing - diversifying our economy. A diversified economy is a strong economy. Education, health care, small business start ups, green initiatives, emerging business sectors. Social services - less drain on an economy when everyone feels supported (check the research)	Cutting pensions of MLA's. Actually collect taxes Oil companies have refused to pay that you gave them relief on. No corporate tax relief - small business makes up 70% of Canada's economy so support it. Not buying all your buddies free trips and parties. Cut spending accounts of MLA's and their offices.	By re-implementing small business start ups, not cutting education or health care. Support IT, AI, support NEW and EMERGING business sectors. Stop living in the past -oil and gas is a declining industry (check the global stats).

T0H	Getting Albertans back to work	lowering public sector CEO's, no one working for the government should be making \$300,000 a year	I don't know
T4P	Education - keeping class sizes at a minimum and maintaining or adding extra support (EAs) in the classrooms. More doctors/urgent care facilities	Charging 50.00 for health care. Higher taxes for corporations. Raising GST to 6 or 7%.	Greener ways to support the oil and gas industries. Maintaining or increased funds to education and health care promotes more jobs as teachers, EAs, nurses, doctors, pharmacy technicians, medical assistants and emergency services to name a few.
T2N	Public education and healthcare.	Reducing the tax breaks provided to oil and gas companies. The government does not provide this kind of tax break to any other industry. I also think the government should introduce a sales tax. Also, start taxing the rich more, which includes the wealthiest corporations.	Focus on clean energy, as this is the future, not oil and gas. Support our public and post secondary education systems. If you continue to defund these areas, it will negatively impact the future work force of Alberta. By cutting healthcare and post secondary, you are damaging Alberta in the eyes of the world. No one will want to invest in here. Protect public education, because education is the most important piece to a prosperous future, not tax breaks to oil companies that pull out of Alberta and head elsewhere.
T0L	Education and Health Care have been the biggest users of tax dollars, and likely the biggest wasters of our tax dollars. The priority should not be on where to spend, but rather on where to save money and to focus on where to make cuts that will not affect front line service. As an educator in Alberta for over 32 years, I know for certain that there is huge fat in the bureaucracy, and, from speaking with friends and relatives who are doctors, nurses and paramedics, it appears to be the same in Health Care.	Here's a scenario: Take a 15 classroom school - average class size of 30. Alberta apparently funds Education to the tune of \$12,000 per student (Operating - not including Capital budget). So the students in that school generate \$5.4 Million. Subtract the salaries of 15 teachers (\$1.5M - this assumes they are all at the top of the grid) a Principal (\$125,000 - a school this size wouldn't need a Vice Principal) a Secretary and a caretaker (\$120,000 - again, a school this size would only need one of each) and a couple of aides (\$120,000). This leaves over \$3.5 Million to cover everything else (Over 65% of the budget). It shouldn't cost anywhere near \$3.5 M to pay the utility bills, provide textbooks, computers, and transportation!! If I were in charge, I would audit each school board to see how this is being spent (wasted) and cut their budgets accordingly. Additionally, I am aware that Home Education operates very efficiently and cost-effectively on a very small budget. However, by stipulating that independent Home Education providers report to AB Education under a Private or Public School, the little bit of funding provided to support these students is being siphoned off by the private or public school and is not available to enhance student opportunities. I would not cut the budget for Home Education (currently only 14% of what a public school student generates) but would change the regulations governing Home Education to enable Independent Providers to operate as if they were a private school, thus eliminating the extra layer and cost of redundant administration. This would free up additional funding to provide enhanced educational opportunities for home educated students.	Create a business friendly fiscal environment by providing tax incentives for start-up companies, reducing red tape and over-regulation, and keeping low corporate tax rates that will encourage companies to operate in Alberta.

t1j	Better and safer roads but use our Alberta oil to do it !	Less red tape	Spearhead the twinning of Highway 3. Make a wider bridge and 3 lanes going thru lethbridge up and down the big hill. It's your main artery of trade between bc and saskatchewan. It's feeds the rest of alberta from the states. Time to put money into it like the Ndp promised at election. 90 million dollars best spent!
t2v	those who need it most. People with disabilities. Students K-12 protect class size especially the youngest. Post Secondary students. Don't make life harder than necessary.	the war room should be gone. All these committees -fair deal, etc should be gone. Press secretaries in all departments that only serve to attack.	Get over the idea that oil and gas will sustain Alberta. Grow to the future rather than trying to go back to the past. Make our province a place where people want to live.
T0H	Health, education, infrastructure, economic diversification	MLA's salaries and pensions.	Invest in education. Encourage diversification in tech, alternate energy, research, and the arts.
T4R	Education, Seniors Health, Hospitals, Doctors, Nurses, Hard working single parents	Ask ALL Albertans this question. Make sure every Albertan gets a questioner. Do you want a balanced budget or is it more important to you to have a job & support your family. Possibly the Gov't doesn't have to find more savings.	?
T2x	Education and healthcare.	No longer giving tax cuts to large corporations.	Stop the eliminations and cuts you are making to the public sector.
	Healthcare, Education, Disability, Infrastructure.	Offer Major incentive to Businesses to come to Alberta which creates more jobs. More jobs means more income taxes.	More business makes more jobs which creates more money for the Government
T8N	1) It is crucial that education is supported to the extent that teachers' jobs are NOT cut, class sizes are NOT increased and special education services are adequately funded. 2) Health care for vulnerable Albertans, seniors and surgical wait times must be maintained and NOT decreased. Front-line workers' positions should be maintained. AISH recipients' funding should be fully reinstated. 3) Provincial infrastructure must be maintained, so that the "house does not crumble".	1) Administration costs in areas such as health care and MLA offices. 2) The current system of part-time/overtime pay for nurses needs to be over-hauled to prevent over-spending in this area. 3) Coordinated program spending to prevent overlap and unnecessary duplication. An example is the current "nutrition" program recently implemented in some schools which are not in the "have-not" category; this "enveloped" grant money would be better spent retaining Education Assistants in the schools, and the nutrition component is already in the Program of Studies.	1) Jobs in the infrastructure maintenance areas would put Albertans back to work and support needed building and repairs. 2) Do away with the corporate tax break. It is not working! 3) Support small business ventures in our province.
T6W	Fund education on a per pupil basis (or at least be honest with the public when you say that there are no cuts to education funding). Fund post-secondary education appropriately or cap tuition increases - don't make higher education only for the elite. The strength of a society is revealed in how they treat their elderly and at-risk. Fund agencies that support our aging population.	It's less about finding savings and more about increasing revenue. I understand that tax cuts to big-business is supposed to generate jobs (and the trickle down effects of the human-capital theory), but what about doing it as an incentive. If your company meets established criteria, then you'll receive a tax credit.	Keep working on that pipeline AND look to diversify Alberta's economy. Why can't we be Silicon Valley - North? We have some of the best post-secondary institutions. Invest in R&D.
	Healthcare, More infrastructure like roads, and give municipalities more money maybe. Also Increase FSCD and PDD funding for disabled persons.	Ottawa should be giving us 20 Billion Dollars to spend. Don't make any more cuts.	The Truth is More money spent will create more jobs. If funding is Cut we lose jobs. so SPEND MORE!

T8W	Health, education, first responders as in the police, hospitals fireman, etc...essential services. All of these are untouchable in my opinion. No cuts to these services!!!	That is a very difficult question...	Any way it can. UCP were elected to do this very thing. Everyone I talk to voted for you guys because you were going to do what the NDP could not or would not when it came to the oil and gas industry. You have failed, and if there were another election called today, you would out of a job.
T5J	Ive worked hard, paid taxes for 17 Years so far, Ive trusted that the Government I vote for works as hard as I do, and contributes as well. Albertans are feeling totally lied to by all the voices in politics right now. I want a guaranteed pension at a average cost of living rate. Ive trusted you with my pension. I want accountability and stability. The Health Care, Hospitals, Teachers, Firefighters, Police, are being Run Ragged, The support Services, NEED Support. Homelessness, Crimes, False News and Bad Reporting are at an All Time High. Again, Accountability is the Answer. Job Creation and Job Stability, Ive worked 3 jobs just to support myself, I am a single, female coming up on retirement (yeah right). The government will work us all to early graves while they talk about it. Accountability, If I wasted time the way the Government does, Id be out of a job. Its very sad to see the Province I was born in suffer so much backlash from the federal levels. Yet they provide no solutions or support, WE (the taxpayers living at below poverty levels while working full time have supported all of it through Hard work and accountability. I expect NO less from the people we elect and put our Trust into. I want accountability on ALL levels from ALL Departments. Honest Reporting from All levels and Departments. I want to be able to leave the Government in charge while I go earn those tax dollars, and know there is Integrity and Accountability in the forefront of ALL they do.	Almost Everywhere You Look - -Government offices with a 2/3 vacancy rate, so much waste. -Unnecessary travel. We all use "Video Meetings" now and have the technology to save travel expenses. - Insist that everyone immigrating to Canada must within five years start paying back into the Government an amount equal to the expenses incurred by the tax payers upon their arrival, and up to the first five years they have spent in Canada as legal immigrants. Again the answer is Accountability from all Departments and All Levels.	Supports for Small Businesses Open up the oilfields with a ten year term limit, within this timeframe seek to lower CO2 levels and find alternatives ie. Hemp which replaces numerous products now produced through oil. Provide jobs in the recycling, reclaiming and reusing markets. Most reusable waste is able to be reconstituted into other products. Providing jobs and solutions. Technology - education support and job market exploration, □
T3C	Maintaining current social service/social welfare levels, health care, education	Getting rid of the "war room" and all other wastes of money trying to promote the energy sector. Implement a PST to increase revenue.	Diversify the economy. Invest in and attract innovation.
t4n	The most intelligent places.Education and health care.A well educated and healthy society is a prosperous one.The problem with Conservatives is they want people uneducated,so they will vote for incompetent people.5 Billion dollar give away to the USA corporate companies share holders.You know where they are going to put that money.Have a look at Stephen Harpers give away in 2007!Jason Kenny was involved with that pathetic idea.	By taking away the corporate tax give away.It will be a failed experiment like the Kansas experiment maybe they should have a look.Who are they, the government in power in 2020 in ALBERTA!	By looking after the people and not corporations that could care less about society.And economic growth will look after it self. How would you like it, if some one said to you, if we privatize every thing it will get real cheap and you lost 27 percent of your NET I say NET Income.Would you vote Conservative ever again?Just asking a intelligent Question!
T4B	Education, healthcare, infrastructure, social programs for vulnerable sectors	Not giving tax breaks to big oil companies and corporations. Reducing politician spending money in regards to travel and expense accounts.	By encouraging the population to spend locally and on Alberta products therefore stimulating the market. Supporting those in fields that have been automated by providing grants to retrain in the tech sector.

	Healthcare, Education,	According to numbers from Statistics Canada, Albertans sent \$49 billion worth of taxes to Ottawa in 2016, but only received \$27.2 billion back in the form of federal spending. Make the federal Government PAY!! Or stop paying our money to them.	More Money spent=MORE JOBS! More jobs=BETTER ECONOMY for all of Canada
T2S	springbank upstream mitigation	create a sales tax	support post secondary education
T2X	Education Health Care Social Programs for those in fixed income	Cut back on freebies given to politicians. Private jets and expensive dinners entertaining. The public has already fastened their belts on the extras they once participated in	There was a program in place to provide alternatives to the oil and gas which now fuels our homes. Where have they gone? We need to think outside the box. We know where we are. How can we move forward using the best of what's available? There is no point in trying to go back to yesterday. It is gone. The cutbacks that are being entertained are only going to increase the unemployment issue.
T8N	EDUCATION AND HEALTH CARE FOR ALL...NOT PRIVATIZING FOR THE WELL TO DO TO STAY AHEAD OF THE COMMON MAN. STOP CUTTING JOBS IF JOB CREATION IS ACTUALLY YOUR FOCUS...IT SEEMS COUNTER PRODUCTIVE. PRIVATE BUSINESS IS NOT OBLIGATED TO CREATE JOBS...THEY WANT TO PAY THEIR CEO'S AND THEIR SHAREHOLDERS FIRST PRIORITY. THEY RUN THEIR BUSINESS TO MAXIMIZE THEIR PROFITS NOT TO CREATE A WORK FORCE.	STOP TRYING TO FIND SAVINGS. LET ALBERTANS PAY FOR THE SERVICES THEY NEED TO HAVE THE LIFESTYLE THEY DESIRE. WE KNOW WE NEED TO PAY FOR POLICE, FIRE DEPARTMENTS, EDUCATION, DOCTORS, NURSES ETC. THAT IS WHAT MAKES CANADA THE BEST COUNTRY IN THE WORLD...THE ABILITY TO PAY FOR ESSENTIAL SERVICES FOR EVERYONE. WE KNOW WE NEED TO PAY TAXES TO AFFORD THIS...WE ARE NOT STUPID. PUT A SALES TAX ON GOODS AND SERVICES. IT'S A FAIR SYSTEM BECAUSE THE WEALTHIER PEOPLE BUY MORE GOODS AND THEN PAY THEIR FAIR SHARE. STOP CUTTING TO CREATE BALANCE...IT WILL NEVER WORK. YOU CAN NEVER CUT ENOUGH SERVICES TO BALANCE THE BUDGET. IT IS A PLAN THAT IS BOUND TO FAIL.	STOP CUTTING ESSENTIAL SERVICES SO THAT PEOPLE STAY EMPLOYED. THAT WILL AT LEAST HELP. WE NEED TEACHERS, DOCTORS, NURSES. STOP UNDOING THINGS THAT HAVE ALREADY STARTED CONSTRUCTION LIKE THE PROVINCIAL LAB. WHAT AN ENORMOUS WASTE OF MY MONEY!! NEVER GIVE TAX BREAKS TO COMPANIES THAT HAVEN'T PAID THEIR TAXES AND ANY OIL COMPANY THAT HAS AN ORPHANED WELL START TAXING THEM EXTRA UNTIL IT IS CLEANED UP. COMPANIES NEED TO KNOW THEY HAVE RESPONSIBILITIES TO THE PUBLIC AND THEY DON'T SEEM TO THINK IT IS A PRIORITY. GIVE TAX BREAKS TO GOOD CORPORATE CITIZENS WHO DO EMPLOY THOSE DIFFICULT TO EMPLOY. START HOUSING PROJECTS FOR THE LOW INCOME CITIZENS WHICH WILL EMPLOY MORE WORKERS AND HELP WITH HOMELESSNESS. ACTUALLY SUPPORT YOUR PUBLIC BY CREATING NOT CUTTING JOBS
T8T	Programs to promote investor confidence and get Albertons back to work.	Eliminate spending on "nice to haves", focus on things that are must haves.	Create a lower cost base for companies to operate in, this provides the opportunity for businesses to hire and increase their margins.
T4L	Health Education Advance education Research	Eliminate the Canadian Energy Centre (Energy war-room) Stop creating panels at the drop of the hat, those are not free. Abandon any notion of following through on any of the 'fair deal for Alberta' ideas. They all seem to create more red tape and government bureaucracy. What apparently is the antithesis of what you believe in. Fire Steve Allen and end that charade that he leads; then replace the Justice Minister for the conflict of interest that put Allen in his place.	Introduce our own carbon tax instead of being taxed by Ottawa and use the money to strategically invest in job creation and economic growth. Use the funds for targeted tax credits such as the 'Petrochemicals Diversification Program'. Introduce a PST (or better a HST), at a rate lower than any other province and use the money on programs to stimulate the economy or reduce the deficit.
T4N	Education and health. Well educated residents make healthier choices!	Top heavy management positions that have forgotten what it's like to be on the front lines are preventing teachers and nurses from keeping up with their students/patients.	Pipeline, studying responsible options of renewable energy sources.

T6R	Health, Education, infrastructure, and economic diversification.	Eliminate the War Room. There's \$30MM. Cut Jason Kenney's travel and "security" budget. That's at least another million. Reduce private education funding from 75% to 0%.	Oblige oil and gas companies to pay their taxes and reclaim orphan wells like every other jurisdiction in North America does.
T0L	Health Care and Education	The oil patch, tax cuts from billionaires.	introduce new ways of thinking and fun the entrepreneurs of tomorrow. trades are important, but do are nurses, future business people, future everything. i know this may not be seen, 17(1) . you think i like seeing what you UCP people have done to Alberta? there is more to life than trades and white people thinking. time to open a book you boomers. look at the world around you. oh, and i'll fight. ill fight until people of every ethnicity, religion and gender are recognized. until health care MATTERS again to you. until education matters again. you cut in the wrong place. young people who are educated will change the world.
T4N	Improvements to health care (keep/make it accessible to everyone) education sectors.	Cutting their own salaries like Ralph Klein did at least 20%-30%!!!!	Factories
T2e	Housing first programs, education, and health including safe injection sites	Stop giving tax cuts to huge corporations	Tax credits for emerging industries such as new tech and green energy.
T8V	DIVERSIFYING! Half of the government support that goes towards Oil and Gas industries needs to be reallocated into a transition plan that will support and guide workers in that industry into new ones. Geothermal would likely be the most aligned with their skillset. Another option would be training to reclaim orphaned well-sites. Money needs to be going into helping potential new industries that are not completely reliant on the oil and gas industry to survive.	Ditch the war-room. It's ridiculous and unnecessary.	As stated above. Build and guide new career paths in different industries outside oil and gas. Support the transition of workers who have lost their jobs in that industry into a new one. Retraining support, extended employment insurance and relocation allowances would be a great start. Instead of campaigns to express how great oil and gas is, lets have campaigns that encourage people to consider moving into a different sector, one where they don't spend so much time away from their families or around toxic chemicals. I think that would be an easy sell for many people.
T6L	Health and education.	Tax big companies appropriately and make them pay fairly for the resources they take from the land. Our water should not be nealy free for fracking.	Encourage businesses and studies outside of natural resource collection. Encourage citizens to be innovative and find ways to trap carbon, find alternatives to fossil fuels, etc. Taking money away from education is NOT the answer.

T0L	Since I work in Education, I suggest that you continue to spend money to provide good teachers but cut from the large bureaucracy.	There is lots of room for savings by making AB Education much smaller. In 30 years in Education, I have rarely seen anything that these bureaucrats do, trickle down to the classroom teacher or the students. Do we need anyone else beside Adrianna LaGrange? I believe that the same could be said of School boards. Perhaps it is time to take an account of what each AB Education and School Board position is supposed to accomplish and ask if it really makes a difference to the education of the students. Maybe those who are not necessary will resign, or those positions can be eliminated.	Provide tax incentives for business start ups, and minimize red tape for all businesses.
T2w	Public Education	Stop cutting and get a provincial sales tax	Invest in diversifying the economy
T8N	Health Education and Social Services	Corporations are doing just fine, and the tax cuts you gave them have not resulted in jobs. They have just gone into dividends to make the shareholders richer. Remove various /subsidies grants to oil companies.	DIVERSIFY! Quit flogging oil. The oil sands operation are profitable. Drilling is not, and may never be again.
T5Y	Affordable housing, job creation, and the public energy sector	Immigration and refugees coming into Alberta Canada. Transportation and Canadian Carbon Tax.	Giving Albertans and Canadians priority jobs over immigrants and refugees migrating to Alberta and Canada. Allowing more training and education to Albertans over immigrants and refugees migrating to AI era. Putting more money into long term sustainable energy so we don't have to rely on oil and gas. Examples would be solar panels, wind turbines, eco fuel. Supporting our local economy and farmers.
T2s	Flood mitigation for Calgary. Creating the best public schools in Canada. Maintaining a high quality medical service. Alberta entrepreneurs will stay and carry the economy forward if those basic things are in place.	A sales tax should be the first set in creating order and financial stability in the Alberta economy. We can no longer subsidize our population from oil and gas revenues too much volatility. Other saving can be found by reducing government bureaucracy at every level.	The digital economy is already working here and growing, largely outside of central offices. They need an environment with good education and health services, our natural beauty is also a big draw.
T1A	Education (specifically EAs and aids for those with severe learning needs - children with sensory issues should not be mainstreamed in loud classrooms), mental health	"Extra" allotments to MLAs. Base pay is far more than any of us are making.	Stop cutting Social services. Firing people does not create jobs. It creates more people relying on fewer resources.
T2K	Better enforcement of the fish and wildlife act, improvements to infrastructure and improving rural law enforcement.	Cutting social programs shown to have little value to the general public and cutting subsidies for so called "green" projects.	Improve the resource sector's access to world markets and slow the inflow of non-alberta residents until the job situation improves.

T2T	As a 17(1) priorities from my point of view are eliminating poverty, adequate nutrition, appropriate and safe housing, working to eliminate domestic violence and support for victims. I also would like support for education and health care. Education is vitally important and not all kids live with parents who can afford extra help. We need enough teachers and TAs who can help kids so they won't fall behind. Health care is vital for all - we need to pay special attention to ensuring that the health needs of our most vulnerable people, including those with mental health issues, disabilities, those with addictions, the homeless are met with support and programs like The Alex in Calgary.	Overall eliminating poverty, reducing inequality and helping all people to thrive will cut costs in the long run. Poverty costs in terms of increased health care costs, as well as justice system... also lower literacy related to poverty and not enough help in school leaves people with fewer job skills. Something like basic annual income for low income people (as long as it is adequate) this could cut red tape, and free social workers to do counselling, support work. Other ideas: Possibly can reduce costs though eliminating some of the layers of admin in health system - but I don't work in the system so can't say what can change.	Though supporting education and advanced education as well as research and centres of excellence. Though supporting diversification and supporting those who have lost jobs to take some further education or training that will help them work in new promising industries. Though promoting Alberta as wonderful place to live and as a province with innovative skilled workforce.
T4N	1. getting our economy kicked into gear again 2. diversification in our economy 3. reducing government wasteful projects and special interest group initiatives 4. reduce healthcare costs by cutting all overtime to meet employment standards guidelines. (8 hours per day or 44 hours per week). Eliminate all employer paid pensions and benefits coverage for part time (less than 28 hours per week) 5. reduce education costs by thinking smarter. Throwing more money doesn't necessarily fix the root cause. Do we really need all the instruction in "extras" like robotics, horticulture, bilingual programs, construction etc. Lets teach our children to read, write, think, banking, budgeting.	special interest group funding should be 100% cut. Let people put their own money where their mouth is and fund their own interests. I have no desire for my tax dollars to fund gender neutral bathrooms, gay pride festivities, safe injection sites, needle exchange programs for addicts, hot meal (breakfast & lunch) programs at schools etc etc etc. Since when is it not the responsibility of the parent to feed their own child. I raised my children and I don't want to pay to feed someone else's period. Special interest groups are just absolutely getting out of hand. If these initiatives are genuinely something that one believes in and supports then let them support with their own money outside the government funds.	First stop spending or put a freeze on on all budget items that are not essential. Top essential items should include health care, education, economy and infrastructure.
T2S	Health, education and flood mitigation for Calgary, research into alternative economic drivers besides oil and gas	Civil service pensions, civil service efficiency	provide incentives for developing alternative economic growth engines besides oil and gas, tax holidays for companies willing to invest in these alternative economic drivers, continue to aggressively promote Alberta's oil and gas industry as economic driver for all of Canada.
T0L	Across the board cuts.	Upper and middle management positions. Police, fire dept, city, education, health care, etc. It is ridiculous, big wages and zero productivity.	Same as US. Cut regulations, encourage small business.
T6B	Supporting the most vulnerable Diversifying economy	Scrap the war room Combine Edmonton Public and Edmonton Catholic Schools into one school board	Find new revenue streams (e.g., impose tax on the wealthiest, consider a sales tax)
T0L	Health care	Government salaries Safe consumption sites	Lower taxes or add incentives for local shops
T1J	Social services, Education, post-secondary education, health care.	Get rid of war room. Recognize it does not have a spending problem, it has a revenue problem. Increase taxes.	Recognize that oil is a dying industry. Support research into alternative energy. Support post-secondary education so we can diversify our economy.
T2C	Public education, public health care, and social assistance (ie. AISH)	Increase taxes, especially from large corporations who recently received tax breaks.	Through social assistance program such as \$25/day daycare.
T1K	Education Health care	Fewer tax breaks for corporations	Helping middle class with lower taxes

T8N	1. EDUCATION 2. HEALTH CARE 3. SENIOR CARE	1. INCREASE TAXES FOR BIG BUSINESS, INCLUDING OIL COMPANIES 2. INCREASE PERSONAL TAXES FOR CEOs	1. CREATE programs to hire young graduates 2. CREATE programs to foster entrepreneurship
T3A	Public health care and education. Economic diversification. Climate change.	Scrap the war room. Reduce MLAs' and the premier's salaries, who have failed to promote economic growth and do not prioritize the protection of public services that Albertans depend on. Stop subsidizing the dying oil and gas industry. Stop giving tax breaks to wealthy, profitable corporations like oil and gas companies that are responsible for climate change and do not care about ordinary Albertans.	Respect and support public sector workers. Retain new graduate nurses and teachers, who are well-educated and can simply move to other provinces where government respects and protects the services they provide.
T2z	On smaller class sizes. Alberta is a province with a lot of immigrants and so a lot of ESL students who are refugees too. When a new student is not even able to read or sound out the sounds of the alphabet in a grade 2 or grade 3 class, how can a teacher consistently support this new student? More over these students are absent on a regular basis. How can this problem be solved with huge class sizes. The factor of ESL should be considered in deciding the class size. Secondly focus on change of the curriculum shd be a priority. We are still not sure how the curriculum has changed or is it going to be the same old curriculum made a long long long tome ago. Things are changing at a rapid speed and tech is changing, the dynamics of many things have changed why is education stagnant. Investing in oil and gas in another priority to create job markets and change Alberta's economy.	Save in material resources and invest in skills and human manpower. Investigate which funding did not make a lot of value? cut those	1.Think of another option to SURVIVE WHEN OIL AND GAS DOES NOT WORK? 2.Start the train line that was going to start. 3. Think of starting more industies and factories 4. Think of breaking the monopoly that dairy has in Alberta 5. Extend out tourist area. Banff is so little, when people want to go for a holiday, hotels are terribly booked- if we had more hotels and excursion areas more people can come and spend money and give a boost to our economy. I understand we want to keep the eauty of it being small, however vast areas around banff can be extended so people can be a little further away yet be close to banff.
T2S	1). Getting the Springbank Dam done. 2). Investing in post secondary education and research. Make it attractive for businesses and entrepreneurs to invest here.	Pension plans and benefits are far too generous for pubic sector employees. For example, accumulating sick days, overtime etc... are being abused regularly. There is zero accountability and it is out of line with the private sector.	Taxes should be reduced at all levels. People employed in the private sector are falling behind every year due to inflation, property and business taxes and income taxes. With more money to spend businesses and individuals would have more money to spend and invest.
T2A	Government should be spending OUR tax dollars on services that benefit the public. Public schools, public healthcare, public transport are all very important for a well functioning society.	Starting with a nonsensical projects like the war room (sorry, Canadian energy centre) There is \$30 million/Year that can be saved. Also, stop wasting our money on a failing oil and gas industry. If those businesses can't support them selves then we shouldn't be giving them tax brakes and other incentives. How about collecting some of the millions owed in taxes by the same oil and gas industry?	It's time we try something other than digging oil out of the ground and selling it. The money our current government is wasting on supporting oil and gas could be spent on... let's see, hiring more teachers, healthcares care workers, police, bakers... Finance reclamation of abandoned oil and gas wells across the province, a whole new industry and 1000's of jobs could be created. Give me that \$30 million wasted on war room and I will create 100's of well paying jobs by the end of the week

T7N	I think the government should support inclusion in the schools. In order to work with high needs students, teaching assistants are necessary in the classrooms to help with programming needs. It is very difficult to have behavior students, special needs and regular students in classrooms without support for these students. Also, less money for students means less resources ie books but also food. Everything is affected. We need to support our education funding.	Our head office has changed office furnishings more often than our school has changed decore. The school is using old desks and filing cabinets and the head office has been refurbished many times. The reason this happened is there was money for this refurbishing but not money for use at the school. The money had to be spent on fixing the district office. It could not be put into the school because it was supposed to be used for the above purpose. Changes need to made and money needs to be used where it is necessary.	Put money into our youth. The more we train our youth then they will be able to start businesses and help with the economy. They may have ideas to think outside of the box and start some new businesses. Make it easier for students to go to school especially university and not have them pay extremely high fees to go to school. Also, get oil and gas production pipelines going. We need the oil and gas industry to get our people working. We have to get our people working and keep them working.
T0C	Education and health of all Albertans	Stop creating so many committees, branding etc- for the moment	Supporting small business, not so many breaks, or renegeing of responsibilities for oil and gas companies. They have have had more breaks than they should have, at the expense of Albertans.
T0L	Debt Seniors care	Make guys at top of healthcare and school boards take less!	Get oil and gas back to work. Give doctors in rural areas a break to keep them in rural areas.
T2N	Health and Education.	I think the government should increase taxes (income taxes, sales tax) to provide reasonable funds to pay for services demanded by Albertans.	Provide incentives in new growth industries to diversify the Alberta economy.
T4N	Sustaining and improving the lives of Albertan's through great Health, Education, Policing and Infrastructure. Spending money for resources to bring in specialists to modernize and improve processes within the government.	If a corporation taxes advantage of our low corporate tax and leaves, they should have to repay a portion back. Increase Sin Tax Increase Fines Create an Alberta Lottery so the proceeds go back to just our province.	By creating the best health care, education , safe communities and great infrastructure more people will want to come to Alberta to raise their families and in turn create jobs and economic growth. You need to spend money to make money
T2J	Renewable energy initiatives, education, public transportation, health care, police and fire services.	Oil & gas and corporate tax rates.	Encourage the development of new industries in Alberta. Show the world we care about more than just oil and money.
T4p	Health Education	CEO of all departments are overpaid	Na
T4R	Education and health care are two very important priorities that need to be maintained. Further cuts to these two departments will have a disastrous effect on the ability of teachers and health care workers to do their jobs effectively. Students with special needs will not get the services they need to be successful at school, if further cuts to educational assistants is required by districts who are under funded. There will be larger class sizes which means that teachers will not be able to form the relationships they need with students. Teachers will not be able to get to struggling students because the larger class sizes will make their jobs more difficult. Cuts to health care will mean longer wait times for appointments and surgeries. Nurses will not be able to give patients in the hospitals the care they require.	Government can find saving by stop wasting money on the big think groups and the province wide consultations that cost tax payers money. Government should also be more careful with how much money is being spent on travel, how they travel and where they are staying when they are travelling on business for the province. Everyday individuals who travel for business does not get to travel first class or stay in \$500+ hotels. It is time the government start looking at how the rest of the province citizens travel and stay in cheaper hotels.	We all understand that the oil industry is very important to the economy of Alberta, but big oil companies are pulling out of the province even after the big tax breaks that the government has given them. We need to become more diverse in our thinking as to where jobs can be created. The oil industry of the 90's will not be coming back, and we need to look into alternatives for the future while support the oil industry. We need to look in different types of technology and greener energy resources. Economic growth can only occur with more people working. If the government continues to cut jobs people will stop spending and if people stop spending more companies will go out of business or leave Alberta.

T2J	Education Health Care Protective Services	Salaries and Benefits for government employees Better Auditing of contract agreement Better commitment to enforcement of rules and regulations	Provide Tax Incentives for companies that provide new employment opportunities. Access Federal Funding for much needed infrastructure such as upstream flood protection and water conservation. Stop pouring provincial funds into the bottomless pit of SR1 which has shown it cannot pass safety standards for a dam close to vulnerable populations.
T2J	Education & Clean Energy.	Tax oil and gas companies.	Focus on growing industries. Clean energy, solar power. Quit investing in the old guard and focus on the future.
T2S	Anything but giving billionaires money for hockey arenas when they would never leave Calgary in a million years.	Not giving billionaires money for hockey arenas when they would never leave Calgary in a million years.	Spending money on things that make more sense than giving billionaires money for hockey arenas when they would never leave Calgary in a million years.
T3E	- Health Care - Social Services (eg, AISH) - Education - Diversification of Alberta's Economy AWAY from Oil and Gas	- Liquidate the Canadian Energy Centre and other such "War Rooms" - Increase taxes on the rich (progressive taxation) - Implement a PST (with refunds/exemptions for low income individuals)	- Bring back the incentives that were attracting tech companies and other industries - Provide funding for education and retraining as we pivot to more robust industries
T2N	The province must protect Calgary from future flooding. Those of us living close to the Bow River must have both upstream and local protections. Sunnyside and Bowness are particularly vulnerable.	Shut down the Canadian Energy Centre. You're making us look like fools.	Get industry involved in financing the clean up of all the orphan wells we have in the province. Industry can't walk away and leave us taxpayers on the hook for the cost. They need to be accountable. I don't mind lending money to the Orphan Wells Association but it should be a loan that industry pays back. There's large numbers of jobs right there.
	Universal Quality Affordable Childcare	Canadian Energy Centre War Room	Universal Quality Affordable Childcare Infrastructure Investment Diversification Technology and Innovation
T4N	Education and Health Care	There is a lot of waste in Health Care.	Incentives for small businesses and job creation Investing in the economy where jobs are being created-ie the Film industry Travel incentives for Albertans to stay in Alberta during vacations
T2M	Cutting public sector wages and number of employees	Cutting public sector wages and number of employees	Cutting public sector wages and number of employees. Cutting red tape. Cutting taxes (calgary property taxes)
T1K	Education, higher education, health, child care, vulnerable people	Stop corporate tax giveaways	Education that will help students develop creative, innovative thinking skills. Do not tie education to today's immediate job market as jobs are rapidly changing and we need people who are creative and versatile.
T2y	Healthcare education	Grants subsidies and cutting back government pensions	Getting our resources to market, and refineries
T1J	health and education	close the "War Room" keep people working and paying taxes and buying products start collecting a provincial sales/consumption tax	invest in companies of the future - tech - green energy keep education a priority to support new technologies, increase efficiencies in existing businesses and encourage entrepreneurship
T2G	Health, Education, transportation	By implementing a provincial sales tax, preferably one that was harmonized.	Invest in tax credit programs for targeted industries. Invest in orphan well clean-up to keep rig crews working.

T3C	Health, K-12 education, post-secondary education, and environmental protection.	Abolish the Canadian Energy Centre, re-introduce the carbon tax, increase corporate taxes	Support renewable energy jobs, not oil and gas jobs. The world is transitioning, and Alberta will be left behind.
T4R	Education and Health Care are always top of the list. Front line workers need to be sufficient to meet the needs and accessible. Create "net zero" carbon emissions by cutting emissions where possible, regulating what is in those emissions and planting trees, etc.	Government needs to cut the multiple layers of administration in education, government and especially health care. More bang for our buck with more front line workers and less admin or red tape! Curtail government spending and make it all transparent to the tax payers! Recalculate transfer payments to reflect Alberta's new reality.	Get the pipelines built!!! Much as some "people" may think, fossil fuels will not be replaced as the major energy source in our life time!! After our oil is flowing freely, then worry about diversification.
T4R	Child care	stop spending money on "focus groups" and "consultations" and go directly to each department and get feedback from those currently doing the job	incentives for child care educators
	Social programs (education, health care, mental health) and to create realistic jobs which do not depend on an unstable energy sector which is not committed to stick with us through hard times (their only goal is self/company profit at any cost).	I suspect that the kickbacks to business (especially oil and gas) are the largest areas for savings. I take exception to my tax dollars being given to wealthy corporations and then having our social programs cut as a result. You were voted in to represent the interests and welfare of the people of Alberta not big business!!!! Also internal spending - limit expense budgets, stop UPC party travel/car allowances, force part time workers to work full time and at any location... sound familiar????	Focus on creating non oil and gas jobs, stop supporting wealthy businesses (they will leave one way or the other once they suck us dry. They have no commitment to Alberta or the residents)
T4S	Funding public services adequately.	Get rid of the panels and war room. Squandering money.collect more revenue even if that means a sales tax. Really corporate tax breaks? Obviously a bad idea.	What you have done so far is not working. Wish I had the answers. I think the NDP was on a better course of diversification same same old not effective
	Education and health care for all Albertans.	Stop giving large tax breaks to corporations.	Spend money on health care, education and infrastructure.
T2S	Flood	Admin and no arena, require more efficiency and effectiveness in hospitals (outside large cities) and educational admin, nurses overtime practices.	Trying for industry diversification

	I think the government needs to focus spending on revenue neutral programs. These programs have a tremendous impact on Albertans and end up making the money back on investment, or even making money. Examples would be the \$25/day daycare program and Energy Efficiency Alberta. Energy Efficiency Alberta invested \$692 million in energy savings and emissions reduction since its inception and generated \$850 million in economic activity. I also think that it is important that the government continues to support and invest the amazing education system we have in place. As our province's population continues to increase, it's important to increase funding for education to ensure students have the supports in place to help them succeed.	Again, programs like Energy Efficiency Alberta and \$25/day daycare are investments that end up making the money on investment back, or make money. Investing in affordable daycare will help to increase gender equality and boost the economy. Every dollar you invest in childcare gets returned in terms of economic growth and growing the tax base, so it pays for itself in the long run. In Alberta we have a system of public and catholic healthcare and education. If we were to amalgamate the public and catholic systems, it would help to eliminate administrative costs and find efficiencies. I think that the War Room is also a tremendous waste of money, especially considering the blunders that the war room experienced in regards to the logo. This money could be spent somewhere else and have a much larger impact. If the government is telling public sector workers that their salaries should be in line with what other provinces pay, I think that we should also look at the salaries and living allowances that MLAs in other provinces are paid to ensure that Alberta is in line. Right now, Alberta MLAs make more than MLAs in any other province.	Investing in affordable daycare will help to increase gender equality and boost the economy. Families struggle to find child care and women are forced to make difficult tradeoffs between expensive child care and their careers. Oxfam claims if childcare costs were reduced by 40 per cent it would see 150,000 women return to the workforce and boost Canada's GDP by \$8 billion, or two per cent. In Quebec, which has an affordable daycare program in place, not only has daycare become affordable for families, but it has increased women's labour force participation, which helps with economic growth.
T8v	Education and Health	Look at how money is spent in upper administration levels.	Proper funding of Education so that students are prepared to make educated people creating jobs.
T4R	Education and health services. Class sizes are increasing and many children with special needs continue to rise. ADHD, autism, dyslexia is prominent in classrooms and there is not enough support for these children in a classroom setting (in need of more teacher assistants and teachers). Hospitals are filling up and hallways are filling with beds instead of actual rooms.	Reduce speed "traps" in areas where there are low or no records of accidents.	Decrease minimum wage and support small business growth. Allows small business' to hire and expand.
T7Z	1) Overall, prevention focus programming sets us up best for the future. This is applicable in both health, social services and education. Too often we focus on things when they have reached the 'problem' stage. 2)	I don't actually see finding savings as the answer - this just passes the burden to municipalities or to the most vulnerable. I think increasing revenue through a provincial sales tax is the most responsible thing to do. The War Room spending should also be cut - those dollars can be reallocated back into communities.	Support education and ensure post-secondaries have what they need to educate our future generations. Support social and community based programs as these are key to maintaining an Alberta as a desirable place to live. Stop fighting with the federal government and other provincial government - this is undermining our reputation and making us look ineffective. We should be leaders not whiners.
T8N	In the area of Education, focus on supporting Public Education(there is only one true public system). Charter schools, private institutions and the Catholic education systems should all be funded on a user pay system. Do NOT institute a Voucher system	Remove Catholic Education from Public funding as a first step. This step in itself will create less Boards.	Focus on Tech Sector, support exploration of creating the cleanest oil and gas in the World.
t8v	Upgrading HW 40 for 25 miles south of the Wapiti(Grande Prairie)	Education, teaching children to accept without critical thinking. Management in both Alberta Education and Alberta health	We should first get the energy sector back to work and use it to assist with technology jobs

T8N	Education, Health and Infrastructure	This is the time to invest in priorities and keep our province attractive as a place to live and do business. Through difficult times more expenditures are necessary.	Investments in education so teachers don't lose jobs and students can continue to afford postsecondary education pursuits. Infrastructure like roads and buildings. A sales tax is now necessary to keep our province as an attractive place to live. A deficit as a % of our GNP can be larger if we are productive and have a growing economy. The negative position of our government is destroying our viability as a province to compete with others.
T8N	Education, Health and Infrastructure	This is the time to invest in priorities and keep our province attractive as a place to live and do business. Through difficult times more expenditures are necessary.	Investments in education so teachers don't lose jobs and students can continue to afford postsecondary education pursuits. Infrastructure like roads and buildings. A sales tax is now necessary to keep our province as an attractive place to live. A deficit as a % of our GNP can be larger if we are productive and have a growing economy. The negative position of our government is destroying our viability as a province to compete with others.
t5x	Education and Healthcare should ALWAYS be made a spending priority.	Savings could be found by increasing taxes for the wealthy.	Economic growth happens when we invest in our community, creating more equal opportunities, increase overall income and financial security by creating a system that spreads the wealth to individuals (NOT CORPORATIONS), and in turn those individuals will frequent businesses and spend more, thus creating more economic growth and job creation opportunities.
t4b	Education: metro school boards in particular need more funding to help educate our future. Smaller classrooms and more support for teachers (such as educational assistants) are desperately needed... especially in the heavily complex classrooms in metro boards.	I don't believe there is a spending problem. I believe there is a revenue problem. Add a one per cent GST in order to fund things like education properly and better prepare students for the future.	Innovation in new technologies to replace oil and gas, while supporting current oil and gas companies.
T4R	PUT AND KEEP MONEY IN THE CLASSROOMS (student supports, class size initiatives, quality teachers) I do think it is ridiculous that teachers have taken another 0%.	LIFT teachers, PreK programming, field trip money, less administration/building	I do not have thoughts on this
	Health, Education (particularly languages), taking care of the most vulnerable in society, diversifying the economy	corporate tax break, war room, ministry of red tape	work to diversify the economy; invest in health care and education (particularly languages, which will help diversity markets), both K-12 and post-secondary - ensure equitable access; support the arts (including film) and technology; make Alberta a place where businesses will actually want to come
T3A	Health Education Climate change research and green technology	Eliminate subsidies that promote long term investment and job creation in the oil and gas sector, while continuing to support existing jobs in the sector.	Job training, job retraining for mid-career professionals. Support economic diversification, investment in green technology.

T5T	Focus spending on core functions. Life, safety, social support, education (K-12), health. Also look at revenue. You could reinstate the health care premium which might prompt users to be more responsible in accessing the health care system and implement a provincial sales tax which allows consumers some say in their tax bill by the spending decisions they make.	Since so many regions are trying to lure corporations through tax cuts I believe this is no longer effective. With on-line processing corporations can easily move from location to location without have to uproot bricks and mortar. As a result, they chase the cheapest tax rate and so I believe they just add the savings to their corporate funds and make no effort to generate additional activity in the local economy. Let the big corps pay there share. They make lots of money from local consumers.	Effort should be spent to remove trade barriers within Canada and with other world economies. Let's get our products (not just oil and natural gas) moved to somewhere besides the USA. Stop cutting jobs in public service unless the underlying program goes with it. Stop putting up disincentives for doctors, health care workers, teachers to come to Alberta by making statements that translate as "they are not valued here" and threatening to cut wages and eliminate jobs. If those jobs are cut you'll just spend more on the social services side so keep them working and at least get some benefit for the money spent. Conservatives have been talking about diversification for 45 years in this province and have made little or no gains in that direction. Set measurable goals for economic diversification or forget about it altogether! Continue to improve connectivity to other markets by continuing to improve transportation corridors for trucks, trains, pipelines and air cargo.
T2A	Core. Have a province wide consultation on Global warming, invite both sides to give their arguments. (The pro side will not show up if there are informed people to debate them because it is all a big lie and they know it) stop wasting money on Global warming nonsense and invest in clean energies. Not solar or wind, they have proven to be expensive and unreliable. (Nuclear, Hydro, and yes coal)	Stand up to these large unions, freeze their wages, they are extremely well paid and compensated for what they do, if they strike classify them as essential, if they still refuse, replace them, if they illegally disrupt others ability to work, arrest them and charge them. I am tired of being threatened and blackmailed by big union. Unions should not be allowed to spend money to push a political agenda, we have more than enough social services, handouts only serve to enable low expectations.	Lower Taxes, Red Tape, allow us to run our business without Gov't interference. Make this a low tax profitable market and you won't have to go out looking to attract business, they will start/come on their own.
T2A	Diversify economic base Maintain health care and supports for vulnerable	Consultants, war room,panels, oil and gas industry giveaways	Tax breaks and initiatives for new and diverse industries Invest in diversity in energy generation (green, renewable etc Keep people in all sectors employed

T5W	Health, Education, and Social Welfare	<ol style="list-style-type: none"> 1. efficiencies within each department 2. freeze on hiring provincial employees for one year...only hire for essential positions within departments, if a vacancy arises 3. hold all government workers' collective bargaining agreements to a 2% increase for two years (including government Ministers of all port-folios) 4. for all new project spending, ask these two questions: <ol style="list-style-type: none"> a. is the project practical and feasible? (is it useful and can we afford it?) b. is this planned project good for Albertans? (a YES is required to both questions, before any new spending is to occur) 5. seek Federal Government rebates, shared costs on projects, and any assistance being provided to other provinces in our Confederation; Alberta has assisted many fellow provinces, many times, during difficult economic or natural disaster situations; as well as examine previous Federal Government areas of responsibility within our province that have been downloaded to us (maybe our Federal Government can help us a little more with roads, bridges, and other on-going infrastructure projects) 6. incentivize local projects within our Province (city, town levels) by encouraging local governments to take on local infrastructure projects with 50-60% Provincial sharing...maybe we can encourage more "can-do" local community spirit to plan and carry out the completion of local needs) 7. create an Infrastructure Provincial Lottery for big-ticket projects...like the new Calgary arena...so things like LRT, bridges, ring roads, twinning highways, maintenance of Provincial parks could be the recipients of the lottery revenue....each year this IPL would focus and highlight one project within the Province, if the lottery is successful 	<ol style="list-style-type: none"> 1. get school districts involved in career re-training ...new skills for our workers who have lost jobs in the oil industry, or who just would like a change... so this involves using the expertise (and creativity and innovation ideas, too) that is already available across our Province (schools are a perfect gathering place, within any community, to assist those with their skills re-training, English as a Second language, and discussing the needs of workers (young and old) within the community); to assist schools in this regard, they may require assistance in technology and technology access 2. continue to promote and support economic think tanks that have fresh new ideas, that research where we are headed as a Province, that may have contacts with other similar groups in the World....again, incentives may provide the best "bang for the buck" 3. work with B.C., and provinces eastward, to complete a pipeline (fossil fuels are not obsolete, yet)...the pipeline can go in any direction, as long as it provides access to a marketplace...of course, we must respect our First Nations' wishes (hopefully, to become partners) and we must respect the environment (we need state-of-the art equipment that can be controlled immediately, in the case of a spill) 4. provide incentives to university, college, NAIT/SAIT graduates who stay in Alberta to apply their trade (so...forgiveness of 3/4 of their school debt may be a start; we need young, healthy, highly skilled Alberta workers...of course, this idea would have to be costed out) 5. we need DELL, Amazon, for example, to choose Alberta for their Western Canada operations....yes, this means tax cuts and other incentives to draw them to our Province 6. keep our Provincial parks for the use of Albertans and world travellers ...we have an amazing geography and rich cultural history...maintain our promotion of tourism 7. reduce business and building regulations, wherever
T2S	I think maintaining support for the poor and vulnerable shouldn't have even been on the table. Just cruel and out of touch.	All government employees should only have the same basic health benefits the rest of us get as a Canadians. Also, why all the cuts to support programs while still allowing the same amount of immigration.	Helping to transition our industries to offset our carbon emissions and start implementing greener ways to live that start a more positive narrative instead of this dooms day scenario Kenny seems to think is beneficial.
T8W	Education Health Infrastructure	<p>Education: less administrations (1 central office instead of 3 in many areas: county, city, catholic)</p> <p>Health: so much waste and damaged equipment by poorly trained staff</p> <p>Infrastructure: better engineering and construction</p>	<p>Stop taxing the small guy into poverty!</p> <p>The carbon tax is just another tax. The revenue from the carbon tax MUST be used for research and develop technology that will reduce our carbon foot prints NOT just give the government another source of income.</p>
T4A	Reducing wages for government employees at all levels	See above	Reduce corporate taxes
t6h	Public Education, Clean energy initiatives, technology, health care	by taxing bigger corporations and not giving tax breaks to oil and gas	focus on new emerging sectors and stop beating the oil and gas drum.

T6T	Healthcare. Quality of care is declining due to limited funding.	This question is written in a biased way. I would prefer that the government go further into debt than cut funding to important services. There is also a way to get more money. I would prefer to pay more in taxes. I would rather there be a provincial carbon tax that ensures that the money stays in Alberta, than through the federal carbon tax.	By not taking away money from post-secondary education.
T4J	Getting all the major projects on a reduced spending budget. When fiscal restraint is necessary there should be no increases in budget - make do with what you are given.	Seriously cut salaries from top administrators in all sectors - health, education, post-secondary, included. Cut expense accounts from every MLA, including government representatives. If you can not afford the gas yourself you shouldn't have the job.	Support new business opportunities in the private sector and not within government.
	Administration.	I think there is a mall sized building full of administrators. If the government wants to find savings they should speak with staff that work within the government and find the middle management jobs that can be cut. I do not think front line staff should be cut I think the problem is there are "managers" in place that manage literally 3 staff. Those three staff could easily be supervised by another manager and that is one position cut right away and immediate savings.	Tax breaks for small business owners.
t3b	Continue funding for feasibility study for Bow Basin Water Management Options Renegotiation of TransAlta modified operating agreement during flood season for the Ghost Reservoir	Cut MLA salaries and costs Reinstitute corporate taxes on the most profitable corps. Reduce costs of dental care and prescription drugs Fire secretive, costly, non democratic boards	Diversify the economic drivers of the economy
T0H	Health Education Employment	Industry	work with the grassroots people Local businesses

<p>T0G</p>	<p>1. Continuing to fight the federal carbon tax in court. 2. Getting our oil to port however we can. 3. Job creation strategies.</p>	<p>Savings can be found by cutting upper management positions in Health Care, Education and most government departments. A large part of why we have huge wait times in the medical system and poor education results in schools is because a large part of the dollars spent in these areas goes to administration and management. Our government departments need to be cut so money can be freed up to pay down the debt and then pay for people in the field who actually make a difference. The NDP government claims to have created over 90,000 jobs during their time in office but in reality all they did was add to the government. Cut some cabinet positions, cut the salaries of the MLA's. Everyone else in this province has had to take a pay cut and so should every person in the Legislature. Another area where savings can be found is in MLA's pensions and double dipping. Do you honestly think that the work done deserves the kind of payout that is given after someone leaves government? I have no problem with fair compensation for a difficult job and the sacrifice that comes with serving in political office but I do have a problem with over compensation and someone being paid for a job that is finished. Also, take a look at every single government department and cut jobs that are non-essential. Our town council managed to keep us to a 1.5% tax increase this coming year by cutting some administrative jobs and redistributing the work load. I believe you need to start with MLA's salaries and benefits first so people will see that you are not just about cutting but you all are also willing to make the necessary sacrifices to get this province out of debt.</p>	<p>Continuing to cut and keep tax rates low both corporately and individually will help. Get rid of the hidden bracket creep that was buried in the last provincial budget. Find new trading partners that will invest in Alberta and buy the products we have.</p>
------------	-------------------------------------------------------------------------------------------------------------------------------------------------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

t1h	<p>I am deeply concerned that this government will limit or get rid of PUF and Mild/Moderate funding. As a 17(1)</p> <p>trust that we WILL pay in the end if these services are cut. I do believe service providers who receive this funding need to be kept accountable some way, but it's really not worth cutting here.</p> <p>did you know that a large percentage of offenders have a language delay or disorder? if we can support those with language delays via early intervention, we build their language skills, which builds their positive peer relations and academic capacity, which in turn helps our economy. The research behind early intervention is crystal clear. this is certainly not an area to cut funding if we can help it!</p> <p>The lowered daycare costs is also an important thing to keep if we want to allow families to continue to work and contribute to our economy.</p>	infrastructure	pipelines
T5A	education, infrastructure, innovation, retention of trained staff	<p>by empowering and supporting well trained staff to find effective work life balance and get back to work while on medical leave rather than continuing to create a toxic work environment where people cannot come back to.</p> <p>Helping young learners with special needs early on so that they can then reintegrate into a regular classroom and not require individualized supports through out their whole education.</p> <p>Creating incentives for people without jobs to want to work rather than get comfortable on welfare programs, including doing some work (life cleaning the streets) before receiving <u>monthly income support</u>.</p>	by not cutting all the supports to education and creating more programs to address young learners needs and smaller classrooms for these learners.
t6w	Education, healthcare, initiatives to mitigate climate change, diversify economy	Eliminate the corporate tax cuts, eliminate the energy war room	Support diversification of economy in the province (we are not just oil and gas), support innovation, support higher education, engage in the clean/green economy growth opportunities
T6X	Public education, Healthcare	Corporate tax	Investing in renewable energy
T2J	Innovation, PUBLIC education, higher education, health care. You may remember them. It's the ones you cut.	<p>War room - cut it. Countless biased panels that have predetermined outcomes - cut them. 200k a year twitter propagandist - cut him. Place back failed corporate tax rate in line with the rest of Canada. Trickle down is a figment of your imagination that has proven time and time again it doesn't work.</p> <p>Maybe it's time for a 3% provincial sales tax. Those who spend more pay more.</p>	Remove your blinders. Your "tax savings" cuts to innovation helped drive new tech companies to B.C. While O&G is an important part of our provinces present and future, it is just that, a PART. The single mindedness of the governments agenda is maddening in how short sighted and stifling it is to the prosperity of all Albertans.
T2a	Environment and sustainability Province branding	<p>Development of new neighbourhoods requiring further infrastructure</p> <p>Restructuring of drug formulary to cover the same drugs but employ more rigorous restrictions</p>	<p>Diversification</p> <p>Investment in tech</p>

T8N	Spend on much needed projects such as Road and infrastructure maintenance to employ people while improving our province. Retraining people to work on sustainable energy projects	Stop giving tax breaks to big business. Collect taxes that are owed Reduce management positions in healthcare, education, government and redirect funds to frontline services	Focus on projects such as road maintenance, infrastructure upgrades and projects such as the super lab that was shut down. Keep people employed working on these projects Focus on renewable energy projects Encourage IT projects, companies to set up in the province
T0M	Diversifying the Alberta economy, environmental sustainability, education, and healthcare.	By stopping government handouts to large corporations! We let them get away with too much!	By focusing on supporting and developing local economies - value added initiatives to the resources and commodities that we grow here.
t3g	the basics only. province is broke, until we can get more pipelines built and drilling starts again. Not firing people but a small pay cut and reduction of sick days similar to private sector. Fire calgary city council to reduce spending that they are unwilling to do.	salaries, small pay cut across the board. No sweetheart deals for friends.	Start alberta cpp, police, tax collection. get out of every federal program. withhold amount equal to equalization until formula is changed.
T2S	It is essential that people are able to find work, if not, they will leave. Job creation must happen and soon. (Massive cuts to post secondary education are a frightening step backwards.) It is important that our oil gets to market but we also need urgently to diversify in a meaningful way.	Abolish public and separate school systems. There is far too much bureaucracy. There must be more efficient delivery systems within the public service. Ask the people who work there what are the time wasters? What is unnecessary? Contract out whenever money can be saved, while ensuring standards do not drop. Just be bold and bring in a sales tax.	Any way it can. Give incentives to young entrepreneurs and investors. Get behind emerging technologies. We are the sunlight Capital of Canada. Lets get solar working for us. Find new markets. Buy local rather than importing.
T5W	Education, diversification of our economy, reduce environmental impacts and creating jobs.	Decreasing red tape everywhere in government processes. Make it easier for Albertan's to get things done. Make decisions (ie. construction projects) that get it done as quick as possible at the lowest cost - don't extend projects for 3 years to maintain access.	The government should invest in new industries to create jobs in Alberta. Also, take a hard stance to get our oil to everyone in Canada and sending some abroad. Canada needs to stop importing oil, support our own people while also continuing to diversify our economy.
T3K	As an AISH recipient, please protect the current income exemption and AISH amount levels.	Sick leave for health & education ministers, cut it by a day or two a year per person	Get people with developmental disabilities in the trades
T2S	Build spring bank reservoir to prevent flood and associated damage in Calgary and surrounding areas.	Reduce bureaucracy	By building spring bank reservoir you'll great jobs and add a high speed train to Edmonton which will make Alberta even more competitive as western Canada's centre.

T5Z	healthcare, education, social services as your top three as these are there to protect Albertans. Next would be infrastructure investments as these help to put people to work. It is okay for government to manage debt, if that debt is used to directly keep Albertans working and continue to build a strong society. Government MUST show leadership and it SHOULD NOT EVER BE based on ideology alone. You are the government for all Albertans, not a select few who agree with your ideology.	Dismantle the war room. It is an utter failure and waste of money. Fire Twitter troll Wolfe. There is no need for a government to be confrontational with its citizens. You are accountable to ALL Albertans, not just those that agree with you. Impose a one time wage roll-back of 1%, followed by two years of 0%, followed by a 1% raise. This will sound like an increase in year 4, but you are at risk of losing the most talented people willing to work for the public service. The public service keeps the province strong, yet it is constantly attacked as being an unnecessary cost. These are the people that will make your government successful. Reward them for helping you get the job done. There is literally nothing the Premier can demand that can get done without the public service. He should embrace and value them, not attack them repeatedly, as he likes to do.	It is not through blanket tax cuts. Trickle down does not work and have never worked. High taxes can slow investment, but low taxes do not mean investment. It simply doesn't work that way. Embrace the energy sector as a sector, not as a fossil fuels only club, but as a larger diverse industry. Support international market development, but also embrace and expand renewable energy with the same vigour as fossil fuels. This will show a more balanced approach that will help to increase investment. Figure out a way to eliminate the deep discounts the Americans get for our oil. This has cost Albertans billions of dollars. Look to what Norway did and make the difficult decision that the oil and gas in the ground are non-renewable, yet owned by Albertans, so save. You missed opportunities in the past because of lobbying. Invest directly, with tax breaks that get better as companies expand. Don't start with 'lowest taxes', create incentives to have taxes tied to performance where the more jobs created result in lower tax levels. Why shoot for 8%, when you can provide incentives for companies to move from 10% to 8% based on how many jobs and wealth they create for the province.
T2S	DIVERSIFICATION FLOOD MITIGATION STREAMLINING SERVICES	-REVIEWING COMPENSATION OF PROVINCIAL EMPLOYEES -ELIMINATING DUPLICATION OF WORK AND INCREASING EFFICIENCIES	-KEEP TRYING TO DIVERSIFY THE ECONOMY -GIVE MORE INCENTIVES TO START SMALL BUSINESSES IN ALBERTA TO AVOID BRAIN DRAIN
T2S	Flood mitigation	Don't look for savings at the expense of employment in Social Services - share the pain fairly with a SALES TAX	Pay more to doctors, nurses and teachers. Promote infrastructure projects like Springbank Off-stream Reservoir.
T2N	I think that the government needs to look at the flood resiliency projects for Calgary. I live in 17(1) and I am still paying for the emotional and physical cost of the 2013 flood. If you don't think the costs are still going on, then you do not know how this flood affected individuals, businesses, communities, and the municipal government. If we have another flood like 2013 or worse, the social and economic costs will be even greater. Please fund the flood projects. This would also provide jobs for Calgarians and Albertans.	Stop expenses for government officials. Cut back on travel and hosting so that we can keep the services Albertans need in education and health care.	Start supporting the film industry again with tax incentives, rather than the foreign oil companies who are not doing much for the economy. Alberta has a good reputation in the film industry. Please do not ruin it. It is also another way to diversify our economy.
T2A	support for the sick the poor and the elderly	increasing corporate income tax and tax on the rich	invest in small business.
T2N	Flood mitigation in YYC along the bow and elbow rivers. Diversification of our labour market - knowing that we need to move towards green energy, education programs and job training to take those currently employed/trained in oil and gas and train them on renewable energies.	unsure	above

T1K	Human Services -health -education -addiction	oil and gas	new industry and markets in alignment with the global climate
T9m	Unemployment. Crime and punishment for criminals. Holding judges accountable for letting them back on the streets. Revamp the older holding facilities and reopen them	Refuse to transfer one more cent to Ottawa. Examine the spending of provincial money in every town and city. No new pensions and golden hand shakes for any government workers. Cut the nurses and everyone else who works .6 shifts then pick up the other days which pay time and a half and double time. Hire more to work straight days. Get rid of the multiple "Managers" managing managers. Examine the records of every school board every hospital every government identify waste and corruption and fire the culprits.	Hire by contract. Get rid of the long term chaff in government teachers, politicians government workers etc. hire without the golden pensions younger cheaper more skilled workers. Support small local farmers. Fix the deteriorating roads.
T3E	Education, Healthcare, AISH, support/harm reduction for addictions, post secondary	cut corporate handouts, stop corporate tax breaks	EDUCATION, HEALTHCARE
T8N	Health care and Education.	Encourage more family practice doctors to stop the hospitals from being overloaded.	I am not adverse to a sales tax so more teachers and nurses can be hired.
T1W	Not necessarily in priority: Infrastructure - keep roadways in top shape, for safety, as well as tourism in the south and oil industry in the north Goal- directed spending with accountability for reaching goals to money spent. Every project and initiative must have clearly defined goals in order to measure effectiveness. Reward efficiency instead of "spending the entire budget to get the same \$\$ plus increase" in next budget - seriously, that MUST STOP.	Privatizing health care departments, wherever possible, to shorten wait times (eg) clinics for specialty services (hip replacement, hemorrhoidectomy, hernia surgery, etc) Encourage charter schools, religious schools, and home schooling, to reduce the bloated expenditures in public schooling (with much better outcomes for students)	Eliminate/lower green taxes, gas taxes, hotel taxes, gas revenue royalties. Open up commodities to competition by cancelling marketing boards. Encourage free trade with all other provinces.
T3E	Arts and Culture - an underrated service in Alberta.	Implementing a provincial tax.	Offer more grants and opportunities for non-profits to host internships to give students a chance of having relevant work experience on their resumes.
T0H	Health Care Education Research and Development to diversify the economy	Make cuts to the budget to the legislature. Government think tanks are part of the wages of MLAs	Research and Development to diversify the economy. Work on interprovincial relationships to build infrastructure such as pipelines. We should be refining our own oil. Value added industries. We should be adding jobs not exporting our undeveloped resources
	Quality of life supports and services that make Alberta a great place to live - education, health, social supports, transit, green initiatives.	Cancel the "war room", and stop the "get rid of the red tape" initiatives, which don't seem to be accomplishing much. Instead of focusing solely on expenses, this province must take a hard look at revenues, and consider, once and for all, what every economist has said is needed and would be effective...1) a provincial sales tax, and 2) put back a carbon levy that we have control over - it's not going anywhere federally and it's sound environment and fiscal policy.	Stop cutting funding to baseline services. It won't help the economy overall to also attack education, social services, and health, all which are strong employment sectors in our province. The oil and gas industry is going through massive upheaval -let's lose the mentality of "if oil and gas is hurting, we all have to hurt" and instead bolster the rest of the province by supporting viable future industries such as renewable energy, research and development, sustainable transportation, tourism, food and agriculture, technology, just to name a few. We have to move beyond our "oil and gas" tunnel vision for the sake of our province and everyone who lives in it. Other places have been through this (think coal industry, fisheries, manufacturing shut downs).

T6J	Focus on our young people, which are our future. Fund our schools and healthcare system properly. A well educated, healthy population is our best way to ensure a bright future for the province. Ensure quality public schooling is available to all children and keeping tuition at all post-secondary education institutions (including technical and academic schools) at an affordable price to ensure we have qualified workers for all fields of employment to diversify our economy.	Institute a provincial or harmonized sales tax as all other provinces do to ensure that the government has the funds to take care of it's responsibilities (education, health, policing, etc.) Remove funding to private schools. In these times of economic restraint, if people have money to send their children to private schools that is their privilege, but the government should not be funding these schools to run completion to the public system we are already paying for. Get rid of the war room (Canadian Energy Centre) and work with the rest of Canada and the world to move forward in a more environmentally sustainable manner. Reinstate the previous corporate tax rate for business so they help pay for their share of the responsibility to the province.	Recognize that the world has changed and we can no longer rely on oil and gas alone for prosperity so we need to figure out ways to support other emerging industries, such as offering specific tax credits and support at international trade shows.
T2S	Flood mitigation for Calgary area. Taking care of the underprivileged, including the mentally and physically challenged, seniors, and healthcare. Infrastructure for cities, towns, and rural settings. Arts for the masses.	Administration in healthcare has absolutely exploded in the past couple of decades. Surely we don't need so many managers...?	Financial incentives for businesses, particularly small businesses in urban settings.
t6r	If you cut too deeply, you will create deficits in social and physical infrastructure. There is no reason why a province as wealthy as Alberta can't look after people / provide support to those in need. And invest in diversification - the invisible hand isn't always effective.	If government is going to reduce the size of the public service, start with those who have are already eligible for a full pension.	Diversification - especially those new sectors that build on existing expertise/capacity.
T2s	Health care and education.	Stop giving large oil companies extra money so they can turn around and then fire employees. Higher taxes large companies. Provincial service tax.	Raise minimus wage. Studies show a higher minimum wage helps local economies. Put more money into health care, understaffed hospitals and fewer clinics means more sick time taken from work

T3E	Public Education Health Social Services Transportation and Infrastructure	<p>1. Combine Public and Catholic education systems to a Public system only - it is not necessary for two systems that create redundancy and double spending, let alone the prioritization of a religious system that excludes a significant number of Albertans.</p> <p>2. Invest in preventative measures for vulnerable populations, including mental health supports, housing, and services. The up-front costs to proactively deal with challenges some Albertans are facing are far less than the reactive costs associated with policing, corrections, medical costs, etc. Let's work to deal with the root of the problem, not just run after the much more expensive symptoms. The ROI and savings on proactive spending have been proven repeatedly and reputable non-profit organizations in Alberta can provide that data.</p> <p>3. Cut the War Room initiative - it is both unnecessary spending that borders unethical, it is supporting an industry that is no longer the answer to Alberta's future. Oil and gas can be part of the solution, but by continuing to position it as the salvation, it reinforces a false narrative and characterizes Alberta as out-of-touch. More progressive industries and educated people will not opt to live and thrive in Alberta.</p>	<p>1. Education - make upgrading and upskilling opportunities easily accessible and affordable to Albertans that are open to changing their focus mid-career. We have an opportunity to create a knowledge economy and skill base in Alberta that will attract industry over time.</p> <p>2. Work to attract new industries and sectors to Alberta outside of oil and gas. New industries need to see opportunity to develop with appropriately skilled workers (thus the need to fund education now to have the workforce necessary for the future) and openness to innovation. A cutting-edge industry is less likely to want to establish themselves if the culture of the province continues to push "old-school" ideas.</p> <p>3. Push tourism to Alberta - this will help with job creation and money infusion in the short(er) term and also create stronger ties to the province for the longer term.</p>
t0I	Justice Education Healthcare	<p>War room Stop lying to the people and costing us money. Auditing the CBE is dumb when it just happened. The government's reaction is uncouth to their reaction; as is the government's pointless fight with the municipalities. IF the government wants to kill elected officials do it. Kill the MGA.</p>	<p>PST would make sense as the corporate business cut cost jobs as did the rest of the budget So far the budget has accomplished none of its priorities. -Jobs were lost not gained, the cuts are causing more jobs to go as well. -The lies and deception of the government has had an extremely negative effect on jobs as well. Education was cut not maintained. UCP guarantees aren't worth the toilet paper they are written on. -All Albertans have been directly affected in a negative way by the budget. -The war room has been such a joke that it has hurt Alberta's interest. TMX opposition has gone up nationwide.</p> <p>The budget should apparently do the exact opposite of what you did last time.</p>
T2S	Reducing the debt is very important, of course. But a major priority remains - to complete necessary flood prevention projects in the Calgary area for both rivers. We remain at considerable annual risk of major flooding. Your government is aware of this problem. Should a flood occur without such protection in place, the backlash would be enormous.	Sadly, substantial savings will likely have to come from salaries and agreements with government staff, health care professionals, teachers and other "big-ticket" wage allocations. Major projects can proceed, but only with very careful planning and financial project management. We need to carefully monitor our limited public funds.	I believe there is a role for provincial support in job creation, but it must be tied to clear measurable criteria (similar to post secondary funding). We cannot afford boondoggles of public money being wasted on pie-in-the-sky proposals. Choose carefully and/or get help making funding decisions. Economic growth is mandatory.

T2S	Flood mitigation for downtown Calgary. Protect businesses from the devastating effects of the 2013 flood. New Saddledome is now also squarely in the flood area as well.	Roll back public union wages. AEUR is a major cash drain. AHS has been eating tax payer money for years. allow and support more private healthcare alternatives.	cut taxes
T6E	Infrastructure repair and upgrades. Education	Ask your front-line employees.	Infrastructure repairs and upgrades
T1J	Reduce spending.. Reduce Civil Servant staff as NDP hired like drunken sailors, knowing they would not be in Office to suffer consequences	Alta has 400% more farm veh registered per farm than any other Prov in Canada. That mean that NOT ONE cent of income tax was paid on these luxury veh, like Cadillac and Porsch SUV displaying farm plates. In addition they get GST refunded Before NDP days the Govt started to look a this problem and DID eliminate the 13 cent per litre refund to Farmers however the Premier of the day said, IT IS OUR WAY TO SUBSIDIZE THE FARMERS without the Americans finding out. I will be speaking to my MLA shortly on this matter BUT a year from now, IF nothing has been done to correct this abuse, I plan to inform the USA authorities and watch the Border close to Alta. products. If corrected, it will increase millions of dollars in revenue for Govt. FARM plates should only be on veh transporting the product produced on farm and in other Prov. allow ONLY one veh. per farm to have farm subsidized plates.	Revamp the spending and waster created by NDP and THIS will result in economic growth. Reduce the empire building in Govt. ie Emergency Management Alberta is a waste of money in present form and was created by Military people, who are masters at building empires but absolutely no idea how to deliver a quality product. The Fort Mac fire was a true example of the EMA being a complete waster of time and peddled lots of BS to media/
	Increase spending to advanced education, research, and innovation. We need to develop novel technologies and diversify our industry in order to maximize our hold of the rising green economy. Alberta Innovates funding should be increased.	-Eliminate the UCP war room (Canadian Energy Center) -Corporate welfare/ tax cuts should be reversed	By funding innovation/ research such that people in Alberta own the Intellectual Property rights to novel green technologies.
T2J	Education and Research. No money to private and less money to religious schools and institutions. more to public boards. More money to government led research into health and agriculture. Diversify this economy.	Stop giving tax cuts to corporations. Collect more and better manage orphan well dollars. Stop going to Europe and staying at 5 star hotels. Stop paying Matt Wolf to harass people online. A Matt Wolf salary could pay for multiple entry social workers that are trying to find a job in their field. Stop funding the Canadian Energy Centre. They have made way too many rookie mistakes that are not helping our international image as a professional and forward place to bring business too - oil or otherwise.	Yes in more diversified fields. Not just oil and gas. the Canadian Energy Centre and corporate tax cuts are not working. more people now are out of work and even more are worried about their jobs. Retail spending is awful and indicates the bad job that the government priorities are going to only harm Albertans.
	Calgary Flood Mitigation. Finish the Springbank Dry Dam. It is critical infrastructure necessary to protect the City of Calgary. Do not delay !!!	Education & Health Care administration. Cut middle and upper management. It will not impact front line services.	Tear down inter-provincial trade barriers. The Canadian economy could grow by 4% if we had free trade WITHIN Canada.
T2J	EDUCATION which you did the exact opposite.	Wasting time with environment vs pipeline	Education investment its so obvious
	The priorities for me are the Springbank reservoir flood mitigation project, education, and police and fire services. All of these are critical for every Calgarian.	It could find savings in civil service departments by investigating work efficiency within each department.	By revisiting and revamping regulatory procedures which I understand are one of the biggest holdups to business initiative action.
T6M	Healthcare, education, and assisting vulnerable persons such as Alberta Works, AISH, subsidized daycare (seems to be the LAST thing on this current government's list)	corporate taxation	by supporting education and retraining, and looking at options past Oil & Gas

T2s	Flood Mitigation Economic diversification	Limit tax breaks to companies who provide no firm commitment to invest locally Get rid of the war room	More support for innovation and entrepreneurial programs
T0I	Attracting other business to Alberta and Calgary in particular Diversification is important as I do t think the oil industry is coming back to Alberta	Cbe. This group of trustees need to be removed and an investigation into how school money is spent	Promote Alberta as a great place to do business. Lower taxes. Good housing. Support the movie industry with financial incentives
T0I	Attracting other business to Alberta and Calgary in particular Diversification is important as I do t think the oil industry is coming back to Alberta	Cbe. This group of trustees need to be removed and an investigation into how school money is spent	Promote Alberta as a great place to do business. Lower taxes. Good housing. Support the movie industry with financial incentives
T2J	Education	Keep government-paid wages reasonable.	Continue to support advanced education, particularly dual credit and apprenticeship programs for high school students. These programs help students transition successfully from high school to advanced education, and help and encourage them to get the education they'll need to move our economy forward.
T4H	Economy and jobs including infrastructure spending especially roads Need to invest in agriculture who need help right now	Administration of Health Care Alberta MP travel and spending and pensions with more video conferencing Oversee City Mayors and council fiscal accountability No RCMP and form an Alberta police force prioritizing real crime not cash cow tickets A made in Alberta pension plan not Federal A government tax built into vehicle registration and licensing Non residence tourists fee in Provincial Parks because they will visit the Parks anyways and we will then collect revenue from non Albertans for gate admission and camping fees, etc.	Need to invest in the orphan well reclamation projects until we get more pipeline and energy projects approved for jobs Need to invest in Tech companies for the future Need to convert to some natural gas powered vehicles for environment concerns

T1H	<p>The government should focus on Education and Health Care. Education is the foundation for our next generation. Schools are already struggling with budget concerns. Inclusion added children with complex needs. Time is being taken away from active instruction to deal with "behaviours" that arise because of this. Smaller class sizes and the addition of Educational Assistants, Councilors and Making Connections workers are key to a successful school for all students.</p> <p>For the last 3 summers we have had to use the emergency room at our local hospital for an extended period and then required addition follow up care. The wait times are incredible LONG! Some services we have had to drive to Calgary for and it is very frustrating to be told they are doing the best they can.</p> <p>Both of these have been classified as essential services and I feel this is where the money should be going.</p>	<p>I do not agree with the current cuts in the areas of education and health care. I feel that many projects could be put on hold for a period or 2-5 years. Projects that are slated to begin in the next year could be postponed for a short period of time.</p>	<p>With all the cuts in services and an uncertain job future I can not spend on nonessentials. I have had a 2 percent increase in pay in the last 5 years and each year property taxes, utilities, food, insurance, etc goes up. Each year we have less money to spend on helping the economy grow!</p>
T1K	<p>Health care Education Early learning Mental health Environment No pipelines new initiatives other than oil and gas</p>	<p>No war rooms No corporate handouts Implement a PST Invest in public health/early intervention Collect taxes from oil companies</p>	<p>Innovate energy industry-faze out oil and gas over time but think ahead and promote alternative energy solutions</p> <p>Help and support small business</p> <p>PST</p>
T9H	<p>1. Education supports 2. Health Care 3. Maintenance of infrastructure 4. Job creation</p>	<p>Put a limit on how much can be spent while traveling for government business. i.e. plane tickets can only cost x amount. Cheaper transportation means should be picked first.</p>	<p>Support infrastructure and education so people are not afraid to spend the time and money completing a post secondary program.</p>
T2W	<p>Investments, especially infrastructure and technology, that increase market access, decrease costs and/or improve efficiency.</p>	<p>Reduce waste Reduce fraud Implement something like the Texas Performance Review (see link) https://www.theatlantic.com/politics/archive/2013/07/the-secret-to-cutting-government-waste-savings-by-a-thousand-cuts/277458 Bold, decisive action Reduce barriers to lower cost private sector services, e.g. private schools that have lower per-student costs</p>	<p>Streamline regulations Defend and promote Alberta industries and regulatory jurisdiction Opt out of federal program like CPP and RCMP - keep the headquarters and the jobs in Alberta Reduce taxes Avoid subsidizing gimmicky, virtue signaling industries</p>
T6T	<p>Increased Health Care and Education</p>	<p>Increase taxation on big business, implement a PST</p>	<p>Diversify and invest in the future (ie tech), not the past (ie oil)</p>
T5x	<p>Employment. Children. Medical</p>	<p>Get rid of the supervisors/managers who have had complaints against them. surprise home visits to those living on welfare. Many live with spouses and collect welfare illegally. Get rid of the opiate/methadone programs where the govt pays to keep people high.</p>	<p>In Alberta it's the oil. When oil does well, every other sector does well. Get other major companies to alberta. Reduce costs of child care. The #1 barrier for families for returning to the work force is the inability to find affordable child care. It's also hard now that insurance costs and tuition has gone up so drastically.</p>

T8H	Healthcare, education, you know the important things! not ways to save the failing oil industry.	Getting rid of the oil room or whatever it's called, and quit bailing out failing companies .. we can't afford that. Make oil companies accountable to pay their taxes like every other Albertan has to!! Food prices are through the roof!! None of us can middle class can afford it either, but we pay our taxes.	Concentrate on creating and supporting new innovations. It's up to you to create something new, you're the government. Forget about oil for now and find something new!
T1X	properly funding education and healthcare (reverse your ill-thought out cuts), increasing access to publicly funded education and healthcare, poverty reduction and harm reduction such as the safe consumption sites, which have many long term savings such as to the health care system, let alone people's lives and family members	scrap the war room, it is a waste of money, eliminate the "job creation tax cut" which has created zero jobs, companies have taken the money and run	support k-12 and post secondary education; stop making cuts to programs, this has only eliminated jobs
T8R	Health Seniors Benefits	Cut management positions in all sectors	Help small business
T2T	Positive message to the world's investment community that Alberta has a stable environment. That means not only our educated workforce but also a city that won't be held hostage by the potential flooding.	Mobilize early-retired people whose wisdom and time can be applied to more than bridge and golf. Just as the airport use "white-hatters", other departments can brain storm on how to creatively extend the "white-hatters" concept to use early-retired expertise to cut expenses.	An educated workforce is required to attract companies to Calgary. Cross train more technical people in Information Technology. Instead of watching Netflix, revive the old PARTICIPACTION campaign to get people into communities to teach/learn coding. Not just the kids, also the unemployed oil/gas professionals and the early-retired. We all need to learn the languages of the future.
T7N	Seniors, persons with disabilities and health care	How about closing facilities like McCullough Centre whereby the facility is not at full capacity, staff outnumber the residents, no success stats and our government invested 6+ million dollars for and administration building!	Focus on creating new jobs for Albertans, not immigrants.
T0B	Education and Health	Cut wages for political pensions and elected officials spending !!	Put money into education ... Early childhood education is the biggest bang for the government buck !!!
T5R	Education, social supports, affordable housing.	Healthcare procurement. Taxing international resource extraction companies.	Maintain well paying middle-class jobs that serve the public good. Foster problem solving and pragmatism in public servants so that they are helpful when supporting entrepreneurs and business owners as they navigate government regulations. Implement transparent processes and release data that allows the private sector to confidently make decisions and innovate.
T2S	protection of Calgary from the next flood	health care	reduce red tape (see what is happening in the US)
T0M	Education, healthcare, environment	Higher tax for high earners	Movie industry credits, solar power and green energy
T9C	PEOPLE - education - all levels, healthcare, social services, mental health support, subsidized daycare	Tax breaks to big business, corporate loopholes and high paid executives	Lower the cost of post-secondary and provide more support to youth entering the work force, support small business owners and more financial support to smaller communities

T2S	<p>The government of Alberta should be prioritizing budget money to support flood mitigation projects in and around Calgary.</p> <p>Budget 2019 saw a serious reduction in the Alberta Community Resilience Program funding allocation for Calgary, and no money budgeted to proceed to the next step of the Bow River reservoir project.</p> <p>This is unacceptable and proper amount of funds need to be allocated to flood mitigation, in order to ensure that Calgarians are protected from the next flooding.</p>	Reduce size of government.	Support the oil sands and pipeline sectors
T2S	Helping to diversify the economy and not just putting money into oil and gas; supporting the most vulnerable members of Alberta such as people on AISH; Building the Springbank Dam before we incur the costs of flood damage again.	Dissolve the 'War Room.' Quit funding private schools with tax breaks. Adapt a sales tax.	Encourage the tech industry and innovation programs in related areas.
T8V	GPS Tracking of all criminals in Alberta. A provincial Community Impact Statement (CIS) should be in front of every judge when they sentence a criminal. Allow the criminal an opportunity for reduced sentences if they leave the province.	Scales of Economy: Currently there is redundant services being provided by NGOs throughout Alberta. Their funding derived partly by Municipalities, but in large part by Provincial Grants. The province needs to reduce all Grants to Municipalities, so the Municipalities learn to live within their own financial capability. I see Municipalities empire-building, based on their own agendas, rather than for the law-abiding citizens.	<p>Stop importing finance & insurance from other provinces. Those are good-paying jobs which should be going to Albertans.</p> <p>Refine all products in Alberta: We ship cows to the US, and import meat. We ship grain and import cereal. We ship oil and import plastics. We need to regrow, rebuild and redesign 'Made in Alberta'. Alberta AAA Beef once meant something.</p> <p>Stop all food imports not labelled in primarily english, and secondary french. It would create a demand for for ethnic food stocks, which would allow locals to develop and grow that market</p>
	Keeping jobs, making GOA more efficient, holding wages to small increments.	Savings are to be had by not allowing GOA workers to take GOA vehicles home. Many GOA employees drive 30-60 minutes every day to and from the office/work with GOA vehicle, others live out of the City center by up to an hour each way, using GOA fuel, increasing maintenance and servicing costs.	Do not lay off UNA, ATA or Public Sector workers. Reduce by retirements.
T8H	Healthcare and education should always be a priority for the governments budget. These are two things that should never be determined by the economy. People still get sick in boom or recession.	Top-heavy programs, bonuses for executives, physician billing/wage reduction, higher taxation for corporations.	Support social programs, proper safe staffing levels in health care, embrace new technologies. Stop supporting the corporations and support essential services (health care and education)
t9h	HEalthcare, affordable childcare and Education	by collecting all current outstanding traffic fines, cutting support to all large corporations (tax breaks) and reducing Public servants like City councilors, deputy ministers and from Family doctors (by regulating and better inspecting their work). Many many doctors are there to count how many people they see, but do not help them... there i no follow up there is no one to verify that x or y doctor is actually doing his work properly. Create "inspector" jobs and hunt these useless doctors that are sucking dry the healthcare system.	monetary and tax break incentives; supporting better educational institutions that teach innovative careers and work to diversify our economy and money sources. Oil will not be there forever and we need to exploit other sources of energy; cleaner and more sustainable. Let's be the first on innovative ways to produce energy, to reduce gas emissions, to reduce waste. Let's make our society more responsible and more educated.

t3b	Affordable childcare for all families Sustainable funding for schools	Corporate tax cuts	Diversify from reliance on oil and gas Support universities Training programs for unemployed individuals
T6M	Making life more affordable for Albertans; allowing Albertans to participate in the workforce. This includes public transit that is robust and affordable. This includes child care that is affordable and accessible in large and in small communities -- and subsidized for those who could otherwise not afford it. This includes transportation options between rural communities and the large municipalities. This means not reducing funding or transferring costs from the province onto municipalities and school boards. "Death by a thousand cuts" which leads to higher school fees, larger class sizes, and higher municipal taxes are having a devastating impact on Albertans, on the economy, and on prospective employers' decisions about whether to hiring more employees.	Eliminate useless (and purely political) government-funded entities like the so-called "War Room" and the Red Tape Reduction ministry. Not go back on signed contracts -- like the Oil-by-Rail contract and contracts with labour unions -- which result in wasteful court costs and paying penalties to get nothing in return. Reign-in the premier's excessive travelling to eastern Canada, Europe, and the United States.	Make life more affordable for everyday Albertans. Do not cause uncertainty within the economy and the workforce by making reckless cuts, threatening massive job losses across the public sector, and transferring costs to school boards and municipalities; which to the taxpayer merely result in higher fees and taxes from a different level of government. The GoA should respect signed contracts even if they were negotiated and signed by your predecessor; so that external entities that contract with the government have certainty that doing business with and making agreements with the government is not risky. Prospective employers can create jobs and build in infrastructure in Alberta knowing the government live up to their word and will not renege on agreements.
T5K	Health care and Public Education	If the government implemented a system to verify that people using the Alberta Health care system actually live in Alberta at least 6 months of the year, you would find that thousands of people do not qualify as residents and just come here for medical care, You would save millions	I don't know
T3E	Health care and education	By reversing tax cuts	Providing incentives for diversifying the economy like funding/grants for Green energy and technology businesses
T4C	1. Education 2. Research and development into new technologies to make this province an energy hub. Not just focussing on one sector. 3. Small businesses- successful small businesses increases financial diversity and provides us with some revenue capacity. should they 4. If you're in need of a revenue stream and you are taxing large emitters, please charge me in a carbon tax. I have NO problem contributing to the solution by taxing me. Seriously. I emit pollution as well and I would like to help the oil and gas industry be successful.	1. Grandfather out subsidies to large companies who should be able to factor from their profits how to sustain their operations through good and bad times. They have been operating for over 100 years and should have a handle on their own spending and operations. Why should other industries have to freeze their spending if these guys don't have to? 2. Look at education and healthcare boards and see if some trimming can be done there. 3. Ensure that any and all resource industry has a full cost financing cycle so that they can handle clean up like they are suppose to. In the eyes of the consumer, this will go a long way to trusting these companies.	1. Taxes 2. Redistribute revenue into high tech, low carbon technologies 3. Diversify our economy 4. Ensure companies have enough capital or reserves to be able to handle boom and bust economy if that's how we're going to stay

T6C	<p>Health and education and social programs. What kind of society are we if we don't care for our citizens regardless of socio-economic status? That includes making sure they are properly educated.</p> <p>Infrastructure construction and maintenance also pays off now, in terms of jobs, and in the long run (in terms of having infrastructure already in place when growth returns rather than paying a premium when rushing to catch up).</p>	<p>Cut the War Room - there's \$30M of unaccountable money saved right there. It isn't the government's role to advocate on behalf of a profitable private sector industry. Stop funding panels and town halls design to give your government the answer it wants.</p> <p>There are two ways to balance a budget - quit ignoring the revenue side! Get our taxes in line with other provinces and you'd be surprise how the spending and deficit problems go away.</p>	<p>Through initiatives to diversify away from commodity jobs (oil and gas in particular). Through infrastructure spending which has numerous benefits as that money works through the economy. Both of these items will pay off in the long-term. Honestly, the initiatives funded under the now-repealed carbon tax where funding a lot of research and a lot of jobs. Through not cutting education and health care jobs - those people will then be more highly reliant on social services and will not be buying local goods and services.</p>
T4X	Getting the people back to work and keeping the unemployment rate as low as possible.	I think the government should look at the equalization program or take stock of the cuts made already.	Programs and grants, federal help, which put all people back to work without any lay off to anyone.
T2J	<p>I think the Alberta Government needs to focus on maintaining to the upkeep and maintenance of all schools, lots of schools I believe and falling apart either with plumbing or boiler issues, up to code with ecco guides in heating, windows, roofing , electrical etc.</p> <p>I think also more teachers need to be hired and more focus on the trades(culinary, welding, automotive, carpentry) into post secondary, not all kids are going to be lawyers or doctors so the focus should be to get kids involved in a trade before they leave high school. 17(1)</p>	<p>First of all the CBE is very top heavy in Administration. Its crazy how many specialist and over paid educators at the higher management level. The CBE has so many Director's and they have an assistant that have an supervisor that a assistant!!!! so much money being spent on excess managers whom do little but create more policy and rhetoric to justify their jobs. 17(1) a CTS specialist in the CBE that gets paid over 150K for what, 17(1)</p> <p>Yet the CBE decided they are going to cut 300 teachers yet do the talk about cutting salaries or elimination of higher staff costs at the Managers level??? never its always cutting support staff and the teachers and staff in the trenches making a difference who really care about education and teaching kids.</p>	<p>By supporting and hiring of more teachers and reducing Directors and Superintendents salaries, and specialist with in the CBE, cutting their salaries and reducing costs will save the CBE millions is salaries that can be redirected in busing, after school programs, more help with special needs and kids whom are struggling needing more support on a day to day basis.</p> <p>The Alberta Government needs to look at the big picture which is to build more infrastructure in the education by reducing class sizes, increasing funding not in special education(charter schools, private schools) but more focus getting back to basics of teaching and let teachers to their job, not the over paid mangers and area directors.</p> <p>The CBE should have their feet held to the fire and be more accountable for spending!!! I have seen so much spending for directors and upper management in catering, lunches and over paid banquets that we have to cook for and then some schools kids go hungry because there in no lunch program for underprivilege kids that are in need.</p> <p>I support the Education Minister for waiting to fire the CBE Trustees and she should, they are so out of touch of the reality of how spending should happen and how much it effects to school education system.</p> <p>The CBE has spent money like a drunken sailor and the Supervisors and Management should be held accountable, cap their salaries and clean house!!!!</p>
T3G	<ol style="list-style-type: none"> 1) Heath Care 2) Schools 3) Infrastructure Maintenance 	<ol style="list-style-type: none"> 1) Reduce senior staff at AHS 2) Reduce senior staff at all Education Boards 3) Reduce senior staff at all Public Services 4) Reduce public service staff (AUPE Members) 5) Reduce car and office space rentals 	<ol style="list-style-type: none"> 1) Maintain the \$15 minimum wage 2) Do not collect at source Alberta Income Tax for \$15 earners. 3) Eliminate the carbon tax on "as you say" the big emitters. 4) Premier hold job planning meetings with big company CEOs(yearly)

T3B	1) continued funding for the feasibility study for Bow Basin Water Management Options	(2) renegotiation of the TransAlta modified operating agreement during flood season for the Ghost Reservoir	Not sure
T4V	Education, healthcare (including mental health), social services of all kinds	Decrease corporate bailouts, fewer tax breaks for corporations and large businesses (including oilfield)	invest in industries that are sustainable long term (diversify from oilfield to sustainable energy), focus on education to create more hireable young people, ensure a basic liveable income for all.
T2W	Given the red ink, I would defer added spending until the budget is balanced. Or for every new program, cut 2 or 3 others to reduce waste.	Reevaluate the entire government and eliminate anything not getting results, streamline fat such as AHS, look at outsourcing more, think effective, efficient and economics. And no sacred cows or friend deals.	People that are taxed less spend more on other peoples jobs. Tax and debt to buy consumption jobs do not generate wealth. When none value added consumption is done, its pandering. Get Ottawa off our backs. Tax, debt spend too much and people will leave like SK NDP days.
T3A	PUBLIC Health care, IT/tech, social services	In the amount of money they are allocating towards oil and gas. It's a dated industry and we need to look to the future	Again, the government needs to start looking outside of oil and gas. We could be a really progressive city if we stoped dwelling in the past.
T1H	Education: \$0 funding for private schools, less inclusion based classrooms, children with like needs put together for core classes, everyone grouped for gym, art, music. Health Care - risk reduction strategies (like charging patients for non emergent emergency visits, eg, calling the ambulance to take someone to the emergency who then gets up and walks out the hospital door, tooth ache that they have had for the last 3 weeks, etc. Attracting tech based businesses, research companies.	MANAGEMENT!!!!!! 17(1) There are in scope management positions, duplicate management positions, admin support for management positions (that don't have enough work to justify their position. Managers will admit they don't have time to do anything because they are in meetings all the time finding ways to re-invent the wheel. Micromanagement by management. Front line staff engagement has decreased, which is where the actual ideas and needs are identified.	Diversify to new types of industry. Wage support to companies willing to hire new grads (company can pay a bit lower per hour to get less experience, but the grad gets a competitive, livable wage)
t8n	increase the fuel tax. Have a scale that as the price of oil goes up the fuel tax goes down and when the price of oil goes down the fuel tax goes up. Change it annually or semi annually. This way the price of fuel will remain relative constant and the govt gets more taxes in. Even when the taxes go down the govt will make more on the price of oil. It should go up by 10 cents per liter. Or put in a municipal fuel tax where it starts at 2 cents and goes up 2 cents per year with all the money going to municipalities.	get rid of waste	Lower minimum wage bring back wage lower for bar and rest workers Do advertising showing that owning a business is a good thing, so much the other way people think business owners are bad greedy people
T2X	Stop cutting from education and health care! Fund for our future and the kids that will one day lead this province.	Providing tax cuts for large corporations while cutting from health care and education is ludicrous! Find another way to stimulate the economy. Invest in renewable energies and stop pandering to oil and gas, as if they are the only thing that matters.	Open your eyes and your minds to other types of business, not just oil and gas. Invest in renewable energies and other types of industry. Allow schools and hospitals to staff properly, which is impossible on the budgets we currently have.
T3K	Fully fund First line responders, EMS, Police and firefighters. Health Care second and education third.	severance packages, middle management at AHS and wasteful spending at AHS.	Not my expertise but lower corporate taxes makes sense to bring big companies back to Alberta

T2Y	Education, Healthcare, and a diversified economy that will cut our total reliance on the global price of oil. Alberta can be a leader in so many more fields than just Oil & Gas. Oil & Gas is important and we need to get our product to tidewater, though we can still be energy producers and leaders at the same time.	The government could save a lot of money by not handing billions of dollars to the already wealthy, profitable corporations. These corporations seem to take the money and run, as proven by the relocation of EnCana, Husky, among others who took this break and invested in other parts of North America including the United States.	By investing in the people, supporting our infrastructure, and creating jobs in many sectors through grants and incentives. By handing large sums of money to large corporations and making Albertan's pay for it with services and higher fees, its only the corporations that will benefit. The everyday Albertan won't see any of that and will therefore be unable to stimulate the economy through consumerism.
	Diversifying the economy, education, healthcare.	Cut MLA's paycheques, get proper royalties from petroleum sector, get rid of the "war room."	Invest in industries besides oil and gas
T3m	Health, education, climate, and municipalities.	Generate income and tax the wealthy - individuals and corporations. Hire people who are key knowledge holders from all political leanings and with a swath of demographics that work in the industries you're making cuts in to make the best-informed decisions. Boards of wealthy people don't know what's happening on the ground. Listen to the entire community - including the "lefties" that this government continues to demonize in social media. Quit dividing Albertans further across political lines and find ways to unite us so that we'll actually believe you want the best for us and support your work.	By moving Alberta forward - support the tech and arts sectors. Also remember that people employed in the health and education sectors are also a part of economic growth, pay taxes, and spend in this province. Stop cutting their jobs. Be truthful and quit hiding behind too carefully crafted lines. We want leaders who are authentic.
T5X	Education (including post secondary) and Healthcare, universal \$25 a day child care program	eliminating the Canadian Energy Centre/War Room, eliminating the associate ministry of red tape reduction, reinstating appropriate levels of corporate tax	Helping to diversify the economy away from primarily relying on Oil and Gas, such as reinstating the tech investor tax credit. Also, reinstate the youth minimum wage to \$15 per hour, as one of the best ways to stimulate economic growth is investing in the lower economic classes, who spend a bigger percent of their income in the local economy.
T7y	Front line service providers.... Nurses, teachers, etc And infrastructure	Top management and unnessesary depts. Make government smaller.	Tax breaks for new industry
T1B	Education and Health. But it must be constructive spending. Start reforming both by trimming fat and putting resources where they are needed.	By firing all 50% nurses earning 200,000.00 by scamming the system. By replacing 20% of teachers each with 2 teaching assistants. By banning all unions in the province. Overhaul AHS. Way too much management. Trim hospital by hospital. Eliminate " sherriff" department-What is their role?????	Energy sector needs to be revitalized. Its dying. Get a refinery built in province, get the Ing project done and any other pipelines needed going. Put me in charge of negotiating union contracts. When the teachers strike have an immediate plan to send \$\$ directly to families so they can get their kids into private schools.
T6W	I don't think community programs that only a small percentage of the population benefit from should be focused on. I think progress needs to made on areas that the MAJORITY of the citizens benefit from. -Roads -Infrastructure -Transportation -Hospitals	-The amount of government positions	Buy building and expanding city and towns that employs a vast amount of people. More jobs = more money = more spending
	Not cutting jobs	Implementing provincial sales tax	Not cutting jobs

T9S	Healthcare- no layoffs, hire into permanent positons Education- class size be determined by ATA. Social Services- cancel 24 hr slot machines, open more injection sites L	Disband war room. No more Mackinnon reports from non Albertans. AhS....cut management salaries 15% and look at sunshine list to target.	Economy-solar power greenhouses, incentives to farmers to grow food for Ab Oil is fading out...do not approve any new projects from foreign interes. Tourism beautiful province,could be huge money for AB
T8W	* Build more Affordable Housing for Vulnerable Populations in smaller urban centres such as Grande Prairie, * Health Care Facilities and sufficient numbers of Staff to work in them (public not private health care), * Adequate number of teachers in the classroom so the student/teacher ratio is at a manageable 15 - 20 students per teacher, * Diversify the economy and don't rely solely on the Oil & Gas sector for revenue. This would mean grants for green energy research and development, high technology & innovation research & development, etc.	Close down the "War Room" and apply that money where it is most needed (ideas listed above in the spending priorities).	Diversify the economy so Alberta isn't solely dependent on the Oil & Gas Industry. Offer Grants and Programs designed to train Albertans to work in other sectors of the economy - not just Oil & Gas.
T8N	Job creation Reducing Red Tape for Start-up businesses. A Small Business Bank loan that exceed the \$350,000 cap currently in place.	Sometimes savings are simple. A city could save money by mowing park lawns every two weeks.	Yes, see my comment above.
T2R	Transit, affordable housing, healthcare	Reversing the tax cuts for oil and gas companies. Adding a provincial sales tax of 5 to 10 percent. Scrapping the Oil and Gas war room.	Listen to entrepreneurs, reduce property taxes for small businesses. Reduce the reliance on oil and gas as our only form of income for the province.
T2M	Healthcare, education and green renewable energies	Reducing corporate welfare's and by taking a leadership role and cutting your own paycheques and expenses. Also, flying economy not taking meetings with US lobbyists.	Taxing oil revenues and investing it like most European countries.
T8n	The priorities should be Health care, education, services and supports for adults and children with disabilities and their families. The priorities should be those in need and vulnerable populations. Stop your cruel and devastating cuts! We are watching you systematically attack core values of compassion with your heartless cutbacks and attacks on the most vulnerable. All these cutbacks will have absolutely devastating social and economic effects and will end up costing the government way more in the end. We are NOT ok with your cruel and heartless cutbacks.	Cut the war room, cut the salaries of grossly overpaid politician and top government workers. Cut all travel and hospitality budgets etc etc stop handouts to oil companies and the rich. Trickle down economics doesn't work and it is absolutely not working now.	Stop cutting public service jobs. Stop destroying the economy. Stop making people panic, people spend less money in the economy when there is panic
T2M	health care and education	increase taxes	I do not know
T2A	*education: for all schools, not just public system *health care *social services/resources - especially for people with disabilities *pension plans for seniors	*don't give big companies billions of dollars *reduce salaries/spending for higher up government employees	*invest tax payers money wisely - don't spend it all *stop laying people off - unemployed people don't spend money *lower gas prices = lower food prices

T6L	Jobs, getting the pipe line going. Standing up to Trudeau's promotion of special interest groups, reckless spending for non Canadians & promotion of refugees' values, at the expense of the rest of Canadians.	<ol style="list-style-type: none"> 1. Stop promotion of special interest groups - funding for LGTB promotion in the schools & elsewhere, extra funding for apologies to Aboriginals, both of which are upsetting 'regular' Canadians. Stop funding for Pride parade. 2. Stop extreme overpayment for CEO's etc. of Universities, Colleges, & other educational institutions. There is no money left for the students & teachers & their programs, the real reasons for the institutions' existence. 3. Much waste also in the health care system. Payment for sex changes & the extensive counselling following - this should be a choice paid for by the individual. Abortions due to irresponsible life style, should also not be public responsibility especially when it means essential services to others is impacted. 	Put a limit on salaries of CEO's, Presidents of Institutions, Public Administration & redirect that money to save taxes for small business, ordinary people.
T5M	<p>- PEOPLE, NOT CORPORATIONS</p> <p>- Education: fund (at the very least) for student growth and stop asking parents to pay more fees; reinstate the transportation (and other) grants that were cut; provide funds for all the deferred maintenance on the schools that are crumbling.</p> <p>- Early intervention: all the research says that the more you fund young kids who have special needs, the less you spend when they become adults. Seems like a no-brainer if this government cares at all about Albertans and not just being re-elected.</p> <p>- Healthcare: our hospitals are working with old equipment and buildings that are crumbling. This should be a priority.</p>	<ul style="list-style-type: none"> - drop the 'war room' - drop the corporate tax cut - drop the oil and gas welfare - introduce a SALES TAX! - use evidence-based decision making - stop micro-managing universities? 	<ul style="list-style-type: none"> - fund alternative energy initiatives (solar, wind - this will produce all sorts of jobs and put Alberta back on the global map, instead of being a laughing stock) - provide grants to stimulate work (think Roosevelt and the US National Parks) - re-start building the Edmonton superlab - this government has broken every other promise, so what's one more? - we need to spend money to stimulate the economy - trickle down economics DOES NOT WORK (the research and evidence is clear!)
TOM	I feel that the government is on the wrong track. By cutting back capital expenditures they are creating an atmosphere of poverty that is being reflected in lack of viable and beneficial and needed infrastructure investments. This would include schools, highways, and identified sewer and water projects. The fall out from those projects would inject money back into the economy at a time when construction companies are willing to provide the best service at the lowest costs.	<ol style="list-style-type: none"> 1. Do not use P3s as a project model. These models have been proven time and time again to cost more money than traditional builds. Sure it takes away from a government line item but the "rent or payments" have to be more to make up for the extra profit that companies build into their bid. 2. Invest in building projects now to save money. 3. Do not delay infrastructure, especially highway repairs because for each year to delay you either add extra multiplied cost to a later repair due to negligence or you allow the road to deteriorate to the point that it needs to be rebuilt. 4. If you are concentrating on reducing staff only look at the administrative levels not the front line. 	<ol style="list-style-type: none"> 1. New infrastructure projects. 2. STEP is a program that supplies the most needed funding for those who are going to be our Provincial leaders. It encourages them to stay within our province as well as provides much needed manpower for charities, municipalities and many other groups.

T6R	Education, Health Care, Safe injection sites and support for addiction and mental health, environmental protection,	A path to balanced budget should include implementation of a provincial sales tax and reversal of corporate tax cuts. My view is that revenue in addition to spending needs to be looked at carefully. I'm happy to pay taxes which contribute to the high quality of life I enjoy in Alberta; I particularly value having excellent public education and health care systems.	Encourage economic diversity beyond oil and gas
	Reinstating the 33% reduction in corporate tax revenues (12% to 8%) until the UCP is able to balance the budget. Why would we want to give up corporate tax revenues of \$4.7 billion at the cost of public services when this has been proven to not contribute to the creation of job?	Restoring the corporate tax rate, implement a PST, look at ways to cut spending on indigenous populations, Disband the War Room	By spending on infrastructure within our province and avoiding tax breaks to large corporations.
T3H	Education, Health, Diversification of the Economy	Closing the War Room	Supporting the Technology Sector, investing in renewables, building infrastructure
T7A	I am concerned about the increase in tuition fees for post secondary education. It leaves young people with a huge debt to pay off even before they can start working. Is there not some other way to have income from this source without putting the load on students? Perhaps those at the top of the ladder [CEO's, professors, those who hire the janitors, etc] could take a cut in pay. Of course, no one wants to do that but a smaller pay cheque is better than no pay cheque.	Why do we pay such a huge amount to the Federal government when Quebec and other provinces with more population pays less? Do we get an equal share or a fair share in the benefits of paying that money? Wouldn't less to them be more for us?	Having looked at the budget, the government seems to be on the right track for that. 17(1)
T0H	Research and diversify all sectors, agriculture, tourism, forestry, technology, energy.	Put a cap on publicly funded individuals. ie. AHS has many positions over \$250,000.00/ year. Cap everyone on the public purse at \$200.000.	Research and development, incubators, encourage departments to become more efficient with incentives
T8B	Education, healthcare and economic diversification	MLA travel and expenses, expensive appointments to boards and agencies, eliminate the highly ineffective "war room" and instead invest the money in funding green energy initiatives (and take advantage of the global trend away from fossil fuels).	Increase corporate taxes and restore tax breaks to working Albertans. Fund those sectors where growth is possible now - green energy, leading edge carbon reduction technologies, etc. Restore tuition tax credit so students can afford their education-which will in turn create skilled workers and help the province prosper.
T6M	Leave the seniors alone stop cutting them first.	Stop giving the corporation 3.4 billion tax cuts do you not understand that is our money not the UCP	Run the pipe line.

Reinvest in services - Hlth and Education. Even if it means creating a PST.
T4V	1) Childcare and education 2) Healthcare	Remove some cooperative taxes or planned tax breaks.	-Support education -Incentives to small business for hiring
t1k	Quality and efficiency of service delivery of basic services.	administration in government and administration in public education; minimize bureaucracy where possible; simplify and streamline government based services such as social services, employment assistance, etc.	job creation in secondary and tertiary industry, stop selling our resources to the rest of the world without adding value first
T5y	Healthcare, seniors, income support and education.	By not giving tax cuts to major corporations that are no longer investing in Alberta's economy.	By reinstating incentives for companies to hire students completing courses in that job field and lowering tuition.

	<p>Public education including school bus transportation. Not providing bussing is a barrier to attendance for students outside the walk zone, public transportation is NOT a solution, it is a burden on families.</p> <p>Child care - quality child care helps everyone and allows parents to work more productively. Child care workers are skilled professionals, they should be paid more than minimum wage.</p> <p>SENIORS fund the drug program increase coverage, this saves money in health care when conditions are well managed including through drug therapy.</p> <p>Mental Health and Addictions - fund Supervised Consumption Sites, opioid and methamphetamine treatment programs. This saves health care and policing costs and makes communities safer</p>	<p>End/reduce corporate subsidies generate revenue by making income tax progressive as income increases, flat tax is unsustainable</p>	<p>Fund and expand post secondary, this is how workers are prepared with needed skills and where many innovations and research come from.</p> <p>Careers in the public sector support all Albertans, these jobs are important too.</p>
T7Z	<p>Healthcare, seniors pension, AISH, education, energy industry diversification. Loans to workers who want to buy and cooperatively manage the businesses they work for when the owner wants to go public, sell or close.</p>	<p>"Savings" is really about allotting resources differently. An attempt at an impartial question would frame it in a broader way. There are many ways of doing this and there was no attempt to avoid leading the participant. For example, "where do you think government could find resources to spend on these priorities?" But I do understand to a degree -- the NDP and the PC did the same and we are all animals of our environment. Why would I expect the UPC to be any different. You are only looking for data to confirm your platform and use as propaganda. I am happy to probably be an insignificant dissenting anomaly in that data.</p> <p>You could allot resources to priorities differently by shutting down the so-formally-called "War Room" -- the greatest offense to taxpayers and working class Albertans in Alberta's history. A taxpayer funded propaganda centre worth 30 million to manipulate and misrepresent data in favour of big extractive business? A better use of that money would be to review and increase royalties on extractive industries in the province. You could also tax multinational giants such as Facebook, Google and Amazon. Also, implement a progressive income tax -- there is a different rate for small businesses, I really don't understand the ideological hangups on a progressive income tax for individuals and families. The carbon tax was already cut -- I mostly appreciate that considering it is a market based solution with very marginal significance on climate disruption and that was mostly felt by average Albertans.</p>	<p>By supporting worker-owned and multi-stakeholder cooperatives. Credit unions were 40% less likely to fail during the 2008 crash. Look it up. U of S has done good work on this. Member ownership business models are more effective at creating stable, ethical, efficient, creative and diverse employment for Albertans that affirm dignity and freedom.</p>

T6J	Public education. I believe that adequately funded, equally accessible public education is a foundational pillar for healthy, plural democratic societies. Keeping choice in education under the umbrella of public education is the optimal solution. Adequately funded public education is an investment and can lead to lower future social costs.	I believe the government needs to make health care costs transparent and known to Albertans so we can know how much we 'cost the system'. I believe there should be some personal responsibility for health care costs, like a health care premium. I wonder about the fairness of people living outside of Alberta for a substantial portion of their working lives and then returning to Alberta when they retire to take advantage of public health care. I think the fee-for-service schedule for procedural based physicians (surgeons, ophthalmologists etc) needs to be reviewed as changing technologies have made some procedures less complicated and should consequently cost less. More importantly, I believe that we don't just have a spending problem in Alberta, but we have a revenue problem as well. Both sides must be considered. The corporate tax cut was a huge hit to the provincial budget. A provincial sales tax could provide more revenue for the province, and is a more equitable tax.	I believe that the government needs to invest in new research and development in emerging technologies, such as Artificial Intelligence, carbon friendly technologies and nanotechnology. There should be a balance with supporting our oil and gas industry, but at the same time, acknowledging that the O&G industry will not be a viable economic base for Albertans in the long run. The time is NOW to position ourselves as global participants in the 21st century. The Alberta government can play a pivotal role in this. The government needs to look to our universities for direction and vision, instead of bad-mouthing them in the press and undermining the tremendous international leadership potential we have at our universities.
	Job security for those working in non-profit and charitable organizations. There are roughly 26,000 registered non-profits in Alberta that employ thousands of people. Many of these organizations are at serious risk of closing their doors due to a lack of funding. This would leave good, hardworking people out of work and relying on government services more heavily than ever because if there is someone who knows what services are out there, it is people who work in the charitable sector. A certain Minister told me after their recent election that, "non-profits do the work the government can't do and they do it better" if this hold any weight, fund those organizations. Fund the people on the ground implementing services that fill in the gaps the government doesn't. They do it a lot cheaper than any government employee ever could.	Despite small cut backs on government employee salaries, they are still being paid exorbitant amounts. Many non-profits' entire budgets are an Alberta Government employees annual salary. If the gov not only funded but also partnered with the non-profit sector, specifically the voluntary sector, there is a huge opportunity to boost services ran by volunteers (snow removal, seniors services, parks and rec gardens and landscaping,community events etc.) which would in-turn mean savings.	Post-secondary tuition cuts and not just for trade schools and tax breaks for people earning less than 50k a year. This would boost the number of educated people and leave more money in Albertans pockets to spend and invest.
T8V	Education, Healthcare, Affordable Housing, Mental Health, Homelessness, Youth	Supervisors and Manager positions, oh... also if they stop giving tax cuts to corporations. That seems like a no brainer.	When you put the wellbeing of citizens first, you have a healthy population that will enable you to facilitate economic progression and innovation.
T1J	Protecting and supporting Alberta's citizens via social services with special focus on the most vulnerable: children, the elderly, individuals with disabilities, mental & physical health, addictions, and homelessness. Learn from experts on how best to support these individuals rather than listening to misinformed, angry, or fearful people. Invest in prevention and early intervention services to save Albertans money in the long run. Spend more on infrastructure and innovation to create jobs while making Alberta an attractive province in which to live.	Stop attempting to prop up industries that are no longer sustainable or viable. Alberta gives tax breaks and kick backs to companies that often leave or continue to cut back jobs in Alberta. Invest in prevention and early intervention services to improve the social determinants of health and lowering costly future interventions (social assistance, jail, foster care, emergency rooms, hospitalization, etc.)	Invest in education, innovation, and become a world leader in environmentally conscious energy production (wind, solar, etc.)

T1H	Healthcare Schools Mental Health	Government officials wages/unnecessary spending.	One idea could be that we start refining our oil to make a better cleaner product rather than only really producing crude oil. Not only would this overall be beneficial in creating jobs but it would also be beneficial for the environment as well as getting back some income into Alberta through oil & gas.
	<p>Education and healthcare maintenance. Reverse the cuts to the foundational sectors that make Albertans healthy and smart. Albertans will MAKE things work economically when in good shape. Albertans are more productive when they feel that they live in a safe environment and currently Albertans feel attacked on many fronts. It's like the government has created a war room against Albertans. Post secondary students have been HIT HARD. Not only is the cap on tuition removed which puts a greater financial burden on students and parents, but the education tax credit has been removed. ALSO, now that students will be harder hit by tuition, why has the student temporary employment program been suspended? Tuition UP and anything that helps students GONE! Shame on the government. Secondly, why punish people who are currently dependent on Senior's Blue Cross Health benefits? People have made financial decisions for health care based on what was available. The Alberta government has put many people in troubling situations with this short-sighted quick dismantling of what was in place. To be fair to Albertans, such changes should come with advance planning and those currently on the program should be grandfathered in. I heard a case of a retired teacher dependent on her husband's seniors healthcare plan that is in stage 4 lung cancer that made financial decisions about healthcare while the benefit was in place. She is now undergoing more stress due to the unexpected government cancellation of this plan. Shame on our government.</p> <p>If you want to make Alberta competitive, invest in Albertans!!! Don't cut our services to give big breaks to the big companies. Start programs that let Albertans get creative with how they would like to live and work. When you invest in their passion, motivation and creativity, you</p>	Tax the corporations so that they're paying their share and not getting a better break than regular Albertans. Why should our education and healthcare systems suffer while big business gets a break? NO WAY. Let the big business keep doing their fair share of supporting Alberta financially especially in handling infrastructure and systems that are in place that keep them in business. We all need roads, airports, water, electricity, gas, sewage, protection, etc. SO to do good business, these big companies should continue to pay taxes to cover these services and infrastructure. DON'T hurt the citizens just to placate big business. They want our markets as much as we enjoy having their jobs, but don't sell us short!	DIVERSIFY Diversify diversify through investing in Albertans not big companies. Educate Albertans on entrepreneurship and innovation. That goes hand in hand with general education and post-secondary education and life long learning. Can you imagine what innovations might come about if you give Albertans breathing room to create next generations of products and services. Shame on the government for making us a banana republic of oil and gas! Diversify and make sure that we are developing multiple veins of economic drivers. It's very short-sighted of our "provincial management" (I will never call it leadership except far back when it was Peter Lougheed) to rely on one sector so HEAVILY. AND not only that, but to rob Albertans of proper oil and gas sector royalties that could be saving us today in these difficult times. Shame shame shame for losing Albertans billions of dollars. Some debt is fine for powering up economic drivers, so get going on investing in Albertans to create the new wave of sustainable energy. Let's make us leaders in some new fields of thought that will make future generations proud of how we moved away from the banana republic mind-set to diversification. Invest in the minds of young Albertans to innovate in products AND services from which future Albertans as a whole will benefit. DON'T touch our education and healthcare for this funding, tax big business to pay for its ride in Alberta. Let Oil and Gas companies find their own way to get their product to market. After all, we urgently need to find new economic drivers and not to keep pouring finances into a dying industry that will bleed us to death and out of money. Think ahead and pour finances into new innovators and creators. We're a smart province and can make a new name for ourselves instead of hunkering down into a STUPID war-room that perpetuates the stupid dying industry. Wake up Kenny and gang. Look back to Lougheed times for some advice.
T0H	Education Children Roads Rural Alberta Torisum	By eliminating the duplication of systems in the education K-12 In the salary's of senior staff. In the management of large projects. By doing the job right the first time ie building schools big enough to not open full and immediately same with hospital and roads so much money wasted on fixing what should have been built properly.	Invest in finishing processes for our natural resources Selling top Of the line finished products that the world needs

T0A	Education mental health jobs	less corporate hand outs increased programing with small business maximize outputs and gain tax revenues increase corporate tax diversify not rely on oil and gas	work with small businesses vs cooperataions diversify to more green programs
T8E	JOB CREATION - PIPELINES ENCOURAGING COMPANIES TO COME TO ALBERTA AND INVEST	EDUCATION- APPEARS THAT THERE ARE MANY MORE DAYS OFF FOR SCHOOLS MORE THAN EVER. ALSO COMBINING CATHOLIC AND PUBLIC SCHOOL BUS ROUTES. I SEE BOTH BUSES DRIVE BY WITH ONLY A FEW CHILDREN ON EACH BUS. HEALTH CARE IS ANOTHER AREA THAT NEEDS TO BE REVIEWED. HEALTH CARE FRONT END WORKERS ARE WAY OVER STAFFED AND DOCTORS AND NURSES ARE UNDERSTAFFED. NURSES CONTRACTS NEED TO BE REVIEWED. TOO MANY PART TIME NURSES WITH FULL BENEFITS. A DAY SPENT AT ANY HOSPITAL WOULD TELL A LOT	WITH SO MUCH UNEMPLOYMENT IT IS TIME TO STOP WORKERS FROM OTHER PROVINCES COMING TO ALBERTA TAKING ALBERTAN JOBS. TIME TO STICK UP FOR ALBERTANS. THE STIGMA OF BEING AN UNWORTHY PERSON IF YOU ARE IN THE TRADES HAS GOT TO CHANGE. WE NEED ALL PEOPLE TO RUN THE PROVINCE NOT JUST UNIVERSITY GRADUATES. WE WENT THROUGH THE SAME THING IN 1980 AND 1990 WHERE TRADES WERE DISCOURAGED AND EVERYONE ENCOURAGED TO TAKE COMPUTERS. IN THE END WE HAD TO BRING IN TRADES PEOPLE FROM OTHER COUNTRIES. TIME TO LEARN FROM PAST MISTAKES.
T1J	early intervention and pre-intervention services. Namely Family Support Services.	Safe Injection Sites!	Fair post secondary costs and trade training incentives
T0B	Health, Education, Environment. I am sure glad I don't have a parent in the Viking Alberta Long Term Care!	Stop welfare for large companies that don't return value to the province in terms of jobs. Tax cuts to corporations require accountability. Why don't we have a provincial sales tax? That would go along way. Its not just about savings its about income streams as well. Why don't you understand that?	Stop cutting jobs! Nurses, Teachers and Government Workers are just as "Albertan" as Oil Field workers. Most Oil Field workers are Transient and not vested in Alberta! A job is a job is a job. You cut these jobs you are breaking your promise on job creation. Its not just up to the private sector. Government is a large employer as well. Oil and Gas will be outdated soon. You need to look at value added agriculture and alternate energy or you will leave us behind other countries.
T1K	Early intervention for children and families to save money in the future. Health, education, and social service delivery need to be priorities or the ripple effect creates expensive, sometimes irreversible, consequences.	-Get rid of the 'war room'. I don't want my tax dollars spent on defending gas & oil, I want you to spend my tax dollars on developing renewable/green energy. Oil and gas markets will continue to decline. It's kicking a dead horse. -Streamline upper management. Ask each government entity for at least one concrete idea on how they could creatively save money or structure in the most economical way.	Certainly not by putting people out of work through budget cuts that will put more people in the welfare line. Job creation and growth can come from renewable energy expansion and funding research and education. Develop great minds and our innovation will be sought out.
T4L	Housing for low income or a cap on rent. Rents are out of control. Lower income folks have to live multiple families in small apartments to have a roof over their heads. A roof over your head or to be able to est should not be a choice people have to make.	Look at Municipal structures, wages, benefit packages at the municipal level. Education, health care. With regard to education and health care. Important areas but again much waste in these systems. Work smarter, not harder. Be fiscally responsible. Too much blooded central,offices.	Lower taxes, cut red tape. I live in a small town/city that brags how welcoming they are etc to business. This is not accurate. I have heard from people who try to start business that they are made to jump through so much red tape, they give up. More advertising on television, social media about beautiful Alberta, our ethically produced oil, etc. Sell our image....a lot.
T6H	Education Health care	Tax breaks to large corporations.	Putting funding into working families - not large corporations

T5L	Infrastructure, health care, and education.	Reduce the amount of wealth that CEOs and business owners are allowed to accumulate, reduce the amount of money that is given to corporations and put it towards social services instead.	Increase tax on corporations. Fund government organizations (health care, libraries, schools, government agencies, manual labor) to enable more hiring opportunities and support for social services.
T0H	<p>-Infrastructure is just a necessity: roads, bridges, schools, hospitals maintained/built when needed (eg. rural hospital like Beaverlodge is very important).</p> <p>-Mental health and long-term addiction services in northern areas, including Grande Prairie.</p> <p>-Non-market Housing: Transitional Housing and Affordable Housing. including housing for persons with history of chronic homelessness, addiction, etc with cross-ministerial support and collaboration internally to produce streamlined funding system (Health services, social programming and Infrastructure)</p> <p>-policies that encourage transition of economy to more diverse and less risky sources of revenue (less risky than current LNG, etc industry)</p>	<p>Cuts/change to:</p> <p>-The Alberta Home Warranty Program. This program penalizes people who build their own homes, and small builders who build only 1 or 2 homes a year directly for the person who will own the home, with unnecessary, expensive fees and insurance requirements, etc etc. It is applied as a blanket measure when it should really only be applied to developers/condo developments.</p> <p>-The "Energy War Room"</p> <p>-stopping tax breaks/forgiveness for shallow gas wells and other industry breaks. These businesses are not supporting rural areas, farmers are not getting paid, roads are being destroyed by oilfield traffic and paid for by municipal tax payers, light and noise pollution, and the list goes on.</p> <p>-Managers in Alberta Health Services: The system of management/chain of command seems to be broken. If you need to talk to someone in AHS who is not front line, there is an incredible gate keeping system that somehow prevents you from ever talking to the person you need to talk to, or even finding out who that person might be. Get rid of the layers of bureaucracy in AHS.</p> <p>-Reduce redundancy between Health, Community and Social Services and Seniors & Housing. Get these three departments working together more efficiently. For example, supportive housing requires agreements with all three - why isn't there just one authority for this, and some internal streamlining?</p> <p>-long term savings could arise from successful supportive housing, addiction treatment and mental health service provision.</p> <p>-support integrated coordinated access initiatives in alberta cities, like Lethbridge and Grande Prairie. Support these cities by making sound software decisions, such as the current software review for ETO.</p>	<p>Wellsite cleanup and reclamation could generate major revenue and many jobs that would be transferable to the future.</p> <p>Fostering employment and education opportunities for people in rural areas - such as supporting GPRC in Grande Prairie to grant degrees, offer quality technical programs that are applicable to many industries. For example, one intro to video production course at GPRC has helped several people start their own businesses in videography/TV. It is amazing that a single course could produce so many benefits.</p>
T5A	Education accessibility and affordability, health services. Economic diversity, use resource royalties to promote and fund new industries not related to oil. Infrastructure support for major cities.	Less grants and subsidies to oil companies and related industries.	Education in new industries related to alternative energies.
T5K	A temporary 3% PST will solve many problems. If the government makes a temporary / interim order that they are imposing a 3% GST for next 4 years and the order will be automatically cancelled if not renewed after 4 years, that will solve many problems. But the current premier is a politician and not a leader, therefore he does not have the courage to do that.	Less government advertisement.	The government is already eliminating jobs in the health, teaching and public sector, they are not interested in job creation. We need more medical staff and more teachers.

T1K	Human Services issues such as family violence, sexual violence, counselling and support for those with disabilities	Bring in a sales tax - 3- 5 %	Newcomers- find ways to ease their credentials so they can work sooner. Is there not a way, the government can balance oil companies needs with the needs of those less fortunate in our communities.
T0B	Education, Social Supports, Health	In the Administration of Health for sure, It takes 7 - 8 people to look at an invoice submitted for payment, for the agency receives the payment...for &6.00 . They could lump payments together rather that generate several cheques for a small amount. Timing for receiving invoices is two months behind, inefficient services...waste of money. All departments need cuts at the top end, not at ground level . Stop reinventing the wheel. Grant funding that is working and great things are happening for Albertans, should be assessed by visits to those programs and sites. Ex Parent Link, before you create red tape and cancel one grant to open another one that is a lot of repetition and duplication, come out ot see what's happening in those programs. Especially in rural Alberta. Ask the people at ground level and the families. A solution would have been charge a small fee for families to join Parent Link, then across Alberta, what an increase of funds that would be. Ask the people of Alberta and listen to our suggestions before making rash decisions.	Yes to a degree, however, cutting in the oil and gas field has hurt our province greatly. Tax increase for the average person are horrendous. A single person pays so much tax.
T5J	Halting / reversing climate change. Investments in alternative energy to transition off fossil fuels. Retrain oil/gas workers to new energy sector for emerging jobs. Electrifying transportation.	End corporate tax gifts. They do not translate to jobs. They go to C-suite and shareholders.	See above Retraining, diversifying the economy, infrastructure-resilience/sustainability.
T6G	- healthcare - while I fully support a public payer healthcare system, the wait times and inefficiencies in the system need to be addressed - education - both at the K-12 and post-secondary level - if we do not invest in our children, we will have no future - removing funding from services like speech language pathology and aids in the classrooms for young children effectively eliminates their future productivity in society (if you can't read/write/speak and socially interact, you cannot produce) - infrastructure - our roads and buildings need to be maintained, our public transportation systems improved - it is a LOT more expensive to repair once things are in disarray than to maintain/slowly improve	- eliminate superfluous spending on items such as the 'war room' - treat yourselves (MLAs) like you are treating the rest of the public sector - look at salaries across the country, find the lowest, match them and freeze them - you make 25% more than your colleagues	- DIVERSIFY! Yes, we need to support the oil and gas sector but we cannot have our heads in the sand any longer... energy sources are changing globally... we need to be on the forefront of innovation not stuck with our heels dug it

T1H	Education. Daycares and organizations that support them. Health care.	Increase taxes on cannabis. Take away safe consumption sites.	Provide free training programs for unemployed, and specific jobs that you need to be unemployed for so many weeks to qualify to get them. For example, I had a position like this in the U.K. through the Manpower Services Commission. It gets people into the work force again.
T4I	PUBLIC health care PUBLIC Education Innovation companies	ELIMINATE THE WAR ROOM! Less travel, pay for your own! Less government staff - seriously need a spokesperson?!	Stimulate or multiple industries to get us out of the economic depression we are in. Increase health care and nursing staff.
T4I	PUBLIC health care PUBLIC Education Innovation companies	ELIMINATE THE WAR ROOM! Less travel, pay for your own! Less government staff - seriously need a spokesperson?!	Stimulate or multiple industries to get us out of the economic depression we are in. Increase health care and nursing staff.
T0B	Youth programming, low income supports, LGBTQ+ supports, mental health supports, public schools and education, the medical field. Basically all the areas you cut money from. There is going to be a suicide crisis soon because of the UCP's cuts and I hope you are prepared to deal with the aftermath of that.	There NEEDS to be more taxes taken from the higher earning companies. The fact that you don't understand this is horrifying. IF you are so worried about balancing the budget, take the money from the people who HAVE the money. Not by increasing interest rates on student loans. 17(1) and I wish you could see the impact that your new cuts are having on the everyday Albertan. You are literally killing people like me who are merely trying to survive while the rich become richer.	TAX BIG COMPANIES MORE. That way the general middle and lower class people will be taxed less and will be able to go and spend their money in the communities where they live. The fact that you think that giving tax breaks to these big companies will create jobs is so idiotic; there have been zero reports of this type of legislation actually working. But then you look at countries like Sweden and Switzerland and they not only have the highest overall happiness rate in the world, but the lowest job loss and poverty stats in the world. This is because of their tax legislation. But here we are in Alberta. A province that apparently does not care about human rights, the marginalized, or the low income. I am ashamed to live here and cannot wait until I can move provinces.
T2s	Flood mitigation	Closing supervised consumption sites	Lower taxes
T6H	Education. Health. Seniors. Economic diversification (i.e. oil & gas dependency).	Fewer 'expert' panels. Scrap 'war' room and associated UCP donor appointments. Cut promotional tours out of province - no benefits realized. Realistic tax on corporations involved in resource exploitation (i.e. see Norway).	Demonstrated adult co-operation and integrity from our provincially elected government officials would be a start. Constructive adult dialog is what I voted for - show me. Diversification incentives - wind, solar, technology. If we continue to allow the abandonment and orphaning of wells without recourse to the corporations responsible, then we have a prospective untapped clean-up industry the government could manage.
t2n	Education, The environment, diversification away from oil and gas.	get rid of the committees	By diversifying the economy away from oil and gas. Do not put any more money into an industry on the decline. Invest in new technologies and training individuals for a new economy
T4R	Post secondary and access for people to get credentials for the future Health care to ensure access K—12 education	Add a sales tax	Post secondary especially in rural areas to keep people in the regions for full education including degrees and trades and diplomas and certificates so they stay in the region and add to the economy instead of leaving to go to Calgary or Edmonton and never coming back

T9S	<p>Setting up a Provincial Police Force.</p> <p>Setting up the Alberta Employment Insurance (AEI) and Alberta Pension Plan (APP).</p> <p>Setting up the Alberta Immigration System.</p> <p>Expanding the tax system to include the collection of all Federal taxes and fees.</p> <p>Health and Education.</p>	<p>Setting up a Provincial Police Force, while reducing the number of RCMP in the province.</p> <p>Both an Alberta Employment Insurance (AEI) and Alberta Pension Plan (APP) should result in net saving, more money for the Alberta Government.</p> <p>Setting up the Alberta Immigration System enabling Alberta to control immigration will save money for many levels of government.</p> <p>Expanding the tax system to include the collection of all Federal taxes and fees, will also result in more money for Alberta.</p> <p>HealthCare: More money needs to be spent but an increase in private options can result in major savings for users, the <u>healthcare industry and for government</u></p>	<p>The government of Alberta should be supporting economic growth by moving towards Independence in Confederation and Separation from Confederation.</p> <p>The policies of the Government of Canada have had a direct and major impact on my economic outlook and that of all Albertan's.</p> <p>Being ruled by people thousands of kilometers away, from a different culture, with a different history and different vision of our future is the major reason Alberta is not the economic powerhouse Albertan's want it to be.</p> <p>Without Independence the government of Alberta is limited to moving deck chairs when it needs to be at the helm to support job creation and economic growth for Alberta.</p>
T4L	Public Education - what are you thinking with the cuts??	Overtime with public sector workers. Plan the shifts better.	Get foreign investments, give jobs to Albertans not to others from outside the province.

	Private sector job stimulation.	<p>Trim fat on government bureaucracy. Downsize on government agencies.</p> <p>Legislation that would encourage more Albertans to have jobs in the oilfield. On site workers are giving feedback that there are many from the east that are being employed. This income or part thereof maybe redirected to the east or origin of the workers. This money would leave Alberta and be taken out of the albertan economy.</p> <p>Holding back on laying out the carpet for newcomers who may become dependent on the provincial economy.</p> <p>Number one savings...recognize that the renewable energy costs are being heavily subsidized by taxpayers (approximately 4 million per unit) and follow the money trail, possibly out of the province. Take into account that these technologies had almost zero output during the cold temperatures. It is reprehensible that we pay according to potential capacity output, rather than actual output.</p> <p>Edmonton's status as a S C may also be generating financial obligations that were previously not a consideration.</p> <p>Could there be a study conducted that would evaluate where various financial redirection is being undertaken away from Alberta, either to other provinces as well as overseas.</p> <p>Emphasize an Alberta directed economy. Stimulate interest in local tourism, local buying (that would provide an alternative to net purchases) and local food purchasing.</p> <p>Keep lowering business taxes towards production growth and stimulation.</p> <p>Lowering personal taxes in return for spending locally.</p> <p>Part of employee income could include a prepaid card that can only be used in Alberta.</p>	<p>Keep energy costs down. Support the natural gas and oil industries.</p> <p>Provide headhunter job support that would connect albertans to local jobs.</p> <p>Emphasis production jobs over service jobs.</p> <p>Provide provincial army training.</p> <p>Disincentivize eastern financial dependency.</p> <p>Encourage family growth for a prosperous future</p> <p>Keep interest rates low.</p> <p>Provide an alternative media outlet to encourage a vision for Alberta that is not codependent on main stream media.</p>
T4S	Health care, education and our senior citizens. The number of students with trauma entering our schools has increased tremendously. Without the proper supports and resources in our schools these students disrupt the classrooms making it very difficult for teachers to do their jobs. It also greatly affects the education of the other students in the class.	Have a provincial police force. Create our own provincial CPP.	Create a credit program or give tax incentives towards the purchase of updated technology equipment to increase manufacturing. This will improve export opportunities.
T2X	Education, health care, green industries, infrastructure.	Shut down corporate welfare for established profitable corporations. Tax profits that are leaving the province at a minimum 75%. When the wage spread in a company is greater than 1000%, tax any wage over that at 90%.	Raise minimum wage to livable and support emerging industries and business. Break up monopolies and strengthen worker rights.

T0B	I am a small business owner in two rural communities. I feel we need more policing in our communities, I have employees that work alone and if there was a robbery the time it takes for the police to come is to long. I would like to see improvements in rural areas for policing.	I have no comment.	Investment in Alberta, attract investors to our province for economic growth. Encourage small business to thrive in Alberta, with tax breaks for small businesses.
T5A	Education and health care	Actually tax big businesses. Taking a pay cut themselves.	More tech!
T0h	Reducing wait times in AHS	Political compensation, shady expense reimbursements, subsidies to corporations, union wages and benefits, removing red tape and bureaucracy. Moving towards a simple tax system without all the minor benefits/credits. (Don't take my money just to give me a portion back).	Investment in R&D. Creation of competitive businesses and publicly owned oil and gas services. Using our money to invest and provide returns.
T2W	Health, education, infrastructure, and economic diversification.	By not giving tax breaks to already-profitable corporations who take the savings and run.	DIVERSIFICATION!!!
T2W	Health, education, infrastructure, and economic diversification.	By not giving tax breaks to already-profitable corporations who take the savings and run.	DIVERSIFICATION!!!
T5m	Health - better care, reduced cost Senior Care - fix it! Mental health - get serious about it, all facets	Bureaucratic bloat Innovation - rationalize Build an intelligent provincial funding agency Quit letting the old boys support their old boy corporate buddies ***Open Govt must be top priority ***	Support education and skills for non oil and gas industries Accept that no competitive jurisdiction has lousy post secondaries. Support them. Don't kill them.
T1B	Healthcare and Public education	Cancel the war room, stop the corporate tax cuts. Introduce a sales tax.	Stop entertaining the idea of seperation, it is scaring away investment. Stop laying off healthcare and education workers. Give your workers cost of living increases, public workers aren't spending right now, they're preparing for more zeros and layoffs and it's hurting the economy.
T1J	Education and Health	Stop tax cut for the big companies.	Create jobs in the public sector.
T4G	1) Providing scientific based leadership in immediate clean energy transition 2) Enhancing education for everyone - an educated population is a healthy and wealthy community! 3) Enhancing our Public health care system 4) providing support to poor through education and employment support, childhood wellness programs, seniors benefits... 5) increased preparedness and mitigation of fires and floods, environmental protection 6) Give more support to municipalities and landowners who are trying to collect money owed to them by oil companies 7) develop the public transportation system in our province	1) Stop subsidizing the oil and gas industry! You are giving money to foreign oil companies and the money leaves Alberta. 2) transfer the war room budget to efforts to "put money in the pockets of Albertans" eg reduced school fees, transportation costs, senior's dependents benefits, 3] stop the legal battle against the carbon tax. What a waste!	1) Support the clean energy industry - what an opportunity to create jobs, increase our economic growth and show the world that Alberta is a leader. Time is ticking and our government is fighting against something that is a golden opportunity for Alberta 2) Embrace the carbon tax and use the funds to assist Albertans to retro fit their houses and businesses to clean energy 3) if you are giving subsidies or tax breaks to corporations, demand concrete evidence that the money is used for job creation. All we have seen thus far is loss of jobs, payments to executives and shareholders, and money lost to foreign countries.
T0K	Health care, education, and things people need to survive	Politicians' salary, and expenses, and conducts audits on how money given out is being spent (ie. Are being higher up in education being paid way more than they should be?).	Hire back teachers, nurses, and other public service jobs.

T8N	Education, health, infrastructure	Top of the heap administration Waste of supplies Inefficient operations	Keep working for a livable wage for all. Diversity our economy Support for our agricultural products
T4N	The government should focus on healthcare. Not on nurses pay but on new hospitals and more equipment. Reducing wait times would be key.	Smaller government and control social programs. All people on subsidies should be checked on to ensure they are not abusing the system. If I need a drug test to work they should need one to not work. Stop wasting money on drug sites that promote drug use and dont stop it. Stop giving raises to public service until private sector gets wages back. Teachers shouldn't get raises either.	Lower all taxes not just corporate rates. All people need more money in their pocket.
T2A	Education, healthcare	Through attrition, day to day operations, look for ways to streamline services	?
T3A	Health Care and Education.	With a provincial sales tax or making oil companies pay their taxes. Creating a more progressive provincial income tax.	Build or renovate more infrastructure like schools and hospitals/long term care facilities/mental health buildings across the province. Fund renewable energy and tech (AI) jobs.
T1y	Education, healthcare and Social services	Corporate welfare and closing the canadian energy centre	Spending money on healthcare, education and social services
T2m	Indexing AISH and other social supports. Health care and education.	Stop favouring the oil patch and energy sector.	By diversifying the economy, including the energy sector. Stop cutting funding for non profit social supports.
T2A	Diversifying/ greening the energy sector Plastic to fuel technology	Stop giving large corporations tax breaks	Invest in green technology Fund and build infrastructure
T2P	Education Health Seniors on fixed incomes Respecting contracts with public service employees	# of MLA'S and size of staff Maintain taxation of corporations including pursuing breaks given to companies leaving the province.	Highway to Ft McMurray to be Twinned, diversifying into tech industry (engineering staff is already here), pursuit of companies to move to Calgary and Edmonton to make use of office space, pay tax.
T3C	Public transit, solar and wind energy, education	Removing the "war room", cease paying people to use social media	Land reclamation and rehabilitation of abandoned wells, large public works projects to modernize Alberta transportation through the larger economic centres.
T5B	Deficit if there's any, otherwise hold on to it, until it is needed for something important (rainy day). Spend on what it is needed only.	yes, it could find savings, since I do not know about the government's needs, or spending. I say anything is possible (slowly but surely).	How to create jobs, it depends of life or persons latest trends. Economic growth can only be achieve by spending on what it is needed not it is the wants, perhaps change of spending, and put some money aside for provincial emergencies or extras. Being strict about spending, and strict self (Treasure Board and Finance) financial discipline. Stick to it.
T0L	Health care and education	I think we need at least a 10% roll back on the salaries of our MP's and MPP's. Many of us barely survive on a fraction of what they make.	Tax breaks to small businesses and support our oil and gas industry.
T0L	Health care and education	I think we need at least a 10% roll back on the salaries of our MP's and MPP's. Many of us barely survive on a fraction of what they make.	Tax breaks to small businesses and support our oil and gas industry.
T0C	they should re invest in the healthcare & education look after us the Albertans, people that should have priority over O&G. We pay taxes fix the infra structure also employs people who buy groceries pay taxes/ support the economy	they should get rid of the \$30 million yearly war room, which seems to have no accountability. Cancel the \$4.7 billion corporation handout implement a sales tax like every other province.	don't just concentrate on oil & gas. get into the tech industry, these industries can support themselves after startup. the previous government had been diversifying it, why did you get rid of everything good that was done. are you so insecure that you can not even have any comparison

T0C	they should re invest in the healthcare & education look after us the Albertans, people that should have priority over O&G. We pay taxes fix the infra structure also employs people who buy groceries pay taxes/ support the economy	they should get rid of the \$30 million yearly war room, which seems to have no accountability. Cancel the \$4.7 billion corporation handout implement a sales tax like every other province.	don't just concentrate on oil & gas. get into the tech industry, these industries can support themselves after startup. the previous government had been diversifying it, why did you get rid of everything good that was done. are you so insecure that you can not even have any comparison
T5t	Health care ! Education and public services. These are vital to our province and economy. Cut wages of healthcare staff means less spending within the province. The effect will trickle down.	Tax high income earners and corporations.	Invest in research for resources and new technology.
T8S	Healthcare, mental healthcare, social work and justice issues, homelessness and the general well-being of people especially the underprivileged band marginalised.	In implementing proper healthcare resources used to send one person from home to hospital in suicide ideation over 14 times in period of a few weeks, perhaps we could have better accessible counsellors and therapists especially in northern communities...you know, the ones where the oilfield workers actually work and live?	...invest in the people that are learning how to become employed that they might realize economic growth for themselves and by proxy the economy of where they live and work. Make university/college as attractive and attainable as the trades.
T5T	Sick, depressed, and impoverished people cannot contribute to our society! We need more progress on fixing these terrible social problems. What are poorly educated, demotivated kids going to become.???...no wonder drugs is such an awful problem. PREVENTATIVE PUBLIC HEALTH CARE is a no brainer. Why do we not invest in prevention instead of fixing people in emergencies? Lingering hopeless is depressing everyone but especially our young adults. And you want to cut post secondary!!! It is already a horrible mess. We need to INVEST in our YOUTH! As a parent I am totally freaked out at the rat race that now faces our youth in Universities. They are like third world universities with overcrowded classes, no place to sit, study, full of anxiety and panic everywhere. In heaven's name this is the most important investment we can make. In 10 years all these kids will determine our future. And many of them are already planning to leave. I am so sad to see the exodus begin from this province.	Its easy. Bring back the tax rates of the 1960's. So sick of the lifestyles of the rich and famous giving their kids private school advantages to "get ahead of all the rest of us." Why not tax inheritance which is totally unearned and breeds privilege and laziness? It is a throwback to Monarchy and outrageous that it is not taxed. Stop tax loopholes for the rich. I am constantly getting ads for "learn the secrets of tax planning used by the wealthy". Outrageous. Also I am fed up of being gouged by Banks, Mobile and Internet companies with their established monopolies and ever rising prices. Your government coddles these companies and lowers their taxes despite huge profits.	By giving our youth the best and widest education possible so they can develop new products, become better social planners, and invent new ways of doing everything and solve intractable problems. How can you not know this? Also we need home economists to teach everyone how to manage on minimum incomes.
t2w	Reverse the corporate tax cuts; another version of the trickle down economics that was clearly repudiated in the Reagan era. Stay away from using Alberta pension funds to invest in oil and gas projects; it's a losing effort in so many ways.	We have a revenue problem; and the flat tax system is contributing to the problem. The "Alberta advantage" has been a significant vehicle to mismanage the oil legacy for future Albertans and distracting rhetoric won't eliminate the Conservative party's contribution to lost opportunities under ideological straightjackets of the last four decades.	Help support economic diversification like the previous NDP government worked on. Just because the last gov't was of different political stripes doesn't mean the strategies weren't working. Nineteenth century market fundamentalism and UCP policies are putting more people out of work and is evidently not adding to the 2019 goal of putting Albertans back to work. Do you notice how B.C. health care advocates are coming to Alberta to hire nursing grads; remember the same thing happening in the Klein years with the same easily forecast damage to the health care system.

T0C	agriculture; job creation; keeping money in the hands of taxpayers and not government; back to basics for education including more on how to be a good employee, financial budgeting and planning.	Health care - private surgical clinics, more frontline workers and less bureaucracy. Education - more aids requiring less teachers since integration of students one of the biggest problems is discipline and support, teach respect. Don't listen to Todd Hirsch for students! Public service to look more like private sector in benefits.	Support young adults to get higher education in practical applications- including not just supporting the minorities as in health education presently. Teach students the importance of being a good employee in school as I have had several employers say they prefer foreign workers to Canadians. Would like to see Alberta entrepreneurs use more of our resources in the Province - potato salad, pickles instead of foreign imports, which would need support. Alberta has to be self sufficient.
T5Z	Paying down the debt	Education, Health, Public Works and all other government departments.	Tax incentives for job creators
T9A	Criminal prosecution, Our Oil and Gas sector, Keeping our Blue collar Canadians employees, Safe guard tax payer dollars where unions are concerned (Education, medical), they protect the wrong people.	Eliminate or combine extreme high salaried employees in tax payer funded positions. Education , medical, etc....	Can we build and expand our own refineries to be self reliant in oil and gas 100% as well as offer it to neighbouring provinces
	Supporting public services	Not increasing funding to private school Dismantle the war room (Canadian energy centre	Introduce a sale tax Support technology initiative Support développement and research to fight climate change
T8I	- healthcare - education - job creation	- infrastructure	Support both renewable and non renewable energy sectors
T5T	Health Care Health Benefits for Medicine Assistance AISH Alberta Works Seniors	Infrastructure Venues except Hospitals Government Salaries Collecting Tax Payers Outstanding Fees especially in Oil & Gas industries.	Alberta Works Programs Bids on Events to Alberta Better tax breaks for small businesses to encourage entrepreneurs to hire more people.
T3A	Establishing an Alberta Police Force, setting up an Alberta Pension Plan and collect our taxes	Salaries are the issue. Attrition and holding fast to zero increases. Also change pensions to defined contribution. Review all grant programs.	International trade missions. More agricultural processing Invest in lithium extraction plus development of hydrogen for energy.
	Funding public sector and services Oil and gas company pay their taxes to towns	By not given our natural ressources to big corporations. Not give more tax cuts to corporation with millions or revenue	Support the poors
	Funding public sector and services Oil and gas company pay their taxes to towns	By not given our natural ressources to big corporations. Not give more tax cuts to corporation with millions or revenue	Support the poors
T8R	A government's responsibility is to represent its constituents views. To improve quality of life for all of it's citizens.	The government can tax high incomes and corporations. Adding a provincial tax would also provide income. Listening to world viewpoints to gain a more diverse economy would be very beneficial in the long term. Ensuring government officials only provide benefits they are willing to give all citizens.	Using the wealth of knowledge that our rich province is known for. As for help from leading economists and other world markets.
T1a	Health Care, Education, and infrastructure	Stop providing corporations that cut Alberta jobs tax breaks. Close the Canadian Energy Center. Change oil royalty program to be at the same level as other producing regions like North Dakota, therefore increase royalty revenue. Introduce tax for foreign buyers of property and for property that is in the top 5% of market.	When private sector is struggling public sector needs to keep people employed. Diversify economy from oil and gas. A well educated workforce, that has good healthcare, affordable housing in a city with good infrastructure is attractive to companies looking to expand or relocate.

T5E	Setting up independence focused "firewall" agencies and programs starting with tax collection and replacement of the RCMP.	Desertification of ALL public service unions. Eliminate every public position created by the NDP and previous "conservative" governments since Ralph Klein. Cut spending on social and cultural programs and offset by implementing incentives for charitable donations.	Do as much as possible to reduce regulations, bureaucracy, and taxes. Work towards total independence from federal programs and services.
T0C	Health care/ emergency services	Cutting spending on addiction support	Look for new economic growth other than oil field. Farming, logging, production of other goods. Job creation in all of thoughts areas as well as public services.
	Preventative health care Public health Recreation Schools	Cut the war room Revoke tax cuts to large corporations	Increase investment in supporting the social determinants of health. Support green businesses. Support public sector workers to maintain a living wage.
	Preventative health care Public health Recreation Schools	Cut the war room Revoke tax cuts to large corporations	Increase investment in supporting the social determinants of health. Support green businesses. Support public sector workers to maintain a living wage.
T3g	Homeless and opioid/meth crisis	Homeless - they are costing millions in current state.	Get Alberta
	Education and healthcare.	Optimization of government agencies.	Diversify into alternative energy.
	The public sector. Education is not an area to cut costs nor is health care. Alberta has one of the best education systems in the world so why are we starting to follow a system that is subpar? Health care is important for everyone and for the average person, that system is necessary as they don't have the money to go for privatization. If government personnel was made to wait the way a normal everyday, blue collar worker was expected to, the changes would not be so quick to happen.	Paying for art work that is not necessary. Why should someone in the government receive a pension after 4 or 8 years of work? An average person has to work 30 years to receive one. Think of the savings that could be had from eliminating some of the pensions. Cut the government wages like they want from everyone else as well.	Economics show that you have to put money into the program in order for it to grow not take all the money out and expect it to get better. The money that was put into the oil field went to the companies and the big bosses not the industry. We lost another major Canadian Oil company to the States in the last couple of weeks. Taking from the blue collar people and increasing our taxes only makes it more difficult to sustain a lively hood in Alberta.
T0E	Health care - mental health services, safe consumption and harm reduction services Child care - \$25/day child care Social supports - FCSS funding and community support worker funding for all age groups Education - supporting students and their families to have transportation to school, appropriate class sizes, modern curriculum including sexual health education, and support for mental health programs like BEST.	Reduce management salaries of government positions Close the Canadian Energy Centre Reduce government red tape and inefficiencies Increase taxes - corporate tax, sales tax	Stop cutting jobs in health and education. Healthy and educated people are able to work. Stop cutting funding to community and family organizations. Healthy families who can afford child care are able to work. Support student employment programs and pay youth equally. People who are paid fairly for the same work and who are able to get work experience are able to progress in the work force. Support transition to green energy, innovation, and entrepreneurship. Support eco-tourism.
T8I	Education Immigration	Health Education Welfare cases	Small business support Less red tape Lower business taxes
t9a	Healthcare but let's provide care for the many instead one or the few.	Public service wages freeze. Stop \$25.00 a daY daycare. Freeze on hiring support staff for education. Stop 13 million test for one child, many could receive help for that amount of money.	Doing fine.

T4x	Education and health care	By introducing a pst Reducing politicians salaries and reducing travel expenditures for politicians	Support small businesses with tax breaks Support larger business with tax breaks on a per employee basis Diversify the economy. Oil is a dying commodity
T7Z	Healthcare and Education.	More effective road construction. There are many projects being done where money is obviously being wasted. For example: rebuilding Hwy 779 through Stony Plain paving wide enough for 4 lanes of traffic, then pouring a concrete divide in the middle allowing only 2 lanes of straight through traffic when completed.	Lower the minimum wage to \$12/hour so that more businesses would be willing to hire unskilled workers and provide on the job training. As workers become more skilled their wages should increase. More people working equals more people spending money.
T8V	focus on preventative health care Make it easier to get natural health products and services like chiropractic, accupuncture & massage Anything to help prevent a person from going to emergency, the family doctor and ultimately the hospital Keep funding the Primary Health Network. This clinic has helped me st	as one caller had said, hire more nurses too many nurses are working overtime he gave an example of his daughter who is a nurse one night they paid wages for 7 people and only 4 were working Caller said government needs to really work on management Also delete some management There is probably too many layers of management Sure you want to rely on atrition to reduce workforce, but lots of those people might be getting severance packages that cost a lot of money	build the pipeline trade scholarships
T5L	Healthcare, specifically Mental Health and Addictions. Hiring appropriate numbers of workers and filling vacancies as soon as possible to prevent skilled worker burnout. Reinstating Indexing of AISH/social assistance benefits to inflation. Focusing on affordable housing options for families and the homeless. Reducing the focus on petty crimes and focusing more on crimes with higher social impacts.	Prevention in the form of education, providing more resources to struggling low-income residents to reduce the need to resort to crimes and reduce ER visits. Hire a Social Worker and Occupational Therapist for every ER that sees heavy users of services so they can connect them to resources and funding available. REINSTATE PROVINCIAL SALES TAX. Everyone knows it was stupid and shortsighted, fearmongering that companies will leave is a myth, and there are ways to prevent that. There used to be a sense of social responsibility where corporations knew they had to support the areas they reside in, but reducing taxes has never been offset by "increased spending." It's a myth people have bought into, and if Alberta really is struggling, people need to stop complaining and be ready to support each other. Also, stop wasting taxpayer money going to court on the carbon tax. Get rid of politicians that pay for personal luxuries with taxpayer money.	Focus less on the oil and gas sector, focus on emerging technologies and best practices. Support innovation that leads to more efficiencies, support local businesses more than gas companies.

T4X	Public Education!!!! It is THE best long term solution! Don't station an ambulance at the bottom of the cliff, when you can build a fence at the top! Education is KEY to any successful society.	Do NOT fund terribly short-sighted projects, like P3 schools! The funding of which is not only extremely politically selfish, but morally and ethically corrupt. It seems like the government is fiscally responsible, but this is a sham and a ruse, when research shows that you can build two to three schools in the course of thirty years with the cost it would be over that same period in funding one P3 schools. Do not put money into oil and gas. No matter how controversial this may sound in Alberta, this is a dying industry. Supporting horseshoe and blacksmithing in early 1900s could be argued as important while only a few rode around in model Ts, until ten to thirty years later, when the motor vehicle was vindicated as truly more important in the economy.	Fund public works, Health care, and Education. For example, provide better incentives for post secondary education!!! Education, literacy, and skills are the ways people get jobs and off welfare, NOT by pouring money into a dying industry such as oil and gas, which inevitably goes back into the pockets of the rich and leaves the poor without a better standard of living.
	Education, Health, post secondary, support for middle income families rather than oil companies	Stop paying for trips for other premiers. Stop spending money on expensive jaunts i.e. Group of ministers going to Ottawa, Trip to England.	Diversity, support quality child care
T0j	Schools. Kids need EAs	Take cuts from anything but education and health care	Cut back on student loan interest
T6W	Education and health care. Not a war room for the energy sector.	By not giving tax breaks to oil companies.	Don't make cutbacks to education, healthcare and other government offices. If you lay them off or roll back salaries the spending will decrease in the province and more businesses will be affected.
T2z	Education and Health Care	Corporate taxes.	Care about your people. The people who voted you in.
T2S	Public services. Diversifying our economy. Not lobbying for oil.	Not lobbying for oil. Quit funding the energy war room.	Diversify.
t6m	Fund Health Care and education properly and don't freeze their budgets , which amounts to funding cuts. Keep cutting and you've lost my vote for the next election , maybe for ever.	Consider a sales tax.	Get creative. Lose the one trick pony attitude - time to move beyond fossil fuels. Explore other opportunities - nano technology , lithium mining. Should have ran a pipeline to Churchill, Manitoba.
t2y	post-secondary education, healthcare, renewable energy	they're own salaries	stop everything you've been doing because it isn't working.
T5S	Be more prudent on some types of infrastructure, that don't help pay for themselves like excessive LRT projects.	too much of a bureaucratic hierarchy in the Health system with too much money going to high salaries instead of to patient care	cut back on regulations for small business, so they can get up & running affordably

T9N	Low income housing for all whom need it...as I see it, Seniors, especially have been left behind, as well as the youngest generation finding it financially difficult to transition from their parent's home into their own dwelling space. As well, there are people whom have just had unfortunate occurrences, leaving them vulnerable for finding housing as well. Housing should be the number one priority as it clearly affects all Albertans, at all stages of life...when that one stressor is removed, it can only uplift every other area of life, from health to finding and keeping work, to creating a family.	I expect the Government could find savings in the exact same places the poor are always told to find savings - they are told to invest better (really), to stop eating out, as that is above their means, and to sell every possession they have so they won't end up homeless. The poor often must accept lower wages, with no benefits - perhaps the Government could try a little of that, as well.	Honestly, I think it may be impossible for any Government to even think they could support both job creation and economic growth at the same time, with any sense of justice. If this has happened in any prior term, feel free to point it out to the public, as we have not seen it. Economic growth always seems to come at the cost of the poorest among us. I do not see how Government can support job creation, without acknowledging that there needs to be a livable wage - across the country. As there is currently not one, any job created will not help one iota. Or perhaps consider instituting the even more progressive basic income for every citizen - as this will not only empower some people to create their own job niche; it will help others who may prefer to stay at home with the kids or aging parents a helpful way to leave the job force -- thus increasing jobs available for the rest of Alberta.
T8A	Healthcare, Education - including Post-Secondary Institutions, Social Services, Pharma care, Aid to Low Income Albertans - especially low-rental housing.	Cutting administrative salaries, perks and exit clauses.	Provide low cost training in growth areas where skilled employees are hard to find.
T0C	Education. We cannot raise a generation of students that cannot find ways to solve problems on their own. Investing in today's youth will only make us stronger tomorrow.	Cut back on either the number of school boards we have in the province or reduce the number of trustees in each school board. Smaller school boards should be amalgamated with neighbouring school boards.	Diversify. We need to fund new technologies. Again, look to the future and not to the past. We should be innovators and inventors not those that rely on past and perhaps dried up industries to get back on the economic track. I am all for Oil and Gas but what else can we do to become economic leaders.
T3H	Public sector	Corporate/private sector	Infrastructure, maintain public sector jobs, focus on art and activities that make Alberta a place to visit.
T4p	Ensuring funding remains if not increases to frontline staff and programs in healthcare and education.	It is not oil and private vs public programming. Its not corporate tax breaks OR public healthcare. Is moderation not an option?	Stop cutting healthcare and education positions or you will have a bigger issue of unemployment on your hands. Additionally, without appropriate education and healthcare, you are creating a sick uneducated population that will require continually increasing assistance from the government. Be proactive, not reactive

T5M	<p>Invest in superior education and stop chasing imaginary foes. I heard the education minister refer to "radical ideologies" in reference to curriculum and teaching, when she clearly did not understand the program of studies or has a bias against it. The program of studies and teachers do not impart socialist agendas, though conservatives seem to spend a lot of energy promoting the lie that they do. They are actually neutral, but the curriculum and teachers challenge students to understand science, historical events and worldviews and how they affect decision making. I fear that the redesign of new curriculum without teachers' input will result in teaching students how to bring short-term gains and long-term losses to Alberta. Please do not train kids to be twentieth century thinkers in a twenty-first century world. Between the impending business/entrepreneurial bias in education and the War Room spending millions on chasing boogey men, we will neglect giving students what they will need to be creative and flexible problem solvers and environmentally and socially responsible thinkers in an unknown future.</p>	<p>A. I say this as a person who was raised with religion, but we must stop funding religious based schools in ANY way. As a taxpayer, I do not see any advantage in public tax dollars going into teaching students that superstitions and unprovable supernatural events are true. You CANNOT make a case that these teachings provide the province with the same economic benefits that teaching provable fact-based subjects do. If the government is willing to incur the anger of some Albertans with cuts, not making cuts to programs and schools that deny science and hard evidence is unjust and non-sensical. Yes, I understand that putting those kids into regular schools will come at a cost, but economically and socially the benefits are greater than teaching Johnny that magic is real.</p> <p>B. Save by spending in the right areas, just the way that you might borrow money at a low interest rate to invest in something that pays higher interest. Stop thinking in one or two year increments. Long term investments in people through education should pay off. 1. How many people went to the oil patch with a lower education and cannot find good employment now, because they have less flexibility than people with more education have? 2. If we invest in educating people, let's incentivize them to stay in Alberta to use the skills that we paid for. It does us little good to pay a portion of someone's education, only to see them go to America or down east for a job and pay taxes there. e.g. Could we pay the full shot of educating doctors, with the agreement that they will work in a rural area for a minimum of x number of years? 3. Education increases the chance that more people will be contributors to society, rather than a drain on resources. My relative was a public defender for youths in trouble with the law. She told me that she saw fewer kids get in trouble over LGBTQ issues when schools</p>	<p>Economic growth: As any manager knows, letting people know that they are valued boosts morale and encourages efforts. Their efforts will be part of the province's growth too. Be respectful. 17(1), so I am relatively neutral when I say this: When you took control of people's pensions without any consultation, you showed great disrespect. My friends who were affected understand the provincial economic situation, but they continue to speak about this grab with great negativity and resentment. Some see it as a shot fired across the bow meant to intimidate. I think that the government might have overestimated its power and neglected to account for dollars lost in productivity and services (especially voluntary). Back in the 1990s teachers withdrew their voluntary services, because Klein left them demoralized when he ordered them back to work without resolving their issues. That withdrawal was legal, had great parental support and was very effective. Klein eventually relented with a somewhat generous raise. I would suggest that you step back and consider that the dollars that you claim to save with the restructuring of pension control does not match the money that is and will be lost as the workers that you bullied adjust their efforts and output.</p>
T9k	Education, health and capital projects	<p>Eliminate funding to private and charter schools</p> <p>To pay for programs add a 5percent hst</p>	Invest in environmental research

T9C	<p>Front line Health care Front line Education - public NOT PRIVATE schools Core services - government extension support Research and Innovation technology for alternative economic development areas Agriculture</p>	<p>*Education - consultants (pensioners that continue to work past retirement in a "consultant" role thus aren't listed as FTE's in the budget). Example: how many of these positions exist in Alberta? These positions should be eliminated before ANY front line staff *Eliminate Private/Catholic/home school systems - too much money is wasted on specialty schools. Just offer more options in public schools. \$'s should stay in mainstream *mandate health care shifts of 8 hours to avoid overtime pay in excess of 7.75hrs. (Many health care jobs are 12 hour shifts resulting in 4.25hrs of double time pay) *harsher penalties for repeat offenders - otherwise they are just tying up justice system resources *Jail - work camps that generate income i.e. laundry, recycling *Stop allocating excessive \$'s to oil redevelopment. Rome was not built in a day and this huge fund allocation is taking funds AWAY from other industries that are mainstays for our economy in the province i.e. agriculture. Focus on one task at a time rather than trying a revolutionary OIL business revitalization plan. Other industries are suffering. *eliminate middle management</p>	<p>Innotech Alberta is a great example of a "revenue generating" government agency that supports economic development in our province by developing new technologies with potential for scale up and supports SME's. Technology will Always enhance any economy and we have the potential for greatness.</p> <p>Stop wrecklessly and randomly cutting jobs! The cuts to date and those forecasted are causing a secondary bust cycle in our province, causing increased unemployment insurance and huge amounts of \$'s going into severance packages. This is not saving us money. Innotech Alberta is a prime example of this. Cuts to this economic developing AND revenue generating government business is counter intuitive.</p> <p>Give industries other than oil a chance - you are singleminded in your economic focus</p>
t7x	<p>Standing up for Alberta against the federal gov't. Get these pipelines put in, so that we can get our oil out. Put the money back into education and healthcare where it belongs.</p>	<p>First and foremost, we should stop paying equillization payments down east!!It is absurd that we continue to funnel money to them, and get nothing in return. Second, I think the government should look at themselves and other highly overpaid administrators and corporate executives, and start cutting wages there first. Third, I also think that if you are choosing to send your child(ren) to a private school, then you should be paying for that out of your own pocket. The government should not be funding private schools. Those funds should be used for public education: teachers, resources, classroom assistants etc, all of the things that are currently being cut due to budget restraints.</p>	<p>go talk to Stephen Harper.... seems to me we were doing ok when he was in charge.</p>
T0G	<p>roads and medical infrastructure. don't cower down to all the indian pressure and keep giving them hand out after hand out and don't fall for the consultation game its bullshit</p>	<p>elimination of the provincial sheriffs department. if you want to keep them as prisoner transfers ok but we don't need tp be paying 5000 sheriffs 100,000 plus in wages and benefits to accrue a provincial pension when they are done working and retire. the expense of all their vehicles and maintenance is a joke and no i have not had a ticket from any of them</p>	<p>the government had better come up with something here after giving away the 5 billion to big company already you guys are in the frying pan and the stove is getting hotter day by day. its time for you guys to quit believing the bullshit stories jason kenny keeps coming up with,you need to have vote of no confidence in him to gain the people back. jason has done nothing but hurt the conservative party and yes i am a conservative supporter</p>

T4E	Allow private sector businesses to bid on providing schooling ,health care and other services that are now monopolized by unionized public employees. The private sector is more efficient and will provide better services for less tax dollars and often with happier employees as well	Introduce a minimal service charge for all health care services to reduce frivolous doctor visits by addicts and hypochondriacs.	Reduce unnecessary regulation, allow private business to do their thing
T9E	They should focus on diversifying Alberta's economy and reducing out dependence on volatile resources. By the way, you can balance the budget without decimating our public services. We should be focus on improving our world-class education system and public healthcare system.	Eliminate the "War Room" and the "Minister of Red Tape", for starters. These are unnecessary, WASTEFUL programs and positions.	They should focus more on diversifying Alberta's economy and reducing out dependence on volatile resources. They should re-instate grants for tech and artificial intelligence companies, and use the STEP program to make more positions for young people struggling to get a foothold in the economy.
T8H	Maintain front line services (education & health care). Stem the rising crime rates.	17(1) nurse and I hear all the time of inefficient and ineffective management. 17(1) I am astounded by the stories of such bureaucracy. I am sure AHS can find savings in this regard without cutting front line services. 17(also believes that funds can be saved by actually hiring to replace overtime hours. But clearly most overtime & excessive sick time are major costs the province can't afford any more (throughout the public sector).	First and foremost, fight ideologies that seek to undermine our economy. That includes those in Ottawa. There will not be confidence in Alberta without confidence in Canada.
t6t	Healthcare, education and natural resources, renewable energy	taxation- we are the 2nd least taxed province. Do you think people would choose to be laid off vs. paying more tax.	using our natural resources, supporting small, local business. Increase tax to big Corp. Create a grant for university students to create ways of economic growth. They're the brains, use them.
T4B	Education Healthcare	War Room Alberta Fair Deal Panel MLA salary	Build a pipeline Build more schools Diversify the economy
T9e	Health care	Stop giving corporations a tax break	Stop laying people off or threatening rollbacks our position cuts
T4G	Please cut our debt and stop overspending!	Many senior positions are filled by people who don't know what they are doing and/or aren't willing to work. Cut their wages back or cut their jobs. Also cut back on social payments, we have a large number of people using the system, just taking more and more, they aren't willing to work and/or feed their kids out of their own pockets!	Offer incentives to businesses to hire workers who want to actually work.

T7y	<p>Daycare subsidizing. Per the understanding the daycare subsidy for non-profit daycares are ending (phase 1 June 2020, and phase 2 March 2021) As a double income home we have a tough time with 2 children at the rate of ~\$1100 each per month to pay as well as all other bills, activities for the children food clothing and other functioning costs to sustain a household. That is \$2200 per month just alone on childcare so that we can continue to work. If we cannot afford care for our children this takes us out of the workforce, it decreases the money we can spend to maintain the economy, it becomes a vicious circle. This definitely was a great initiative the NDP started, and we do not care for the NDP, but this initiative was definitely a well spent one. We voted for you UCP, please don't make us regret it.</p> <p>Healthcare- is another area to focus on as we all will require assistance in our hospitals if not today but in the future. Our families are aging and the quality of care sadly is depicted by the quality our hospitals are in. If we cannot continue to maintain and replace aging equipment the level of care decreases. If we cannot continue to decrease wait times, captivate some of the best doctors in the country, makes it so hard to function in the healthcare industry. And the only ones that suffer are the patients, your families who go into the hospital who cannot get an MRI done because there is a wait time. Or an ultrasound done to determine that stomach pain because there is one shared amongst 4 departments. Fully understanding that every so often resources need to be reviewed to ensure the most efficiency use of the current budgets. But at least maintaining budgets from year to year so as not to decrease funding is a minimum that should be done.</p> <p>Education- without good education, the future of our</p>	<p>The inefficient projects that have taken place such as Edmonton's bike lanes that cost the city millions and for what. For a city that has summer months in less than 1/2 a year. Reviewing where projects have been poorly managed and recapturing the funds that have not been spent. There are tons of pockets of money just sitting there on projects that were created in the past that have been poorly managed and money is just sitting everywhere waiting for variance opportunities to spend the residual that was not spent initially. Taking that money back, and re-allocating it to resources that include all the people and not just those that drive their bike to work cause they live close to downtown edmonton. What about people in the rural who would never take a bike to work. Those projects are inefficient and poorly thought of. That is just one example. Funding projects that would touch a higher percentage of people.</p> <p>Arts- In a time of budget clean up- the main necessities for life should be focused on: Subsidies where it allows people to continue to work Healthcare Education Infrastructure so our roads don't kill us on the way to work cause the pot holes are so large</p>	<p>Keeping minimum wage lower so the small businesses can continue to sustain. Maintaining coal fired power which allows for more men and women to be employed. These other forms of making power do not require as many people to maintain which leaves lots of people out of jobs. Clean up the technology- there is no reason to stop utilizing the resources that were put on this land for us to use. We must be smarter with the technology to clean up the emissions like the rest of the world is doing.</p>
t2z	Healthcare, including public health initiatives like safe consumption sites	Their own salaries and pensions, corporate handouts	Spending on infrastructure projects, grants for companies that will help in diversifying the economy- i.e. tech companies
T9A	Keeping smaller class sizes is important to us and many other albertans we know. Our kids are the future work force and we need to always keep that in mind. Investing in the future through our children is good for everyone.	The health care sector needs a serious restructure to make it financially responsible. Over management is a serious problem in many companies and leads to overspending without enough revenue to support it. Alberta health is a prime example of that.	The corporate tax cut is a good start. Cutting back on red tape and getting the federal government to cooperate with our energy projects would be a necessity to getting energy companies to invest again.
T3c	Education and health care	Federal Transfer payments	Economy for the Common Good. It's a thing. Look into it

T1S	Reduce the provincial debt (the Notley mess). Health care & education seem to be "out of control". The health care wait times do not seem to be improving, so why keep throwing more money at it. Hospital management needs to be made accountable. Education system is in trouble. Their management needs to manage or get folks in there to do the job properly.	Road repairs. There are some European countries using technologies already that use machines to repair roads at substantially lower costs than the "more manpower procedures" currently being used. I'd be happy to pass on the info I have to you if requested. Tree planting by drones. 100,000 trees per day can be planted with a hand-full of manpower. The technology is superior especially in mountainous terrain.	If we are going/forced the "electric" route, I don't think we have enough generating capacities. Let's get a plan in place asap & get the generating capacities required. I don't want to see Albertans "get caught with our pants down" i.e. Brown-outs.
T8V	I was a believer in PPP infrastructure projects in the past. Reviewing the capital plan to make sure that only the most important projects move forward is very important. The new GP hospital and HYTHE senior's expansion have been very expensive to the taxpayer. Augmented due diligence should be required so taxpayers do not get financially take advantage of. Retaining more federal tax to stay in Alberta is key- stop the Quebec freeloading. Getting Alberta back to work so we can tax more people and more corporations would ease the burden for everyone.	Making the capital plan accountable so higher costs are harder to incur. Having a capital plan that is not developing ahead of need. Health care is burdened with wait times for some procedures. Is there any traction to discuss expanding private clinics for certain procedures? I wish I had more answers here, but I look forward to hearing what others think and believe.	Tough talk with Ottawa. Bills that stop the export of O&G? Come on...enough. Provinces using Alberta as a cash cow? Come on...enough. Attract refineries into Alberta. I am tired of the talk where this can't be done here. Why not? Give a corporate one time provincial tax exemption for investing in a technology manufacturing campus (computer manufacturing, super conductor manufacturing, etc.). I understand there is a robust tech industry in Alberta, but no tech campuses. Increasing Alberta's place in agrifoods may be useful in diversifying Alberta and providing value-added products to the world. Again, taxable exemptions for the short-term to increase this industry's footprint in the province may be beneficial for all.
T6C	Health care - seniors and supportive living homes Job creation - not just oil sector but ways to branch out. More support for small business Analysis further the Blue Cross coverage for persons under 65 but married to a over 65. Income test for low income seniors to ensure coverage	Senior and mid management in all go government positions. Too many similar positions. Review expenses. Drop all bonuses. Reduces all non essential system changes, unless required or improves efficiencies. Stop with the creation of more review panels. Stop the universities from providing offices and staff for retired professors.	Don't just look at the oil industry. Search out new business types, and provide the incentives for them to be in Alberta. Provide the amount required education required to fill the jobs.
T7Y	Health and Education just to keep the leftists happy and to silence their complaints (with restraint as is required to balance a budget). Infrastructure including roads serves almost everyone.	Administration is likely the top answer but I'm definitely not an expert.	Lower the amount of red tape. I realise you have already tried in some areas (ie. getting rid of the carbon tax). First we pay it, then we get 80% back (in my greenhouse business). What a waste of my time and a cost to administer the collection and the redistribution.
T4x	Education and healthcare	Middle management in the government	Educate our children so that when they grow up they'll have the tools to creat industry
T0C	Schools Healthcare	Their expenditures Acquire more percentage from Gaming, liquor and cannabis	Support and push for the pipeline Supports all businesses
	Do not cut PUF funding for children in need of early intervention.	Government official's salaries.	Support public sector programs and jobs.
T4B	Guaranteeing the green line funds and infrastructure projects that help reduce commute times and idling. Second overpass in Airdrie.	Get rid of the War room and Fair deal panel.	Diversifying the economy. Giving Calgary and Edmonton revitalization money to attract corporations back to the downtown cores.
T6e	Education, including post secondary. Health care, especially upgrading lab services	Cancel the "energy war room", Cancel the corporate tax cut	Invest in alternative energy sources, other than fossil fuels. Invest in students who are the leaders and future innovators of our province by cancelling the funding cuts to education.

T0A	<p>Healthcare and education should always be a priority. Tuition should not increase at university.</p> <p>Apprenticeship support already exists. \$1000 grant per year plus EI while attending 3 months. Why does this require more support. Support is already extensive.</p>	<p>Oil and gas should be taxed appropriately; not reduced.</p> <p>Healthcare monthly tax should be reinstated. We used to pay about \$100/month per family.</p> <p>Provincial sales tax, if necessary.</p>	<p>Do not limit support to oil and gas. This could prove a big mistake as the world responds to climate change. Support alternative energy and tech companies. Alberta has always been the last to change. Think smoking and seat belts and metric measure. Now we are doing the same thing with climate change. As I already mentioned, make education a priority. The days of junior high drop outs earning \$50/hr and being in charge may be over.</p> <p>Create tax breaks for alternative energy and tech companies with \$ recovered when you cancel oil and gas tax breaks.</p>
T0B	<p>Healthcare, education, and Infrastructure. A modern safe and healthy educated society survives and even thrives in downed economies. Invest in your people; invest in your communities.</p>	<p>Returning corporate taxation to where it was, or better yet raising them (Norway a very similar economy and population has a 22% avg. Corp Tax Rate). Corporations should pay their fair share. Tax cuts only reward the rich who historically cut and run. Hardworking Regular middle class Albertans shouldn't be paying higher taxes than the corporations. Fair taxation, It helps Albertans and creates a balanced economy. From 2000-09 federal corporate tax cuts saw a reduction by 10% yet business investment stayed exactly the same 12.4% of GDP. Cuts didn't increase investment or create jobs. It rewarded a handful of very rich people, and lost the Liberals their majority.</p>	<p>Invest heavily in infrastructure projects, upgrading highways, bridges, building schools and hospitals. A job created in this sector gives those qualified from the downed oilfield a job opportunity and has them off assistance and paying taxes again. Infrastructure is a historically proven recession buster.</p>
t8g	<p>Support health care workers don,t cut budget on health care.Ralph tried that and it did not work we educated nurses and doctors and they had to go to USA for work 17(1) think this way.but I also have grandchildren and great grandchildren to think about.</p>	<p>Cut out some of the fat in the top end eg.too many so called bosses, executives ,in government today in probably every department</p>	<p>I think they are doing the right thing by supporting the trades apprenticeship programs ,but they could help the farmers too,afterall farming used to be Albertas number one industry.</p>
T5K	<p>The government should focus spending priorities on Education as well as Health Care.</p>	<p>The implementation of a provincial sales tax would improve the provinces ability to again become solvent.</p>	<p>Small business owners should be encouraged, supported and not have to face as much red tape. Homeless people should be encouraged to work for housing, food and income. Pipelines must be established, oil production encouraged. Farming and industry must be recognized and enabled to prosper, within environmental guidelines.</p>
T5K	<p>The government should focus spending priorities on Education as well as Health Care.</p>	<p>The implementation of a provincial sales tax would improve the provinces ability to again become solvent.</p>	<p>Small business owners should be encouraged, supported and not have to face as much red tape. Homeless people should be encouraged to work for housing, food and income. Pipelines must be established, oil production encouraged. Farming and industry must be recognized and enabled to prosper, within environmental guidelines.</p>

T5K	The government should focus spending priorities on Education as well as Health Care.	The implementation of a provincial sales tax would improve the provinces ability to again become solvent.	Small business owners should be encouraged, supported and not have to face as much red tape. Homeless people should be encouraged to work for housing, food and income. Pipelines must be established, oil production encouraged. Farming and industry must be recognized and enabled to prosper, within environmental guidelines.
T5K	The government should focus spending priorities on Education as well as Health Care.	The implementation of a provincial sales tax would improve the provinces ability to again become solvent.	Small business owners should be encouraged, supported and not have to face as much red tape. Homeless people should be encouraged to work for housing, food and income. Pipelines must be established, oil production encouraged. Farming and industry must be recognized and enabled to prosper, within environmental guidelines.
T6R	Priorities should be focused maintaining quality health care (especially for the most vulnerable) and public education. These two areas face drastic cuts which will hurt Albertans in the long run.	Look into the research that has been done by the Health Quality Council of Alberta. Primary care and front line workers are extremely important in first helping patients. By cutting funds to family doctors and nurses, this will lead to increased burden to ER departments and more health complications. There should be a real focus on preventative health, in the form of healthy eating, active living and mental health. I URGE you to read this document: https://www.hqca.ca/wp-content/uploads/2018/05/HQCA_PCMeasurement_March2014_Final.pdf	We need to focus on renewable energies and innovation. Getting back into Oil, Jason Kenny is becoming obsolete, not to mention the problems placed on the environment. Look into wind power, solar power, recycling (or reducing would be better).
T8W	Education and safety (keeping our rural communities safe).	We want to support small businesses and Canadian businesses, so if tax cuts are going to go to businesses they should go there only. No tax cuts for huge businesses, especially if they aren't based here. More money for Canadians. Also if we have to keep pumping gas the least our other provinces could do is buy it.	Investment into stable industry's, no one wants to send people to a job that wont exist in a few years. With that, more investment/scholarships to support people going into the jobs we need most.

<p>T5Y</p>	<p>Health care - bring down wait times without privatizing health care</p> <p>Education - provide public funding for enough teachers and support staff so that class sizes remain below 25 students. Private schools should not receive equal funding - in fact I am of the opinion they should receive less than 50% of their funding from tax dollars.</p> <p>Capital funding to build new schools and fix schools that are in need up upgrades</p> <p>Post secondary education: maintain or increase funding levels. Keep the domestic tuition cap in place. Dial back the increase in interest rates for student aid debt when students go into repayment.</p> <p>Funding for municipalities: maintain levels to pre-2019 budget. This reduction causes us to pay more in municipal taxes. You're just moving the tax dollars we spend, not reducing the overall amount.</p> <p>Hire more prosecutors to send people through the court system more quickly</p> <p>Remove the decision to reduce public sector wages by 2%. Reverse the plan to cut public sector jobs, even through attrition. It's just as bad to be left behind and severely understaffed as it is to be laid off. The need for public sector employees does not go away just because you're cutting the funding - we still need nurses and teachers and other support staff.</p> <p>And yes. I'm aware of how much these things cost. Tax me accordingly as long as I get to live in a functional society</p>	<p>There are a lot of times that spending money up front on proactive measures saves money in other places. One example is the Housing First model. By paying rent and providing supports to formerly homeless individuals, the government has been proven to save money in other places - health care, policing, the justice system, etc.</p> <p>There are many arts and culture initiatives that show similar impacts.</p>	<p>You need to diversify the economy. Many oil and gas jobs are becoming automated, so they're not coming back. Provide re-training to those in the sector who have lost their jobs. The CETT vouchers for former coal workers have been very successful, for example</p> <p>Invest in other industries. Not everyone wants to work in the oil sector, even if it miraculously makes a come back and we see a boom like 2006.</p> <p>We need all types of people and careers in Alberta.</p>
------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

T8A	<p>education health care growing green energy seniors</p>	<p>implement a small provincial sales tax (we all pay) STOP handing out money to oil corporations!!</p> <p>all charter and private schools SHOULD NOT receive any public funding- parents who choose to send their children to these types of schools need to pay/ support their existence entirely themselves</p> <p>cut the Lieutenant-Governor spending/ funding - it is a symbolic position that should not receive any taxpayer funds as that person is NOT accountable to citizens</p> <p>cut funding to many programs (education funding, outings) in prisons - these people should not be receiving any frills</p> <p>allow more private health care clinics (pay as you go/ need) but NOT at the expense of general health care funding - allows choice/ options and if people wish to avoid lengthy waits, they pay</p>	<p>by cutting spending to education and health care, you are in essence, eliminating jobs (front line workers)</p> <p>grow the tech sector/ movie industry sector/ tourism sector (Alberta residents show their AB licence to receive a 2-5 % discount at provincial sites, mountain resorts, provincial museums = more Alberta visitors and more economic spin offs) / what about giant greenhouses for growing more produce year round (on the same scale as the marijuana industry) - less reliance on out of province items purchased</p>
T6L	Getting our economy going, Health Care - physical and mental, and education.	Lower minister salaries and pensions to be more in line with the working people. Find effective and efficient ways to operate. Reduce waste. Reduce transfer payments.	Invest in business, stand up to federal government and other provinces. Sell Alberta oil!!
T4C	1 Health, 2 Education, 3 Safety of Citizens, 4 Infrastructure	Stop trying to be all things to all people, reduce the chance of liability when people do public service activities - ie why should a helpful citizen be concerned about assisting in flooding the outside community rink? The threat of American style liability has smothered community involvement. Get a handle on out of control Municipal spending - the Minister of MA needs to STEP UP!	Institute a set of guidelines for municipalities to follow in their planning and permit process, based on the best examples (Airdrie, Strathmore?) and implement so the worst examples (Rocky View County, Calgary, Cochrane) are brought back to reality. Continue to uphold and publicize our high standards for protection of the environment. Maintain a steady, reasonable, business tax rate that can be depended on.
T0E	1. Balance the budget 2. Get Albertans working. 3. Infrastructure	Cut administration. Our provincial Government is too top heavy in all sectors. Not enough bang for the buck.	Low taxes. Let entrepreneurs and business generate jobs. Government should be focused on health, education, fire and police etc.
T0B	Ensuring debt repayment and balancing the budget. Only taking debt in regards to gov't projects such as twinning highways and building pipelines (these projects are investing in AB).	Revisiting AISH eligibility requirements. Cutting post-secondary funding to arts and commerce projects and diverting it to STEM and trade programs. Cutting the multiculturalism grants and making those clubs become self-sufficient. Switching gov't pensions from defined benefit to defined contribution and make investments that directly correlate to those industries in AB (It's risky, but, it incentivizes our public workers to work towards this provinces wellbeing. If CEOs are expected to be paid in corporate stock, why not public sector unions?).	As mentioned earlier, we need to focus on STEM and trades. Thank you for working towards giving prestige to trades as equals to degrees. This way we'll have a ready workforce to diversify both our energy sector and into technologies.

t6h	Alberta should be focusing on developing our natural resources but not at the expense of health and education. Currently, the proposed budget will be most detrimental to our most vulnerable citizens, such as students with special needs and people with medical needs. The move to alter public education which is currently recognized as a benchmark around the world should not be sacrificed for a private model which is worst for those from low socioeconomic status.	While education and health salaries could stay stable and taxes could go up incrementally, we must not sacrifice our social capital to achieve short term goals. The budget should not be balanced on the most vulnerable people in society	An aggressive move to get our resources to port and using the revenue to invest in renewables should be the focus. Fossil fuels are becoming less viable and we should develop our resources before they are phased out. By investing the revenue in solar, wind, and alternate energy sources Alberta can be relevant in the future. Investment should not be pulled from innovation and development as a "brain drain" will make those most entrepreneurial to seek elsewhere to invest.
T6M	Health care, Education, GHG reductions	MLA pay, MLA office budgets, Premier travel outside Alberta, MLA pensions, Oil and Gas Subsidies, Ending funding for the Canadian Energy Centre	Spend more on infrastructure, by not turning respected post secondary institutions into diploma mills.
T3A	Healthcare and primary and secondary education.	Post-secondary education 17(1) and lobbying for cross-province free trade which would boost the economy.	Lobbying other premiers for cross-province free trade (not just oil/gas, removing intra-national trade barriers in general as Stephen Poloz suggested). Not making massive cuts but freezing budgets over several years until revenue catches up to spending.
T0B	Jobs, Education, and Health, Food production (Agriculture) Economic agencies (REDA are already setup and ready to work with communities)	Take a very close look at the bureaucracy in the govt and see if something can be trimmed from these offices.	Work with industry and job creators in this province and help them set up good strong business cases by using interest free loans.
T8A	Supporting our education systems and health care system. Allow these systems to grow and thrive instead of implementing "freezes" that amount to cuts.	Making sure large corporations are taxed and paying what is owed.	Supporting educators and educational systems to prepare and inspire students. Explore renewable energy and diversify from oil.
T6H	Diversification and retraining	Healthcare - private delivery and hire physicians as employees rather than contractors who engage in monopolies and price setting. Administration and red tape	Universities! Trade schools don't bring you innovation and universities need funding to bring in top researchers. Now some universities do have spending problems, but that's administration and not the teaching.
T5M	Social services, education	Program abuse and possibly fraud in large social services programs (welfare and AISH).	Raising the low and middle income levels.
T0C	The typical ones are health and education, but economic diversification is huge.	Streamlining operations and limiting middle management. AHS and others are loaded with bloat. Frontline is not the issue.	Create an investment forum for international investors to come and see what we have to offer. 17(1)
T8X	renewable resources	Not funding oil and gas propaganda	Invest in renewable resources instead of pretending non renewable energy company care about Alberta
T8H	Education and healthcare.	Raise taxes on large businesses and the wealthy Albertans that have money to spare.	Investing in our children's public Education rather than having a narrow minded, shortsighted vision.
T5A	Healthcare and education	MLA salaries.	remove the salary freeze for non union govt and AHS employees.
t8a	tax credits for technology and film industry to fill empty office buildings, diversify our economy and move jobs from BC and ONT. This will increase AB population and give us more of a federal voice	healthcare, education and especially the government bureaucracy	tax credits for future growth industries (and their related educational facilities) to diversify our economy and get these industries established in the province
t8a	Healthcare Education Economic growth / job creation	Look for efficiencies in government but not lay off workers. A sales tax would help us to have a regular revenue stream as well.	support small business, unions, oil & gas development as well as technology and manufacturing sectors.

T0A	We should not have any spending priorities. We should only have cut-back priorities. We do not have a revenue problem, we have a spending problem.	<p>Normalize public employee pensions and salaries to represent what people in the private sector make. Open the public sector to more competition from the private sector.</p> <p>Get rid of redundant or useless departments. It must be clearly understood and appreciated that public unions are not unions, they are monopolies, and do not have to compete like private unions.</p> <p>Get rid of all unessential programs in universities . Like any leftist, socialist woke bullshit.</p>	<p>Stream-line and speed-up the regulation and permitting processes for projects. Eliminate as much red tape as possible. A healthy and robust investment environment is essential to the future prosperity of any Province and must be aggressively pursued. I do not mean subsidies and welfare hand outs.</p> <p>Alberta has enough natural resources and talent that we do not need eastern Canada. Alberta cannot survive another federal liberal dictated government. Alberta needs to separate from Canada to survive, period.</p>
T0B	The government needs to focus spending on developing our vast resources, oil and gas, forestry, agriculture tourism, and technology. I feel there is a lot to be done, there has been too much focus on oil and gas, I realize it has been a major revenue driver for a long time, however I feel that there is lots of room for development and growth in agriculture first of all it is sustainable and there is a growing population to feed around the world we are shipping too much unprocessed food. We need to diversify our economy so that we can smooth out the highs and lows of the energy sector as well with the growing awareness of climate change energy is getting a bad image. We have a beautiful province we have vast forests some of the most productive farmers in the world for a change lets not cut funding to these industries rather increase spending so that we are not so reliant on energy	<p>First off you have a big job ahead of you, I think the first thing you have to do is educate the people, when people can't manage their own finances how are they going to understand fiscal management by the government there are a lot of people that think that if the government pays for it it is free. So I realize there was I believe a 5% rollback on MLA's salary meaningless in terms of optics you need to do 25% and then your message of austerity would seem a whole lot more authentic. In my opinion people need to know how much it costs to visit a doctor, or how much it costs to send a child to school, how much do teachers make how much does the pension plan cost we need to know what it costs to deliver public services, so that when you want to rollback or freeze wages we can judge whether that is fair. One way to save money is scrap preschool it is just glorified daycare we should not be paying for baby sitters plus it would provide a chance for some small business I think the whole education system has to be overhauled and become more efficient, way too many half days and shortened days when transportation is so high perhaps longer days and fewer of them would be more efficient and teachers are overpaid. For the life of me I do not understand why people abuse something as great as health care but both patients and providers do, again a patient has to know what it costs to visit a doctor and not on some website that requires 10 minutes of search but posted at the clinic and at the hospital, it should be mandatory that cost of services that are in part or in whole funded by the government be posted in a visible location and I mean all services education, infrastructure, health care, recreation facilities everywhere government money is spent there should be a visible account of the funds provided by the government so that we can make informed decisions about budget cuts or freezes or if you are being fiscally responsible. Health care abuse has to be stopped. Live near</p>	<p>First of all we have to provide our grade one to twelve students with better life skills. From a way better understanding of economics to a more diverse and practical course offering. There should be no student that attends junior or senior high school that has not visited one of the tar sands plants, or a coal mine or a lumber mill or a farm or went to an operating room theater how are our students going to make wise career choices when they have not been exposed to real life experiences. In my opinion wise satisfying career choices makes for less unemployment a more productive workplace in turn we become more competitive globally and that creates more jobs. Our youth is going to drive our economy going forward we have to provide them with the experiences and the tools so they can leave school and make the wise choices to be productive members of society. We have failed miserably over the last couple of generations.</p>

T0B	<p>The government needs to focus spending on developing our vast resources, oil and gas, forestry, agriculture tourism, and technology. I feel there is a lot to be done, there has been too much focus on oil and gas, I realize it has been a major revenue driver for a long time, however I feel that there is lots of room for development and growth in agriculture first of all it is sustainable and there is a growing population to feed around the world we are shipping too much unprocessed food. We need to diversify our economy so that we can smooth out the highs and lows of the energy sector as well with the growing awareness of climate change energy is getting a bad image. So I realize there was I believe a 5% rollback on MLA's salary meaningless in terms of optics you need to do 25% and then your message of austerity would seem a whole lot more authentic. In my opinion people need to know how much it costs to visit a doctor, or how much it costs to send a child to school, how much do teachers make how much does the pension plan cost we need to know what it costs to deliver public services, so that when you want to rollback or freeze wages we can judge whether that is fair. One way to save money is scrap preschool it is just glorified daycare we should not be paying for baby sitters plus it would provide a chance for some small business I think the whole education system has to be overhauled and become more efficient, way too many half days and shortened days when transportation is so high perhaps longer days and fewer of them would be more efficient and teachers are overpaid. For the life of me I do not understand why people abuse something as great as health care but both patients and providers do, again a patient has to know what it costs to visit a doctor and not on some website that requires 10 minutes of search but posted at the clinic and at the hospital, it should be mandatory that cost of services that are in part or in whole funded by the government be posted in a visible location and I mean all services education, infrastructure, health care, recreation facilities everywhere government money is spent there should be a visible account of the funds provided by the government so that we can make informed decisions about budget cuts or freezes or if you are being fiscally responsible. Health care abuse has to be stopped I live near</p>	<p>First of all we have to provide our grade one to twelve students with better life skills. from a way better understanding of economics to a more diverse and practical course offering There should be no student that attends junior or senior high school that has not visited one of the tar sands plants, or a coal mine or a lumber mill or a farm or went to operating room theater how are our students going to make wise career choices when they have not been exposed to real life experiences. In my opinion wise satisfying career choices makes for less unemployment a more productive work place in turn we become more competitive globally and that creates more jobs Our youth is going to drive our economy going forward we have to provide them with the experiences and the tools so they can leave school and make the wise choices to be productive members of society We have failed miserably over the last couple of generations</p>
T7x	Health Care	Stop over paying the higher ups	Hire more health care workers
T2J	Areas with lower managerial overhead. transportation, energy, technology, agriculture	where inputs don't have good enough outputs per dollar.	by not being as afraid of budget deficits as they are. Investment is income, understand where added investment causes inflation and where it doesn't. Understand how the government should compete and realize that a central bank is an accommodating yet overly exclusive table for money creation. 17(1)
T4N	Infrastructure and diversifying the economy	Administrative costs	Economic diversification, green tech incentives

T6J	Keeping employed workers working. Not firing them and giving their jobs to private - for profit unidentified entices or corporations. In particular our medical/healthcare services and educational workers.	- Unhide the dollars given out as election supporter bribes or otherly described silent give aways and make each cent's worth accounted for. From the day of this past election until all Albertans are confident in the transparency of 'all' current government transactions. Claw back these funds - Hold drilling companies responsible for abandoned oil wells - penalize all petro chemical companies and contractors/independent operators for past, current, and future abandonments...ensuring industry fiscal support of the responsibility of cleaning up.	- Fund alternative energy development and implement programs and policies to encourage individuals and corporations to retrofit buildings, businesses, and homes. - Encourage public mass transportation. Give individuals opportunities to invest directly in projects ensuring for-profit participants are fully accountable to all Albertans and not just private government committees. - If major projects like a fast-rail link between Edmonton and Calgary are held up by funding, set up a individual funding structure allowing "Albertans" not other non-Canadian sources to fund the project. - Make any private-funded healthcare and education providers fully fiscally transparent to all Albertans and allow individual investment into such.
t5z	Education, both pubic and post secondary. Health Care. Diversification of economy.	Introduce cost-sharing for doctor visits (80/20) with exemptions for the poor. If we have to pay a portion to visit the doctor: a) it would help eliminate fraud b) it would help eliminate unnecessary visits	Re-instate the tech incentives. Edmonton was on the verge of becoming a tech giant and the budget cut is destroying the progress.
T5R	Education (K-12) with priority to K-6 increased funding per child. Children's Services, Health (family physicians, long term/extended care). Housing, (single parent/guardian family, seniors, vulnerable)	Amalgamate departments; one director for several departments. Spend money on 'essentials' art work; lovely but should be privately funded, Reduce funding of LRT; (we have roads and bike lanes, enhance public transit systems)	Provide incentives for students enrolled in a 'trade' program. Provide incentives for businesses during their first 2 years of operating. Have a 'delegate' travel and extol the virtues of doing business in Alberta. Work with insurance providers to reduce premiums to Albertans.
T8S	Healthcare - an ill society is a society that does not work and therefore has no money Education - the strength of our province lays in the education of our population. A strong education system is necessary for a strong future. Small business/Innovation - start the process of moving away from fossil fuel dependency as our main source of income in this province	1. At the top!!! Heavy bureaucracies of government agencies need to be trimmed and more "boots on the ground" and front line workers are needed 2. Get rid of the Alberta "War Room" - Canadian Energy Centre - what a colossal waste of my money as a taxpayer.	Put money in the hands of the people! When people are secure and have money; they spend money which in turn keeps businesses afloat AND creates jobs. When governments hack and slash and cut, cut, cut ...no one feels secure and therefore people start to hold off on spending. This creates a HUGE problem as businesses start to feel the pressure and begin to lay people off and/or close their doors and/or file for bankruptcy. Hack and slash does NOTHING for prosperity!!
T6C	Supporting Alberta's Economy, while Business learn to move in our "new normal". Too many small to medium size companies have already sunk... the ability for remaining business to continue through this change and into our new economic climate needs your support.	My suggestion comes As a small business owner, and a successful family manager who's managed through many financial downturns; A "fine comb" technique is needed here to discover the hidden places where financial savings are hiding. From the SMALLEST to the largest expenditures its time to ACTUALLY stop spending in unnecessary ways. New adventures, rewards and even beautification are a very limited example of how nothing can be overlooked. ONLY ESSENTIAL, NECESSARY SPENDING and hopefully this will take direct pressure off the taxpayers and hopefully provide resources to keep "business" running.	Honestly cutting "all" *unnecessary* financial outlays as indicated previously. Redirect those funds to "directly" support business
T9H	Social Services and Healthcare	Finding other revenue streams, introduce PST.	By not cutting social services and healthcare

T8E	Diversification of our economy. Dependence on the oil industry is not the future.	Definitely tighten spending in all ministries. Eliminate wasteful spending, inefficiencies and redundancy. Closely examine the provincial tax structure. A flat tax rate may no longer be practical when other revenues have declined.	Offer initiatives to tech industries and sound renewable energy projects.
T9M	Health and Education.	By returning corporate taxes to their original level instead of forcing health care and education cuts.	Funding health care and education to create health care and teaching jobs so that the province can meet its obligations to rural Alberta. Incentivizing companies to sponsor trade and high tech education.
T4X	Health care & education! It would be a shame to make cuts to our future 17(1) t's the increase in class sizes, lack of funding to students with special needs etc. The children and young adults in our province deserve the best setting to learn in and become responsible citizens so they can be strong leaders in the future, in Alberta!	Maybe they could look at their own wages, travel expenses etc etc etc	Put the pipeline through, leave funding to education and health care alone so teachers, educational assistants and nurses et al can continue to work
T6W	Continued support for new immigrants, support for k-12 and post secondary institutions, funding for technology innovation and health care.	I think you are taking too much too quickly from health care and education. The funding for the "war room" seems inappropriate in a province that needs to diversify its economy. You could cancel that.	Through supporting new growth areas such as tech and innovation in agriculture and energy.
T8W	Greater support of public services, such as health care, education and law enforcement.	Instate a PST in Alberta. Increase taxation of large corporations.	Creation of public works projects. Diversifying our economy into other ventures besides oil and gas.
	Job creation	Not sure,	-Add a provincial tax, -1.5% public sector wage roll back. -invest in green & alternative energy -higher taxes for the wealthier tax brackets in Alberta
T6J	Health care jobs Education Jobs Rural school divisions and hospitals Removing tax advantages for oil c	Cut salaries of high paid execs in government Cut party sponsored agencies like war room and Tory sponsored travelling road shows	Listen more Respect democracy and public opinion Keep jobs on health and education sectors Give back tax credits to film industry and hi tech Give good tax credits for businesses supporting arts A sector that creates jobs
T2p	Eliminating the duplication and waste by having so many Universities in Province.	Reduce duplicate spend in Universities. All have duplicate HR, Admissions, IT, accounting. Implement consolidation similarly to Health Care years ago.	Build high speed rail that connects Calgary to Edmonton. Create a economic power through connecting our two cities with everything between (red deer, airdrie, Leduc, etc.).
	Innovation	stop spending money on cronies	Diversify, we can be more than oil

T7Z	<p>Spending needs to be balanced between "promoting big business" and the social programs. Governments get it backwards - when times are tough in the public sector the government should step up, when times are good back off. No governments cut back in government right when times are tough in the private sector - double whammy.</p> <p>The other thing the government needs to recognize is that government does play a role in ensuring equity for all when it comes to health, education, etc. The private sector is not in that business, they are in the business of making money - the two do not mix.</p> <p>Put money into programs to generate diversity in our economy such as supporting alternative energy sources, attracting the tech sector, etc. There has for years been talk about diversification but it is only lip service.</p>	<p>Cutting the 30 Million \$ War Room would be a good start. Cutting layers of upper management who are so far removed from the working level that they cannot make informed decisions. When you are looking to cut what senior executive is going to recommend cutting themselves - a lot of non-productive senior management - not talking about working level managers just the upper level executives.</p>	<p>Quit laying off public sector workers for starters. Put money into the post-secondary institutions to support alternative energy research. Provide incentive programs to draw other industries to Alberta. Evaluate whether all the incentives and give aways to the energy over the years continues to be worth while - get your heads out of the sand when it comes to the energy industry who to a large extent have raped our province of our natural resources and when times get tough they pack up and leave. Provide funding to complete the twinning of the Fort McMurray highway. Put money into other infrastucture programs - generates work and results in a better province which in turn attracts more industry and tourism.</p>
T8v	Alberta busness development	<p>Equalization payments Cut top heavey bureaucrats</p>	<p>Removing carbon tax Invest in alberta agriculture , energy Push back more on attacks on alberta from other provinces</p>
T8G	improvements to healthcare and education, AISH and Seniors	<p>taxing major corporations to insure they pay their fare share...bring back the carbon tax</p>	<p>restore funding to front line services, education, and healthcare, climate change is real, we need a diversified economy rather than relying on oil, support for solar power</p>
T7Y	Infrastructure	<p>Social services of all types.</p>	<p>Expand our infrastructure. Build a highway from Ft Mc to Peace River or High Level. Pave highway 40 from Hinton south. Reduce red tape. Reduce taxes. Reduce the size of our civil service.</p>
	Health, education, and socual services	<p>The government does not have a spending problem so much as an earning problem. Increase taxes to high earning individuals and businesses. It is also time to revisit a PST as a conservative government is the only government in Alberta who has any hope of implementing it.</p>	<p>Restore grants to the tech sector, renewable energy, and small businesses. Diversifying our economy is more important than continuing to try and restore the oil and gas into where it once was.</p>
T6L	Education and Health Care	<p>Quit wasting time and \$\$\$ on "think-Tanks" and "expert" consultations.</p>	<p>Remove regulatory barriers.</p>
T6G	More spending on social services including education and health care.	<p>Raise taxes so the wealthy can pay their fair share</p>	<p>Implement a sales tax</p>
T0B	Classrooms ans kids. Now, more than ever, our children need person-to-person interaction. Special needs and inclusion are failing due to a shortage of teachers and support staff that can meet their needs. And teachers are drowning in constant demands to do more with less.	<p>Start with reducing the wages and numbers on the administrative side of division offices and government positions. How many teachers could be hired for a superintendent's wage?</p>	<p>First and foremost, by NOT cutting the jobs/positions of the front line workers. Put staff with kids. Cut out all of the extra spending on initiatives and get back to supporting basic skills development.</p>

T3B	Childcare, Education, Healthcare	Get rid of the war room, and the Fair Deal Alberta discussions. Also Mr. Kenny needs to be in the province more. Stop travelling and spending tax payer funds.	You must spend money to make money. You must support the educational needs of the children who will be filling those jobs in the future. Stop relying on oil and look at diversification of resources(solar, wind). Support the film industry, which creates jobs.
T4S	<p>1. Health Care - People who lose work because of untreated illness cost us money. Doctors who are overworked will make mistakes. We don't have enough doctors or nurses. Emergency rooms are too crowded. Health is a basic need.</p> <p>2. Education - We need to grow our own doctors, lawyers, architects, engineers, teachers. We need to have a literate society capable of critical thinking. There are a lot of violent children in elementary schools. The other children can't learn when they're afraid. The violent children need educational assistants.</p> <p>3. Farmers - these people grow our crops and raise the animals we eat. These people have always been overlooked and never even have two nickels to rub together.</p>	<p>1. No tax loop-holes for large businesses or rich people.</p> <p>2. No "deals" or incentives for people who already have more money than everyone else.</p> <p>3. Increase taxes for the rich people and businesses.</p> <p>4. People and businesses have become rich by taking advantage of the system and the general public. This is shameful. They need to pay back their ill-gotten goods.</p>	<p>1. Hire more doctors, nurses, teachers, and educational assistants. If they have jobs, they'll be able to spend money and pay taxes.</p> <p>2. Support small business. People who are hired to work there will have money and be able to spend it in their communities.</p> <p>3. Oil and gas are important in Alberta, but they're not the only asset we have. Think about other things, too.</p> <p>4. Increase tourism. This will bring in money to hotels, restaurants, local business.</p>
T9S	<p>Education, Health and social services.</p> <p>Healthy Albertans can work and when we work we pay taxes, we spend money in our communities. Taking care of every Albertan needs to be the highest priority, if we do not have our health, what do we have? This includes recognizing our remote and rural areas and taking care of them just the same.</p> <p>Education - We cannot be leaders in the county and the world if our future leaders are not properly educated. We need to move forward with our education and ensure the generations that will be running our province when we are retired are ready. It is our responsibility to prepare them.</p> <p>Social Services - We are a privileged province and need to take care of each other. Nobody should suffer by not being able to access the resources they need when they need them.</p> <p>Putting Health, Education and Social Services as true priorities will save us money int he long term and help generate more money in our economy.</p>	<p>Administration, workflow and just waste. Make the people who are spending accountable for their spending.</p> <p>Basic business is finding the most effective and efficient way to operate, maybe try that in running a province.</p>	<p>Diversify, work with communities of all sizes.</p> <p>Oil and gas are important for our economy, but so is the technology sector and many other industries.</p>

T6x	Stop funding illegal immigrants, sanctuary cities. Keep helping education funds for students even I they move local schools (funds that follow the student) will help create Less waste. Review the effectiveness in having special needs classes / aids who work with kids who will honestly Never be independent in the future, serious drain on funds.	Top dogs in education, health and government. NO tax paid job should pay more that \$100k. Do not cover expens accounts.	Small business tax forgiveness. It's hard to pay these giant Bill's these days.
T6H	I would like the government to reconsider its cuts to health and education. I would also like the government to keep increasing AISH along with the increase in the cost of living. I want to keep these great programs we have (regardless of other provinces spending or lack of spending). You have cut money to Edmonton public schools (perhaps not the overall budget but particular grants, and have not increased the yearly budget, even while EPS has more students each year), so I don't understand the comment you make that you have not made cuts.	In the past I was against a PST (and filled out surveys against it). However, now I have changed my mind and would much rather have a PST if it is necessary to have you not do these cuts to health and education. Please reconsider. I know many other Albertans I have talked to would also choose a PST over these cuts now that we see them in action.	I see that you are committed to fully supporting our oil and gas industry and workers, which is good. However, I would also like to see a big public effort to transition Alberta to a Green Economy, such as big tax breaks or grants for new green companies that could help with this transition to diversifying the economy.
T2S	Let go of oil. Let the industry fend for itself. Focus on things government should focus on: health, education, safety, etc. Demand repayment by industry for orphan wells and unpaid municipal taxes. Work on the environment.	Quit giving money to oil. Oil isn't the golden goose: taxpayers are! Stop funding a "war room". Quit giving lucrative government contracts to Conservative hacks. Don't run phoney leadership campaigns. Try to avoid scandal. That's how we lost the election last time!	Focus on the fundamentals. Alberta needs a PST like all other jurisdictions in the world. Don't get ideological and hunker down on oil. It will be our undoing.
T6R	In some way, try to introduce a 2% sales tax. . . slowly by .5% each year. Increase resource royalties to the province when resources of any kind resurrect themselves. (The province lost out over many, many years.)	Look elsewhere instead of education, healthcare, civil service, AISH, etc.	Motivate technology companies to come to Alberta. Offer re-training opportunities for those who have lost jobs in the resource industries, healthcare, education, and civil service. People without work cannot stimulate the economy. The domino effect will affect everyone and everything. Alberta will otherwise become a wasteland.
T4X	Education Health care Social Services Infrastructure (roads etc.) ie the basic things government is supposed to use our taxes for	Eliminate the Energy Centre (war room) Reduce the number to communications people in the government working for UCP- if you are doing the right thing it only needs to be said once	Create policies tailored to particular industries and services to encourage investment in, for example, value added in oil and gas, in agriculture, and in forestry. ie we need the courage to take a long view.
t6j	maintain programs and prepare for future without oil	government should focus on revenue	dont cut civil service
T8V	Keep our government workers employed! When you negotiate new contracts don't take away everything in it! Like retention bonus for people working in the North.	Get of mid-managers, levels of ADM, DM and on and on. Don't cut front level services. Also, get rid of the embarrassing WAR ROOM in Calgary!!!!	It's not all about oil and gas what about Forestry, agriculture? Focus on other areas of growth.
T4V	UCP should step down. You lied you bastards	Firing Jason Kenny! Asshole	By stepping down
T0H	The government should focus on taking care of it's people and it's land. Like a government is supposed to do. Stop catering to your business buddies and making the people pay for it.	How about their own pockets? Or if you out want to pull from the major organizations in the country maybe have some balls and target the people making the most instead of frontline staff who are barely getting by as is. Starting a war with the people who educate your young and care for your sick and dying is a serious misstep.	How about instead of trying to convince corporations to come to Alberta with ineffective tax breaks you actually do something to address our global image. People hate Alberta and it's mostly due to mismanagement by our government.
T0A	Emergency Healthcare and Education.	Government salaries and business tax credits.	By helping out the middle to lower class.

T5Z	government should focus on ensuring schools get budget aligned with population growth, but hold the line on individual compensation. The same goes for health care. Those in the public service need to understand they are well compensated and have security most other workers do not have.	There are way too many GOA managers with limited or no staff. Why is there deputy ministers with multiple ADM's that have next to no staff? In industry, directors have 6 to 8 managers who in turn have 10 to 12 staffers. The public service needs to get rid of redundant senior managers at the ADM, Director and level 5 paygrade who do not supervise staff. We all know there are Dm's with an ADM, who in turn have 2 or 3 staffers. That needs to stop!	Continue to cut tax and allow accelerated depreciation of research related assets
	Health care Education Public transportation	Executive Director of Issues Management for the Premier of Alberta- this guy is seriously embarrassing to the image of Alberta Getting rid of the war room	Creating a healthy environment for industries other than oil and gas. The massive tax breaks given to those companies has created nothing.
T0a	Education/healthcare	Institute a sales tax to mirror gst	Encourage renewable energy- not just oil and gas
T6C	Public education and public post-secondary education. Publicly funded health care that respects the Canada Health Act and that is properly funded so that it can work like it can and like it should.	A long term approach might include higher royalties to corporations and where this money is nestled in a version of the past "Heritage Trust Fund" so that when there are inevitable down turns in the economy we have that pool of savings to re-inject in the economy. Creating publicly funded jobs through massive work projects (i.e. - Anthony Henday, etc.) whilst using the royalty revenues that were generated during the boom cycle of the economy.	At the present moment, definitely by funding public projects such as infrastructure, research and development or the creation of the "super lab" that was unfortunately, in the opinion of this Albertan, stopped. Diversification is also extremely important and will help in job creation and economic growth. Although oil and gas is extremely important as we do have such an abundance, this is not the only choice in the energy sector. Putting all eggs in one basket in this day and age is not an answer as all signs show that the world demand for fossil fuels is slowly decreasing as choices are made by governments throughout the world that are based on the science of climate change, thus, resulting in a continued lower demand for fossil fuels.
T9H	Healthcare Education	Oil and gas industries	Continue to hire Registered nurses and teachers as well as investing in other jobs in the oil and gas industries to contribute to the provinces while still maintaining our health care and education.
	SAY SOMETHING I certainly do not think they should focus on cutbacks for nurses salaries and overtime and weekend pay and personal days. As well as one extra measly dollar for being a masters of Nursing. Kenny directly went against his word that he would not do cutbacks in the nursing field and he did. He is a huge disappointment to me and I regret voting for him and the conservative party.	On government expenditures itself. Too much has been spent on politicians salaries, child care for politicians, and money spent on the upper echelon of the government. You're penalizing hard-working nurses and teachers right now and it is angering and distasteful and distrustful.	Will certainly not by cutting back on our salaries and cutting back on number of nurses hired. You need to get our oil industry up and running like it used to be over 10 years ago. Our province has suffered profusely and my next door neighbour is working in Ontario as an engineer for the past five or six years because of what has happened in Alberta. Stop importing oil and start exporting oil
T9S	job creation pipeline construction decrease spending	cap public sector wages remove public section management wage to-ups and added benefits stop May madness spending end public sector pension add ons such as matching RRSP contributions	end red tape simplify resource development approvals decrease taxes
T9C	Agriculture support programs, Alberta farmers have faced 4 years of devastating wet harvest conditions that is draining us financially	First of all cut government waste, secondly cut government wages that means elected MLA's and top ceo's in government departments.	get out of the private sector, lower business tax, separate from eastern Canada

T7Y	Investing in revenue generating for Alberta Define core business for civil service with a core capacity support and contracting to deal with changes (downturns/cyclical upswings)to keep govt small & effective Innovation in health & education services delivery Tax workers working in Alberta but living in Alberta - no exemption for them from Alberta provincial tax.	Integrating program service delivery across departments to eliminating duplication & improve efficiency. Not duplicating programs across levels of government - stick to provincial government programs/mandate. Use technology to deliver services reducing travel expenses.	Stand up for Alberta against federal policies/programs putting AB at a disadvantage. Provide incentives supporting innovation & economic growth. Maintain Alberta's infrastructure (e.g., highways resurfacing) as it also attracts economic growth.
T6M	Roads	Energy savings	More attractive investment environment: Taking care of our infrastructure Better looking cities Less bureaucracy
T8N	More needs to be done to ensure municipalities are not short changed in this budget	Instead of cutting already over stretched government departments, that many Albertans rely on. How about looking for new ways of creating tax revenues, such as a sales tax??	Of course
T0B	Not cutting public health employees wages. The government should be fairly negotiating wages with all unions. All unions deserve 5% or 8% wage increase. The government should not cancelling projects in health care. All seniors deserve health coverage. The seniors health coverage should not be changing. The prescriptions of patients should not be changing as well. The government should be focusing on not changing health workers pensions. The full-time staff is important to AHS. I don't think we need to privatize laundry, laboratories, and ambulance. Privatizing health care is never solution it costs more to hire private companies. Most of all those private companies abuse patients because they are paid at a lower wages.	The government could save money by not giving corporations handouts. The government could create Jobs for oil wrokers by oil wrokers cleaning up abandon oil sites. Maybe should look at other resources the could improve the economy of Alberta	The government should be supporting municipalities by having oil companies cover the cost of abandon oil rigs. We could create jobs for unemployed oil wrokers with wind and solar plants
T5X	health care. Earlier this month I got a letter from Alberta Health saying they were no longer covering seniors spouses who were not 65 yet as of March 2, 2020. This, I assume, refers to Blue Cross and NOT Alberta Health care itself. It doesn't really matter much, I guess because Blue Cross doesn't really cover much anyway. Education is very important as well and we can't put more pressure on teachers.	Provincial tax is NOT the solution. We've survived all these years without a provincial tax and we shouldn't implement it just to help the government spend more of our money. Proper spending is. The government, not matter what party is in, is one sided. Tax breaks are always in favour of the rich because the poor can't afford the breaks. So eliminate some of the tax breaks that only the highly paid people can benefit from - people who make 150,000 and more, as an example.	I don't know, but I do know, we are in sad shape.
T0H	Health care, it really needs a workover. Wait times are too long for needed surgeries. And the president and 10 or 11 vice-presidents are extremely overpaid, and there are too many of them. Somehow the management must be streamlined, it is so top heavy!!	By eliminating all of the 50,000 new government employees added by the NDP. Our civil service workforce is bloated. And by eliminating and reorganizing health care management.	By reducing taxes (done) and by forcing a referendum on equalization and separation. The federal government must be forced to the table. Or we separate.

T8L	Fund health care, specifically pharmacists. My local pharmacist in Fort Saskatchewan has saved me so many trips to the doctor and ER through knowing me medications well by doing a medication review, and prescribing for me when I need it. The services they provide have to be saving the health care system a lot of money!	Increase taxes on the very wealthy	Invest in healthcare. Megan health and addictions need investment.
t2c	reduce medical expense with the input of doctors and do not privatize develop non oil and gas industries promote tourism	implement sales tax reduce government salaries and reevaluate government pension plans	support and creat industries outside of oil and gas implement sales tax
T1H	Health Care and long term R&D for renewable resources including but not limited to solar/wind/Geo thermal, nuclear and energy storage. Why not use our royalties to fund and move forward.	Stop funding oil and gas and start having industry pay for their impacted on the economy. Boom and bust. Can't stop bailing them out.....	Invest in R&D..... Capital projects. This is not UCP money this is Alberta's.
	People programs whether health and welfare, Parks and Recreation as examples.	Not financing companies or tax holidays for companies that leave the province. Silly things like the war room. Oil companies made billions from the province time for them to finance their own clean up not the people of Alberta.	Diversification, big oil is no longer our ticket to no provincial tax.
T4X	Education, health care, senior and handicapped funding, getting the pipeline built	Cut the unnecessary travel for meetings when you can use technology, stop cutting everything that the NDP started that is working for the majority of Albertans and stop setting up new focus groups that will come to the same conclusions	give tuition breaks to those who are studying energy alternatives, reinstate the carbon tax from the NDP that will encourage companies to come here because they will look at the province as though we care about the rest of the world, leave the business tax where it is (lowering it does not encourage companies to hire if there are no jobs to hire for)
T4X	Reducing class sizes (funding for growth and reducing overcrowded classes), providing adequate funding for special needs people and those who are vulnerable. Fund our health care!!! Give teachers and nurses control of their pension. That was wrong!!!	Government officials could reduce their pay!!! The government needs to see funding education as an investment in the provinces future. A good debt, resulting in educated citizens that will join the proud work force of Alberta. The government officials could reduce their operating costs by avoiding expensive flights, and unnecessary expenditures. If education & health is cut, then everyone should have cuts. Make big oil companies pay their property taxes! No big tax breaks! Give reasonable tax break to companies who have and continue to invest in our province.	Start by uniting the province's public and private sectors. All Albertan's should carry the economic state of the province. Stop making the Public sector seem like the bad guys! They keep us healthy and our children educated. Invest in alternative energy & oil & gas. The world is a changing place. Turning a blind eye to alternative energy and technology is ignorant. Be responsible to the environment. Compromise! If we don't want people to think our oil is "dirty", more environment investment could change opinions. If the Oil & Gas doesn't pick up, have a back up plan! Be smart. A smart government doesn't put all their eggs in one basket.

T9E	Reducing waste in government	Administration costs in the different education systems- private and public. Fund one public system as other provinces do so children learn tolerance and acceptance and common values. Religion can be taught at home if parents are so inclined.	Support businesses that are diversifying.
T8L	Healthcare, education, public service (everything you're cutting that's essential.... billion dollar tax cuts to Syncrude are NOT essential for survival)	Making oil companies pay their taxes and to stop giving them MASSIVE tax cuts. You'd balance the budget VERY fast by stopping that.	By not cutting jobs in healthcare, education, and the public service. The oil companies literally aren't hiring anyone, even with your massive tax cuts. Jason Kenney's government hasn't created a single job with their catering to big oil, but are ALL about job cuts for essential services. Literally, what's wrong with you? Why is 1 oil job > 1 nursing job ? Who's going to keep you alive in an emergency? Probably not the big oil executive or the labourer with high school education who believes he deserves 150,000\$ a year as a salary.
T0K	indexing Assured Income for the Severely Handicapped to keep pace with inflation. not counting the earnings or assets of able spouses against the income supplement intended for disabled spouses so that able spouses can provide for their children instead of supplementing the AISH program.	Not giving away 4.7 billion dollars to profitable corporations with no commitment for re-investment for Albertans.	Use that 4.7 Billion for re-training and diversification
T4L	Infistructer, education.	Reduce consultant and contracted services where resources and skills already exist in the government.	Reduce regulations to become more competitive.
t9e	Health care, education, police officers	Cutting the number of provincial government employees. How about cutting those jobs, rolling back their wages like they threaten to do to nurses and teachers? Their salaries are ridiculous not to mention personal spending accounts!	Stop cutting teachers and nurses? That would help.
	Focus on commitments to the cities of Alberta. Funding cuts affect jobs in Alberta, which does not support job creation.	Review the revenue side of the income statement, not just expenditures. Why not balance with a sales tax, instead of cutting taxes for large corporations and expecting municipalities and common workers to absorb this shortfall.	Support green initiatives and climate-friendly initiatives. Support your cities and honour your funding agreements.
T8V	Health care, education, and social services	By not spending public money on private schools, by not propping up the oil and gas industry with lower taxes and royalties, by shutting down your oil and gas "war room", by not investing millions of dollars in oil and gas, which is a dying commodity, and by not using pension money that does not belong to you for said investments.	By investing MORE money in post secondary education, by providing incentives for business ideas that would diversify our economy, by providing incentives for people and businesses who reduce their carbon footprint. The government could eliminate the deficit simply by charging a provincial sales tax. This would fairly tax everyone, unlike the 2019 budget which targets only vulnerable populations and the public sector through all the cutbacks and cancellation of grants.

T6J	<p>Education: ensure we have a public school system for children without special needs and children with special needs, ensure all students feel safe and supported from all minorities including LGBTQ students, ensure families whose income is below \$70,000 per year receive the same quality of education as students whose families earn that amount and more, use all scholarships with the intent to enable students from households with less than \$70,000 per year to get post secondary education, develop more co-op degree/certification programs at the secondary level, and build enough schools to house and teach all Albertans of age for K-12 studies (keeping class sizes maximum 10 for Kindergarten, maximum 18 for grades 1 to 3, maximum 22 for grades 3 to 6, and maximum 25 for grades 6 to 12) with aides in place for any students having special needs.</p> <p>Healthcare: ensure all Albertans regardless of age or capability level have full healthcare coverage without privatizing any of the services. Localise healthcare as to location in Alberta being northern, central, and southern as each region has different weather conditions and medical needs, and should receive medical funding to meet those needs.</p> <p>Welfare: ensure that children and people of adult age who are handicapped and have the same need for care as children whether on a mental, physical, emotional, or neurological level receive it. This includes seniors whose capabilities are deteriorating as they age. Ensure that there is aid in place for aging parents of Albertans with more severe handicaps so that said parents are able to still care about and partially care for their child, even if it is no longer safe for their child to live with them due to the parents' growing frailty and the nature of the child's handicap(s). Ensure Albertans can have a roof over their heads and food to eat without them needing fear animal infestations or their</p>	<p>Lower the salaries and benefits of all the members of the provincial government, and the benefits they receive while in office. Also, lower the value of the retirement benefits they receive. These people are doing a job like any other working Albertan, and receive the benefits of making connections during their terms that can further their careers after their terms are finished, so should not be in need of benefits options that are any more than would be received by a lower income Albertan such as a sales clerk, a hotel housekeeper, or a janitor. It will give the members of parliament a stronger understanding of the hardships faced by people in the province, while their still high income would give them the means to overcome them in ways the minimum wage earners cannot. The retirement package they receive should not come into play until they reach retirement age and choose to retire, as is the case with people receiving CPP and OAS in the province. That package up[on retirement should only be a preset income, and they should receive the same healthcare as all other retired Albertans are eligible for. If they want more, they should have the option to do the same as the wage earning Albertans must do, save up for it on their own.</p>	<p>Work on cleaning up the lands where orphan wells are, or there are oil residuals in the water. This would ensure more farming land in Alberta that is viable, which would bring in more jobs and more tax income. Expect the oil companies that pull out of the province to clean up before they leave, so the land can become farms or tourist areas and produce money. Raise corporate taxes and give small businesses more breaks. This way, smaller businesses will feel more welcome as startups in Alberta, and the large corporations will be aware that Alberta is in control, and they are welcome so long as they are for the good of Alberta.</p> <p>Spend money on developing roads and having Ensure that wildfire services such as air tankers are contracted to be on hand for August and September. Trying to stop the fires when they first start is a lot cheaper than not knowing of or leaving the fires until they are out of control and mass evacuations will be needed, with hundreds to thousands of people then living off the government money until either the fires are out or they have found new jobs and resettled in different population centres because the place where they used to live is in ashed and after using all their savings as fire refugees they no longer have them to build new homes with. Develop more co-operative higher education programs. Businesses and service facilities will like having staff they do not need to pay as much as someone with a degree, and colleges and universities will be able to process more students faster. Provision of a letter of reference to persons in the program by the co-operating employers will help graduates procure employment o graduation in their respective fields, so they will spend less time seeking employment and more time contributing to the province with the work they do and the taxes they pay. Also, in cases where young people might not be well suited to the field they think is good for them, they will learn this before they have finished a full program, so they will either</p>
-----	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

T8V	<p>Make AISH, seniors and veterans funding a realistic amount. Please do not tell me AISH pays \$1698 per person because that amount includes the federal disability amount; so AISH pays only about \$100 - \$500. Try living off \$1698 a month, OH and if the federal disability increases; then AISH deducts that increase from AISH, dollar for dollar.</p> <p>Management downsizing in ALL public sector; there are far too many managers, managing managers, managing managers. Stop spending money you don't have. CONTROL SPENDING. This government does not have a revenue problem it has a MAJOR SPENDING PROBLEM. Let me come have a look at your spending; I have to live within the constraints on my budget or creditors will be calling; the government needs to sit down and say this is our total revenue, things need to be cut, entertainment, fuel, whatever you are using too much of. Managers?? I should be able to find any number of areas for government to decrease spending; I have to keep doing it in my budget since my taxes keep going up but my pay remains the same. (By the way I am not on a pension of any type but have not had a raise in over 4 years).</p>	<p>Utilize the McKinnon Report (except for the PST that's a definite NO); we already pay WAY TOO MUCH in taxes at all government levels, including the hidden taxes. Has anyone in government actually read this report? Take the time it is a good guideline.</p> <p>Union wages, downsizing management in government departments. Less government managers. How did we all of a sudden increase public sector workers when private sector was losing jobs? Can anyone provide an acceptable answer? Get rid of redundant managers, do not get rid of front line workers (teachers or nurses); review overtime policies and sick days, restructure contracts. In the real world I don't get sick days, if i'm sick I DON'T get paid. Wow realism. Let government offices, specifically Alberta Infrastructure, find their own contractors; instead of having SNC Lavalin / BGIS contracted to contract out subcontractors. Relieve SNC Lavalin / BGIS (Brookfield Global Integrated Systems) of their management role of finding and looking after contractors for Alberta Infrastructure. AI has staff that are more than capable of this and you lose a layer of unnecessary management. Let's just start looking for government waste, there is SO MUCH of it out there.</p>	<p>At this time the responsibility of this government is to NOT decrease funding to AISH, seniors or veterans; do not try to balance a budget on the backs of those less fortunate.</p> <p>The governments responsibility is to make cuts to bloated government sectors; ALL of them are bloated. Do management pyramids for all government departments, realistically there should be one manager for 20 employees (includes all managers below that manager) last I looked it is often the case that one manager in a government department manages considerably less employees. How many vice principals are required at a high school? 3, 5, 10? Look at these numbers; these are management positions, vice principals and principals do not teach our students, so why do we need so many of them?? How many managers do we need in school district offices? How many administration staff?; again utilize the management pyramid. Why are we constantly building new district offices? And not selling the old ones? Wasted money.</p> <p>Until this government and all governments after learn to control their spending then this is entirely pointless.</p>
	Education, healthcare and economic diversification.	Cancel funding to the "war room".	Focus on industry outside of oil and gas. Alberta needs to better diversify its economy to survive and compete in the future.
T1J	<p>My mother was a resident in long term care and recently passed away. I do believe that there needs to be a look at the funding model for these facilities. The government is the funding source and it does no good for anyone to bash the facilities for their care or ask for fines when the money is not coming in the front door. Currently Alberta is the province that funds the least for care. 1.9 hours per resident in 24 hours. Adding hours to this area is not a significant cost but one that would make the quality of life better for those in care. To not consider these areas is abuse by the government in my opinion. My concerns will no longer help my mother but I was with her 8 hours/day for 2 years just to make sure she could go to the bathroom and have her meals. I saw many where this was not the case. I worked in health care for 17(1) and was very dismayed at what I saw. Please make this a consideration</p>	<p>I do believe that there could still be savings achieved by shaving off some of the bureaucracy in all government departments. There seems to be many layers of people to go through when trying to talk to someone about issues. Even in my quest to contact someone to discuss funding for LTC, I was given the names and numbers of 4 different departments, none of which could answer my questions. Thorough review is needed for sure</p> <p>I know this would not be a popular move but I believe that our farm community has had it too good for too long. Perhaps some of the perks they receive could be reviewed. The same person is paying the bills and that is the good old middle income wagger earner. A Jaguar should not be considered a farm vehicle and I believe those plates and fuel subsidy need to go expect for working farm vehicles. We are probably one of the only provinces that provide that perk</p>	<ol style="list-style-type: none"> 1. promoting small business 2. maintaining the tax structure for all business

T6J	<p>Not cutting healthcare or education - increase staffing and funding with student growth</p> <p>Diversifying our economy and getting away from reliance on oil</p> <p>Growing the economy without giving billions away to oil companies and balancing it on the backs of everyday Albertans</p>	<p>Get rid of the ridiculous war room and maintain corporate tax rate. Don't give away billions to billionaires</p>	<p>Investing in green technologies, tech and promoting Alberta as a place to invest</p>
	<p>I think government needs to focus on hiring MORE nurses and retaining them. LPNs or RNs. But we need more nurses because we are DROWNING and patients are suffering.</p>	<p>Think about all the PDD patients that have government funded HOUSES built for them and just them. These patients also have tens of workers hired for them to have round the clock care. Start cutting costs there. Or maybe the CEOs of health care company's who make millions of dollars on the backs of front line workers.</p>	<p>Hire more nurses!!!</p>
T1K	<ul style="list-style-type: none"> -Education -Health services, including mental health -Supports for children with disabilities -Supports for parents to help improve their capacities to care for their kids -housing supports -AISH 	<p>-taxes on the wealthy and big companies</p>	<p>-Not cutting jobs</p>
T2J	<p>I think the government should focus on making life easier for average Albertans. For me, that looks like prioritizing accessible and efficient transportation in all areas of the city (Green-Line).</p> <p>As someone who is also struggling to stay on top of tuition and necessary dental (not aesthetic) dental issues while working full time, I also think that our Provincial and Federal governments should work together to make both dental and educational services more available to all individuals.</p>	<p>As much as most people detest the idea of taxation, I think that both corporations and religious establishments would be capable to help in this area. As someone who believes that religion is based on "caring for thy neighbour," these establishments should be more than happy to aid the larger community of Alberta. This idea would generate income.</p> <p>For saving money, I would suggest that we would need to take a long term approach to how our cities infrastructure works and make improvements to how efficiently we work. Things such as having busses run on solar energy and battery energy for example, would save cities the cost of fuel on a day to day basis.</p>	<p>I am all for the government helping with job creation, but I don't think that budget cuts to the cities front line staff (teachers, etc.) is the way to go. I believe that working to diversify our energy sector would help the province create jobs in the those sectors. I also think that going forward with projects like the green line will also create more jobs.</p>
T8N	<p>Health care and childrens services</p>	<p>Cut from the top. Example: Large wage earners in the Health industry make way too much money and seem to have done nothing to earn it.</p> <p>Also, with these large wages there should be NO perks. All perks should be stopped. Why should the tax payer be paying for your dinners, rides, trips for your family or clothing. Pay it yourself so that i can clothe and feed my family!</p>	<p>By cutting regulations and lowering taxes.</p>

T8X	<p>Finding efficiencies within the government itself. Communication doesn't flow freely within each department creating costly redundancies. Example - why did AHS require proof of age from someone who has been receiving Senior Health Benefits for the last 4 years - is there not a way of checking this out from within the system.</p>	<p>Hire the right people for the job and CUT management positions. Only hire full time staff and get rid of part time people. Recent experiences with our pathetic health care system have shown me that there are a lot of lazy people out there across all disciplines - NAs, LPNs, nurses, housekeeping, dietary and doctors. No one is held to account by managers. Hire front line staff willing to work and the right person to oversee them and make sure they do the job right!</p> <p>It is a huge injustice to cut health benefits to the spouses of seniors who are already in the system. Instead you should grandfather them in and change the rules going forward (FYI - this does not affect me but you are losing a lot of support from the people who voted you in for doing this).</p>	<p>I think fair tax breaks help but for the most part government should stay out of private business. Get your own house in order.</p>
T3A	<p>Stop Alberta's runaway train of over-spending. This province needs to balance the budget instead of accumulating more debt. You people are setting a terrible example to follow for the future generations, and you should be ashamed of yourselves for doing nothing about our provinces over \$70-billion dollar deficit!</p>	<p>Alberta is the highest paying province in Canada for welfare recipients. People from all over this country, and the world, flock to Alberta by the droves because of all of the free money they get from the government (taxpayers) for having a baby or being mentally ill of some sort. People take advantage of Alberta's good nature and millions of taxpayers dollars are lost to this ignorance.</p> <p>Over-inflated government employee pensions and salaries are also a huge money pit. Politicians and government employees are supposed to be civil servants, not getting filthy rich off the backs of the working-class taxpayers.</p> <p>Finally, the illegal or 'black market' in this country, and by proxy this province, is out of control. I'm telling you that even Helen Keller could tell you that this country and province is full of illegal crime and corruption. Millions of dollars are not being paid to taxes every year due to criminal activities. This is what we have police for...use them for shutting down criminal organizations that are operating in our cities, right under everyone's noses.</p>	<p>Support local businesses and resources. Educate and train Alberta residents instead of bringing in waves of immigrants to take our jobs. Institute a welfare-to-work type program for people who are able-bodied and are on government assistance.</p>
T9E	<p>Education, health care and services for low income, elderly and high needs population. Infrastructure. Homelessness.</p>	<p>By not giving money to big cooperatinons. Alternate forms of energy sources.</p>	<p>Investing in diverse forms of alternate energy. Focus more on small local businesses.</p>
T6R	<p>Public Education and Health Care</p>	<p>Cutting from the top. How about "where could the government find earnings?" PST.</p>	<p>Not cut funding to education and health care.</p>
T0B	<p>Health care, education and human services</p>	<p>Taxing wealthy corporations</p>	<p>Cheaper daycare costs would help low and middle class earners to afford to work</p>
T0G	<ol style="list-style-type: none"> 1. Health 2. Education 3. Social responsibilities 4. Infrastructure 5. Projects in all aspects of energy 	<p>While I encourage responsible spending, looking at the current state of services and infrastructure in this province are troubling. I don't want to pay more taxes than the next person, but if we want to grow as a province, I'm not certain this can occur without more income.</p>	<p>Look outside the box. While I fully support the O&G industry, when the government shows disdain for other energy and technology companies on the sole basis that they are not oil and gas, you're ultimately kicking the gift horse in the mouth. Albertan's have a larger identity than just O&G.</p>

t1k	Mental health, education	MLA paycheques	focusing on infrastructure, reduced spending on roads doesn't save anything in the long run. Clean energy resources, building solar/wind farms, renewable resources.
t2z	Education and health care. We need more teachers and nurses. Flood mitigation should be prioritized as well. Social funding for the less fortunate - taking care of our seniors, our homeless, our sick, those who have lost jobs - is how we will have a stronger province.	Cutting the "war room". This is a waste of money and is NOT at all helping regular citizens. Cutting spending by MLAs.	By allowing the economy to diversify. Invest in other fields (green energy would be a great one!) and encourage other industries to come to Alberta. Stop making ridiculous decisions like this "war room" that has yet to do anything for the economy and job creation and is only a waste of time and money.
	Protecting education and healthcare. Adding more renewable energy sector jobs - and the related services such as: maintenance, installation and sales.	Downsizing the government management system. Less managers for supervisors for directors.	Invest in Alberta based products, not companies with international shareholders.
T8X	Healthcare and education.	Eliminate excessive number of panels panels and the Fair Deal town hall meetings. Fair Deal Town Halls are just an outlet for angry Albertans who are uneducated about the reasons why we are in debt. The price of oil has declined tremendously and the Alberta economy is not set up to be diverse. We rely too much on O&G. The NDP were trying to diversify, however, Kenney scammed his way into the leadership position by committing fraud.	Stop giving tax breaks to O&G companies. They are taking the money and creating jobs elsewhere. Support the people of Alberta instead of making everything more expensive for them.
T5A	Front line health care and teachers/schools	Management No more big company tax cuts	Continue to diversify
t8n	The government should prioritize spending on not only required but expected standards of service and care for *all* Albertans. Indications of spending cuts, as provided in the 2019 'Blue Ribbon Panel' report, are concerning regarding reductions to health, education, and other social services. Albertans have invested in and expect government services that reflect a decent and equitable quality of life. While Alberta's economy has been in decline due to oil and gas market fluctuations and reliance, the government should *not* be investing taxpayers' funds -- and in lieu of the expenses of expected social services -- for larger businesses/corporations through further or increased tax breaks. Tax breaks and continuance of services should instead be provided to smaller businesses and individual Albertans, who are faced with economic challenges far more difficult to bear than larger or national/multinational corporations.	Savings can be found in the significant tax breaks and economic allowances provided to large corporations doing business in Alberta. Savings of \$30M can also be found in dissolving the government-funded agency providing high-cost PR services to a select few within and for the oil and gas industry (i.e., Canadian Energy Centre), when current government departments could provide factual information and campaigns to independent news providers/markets/industry. I am very disheartened that our provincial government is looking to cut spending in social services (health, disadvantaged Albertans, K-12 education, post-secondary education) and via forced squeezes on public sector labour contracts, to feed funding of a singular industry, oil and gas. The proposed cuts (per Blue Ribbon Panel report) are punitive, transactional, short-sighted, and do not reflect the needs and concerns of all Albertans.	Invest in Alberta's labour force, and respect the rights of workers and citizens, who will want to continue contributing to Alberta's economy. In doing so, support an educated workforce and citizenry (i.e., not just trades-based, and investing in and collaborating with universities and the sustainability of their strategic plans), who can provide the diversification and innovation necessary to ensure Alberta has a sustainable and future-focused economy, not one tied to a singular industry. Invest in (rather than constrain an cut) social services (health, wellness, support and resources for disadvantaged) that make Alberta a desired place to live and for citizens to contribute their intellectual and physical resources to benefit and better our province, now and in the future.
T3B	Healthcare, Drugs (Medications), Education, Rural Security	Administration and overhead costs in all government departments	Through incentives for business and industry to move to Alberta; need to re-establish "The Alberta Advantage" as Alberta no longer has an advantage

T0C	Infrastructure, schools, and healthcare	Cap large lottery wins to 5 million. Use the lottery money to help with large ticket needs. Have all people in Alberta that are not permanent residents or Canadians pay aHealth Care premium. Only students that are Canadian should receive scholarships or grants or student loans. Have every citizen re-drive for license renewal.	All people should only be allowed to work at one job. This way others could find jobs as well.
T5K	Education - funding for inclusive education, reducing class sizes, ensuring that the most vulnerable learners have access to high, quality education through our PUBLIC education system	Making large corporations accountable for their environmental impact.	Absolutely, but not at the expense of the most vulnerable.
T6C	Education, post-secondary education, and healthcare. All priorities of middle-class Albertans, especially those with children.	By rightfully taxing corporations.	By supporting education, health and post-secondary education. Green energy has huge potential in Alberta that's largely untapped, and would diversify our economy away from a sole reliance on oil and gas.
T6K	Health care, seniors, homeless,students are already struggling. Nothing should be cut back from these people.	In the corporate (business) world and the politicians pockets.	Education should be accessible and affordable to all so we will use the talent that's available now and in the future.
T4N	Public education Public health care Economic development	Top government official salary Cut funding for private and religious education.	Support public education and university funding so that youth are receiving the education they need to create new jobs and have the skills for current jobs.
T4C	Not The Lab and education!! Pipeline	I think the government could hire enough nurses,IPN's so that when some one calls in sick, The hospitals do not have to call someone in for double time. Hire more full time FTE's so that overtime is not given to Part times when called in. Too many part time nurses/LPN's are making more money due to double time payouts. Bring back health care monthly premium. It is important to cut waiting times for the people of Alberta. Cancer for alot of people is on rise and it is not fair or right to have to wait for MRI's CT etc.	Hire more full positions in health care to create economic growth. Get the pipeline going to BC from Alberta.
T0L	Set up private health care for some services.	I responded earlier but a couple more Get rid of farm gas as it grossly abused. Most farmer's mini vans have farm plates around here. Farm diesel should be off road only as it creates unfair competition. Maybe all trucks hauling grain or livestock should get a tax break. We have a daughter who does foster care and we see the waste at times.	Privatize
T6R	Health care	Management and CEO clean out of unneeded positions	Create more full time position instead of cutting to part time. Forces people to work 2 plus positions to make a living
T0L	Education, Healthcare, lower tuition fees for post-secondary education and the vulnerable sectors including AISH and seniors.	Get rid of the ridiculous "War room" and incentives for oil and corporate companies. Raise taxes for Corporations and collect on outstanding taxes owed by oil companies.	Invest in our social programs and lower tuition fees to allow students to be able to afford school.

	Education, health and support services, and infrastructure.	I think the government should increase taxes on large corporations to boost income that could be used to balance the budget, as opposed to cutting funding to essential services.	Fund training to help employees transition from oil and gas to other trades (e.g. due to layoffs); offer tax breaks to small businesses.
	Social services, schools, public services, environmental protections, infrastructure, helping to deal with homelessness, drug abuse and the growing income inequality.	STOP GIVING OIL COMPANIES FREE MONEY AND TAX BREAKS! Shut down the pointless war room. Increase taxes on corporations and those who earn over \$1,000,000 or those with large assets.	Diversify the economy, support growing industries, think and plan for the future and stop living in the past.
	<p>1. Diversifying the economy and supporting the next generation of jobs in tourism, low carbon energy market and technology.</p> <p>2. Preventative health care to incentivize people to exercise, quit addictions, eat healthy, etc. to lessen costs over the long term.</p> <p>3. Environmental management to ensure we can continue to harvest natural resources for the long term without further health impacts or clean up costs.</p> <p>4. Retraining support for skilled people who cannot find work.</p> <p>5. Leverage federal dollars through the Infrastructure Bank and other programs</p>	<p>1. Fewer MLAs with fewer offices, more focus on getting feedback and input through online channels.</p> <p>2. More collaboration and integration across GOA so that fewer managers and advisors are needed.</p> <p>3. Invest in nonprofits to help government implement priorities. They deliver services for much cheaper and can leverage GOA investments.</p>	<p>1. For people who need to re-train and find another career - help with paying for training and EI type program while they are not working.</p> <p>2. Low interest loans that are not impossible to get for entrepreneurs to start new businesses, tax rebate when they hire employees.</p> <p>3. Incentivize solar panels and energy efficiency upgrades through federal programs.</p>
T8A	Government should focus on investing in education, healthcare and child care to support all Alberta families. Invest in diversification of new clean technologies and Alberta innovations (ie bio tech, wind and solar, film and gaming sector. Do not cut safe consumption sites!	Stop subsidizing big business with tax breaks, make the oil companies pay their outstanding tax bills to municipalities! Do not use my tax dollars to clean up orphan wells, hold the companies to account.	Invest in post secondary education (stop the cuts now) and re-training into clean tech jobs for previous oil workers. Help new Albertans' transfer their education and experience from overseas into qualifications for Alberta jobs. Reinstate the 15\$ minimum wage for all jobs. Invest in \$25/day child care to make it affordable, expand it for all families. Ensure that family support programs are funded and available in local communities.
T1K	Healthy attachment between child and caregiver is foundational for the life-long healthy development of the child. Positive, supportive relationships grow in positive, supportive environments. Therefore, governments should place more dollars in areas that affect families such as Family Resources/Parenting support, education, health. To make a more healthy society with contributing members, we need to support our early years and supports for families.	I think government should cut salaries of government employees and officials rather than asking non-government employees (non-profits, seniors, child care etc.) to cut costs.	I'm not very knowledgeable about economic growth but I would suspect if Alberta is in a downward economic trend then trying to entice corporations to invest will not necessarily help delay or stabilize a downward turn. Focusing on one economic resource, like gas and oil, may not help. I think Alberta may have to think about diversifying its resource base and find other ways to attract business to the province.
T1A	Twinning of #3 highway medicine hat to Taber.	Eliminate waste..both in education and health care. More closely monitor income support cases..how much of this money is going to support drug and alcohol use rather than necessary living needs.	More support for small business. ..lower taxes and less red tape which costs small businesses both time and money.

T0C	Health Care, Education and investing in diversifying Alberta's economy	Increasing taxes on large business, including oil companies. Requiring large corporations to pay taxes, stop giving them tax breaks or tax relief. Start a provincial sales tax. Start using reports that have already been completed within the past 5 years instead of redoing an assessment that is costly.	Focus not only in oil and gas job creation efforts, but start to prioritize all Albertans in job creation efforts such as: green energy tax breaks for companies that promote new technology, film, video gaming. Stop supporting companies that leave Alberta and move to the Us.
T0B	1. Use all means possible, including lobbying other provincial governments and using the "Not Withstanding Clause" Sec 33 of the Charter to strike a better deal before 2024 on transfer payments. 2. Reduce or at least bring in to parity, all provincial employees salaries, especially managers and supervisors, to similar positions or classifications in other provincial jurisdictions.	1. Reduce the provincial government workforce in those ministries that may be "top heavy" with administrators. 2. Reduce the number of school divisions, health authorities or other multi-administered government funded service providers by consolidation where efficient and effective. 3. Re-look at publicly funded "defined benefit" retirement plans, with consideration to transitioning to "defined contribution" plans much like the private sector has.	Unfortunately, much of the problem/fault lies in the hands of the federal government through lost opportunities. Continue to lobby them; what's good for Alberta usually transmits through to being good for the country. (ie. generating income = higher tax revenue, transfer payments, etc.) Alberta needs a better deal!!!
t2x	Cutting unnecessary bureaucracy in the government, and tax-funded institutions. Encouraging economic growth. Care for those who can not care for themselves.	Inefficiencies in healthcare and education. Inefficiencies in bureaucratic processes.	Programs to encourage Youth in both trades and STEM positions. Put the word out that our industry is not the terrible thing that special interest groups would like you to think. Invest heavily in other sectors. We have a huge population of innovators and engineers, leverage them in many industries!
	alternative energy sources, health, education, funding child care. These are the ways to ensure we are able to thrive in the future. It's called "investing."	Why are they so focused on only savings? What about increasing the money coming in to the coffers? For a start, the government could increase revenues by getting rid of the corporate tax cuts, by increasing taxes slightly overall (and more dramatically for the very wealthy - the people who can actually afford it), or by implementing a provincial sales tax even temporarily. Now for savings: They could save buckets of money if they axe the oil-industry stroking "war room" that costs the equivalent of a public sector salary EVERY DAY. Decrease funding to private schools. Reduced travel for MLAs, particularly to other countries. If we have to tighten our belts, <u>so should the MLAs and the premier.</u>	Pay increases (long overdue) and adding jobs in public sector areas (like health, education, corrections, child protection, legal aid) ensure that enough Albertans are employed and able to spend money, which will actually stimulate the economy. So will ensuring those on various income supports can afford to purchase basic necessities. Trickle down economics have been clearly shown to be ineffective in promoting both job creation and economic growth, so relying on corporate tax cuts seems unwise from a rational and logical perspective.
T8A	Seniors housing & medical needs - including medications	Taxing corporations	Lower interest start up loans
T4S	Education, health care, and policing	Stop giving large, multi million dollar corporations tax breaks. Encourage companies to earn tax breaks through hiring women, visible minorities and LGBTQ+ and finding ways to use environmentally friendly technologies.	Through hiring incentives like livable wages, increase benefits, job security as well as diversifying the economy by supporting small business, public sector jobs, and social services.
T0J	Paying down the deficit.	In their own wages and pensions.	Get the oil patch back to work.

T2J	Create a pro business environment by reducing the road block created by these useless bureaucratic department and saving money at the same time. Encourage supports for new business unrelated to energy while keeping supports for the energy sector.	Certainly consider reducing the size of Government. Lots useless expensive department can be eliminated. The same can be said of some program that can be easily dispense off. I was surprised that more than 30% of our City employees earned more than \$100,000 a year considering the retirement and other benefits that usually come with Government Jobs. I am sure that our provincial group are most likely in the same magnitude.	The government can assist in developing training programs that can be tailored to fit the future requirement. Remove some of the barriers for on the job training.
-----	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------

T5R	Good governance, first and foremost. This means asking thoughtful, well researched, data-supported analysis of how we are doing in various program areas and then public engagement in alternatives. Healthy public services like quality PUBLIC education, PUBLIC health care and PUBLIC parks are foundational to the kind of province where people want to invest and live - not creating two tiers for those who can afford it and those who can't	War Room.	Oil and gas is never - ever going to be what it used to be as an employer or as a tax base Need to focus on economic diversification through things like tourism, recreation, parks to best use our natural environment in a more sustainable and environmentally responsible way. And to be successful, that needs government investment in infrastructure - just like the government did for oil and gas Staking our whole future on oil and gas is unbelievably short sighted
T6H	Providing good health and education services. Stop thinking that the public sector workforce has to be reduced.	There are few savings left to be found. It's time to implement a sales tax.	Provide incentives to foster investments and diversify the economy i.e. green energy, artificial intelligence,...
T2T	education, including post-secondary and health care	provincial government infrastructure	diversify, diversify, diversify... technology, arts, agriculture, clean energy
T9h	Education	Upper management in education, govt of alberta, reduce jobs and salary top down.	Create front line jobs and reduce upper management staff and salary.
T1J	We need to ameliorate the adverse childhood experiences (ACES) and create better childhood experiences which will result in better lives for children and a better future for them and our community. The data says that preventing ACES drops addiction 75%, drops crime 75%.	?	?
T2K	Transit	Raising taxes on large corporations	Funding municipalities and creating city charters for Calgary and Edmonton
T1K	Providing proper assistance to Victims of Crime. Rural VSU's are severely understaffed and under funded. How can citizens have faith in the justice system if they aren't helped?	Remove duplication of services and thin out upper management.	The Alberta government needs to get tough with the Federal government demanding a better voice. The time for asking nicely ended years ago.
T2R	Economic growth is most important without it we can not have good health care, education, transportation etcetera systems.	I would like to see funding taken from drug injection sites in all cities completely and given to drug intervention and drug treatment programmes I think this will result in less money spent of policing and countering the cost of the social disorder caused by the dug injection sites.	Be very judicious in tax breaks for individuals and companies; we need income to balance the books not just cuts to spending. I think government should focus on spending that encourages economic growth e.g. tourism, manufacturing and technology.
T2T	Building a strong citizenry by investing in the things we need to be happy, healthy, and engaged; strong services, especially education and health care.	Reducing tax breaks for wealthy citizens and corporations. Chasing down tax evaders. Pushing the federal government on transfer payments.	Stronger education to help create a more entrepreneurial attitude coming from high school, college, and university graduates.
T4P	I think that there should be a priority to our province's early childhood services, programs and our education system. I also think that social services should be a high priority as well.	I think that there could be some savings in administration costs, looking at redundancies and inefficiencies.	This one I am not sure about
T1A	Social Services. Stop slashing the few remaining grants and expand this funding to those providing urgent services to vulnerable populations, children and older adults.	Your wages, pensions and benefits are way out of line.	By creating more jobs, supporting business who do by reducing their taxes. Tax the very rich.
T9E	Economic Growth, Environment	Reduce overpaid, underworked bureaucratic positions	Lower corporate taxes

T3G	I would like to know how increasing my family's home and auto insurance by a whopping \$1800/year (after 20 claims free years) is helping my government to balance the province's budget.	With all the 'cost saving' measures you are imposing on our family, we will lose ~\$6000 this year through tuition hikes, tax and fee increases, user fee increases, health care cuts, and on and on.	I don't mind paying my fair share. But for us, as a middle class family, this is not fair. You've lost our 4 votes definitely.
T6M	Education, as enrolment increases the funding needs to increase Renewable energy, grants for up graded windows, furnaces, solar panels. ensuring the vulnerable in our society can have access to shelter, food, and health care	Not giving a tax break to the big companies in our province. Looking at the budgets for government departments	Grants to business with sound budget plans to get started. Fair and livable minimum wages so a person does not have to work 2 jobs to make ends meet
T4x	Health, getting rid of teachers who teach children that oil is BAD after all oil pays their wages.	Start confiscating oilfield equipment from companies in arrears for orphan wells.	I have no idea
T4H	Family wellness, childcare, healthcare, benefits to low income families	in their payouts to big business	providing training, forcing through pipeline deals
T6X	The number one priority should be getting the Education and Health Care funding under control. The amplified hysteria by the usual suspects should not deter the government to reduce administrative bloat. The layers and layer of bureaucracy in Alberta Health Services (AHS) must be reduced. I would move decision making and service delivery to the grass roots so that it is more responsive to the people it is serving. Get rid of the Central AHS structure and move it to the community level. Administrative costs can be trimmed at the hospital level as well. A hospital does not need individual Physio Therapy, Psychology, Social Work etc Cohort and management team. It is a waste of monetary resources and lends to administrative bloat. Each of these disciplines can be managed at the individual unit level. The unit can be responsible for hiring as well. There needs to be transparency as well. The AHS website does not show the layers and layers of bureaucracy and subsequent significant compensation in their organization chart. Having a clear org chart would also help the government show Albertans how many millions of health care dollars are going to managers managing managers. I think management bloat is directly responsible in job dissatisfaction, lack of direction, timely delivery of services, and responsiveness of a system to change. Education specifically school boards are another money pit. First and foremost all school boards should be under the Alberta Sunshine List. There should be a clear and standard reporting mechanism for listing organizational structure and costs. Calgary School Board and Edmonton School Board's reporting of budgets is vastly different. Standardize the format so Albertans know where every penny of their taxes is being spent.	I think I have described that in my first response. A specific example in Education would be looking at individual board expenses on Special Needs Students. This group makes up 3% of the overall student population yet there are whole departments dedicated to this group in EPSB and CBE. There is a Superintendent for Inclusivity and layers of managers at CBE and an Assistant Superintendent and layers of management at EPSB. Move it to the school level and give Principals control over the funding and how they want to spend it. They can purchase OT/PT, Social Work, etc from the Central Services of the Board or privately if it is cheaper.	By trimming excessive bloat and getting spending under control. The government should look at diversification in fields like tourist, high tech, and other industries like British Columbia did.
T2z	Cut spending.	Slowly getting rid of some of the 40,000 people that were hired during the NDP time. Bringing wages into line with the rest of the country.	Supporting private sector jobs by getting rid of regulations.

T2B	Health care	Get rid of the War room	look outside oil and gas
T5T	Education and healthcare, both are investments in our future and preventative measures will ensure our future as a strong, healthy, educated province.	Red tape and giving huge tax breaks to large businesses. Frontline services should not be cut.	Small business supports, invest in sustainable energy.
T0h	Agricultural focused - as when oil and gas is down it is a huge economic driver. Economic well-being.	Large corporation tax breaks.	Quit taxing the middle class so high for doing well. Reduce job cuts currently occurring.
T3E	Education, health care and diversifying the economy.	High administrative expenses taking place provincially. At the university I work at administrative expenses account for 51% of the total budget.	Diversify the economy by attracting and supporting companies from different industries that have high value and low environmental impact: pharma research, medical instrumentation, game design. Establishing a second dry port may help with developing logistics and supporting export activities from small and medium enterprises, the same way <u>Dutch, Austrian and Swiss governments do.</u>
	Education, health	Raise taxes slightly on corporations and introduce a small sales tax.	By supporting education, particularly K-12. This is key to the future.
T8h	Sexual violence, domestic violence, education	Political red tape	Increase incentives to small businesses
T9H	-social services (domestic and sexual violence, mental health supports) -addiction and opioid crisis -housing; emergency shelters; second stage shelters; transitional housing	-take a paycut themselves! -tax oil and gas -add a PST!!!!	-diversify the economy: MOVE AWAY FROM OIL AND GAS -continue to invest in education
T4S	Public Education (Specifically EA help in the classrooms) Public Health care RCMP members	Stop investigating and changing things that don't "NEED" to be changed (eg. WAR rooms, Education curriculum)	No Comment
T3J	Government should focus on education and health care. Our Alberta Government should focus on reducing class-size, hiring more education assistants and specialists (including music and art specialists), and encouraging learning through the arts. For health care, our government should hire more doctors and nurses, counselors and psychologists to help with the rising needs of Albertans who have sickness.	From imposing higher tax on the wealthy people and companies, e.g. the oil and gas companies. From putting a cap on the salaries on CEOs and government officials.	Funds and grants for Albertans to set up their own businesses. Set a realistic minimum hourly-pay that prevent exploitation of employees and yet encourage employers to hire more workers. Invest in re-newable energy sectors.
H8T	I think the government should focus on job creation and economic	Him I think by tax	Jobs are central to economic growth and political stability. As long as people are busy with their work and are able to provide for themselves, their morale is high and things are stable. Jobs create earnings, which creates demand, which in turn creates production and investment and hence more jobs.
T1R	-Funding PUBLIC education for K-12 public and Catholic schools. Do not use public funds to finance those families that choose to send their children to private schools. -Post-secondary. Reduce student costs. -Healthcare. Not two-tiered.	Beaurocrats that get paid way too much. G of A severance packages and expense accounts. Taking a 5% salary cut and increasing your allowances for other work is not taking a cut.	Support our youth wanting to go to post-secondary without accumulating large debt.

T0a	<p>education, economic diversification, infra-structure.</p> <p>Accept that debt is a good thing in times of recession and that it is the duty of government to see that the economy is maintained at a level that can respond once economy turns around</p>	<p>Allow trained managers in health education and infra structure to do the jobs their paid to do without political interference.</p> <p>Dump the "war room" and other politically motivated studies</p>	<p>Bring back an Alberta based carbon tax and use a portion of the proceeds to fund diversification</p>
T4E	<p>I do not believe this is the time to be spending unnecessary money on anything other than debt in our Province.</p>	<p>In the elimination of AHS bureaucrats, that are not necessary in my opinion. Also the duplication of testing and patients reuse of equipment. The waste in our medical industry is atrocious to the point of being criminal.</p>	<p>Instead of hiring figureheads, look to the people for their experience. Right now there are so many overqualified workers that could offer an abundance and wealth of knowledge in many areas. Place these people in positions where they will excel and utilize the skills they have garnered. Good examples of this would be administration, policing, boards and policy producing areas.</p>
T4X	<p>Opening markets for business to flourish. Avoid duplication and overlapping services.</p>	<p>Hospitals have a ridiculous amount of layers of bureaucracy. Let's start with that and leave front line workers serving the public.</p>	<p>Incentives and helping to open markets (which I know they have been doing).</p>
T5T	<p>Elected governments must show better outcomes. Time to stop blaming and taking responsibility for policies. If the minister fails to get the outcome promised then he or she MUST resign. There are NO excuses. If the cabinet fails to improve the economy then they must take a pay cut. Simply, the citizens want better performance. Taxpayers are shareholders. We want better results and less finger pointing. Period!</p> <p>So -- focus on cities, health and education. These are important for economic growth.</p> <p>If many companies and charitable organisations look for educated employees so should voters. It's hard to believe that people in office can be a minister without an education. Poor education and lack of experience leads to poor political administration. Therefore, only properly qualified MLAs should be ministers.</p> <p>Stop talking about separatism. It does not promote economic growth -- cooperation does. Focus on working with our other provincial partners. It's a waste of time and money. If this nonsense doesn't stop -- I might start feeling alienated by my provincial government.</p>	<p>Government must cut elected office perks. This is public service not a free lunch. Cut ministers expenses. If you don't like the working conditions - quit. You chose to run -- then do it for public service.</p> <p>Do not touch CPP. This has been a successful program. It makes no sense to touch what works. The expense of repatriating Alberta's contribution and incurring the administrative expense of setting up a new one is costly. Plus I don't want government touching my retirement money. Leave it alone.</p> <p>Before making emotional decisions (with sovereignty in mind) make sure taxpayers aren't throwing away money on stupid ideas. If it's cheaper to go to an Alberta provincial police force then fine. If the contract is workable with the RCMP then leave it alone.</p> <p>Again, stop wasting money on stupid ideas and focus on cooperation with the other provinces to get this economy working.</p>	<p>Diversifying the economy into other sectors besides the oil industry. The world is changing and so must Alberta.</p> <p>An educated work force is critical to a progressive economy. Invest more in affordable training at all post secondary levels. DO NOT DICTATE WHAT UNIVERSITIES TEACH. They are not trade schools.</p> <p>It's time for a provincial sales tax. Yup! Lets not plan budgets on oil revenues but share the tax load with a modest PST. And yes, the elected government better manage tax dollars well or voters will get angry.</p> <p>It's time to change Alberta within!!!</p>

T5G	Well funded (increases) to public: healthcare, education, social program, attract talent and businesses playing in the technology sector and renewable resources such as solar. Address the orphan well problem through government funded labour, potentially with a partnership with private organizations and federal funding.	Eliminate the Canadian Energy Centre, eliminate redundant communications positions within the Office of the Premier, eliminate corporate tax decrease, implement a wealth tax.	Lean into agri-tech, and other high tech research and innovation, and renewables, as opposed to relying on the diminishing returns of resource sector. Strongly support post secondary education and funding for programs outside of resource related programs (e.g.: computing). Address the orphan well problem through government funded labour, potentially with a partnership with private organizations and federal funding.
T8x	Health care publicly funded. Support education. Put people to work through projects like roads. Infrastructure.	By implementing a 2 percent tax	Build roads. Repair roads. Put money in diversity. Encourage people to start businesses through grants.
T8x	Health care publicly funded. Support education. Put people to work through projects like roads. Infrastructure.	By implementing a 2 percent tax	Build roads. Repair roads. Put money in diversity. Encourage people to start businesses through grants.
T2X	Priority 1: heavy investment in renewable energy so Alberta can remain Canada's leader in energy production and have a future for our province. Priority 2: education and training to get displaced O&G workers as well as those who see the obvious future that's coming into renewable energy jobs. Priority 3: social programs investments to ensure all the Albertan's affected by UCP cuts don't suffer waiting for the economy to recovery (it's not going to recover with the UCP's current agenda	Priority 4: collect all the taxes O&G companies owe Alberta and get rid of all subsidies for the entire O&G industry Priority 5: get rid of the "war room", this was and will continue to be a complete waste of taxpayer money and is another of Kenney's deceptive partisan policies, that benefit no one but himself and the dying O&G industry skills. Priority 6: cut all pay for politicians and government workers to match a) either the \$15/hour minimum wage rate in Alberta or b) \$50,000/yr which is the national income average. Why should they enjoy a comfortable life, while the rest of the province suffers. This is abuse of power 101.	Heavy investment in renewable energy, that's the #1 priority this backwards government needs to focus on. The rest will fall into place.
T3E	Job creation and technology.	Tax initiatives.	Youth workers, grants for education, minimum wage decrease.
	Education, health care, social services.	Expand the PCN model in healthcare. More funding for midwife births. The "war room" hasn't made much of a positive impression yet considering the cost. The government could refine the impression of Alberta's oil by hiring an oil ambassador instead - a progressive, environmentally savvy oil advocate. One charming and knowledgeable person would have a bigger impact than the "room".	Hard to see the benefits of the corporate tax cuts. I hope this will be re-evaluated/changed if it's not being effective. I like the apprenticeship programs. Government grants for solar/green projects or startups should continue. Would be great to see Alberta as a leader/ attracting expertise globally for all energy sectors.

t6c	Education should be the main priority of our budget. Providing sufficient resources to develop a highly educated province is absolutely imperative.	Perhaps increasing revenues could be equally effective. Support new industries and encourage new business. Technology, clean energy, personal services, innovative small business - increase the tax base with quality, high paying jobs and quality business that want to stick around. Find savings by reviewing big ticket spending and determining if there are more effective ways to provide the service. Many of the proposed cuts to health care and education seem to have an outcome of making service significantly worse. Don't be "penny wise and pound foolish"	Look further than simply oil and gas. We need all of our energy resources and we need to support small and medium business. Support high quality education so families want to move to Alberta. Make it easy for municipalities to welcome small business. Encourage post-secondary students to look at new industries by providing grants and scholarships.
T0B	Social services. Limiting access to necessary resources and services makes it more difficult for people to work/contribute to the economy.	Tax corporations appropriately (and don't give them a tax break - there's no such thing as "trickle down" economics). Individuals/families who earn above a certain income threshold could go back to paying the basic Alberta Healthcare fee. Perhaps the Premier and his friends don't need to fly on private jets?	Tax corporations appropriately. Or, tax them unless they show that they're investing in people and the economy. More money to research institutions (university, Alberta Innovates, etc). The future is never based on maintaining the status quo, rather, the future is based on being innovative, creative, and making new discoveries. Spoiler alert, Alberta's wealth which came from refining the oil found in the oil sands only happened because of science, research, and innovation. Support creative thinking.
T6M	Education and preventative health care. These are two things that are going to impact the society that we live in for the future.	I am unable to speak and where the money can come from as I do not work with the budget of the government. If there is not enough money there increase taxes that every pays towards. Do not cut from the jobs that require resources!	Invest in jobs of the future not things that are only band-aid fixes for today!
T4N	Education, healthcare, social services	By taking out the war room and re-instituting the taxes they cut.	by investing in social services and healthcare and education
T6J	Education, Health Care and social supports	Corporate taxes	Support students who need job experience and fund STEP program.
T0L	Please DO NOT follow through on the provincial take-over of our Canada Pension Plan contributions this would be a huge mistake and I'll leave Alberta if it goes ahead. Are you crazy?	Research - no need to fund provincial scientific research, this could be done through the universities. Please DO NOT follow through on the provincial take-over of our Canada Pension Plan contributions this would be a huge mistake and I'll leave Alberta if it goes ahead.	The economy is absolutely booming where I live ¹⁷⁽¹⁾ but there is a labour shortage and high turnover (expensive due to so many new training costs) largely because of the high cost of resort town living (rent, food, everything!) and low tourism-sector wages. The higher minimum wage will help a little but it's not enough. Some type of subsidized staff housing initiative would be the most useful - maybe re-locate some of the unused oil industry modular camps to Jasper, Banff, Lake Louise....
T4A	Actually funding healthcare, your privatization strategy is going to cost us all more in the end just like everything else you've done.	Eliminate the war room, eliminate elected official perks.	Diversify, putting all our eggs in one basket is going to drive up unemployment as it already has, drive down revenue, and drive up debt!

T3A	Renegotiation of the TransAlta Agreement on the Bow River for flood mitigation in Calgary. The utilization of the Ghost reservoir is currently the only tangible flood defence mechanism available to our City, and has the added bonus of enabling protection of residents from both groundwater AND overland flood damages. Surely the ~50 Mw maximum generation capacity available to TransAlta from this structure is of minimal importance compared to the protection the reservoir can afford the City of Calgary. Given the current difficulties with SR-1 and the illustration it provides that only a few vocal individuals, be they private or indigenous, can legally impede the construction of even demonstrably necessary infrastructure, underscores the position that utilization of all existing flood mitigating structures is imperative.	Disband the "War Room". Politically motivated waste of money.	Focus on luring companies involved in the "new economy", not "sunset" industries. Anyone who thinks that the next oil boom is just over the horizon doesn't understand either the current state the Western Canada Sedimentary Basin, the oil industry itself, or the simple economic realities of supply and demand.
T1A	Support the people of Alberta and NOT large corporations. The cost savings that the government plan on implementing are going to cost us MORE in the future! The Ralph years are still around our necks. The spending priorities that the government should focus on: THE PEOPLE OF Alberta! This can be done with health care, education and anything else the government wants to cost... this will cost us!	Start with the Public Relations Department, then the assistants to the Assistant Deputy Ministers, in other words "the government" and the panels and consultants AND eliminate the "WAR ROOM" and QUIT GIVING LARGE CORPORATIONS TAX DEDUCTIONS without strings. Why are you deliberately knowingly sending our money outside the province of Alberta and even Canada?	Quit removing incentives for the High Tech companies and renewable energy companies!
T1V	Healthcare, schools and post-secondary education.	Bring in a 3% provincial sales taxes; however, exempt from any sales tax should be: food, medical services & prescriptions, residential / commercial property, veterinary care, and rent (housing and businesses). Axe the annual \$30M war room.	Create jobs by implementing programs to diversity Alberta's economy.
	I am from BC. You should focus on Supporting BC.	Find a way to limit your surveys to your own residents so that it is not a waste of money. An office in BC sent this around there office.	Hire more people from BC
T5X	Education and health. Without education we have no future. Without good health we have no present. If you look to making these better in our province, jobs and prosperity will come.	Ditch the "war room" so you can support aides for students in our classrooms. Oil and gas companies have their own marketing budgets. Leave it at that. MLAs can take budget cuts in their salaries. Trust that departments are doing their best to provide services in the most cost effective ways possible.	Support technology for farmers and other small businesses. Support our universities and other higher education institutions as this is where new knowledge and developments can arise. Have a more positive outlook on people.
T6T	Get debt under control	Everywhere	Support diversity
T5G	Healthcare, schools (in house daycare), transportation	Government employees, getting rid of grant programs government offers	building infrastructures, helping small businesses and working with private companies and investors

T4N	Health, Education, Seniors Benefits, Developing clean alternatives to fossil fuels and the jobs that would go with that.	Stop giving tax breaks to oil companies and other corporations - it DOES NOT trickle down and DOES NOT create jobs - they just use the money to pay shareholders and buy back their own stock.	Development of "green" technology and jobs will follow. Give the tax breaks to smaller businesses and to the middle class - the middle class support the whole province (corporations pay little if any of their tax share, and the poor cannot pay. In Health, stop physicians from using hospitals as their private physician offices - this is costly and physicians should have their own private offices as they bill for their services and don't pay for the use of the hospital facility. If they are going to use a facility for their patients instead of their office then they should have to pay rent for the use of the facility. Many physicians don't even have an office - they just use the hospital facility, or their have limited hours where they don't have to pay staff at their private office and utilize the resources of the hospital facility.
T0M	Policing Child Care - subsidy program needs to be revisited Health Care Oil & Gas	Cut \$25.00 child care centres - put extra dollars into subsidy for families that actually need financial assistance. Safe Injection Sites Stricter AISH qualifications Subsidy Investigations	Continue supporting Oil & Gas
T5H	Healthcare, Education, Diversification of our economy	Over head and poor management	investing in our Education system and creating an environment that promotes diversification of our economy.
T8A	pipelines	more efficient teaching	more fossil fuels
t2I	Spending reductions or freezes across the board	Bring the per capita expenditures inline with other provinces	tax reduction with tighter cost controls
T0M	Public Healthcare, Public Education, Public Supports for vulnerable populations (not including oil company ceos and other large corporation CEOs) Incentivizing post secondary education, Maintaining RCMP services for ALL Albertans, stay away from our pension plan,	Taxing oil corporations and other large corporations. Implementing a PST that applies to discretionary spending, eliminating the "war room" Avoiding outside consultations when people inside Alberta can help to solve the issues, not taking private jets to meetings to impress other premiers and their aids, I could go on and on and on	Pay EVERYONE a fair wage, reimplement the tuition cap for post secondary students, invest in education, encourage diversity in our energy industry, invest in healthcare, healthy people tend to work more, again I could do on and on and on
T3H	Infrastructure for the future puts Albertans to work and will allow them to be more efficient in the future.	My understanding is that our health care dollars are being used to treat non-residents. The AHS needs to implement a more rigorous process for validating individuals who are seeking healthcare at our hospitals. Numerous reports of non-Albertans receiving care and no chance of the government recouping charges. Birth Tourism, should be managed and discouraged or made a for profit industry. Have we done a good job of collecting fees from other provinces? All avenues should be investigated.	Reduce the number of government employees. This would reduce the long term burden on future Albertans. Pensions and benefits for government employees should not exceed, in fact should be below the private sector due to the guaranteed payout of their future benefits.

t3b	I think the government is right on target. Reign in the size and cost of government including healthcare and education. I think an easy way to cut costs but not services is to change the work week for government employees to 40 hours per week which is a short week for oil and gas workers. I am sick about the wages and pensions and (lack of) work hours for Calgary city employees and alberta government workers.	Save 100 million dollars by stopping the enormous cost of overland flood barriers in the Bowness area. 95% of the damage was caused by groundwater. The REAL SOLUTION is an upstream reservoir or two! (1) continued funding for the feasibility study for Bow Basin Water Management Options (2) renegotiation of the TransAlta modified operating agreement during flood season for the Ghost Reservoir	I think lowering business taxes is wise
T8A	Economic diversification Education Health Environment	Restore the corporate tax rate to its existing 12% which is in line with other jurisdictions. Get rid of the Energy War room Consider a provincial sales tax Eliminate pet projects such as the inquiry into anti-Alberta Energy campaigns and the red tape reduction department. Restoration of a provincial carbon tax with proceeds going directly into innovation for renewable energy. Eliminate increase in funding to private school sector.	Tax incentives for developing industries outside of the volatile oil and gas sector. Restore funding to municipalities and public service which will be facing large layoffs in the near future.
T3E	Diversifying Alberta's economy while still supporting the oil and gas sector. Work with municipalities and the private sector to target new industries to take advantage of the well educated and business savvy Alberta workforce. Some key areas are - Health Care, Education, Public Infrastructure, Abandoned well remediation.	Avoid giving tax cuts to big business while taking away average working class opportunities for teachers and nurses. Ensure that government services are fully cost recovered (Alberta Environment and Parks Application fees and Public Lands Fees rate structures are not proportional to the costs to deliver the environmental permits, approvals and leases). Applicants should pay their share.	Diversifying Alberta's economy while still supporting the oil and gas sector. Focusing on the middle class, keeping childcare affordable, supporting famers, teachers, civil servants, universities, health care professionals.
T4X	The government needs to find some balance and need to remember that governments are supposed to care for people- not just corporations. They need to adequately fund education and healthcare and need to diversify our economy.	They could find savings by increasing the corporate tax rate and imposing a small sales tax. They can go after the companies that owe the government 173 million dollars in tax money as vigorously as they go after the average citizen.	They can proceed with infrastructure projects that create jobs and the price of labour and materials is low. They can support R& D of other industries in an attempt to diversify our economy. They can impose the same kind of tax breaks and subsidies to other industries besides oil and gas.
t2k	Environmental protection & remediation PUBLIC health care PUBLIC education	Bring corporate criminals to justice Make polluters pay Stop funding partisan propaganda Stop the flow of public money/resources into the hands of UCP cronies	Tax the rich, individuals & corporations Take public ownership of essential services & resources Raise the minimum wage Start a green new deal
T0M	Healthcare, low income earners	MLA salaries.	By making our province culture and diversity friendly
T2Z	Not solely on the oil and gas sector. Spend on the technology industry to	Save 30M\$ a year by removing waste of money like the energy 'war room'	Education and diversification of the Alberta economy away from solely oil and gas. Reinstate subsidies for company creation and entrepreneurship in the technology sector to bring high paying jobs that don't rely on the price of natural resources

T6M	Supporting struggling families who are out of work or living in poverty (public education, post secondary, healthcare, income supports, rent supplements, supervised consumption services). Finding oil alternatives, diversify our economy - we can't rely solely on oil anymore.	Increase our revenue - sales tax, increase corporate tax (it's not creating jobs!). Stop with the reports and "consultations" with predetermined outcomes and results. When you set out to find something in particular, you ignore the other information around you. Axe the "War Room"!	Increase minimum wage so families can lift themselves out of poverty. Diversify our economy. Support other industries - the tech industry was starting to thrive when you cut their financial support. Stop giving corporate tax breaks and thinking they'll solve the problem - they won't and they aren't! Increase the public service to keep with population growth (it's the only job creation you have direct control over). Remember the economy can't grow if we're living in poverty. "You can't get blood from a stone" applies to families, not just <u>oil companies who have gone bankrupt</u>
T5H	Diversify, diversify, diversify. Boom and bust is very real and intensifying our deepening reliance on the same handful of companies just to survive is preposterous. Oil will always be needed somewhere, but it can't be the only lifeline. Alternative energy works, and it can exist side by side with conventional petroleum. Instead of avoiding it, Alberta should be leading the field. Invest in the future we could have and stop dreaming of the past we had. Relying on blind luck to push the dollar-per-barrel around is so short-sighted and needlessly naive.	Bring in a PST. Stop giving money to companies that don't pay their taxes, pollute at will with no intention of cleaning it up, and then pillage their workforce to bump up their investors stocks. Cheap business taxes don't bring in more companies, it just lets them keep more for themselves. They want to drill and extract resources? They buy a lease from Albertans, put down a real deposit to clean up their mess that actually accomplishes something, and the people of Alberta take the lion's share of every barrel sold. The people own the resources, not the companies. Stelmach's Royalty scheme drained the income away from the people of Alberta and we never made up the ground we lost. And now the UPC is giving even more money away? It didn't work when Klein cut everything, it didn't work when Stelmach cut the Oil Royalties program, why would anyone with a rational thought in their head think cutting again is going to work any better?	Undo Stelmach's Royalty reductions. Bring in a PST to actually fund the infrastructure we have and keep it maintained properly. All those orphaned wells and plants can be brought back online and operated under an Alberta Oil Company, with profits going back to the infrastructure. While the plants are being updated - add the technology needed to capture whatever isn't sold downstream and find new ways to use the leftovers that normally just get burn off in a flare stack. We have the people, we have the technology, we have the motivation because we actually live here and want our kids to enjoy what we have. Oil companies waste half of what they extract and they still make a profit - why can't we do that ourselves and improve on it?
TOL	Please ensure that those that are at the most vulnerable particularly those on AISH, are protected from any cuts. There has been an insidious paring of benefits to them. Specific instances include reducing the number of visits for specialty medical services such as physio therapy or other such services. Also reducing the funding to support groups such as those providing rent subsidies to the disadvantaged. Often these subsidies allow someone on AISH to live independently compared to in group homes. The monthly rate of financial support to those on AISH has not come close to keeping up with inflation and the last noticeable increase was by Allison Redford 8 years ago. The second item is the off-loading of policing costs on small communities who are struggling to retain businesses and population. Not fair for small towns to pay for policing when the number of police is not increased and they spend most of their time and resources in the MDs not the actual towns.	Lowering the amount spent by the large municipalities on "feel good" programs such as bike paths and artwork. Putting a wage freeze on all government workers Reducing some of the unionized "Make Work" projects initiated by the previous govt. The Super Lab in Edmonton was good start.	Lower tuition costs for post secondary students by giving a subsidy to those who achieve a certain grade point or Percentage level (ie 70%). Its a waste of money to subsidize those that are simply putting in time as they will not become the workforce Alberta requires

T8V	The people most vulnerable are the easiest to reduce spending on as they won't complain but don't take this easy route so continue to cover needs such as low income housing, addiction treatment including supervised injection sights, mental health and addiction and related medical coverage.	The government and people of Alberta need to realize there has been a downward paradime shift that is long term in the income levels of many, many Albertans and small companies. Government employees assume they deserve their upward inflation adjustments and more when in reality many of us are now living on incomes below five years ago. It will be a fight but government must try for massive savings in wages, not by layoffs and related service cuts but by simply paying less per hour or per month. I would challenge any of those people to do better elsewhere at a non government job. This should be right up the chain to ministers, deputies etc that should all be pushed back 10 to 20 percent.	Get out of the way and leave it to businesses and cut your own costs by not creating or expanding departments for the purpose of job creation and economic growth. Make a fair, low cost playing field and business and related economic activity will come.
T0K	I know that education and health are the largest budget expense. However there must be areas where non-essentials can be reduced or entirely eliminated. e.g. How can teachers justify asking for raises when this province has vastly reduced income. Increased taxes are not the answer. We need jobs.	See above.	Reduce taxes for industry and businesses so that they can be more effective in creating jobs and thus more people are contributing to the tax base. Get the pipeline built. Do all that can be done to facilitate expansion of the development of natural resources in this province. Also cut the red tape in order to make it more likely that industry and business will develop in Alberta. Be more business friendly.
T8H	EDUCATION EDUCATION EDUCATION Smaller classes Better supports Health Care - more nurses Front line care	Consultants Politician salaries using Albertas own gas and oil to sell instead of letting countries including our own buy from over seas.	support the oil and gas industry again not let Alberta be the province that gets forgotten about pipe line encourage that Education is important - teachers do matter
	Diversifivation investment in Technology Carbon efficiencys in oil industry Family supports- Childcare Preperation for aging baby boomers in healthcare	Remove overlap in Alberta Health such as Covenant Health Developing becnhmarks for success at all departments of goverment and investing only in high value assets based in statistics	Investment in increase in groups suh as Alberta Innovates, Amii, Carbon Engineering and others as determined by value added to economy. Ideally this investment would improve rate of innovation and create jobs for today and the future.
T6L	Do a hiring freeze in the Alberta government but do not cut wages	Lay off managers in social programs	Support the oil and gas sector

T6H	We need to continue to cut cut cut until we bring our debt to zero. We all enjoyed times of plenty, now we need to suck it up and go through times of austerity to get back to where we need to be for a successful economy long term. We will all survive with cutbacks, it'll just take time getting used to the new norms. Model our spending after other provincial governments in Canada who aren't as bloated as Alberta's is.	Every business in Alberta has had to find ways to cut costs to stay afloat over the past few years - businesses don't have the luxury of running deficits year over year with no ramifications. As such, we need the government to follow suit and operate like a business. Workers need to be cut, those that remain may need to take on reduced hours, hiring freezes need to be instituted. Non-essential programs may need to be cut entirely. Excessive bureaucracy and overlaps need to be removed. Perks and bonuses and fancy benefit programs may need to be cut. On and on we go.... You could contemplate increasing taxes only on non-essential/luxury items. If people have discretionary income and want to spend it on non-essentials, then so be it and they can pay higher taxes for it. This won't hurt the lower class whatsoever.	Incentivize businesses to return to/stay in Alberta through lower taxes and less red tape. Find ways to lift up and help businesses, not penalize them.
T4M	Homeless and low income housing. Healthcare. Mental Healthcare. Basic Incime Program. Seniors support.	Their salaries	Easier to get funding for small business, students, low income support.
T0A	Resources Development Healthcare Senior Care Education Infrastructure & Roads	Administration Bloat in the Ministries Indexed Pensions Redundant Meetings Puffer Budgets	Private sector opportunity with less red tape
T2S	Education Health care Supporting the least fortunate in our society- AISH and date consumption sites	Cut the war room, it's useless and an embarrassment to the province Collect taxes from oil and gas companies Make oil and gas companies responsible for abandoned wells	Diversify the economy away from oil and gas Promote tourism, the film industry and technology firms.
T4N	Costs to deliver services	Education, health and size of provincial gov't	Responsible tax structure, reduce burden of regulatory requirements
T6e	Believe the Alberta government must put people back to work.we need to look at our transfer payments and what do albertans get for this.	smaller government	We need the pipe line
T1J	we need to continue to fund frontline healthcare which means not decreasing the number of nurses or cutting back on physician pay. Working with organizations like the AMA will allow costs savings to be found (as has previously happened), but unilaterally cutting doctors fees is shortsighted and will have unintended consequences.	within management/administration within healthcare, buy not excessively lowering corporate taxes (i.e. aiming for 10% rather than decreasing to 8%)	by decreasing red tape
T6H	Education, healthcare, social support.	Subsidies to oil and gas companies, international trade.	Subsidize education, healthcare, and social services so they can afford to expand their operations.
T3A	Buying land for expanding provincial parks.	Stop mowing the ditches every year. Cut back to every second or third year.	Do what it promised to lower taxes.
T5X	Healthcare Education Environment	I'm not sure but I also know that investing in the future by spending now can actually end up saving lots of money.	Exploring new areas of business like carbon capture technology

T2J	Health care, transportation	Freeze the government salary spending, no salary increase from Premier,Minster to civil servant. Pay out the debit asap to save the loan interest. Use wisely for all the government fund.	Attract more foreign investment, even from the Chinese state company as I don't understand what the high risk from the Chinese company investment compare to other country's company? Remember, they have higher risk to invest money to our country than us. For example, they may lose money if our government policy change after they put in their investment in our province.
T1H	Defend what we have left of existing oil sector economy but grow the diversity of our other interests... somehow. Keep our taxes low by reducing some core services and allow private sector take them on. Or simply reduce the level of service No New Taxes.	Top and mid level management amalgamation in all government funded sectors. Departmental budget reforms and/or incentive to individual departments to find meaningful savings. Better tracking of department spending and watchdogs to curb excessive, or needless spending. (ie)My particular laboratory may already have a weigh scale,pipette,or spectrophotometer that works well but a new one requisitioned by dept. head simply to use up all of this years budget allotment to help justify having a similar budget allowance for the next year.. and so on. This sort of thing happens in ALL government run institutions. Can't we make due with what we have.. once in a while?	through the private sector - fund contests with "big, attractive" prizes for best proved plan to create "home-grown" Alberta business using "home-grown" Alberta resources.
T5X	Education, healthcare, recycling programs	Not giving themselves big raises	Not sure
T0M	De-population across east central Alberta is killing communities. Focus on bringing business and jobs to this region.	Everywhere.	Build a common regulatory and economic zone among the western provinces. Job credentials should be transferable, and there should be free trade among western provinces. If the East won't play ball on pipelines and energy, tariff the shit out of their goods and services.
T0C	Government should assist daycare facilities with providing childcare for working parents. Since the hike in minimum wage, and the proposed cuts to the Basic Contribution Grant (16% cut) and cut for staff incentives to stay on, this has caused significantly impacted our operations. We are steadily losing money every month. The government should INCREASE assistance to daycares to be able to stay open and provide a place for those employees of all the NEW jobs the government is creating!!!We also fundraise \$20-25000 per year, and depend on donations and casino to actually be able to operate, which with these cuts, may not be able to operate for long.	Government seems to be top-heavy in administration and are cutting the staff that are doing the work. Everyone seems to have a deputy, assistant deputy, assistant to the assistant deputy, assistant to the assistant to the assistant deputy, you get my drift. It's pretty hard to fix the previous governments spending issues but I think most people are on side if the make sense. It does hurt when it impacts the lower income families.	Support daycares so people actually have a safe licensed place to take their children when they get a job.

T6L	Education, healthcare, and economic diversification (specifically in tech, green energy, and manufacturing that focuses on upcycling by-products and waste products from existing industries).	<p>By eliminating the ineffectual \$30 million per year War Room.</p> <p>By eliminating the \$2 billion per year in corporate subsidies in oil & gas.</p> <p>By raising corporate taxes back up to 11% (which would still maintaining the lowest tax regime in the country), and save us billions of dollars.</p> <p>By introducing a 5% PST, with rebates for low-income households.</p>	<p>Supporting economic diversification away from an oil and gas economy.</p> <p>Investing in shovel-ready construction projects like the Edmonton LRT, the south Edmonton hospital, new schools, etc.</p> <p>Giving rural areas new tools via which to collect the \$173 million in unpaid property taxes owed to them by oil and gas companies.</p> <p>Supporting tech, green energy, tourism, and agriculture.</p>
T5R	<p>1. Diversifying the economy - responsibly. AB cannot control oil or pipelines. It is good to continue lobbying to encourage these two but will continue to be a problem for the indefinite future.</p> <p>Research grants to U of A etc. are helpful. For example, a company I am aware of developed a new technology and are going to build it here because they were able to obtain funding from U of A (in-turn, receiving funding from AB gov). The result is that \$1m of external private investment has been secured and \$10m of further investment and financing is being sought to purchase equipment and hire employees to develop this world leading technology. The individuals who are leading this developed the technology at a European institution but happened to live in Edmonton. The European institution offers generous support which allowed them to develop the initial technology and obtain patents which normally cost \$50,000+ each.</p> <p>2. Health care and education. Everyone needs it.</p>	<p>Pursue collection of unpaid provincial corporate tax. Raise alcohol prices which AB gov collects some amount from I believe. Raise or implement a land transfer tax fee. Look at nursing employment and scheduling systems to reduce OT payments.</p> <p>This question is worded in a leading manner. It is asking solely for savings and not for revenue in general. Raise corporate tax - it is not providing benefits that were expected. Implement a PST. It has not made AB any more attractive for purchases that would create economic activity that would lead to tax revenues greater than what a PST would.</p> <p>There is no requirement to use the PST revenue if the AB gov feels like it should not. In that case, it could be used to pay down debt or to put into the heritage fund. That way, the government is not relying on additional revenue.</p>	<p>1. Create optimism. If people feel like the economy is not doing well, they will act accordingly. People are business owners and decision makers.</p> <p>2. Diversify. Undo the grants/tax credit elimination for technology etc. sector. It is the future and can attract significant investment from external sources. Quality of life in Edmonton/Calgary is higher compared to other Canadian cities where housing is unattainable. This is attractive to technology companies. See above example from previous question.</p> <p>3. Do not roll back public sector wages. This would decrease the spending power of 30,000+ people (government, healthcare, education, etc.) which will decrease the economy as a whole and encourage recession. We have already seen it in the new-housing construction sector. Trades people are being laid off.</p>
T2Y	Health care and the opioid crisis	Their salaries and the war room	By increasing wages of the lower and middle class so that they have money to spend on local businesses
T4S	Education Health care Creating jobs	Helping drug/opioid addicts	Not sure
T6W	Education and Health system	Public Administration	The job creation and economic growth shall not be limited to specific sectors of industry such as agriculture and oil. One way to creating job and growing economy is to increase diversity and create value. For example, a tourism styled agriculture system for all four seasons that combines farming, entertainment, restaurant and B&B. Government can play a leading role to help farmer transforming their farm into this type of a multi-functions resort.

	<p>Roads including bridges, provincial police services, make fire guard areas around communities in forested areas.</p>	<p>Cutting out unnecessary programs currently in place just for the sake of political correctness such as policies in the school system that do not focus on academics, policies in the health system that are not medically necessary or are a result of dangerous lifestyle choices, unnecessary and unfair compensation programs in the government such as pensions after 2 terms available to be taken before the set age, this should be the same as for CPP. Have the industries that benefit from forest harvesting help pay the costs of fire management as they benefit from harvesting the resources on crown lands.</p>	<p>Promote manufacturing of finished products from our natural resources, we should be value adding to all of our natural resources and holding those we import products from to the same high standards for safety, labour standards and climate accountability that we are expected to adhere to.</p>
T2W	<p>Continue down the path you on, creating accountability with the major users of our budget. Continue to work with the major users to find savings.</p> <p>Education - work with the curriculum for high schools to create a mandatory course on finance. Include in our teaching the basics of life with money, debt, financing, investing, credit cards, etc. This should not be an optional class.</p> <p>The war room - keep the funding, but move the fight to the background. This is a battle that cannot be won in the public eye because it is too easily misconstrued as 30 million of public money being wasted during a time of 'cuts'. Even though the budget has been about budgets maintained, perception is that no increase to at least matching the increased costs of salaries is equivalent to a cut - programs have to be removed. The UPC war room in the public eye is a perception issue that the government cannot win in times of restraint spending. But it is important, but you don't need to convince Albertans - a majority of us are on board.</p>	<p>I work in 17(1) - no raises for 7 years outside of a small calculation adjustment going to the grid. That is OK, we are not flush with money. Figure out how to partner with unions to help in times of need - I know that is an impossible task and in the media, unions and not limited in telling lies, the government is restricted in the communications. Physician remuneration in a fee-for-service system is open to abuses and creates red tape for the patient (being paid to accept a referral is a joke). Support our family doctors, find savings with our specialists.</p> <p>Education - is there any way to amalgamate if there are savings to be found? School boards covering a bigger area? Creating common HR/finance/IT services for more than one board (much like what has been done in Alberta Health Services). Again, only if there is actual savings in doing so.</p> <p>Pension Plan - moving the pension plan under control of Alberta. Does that actually save Albertans money in contributions? If yes, then security of the fund and showing the growth of the fund and the growth projection of contributions vs the federal CPP is needed. Full transparency on the benefit. This may not save the government money, but saving any amount of money to Alberta residents resulting from government actions amounts to a similar thing in the eyes of the people.</p>	<p>Hold the federal Liberals to promised funds and get them to Alberta asap. If there is infrastructure money for example, work with the municipalities to get projects in order to get the funds. Too much promised money is left on the table.</p> <p>The corporate tax break does not seem to have the effect, and yes, it has only been a short time-period. Is there a way to alter for a tax break tied to job creation? So a job-creation tax credit vs the hope that by providing a tax break will provide more jobs. I agree with the 10% tax rate coming back (I am unaffected personally).</p> <p>I would like to see Alberta join the other three provinces in the pursuit of nuclear power to allow Alberta to reduce emissions. But... we also need to keep fighting for the export of our fossil fuels as the rest of the world demand is there and is increasing. Using a portion of our royalties to build a sustainable, greener economy makes a lot of sense to me. I am personally against the expanded development of intermittent power generation of wind and solar farms (not solar on houses) that I think harm our environment and wildlife way more than fossil fuel exploration and refinement.</p> <p>Energy Efficient Alberta and the solar capacity residential program where houses can having financing attached to the property tax - I think is a great win. We are in Calgary and my whole group is talking about it. Job creation and reduced load on our power supply as that program grows.</p> <p>As an aside, the younger generations are more liberal in thinking, and a strong vote. Having a very conservative focus on financial accountability is needed. But, focusing on a few things that are important to the younger generations of voters is essential. Energy Efficiency Alberta residential solar program</p>

	In order from first to last: Health care (especially seniors benefits), capital infrastructure projects, public education and funding for realistic economic diversification (especially energy sector).	No more handouts to big business. Stop funding private and separate schools. Real audits of staff performance in health care. It is the productivity of staff that is the problem, not the number of employees in the system. Collect proper royalties on oil and gas.	Leave minimum wage alone. Limit temporary foreign workers. Put a cap on rents for commercial spaces. Tuition caps to encourage enrollment in professional and STEM fields.
T0G	Education, Healthcare and Innovation	Canadian Energy Centre budget, less consultation, more action, cut all funding to private schools.	Invest in innovation and high growth industries like nano-tech and clean energy. Fund schools and all post-secondary schools at higher levels. Create a sales tax to balance the budget.
T5L	I see nothing in the budget for hospital improvements. We do not want our hospitals to end up like in Ontario, believe me I have lived there. We pay for those services through our taxes. Perhaps Trudeau could lend a hand with more money for health care. The deindexing of income tax, what an odd way to create "economic diversification". You mean create more poor and more rich. Maybe we can pay executives a little less to come to Alberta then. Housing is way over the top now. The cost of a lot costs more than my house. The cost of living from when I came to Alberta in 2001 is so different. Even a waitress could have her own apt. back then. We need balance, we need to respect everyone!	There are marketing initiatives under every dept. You are taking away the tax film credit and yet extending that money to trade services for marketing. A war room etc. Perhaps a little support to films is in order but royalties back from successful films. Films would have to be substantial to get help. Alberta jobs.	Consolidation is good as long as the Alberta workers can accommodate a more diverse work load and some items are not left undone or always last. You certainly have created a very safe Province of Alberta web...deadly long though. I support TIER as long as initiatives are followed through on and science is supported. How much for the 610 million is for science and environmental improvements...old oil wells are making us look bad to tourists and we need more campgrounds and cabins in the public or private sector or combined north of Athabasca. Again would Trudeau help with that. I like how the army corps of engineers in the US does their work and then leaves behind a working campground when done. How can forestry/environmental services and camping be combined in Alberta?
t0k	Hold the line on any wage increases. Govt employees make way more than private sector jobs as it is.	Cut useless jobs and programs	No more govt jobs. Cut taxes to the rich and private sector businesses.
T9E	Retaining staff! Especially on the front lines. I have witnessed several contract staff, not receive renewals, increasing pressure on the remaining front line staff. Millwoods Town Centre opened a new office and then promptly decreased to I'd say about 50% of the staff in the front. Most of those front desks are empty all the time. Now, there are very few people to help out with Job Searching.	Make the big corporations pay their taxes! In full. With interest when late. Just like all the other Albertans, including the smaller mom and pop shops! Why are the big cigar toting gurus ruling over Alberta and not paying any Taxes? There is nothing holding them accountable or making them EARN these tax breaks other than being ridiculously rich and selling off our resources.	MAYBE, give companies tax breaks that are calculated PER "5 YEAR ALBERTAN" EMPLOYED... non of this farming out spots to the other provinces and countries. If their workers have lived in and paid taxes in Alberta for 5 years... then maybe give them a little tax cut... and a bonus if the Albertan is a foreman or supervisor... like a penny per "5 Year Albertan" Staff Member.... MAYBE a loony if they are a manager... and that should apply to the small businesses too. Make sure these jobs are being offered to ALBERTANS not fly ins from the states. Make sure the people getting the breaks are ALBERTAN
T8A	Healthcare and education.	Not give tax cuts to large corporations. Cut the "War Room".	Diversify our industries. Invest in alternative energy sources. Build the SuperLab in Edmonton.
T3G	Providing living arrangement for homeless. providing meaningful employment and skills with living wages. Taking over the public works from profit oriented industries will employ more peoples will help the economy. Providing child care @ reasonable rate, that will help spouses to work..Recognise workers at lower level.	More people work more revenue comes in. consolidate top heavy structure from the organisation, there should be a reasonable ratio people under managers. Bring in 2% sale tax. promote health at school levels. Comparing with other provinces compare all approaches including sale tax. Set budget at lower level of crude.	Encourage more births, more population over the next 25 years will solve some of the problems.

T9W	Front Line Health Care and Education are not options. There are definitely some efficiencies that can be made, but not to the front line. Our hospitals and schools are still feeling the effects from previous slashing budgets where no money was spent on infrastructure.	Management of every level. I would actually support bringing back a reasonable health care premium. Make doctors more accountable and audit their billing practices.	Tie any corporate tax cuts to the condition that they have to prove jobs have been created to get them. Increased your job force this year by x amount of FULL TIME employees? Tax cut for you!
T5W	Economic diversification ("ethical oil" is not a concept recognized by world markets, there's nothing we can do to stem the tide of capital away from carbon-intensive economies, etc.) and social programs to help both those who will be affected by the transition and those who were already hurting.	End patronage appointments and non-tender contracts. Close the CEC. Find ways to spend a little money now to save money later (e.g. build infrastructure while labour is cheap and plentiful; reverse cuts to Alberta Justice that will, in the long run, cost much more in fees to outside law firms; etc.).	Spend public money on wages. People with money in their pocket support businesses and create jobs when they spend it; the more people with money to spend, the better the economy. Find ways to curtail unemployment (e.g. a robust public service, infrastructure spending, economic diversification, etc.).
T4N	Healthcare. Education. Seniors	Stop the 4.7 billion tax cut to big companies. Get rid of the "War room"	Do better
T8H	Health, education, job creation, housing, encouraging and supporting small business.	This is not the time to be looking for savings as we are still in a recession. We should be spending and creating and focus on saving when we are in a better fiscal climate!	Invest, create more opportunity through programs and grants, lower taxes
T3H	Education should be a priority. Health Care System.	Increase revenue, stop the cuts. Add a provincial tax!! Every other province does.	Diversification of our Economy. Invest renewable energy.
t2e	Health care Environment Education Economy Federal cohesion	Leave all existing programs and processes in place that have been identified as successful based on indicators.	Require more professional sign off internally and by proponents Continue to streamline review of submissions for economic development Advertise globally for tourism
T0K	Cutting taxes	Cutting government and inefficient quasi government (health/education) spending. Streamline services.	Cut taxes and the economy will take care of itself; Alberta will attract business
T2L	Public healthcare. Public schools. Childcare services, such as daycares. Social services such as homeless shelters, community centres, abortion clinics and specialized counselling services. Incentives for cities to expand their public transit programs. Environmental protection.	Defunding private schools. Increasing taxes for large corporations. Implementing a carbon tax that keeps the tax money in Alberta, instead of it being contributed to the federal government. Tax churches. Increase the tax percentage of the three highest tax brackets for personal income tax.	Diversify the economy, specifically the energy sector. Develop the renewable energy sector. Provide oil and gas companies options for training in moving into solar and wind energy sectors. And if not create a refinery, instead of losing money by sending our unrefined oil to Texas and buying it back at a loss (operating at a loss will not change with creating another pipeline). Create jobs in rehabilitating the ecological destruction we have created in northern Alberta. This could create jobs for conservation biologists, wildlife specialists, hunters, schools, and more. Create jobs in our universities by providing grants for Indigenous cultural restoration and fulfill aspects of the TRC
T2X	Essential services	Making cuts, but in the right places. Management cuts at AHS, NOT front line staff cuts & NOT support services cuts - these are hitting vulnerable people really hard; don't cut grants to tech companies - almost all that were planning to set up in AB aren't now because of cuts to these grants. Cut the fat, not the essential services.	See above - grants to tech companies just 1 example. Get tough about getting pipelines built - TMX is a drop in the bucket, we needed Northern Gateway/Eagle Spirit & Energy East. Turn the taps off if necessary. People are really suffering in AB - completely needlessly when you look at the O & G industry in the US.

	<p>Services that keep Albertans healthy, educated and skilled with recognition that rural northern alberta has a key role:</p> <ul style="list-style-type: none"> - Health care and services - Education, post-secondary and K-12 - access to services in rural northern alberta <p>These services provide positive economic impact in the region's rural economy. They reduce the 'overburden' of waitlists and demand in urban centres. They provide accessibility to many rural residents who cannot access urban centres without transportation costs (ambulances or private transportation).</p>	<ul style="list-style-type: none"> - change urban centric thinking for access to services, there is efficiencies that can be found in funding rural access points. - don't provide big corporations with tax breaks - implement a GST tax 	<ul style="list-style-type: none"> - as noted above, recognize the importance and support a positive rural economic impact through education and health care access in rural communities - encourage skill training for underrepresented learners and support entry level opportunities for experience through STEP programs, funding for experiential learning encouraging industry and employers to fund this as an investment in growing a strong Alberta workforce.
T6C	<ol style="list-style-type: none"> 1. education - ensuring appropriate class sizes and resourcing for classrooms and universities 2. health care - ensuring equal access to health care for all albertans (no tiered system) 3. environment - holding companies accountable for their impact(s), having a long term plan to support transition of power to renewable resources (no coal), manage emissions and have a long term plan to lower emissions. 	<p>People should understand that the historic model is not sustainable and that additional sources of income are needed to support spending priorities. Implementation of progressive income taxes and a Provincial Sales Tax would be examples of income sources.</p>	<p>Focus on growing sustainable environmental field. Systems that encourage companies to clean up. Allow for creative solutions to environmental problems. Develop a long term plan (>50 years) that contemplates the shift away from reliance on non-renewable resources.</p>
T6J	Health and Education	closing the war room and stop giving tax cuts to billion dollar companies so they can afford to relocate	provide tax and business incentives to companies in growth industries instead of trying to save deadwood.
T6M	Education & Health	Scrap the War Room	Encourage Small Businesses
T8A	<ul style="list-style-type: none"> -Stay on the UCP planned spending course as outlined in the election. -Focus on current infrastructure maintenance priorities,deteriorating infrastructure costs more to maintain the longer it is ignored 	<ul style="list-style-type: none"> - Consider one province wide school board for public and separate systems - Stop supporting private and semi private schools within the public system, i.e. Sherwood Park Alliance School that is also a user paid school receiving public funds within the Elk Island Public School Board system. -Resist granting unrealistic raises to public sector employees and managers, private sector employees are still suffering pay and benefit cuts and in many instances cuts in hours worked, which are being filled by part time workers at lower wage rates 	<ul style="list-style-type: none"> -For economic growth, aim to reduce taxes to all Albertans, more money in their pockets, more spent in local business, more jobs being created for business - Do not provide massive tax breaks for big business, these tax savings mostly end up in company coffers and not creating jobs as intended.
	<p>Education - Our students are our future. They need access to all the services needed to become successful, contributing adults. We need low class sizes, adequate number of student assistants, access to PUF funding, mental health clinics & more.</p>	<p>cut back salaries and spending accounts of our Alberta government employees (Legislative Assembly staff - not education and health care workers)</p>	<p>fund our pipelines in our gas & oil sector make self checkouts a thing of the past - real bodies can and should do the work. Society is lacking human face to face contact in so many ways. Let's provide those opportunities while creating jobs.</p>

T2R	1) driving development in non-oil and gas sectors, 2) getting Albertans back to work through retraining to meet #1, and 3) not focusing on cutting spending that impacts the most vulnerable of the population the heaviest.	Cut funding to the war room altogether (white elephant). Stand up it's own police force so as not to pay for the RCMP. Stop hand outs/tax breaks to big corporations who are leaving anyway. Stop the trade junkets - they aren't working very well from a final deliverables point of view. Stop thinking like the Harper gov't.	Actively invite innovators and research firms to set up shop in Alberta. Look to green technologies as a growth vector. Joint partnerships with Indigenous and non-Indigenous entrepreneurs. Rethink tax collection and funding allocation in support of communities. These communities always expect gravy train funding for their pet capital projects and aren't living within current means. Reduce university fees to students - means salary cuts to university. Cut salaries of school board and hospital administrators. Stop cutting front line jobs; reduce the number of mid- and senior-level managers.
T1K	Increasing revenue, spending on capital projects to put trades people to work	Do more work in-house and less through contracts and privatisation.	Subsidise new industries such as tech companies and alternative energy. Provide services to Albertans to support them through difficult times and career changes/retraining.
T8A	Health Care and Education. The canceling of the provincial super lab was a huge mistake and in the end cost the tax payers much more than it saved (50 Million). Privatising these services has been tried in the past and failed in Calgary, why try it again...	Stop investing so much money in bailing out for oil and gas companies and start investing in business and technology that will create a sustained renewable energy source for Albertans.	Support Public Health Care as our population ages. Support diversifying our economy so that we don't have to rely on fossil fuels. Putting ALL of the Prov. Gov's energy into a dying industry is going to set Alberta back for generations to come. We need to make investments into our future not what worked well in the past.
T1H	Mental and physical health care.	End the funding for the War Room!	More support for starting up for small businesses and trades companies.
T8N	Healthcare and Education	A small user fee for medical appointments - \$5-10 range to discourage unnecessary trips to the doctor, particularly to ER. I think there is much government waste in upper levels of management.	Invest in infrastructure. Make Alberta an appealing place to do business, fair business taxes for large companies but affordable taxes for small businesses.

T5J	<p>Spending priorities should reflect the need of the times. When the rest of the economy is not doing well then it is for government to prop up the economy. Now is the time to invest in sustainable and growth sectors, and preserve jobs in those areas.</p>	<p>Balancing the budget is not going to solve our long-term economic woes. But further efficiencies can definitely be made in the health and education sectors. However, the burden of a balanced budget should not be thrown just on a few by taking away their jobs. Focus should also be on efficiencies, and economy of scale.</p>	<p>Everyone (except a few!) know that Alberta's future cannot be hedged on oil and gas. Shift this governments focus from oil and gas. Acknowledge that while it will remain an important sector of our economy, it cannot be our ticket to the future.</p> <p>However, energy and health are also the two sectors where Alberta has global talent and also some recognition. Can Alberta can become a leader in alternative energy or health tourism. If so, Government should create the conditions to achieve that vision.</p> <p>Job creation and economic growth cannot be turned on with a switch, so it is too late to talk about that. A more practical conversation would be how to save existing jobs. The public sector is the biggest sector of Alberta's economy. Taking away peoples job will only worsen the economic situation. A more equitable and effective approach in my opinion is through salary containment, or reduction in work days. I suggest the latter is a better option because it encourages entrepreneurship while people have some assured income.</p> <p>Government needs revenue but there is nothing to generate that. I have never seen such hopelessness in any economy. But the situation is a creation of our own short-sighted vision, and I blame the politicians for most of it. I think the health premium should be reinstated at least on a section of the population. And the revenue should be invested in new and future oriented sectors.</p>
-----	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

T2Y	<p>Get a handle on the number of civil servants employed in ALL Government offices and Agencies.</p> <p>Bring Government Pension plans in line with RRSP limits that all the rest of taxpayers have to adhere to.</p> <p>Reduce civil servant payrolls, to match PRIVATE payroll levels.</p> <p>LIMIT BORROWING TO ESSENTIALS ONLY, PAY DOWN DEBT AS QUICKLY AS POSSIBLE.</p>	<p>Review money sent to Cities as Calgary and Edmonton, they both seem to be out of control with spending, ALL "ARTS FARTSY" spending needs to be stopped. Calgary especially has this idea that council must just keep on spending and approving big projects - It appears that council has very little "Common Sense".</p> <p>Cut spending to Universities, these bastions of Liberal training are over funded and over paid - tenured professors need to be sent packing!</p>	<p>A hiring freeze in the CIVIL SERVICE. No new hires with attrition of civil servants employed in ALL Government offices and Agencies.</p> <p>Build incentives for small business to hire and train new employees for up to 36 months.</p> <p>Incentives for trade schools, reduce money sent to Universities to free up cash for trade schools.(check the records of the large number of secondary place holders that never complete and just waste taxpayers money).</p> <p>Reduce civil servant payrolls, to match PRIVATE payroll levels.</p> <p>"Right to Work" legislation needs to be introduced in the province.</p> <p>All Government Unions, in teaching, medical and universities need to be declared as "Essential Services", and a pay scale set that eliminated STRIKING! Union Leaders need to be fined large \$'s for their constant arguing for more money.</p>
T7Y	<p>Education and Health Services and investing into generating a renewable energy industry to decarbonize Alberta's economy.</p>	<p>I don't think Government of Alberta can find many sources to find savings while maintaining an adequate level of public services. The only savings I could foresee would be by stopping to subsidize the oil sector with low taxation rates. Considerate amounts of money would be saved if the corporations would contribute a fair share in taxes to the Alberta public sector.</p>	<p>Through diversification of the economy and more support into the renewable and clean energy, jobs and economic growth can be supported. The government should support transition programs from laid off oil and gas workers into clean energy industry and other alternative new industries emerging.</p>
T6J	<p>Industry diversification, healthcare, education and infrastructure.</p>	<p>Smaller government, finding Albertans to fill vacant positions vs moving ppl here from Ontario to work here. Bring back provincial carbon tax so that money can be directly invested in THIS province.</p>	<p>Invest in industries that actually create jobs, clean energy initiatives, infrastructure development, put back grants and tax credits to tech and AI development.</p>
T2M	<p>Public Education and Healthcare Diversification of energy resources</p>	<p>The 30 million spent on a war room that is fighting an antiquated resource would be a good start.</p>	<p>Fund public education and healthcare, this will create jobs and benefit society. Spending on our future is never wasted.</p>
T2V	<p>1)Reducing red tape and taxes 2)Infrastructure to attract business and trade 3)Streamline resource approvals and speed 4)Encourage development of all types of businesses 4)Focus on business; then the GDP will pay for social safety net costs</p>	<p>Alberta owned and managed CPP, UIC, tax collection and provincial police.</p>	<p>Reduce taxes at all levels. This will bring businesses to Alberta. Bring government agencies currently in federal government to Alberta thus bringing Alberta jobs.(Tax collection, UIC, CPP, police). Alberta should look to removing interprovincial trade barriers, create trade agreements with areas outside Canada. Reduce property taxes.</p>
T4b	<p>Stop attacking the poor and disabled.</p>	<p>Delete the war room and stop spending thousands on trips. Stop talking about separation, it's turning away investors and companies as it's showing Alberta is unstable. Bring in a PST.</p>	<p>Provincial carbon tax, invest it in green line and make jobs again. Bring in a PST. Stop cutting departments that focus on the environment and stop cutting education funding like PIP. Atop cutting heath care funding. Invest in people.</p>

T0C	The basics essentials that are required for majority of population.	Education, healthcare & social services, and reduction of unnesseccary government workers.	Elimination of any refugees, or immigrants to Alberta would help. As well to focus on getting the industries, oil, & gas going again.
T8H	Environment, education and healthcare.	MLA's and premier's salaries, travel and benefits should be cut. Offer incentives to non oil and gas companies who hire more people or who invest in new projects in Alberta.	By diversifying the economy and providing subsidies to new industries or expanding industries that are non oil and gas. Help diversify agriculture, technology, forestry and other industries.
T4j	Getting Albertan people back to work. Not by creating more goverment jobs. But making it easier for small business to operate in Alberta	Not just cutting budgets but also administer the cuts particularly in management of health care and teachers. Dont give in to unions	Offer low interest money for small business to expand operations
T3G	K-12 education spending and technical college programs. Though i think the Carbon Tax is thoroughly flawed, and I am one of those people that will not get a rebate. I would prefer if one is forced on us by the Federal Government then make the most out of it. Spend it on building a manufacturing plant that builds Solar Panels here in Alberta (create jobs then sell it), or research into creating alternative Fuels, Pay for grants to retrofit government building into being more efficient.	An overall of the subsidizing "Advanced Education" needs to be done. Why are we allowing children to get into university programs that are heavily subsidized by Tax Payer dollars. When the Program heads are not canvassing the Industry to see if these students will have jobs at the end. Either those graduates will not get a job at all or will need leave Alberta to get jobs. Have the Education Minister evaluate how many Jobs for Engineers, Educators, Lawyers, Doctors, etc. are actually available for Students graduating that year and only subsidize that many. ie) U of A - 40,000 Students Only 20,000 Jobs Available. Then only subsidize 20,000 Students the rest can pay the same price as the Foreigners	Be more realistic in where we are selling our goods. Is selling our Energy to the coast (Trans Mountain) really a priority since the second we try and ship our oil out of Burnaby some middle eastern country will sell theirs for lower than what we can produce ours for... Really we should be looking at the market south of the border. Try and push Natural Gas and Upgraded Oil to the USA. They are the ones that are going to want it in a couple of years. We should be preparing for the eventuality that the USA will not be Oil Dependent forever.
t7p	Healthcare, education, making companies who refuse to pay taxes pay them. Repeal the oil field tax bonus, most of the money just left the province and hurt Albertans. Diversity in the energy sector (renewables should get the same amount of subsidies or oil should have their subsidies removed)	Stop giving money away for corporate welfare when they don't invest it back in provincial projects..... not rocket science	Invest in public sector instead of cut it. Diversity in the province How much money does and out of work public sector or alternative energy worker contribute to taxes?
T5L	Social Services, in particular the Fetal Alcohol Spectrum Disorder Networks in Alberta. If the 174,000 Albertans with FASD in the province were supported through the Networks this would help to reduce the cost to many other systems and Ministries, such as Justice, Education, Health.	PDD supports. This system does not adequately meet the needs of persons with disabilities in the province. It is time for a new model.	Investing in other sources of economic growth outside of oil and gas.

	<p>- Health Care. Of course everyone needs to work more efficiently to ensure our dollars are being used in the best way, but, your approach to funding is to Cut. You can spin it anyway you want, but that is what you are doing. Fund where it is needed. Modern medicine keeps people alive longer, so it costs More. Baby boomers are a significant portion of those accessing the system and they are getting older and there are a lot of them.</p> <p>- Education: My children's education is suffering comparatively in one year with you in power in Alberta. Do better. Fund where needed. Listen to our Board of Trustee members that are talking with us and hearing our concerns</p> <p>- Public sector workers: we haven't received raises in years, but the cost of everything goes up (inflation) and you are placing more costs on the citizens of Alberta by cutting. you are essentially rolling us back by not giving us more money. now you want to roll us back? be realistic. I can understand in our economic climate that 0% may have to be taken at this current time, but please remember that when things were doing well, we still didn't get raises. Our wages are comparable to other jobs in Alberta. Compare to Alberta Not the Country. Lay off's are not reasonable either.</p> <p>- environment: I would like my kids to have clean air when they are older. Take care of it.</p>	<p>- There are so many "panels" which just waste money. Talk to the right people instead of consulting external people. You keep spending money to find solutions, but waste money to do it.</p> <p>- Do you need a very expensive war room?</p> <p>- less administration in the education boards, alberta government and alberta health services. But, do through attrition to not cause people to lose their houses, etc.</p> <p>- Work well and in good faith with the union bargaining. Ask us where the savings are instead of you assuming where you could find money.</p>	<p>- Don't do lay off's. all that does is increase unemployment.</p>
T8A	<p>Education Job creation</p>	<p>The travel expenses for trips that don't seem to be establishing investment in Alberta</p>	<p>That was part of your election platform. Just put into place the strategies that you planned for and what you promised to the electorate</p>
T5Y	<p>I think our spending needs to support adequate health care (support front line workers like doctors and nurses). I also think our health care should grow to support naturopathic doctors, more mental health care, vision, dental and hearing health care. Education is important and we need to support our citizen's education to grow our economy, and support new innovation and ideas for growing new companies.</p>	<p>Cutting down on the highly paid executives. Instead of cutting the needed front line workers, the high salaries of upper level executives could be cut as well. Also, MP expenses and salaries can be trimmed as well (they should share the pain, instead of asking everyone else to take cuts but remain themselves untouchable from the cuts).</p>	<p>Analyze what are the industries that are having trouble finding workers (is it IT, medical, etc?). Support and expand the available training so that people are well trained and are able to be employable in those industries. There is a lot of information online about where workers are needed. Also support the growth of new companies that provide needed products, services, and jobs (with loans or grants).</p>

	<p>Jobs: If the government is working to shut down the oil and gas industry in Alberta there needs to be a diversification of skills in the workforce. This includes and is not limited to incentives, grants, and bursaries for education in sectors that are up and coming and will help individuals and families thrive and prosper instead of exist in a constant state of survival.</p> <p>Healthcare: Over the past couple of years there seemed to be an improvement in the healthcare system. A healthy population is the greatest good for all.</p> <p>Poverty and Housing First: These two things are detrimental to a thriving economy. Taking a 'housing first' stance allows people who are facing challenges a safe place to be while dealing with their challenges. At the very least, introducing a basic income for children under the age of 18 to end childhood poverty - this will give children opportunity and hope for their future.</p>	<p>There is so much red tape and bureaucracy, which creates a complex system of checks and balances. By decreasing the level of government involvement to a minimum and also decreasing governmental salaries. Being a public servant ought not make someone wealthy. When I say this I am specifically referring to individuals in the highest level of government. Also, more transparency about where monies are being directed to by openly publishing the statement of account and ledger for each fiscal year.</p>	<p>The government ought to make smart investments based on a carefully calculated risk assessment. Investing in people by providing educational assistance to help with the vision of the future for the province. Investing in research and development. Investing in technology and space exploration.</p>
T7X	Healthcare and education. Infrastructure.	Increase revenues from corporate taxes.	Invest in frontline public jobs. Create incentives for green energy investments.
	Health, education, Job creation and Industry. not laying off hard working albertans who the will have to look for jobs in a struggling job market. Unsure how we take from one and call that a success. Let's look at what the underlying issues are actually not looking to other provinces to give a report that who knows how much money they spent with their own agendas and who don't have a full understanding of AB.	Overtime, stop wasting money on crazy ads for war room , use more economical means of advertising, stop paying for neighbouring provinces to fly to ab for promotional events. Focus on the real issues. All albertans are tax payers and we are heavily taxed.	By not laying off current employees who then will need financial assistance. Working on the pipelines and new industries like tech while trying to revive the oil and gas.
T3E	The government needs to stop trying to revive a dying industry. STOP corporate welfare; make oil companies pay their taxes. DO pay for infrastructure and all those amenities that Albertan taxpayers have supported over the years; health care, education (particularly higher-education, which will supply earners to pay the taxes to make Alberta an economic engine). Support green-initiatives like improved mass transport and petroleum-free power generation. Restore drug benefits to dependents of retired people over age 65. Use science-based treatment for addictions by supporting clean use sites where they are needed, and offer better support for treatment.	Close coal plants. Re-train oilsand workers involved in expanding the industry. Stop the "oilsands war room" which is involved in scandals such as misinformation, copyright infringement, and which operates in secrecy. The cigarette industry benefitted for only so long with their own attempts at this strategy. DO NOT let any of our elected leaders fly first-class and DO NOT bring in people on tours with costly junkets. Alberta is hurting; lead by example. Show the kind of restraint you are asking people in vulnerable sectors to take on.	Training and re-education of people involved in the fossil-fuel economy. Embrace the new-world, proven realities of clean energy. Recognize that new jobs in post-secondary support Alberta's real asset of being a knowledge economy. Despite huge cuts that are resulting in layoffs and planned reductions in staff in health care and post secondary that seem intended to boost people in the oil sector, there is NO REAL GROWTH. You now have people paying fewer taxes and have not increased revenues for this province. Things will get better with the pipelines that were started by the previous government, but no new initiatives show actual results. The price of oil is outside of Alberta's hands, so no amount of propping up the industry will make measurable gains.
T3K	-Education -Healthcare	-Large business tax breaks.	Yes
T5r	Fully funding education to new enrollment levels, fairly paying and compensating our health care workers, and investing in infrastructure.	Rescind the corporate tax giveaway as it is not working as intended to create jobs. Too many companies are taking their profits and just paying out shareholders or investing elsewhere.	By not laying off government employees which is lowering consumer confidence. Rescind the corporate tax giveaway and fund programs and services to appropriate levels.

T2W	Education, Healthcare, Public Services, diversifying	Corporate taxes	Diversifying our energy sector
T8A	<p>Post secondary education- people who have lost jobs need to retrain and recent changes are making that more difficult. Health promotion/harm reduction- focusing on acute care is an endless money pit. Focus on healthy community and programs that reduce use of EMS/Acute Care ie. Safe injection sites, traffic safety. Economic diversification</p>	<p>Stop the corporate handouts. If you are going to give businesses money, give it to local ones who will stick around!</p> <p>We also need to look at the revenue side of the equation. The time has come to think about a sales tax. Taxing purchases made with disposable income is far fairer than cutting programs that are hitting our most vulnerable citizens.</p> <p>Quit wasting money on the "war room". Channel the money into actual environmental programs (such as public transportation, green energy) and let real journalists write about it. That will give Alberta far more positive press than biased junk coming out of a propaganda engine.</p>	<p>Why oh why would you cut grants to tech companies? They were doing so well and added much needed diversity.</p> <p>While I support wage freezes (or even a couple of % rollbacks) for those working in the public service (and I say that as someone who works in a municipality), I don't support layoffs. It feels like you are laying off the only people left working in the province!</p>
T6I	Education and healthcare	By not giving a tax cut to profitable oil and gas companies.	Investing in education at all levels. Tax incentives for small businesses and the tech sector
	<p>Innovation. Nurture small business. Invest in Education. Our oil and gas sector needs to start kicking some ass and that ain't going to come from Ab Gov denying climate change and abandoning orphaned wells. The leadership vacuum is demoralizing the industry and it's imploding. Why are we not attempting any Value Added Production? They don't want our bitumen but they sure burn petroleum products. Make the industry sexy again: produce something! Anything.</p> <p>-An ignorant workforce can't do this. Incentivize education and make it balanced. It won't be you and I that fix this, but it might be us who makes it worse. It's the youngsters who'll undo our work if we alienate them. So, let's stop alienating them. They want to be proud of their work and their province.</p> <p>Some of them are so young, they never knew an Alberta that wasn't a basket case.</p>	<p>-Government expense accounts and travel.</p> <p>-The humiliating "war room". Jeeze guys, you'd be helping me far more if you did nothing. Please: stop helping!</p> <p>-cut executive compensation</p> <p>-Double excise tax on liquor and cigarettes.</p> <p>-Triple excise tax on pop and energy drinks.</p> <p>-</p>	<p>Sell pinatas of Justin and Jason: The two most acute threats to middle-class prosperity in Alberta.</p> <p>Alberta; take your foot off the throats of families who work, hire, contribute, consume and commute (for now) in this Province. Their kids go to schools here and their parents access health care, here.</p> <p>HERE!</p> <p>Stop making an enemy of yourselves. You'll push these people right back into the arms of the NDP. Please! While families are still kicking, give THEM some of the tax relief you're asking us to give to the resources sector.</p> <p>"Blood from a stone", he says? What? Who's the stone?</p> <p>Nobody in Edmonton is talking about giving US a property tax break.</p> <p>UCP's war on families is bad for business.</p>
	<p>- Adapted Physical Activity (physical activity / exercise for individuals experiencing disability or living with impairment)</p> <p>- post-secondary institutions</p> <p>- environmental conservation</p>	- increase taxes on big business to previous levels	Grants to support training in non-oil jobs (diversify economy so all our eggs aren't in the oil economy basket)

T4R	Mental health and education	government salary.	I think it was a great idea for raising minimum wage to 15.00 an hour however that makes it nearly impossible for small local business to stay running. The pipeline needs to be approved a lot faster then what its going at right now, since oil and gas has declined, crime and poverty has risen. Everyone is moving to slow on bringing the economy back up and it needs to be more or a priority.
T8R	Achieving a provincial police force, Establishing an Alberta Pension Plan, Highways, and internet in rural Alberta	Remove the excessive pensions of Politicians and civil servants. No public pension should ever pay full wages for anyone no longer adding value.	By disconnecting from the federation that has crippled the province.
T8H	Recycling Centres, Environment, healthcare, schools	Progressive tax on rich (over \$100k)	Let the market do its thing
T2N	*lower wait times for healthcare procedures and find efficiencies within AHS	*freeze or cut spending on public servants' wages and benefits	*lower corporate taxation
T1V	Healthcare, education and diversification of the provincial economy away from oil & gas	Middle and upper management of crown corporations. Administrative positions within the government.	By using what has worked - grants and funding for growing economic areas like tech and film
	Education, healthcare	tax corporations	Diversify your industry.
T3R	Stop cutting the vital services all Albertans rely on. Health care and education should never be leveraged!	From the top 1% Government officials do not need to be making more then the average person especially when unemployment is so high.	Bring back the tech and alternative energy programs you terminated.
T0H	Health care- health care should stay public and be properly funded. Instead of asking the top tier where cuts should be made for saving money spend time with front line staff and see how your cuts affect patients directly. We already have private diagnostic imaging and it has not helped with the public system wait times. Machines sit empty in the private while people are waiting 6 months or more for a CT scan. Limiting the amount of scans done in public are only adding to the long wait. 2 tier systems have failed all over including sask where it ended up costing the public much more.	Get rid of the stupid war room that is wasting 30million a year! That money could be put into health care or education.	Incentives for diversification. Tech companies green energy ect. Giving all the incentives to oil and gas for 40+ years has left us with a one truck pony for money. Start investing elsewhere. Oil and gas can and should support itself.
T7Y	We personally know of people that rely on the medical funds for expensive drugs for their illnesses that they could not afford otherwise. This should NOT be a cut in funding as it could bring death to some and then the UCP would never get elected provincially or federally.	There would be great savings made if the photo radar done only in Alberta were eliminated. Where does all that money go currently? Likely some other NDP or Liberal agenda uses it.	Of course the pipeline brings many jobs, so that is good. There should be tax benefits for having children and mother's to stay home raising them. Nurses and medical staff should not be cut back on. Small businesses should be encouraged. Lower taxes, and tax advantages should be encouraged.

T8A	<p>Stop looking in the rear view mirror and focus on developing new industries in Alberta. Oil and gas should not be our priorities. Employment in those fields is not going to return to previous levels. Workers in those fields need to be focused on retraining not waiting for jobs that are not coming back(due to increased technology and globally controlled hydrocarbon pricing). Doubling down on one industry will cripple our economy. Giving 4.5 Bln of ineffective tax cuts to industry and then asking public sector workers who have not had a pay raise in 5-7 years to take a rollback when they have already lost 10-15% due to inflation takes dollar out of our economy. Money to workers will come back in to the economy.</p> <p>Cutting money to all sectors of education is counter productive long term. Our youth need to be encouraged to attain higher levels of education in areas of potential growth. A dollar saved today that results in a less productive work force will not help economic growth.</p> <p>Controlled spending needs to be balanced with appropriate taxation. Alberta needs a sales tax and appropriate levels of corporate tax like the rest of Canada. Being a desirable place to live in not just about low taxation. Infrastructure is required for livability, particularly for young professional families.</p>	<p>Focus should not just be on savings but consistent and fair income streams. Tax cuts to big business have been grossly ineffective. Corporate profits have increased but job creation and new business growth is negative. Educated, progressive Albertans are not uncomfortable with taxation in line with the rest of Canada. They are uncomfortable with pandering to the rich on the backs of the less fortunate.</p>	<p>Incentives to start ups and emerging technologies and industries rather than being focused on existing oil and gas. War room is a waste of money.</p>
T0B	Education and Healthcare	<p>There are to many government employees aka. Mps councilors etc. They also make way to much money. Take a pay cut.</p>	<p>Investing in education and healthcare can create jobs needed for kids and supporting the sick and afflicted</p>
T2v	<p>Get gov't labour costs under control. Number of people, wages paid, and benefits that grossly exceed normal standards. Stop using legacy PC personages for work, and fire them if they hire family for additional gov't work.</p>	<p>AHS -mgmt, doctors, process. General Government Bureaucracy Outsource more items thru competition</p>	<p>Take away barriers.</p>
t3c	Health, Education, Diversification of economy	<p>Elimination of war room, avoidance of relying on single source economy</p>	<p>Understand that the world is changing and that while fossil fuels are critical to the worlds future, pricing of fossil fuels is not within the control of our government, and blaming a prior government or a federal government for issues that are inherently created by global low pricing caused by a US unable to control their own runaway exploration and production is tantamount to suicide. The capacity of this province is incredible - let's diversify it. Engineers can do a lot more that search for oil and gas.</p>

T5H	<p>- Funding primary healthcare - family physicians, nurses, LPNs. The ostensible cuts to primary healthcare will be detrimental to the health of the province as well as the healthcare budget. Cutting frontline healthcare will prevent individuals from getting the care they need right away, making them sicker, and requiring greater intervention (and greater healthcare cost) later on.</p> <p>- Education: Cuts to primary and post-secondary education will only result in a poorer provincial outcomes over time.</p> <p>- Social services for vulnerable populations</p>	<p>- Discontinuing the "Climate War Room" would result in considerable savings and would prevent the spread of misinformation.</p>	<p>- Investing in healthcare, education, and social services that support vulnerable populations are investments that will facilitate economic growth as individuals will be better equipped to be employed in high quality and high output careers.</p> <p>- Investing in developing jobs in the clean energy sector</p>
T4S	<p>Getting people back to work. Improving Healthcare for all, and taking better care of our seniors.</p>	<p>Stop sending it to Ottawa we need it now.</p>	<p>Support small businesses, that includes Doctors.</p>
	<p>Health and Education. Without an educated and healthy work force it will be impossible to 'get Alberta working'. Holding the line on education funding does not address the realities of increase enrollment. Performance based funding for post secondary institutions only benefits affluent communities.</p>	<p>BY increasing corporate taxes, especially for corporations that are foreign owned. Give only Alberta own corporations and business a break.</p>	<p>The government should not create funding situations where front line work (k-12 education and health care in particular) is forced to cut staff. The government should minimize government layoffs as that negatively impacts Alberta's employment rates. The government should encourage economic growth in sectors that do not rely exclusively on natural resources as natural resource based sectors are highly volatile and regularly experience boom bust cycles that leave the entire provincial economy vulnerable. The Alberta government should ensure strong federal ties to influences foreign trade policy and agreements.</p>
T6W	<p>Public healthcare, public education, child care</p>	<p>increase taxes on heavy industry.</p>	<p>Increase support of child care, diversify government funding (grants and such) to multiple disciplines.</p>
T4L	<p>More jobs. Taking from Health Care by wage freeze isn't helping. People getting laid off is only creating more overtime.</p>	<p>We'll get a backbone and force Trudeau out. His spending is costing Canadians more and more every day.</p>	<p>Stop entertaining Trudeau with the carbon tax. I'm sure you know about Agenda 21 and how Trudeau is killing Canada financially.</p>
T6J	<p>Health, education, environmental initiatives, and support for the disadvantaged and vulnerable populations in our province. Invest in more sustainable energy sources (e.g. solar energy).</p> <p>Pay someone to develop a better survey that can more accurately capture Albertans' values and opinions. I really do not understand how you will analyze this data in an objective manner when the questions are so broad.</p>	<p>Start charging PST like almost every other province does. Stop contributing to large oil companies.</p>	<p>Increase funding to educational institutions. Increase student grant funding to support skills and critical thinking development. Contribute to long-term housing solutions for the homeless population.</p>
T4R	<p>Shrink the bureaucracy. Cut public spending.</p>	<p>Civil servants.</p>	<p>Lower taxes and decrease regulations.</p>
T1R	<p>Education, health (supervised consumption services and programming), tourism (actual money injected in parks and recreation and in educational programs and parks services)</p>	<p>Tax the rich more.</p>	<p>By prioritizing jobs in education and health sectors!</p>

T0B	Healthcare Education Social programs	Healthcare - Provide those who use the system a quarterly account of what the system paid out for their care. I e Dr. visits, hospital stays, medication. Review doctors billing. How it now there appears to be a medical clinic on almost every corner? Something is wrong with this picture. Educate the public in prevention of illnesses which would be controlled through lifestyle changes and exercise. Defund abortion and MAID. Education: Reduce upper and middle management. Salaries. When 95% of a schools budget is salaries. Evaluation based on performance. Senior Teachers who are marking time waiting for their pension offer a payout. Review bussing. Students attending school near where they live would reduce number of busses. Is bussing cost effective? Social programs. The federal government accepted refugees. now a large percentage of them are on "AISH" or social assistance resulting with many believing they are entitled to these benefits. A number were living in refugee camps without any requirement to work or doing anything productive regulated. This behavior now their lifestyle.	Reduce taxes. Recognize successful private sector business. Encourage and support technology, movie and film, innovation and research to add value to food processing, manufacturing, natural resources recycling. Infrastructure must be maintained and kept up. However, I believe setting higher engineering standards for road construction, repair, rebuilding holding contractors to the contract would see these lasting longer with less maintenance. Reviewing the options included in vehicles the government purchases to see if the option is necessary or frivolous. Continue to fight to have our natural resources i. e. oil and gas get to markets via pipeline.
T7S	Education (including early childhood, school-age and post-secondary), Health Care, Economic Diversification, Environment and Social/Community resiliency.	By reversing the tax break given to corporations; Increase corporate taxes to what they previously were. "trickle-down economics" has been shown by peer-reviewed research that it doesn't work, including by research conducted within Alberta.	Provide additional funding to education at all levels so that Albertans are able to maintain or enhance their reputation as a highly educated/skilled workforce that can solve complex problems. Provide incentives for establishing businesses that are not Oil&Gas (economic diversification); sectors such as technology, tourism, forestry, alternative energy, medical etc etc. Encourage immigration. Reverse the cuts made to municipalities, to Education, to Health Services... all of these people now out of work are also Albertans!
T2K	Education Health care Indigenous health & social welfare Sustainable & renewable energy sources Commuter transport Reconciliation projects Addressing homelessness, mental health & poverty line	- introduce an Alberta provincial sales tax, like all other provinces - reduce tax cuts to corporations, oil & gas companies - higher taxes on incomes over \$250,000	Invest in albertans. A balanced budget has only meant the de-funding of education and health care for the past 30yrs. Invest in people, stop taking funding away- this only equates to middle and lower class families have less within a rising cost of the economy
T7X	Infrastructure - Our roadways need more (better) maintenance and improvement.	By cutting overheads and money to non necessary items. I believe we need to keep front line services for health and education but if the rest of the province is not getting a raise and is feeling a cut then so should other staff.	Construction. Improve roads and facilities and other needed infrastructure. As well as grants/loans to companies looking to relocate to Alberta
T3Z	Reduce spending, make government smaller, make people responsible for themselves again	Reduce middle management across the board	Reduce costs for business through tax reductions, reduction in red tape and streamlining of approvals

T6C	<p>- Police, courts, and the military: these are the essential services that Government should focus its spending priorities on. Also: creating an Alberta Police Force so we are not dependent on the Federal Government for our safety from criminals.</p> <p>- The Alberta Government should look at 'getting out of any business that competes with the private sector' - in other words: complete privatization.</p> <p>- The more entire Government departments we can eventually eliminate 100%, the more potential for huge taxpayer savings and increases the economic opportunities for Alberta businesses and this encourages foreign investment.</p> <p>- Government should also focus on eliminating deficits and debts permanently.</p> <p>17(1)</p>	<p>- Promote and encourage privatization of health care and education for Albertans to become responsible for our own services rather than depend on Government.</p> <p>- Reduce tax rates for Albertans straight across the board.</p> <p>- Battle government unions to reduce wages and eliminate costly pensions and other payouts once they are finished working for Alberta. If services were privatized this would go a long way to eliminating these costs.</p> <p>- Government could find savings by investigating the previous Notley NDP Government for criminal wrongdoing (i.e. to what extent Alberta taxpayer money was stolen or inappropriately spent on companies and individuals outside Alberta) and if crimes were committed, charge them and file civil suits to return the money. This would send a clear message that corruption will not be tolerated in Alberta.</p> <p>- The Alberta Government should take the Federal Government to Court demanding that the equalization payments are unfair, that we should never have to pay these again, plus we should be repaid money stolen from our Province over the last several decades. It is important to send a message that theft from Alberta will not be tolerated and that we intend to hold those responsible.</p> <p>- Also: filing civil suits (and demanding criminal investigations) against those senior officials in the Government of Canada responsible for all of the economic hardship caused to our Province due to corrupt Federal Government policy (e.g. Mortgage Stress Test and other undue interference to Alberta's private sector).</p>	<p>- Carry forth massive deregulation and tax reduction, and implement economic strategies that are being used by the U.S. effectively South of the border.</p> <p>- Promote harvesting of Alberta's natural resources by allowing the private sector freedom to operate without undue government interference. This will help to encourage foreign investment into Alberta.</p> <p>- Eliminate the minimum wage law that is forcing companies to shut down and leave Alberta with increasingly scarce job prospects for those at the bottom end.</p> <p>- Promotion of property rights and freedom of speech (i.e. liberty for Albertans!)</p> <p>- People running for municipal office (i.e. cities and towns) should be allowed to declare the political party affiliation (e.g. Mr. J. Brown, UCP) on the ballot. This would help voters understand if the candidate is a conservative or a socialist. We have too much government spending and regulation at the local level, and I believe it is paramount for the long-term health of Alberta that this be addressed.</p> <p>17(1)</p>
T2B	EDUCATION! EDUCATION! Education! HEALTH CARE! FUNDING FOR CITIES!	not giving huge tax cuts to mega corporations	Funding a diversified economy with tax credits. Work WITH the rest of Canada to promote growth and export of resources.
T9S	Supporting healthcare and education at ALL levels. Your current and proposed cuts are short sighted and are eroding your political base and the future prosperity and economic health of the province.	Reduce tax incentives and cuts to corporate tax levels. Bring in a sales tax for equitable taxation based on consumption. Cut red tape and over regulation in the post-secondary education system by pulling back on your proposed funding model changes.	Cut red tape and over regulation at the post-secondary level by pulling back on your proposed education funding model changes. Focus on supporting small businesses and starts-ups in the province, including an enhanced focus on the tech sector.
T4V	Just ask yourself, "What would Rachel Notley and the NDP do?" and do that instead?	Just ask yourself, "What would Rachel Notley and the NDP do?" and do that instead?	Just ask yourself, "What would Rachel Notley and the NDP do?" and do that instead?
T4A	Education and health	Government travel, centralized laboratories for testing, reduce committees, disband the CEC	Invest in other renewable resources
T3E	Fund health care properly and generously.	Stop fundine the UCP supporters.	Build infra structures and do maintenance on buildings.

T2Y	Healthcare and Education, Job Creation	Create cost centers for office supplies, that School boards, Government offices local and provincial can order from. if you have a bigger demand for something then the cost of those supplies are usually cheaper. create one north and one south 1 procurement office consistently looking for better deals in the long run it will create savings, instead of having 10 or 12 warehouses with many departments of procurement or overhead of those buildings you create savings for school boards(more money for students,)Cities and Provincially as well, There may be a few job losses but ideally they could transfer over to new buildings	Start with Tourism, Create Vegas of the North loosen the AGLC laws the restrict Gaming and Alcohol, Calgary is so well situated to the mountains go skiing in the winter and see a show at your hotel at night, Vegas has so much money that goes towards local education, roads,healthcare and use this money to fund other government projects, will create 1000's of jobs, Hotel staff, gaming staff, transportation, Security, and would also trickle other jobs out into the community . Second lets not be a one trick pony can not sustain a province economic growth by relying on the energy sector, Sait and Nait are two places where we can start focusing on technology and start becoming leaders in Canada where company's want to come to because we have people being trained right here in our province. Give Tax breaks too people not corporations more bang for your buck, as life becomes more expensive for family's we have less to spend on those corporations, give the people the breaks and they will re-invest in the province can barley making it by now while corporations are still making money and they are not flying back to the province
T9V	Infrastructure Health Care	Reduce red tape. Don't spend any money fighting non-existent climate change. Reduce the size of government from the top down. Reduce/control the number of migrants we accept.	Low taxes. Business friendly policy.
T3A	Focus on negotiating a better deal for Alberta so less money is lost to Ottawa. Set up an Alberta pension plan that ties savings directly to the individual that made the deposit so they can see the benefits due. Take back control of our provincial health care system.	Expand private health care options and private health insurance. Increase the use of computers for teaching at middle schools and high schools. Properly done, class sizes can be both larger and more effective. Diploma exams in grades 6, 9 and 12 should account for no less than 50% of the students' grades.	Reduce taxes on businesses, especially small businesses. Do not waste money providing job training programs. Let the private sector do any necessary training.
T9N	Healthcare & justice and infrastructure	Upper management and administrative including public servants.	Tax reduction for small businesses, no provincial sales tax.
T2g	Reducing the debt is a priority. Reducing the number and compensation of the public sector .	Eliminating government departments and reducing the bloated public sector.	I support the lowering of corporate taxes. Fair deal with Canada. Review equalization program, CPP, EI Etc.
T5J	Investment in Infrastructure including repair and maintenance on existing roads, bridges and buildings.	Long term planning and commitment on Infrastructure instead of short term thinking on cost savings.	Ongoing investment in Infrastructure on a sustainable basis instead of the roller coaster funding will both create and maintain jobs.

t0k	Spending LESS! Beyond that, getting our industries back to full capacity, and doing everything we can to keep them that way should be number one.	Strive for increased fairness in pay and perks to public sector workers. Currently they are paid more than equivalent private sector Albertans. This must stop! Cease raises and use attrition until they are inline with the rest of Albertans. Fairness is a key platform of leftist thinking is it not? Public sector unions support leftist political institutions do they not? Then they should not have a problem with living their ideals. The Alberta government pays our more per capita than any other province. STOP THIS IMMEDIATELY!!!	Fight for maximizing our industries, all of them. Fight to squash all external barriers and opposition to our industries. Opposition like foreign funded anti-oil groups need to be better controlled. Free expression is always allowed, but using foreign funds to curtail our industries is tantamount to economic sabotage. Look at a pipeline to Churchill, MB. We could provide LNG (at least) to a needy Europe. There are tankers available that would have no trouble with the annual ice that builds up in the winter. We could also ship oil to NB the same way. This is not my idea, it's being talked about, look into it further.
T6B	Train connecting Calgary with Edmonton. Beyond connecting two major Western Canadian economies it would project confidence that Alberta isn't only a low tax jurisdiction to invest in, but a stable and thriving one. Alberta heritage projects as they pertain to tourism (museum exhibits, natural landmarks, etc.) to help tell a distinctly Alberta story. Provincial parks.	Public post-secondary institutions, measured cuts to public sector salaries and perks, forcing teachers to teach summer classes as part of their current compensation package.	Continued red tape reduction, ensuring that municipal governments also run government as efficiently as possible, demonstrating support for non-energy related business. (agricultural upgrading, oil refining and upgrading, advanced manufacturing, etc.)
T8A	Education Healthcare Diversifying the economy	Stop giving corporations tax cuts	Diversify the economy instead of only focusing on oil and gas which I realize we rely on but is killing the planet. We need better options Also, stop cutting front line health care workers and teachers - you're just putting them in the unemployment line!
T5R	Health and Education!	STOP Bailing out private corporations!	Diversity!
T6E	Funding to ensure Albertans with disabilities have access to quality, sport, physical activity and recreation programs. By directing funds to organizations that deliver programs within the community (e.g., The Steadward Centre), they will enhance the health, well-being and quality of life for adults, youth, and children experiencing disability. This investment will help to create healthier communities across the province.	By investing in sport, physical activity and recreation for Albertans with disabilities, the government will find savings in health care costs as there will be fewer visits to health care providers by supporting the development of healthy, active communities.	Investing in training and development (e.g., post-secondary education or funds to assist organizations to enhance professional development opportunities with their current employees) as well as hiring programs for young people (e.g., STEP) or investing in employment training and preparation for people experiencing disability. Investment in capital projects that support physical activity and recreation will create jobs and ensure we have a healthy workforce.
T6B	Climate mitigation and adaptation. This is very clearly the number one economic and social issue we face today.	reduction of teacher wages. Use the savings from wages to decrease class sizes and provide better supports.	Investment into the green energy sector. Complete divestment from the fossil fuel industry will lead to substantial economic and social growth.
T0G	Health care, Agriculture, Energy, Debt Reduction	Upper management in all cases, particularly Health and Public Service sector. Procurement of services. A complete review of government owned infrastructure across the province..... do you really know what you own, where it is and how much its costing. MLA,s salaries and expenses.	Much much less government regulation, less union influence, incentives for private enterprise, and those don't necessarily have to be financial.
T2V	Education, health care, diversification of the economy	Not giving handouts to multi-billion dollar companies	Move away from dying industries, diversify

T6C	I think the government should focus on diversifying the economy and encouraging investment in new industries. Being entirely dependent on oil makes our economy too precarious and too vulnerable to swings in world markets for oil.	I think the government should dissolve the energy war room. The government should also leave the corporate tax rate where it was (at 12%) instead of decreasing it to 8%. The extra money could be used to give tax breaks to developing industries to help them get established.	The government should not be cutting jobs in the public sector as this puts people out of work which further depresses the economy.
T2E	Education	Oil and gas royalties. Gas company taxes.	Research grants and expanding Alberta Innovates.
	The government should focus on improving all levels of education, providing more funding for better programs in schools, and keeping post-secondary tuition costs low. More money should be spent on public health, hiring and promoting workers.	Increasing corporate taxes	Support post-secondary students
T2G	Environmental protection, renewable energy investment (wind, solar), diversification of economy, water security	Eliminate corporate tax breaks, introduce PST	Alberta's future depends on diversification of the economy and a shifting focus away from fossil fuels to renewable energy (wind solar). Alberta is extremely well situated for wind and solar energy. Government grants to introduce more wind farms/solar farms would go a long way in energy security and sustainable economy.
	The government should focus their spending on healthcare and education. The government should increase their investment in these areas not freeze them.	The government could find savings in getting rid of the war-room, or they could find savings by not reducing corporate taxes.	The government can support job creation and economic growth by investing in education to provide the province with new high level workers and entrepreneurs.
T6X	Developing industry/sectors to make the provincial economy less dependent on oil & gas	Ask government employees for feedback. Initiate a program that looks at current government inefficiencies and develop potential solutions.	Partner with private industry to create jobs so that it is not so dependent on provincial funding, develop alternate industries
T0H	Cutting costs and getting the public sector under control	Cut bureaucracy, lay off extra personnel and get rid of special interest funding for minority groups	Cut red tape and let the markets sort out their problems
T3G	Private sector non-o&g related job creation.	Administration and expense spending.	Tax cuts for small businesses for creating new jobs.
T0L	Health Education Economic Diversification facilitation	Increase time for MLAs to have to serve before being eligible to receive a government pension Stop funding "The War Room" It is stealing from Alberta citizens. Improve inefficiencies and unnecessary duplication within the government beurocracy.	Partnering with various universities to turn research into economic development Promoting the "under 40" to turn business ideas into business realities, emphasizing job creation. i.e Financial Awards for Student Entrepreneur of the Year. Offering Alberta businesses encouragement to modify their businesses to become adaptable to be stable over the ups and downs of resource industry. Promoting International Companies to come to Alberta.
T5Y	Education.	Infrastructure projects	Invest in Education and Healthcare
T0J	Health Care and Education	Tax savings could be saved by not giving big business our tax money	Let business hire their own people, as they need them.
T0G	Public education, health.	Reduce the number of admin in health to facilitate more frontline staff.	Support manufacturing final products here in Alberta, including oil. We shouldn't have to buy back our own resources as a finished product.
T0C	Spending their own money as taxation is theft and therefore illegal and immoral!!!Stop taking peoples money and pretending we need your "protection" we see through it and know you are not for the people any more than than MS-13, mafia, or monarchy organizations are!	The government does not have any monies that it has not stolen. So all spending is more than its means. The best way to find savings with the greatest overall benefit to the people would be simply dissolving all levels of provincial government after severing ties with the federal government.	To support job create and economic growth the best thing government can do is get out of the way!!! The government cannot create jobs and economic growth as they are a parasite incapable of creating anything; relying instead on a monopoly on force to steal and redistribute wealth.

T3G	<p>Ending ALL Equalization payments and participation in the federal government's giving away of tax dollars to special interest groups/industries/countries, etc.</p> <p>Establish a sector of provincial government to manage all tax dollars collected from Albertans so that the money stays in our province.</p>	<p>In the middle/high positions within each department. Cutting frontline workers is NOT the way to save money.</p>	<p>I think its going to take time to attract oil and gas companies back to our province. Continue to support projects they may have coming up.</p> <p>At some point, once the debt is cleared and we are no longer sending money east, we should consider buying the pipeline to the coast to ensure this situation never arises again and that the federal government doesn't have the ability to control the sale and transportation of our resources.</p> <p>A utility corridor across Canada would be a good thing for Alberta's industries.</p>
T0B	Reducing debt	Throughout government, i.e. bonus"s etc	Unsure
T8H	Education and Healthcare	<p>I feel that some places are super TOP heavy in management so maybe they can take a pay cut. I also think the government could take paycuts, I get that they are busy, but if us small people can get paid only 40K a year, maybe others can learn from that. I also feel that using tax dollars to change needless things need to stop (changing wording of anthems, or stuff that is along those lines that are just a waste of money.</p> <p>One of the biggest way is DONT CUT education and health care and put more people on unemployment. At least with them working its taxes being paid, no money coming out of the government, they are willing to put money into the economy.</p>	<p>first of all don't cut the education and healthcare as they put money back into the economy</p> <p>get pipelines going</p> <p>support entrepreneurs maybe some incentives, lover taxes for the first 2 years, then increase</p> <p>Would love to see utilities regulated. The admin and distribution fees are through the roof, honestly my usage is approx. 40-50 a month and my bills are almost \$200. Imagine how much of that would go into other spending and support growth.</p> <p>Put a cap also on insurance companies. Their increases are out of control! Again all these increases affect how much the public puts back into the economy for growth.</p>

	Education, definitely education. But in a meaningful way without all the odd out of left field propaganda like that out-of-context test question to make people believe in an obviously fictitious educational socialist movement.	I would say definitely start with ending the "war room." I would also think that cutting taxes for the wealthiest corporations is also a bad idea.	Invest in education for an educated workforce, the more the better no need to pit secondary educational institutions against each other, that seems like it will help nobody. Also, I would think that it makes sense to diversify, while I am not anti-oil and gas, it does seem illogical to me that one would defend it to the point of ridiculousness when it is obvious that humans can't depend on more and more of it for ever.
T4n	Cut spending on jobs that are no longer needed. Cut spending on social services, some people are taking advantage of our social services programs and it should be stopped.	No sure.	In construction building lots are so high materials are so high. How do you expect people to run up such high debt to just to have a house when the wages aren't much higher than 20yrs ago. My view is that it's just greed. The value of our money isn't there to support such high costs. Your going to put us in the street if you dont watch the money. If we as Albertans ran our house like the government we would be on the streets.
T2R	Health care Education Infrastructure projects to employee construction workers	Find savings by creating a 1% sales tax on goods and services, like the GST. When comparing us to other provinces, you also need to consider if those provinces have the best or worst system.	Infrastructure projects that are needed like transit systems Support research in green technology (Oil and Gas is going away so we need to diversify our economy)
T9E	Education: classroom sizes, keep high and moderate achieving students together and put the low and challenged students in classroom environments that will better meet their needs so that EVERYONE gets the best and most appropriate education they can, instead of a milquetoast common (rather low) standard for everyone. Finance: Myopic focus on a pipeline is not useful. It's important to be sure, but our economy needs to diversify (we've been saying this for 45 years or more). Technology, secondary and tertiary products made from our resources, finance, science and more. Oil will be a part of our economy for a while yet, but we need to realized there is an end in sight and work towards that too.	"Bureaucracy is expanding to meet the needs of the expanding bureaucracy" ~Oscar Wilde Healthcare: How much of every dollar that goes into AHS actually makes it to the level of patient care? The budget goes up every year and yet there is no perceptible change, in fact there seems to be retrogression, in what patients and their families experience. The system is woefully top heavy and spends far too much on consultants and other services that do nothing to help the very people the system is intended to serve.	Get out of the way. Create an environment that allows business to operate with a minimum of red tape, let the market decide who wins and who loses. If incentives are to be used, ensure they come with clearly defined end dates, targets and expectations.
T5x	Stop the cuts. Save health care. Support seniors	Get rid of the war room. Support innovation. Stop blaming others and take responsibility Implement a sales tax	Reinstate green energy projects.
T3H	Reduce spending. Can projects like the LRT in Edmonton and Calgary.	Cut public service wages by at least 5% across the board. Reduce middle management positions including those at AHS	Reduce the red-tape at AER and review LMR policies. Get the oil industry back on its feet.
T3K	not sure	Student can buy their own school supplies	not sure

T2Z	Infrastructure, with a primary focus on diversification of provincial revenues other than oil & gas.	Similar to the private sector, government must ensure its staffing costs are in line with revenues. Pay exceeding provincial private sector averages, pensions that are only available to government workers, job security that does not encourage performance. Tax payers can not afford to continue to fund union jobs.	Ensure that post secondary institutions are incented and rewarded to graduate students required to fill forecasted shortfalls within Alberta's workforce, and punished for graduating students whose degrees/diplomas as not in demand.
T1K	Mental health - there are not enough resources to assist people with depression, bipolar disorder and other mental issues. It is difficult to find a psychiatrist to assist people. Even when you do they prescribe pills but do not follow up on programs available to assist people with dealing with depression.	Savings can be found in every government department. I have worked for the government and discovered many inefficiencies and wasteful spending. Government departments need to treat their departments as a business which they should be accountable for. They should have skin in the game as private entrepreneurs have.	Skills training for youth. There are many jobs available but students out of high school have no skills and many jobs require some sort of skill. It is difficult to obtain those skills if no one gives you an opportunity.
T6H	Public services (health care and education).	In giving millions, or billions of dollars to corporations who just pocket it.	Stop cutting teachers and health care workers.
T3P	Public services - however streamline services to make them more efficient. Review levels of management as services seem very too heavy Invest in local industries that could be used for income aside from oil and gas - diversify the economy e.g grains, Alberta beef etc	Making efficiencies in service. Reduce the top heavy organizations and give more input to the frontline Performance related pay - reduce the power of unions in keeping people in jobs that aren't competent Stop giving tax breaks to the rich	Diversify the economy - focus of other industries in Alberta and not just oil and gas
T5M	Health and Education. Economic diversification. Every Conservative government since Lougheed has talked about it, but when revenues are booming they spend like drunks.	The massive structures of Education and Health contain many mini-kingdoms of superfluous research and centres of excellence. Many of these people could not honestly describe their duties. Discard uber specialized programs of no value. The knee-jerk reaction, for quick results, of dismissing front-line staff is mis-guided. Laying off cleaning people is a pathetic way to cure a billion dollar systemic problem. It's like blaming wet sidewalks for causing rain.	I don't agree with business tax cuts for massive corporations. A substantial portion of our revenue heads to Texas. Encourage small business, through incentives, especially local small business. Demand that Canadian-based and Alberta based-staffing and supply solutions be exhausted. Edmonton had a bridge designed in Spain. Why? Also, America is not the only role model. How have the Scandinavian countries managed to have compassionate, caring societies and yet compete so well globally with such small populations? There are better solutions than the one of American greed and wealth concentration.
T4P	Providing support to residents through social program funding, supporting smaller businesses, families and mid-size companies that are actually looking to create jobs. Safe consumption sites are a PROVEN effective piece of harm reduction, cost savings and saving lives. You have "committed to funding beds" but continue to ignore evidence and research that shows safe consumption sites to be a valuable and necessary piece of combatting the opioid crisis. Support teachers, who, thanks to your recent adjustments, will now have even larger class sizes to manage with less institutional funding. Provide necessary infrastructure supports for things like the Red Deer Regional Hospital, which has been in dire need of expansion for over a decade.	Stop providing corporate hand-outs to companies who aren't creating jobs. Shut down the stupid energy "war room". Oil and gas are not the only industries in Alberta, they aren't even the largest provider for jobs - that is sales and service. Force oil and gas companies to pay taxes on abandoned wells and rigs so that counties are not left on the line. Work with Alberta Health Services to cut middle management positions - NOT FRONTLINE WORKERS. Stop organizing panels to "listen to Albertans" on issues you've already decided on (safe consumption sites, the fair deal panel etc).	Stop giving money to massive oil companies, and complaining that they are taxed too much. Provide relief and tax incentives for independent, small and medium businesses who are working to promote local economic growth. Empower young people, Indigenous people and women to be able to access programs and support that will move them forward in their careers. Do this by supporting post-secondary institutions and grant-programs to help people access more education. Quit pushing the oil and gas SO hard. The industry isn't finished by any stretch, but Alberta needs to move forward. 40 years of conservative focus on O&G didn't save us during a national recession, and it's time to begin to expand the horizons of Albertans.

t1x	Cut needless spending and waste. Find economies of scale, run the government like a for profit business and urge other jurisdictions to do the same. Implement voter recall immediately!	Cut redundancies and red tape. Streamline everything you can and reduce the size of the government. Make politicians accountable for all spending	Stop raising taxes and do not allow other jurisdictions to raise taxes where the provincial government lowers them
T5c	Education and healthcare	In the war room	By stopping corporate handouts to the oil industry, tax credits for green initiatives.
	Education, healthcare and diversifying the economy.	Eliminate the Canadian Energy Centre and tax breaks for large corporations. Do away with the Catholic Board of Education, the public school system does not need to be duplicated.	Quality public education for the next generation. Affordable childcare. Implement a P.S.T.
T3B	I think the UCP should figure out the costs of continued poor human resources management within the public service. Wage role-backs, salary freezes, making employees purchase their own coffee...things like these are making the APS far from an employer of choice. This has a huge cost. The continued loss of experienced people leaving for better jobs, constant hiring/training costs, etc. are creating an inefficient, poorly managed, environment run by people who are either just hanging on until retirement or are too afraid to speak up.	Treat the APS employees as valuable people...like the private sector does.	Quit wasting money on partisan committees and such. (War room, red tape)
T8N	Keeping spending in check. Focus on streamlining services. Focus on IT for Calgary and Edmonton areas.	Looking at privatizing areas in healthcare and education.	Cutting red tape for private enterprise to hire.
	Education and healthcare	Not giving tax breaks to oil companies	Give help to small businesses. Encourage innovation.
T9X	Job creation - Health - declining healthcare access and services while costs increase. Privatization isn't working well. Cost go up (while salary and benefits for their workers do not) and services go down (evidence : senior in Viking dies of dehydration and bladder infection .) Education Reducing tax burden on Albertans. Between income taxes, property taxes, insurance increases, increased costs if utilities and carbon tax, and other costs of living, it is a struggle to make ends meet. It has been Stay-at-home vacations for many years, at home entertainment except for a movie a couple times during the year and eating out is a pizza or fried chicken every few weeks. Good news, eating healthier. Would be nice to have a bit of extra money.	1. Health - Hire people instead of privatizing. Costs less in long run (businesses contract costs keep increasing year after year and definitely increase more than staffing costs. In addition, employees have high income tax rates than corporations so governments will recoup done of their labour costs. Maybe services will improve because increasing income not the biggest driver for decisions. 2. Education - provincial bussing sounds like a good plan to reduce costs by reducing number of buses on the roads. Not sure government negotiated contracts are the better than locally negotiated ones. It does level the playing field for teacher pay and benefits so unions cannot use the competitiveness of boards who want have more attractive contracts than other boards against the those other boards during negotiations.	Sorry ... other have reversing privatization, no affordable ideas
T7X	prioritize private sector job growth as it increases the tax base and is run properly, govt jobs cost to much and are not well run	reduce unionized govt workers and management way to big	by supporting private industries and private sector jobs
T7P	Veterans seniors and no more giving bonuses like trips paid by us to any Government representatives. Unemployment and vagrants taking over small towns. Citizens safety all around. No payments to Harry and Magen they can afford their own protection. Like Trudeau can. Medical issues.	By no overspending on frugal treats Slow down immigration certainly don't allow unless payment for admission.	Get pipelines on track.

	<p>Front line healthcare Our unit has almost doubled patient load with no increase in funding for allied health(except for nurses) we can't keep up Education</p>	<p>Instead of managers for each discipline ie pharmacy, physio, dietitian etc- cut the manager for physio, dietitians etc and have them managed by the program. The decisions would be made a lot closer to the patient ensuring better patient care despite increasing workloads Make sure connect care decreases workload and frees up staff for patient care. Some dept have very good software that is efficient don't decrease efficiency with a system that does not work as well Instead of SCS put that money to kids in disadvantaged homes to break the cycle of addiction and they grow up to get jobs - people need to take responsibility for themselves instead of society</p>	<p>Stop oil companies from leaving Alberta Technology development here instead of paying foreign companies for connect care</p>
T2b	<p>Education, health, and fomenting the diversification of our economy</p>	<p>Stop tax breaks to big corporations. Reduce government size.</p>	<p>Fomenting diversification of the economy. Investing in post secondary education to create our own skilled workers and future entrepreneurs</p>
	<p>Support small business instead of bleeding us dry! Develop our resources instead of giving it away raw. Local education, in large institutes our young become a number like cattle being put through the chute. Without strong local institutes we are sending our young away, lots to never come back to our economy. Stop wasting money on centralizing everything, it doesn't work, your money cruncher thinks it does, real life dealing with it proves it doesn't get the job done.</p>	<p>If you look at the government itself. Quit wasting money on all the problems in the rest of the world. In a plane when the cabin depressurizes you need to put the O2 mask on yourself before you can save anyone else. It is good people under government are held accountable, the government needs to be held accountable for its spending too. Where are the government job losses and wage cuts? Savings will be found if people employed by the government were made to serve not be served. Quit just taking! Quit handing our tax dollars to the rest of the country, stop the bleeding here! For now, quit bringing in more new things, people, programs we just need to support. If anything is brought in it needs to give back. Try telling the truth, come clean and quit the waste.</p>	<p>Develop our resources at home. Oil and gas is key to our economy right now and in the future. We do need to remember that Alberta was not built on oil and gas but the idea and development of it. Provide education and opportunity for us to forward think and develop new ideas. Help tie colleges to business. The division in the province is really bad, government created this, provide the truth, encourage research to the truth.</p>
T0M	<p>Child care, seniors, schools, health, infrastructure!</p>	<p>AER, maybe a bit over staffed. Welfare, anyway participants that collect Welfare can be steered towards getting off welfare and back into the workforce. This is not anyone on AISH. Review every revenue and expense source. Can every expense account be cut by .05%.</p>	<p>Work with large financially stable companies to increase their productivity to be able to provide more jobs. Work with small business (our backbone) and provide education to grow and be profitable.</p>
T0p	<p>Health care, justice system reform on actually prosecuting offenders instead of plea bargains and reduced charges to a lower offence. Prosecutors stop throwing provincial violations out in court or plea to a lower charge, all because they want to streamline their cases to just clear the work load. Attracting diverse companies to build green technologies to make Alberta not just an oil and gas economy but a technological economy as well. Lower taxes</p>	<p>Unions, healthcare positions reduced in certain departments</p>	<p>Bring in technology companies and green manufactures.</p>

	Health care, education, diversifying our economy	Savings could be found in being clear to the public service on how to make spending decisions (clear strategic direction and principles), and rolling back the salaries for public servants. Most importantly though, we have a revenue problem, and need to consider our tax structure and if existing tax sources <u>should be implemented</u>	Invest in diversifying the economy, invest in building infrastructure so there are projects for industry, and balance job cuts/wage rollbacks so Albertans have money to spend in the economy.
T6m	Job creation and nothing else.	Healthcare, education, virtually all social programs. Waste of money all of them.	More refineries, more drilling, turn Alberta into a high tech province that produces oil based products to export to the world. Open more coal mines, lower personal and business taxes to allow more hiring and to encourage more spending. Stop freezing wages it's stupid and doesn't save any money in the long run since it impacts spending of people and hampers growth. Stop thinking taxes make economies grow, if people have more to spend they will spur the economy!!!
T3G	Cut spending on civil service and renewable energy Cut the number of non teaching head office jobs and the waste of money on huge fancy school board office buildings with floors of empty offices Remember that countries like Germany have tried and failed dismally to make wind power actually make economic sense Lower debt	Stop funding "renewable" energy projects that are a waste of time and money (an example : the NDPs ridiculous hugely expensive new transmission lines -built costing millions - to southern Alta. for wind power - that currently have ONE pathetic windmill feeding into the line)	Push stupid Trudeau to allow thousands of projects like the proposed Teck one to go ahead - to create thousands of Alta jobs- without requiring completely ridiculous, unreasonable promises of impossible carbon emissions levels.
T4N	Healthcare , Aish recipients , Education , Green Industry (i.e. Solar , Electric , and Wind power), Universal Daycare . Infrastructure (Bus Lanes , bridges, roads and Affordable housing.	Get party donors to invest in the economy, cut redundant positions and forms, Premier needs to pay for his house and stop cutting programs that support the most vulnerable in society. Therefore he also needs to stop taking unnecessary plane trips paid for by the provinces.	Promoting new companies whose business products involve tech, solar, and electricity, and local projects, that money will go into the economy and benefit the rest of the province.
T8T	Stop making cuts to the most important jobs; nursing and education. The premier is just another Ralph Klein!	Stop giving MP's such outrageous pensions, for starters!	Get the oil sector up and running!
T6x	Health Care Schooling Pipeline	Public sectors that are top heavy in management should be cut not frontline workers. Cut the equalization payments to make other provinces realize how much they rely on Alberta. It's easy to say no to the pipeline when you are out east yet Albertans are struggling and still expected to pay	We need to support middle class workers. Large corporations get tax benefits and low income earners receive handouts. Most families are working 2 well paying jobs and are struggling
T2Z	More resources spent on Health care, mental health, addictions, benefits for seniors. Investigation of people who abuse the system such as receiving AISH but spend their cheque on drugs.	Take away benefits for people who don't deserve it. Abuse is rampant. Give AISH recipients a card that allows them to purchase groceries etc. Drug test AISH recipients. Health care, waste of expensive supplies. Cut top management salaries.	More training for public employees.

T1X	Healthcare, continue to support mental health and addictions. Develop a united mental health and addictions strategy that is sustainable and science based. United means with the opposition not against them.	Retract the position of the war room being a private organization. Get to work in the legislature STOP campaigning.	Pursue development of natural resources, providing Albertans with the ability to harness solar energy in a cost effective manner, providing organizations that could help reduce emissions; incentives to operate in Alberta.
	Public education, healthcare, alternative sources of energy	Billions handed over to big corporations for tax breaks	Diversify economy, quit cutting jobs in healthcare and in education.
T1C	<p>Education- superintendents need to be capped for \$\$\$. Totally over paid and what is the real need if you have school boards too! A superintendent making \$250-300k when the classes are over capacity, Time for a max on pay and benefit.</p> <p>Ahs- time to cut public health, and place more on mental health.</p>	<p>Getting spending under control by cutting ahs programs in public health. Why are we not having pharmacy doing all immunization, flu clinics, and other shots like shingles etc.</p> <p>Get rid of the AHS oral health program- we have dentists that provide the same services and more. Those in need can use the Alberta Child benefit to get the services provided. Leave it at the children's hospital for those that need to be placed under General an anaesthetic, but the other programs are a waste of money!</p> <p>Privatize all Health sciences union jobs! We don't need to pay so much for services that can be private or tenderer out! Health promotion like car seats, farm safety, party program, falls programs- these all are a duplication of services that are in the community and don't need to be ahs jobs too! At \$50/hour for an ahs employee to do the job of a private sector with a \$25/hr wages is totally stupid!</p>	Income splitting- in fact this year while the province has a job shortage, people are loosigg hyg jobs, in major debt and the mental health crisis is beyond hopeful. In come splitting would at least allow for some hope!

T1V	Public services such as health, education, elderly, daycare.	TAX CORPORATIONS AND WEALTHY PEOPLE PROPERLY INSTEAD OF GIVING THE RICHEST TAX CUTS AT THE EXPENSE OF WORKERS!!!!	<p>With MUCH higher taxes of the wealthiest and spending properly on those who actually circulate money within an economy -the lower and middle classes.</p> <p>All research supports this.</p> <p>Funding your rich oil and gas buddies with illegal war rooms and tax cuts hurts Alberta and has not only put us into a recession, cut needed care, hurt our future incredibly, taken away investors,lost us thousands upon thousands of jobs and the taxes that go with those jobs, it also will NEVER return a dying industry whose prices are mostly controlled completely outside our country's doings.</p> <p>Jobs are created through proper taxation funding education that gives people the ability to work higher paid jobs, start businesses and run them well, and do better. Jobs are created through the ability to work with proper timely health care for all, daycares being subsidized, and supporting our infrastructure of society with mental, emotional AND physical health. Economic growth is certainly helped by looking at long term realities rather than burying heads in old oil sands, the reality of using oil now but investing in research and development, clean tech, taxes that help companies move to greener tech and have a financial need to not only do so but to fund R&D themselves for even better green tech. Economic long term health is not only about growth but sustainability, getting to a healthy state and rather than growing, sustaining that health. It helps to be funding and supporting things that will exist in the future, not just green energies but also other industries completely, to have diversity in job options and the exponential growth they bring (such as supporting movies coming. Millions of dollars that requires thousands support staff whose incomes support a huge diversity of incomes in all the places they spend money</p>
T4p	Education and Healthcare. They are the most expensive because we value them the most. Find efficiencies, tell the school boards and hospitals to find ways to save money. Don't cut their budgets so they have to provide less. Tell them to find savings so you can provide needed resources they are requesting. Do not save money buy cutting wages or laying people off.	why do we fund a separate catholic school board? Lots of savings by not funding private schools and multiple school boards.	Incentives for sustainable energy careers, cleaning up orphaned wells. A program where high school grads can earn income and tuition for public service employment. 1 year tuition for every 12 months working at a long term care facility for example.
T8N	Emergency Services and Education	Government management, government employees close to retirement and government offices not needed (ie. Calgary ALRB office, multiple Employment Standards offices, multiple treasury offices).	Lower business taxes to entice businesses to stay here. Get the pipeline going. Spend money on infrastructure to create jobs.

T4R	-Social service sector such as FCSS and health care on the prevention side of care.	- remove the drivers test from being government control to privatize again. - freeze upper government staff wages.	- making childcare more accessible. Paying close to \$1000 a month per child is not realistic for many families forcing one parent to stay home. -keeping jobs in Alberta. Talk to Texas and see what they are doing to promote oil in their state and see if we cannot do the same here. - keeping grants and programs that promote job sharing.
T7X	Education. Nurses.	Removing corporate tax cuts, higher taxes for big business and higher income earners.	Educate the youth. Fund education and teachers so that the future can provide economic growth and educated citizens and workers.
T0C	environment health education	scrap the "war room" don't return to flat tax stop funding private and charter schools	invest in green energy
T8R	Education, healthcare, and police	change laws to protect citizens that are defending themselves and their property or business educate our children and we will not need as many jails	Education - educate our youth
T1B	There has to be more money put into education. Jobs for Albertans can not just focus on energy sector. With the push for environment we need to be able to adapt to find employment in other fields. Also there seems to be tax breaks and subsidies for everyone except the middle class. Soon there won't be any middle class. Alberta (especially Medicine Hat has higher gas rates than most places. There is not very much diversification of work. Medicine Hat and Alberta take advantage of the subsidies for immigrants. Our restaurants and businesses are full of immigrants while my educated son who has lived in Alberta all his life cannot find employment opportunities.	PLEASE, start cutting from the top. The public school district in Medicine Hat needs to have its Central Office cut. The government should be looking at the gross negligence in how administration (school central offices, hospitals, corporations, businesses) waste the resources and money.	Not allow a post-secondary institutions to increase enrolment. Provide more support for post-secondary students. Not allow businesses like Tim Horton's to use subsidies to hire immigrants. There are definitely Canadians wanting work. It is not fair for public sectors to always take the brunt of government spending. Teachers have taken 0% for more than 7 years. Overspending of governments has been before the NDP. There will not be economic growth if every sector is cut and unemployed. No one can spend any money. As well we will see many people who are educated and diversified leave Alberta.
T3H	The core services of healthcare, education, and law enforcement. However, spending should not be increased. Efficiencies must be found within existing budgets.	Eliminate corporate welfare and green energy subsidies. Reduce the size of the civil service. Allow private provision of public health care to reduce the number of services delivered by comparatively more expensive unionized government employees. Outsource any service that can be provided by private business.	Personal income tax reduction and continued elimination of red-tape and unnecessary regulation. Something also needs to be done about the chronic financial mismanagement in the Calgary Municipal government. Skyrocketing business taxes are a serious impediment to economic recovery in the city.
T4A	1) The needs of children. (Children at risk; hospitals; schools.)	1) Bonuses paid to all executives on Public Boards. 2) Cut salaries paid to executives on Public Boards and limit the size of all Public Boards. 3) Change curriculum in high schools. * focus on courses that support future employment 4) Provide Education Funding (University and Colleges) only to courses that will reasonably provide jobs to graduates. 5) Cut 'Alberta Sunshine List' salary in half, and eliminate bonuses.	1) Fund Education / training where there is a need for workers. 2) Remove unnecessary Regulations and have competent Regulators. * AUC takes far too long to make decisions. * Cost to comply with regulations make us less competitive. 3) Increase speed of Capital Cost Allowance write downs to be more competitive with U.S. tax policy. 4) Include courses on Finance an Money Management in all schools.

T7E	<p>Make a meaningful investment in public education. Alberta's public education system is the envy of the world with our very high rankings in PISA. Fund inclusion of special needs learners in classrooms in an adequate manner. Fund for enrolment growth in a meaningful way. Public education is a democratic, equalizing force in our society. Please stop attacking it. We have a system we can be proud of- let's work together to make it even better.</p>	<p>Revoke the 4.7B tax giveaway to large corporations which has created no new jobs. Eliminate public funding to the Canadian Energy Centre- let industry fund it. Collect tax/lease revenue owed by O&G. If they won't pay, seize assets and liquidate them to recover amounts payable. Introduce an HST so we can get off the revenue rollercoaster in Alberta, and stop the ritual sacrifice of our public services.</p>	<p>Invest in diversification. Software firms and green energy firms should receive tax incentives to invest in Alberta. Invest in our film industry. Support logging and agriculture with tax relief and infrastructure investments. Incentivize investment in refining and manufacturing capacity. Work with NWT on a pipeline/LNG terminal on the arctic coast. Invest in transportation infrastructure- high speed rail/hyperloop between Edmonton and Calgary. Incentivize the carbon capture industry.</p>
T0G	Reducing debt!!	Public sector contracts!	Tax cuts for employees and employers once the books are balanced and debt is reduced
T0J	Cutting expenses, curtailing growth of government, reducing administrative bureaucracy and getting public service salaries lowered to be closer to the national average. Thank you for this opportunity for input.	Please see above.	Legislation to encourage private enterprise, be strong in dealing with our federal government to rebuild Alberta's energy industry and ensure access to tidewater.
T9K	<p>-Health Care (make health care available to everyone. Don't privatize and create a two tier system. Consult with health care professionals when making executive decisions regarding basic day to day procedures and medication changes)</p> <p>-Education (freezing spending for the next 4 years will equate to a reduction to school funding as new students enrol. Resources and funding will need to spread out to cover more students and class sizes will increase, EA/special services support will be reduced). The Fort McMurray School Division has already announced the discontinuation of the Keep program and has increased bussing fees due to decreased funding. This is just the beginning.</p> <p>-Recognize that inflation costs affect the public sector workers and do not continue to ask us to take a 0% wage increase and make us feel guilty for wanting to keep up with the cost of living increases. 17(1)</p>	<p>-Eliminate carbon tax</p> <p>-Don't give such high tax reductions to corporate taxes and instead increase the taxes for the average Albertans.</p>	<p>-Continue work on promoting Alberta as a conscientious oil producer and fight back against investors that are working to landlock our resources and target us against environmental activists. Continue to push for pipelines, and build alliances with other provinces.</p> <p>-Continue to explore and research how we can reduce emissions and create cleaner environmental practices in oil production. Share our stories and have the oil executives and politicians tell our stories and fight to let the world (eastern Canada) know that we are ethical and setting world standards. Climate change activists are not going away, so we need to modernize with the times and diversify.</p> <p>-Alberta is resilient, but it is time to stand up for ourselves. We need representation and we need to fight for a reform in the voting system. I appreciate the efforts that are being looked at (independent CPP and police representation) and I urge us to continue to look at the long term effects of all of the these actions.</p> <p>-I am so disillusioned with the federal government at the moment, and I truly believe that it is so biased towards the needs of Ontario and Quebec that it is actively working towards squashing our interests to pander to the voters there. We do need to work towards a "fair" Alberta. I just ask politicians to stop focusing on their own personal interests and for the focus to come back to every individual Canadian who is hard working, struggling, paying taxes and do what is best for us. (yes, am I cynical? When we have a Prime Minister flying in private jets to Costa Rica for Christmas and then lecture the average Canadian for flying coach. Classic, do as I say, not as I do. A prime minister hopeful that wants to make cuts to public education but uses party funds to pay for his own children's</p>

T6H	Economic diversity initiatives to transition away from fossil fuels without significant job losses - grants and tax credits to small businesses in tourism, alternative/renewable energy, research. Health care.	Big oil tax breaks - fewer tax breaks to big multi billionaires and non-albertan companies in a dying industry who are taking their business out of tar-sands into easier to extract locations. The "war room" biggest waste of money for unnecessary private industry tax payer funded PR. Also a very small sales tax would result in huge income and prevent these short term short sighted deep cuts will impact society greatly in a negative way in the long term.	Tech, tourism, research, film, renewable energy R&D. Tax breaks for small businesses, startups and renewables, not giving gifts to already profitable big industry. By not laying off so many gov employees who contribute to local industry and services when employed.
T8A	Public Education and healthcare.	Government bureaucracy and non essential services	Support public education and healthcare so you have an educated job force and healthy people able to work. They should actually spend more to stimulate the economy versus creating a climate where businesses leave and go elsewhere or are forced to shut down.
T6W	Health Care Education including Post-Secondary Infrastructure	Stop giving tax breaks to corporations. End the war room. Invest in preventative medicine/ community medicine instead of only focusing on acute care.	Acknowledge that civil servants are a part of the economy and actually help spur economic growth. Having government offices located outside of major urban centres can be a huge economic driver for rural areas. Consistent and stable jobs are critical for communities that are heavily affect by boom and bust cycles. Alberta needs to diversify our economy, we cannot solely focus on one industry. We have many natural resources in the province and the manufacturing expertise to create value add jobs. Provide support to small businesses not just tax breaks. A business saving money does not guarantee economic growth but helping them make their businesses better will.
	Health care. Funding and benefits for those unable to work.	Taxing corporations that make profits of more than \$1000000 per year. Minimizing travel and expenses for government employees	Investing in a variety of industries to bring other businesses (such as tech and film) to Alberta
T1S	Health care and PUBLIC education. Without these what kind of future is there for our province? Each and every child in our province deserves the same access to quality education, not just those that can pay for private school, smaller class sizes and individual support! Each and every citizen of our province deserves to be taken care of and not have to worry about medical bills - ideally we'd look to more proactive wellness so that we can save money by not having to take care of people in the longterm with long illnesses.	Stop handing out money to large companies that are already turning huge profits.	Help out smaller businesses and provide supports to start-ups.
T0B	Schools, healthcare, Roads,getting Albertans back to work.	Don't give yourselves pay increases, cut down travel, don't pay Ottawa for our oil.	Create more jobs.
T7P	We still need health care and education? and that's it!	Don't hire any more government employees, to many are sitting on there ass already.	let private enterprise do the hiring, get rid of as many unions as possible. I find things pretty tough, just make ends meet at the end of the month, never seen it like that before, I'm over 80 yrs.
T8V	Infrastructure, education, and support of homelessness/less fortunate. Hopefully being able to have those that need society's help to be helped by society and reintroduced into the economy.	Focus on long-term investments, rather than cheap temporary solutions. Such as creating roads and infrastructure that don't last, focus on the one-off expensive purchases that do last.	Focus on internal trade rather than exporting raw materials out of country. We should focus on having manufacturing here in Canada, rather than just shipping out our raw materials.

T5A	Healthcare, education, elderly, people with special needs	By not giving tax breaks to the rich	Renewable resources
T2L	<p>I could answer with vague statements such as the economy and getting people working again, reducing the deficit, etc., all aspects that are already under review.</p> <p>My comments will focus only one item, flood mitigation measures for the Bow River in Calgary. It has now been 7 years since the flood, and Calgarians have seen virtually no progress towards an upstream dam or diversion measure other than very preliminary feasibility studies for Bow Basin Water Management Options.</p> <p>All of Calgary was affected by the Bow flooding, including downtown. Berms have been built in Sunnyside, Eau Claire, the zoo, etc., but nothing has lessened the risk for Bowness residents.</p> <p>Money needs to be allocated to complete feasibility studies and get things moving please!</p> <p>In the interim, there needs to be immediate renegotiation of the operating agreement with TransAlta during flood season for the Ghost Reservoir. This requires minimal effort and relatively minimal cost. If TransAlta had managed water levels more effectively in 2013 (released water earlier), some of the flooding would have been lessened. Please do not allow a repeat!</p> <p>Thank you.</p>	<p>I agree with cutting travel spending for universities, colleges, etc. In prosperous economic times, there is benefit to exchanges of professors, but right now it is a luxury. I know several profs who travel all over the world for conferences, meetings or to give a presentation. We can't afford that right now. They should have to settle for remote access conferences or meetings.</p>	<p>I think that the sharing economy is taking a huge chunk out of provincial revenues. Much of the "sharing" is done under the table. For example, hundreds and hundreds of Airbnb rooms are rented without paying business taxes, whereas a hotel renting the same number of rooms would generate provincial revenue, as well as employing staff, who then also contribute taxes.</p> <p>Same with Uber or other sharing platforms. What if they were called the "avoidance" economy?!</p> <p>A small businessman opening a storefront business has all kinds of costs and taxes, but someone working from their home avoids those. Having worked for a small business for most of my career, I saw how much the business paid in WCB, CPP, EI, etc., as well as property / business taxes. The guy working from his garage paid none of that.</p> <p>Individuals can operate numerous Airbnbs, drive as an Uber, share other platforms, and thereby earn a living.... while avoiding taxes.</p> <p>There is a huge chunk of revenue being missed there. They should require a business license and have the same rules applied.</p> <p>This also affects larger scale operations such as hotels, who may not start up new operations when their competition is those working under the table. For example, there are 100s of available rooms in Canmore. Those are all stays that would have been hotel stays before. Now it is even less likely a new hotel will be built, and thereby some employment opportunities are also lost.</p>
T4C	<p>I would be painful as we see from the Regina Refinery regarding pensions, but it is necessary to address. Defined Benefit pension plans are non sustainable. Look at the Teachers pension plan, the short fall will not be paid of until 2060, hopefully.</p>	<p>Do not give Industry hand outs. Especially Solar or Wind projects. Don't approve any raises for 3 - 5 years. Second, there are some countries where private insurance supplements public insurance. It's quite common for Canadians and Europeans to purchase supplemental insurance that covers things that the public plan won't. Instead of Canadians going to the USA for treatments, why can't we have US Citizens coming to Alberta for Treatment, Hip, Knee Replacements, ETC.</p>	<p>Keep Red tape to a minimum. By Pass the Federal Government and approve projects fairly and expeditiously.</p>
T4V	<p>Push for the referendum to separate from the Canadian Federation in parallel with the Fair Deal deal.</p>	<p>Fire half the top level bureaucrats in the Alberta Government. They have a tough time listening to the MLAs that we the people elected. They need to make the right cuts in the right places. Fire the fluff!</p>	<p>Keep pushing the boneheaded Laurentian Elites into letting us go our own way.</p>
T5A	<p>Social services including education, daycare, health care, AISH, public-use infrastructure and income support.</p>	<p>Stop tax cuts for corporations. End corporate welfare & put the public of this province first.</p>	<p>Diversify our economy away from fossil fuels & retrain workers for renewable energy jobs. Invest in renewable energy development projects.</p>

T5X	Infrastructure to create jobs. Healthcare to create jobs and keep Albertans healthy enough to work. Education so we don't make the same mistakes again. Re-Socializing industries where the market has failed. And creating and/or re putting in the motivators to gain footholds in competitiveness in current growth markets. If you think this is a one word answer for any of this, you should be fired.	In their own cabinets. Screw savings we need more income and revenues. You don't take a unbalanced budget that's caused because you have to fix things and make it work by not fixing things. You find ways to bring in more money. You don't tax those making the most less. Reaganomics was disproven by every single measurement, to show allowing people to keep excess money does not encourage them to spend and grow. Markets do that not savings.	By doing the things I mentioned in all the other points. Spend in the economy. Create artificial jobs if needed, but more importantly spend to create jobs in the public sector, because those ensure more work is available in the private sector. Every economics text (Mezo, Micro, or Macro) states you have to spend money to make money, and a government needs to spend money when a private market does not. NDP started off okay, but didn't do enough. You guys are making things worse and still creating a deficit. It'll get worse unless you start increasing revenue, so screw you cutting as an answer to balance the budget. You need growth.
	I think that the government needs to consider primary and post secondary education as well as health care more seriously. In addition, affordable housing needs to be made a priority.	Much money could be found in the pockets of elected officials. Lowering their salaries and using the leftover could be incredibly beneficial to other people who need it more.	Instead of always focussing on oil and gas, we should be looking at new innovative ways for energy. Our supplies are running out, but there are so many incredible opportunities to finance that could benefit our economy greatly (greenhouse farming, algae farming, etc).
	Education and health care	Setting up new committees to reevaluate what the previous government did. Senior level government wages/pensions/expenses	Continue to diversify Alberta's portfolio. Technology, industry Create a more positive environment in Alberta. Stop pitting industries/services against each other.
T4T	PUBLIC education, K-12 and post secondary. Health care: rural access, women's reproductive health Citizens living in poverty	Education - amalgamate public and separate school boards. - eliminate funding for private schools and divert funds to public school system.	- broadband access for all - ensure access to post secondary education in new technologies - support innovation in new technologies - ensure all students have access to a strong public education system - reduce costs to students of post secondary education - collaborate with municipal CEO's of economic development. They are on the ground.
T8N	Creating jobs and improving the energy situation.	Everyone should have their wages frozen until we get out of this NDP mess. I worked my whole career in Alberta and had my wages frozen for 5 years.....time to bite the bullet for electing the incompetent NDP.	Get rid of more governmental red tape. MORE incentives for businesses to locate to Alberta.
T1k	Support k-12 education	Municipalities	Diversification of the economy, technology and tourism
T7V	Highways & infrastructure	Reducing the size of government and the number of government employees	Support the growth of business
T5y	Healthcare, public sector.	Increase taxes on corporate companies, and those within an extreme high income bracket, see how much is being spent in areas such as political advertisements, and public media companies	Provide small business with a reward program of some sort where they can see a larger growth in profit and employees
T3A	Expense reduction should be priority No new spending	Health care Government services, too many employees and too little results. Public employees paid too much with too many benefits and too few results. Review of the entire budget and get out of the things the government should not be in. Core services only.	Only focus on creating an environment that supports business and growth. Low taxes, less red tape, less regulation.

T3A	K-12 education and post-secondary education investment (research funding and qualified academic staff hiring), public health	applying IT wherever possible to improve efficiency reduce unnecessary administrative/professional positions in education	the promotion of a diverse economy (technology and Innovation, finance, tourism, and entertainment, etc.)
T5H	Investing in the future of Albertans - health care, education at all levels.	By expecting the corporations to pay their FAIR SHARE of taxes to support the community resources they have used to build their wealth.	Diversify the economy; encourage tech and AI and research and development.
T0J	We need public seniors health systems, need to fine private senior care centres for blatant violations that cause needless deaths. Dont cut programs that save lives and harm all voters needless pain and grief. THINK BEFORE YOU CUT .will it hurt or cause more pain and death.	cut all upper management , way to bloated over last ten years .PS get rid of gravy train contracts given to retired managers, it doesnt take years train new supervisors and make great pensions.	Tax credits for full time jobs created, tax debits for layoffs ,raise taxes to make these work, most companies already have write off for many years to come . Yes my family done a lot of accounting and seen a lot crap and private for profit can never win, creates way more hidden losses and debt.
T3E	Free Public education <= grade 12 / Guaranteed minimum income / Long Term Disability Income / Old Age Security Income (Raised ????) Bring back Unemployment Insurance to Replace Employment Insurance (appears to be based on credit card insurance scam) UI was based on 43 % of the persons income for up to two years whether the person quit , was laid-off or fired (UI 1964) / pass a law that all people that are employed get CPP ,UI,LTD,OAS,GMI,etc !! There are many people working without any of these due to current laws ! (many job descriptions eg Farm Workers , Salespeople , people working less than 15hrs/week for one employer are not covered) Some people have been working in MALLS for a different employers each day ; then start this cycle over every week ; therefore they do not qualify for CPP , UI , etc !!!!	1) Any money from the Alberta Lottery Fund should have to be approved by the Provincial Legislature before being paid out !It should be investigated for corruption ! EG: 25.5 million per year to the Calgary Exhibition and Stampede 20 years = \$510 million ; why would they need funding for the Saddledome , etc 2) Cut this insane funding to this public Art on switch boxes , sides of buildings , etc (\$80,000 for a 2" copper pipe with a little copper bird on it was at 4 st and 25 Ave SW (stole it ?) ;the Cowboy Hat in front of Windsor Park Fire Station , Etc . 3) The tunnel under the Bow River in Calgary . This is a very specialized type of construction,the equipment and support structure in these tunnels are very specialized and expensive , the employees have to come with the company installing this it will only create minimal jobs for Calgary ! I do not think this can be done the ground under the Bow River is bed-rock gravel not solid enough to be tunneled , ask City of Calgary Water Works ! Note : the Tobacco Companies , Distilleries , Breweries used to put millions/billions back into the economy through SPORTS , JOBS ,and related business ; The Drug Abuse and Marijuana are just costing society nothing but trouble and money EG Medicare, Law Enforcement, Crime, Prostitution, ETC ! (Justine trying to vindicate his mother (found with it with the Rolling Stones circa 1960 era)) It was a proven point that one joint does as much damage to your lungs as 25 cigarettes !) . YOU HAVE TO QUIT SMOKING , DRINKING , DOING DRUGS , ETC !!! They are just supporting bad habits and creating crime in the community !!!	EDUCATION , APPRENTICESHIPS , BRING BACK UNEMPLOYMENT INSURANCE , it was the only thing that put the money in the community where the problem was , Proper management of Companies (only hire people who want the learn the job properly , get the time and cost down and the quality up , do not hire employees friends they will take over the company and bring in UNIONS) Change the Labor Laws so that the employees can vote a UNION out if they are not representing all employees fairly and respecting their seniority in that Union in that City etc (15 % sign a complaint to the Department of Labor)
T6T	Investing and building for the future	In areas that are not primarily for the investment and building for the future	Invest and prepare for the future and not get stuck in the past
T6c	Health care and education	Cutting corporate taxes	Green energy

T9G	Job Creation, Education Funding, Frontline Healthcare Funding	Equalization Payments, bring back charging for AB Healthcare, Cut top level positions instead of front line workers (for both Education and healthcare), bring back school fees	Fight carbon tax, WEXIT
T6C	Education, Public Health, Immunology	Tax large cooperations and business owners.	Remove all caps on oil, and industry, allow them to develop, but tax them.
T3I	Education, health care and social services, Diversification, anything but careless giveaways to greedy oil companies.	Not giving cuts to oil companies without direct commitment from them that said cuts will keep them here and people employed. Not messing with pensions and aimco... it will end up costing the government more in the end. Reduce the size of government.	Create a sales tax and properly fund our social services. You can't get the provincial finances back on track with cut backs alone... not without leaving a shell of our social network and so many Albertans unhappy you will be voted out next time.
T3G	Education and health	Provincial Sales Tax!	Through investing in other industries besides just the oil and gas industry
T8b	Supporting front line services that support Albertans in turn. Ensuring our ratios of service providers to clients doesn't become too burdensome.	Benefits, subsidies that go to the oil industry could be reduced as it appears they aren't willing to stay in Alberta regardless of our work to retain them.	Providing a strong educational base, to help prepare Albertans to either competitively seek out work or to potentially create new forms of work.
T2R	Education Healthcare Social Services (AISH, Alberta Works, Low Income Housing, Safe Consumption Sites)	Holding companies responsible for their abandoned oil wells rather than the province taking on the clean up cost. Stop tax breaks to corporations. Increase taxes on citizens earning more than \$3 million annually	Increase incentives and employment opportunities for disabled people. Grants to small business to hire more employees or assist with development or training. Reduce taxes for small business owners. Reduce sales taxes on merchandise at small businesses to incentivize supporting Albertan business
T3L	Support oil & gas, but openly plan for the future economy without it.	Road infrastructure, and implement a sales tax.	Promote diversification of the job market.
	Education, health, job creation, diversification of economy.	Stop corporate gifts. If you want to give big business money, ensure that money is for the creation of jobs. Impose a sales tax to increase revenue.	Invest in and encourage SMALL business to be able to employ every day Albertans. Invest in middle and low income Albertans. Impose a 5 % sales tax. Every consumer pays equally. The government compares Alberta to other provinces for everything else. Other provinces are able to support and grow economically with a sales tax. Alberta would be able to support all of its priorities!
	Spend on Healthcare, University fees, Education	Federal government should be paying for all this, they can make money. DEMAND THEM.	MAKE More Jobs, its so easy Spend more
T0E	Education, health care, stimulating the tech and film industries, focusing on alternative forms of energy so our economy can transition away from full reliance on oil & gas.	Stop giving large handouts to corporations. Shut down the expensive war room, and stop paying people to eliminate "red tape" just for the sake of doing so. Regulations and protections are there for a reason, and should be evaluated on their merits, not so that a prescribed percentage can be eliminated to hit an arbitrary target. That's simply idiotic.	Tax incentives for a multitude of industries. We have a strong film industry here that could easily go away and cost jobs. We have some brilliant tech companies here that could pack up and move to a different province. We rely so much on oil and gas, but we could be leaders in solar, wind, and other alternative energies. Oil prices will never rise to those peaks again; we have to think about the future and how we can have a diverse economy that won't get its legs kicked out from under it if one industry hits hard times.

	Education, healthcare, innovation and technology outside the oil and gas industry, the environment, public libraries and other public facilities such as rec centres.	Make the O&G companies pay for their own environmental cleanup and well closures instead of the taxpayer.	Provide incentives and tax breaks to companies and individuals in the green energy sector, in IT, in the arts. Provide incentives to businesses and homeowners to retrofit their homes using green technology. Continue to spend money on maintaining and upgrading infrastructure. Restore and increase funding to municipalities. Provide incentives and tax breaks to workers for retraining and upgrading skills.
T0B	Rural crime solutions Rural/small schools Rural job creation	Overpaid administration and government workers Programs that enable illegal drug users	Tax breaks for middle income to allow them to spend their own money to stimulate their own communities' economies
T4V	Public education and health care should be the priorities. Schools cannot provide quality education with less dollars. Student needs are more complex than ever and we need teachers in front of students, smaller class sizes, educational assistants and funding for rural school jurisdictions.	Stop creating committees. The "war Room" is a waste of money, the committee to oversee the new curriculum that was ready to be rolled out is a waste of money. Make the oil companies pay up- taxes are taxes.	Focus on alternate energy and change the tax schedule. Tax the rich.. Stop the bizarre thinking that the budget must be balanced at all costs. We cannot afford the human costs this government is oblivious to- vulnerable people, students, people who are ill.
T5M	All of them	Get a PST	look forward to the future economy. the ones of tomorrow. Not carbon economy.
T0j	Infrastructure—roads and bridges	All the over head managers at AHS	Separate!!!!!!
	-Maintaining safe, efficient and accessible health care. This can be done by ensuring enough well supported front line staff, enough health care facilities, and enough access to medication at a reasonable cost. -Maintaining quality education for our children by ensuring enough well supported front line staff and small class sizes. -Job creation -looking for other markets to utilize Alberta's resources such as oil	To help maintain an accessible, safe and effective health care system - Charging a minimal yearly healthcare fee per person with exceptions as needed - Charging a minimal fee for ER visits and doctors visits To help with maintaining a great education system - Charge a minimal house hold School fee for public school	-Tax breaks to economy stimulating cooperations. -exploring options to diversify the economy
	Healthcare, Free university tuition	The Federal Government	Create more jobs by spending more. More money directly creates more jobs!!!
	Spend MORE	Demand the fucking feds, they make money.	Spend more, More money=More Jobs
	Spend MORE	Demand the fucking feds, they make money.	Spend more, More money=More Jobs
t5x	Healthcare, Education, Renewable Energy Job Creation	War room creations, Unecessary 3rd party group hired to balance budgets	Renewable Energy research and advancements
T3H	Public Health and Education.	Spending/Contracting out of Province and out of Country Companies.	Putting more money back into Public sector jobs such as health care and education.
T3B	Education - all levels Health Care Social Services	Corporate buyouts	Implement a 2% Sales Tax

T3L	<p>First, I do believe in Alberta and its place in our economy, but I also believe in a sustainable economy. It is important that the government invest in alternative energy sources to ensure that our economy will thrive long into the future and to find environmentally friendly practices that ensure a high standard of living for future generations.</p> <p>Second, I believe the STEP program should be reinstated. Many non-profit organizations rely on this program for staffing during operating times. Arts and culture is already underfunded. Many who would work in the Arts, Heritage, and Culture sector in Alberta leave because there are more opportunities elsewhere.</p> <p>Third, I believe the collective bargaining process should be respected concerning nurses. Without nurses, the healthcare system will truly falter.</p> <p>Fourth, I think social programs and investments into youths, mental health, and addiction are important. Youth are our future and investing in them ensures a better future Alberta-reducing difficulties in sometimes already difficult lives can be really help. Please maintain the age limit for aging out of the foster care system or at least put supports in place to help those that would be immediately effected. Investing in mental health and addictions is harm reduction.</p> <p>Fifth, I would invest in affordable childcare. To get more Albertans back to work, I believe that affordable childcare would allow those who stay at home out of necessity to return to work. Additionally, making it affordable for those who do work would mean any excess funding that would have gone to childcare can be injected back into the economy.</p> <p>Sixth, all children deserve equal access to a quality education and resources should be spent on areas that are lacking and funding maintained. The Alberta curriculum is woefully behind on teaching many of the skills and</p>	<p>To begin, I think it must be acknowledged that the oil based global economy is changing and Alberta needs to adapt to these changes. I do not believe that our economy will never reach the levels they did before the recession in 2015. I do see the need to reduce our debt load, but all the cuts must consider the needs of the people affected by them as they frequently impact those already facing difficulties.</p> <p>First, I greatly disagreed with giving companies tax cuts in hopes of economic stimulation, totaling billions. The government is place to look after the needs of the people, not companies.</p> <p>If possible, can governance boards be combined- like healthcare or education boards for separate school systems.</p> <p>Additionally, cut all expenses to the Environmental War Room. Environmentalists are not the enemy of the province. They can be part of the economic solution to create a sustainable future for future generations.</p>	<p>First, I think it is important to begin studying and investing in alternative energy sources for the future of the province. Environmentalists are not the enemy of the province, they can be an ally. I believe that investing in both fossil fuels and green energy will create many economic opportunities.</p> <p>I would invest in holding oil companies accountable for their defunct wells- cleaning them would create opportunity.</p> <p>Finally, by investing in education, healthcare, and arts and culture, many people who would leave Alberta for better opportunities would stay.</p>
-----	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

T2A	<p>Diversifying Alberta's economy. A number of other locations (e.g. Houston) have greatly benefited from diversifying. It allows for other economic sectors to grow, creating additional jobs. It also allows for O&G workers to re-train themselves to have careers in other sectors. This means less competition for O&G jobs, which are scarce.</p>	<p>Reduce the pay for c-suite staff rather than lower level or front line staff. Also conduct better independent vetting of c-suite staff. AHS hired an individual who was fired from a similar high ranking healthcare position from Australia, found him to not be conducting a satisfactory job, fired him but still had to pay a minimum salary for a few years as per conditions he negotiated into his employment terms.</p> <p>Increase income taxes based on income tiers. The "Alberta Advantage" failed to keep Encana in Alberta.</p>	<p>Bring back AITC, IDMTC, SR&ED, etc. programs. Essentially, bring back the programs that supports the innovation and the technology sector that were removed. 17(1)</p> <p>retrained myself when the crash hit and found successful job opportunities in the technology sector. That success has been limited by the choices made to find savings because "diversity is a luxury", which was stated when the budget was announced. Regardless if someone is in the O&G sector or not, they found this statement to be narrow-minded and short-sighted. Our household earns approximately 17(1) and we pay our taxes diligently. However, in order to keep up our salary and successful careers in the technology center, we may be forced to move to Ontario or BC where the technology sectors are supported.</p> <p>At this point, Alberta and PEI are the only provinces that do not have a SR&ED program, which puts Alberta at a great disadvantage in the innovation arena. Innovation leads to new technologies and advancements, which leads to jobs and economic growth. It seems like the government made a judgement to eliminate these programs without proper consultation of experts who could appropriately determine the negative repercussions of such a short-sighted move.</p> <p>Unfortunately, Alberta's "blue ribbon panel" lacked the diversity in experience and background to fully understand the impact their choices would have on the advancement of technology and innovation. Instead they had similar views and perspectives and</p>
T2E	Maintaining services for the most vulnerable Albertans	Industrial subsidies.	Support growth industries, like technology, as opposed to legacy industries like Oil and Gas.
T8N	Health care and education	Increase taxes for the wealthy and businesses	Through education and continued education.
T8W	<p>Education (post-secondary and at all levels) Education is an investment into our society's future!</p> <p>Health care!</p>	<p>Stop funding unneeded propaganda agencies to discredit environmental agencies</p> <p>Stop giving tax breaks for "job creation" which have failed to create jobs and whose recipients have in fact gotten rid of Alberta jobs.</p>	<p>Focus on renewable resources and transitioning skills. Oil and gas workers are highly skilled, if you give them the tools they can use their skills which are highly transferable to find sustainable and long term employment in durable and renewable industries.</p> <p>Also, look into consultation before you review your budget. This is not consultation. Consultation is before you act not after you have destroyed Albertan livelihoods and put Alberta's growth at risk with a deleterious budget and many unneeded budget cuts.</p>
T3K	Assistance for Diabetics to pay for insulin pumps and sensors. Specifically for senior citizens. These can total \$4000/year, and are rarely covered by insurance providers.	Tax large corporations.	Assist the government grant program (s) to make it easier to access money. Applying for grants is much too lengthy and complicated! We need support in terms of manpower/ programs to make it easier to navigate and complete the process.

T4R	Keep spending to a minimum level where services aren't compromised until the budget is reduced and/or the economy improves	Get rid of all middle management in government services especially in schools and hospitals. Putting them back on the frontline will lower their salaries and the standard of service should improve. Or perhaps they could find another job!!!	Wish I had an opinion. Sorry
T4J	<p>1. Budget is a balance of spending and revenue. Many gov't licences for services or opportunities are less than neighbouring provinces and should be increased to maintain a parity. For example BC fishing licences are more expensive than Alberta</p> <p>Whereas Alberta has no licensed guiding program B.C. guides bring non residents into Alberta to fish.</p> <p>2. Continue strategy to reduce Alberta public service to neighbouring provinces</p> <p>3. Privatize many government service and supply programs.</p> <p>4. Sell govt assets IE. grazing leases closely related to existing ranches in the white areas of Alberta. Sell leased recreational lots in Alberta parks that pay minimum rentals etc.</p> <p>5. Study and implement user fees to manage programs.</p>	<p>1. Continuing to reduce the civil service to staffing levels and salaries comparable to other provinces.</p> <p>2. Reduce providing non essential services.</p> <p>3. Force the rural municipalities and small towns (<10,000) to amalgamate</p> <p>4. Increase out of province tuition to non residents and reduce student numbers less than 10% of students.</p>	<p>1. Alberta's parks and protected areas has sterilized Alberta's opportunity to have World class outdoor recreation opportunities. Present legislation forbids backcountry development of hotels, ski hills, and other facilities.</p> <p>2. Continue to recovery activities that are provided by the federal govt. IE provincial police, pension programs, etc. Have the jobs and administration in Alberta not Ottawa.</p> <p>3. The war room should commence a strong education and communications program to educate Alberta's to climate change and the true cost of federal programs.</p>
T5N	Education and health services	Big companies	Stop privatizing important issues like education and health.
TOM	Taxes are for management of the Government and covering for costs of services provided by the Government.	<p>health care, it is a big waste of funds as many therapies are available throughout the world that cost much less and are more effective. ie: Stem Cell Therapy</p> <p>Education should be slimmed down to having more on the job educators and less administrators at high salaries. This current process of high earning administrator is taking income away from providing educators and class room helpers. Either the school board finds a way to balance their budget by cutting top executives or the Government goes in and does it for them.</p>	Encouraging small business by reducing taxes and creating a larger tax base of businesses.

T2Y	Public services such as police, healthcare and education are important but spending must be kept in check. Once the budget is balanced, a mandatory 10% percent of the revenue must be saved and invested for the future. At the same time Alberta must start paying down the accumulated billions of dollars of debt, so that we can be AGAIN debt free.	I support the proposed cuts in the public services and government spending. Healthcare is one area where overspending and inefficiencies contribute to ever-rising costs without any meaningful increase in the quality of the service. Teachers' unions are always demanding more money, higher pensions, smaller class sizes and yet my wife and I are bitterly disappointed by the quality of education our ¹⁷⁽¹⁾ children receive. Each year every teacher should be evaluated anonymously by the students' parents in online surveys and if they rank in the lowest percentile, they must be fired. If this is done, every teacher will strive to excel in their work and constantly improve. Big provincial projects must be contracted to the lowest bidders and no unjustified additional expenses incurred by the companies must be covered by taxpayers dollars.	Since raising business and/or personal taxes to increase the provincial revenue would drive companies away and put even bigger burden on thousands of Alberta households, the budget needs to be balanced by cuts in every department and public service. The province already has the lowest business tax and Canada, and this is a great start. However, more incentives could be offered to companies, which are willing to bring jobs to our cities and towns. We are still exclusively reliant on Oil and Gas, so diversification of Alberta's economy is a MUST. Robotics, Bio technologies, Online commerce, Cyber security are among the industries of the future which will see tremendous growth and if welcome in Alberta, will provide jobs and prosperity for many generations to come. Our provincial government must consult with representatives from these industries and find out what could be done, so that Alberta becomes the "go to" place for all of them.
T7Y	Lowering Debt, healthcare, christian education.	stop funding abortions, stop funding special interest groups such as LBGT group, stop providing funding to countries that don't support christian values and beliefs, stop allowing any religious groups except Christian organizations from receiving charitable donation status.	Give tax incentives to companies that hire additional employees and offer training programs for available jobs in Canada
	Health and education	Let the multi-millionaire oil and gas company executives defend themselves instead of wasting taxpayers' money on the CEC	I wish I knew!
T8H	Paying down debt	Bring in a flat tax system	We need to remove the stress test and carbon tax. When you reduce taxes on working Albertans you increase growth. We need to keep It simple. Don't spend more than you make. I would strongly suggest to stop sending money to Ottawa until They support albertans
T0E	Health, education, cleaning up orphan wells.	1) Charge the oil companies more for orphan/abandoned well cleanup. 2) Force the oil companies to give back the \$4.7 billion Kenney gave them for no reason at all.	Stay out of the way. After 44 years the Cons have shown they can't run a lemonade stand.
T6E	Homelessness, Child poverty, access to medical care for all, access to education for all, missing indigenous women and children.	The government doesn't need to find savings, it needs to increase revenue by increasing taxes significantly on the most profitable corporations.	The government should be hiring all unemployed and underemployed Albertans to build, repair, and upgrade infrastructure and to move towards world leadership in renewable energy.
T6T	Maintain essential services and infrastructure, and invest in the private sector economy.	Overspending in non-essential public services.	Competitive business environment, support for local production of products that are commonly imported, yet we could be producing more of in Alberta. Some easy areas include value added food production and construction materials.

T5K	Education and healthcare.	Cancel the energy “war room,” and reinstate caps on auto insurance. Increase taxes for wealthy corporations and those who pollute more.	Focus on diversifying our economy. Increase grants and incentives for small businesses and students. Reinstate Summer Temporary Employment Program (STEP) program.
T4p	Education and seniors.	In their own wages	By diversifying markets and enhancing alternatives to oil and gas.
T0M	Health care, education and transportation infrastructure; Long term water resource management	All government operations should be reviewed for efficiency by a qualified contractor - savings of at least 30% are likely, with no loss in service. IF: the contractor has the skill set in process improvement. Your managers have neither the skills nor the incentive to find efficiencies. Consider building and maintaining in house the management skill set that results in continuous improvement and sound controls.	1. In conjunction with industry, develop education programs in skills that are lacking in government and business everywhere. The goal would be to become world renowned in training and implementation of these skills - centres of excellence that could become wealth generators based on knowledge, not resource extraction. The skill sets are 1. process improvement 2. governance and control 3. mediation/ negotiation 2. Develop stronger relationships (ie pool resources) with other regions based on shared interests eg Sask, Man and the North for resource development and access to soon to be available <u>tidewater ports</u>
T4J	Health care and education.	Many government services become top heavy with individuals collecting high salaries in administrative or bureaucratic roles. Often, with two or three people drawing a high salary to do the work that one person could handle. Unfortunately, when budgets are cut, these same people are the ones who have to decide where savings should come from. They’re never going to be creative enough to cut their own positions. School boards, health care regions and similar government funded services likely need an external audit of their budgets to ensure that money is not being wasted and to make sure that the money we do spend maintains or improves the quality of frontline services that taxpayers are receiving.	In a word, diversification. Cutting funding to certain areas of higher education was likely a mistake. As was cutting funding to projects designed to diversify our economy. While the petroleum industry is important to our wellbeing, and we should support it. Alberta needs educated and creative thinkers to help us diversify our economy and make us less dependent on the global price of a single resource. As a province, we will never have significant control of global oil prices, but we can control if we other options to maintain our prosperity when the price of oil is low. In terms of the petroleum industry, I have never understood our focus on piping raw material out of our province to foreign petrochemical sites just so we can purchase the finished product back at a higher price. I would like to see us improve our petrochemical manufacturing capacity so Albertans can sell the value added products to the world, and the money from the value added products is ending up in the bank accounts of Alberta employees.
T0L	Restore dependant coverage on the Seniors Blue Cross coverage.	Reduce travel of elected officials.	The government needs to spend money on infrastructure items.

T5A	<p>Education: K-12 education. Specifically providing funding for supporting public education, inclusion, and student success. including but not limited to class size reduction, additionally funding for testing a student supports and No voucher system or private school funding. Charter schools are fine but private schools have tuition and therefore should not be supplemented by tax dollars.</p> <p>Health care: Keeping RNs in hospitals, prioritizing preventive care such as family physicians as well and staffing hospitals to meet demand and no privatization of health care. Invest in children and our future and invest in the universal access to affordable health care.</p>	<p>The new curriculum advisory panels and red tape you keep putting up the redesign again will cost even more to tax payers. Curriculum should be a partisan issue 17(1) was put in by conservatives and really the difference between the old and the new is not so bias or great that you need to redesign again. That is just unnecessary cost to tax payers and a waste of money just for “optics”.</p>	<p>Less money and tax cuts to the big company’s and invest in the local economy and in job creation for the middle to lower class as well as the public sector. As teacher with a husband who is laid off and has worked in oil and also construction please stop trying to pit oil vs public sector most of us in the public sector have partners who also work in the oil industry. We need to work together. 17(1) with how the budget(or as you say “grant relocation”) has happened it is not just effecting public sector it is effecting everyone directly or indirectly. The whole point of public sector is it should still be able to serve the public when the private sector is suffering because it is the children of the private and public sector who are hurt the most cuts of these kinds.</p>
T6T	Healthcare & education	Create well paying jobs & the taxes will automatically create more funds	Create much more jobs in the climate change industry. Far too many are out of work and need new careers,at the same time it will be a huge boost to the climate which must be dealt with
T9E	Public Education and Health Care	MLA and Premier expenses and salaries.	Support public sector and small business tax breaks.
T0B	debt repayment, policing and law enforcement, eliminating waste in ALL government departments, no matter how much the public sector unions howl.	Education, health care, the bloated public service in all sectors	lowering taxes, eliminating/streamlining regulations and red tape for ALL businesses, big and small.
	PUBLIC healthcare and education. DIVERSIFYING our economy - oil and gas is a an important industry for our province, yes, but it's foolish to focus solely on a non-renewable resource that is so fickle and impacted by so many outside, uncontrollable factors. Looking at renewable resources, supporting arts and heritage, etc. will lead to a healthy economy.	Reducing the pay and pension of MLAs, ministers, and the Premier. Reducing the amount of managerial positions in the public service and focusing on front line workers. Not being afraid to invest in higher quality products and services that provide better, longer returns.	STOP THE ATTACK ON THE PUBLIC SERVANTS AND SERVICES! Public servants are tax-paying citizens of the province, just like anyone else. They contribute to the economy by purchasing from local businesses in both a professional and personal capacity. They provide essential services for the citizens of this province. By cutting budgets that are causing mass layoffs, there are fewer citizens who can help stimulate the economy because they no longer can afford to buy local or buy at all. By cutting budgets, having hiring and spending freezes, public servants can't contract local businesses or support them as part of their work. Tax the wealthy and bigger businesses to help support the little guys. Taxes are NOT a bad thing - without taxes, we lose the services we rely upon.
T8n	None. Get rid of debt	Government employees cut back	Oil
T8A	Health, Post-Secondary and K-12 Education. This three areas will help keep Alberta strong and improve the economy.	I think the government should look to adding a Provincial Sales Tax rather than cutting spending as deeply as it intends. Spending more doesn't always mean we are inefficient, it also means we are investing more back into our people. Who says Ontario and BC have it right? Also a significant amount of resources go into to oversight of Board managed organizations in Health, Post secondary, etc. GOA needs to allow Boards to function properly and not be involved in the weeds.	Government needs to make sure that people are able to get re-trained to provide skills required in the changing economy. Supporting those who have been laid off through oil and gas industry decline and significant public sector job losses.

T1K	Education, health and infrastructure. We need excellent teachers in order to remain global leaders in education, and a place that other countries look to for expertise. We need excellent health workers, in order to maintain at the top of the field in healthcare. We need top-notch infrastructure so that we are safe and can grow at a steady pace.	Trim the fat from the upper-echelons of government. Tax the top 30% of individual earners the most. Tax the top 30% of businesses at the very highest levels. Demand that businesses that are in arrears on their corporate taxes must pay up or go into bankruptcy. Individuals do not get to defer personal taxes in order to avoid bankruptcy. Stop with the corrupt nepotism and demand that wealthy businesses and the wealthy individuals contribute proportionately.	Provide world-class education opportunities and support families with school-age kids. Keep class sizes small. Keep schools maintained, and well-staffed. Provide top-notch health care to all. Maintain hospitals and clinics. Keep nurses and doctors employed so that they can deliver optimum health care in clinics and hospitals. Keep infrastructure maintained in order to keep people and communities safe, and to attract business to our province.
t2k	Education	Big private companies	By not ignoring education efforts and help prepare our future workforce.
T5E	Health	Alberta Health Services is wasting Albertans tax dollars forcing people to take them to court in relation to getting health records, and other range of issues. This is why they don't disclose financially how much AHS has spent on legal year to year.	Invest money in building a few more Technologically Advanced Vocational trade schools. Make apprenticeships more appealing to Alberta's youth.
T0J	<ol style="list-style-type: none"> 1. Education - Fewer managers but more teachers and schools. Students need our support without which we have no growth, innovation and problem solving. 2. Public Safety- policing and health care - Again fewer managers but more professional front-line workers. All citizens need to feel safe: their physical and mental health are well treated in our province. 3. Communication. 4. Making it attractive for long term old and new business to stay or relocate here. 5. Take care of our natural resources. 	<ol style="list-style-type: none"> 1. Reduce the number of MLA's in our province by about 1/2 i.e.: 43 instead of 87. 2. Reduce the number of managers in government. Their salaries do not reflect their contributions. Too many chefs and not enough cooks. 3. Ditch the war room. Pay for the research and advice. Meetings can be held in already provided legislative buildings. 	<ol style="list-style-type: none"> 1. We will lose businesses and families if we can not support them. 3. Promote research, high tech industries innovation and all the established businesses and resources.
t4r	none; all budgets should be frozen, or cut	cut public management and administration jobs, and all of those appointed by the ndp.. it is outrageous that university heads are paid over \$800k a year. let them find a private sector job cut municipal funding, unless they cut their administration costs and lower property taxes	keep cutting business taxes, get the pipelines built, fight the carbon tax and foreign funded activists
T5H	Healthcare, education, arts funding, creating a provincial sales tax to offset these costs and begin paying down the provincial debt. Financial assistance to at risk people first. Build toward a society where there is no homeless population because spaces and rehabilitation access has been provided for these people. Also: no more tax breaks for corporations!	Cut politicians salaries. No more corporate handouts. Kill the war room.	Employ out of work Albertans to help clean up the many orphaned oil and gas wells in this province. Increase education spending particularly on things like alternative energy science related programs. Encourage expedient diversification of the Albertan economy.
	Healthcare, education, seniors and disabled.	Less tax cuts to oil and gas, get rid of the CEC war room, get rid of Matt Wolf, the MLA's are making still making more than the average- cut their pay, put MLA's pension or RRSP's into AimCo to invest, cut press secretaries salaries to previous government..... so many choices.	Diversify....not just oil and gas.

	Healthcare, education, seniors and disabled.	Less tax cuts to oil and gas, get rid of the CEC war room, get rid of Matt Wolf, the MLA's are making still making more than the average- cut their pay, put MLA's pension or RRSP's into AimCo to invest, cut press secretaries salaries to previous government..... so many choices.	Diversify....not just oil and gas.
	<p>Health care and public education - without this, everyone's quality of life declines. They do not generate a short-term profit but they do have long term gains.</p> <p>Promoting jobs outside of the oil and gas industries - yes, they bring in money now, but they won't last forever. Use the funds to diversify our economy now.</p>	<p>Prohibiting any government employee from using public funds/taxes to pay for "wining and dining" clients, travel in private jets or in business class or anything else that is not directly necessary to complete an assignment.</p> <p>Eliminating life-long (or double) pensions for government officials that have only worked 4 years in a post. Their pensions should work like CPP like anyone else.</p> <p>Eliminate loop-holes that allow employees to get paid double time for covering another's shift when they cancelled their own.</p> <p>Stop funding private education and health care - the rich don't need anymore money.</p>	<p>We need economic SUSTAINABILITY not growth. Everything on earth that grows rapidly will eventually crash.</p> <p>Diversify! The oil fields will not last forever.</p>
T0B	Necessary expenditures - maintaining roads, schools, hospitals, etc.	Defund unnecessary surgeries and procedures from health coverage - things like abortions, some plastic surgery, etc.	Perhaps give employment incentives to especially small business, or those willing to take a chance on new graduates or people without experience.

T4A	Health, education, economic recovery	<p>I believe we have an excellent health system but it is expensive and very slow. I believe we have a top heavy system - with layers of consultants, senior and middle managers and their support staff including admin assistants and research assistants. I would like to see a huge reduction in the top of the pyramid - and turn the pyramid upside down so that the bulk of the money goes to frontline workers and resources. We should have sufficient emergency/urgent care services to move people through quickly. We need facilities - efficient additional surgery suites for specialists to reduce wait times for orthopaedics, cancer treatment, etc. Unfortunately, just asking the system to reduce usually means they reduce at the frontline. I know cutting managers often is expensive - with payouts, etc. Also managers don't cut themselves. 17(1) - before it became like a private corporation - 17(1) a medical officer of health and a Director of Nursing - supervisors managed about 50 frontline staff and there was nothing in between. Now there is a sense of entitlement, like Bank CEOs.</p> <p>I believe the Education system is patterned after Health - with the same bureaucratic layers - please cut the fat at the top and the middle.</p> <p>I am not familiar with other departments - but again, frontline services is where the dollar should go. I don't believe anyone working for government should be making more than \$200,000/year. After all, they are in service positions.</p>	This is not my area of expertise - I believe we need to get our oil workers back to work; offer re-training or skills development to those who need it, encourage small business and provide guidance so that they are successful. Offer trades and business courses in the school system so that students can support themselves when they come out of school. Times are changing, with online shopping taking over our retailers.
T3A	Public education and public healthcare.	Raise corporate taxes.	Research what is in demand. (Eg. Replacing plastic with biodegradable products) Invest. Generate jobs.
T2K	Diversifying our economy, supporting the most vulnerable, and building communities (via physical and social infrastructure). So far, this government has shown its commitment to rewarding already-profitable large companies with a tax cut at the same it de-indexed AISH; repealed tax credits for new and growing industries like film, TV, and gaming; hammered education; and downloaded costs onto rural and urban municipalities. The UCP's priorities are not Alberta's priorities and this government has already hurt so many--only to forecast returning to balance in the same fiscal year as the NDP government forecast under its budgets.	This question is framed to encourage responses that focus only on spending--budgets reflect an organization's values and include both expenditures and revenue. If the UCP government wants to focus on cutting spending, then remove subsidies for private education. If the UCP government wants to address the fuller picture of the budget, then consider realigning the corporate tax structure to include small, medium, and large corporations: 2% for small businesses, 7% for mid-sized businesses, and 12% for large businesses.	Actually support diversification. This roller coaster we are on has hurt Albertans for generations--and usually the working and middle classes most. Oil and gas are not evil, but they do have large environmental and economic costs. We've GOT to support new ways to building our economy, and the creative industries as well as the humanities support the economy while balancing human interests.

T4B	<p>Balancing the budget. We can't continue to pass this debt onto our kids.</p> <p>Standing up to miss information in the media and social media. Oil use is not going away if everyone changes to electric cars and paper shopping bags!! Oil use will be reduced but oil is used in most things!</p> <p>Inform the public that Alberta is the driving economic force in Canada not a money sucking province like Quebec. Job creation by Starbucks and Tims are not a long term solution. The public needs to see that a green economy will result in good paying job losses as any technological advancement will be produced off shore as we earn too much per hour to support production of anything here, look at jobs in the auto industry that are leaving Canada and causing a slowing economy in Ontario.</p>	<p>Cutting excessive management, not the front line staff. We don't need so many high paid managers in offices that do not see the public.</p>	<p>We should continue to put pressure onto the federal government to have the energy east and the trans mountain pipelines finished in a reasonable amount of time.</p>
T8H	<p>Health care and education, infrastructure</p>	<p>War room, lower our mp's wages to become on par with other provinces. No large bonuses and severances.</p>	<p>Get gas and oil to market, diversify. Nuclear power.</p>
T8H	<p>Restoring the helps and jobs you have already taken away. Minimum incomes for food, clothing and shelter. Health care. Education. Ignore the private sector. In most cases, it can take care of itself. Ensuring that everyone pays their fair share of taxes.</p>	<p>Discarding the panels, etc., that complement the government's own conspiracy theories (e.g. the "war room"). Stop subsidizing successful industries such as oil and gas. There are efficiencies that could be had in our medical system (see Danielle Martin's book, "Better Now" for a few suggestions). Put caps on public sector administrative salaries, some of which are out of line with the responsibilities some of these people have. Eliminate unnecessary positions in the public service.</p>	<p>Encourage movement toward a carbon free economy. There is lots of room there for growth in jobs. That one area may be the key to Alberta's future prosperity.</p> <p>Why are there no questions are where additional revenue could be raised?</p>
T8A	<p>Ask school boards and hospitals not to hire personnel who have nothing to do with the work at hand. School boards are top heavy in management. Inclusive learning is expensive with having to hire many educational assistants for each school. Ten or so central locations could be had for each large school board to educate the students who are in need of extra support. Qualified teachers and aides would then be more effective in these special school locations. Regular classroom teachers could then teach more effectively without having to often stop the instructional time in order to discipline or motivate unwilling students.</p>	<p>Bring back health care premiums for those earning \$60,000 a year or more. The rest of low wage earners should be subsidized. This system worked well in the 1980s.</p>	<p>Incentives for small business owners.....so that they can hire more workers.</p>
	<p>Education and Healthcare</p>	<p>MLA salaries and Premier salary. Cut expense budget on things like private flights and excessive spending by government officials. Put in place a province wide sales tax.</p>	<p>Support pipelines being built. Stop cutting public sector grants and budgets.</p>

T5P	Education, Health Care and the programs that support our most vulnerable, not make the rich richer.	<p>Tax big business. They generate the most income, they should pay the most tax instead of the least.</p> <p>Not provide big payouts to oil companies who pay off their bills, close up shop and then move out of Alberta. How many billions could have been saved. In what ways did this save money at the time it was given out?</p> <p>Eliminate the war room. This should be labelled the "arrogance" room.</p> <p>Add a PST to support the debt until it is gone</p>	Education is our future and not just education in how oil/trade workers is what we need. If our province is to succeed, it will be in the hands of the children who will be a product of their learning.. and they are learning that currently they don't matter to this province and the reliance on only oil is unsustainable.
T5S	None.	Efficiencies in existing systems such as health care and education.	Continue to focus on reducing the noise around climate change by addressing things that can have an actual impact. Also continue to push for our energy sector while identifying the positives of Canadian energy in the world marketplace.
T8E	Health care and education	By not handing out corporate tax breaks that have been proven to not create jobs.	By supporting our well-developed tech industry, as well as by keeping public services well-funded so that albertans are well taken care of and keep their jobs
T2L	I am extremely concerned about wildfire prevention and safety. I don't think enough is being done on this front. If there are big fires in the next couple of years, there will be hell to pay, in light of recent cuts.	Big fires are expensive. catch them while you can	As soon as you have to hire crews from out of province, the bill is going to go through the roof. Hire good people internally and put them to work.
T7Z	<p>Doubt the government will truly listen or give albertans the real results of this survey.</p> <p>They should cut management jobs and not front line workers.</p> <p>Public Education funding should not be cut. Our Province is growing and we need our teachers. We also need our healthcare.</p> <p>The government should NOT implement our own Alberta Pension as that is a waste of money. We should not be using all our Albertan tax dollars to invest solely in oil.</p> <p>I disagree with our own Tax Collection as Federal govt CRA employees in Albert will lose their jobs - how is that helping</p>	<p>Cut from the top! Not the bottom where the work is done. Cut top salaries and reduce management. Reduce politician spending.</p> <p>Implement a sales tax instead of hurting education and health care.</p> <p>However you didnt listen to teachers regarding their pension so doubtful prov govt will listen to these ideas.</p>	<p>Definitely not by cutting frontline alberta health workers and not by cutting teachers. That will hurt our economy.</p> <p>Also taking our CPP to invest in Poorly in AIMCO is wrong!!!!!! i totally disagree. This is my money that I worked hard for and the provincial government should keep its hands off my CPP!!!!</p>

T7Z	<p>Doubt the government will truly listen or give albertans the real results of this survey.</p> <p>They should cut management jobs and not front line workers.</p> <p>Public Education funding should not be cut. Our Province is growing and we need our teachers. We also need our healthcare.</p> <p>The government should NOT implement our own Alberta Pension as that is a waste of money. T0L	<p>Seniors Private education options - parental choice</p>	<p>Education - teacher salaries; get back to basics Environment Culture and Women Immigration</p>	<p>Lower taxes and refuse to collect the "Carbon" tax Fight the Federal government that is sabotaging the Canadian economy and hamstringing Alberta's economy Stand up to Unions and cut the fluff Curb municipal grants in relation to their over taxation of business</p>
T0M	<p>Health care I assume is the most costly for taxpayers. We seem to have great and fast clinics for testing and these are always full of people . I assume the people waiting are all eligible but appears lots are new Canadians. I wonder if Federal government should be increasing their share as I assume Alberta doesn't have a great say on who gets in (and if they already have health problems) it will affect Alberta tax payers.</p>	<p>Should also look at welfare and provincial aid services. I have heard rumours about payouts to people who don't actually live permanently in Alberta but also that we basically have no Investigators to check on these cases.</p>	<p>Try to modernize and switch to programs using newest technologies available.</p>

T5Z	Education and healthcare	Taxing the wealthy class more; cutting back on salaries, pensions, and personal spending claims of politicians; stop providing subsidies for large companies	Continue to fund and expand the affordable childcare program; make vocational training/educations accessible
T3A	Public Funded Education including post-secondary, as an educated workforce is the only way that we can grow our economy. Public support of Alberta Health Care will ensure we have a healthy workforce which will boost the productivity of workers. Focusing on preventative health care will also employ many Albertans in meaningful work while decreasing the health care costs associated with hospitalization, disabilities and inability to work in the economy.	We could reduce corporate tax cuts and insist that oil companies fund the environmental clean up of abandoned well sites instead of the tax payer. Cancelling the obviously ridiculous anti-defamation committee which only rewards UCP supporters would save a lot of money.	It should support job creation and economic growth by reinstating grants for innovation, the film industry and other non-oil and gas businesses. It should ensure that Alberta has a very well educated workforce to attract the newly created non-oil and gas related industries.
T3L	The health and welfare of those living in our province - that includes safety (police/fire/paramedics), medical services and personnel, education (proper funding of institutions, teachers and assistants) and affordable housing for seniors and low income citizens. People NEED to come first.	Get rid of your "War Room"; collect taxes from companies owing the government - no one should be able to have a free ride.	Support new technologies that reduce our carbon footprint and the overall health of our planet.
T0E	looking after our infrastructure, our roads are in deplorable conditions, our hospitals in bad shape and understaffed and over staffed with supervisory positions, our schools and education system are under staffed with teachers and over staffed with supervisory position and the same in our government too many bureaucrats lets get back to bussis	less bureaucrats, less spending on studies and more action, there are many government positions that are unnecessary, run the government to be accountable	by fixing the infrastructure and reinvesting in our province and its citizens.
T4M	Children, Youth, Clients with Disabilities, EDUCATION, Health care, research	CEO's Salaries - Not cancelling contracts costing a billion dollars. Introduce health care premiums and Provincial Sales tax so everyone shares the burden. Quit with the legal battles you know you can't win.	refineries, manufacturing companies, world class health facilities and research, agriculture.
T6C	Continue basic operation and programs, with a view of living within our means. It will be tough in the near term, yet if we keep spending without a view towards paying off our accumulated deficit (exacerbated by our previous NDP government) we will be in worse shape down the road.	Cut government departments that are not of dire necessity, discontinue safe injection sites (ultimately not needed and not necessary), cut funding for special interest groups like gays and lesbians, cut funding for abortions. With teachers, doctors, nurses and other professionals these can afford to take a little pay cut or a wage freeze until our spending and deficit are under control - preferable when our deficit is paid off and we are in a position cash flow position as a Province. Keep doing the good work. Together we can come through this difficult and challenging time.	Encourage small and medium business through low taxes and cut minimum wages a bit or at least keep minimum wages low (between \$10 and \$12 an hour). Promote our energy industry (oil, gas, coal, wind and solar). Continue to support our farm and ranch industry.
T7X	Schools (education) & health care	Politician travel & per diems	Promote & support pipeline creation
	Seniors, healthcare ,education	Not sure	Focus on other things other than oil and gas diversification

T8A	<p>Stop spending! Get control of the massive debt. Get control of labour costs. We still have the most civil servants per capita in Canada with not the best results by far. there are far to many managers in health care, education and government.</p> <p>Some "managers" are making around \$200.00/yr and supervise 3 or 4 people? This I know for a fact. Doctors in this province do very well and will NOT take any cutbacks why?</p> <p>The unions are very strong in this country and are not working for the good! They block oil and gas projects and support cororate welfare spending</p> <p>Stop subsidizing corporations, the petrochemical industry i.e. the Sturgeon Refinery is a big multimillion dollar government boondoogle</p> <p>Stop wasting money on "energy diversification"</p> <p>Get the U.C.P War Room functioning properly / professionally and make sure its effective and worth the money spent so the rest of the haters, and liberal media cant't keep making fun of it.</p> <p>etc. I could go on and on and on</p>	<p>Find savings in the massive government labour pool, and the incredible benefit packages that come the this employment. You may not be aware but the abuse of the benefit system in gov generally is out of control. In the correction system the unionized employees are and have been for some time totally ripping off the system by way of sick time, personal tome, moving time, PTST claims that come with WCB, counselling massages etc, etc that go on for years. The middle managers who have to deal with this are not unionized and are not people who will be able to speak to you!! If you speak to top bosses you will not hear about it. These managers who deal with this everyday are giving up on the system.</p>	<p>I am not an expert on this by any means but i do believe that many people are entrepreneurial by nature and governments are generally not. All levels of Government esp provincial and local should foster a climate conducive to business. One that reduces barriers.</p> <p>The current leaders of Edmonton and Calgary are not good for business start ups, they are all "the government should take care of everyone" and we should be like Vancouver?? the dream</p> <p>Perhaps working /partnering with the leaders in smaller centres would be more useful ie. Westlock, Peace River, St. Paul just a thought.</p>
T0J	<p>Infrastructure-highways, bridges, pipelines, power generation, refining</p> <p>Healthcare in rural areas</p> <p>Education that is performance based only in the non-liberalarts subjects...i.e. mathematics chemistry physics..not history or English.</p>	<p>By dissolving the AHS Services Board and cancelling the extensive duplication of work already being done by the Ministry of Health.</p> <p>This so called Superboard is costly and absolutely unnecessary</p>	<p>By continuing to make a healthy venue for investors to create industrial enterprises and treat the private enterprises who are already here as well as is possible by reducing their cost of doing business</p>
t6c	<p>Affordable seniors' housing , other affordable housing, raises for mid and lower incomes to keep people out of debt, more hospitals and schools , more refineries and pipelines to keep up with the U.S. ,mentally handicapped to be cared for in institutions and not in homes with one or two care givers, stiffer penalties for most crimes</p>	<p>Free bus passes to fill our buses and keep cars off the roads, tax the higher tax bracket and have limits to what C.E.O.s get , encourage pension and health benefits for all workers so they can survive without debt.</p>	<p>cut red tape, incentives for necessary workers</p>
T6H	<p>The government needs to focus on better funding environmental monitoring and strengthening our universal health care system.</p>	<p>Increase taxes on the super wealthy to divert back into the province.</p>	<p>holding large companies accountable and encouraging economic diversification within Alberta. Support the tech industry here and allow space for more manufacturing jobs instead of only focusing on the oil and gas sector.</p>
T9s	<p>Education and Health care, if you take care of the people that 'take care' of people your community will thrive! Mental health is important and so are our rural schools. People deserve to stay and thrive in their communities!</p>	<p>I think they could look at business and a small increase of tax over a number of years. Not to make a big jump but a gradual increase. Focus on looking where school boards could work together and collaborate rather than compete for students. Equity vs equality. I think reducing the number of people working redundant roles to be reconfigured, like thy do with teachers, making them take on more responsibility, allow these people to have more than one role that they are responsible for in their role.</p>	<p>The government needs to focus on education that is equal for all. This is vital to the future. If we create inequality with education, we are creating a gap in society of people of who can and cannot. Education and health are the two areas where we can equalize and see people achieve greatness if they come from not much.</p>

T4N	<p>Stop funding private services on government money. Look at the middle management and down size. Stop travel claims, decrease your benefits and bonus and spending accounts. Most people don't have them and they make a lot less money than government officials. STOP killing the middle working class people who are actually trying to make a living and support our cities, farmers and families.</p>	<p>Stop with the handouts to companies. Make a budget and stay within it like the average Albertan needs to do to survive. Have some common sense. Maybe consider doing your job as an unpaid, no benefits role and see the difference it would make in your thinking and decision making skills.</p>	<p>Not thru privatization!! Copy cat their way of running a business but do it within public ownership. Stop being ashamed to be a public organization which is what you are.</p>
T6J	<p>Maintaining or increasing spending in health care to continue to provide quality care for all Albertans. This directly supports all three of the key priorities listed above.</p>	<p>Increase corporate taxation. Increase the income tax of the top 2 tax brackets (ie: taxing the rich a higher percentage than the lower and middle classes).</p>	<p>Increasing spending in health care, diversifying Alberta's economy into additional industries (not just oil and gas)</p>
T1A	<p>Arts, culture, heritage Health care Social services</p>	<p>Scaling back any military related spending Cutting back corporate tax incentives Taxing oil and gas companies more for non-renewable resource extraction</p>	<p>Supporting small businesses Supporting arts, culture and heritage organizations to fill their staffing gaps through increasing operational funding opportunities. Supporting renewable energy and new industries.</p>
T1S	<p>Education, especially our public schools and post secondary schools. All Albertans will contribute to a future Alberta.</p> <p>Health Care industry, especially supports for people with chronic conditions and mental health issues. We should strive to be inclusive of all Albertans, rather than moving to a two-tier or privatized system.</p> <p>Diversification of economy with a specific emphasis on tech and re-tooling and re-imagining our energy industry to be more relevant in the 21st century. The rest of the world is rapidly moving away from fossil fuels as an energy source. We should capitalize on our current enormous base of skilled people to move quickly to be a world leader in new energy sources, just as we were leaders for years in the dying fossil fuel industry.</p>	<p>Rather than focusing on savings, perhaps we should focus on increasing revenue. The global price of oil is steadily decreasing and will continue to decrease. As we have very limited influence on this, we need to shift to new sources of revenue. Rather than throwing good money after bad in the form of countless panels and the Canadian Energy Centre, perhaps we could use that money to increase our province's revenue from burgeoning tech and sustainable energy markets.</p>	<p>Diversification of Alberta's economy with a specific emphasis on tech and re-tooling and re-imagining our energy industry to be more relevant in the 21st century. The rest of the world is rapidly moving away from fossil fuels as an energy source. We should capitalize on our current enormous base of skilled people to move quickly to be a world leader in new energy sources, just as we were leaders for years in the dying fossil fuel industry.</p> <p>A trickle-down economy simply does not work. To increase government revenue, we need to increase the tax rate on the highest earners and cut loopholes that allow them to get out of paying their share.</p>
T6H	<p>Establishing new alternative energy sectors and recycling plants. This will provide a means to transition out of our dependency of fossil fuels and help with environmental concerns. Eg. Production and implementation of solar, wind, and biofuel . Recycling plants to deal with the plastics crisis and enable production of synthetic fuels from these plastics and other organics.</p>	<p>Increase the time spent in office in regards to earning full pension. In what world does someone get a full pension for serving only 2 terms (what i understand is 8yrs of service).</p>	<p>See the first statement</p>

T3B	<p>Keep doctors & nurses that we have working, We went through a bad time after Ralph Klein laid off a lot of them. It set us back. Also the ones still here have gone through many salary cutbacks over the years & they have stayed but if it keeps up we will lose them & not be able to get others. University is expensive.</p> <p>Get the pipeline built & put the oil workers back to work. I just talked to someone who managed to keep his company & all his employees working. We need to get the oil fields back functioning. Talk to the Indian bands as you should have at the beginning.</p> <p><u>Get the veterans off the streets & into housing</u></p>	<p>Get our money back from all the big companies you gave it to.</p> <p>Quit sending money to Quebec especially if they keep refusing to let our pipelines go through.</p> <p>We must be on the brink of bankruptcy the way you are spending money we don't have.</p> <p>Tell the unions to find cutbacks of their own. The union people make plenty of money compared to people working in private industry if they are fortunate to have a job.</p>	<p>See "spending priorities".</p> <p>Businesses are already getting tax cuts at the expense of residential.</p>
T2K	<p>As you have not come close to meeting your three objectives due to such severe cuts and lifting of caps on various things, regular Albertans are hurting more now than before your election!</p> <p>Health care: specifically the super lab and the cancer centre, supporting long term care and in-place aging initiatives, trimming fat from CEO and boards not front line workers and support staff (includes education as well)</p> <p>Education: reinstitute \$25 a day day-care, put the caps back on, you messed with minimum wage to make it harder to earn a decent salary to live in Calgary and be a productive member of society. Tuition is soaring, busing costs are back, resources are being mishandled, you have managed to squeeze the average Calgarian, seniors especially, on every aspect of our lives.</p> <p>Seniors and veterans under your jurisdiction as well as the disabled. Stop interfering with people's benefits, drugs and drug plans, support research and development of new drugs or coverage to make life more enjoyable and comfortable for the citizens of this province.</p>	<p>Disseminate the war room - ridiculous idea.</p> <p>Reduce cabinet, reduce the amount of travel taken by cabinet and monitor all MLA's expenses carefully.</p> <p>Increase corporate tax, modestly.</p>	<p>Start by diversifying and welcoming with open arms new, innovative and up and coming businesses and industry: tech, film, to name two to start.</p> <p>Oil and gas is a no starter and long past its prime.</p> <p>Support small businesses and start ups as they are much closely linked to our community than any multi-national corporation is.</p> <p>Put the caps back on insurance, tuition, and any other area that you removed it, all you did was take money from hard working Albertans and funnel it to insurance companies, which seems to help their bottom lines, but not average Albertans.</p> <p>It's the PEOPLE of Alberta that need OUR money in OUR pockets to spend in their communities to keep the economy ticking not industry or corporations who need OUR money!</p>
	<p>Teachers and educational assistants.</p> <p>Medication to those who require it (elderly and those with serious conditions).</p>	<p>Tax the corporations, don't gut the public service. There is reason we have public service- to support the children and families of this province.</p>	<p>Incentives to companies who hire 'regular' people, not the boss' daughter or a friend's relative. Too much nepotism is occurring.</p>
T6W	<p>Education-Funding enrollment, give back Classroom improvement fund, transportation grants, and class size initiative</p> <p>Health Care-increase spending to match inflation</p>	<p>-Get rid of War Room (seriously)</p> <p>-Get back carbon tax so Alberta can use it</p> <p>-Reduce tax breaks for large corporations (especially since they go to Texas anyways)</p>	<p>-Bring back initiatives for small businesses (tech companies)</p> <p>-Diversify economy beyond oil and gas (seriously)</p> <p>-tax large corporations</p> <p>-consider a PST</p>
T8a	<p>Cuts special interest spending. Publicize when special interest s are at work to distort public perception.</p>	<p>Force AHS to reduce middle management.</p>	<p>Get oil to international make. Can upgrader be built in AB.</p>

T5M	Alternative energy education grants, small startup business grants for alternative energy(not for existing big business in the oil sector hoping to cash in again), retraining of existing oilfield workers for other vocations. Small business support in cottage industry food businesses and cut flowers.	On mowing the highways. NOT necessary, wasteful, and spreads noxious weeds around the entire province. Also cut back on management positions in AHS and government offices. We need more people who work with patients and customers and not managers.	By encouraging self-starts and not regulating the heck out of all industries. Cut government programs that benefit the rich and businesses that should be already standing on their own. Cut grants and exemptions for polluters in the oil industry.
T9H	Lower public sector costs. We've just endured 4 years of NDP financial ignorance, favouring unions and left wing bureaucrats. Take back the ledger and turn it black. If you have to endure bad press and a few strikes, too bad. With oil and gas in the toilet, we can't afford the status quo.	Edmonton City council. Hospitals and medical services. Every public sector union. Everybody else is damn near broke.	Do what you are doing. And lobby the feds constantly. Although until we get rid of the kid with the 9 year old IQ it's going to be a challenge. Work hard on nuclear. It's the future for baseline power.
	Health Education Infrastructure Tech Alternative industries to oil and gas Social programs The budget as we all know has already been put together. This is a simple exercise to "appease" the masses and to provide your government with the opportunity to say we all had input.	Get rid of war room. Get rid of the tax credits handed out to oil and gas buddies. Hasn't proven to be the least bit effective. And has forced unnecessary cuts to public services. Fire your Twitter man This question should read how do we increase revenue. But, yeah, not the UCP way.	Reintroduce carbon tax, yeah I know. Not in the "platform". It brought in income, provided funds for alternate industries and helped prop up overall budget. Was kind of like a provincial sales tax without the sales tax title. But no, now we pay the money to the feds instead of keeping it here. Another crucial blunder.
	Investing in a future successful economy requires a highly educated population; that means a focus on education at every level and not cutting back funds for schools and universities. Focus on technologies which enable a sustainable development for current and future generations.	Cancelling the "War Room," using this funds for social services and healthcare ; collecting outstanding taxes from businesses and companies; introducing a sales tax.	Developing a vision for the diversification of the economy. It's about time to end Alberta's dependance on the fossil fuels' sector.
T8N	Front line health, education and emergency services. Many other problems would be addressed if this were done well.	1. Mid and upper management in the public service. Especially health and education. There are too many people supervising people who don't need supervising. Too many managers who are not managing anything but themselves. 2. Spending on things that the government should not be involved in. Businesses and Corporations don't need hand outs. They need government to get out of the way to let us hire people and create wealth for all.	They can support job creation by removing barriers to investment and reducing bureaucracy so the businesses can focus more resources on growth and thus job creation. Quit trying to help us.
T3A	education and healthcare	in education remove provincial achievement tests and diploma exams	grants for other than oil industry
T1X	Reducing the size of provincial government & demanding that cities & municipalities do the same if they don't , cut of funding !!	Cut off spending for anything that is not a necessity !!	LOWER taxes for small businesses and personal taxes

	<p>The government should focus on public services. Public healthcare should not be compromised with a decrease in nursing funding. Nurses should have adequate time, pay, and staffing to meet the needs in each hospital in Alberta. Public Education should not lose any funding or grants. Class sizes should be within the provincially stated guidelines with adequate supports for exceptional students in the form of assessments for coding and supports, as well as enough Educational Assistants to support learning. The planned curriculum update should go through. Social services should not be compromised. Children living in poverty, mental health supports for youth, and supports for people living with disabilities should be a priority in this province.</p>	<p>Enforce taxation of oil and gas industries. Create a task force to clean up abandoned oil extraction sites, and fine the companies for abandoning the sites. This can also create jobs for those who have been laid off in the industry.</p>	<p>See above- create a task force to clean up abandoned oil extraction sites. Provide adequate funding for social services, creating jobs for nurses, teachers, and para-professionals in healthcare and education.</p>
T5T	Education and health care.	Development of urbanization of the inner city/downtown. Too much is being invested in transforming the downtown area for the wealthy to use.	Continue to invest in Canadian businesses. Welcome foreign investment to boost job creation.
T1B	Why is the government going to lose 114 million dollars over the next 4 years in AGLC Cannabis distribution system, why are you not adopting the Sask. and Ontario models where the product is sold direct to the stores. Fresher product lower prices.	Why is the government going to lose 114 million dollars over the next 4 years in AGLC Cannabis distribution system, why are you not adopting the Sask. and Ontario models where the product is sold direct to the stores. Fresher product lower prices.	Keep taxes low, eliminate regulations cut staff and reduce the size of overall government.
	Health and Education	You can only cut so much. It's quite clear that Alberta needs to institute a sales tax.	While I agree that we need to continue investing in our oil and gas industry I don't think we can only focus on it. Let's start to focus on creating industry in other forms of energy, tourism or manufacturing.
T1S	<p>Cuts to Immigration in the interim, merit based candidates that have the needed educational background + language skills required.</p> <p>Cut backs to provincial government programs & unnecessary hiring practices when our province is in crisis mode. 50 thousand were added to the government payroll under the previous administration, how did we manage before that point in time ???</p>	<p>See the above, in addition, promotion of made in Alberta programs that enhance Pension Plan Contributions, a Provincial Police force tuned into the pulse of Alberta as opposed to what we now have now. This would provide a much more comprehensive structure to law enforcement, in tune with the province, while being controlled locally.</p>	<p>Promoting this province worldwide when it comes to our Engineering & Educational talents related to the Oil & Gas recovery. Leading edge technology, Alberta home grown intellectual ability when it comes to new oil & gas enhancement methods related to recovery & refining etc.</p>
T9E	There has been so much emphasis on new construction that maintenance of existing roads, structures have been neglected. Rome wasn't built overnight and that's what the political bodies have been trying to do in the past	There seems to be an exorbitant amount of government employee wages going out. Maybe these employees should do their jobs so it doesn't take 3 of them to install a light bulb	Let's face it. Alberta is a resource rich province. Yes it needs to be produced in a responsible manner but when there is so much resources being brought into Canada and not being used from our back yards; something is gravely wrong there

t8n	Health - (the usual)plus doctor recruitment, options for private-ish health services i.e. if someone has the means to go to a private clinic for certain procedures, they should be encouraged to do this and free up space in the system. As it is, there are a whole series of private services available for important needs: dental is private, private education is available, psychologists are private, and the list goes on. Economic drivers - entrepreneurship, foreign investment, etc.	- Amalgamating small towns. There are too many municipalities each with their own administration, elections, etc. - Alberta School Boards Association and other similar lobby bodies need to have funding capped. Fees are paid through public education dollars and do not serve Albertans, let alone students. - There should be a way to put the burden of managing and collecting unpaid municipal bylaw violations that do not have to go through the provincial courts. Barking dog issues, noisy party matters, and photo radar tickets from 200+ municipalities adds cost and time to the provincial system. Municipalities benefit from the revenue, but I don't know how much they compensate the province for the administrative burden created by peace officer tickets.	- Brand Alberta as the place to be for entrepreneurs. This can become a global campaign as well. New idea you want to test? Do it in Alberta. want to keep start-up costs low? Come to Alberta... - I am pleased with the attempts to bring foreign investment back to Alberta. - find ways to encourage and assist the "gig economy".
T1B	Education, social programs, health care and infrastructure	By not providing corporate tax cuts and by not wasting money on creating useless panels, focus groups and a media war room. Implement a sales tax, like all other provinces have.	By diversifying our economy and giving incentives for renewable energy
T2C	Health care, education, diversification, job creation	Close down that stupid war room, total waste of money, along with the tax break for oil companies who are leaving Alberta anyways. Stop with all the frivolous court cases, that have already been lost by other provinces.	Lose the cut and slash project to health care, education. Hire unemployed to clean up abandoned oil wells and have the oil companies pay for them.. NOT THE TAXPAYERS!!!! Open more cannabis growing plants, seems to be a demand for that crap even though I don't agree with it even being legal.
T0K	Drug treatment and rehab, the streets don't feel safe like they use to.	Ensuring foreign trained doctors are compensated well and remain in Alberta and come to Alberta. Foreign trained doctors don't cost the Alberta government anything for k-12 or for their medical training, then they come for merely their productive years, meaning they provide large cost savings overall.	By ensuring that Alberta is a leader in future industries. We need to sell the high vacancy in especially in Calgary along with it's highly educated work force.
T2E	Paying off the debt	Privatizing health care and education	Reduce taxes, cut regulations and get out of the way of the free market
T1K	Climate Action, Education, Health Care	Eliminate the "War Room"	By supporting renewable energy
T6M	Wages and salaries in government departments and higher education are out of line with the private sector and need to be rolled back, considerably, starting at the top. Also, it appears as though a lot of managers have been hired in the past 10 years which should be evaluated by doing an overall program review. I'd start with a program review in Alberta Environment and Parks which has a top-heavy organizational structure.	Streamline the judicial system for what are relatively minor offenses that really don't warrant a court appearance and take up time for judges and prosecutors that could be easily handled by specified penalties instead of long forms for court appearances. There seems to be a lot of new staff in the Justice and Solicitor General department based on the number of sheriffs I see in Alberta nowadays.	Downsize the public service and free up money to attract new investments in Alberta's economy by offering incentives to attract new business opportunities.
T4P	Tax breaks to refineries to process heavy oil into finished product (gasoline, diesel, jet fuel etc	Cut union at the top. Increase workers and reduce management (education and health care). If left to the unions they will cut services so people will complain.	Drop corporate tax to zero for 10 years (only on Alberta product development ie. finished products not raw product)
T1s	Education, health care, seniors	Tax oil companies like all of us	Cut bureaucracy Invest in future technologies Get a new deal

T5L	Invest in ways to attract businesses to Alberta	Yes. We are facing record levels of taxation to support government programs that don't produce a return on investment that makes sense. Cut unnecessary regulations and overspending on marginal programs.	Yes!!! But by encouraging private sector investment and solutions. Government spending is not a promise of economic outcomes. Because civil servants are not investing their own personal money, so accountability is pretty much non-existent.
T4H	This is a horrible, biased survey. Shame on you!!! I can answer it as many times as I want (so how will you know how many actual respondents you had vs. responses?). Additionally, you should be asking about REVENUE sources and not just expenditures. Revenue sources could be and should be TAXES. This includes a PST and Carbon Tax, as well as not giving MY hard-earned money away to oil corporations who don't give an actual flying fuck about any of us. That was the most reckless thing I've ever seen any government do.	This is a horrible, biased survey. Shame on you!!! I can answer it as many times as I want (so how will you know how many actual respondents you had vs. responses?). Additionally, you should be asking about REVENUE sources and not just expenditures. Revenue sources could be and should be TAXES. This includes a PST and Carbon Tax, as well as not giving MY hard-earned money away to oil corporations who don't give an actual flying fuck about any of us. That was the most reckless thing I've ever seen any government do.	DIVERSITY THE ECONOMY. Focus on renewables and climate change adaptation and mitigation (including for the farms of central and southern Alberta who will be in a dire situation shortly). Stop cutting. INVEST while interest rates are LOW. This is a horrible, biased survey. Shame on you!!! I can answer it as many times as I want (so how will you know how many actual respondents you had vs. responses?). Additionally, you should be asking about REVENUE sources and not just expenditures. Revenue sources could be and should be TAXES. This includes a PST and Carbon Tax, as well as not giving MY hard-earned money away to oil corporations who don't give an actual flying fuck about any of us. That was the most reckless thing I've ever seen any government do.
T3C	Give public schools back their money. Divesting from Alberta's oil economy. Our landscape is one of the ripest in Canada to be used for ACTUALLY renewable energy resources. Imagine the jobs and money that could be made and the positive environmental impacts if the Alberta government actually cared about meeting any kind of significant GHG emissions reduction target. Re-training programs for oil and gas workers to support the shift to renewable energy sources. People are against the change because they are scared for their livelihood, and that is fair, we cannot disregard literally saving our planet to ensure the jobs of a small amount of the population.	Cut the war room. 30 million dollars+ to actively work against the future of this country and this planet makes absolutely no sense.	Recognise the value of the arts and support them. Both in schools and in the broader public. Diversify. Support a guaranteed basic income to ensure every citizen can afford to live (and spend) in this province. Support re-training programs that help transition away from an oil based economy. Support more green initiatives.
T1J	Diversifying the economy, public health care and education resources for Albertans.	Close the "War Room" a colossal waste of money! Look at how "top heavy" AHS is and stop attacking the front-line workers.	By diversifying.....oil and gas are over.

T3Z	<p>I government needs to offer additional support for individuals with chronic, incurable conditions which require support to stay alive, eg. type 1 diabetes, cystic fibrosis. These patients represent only a small percentage of government spend, but enabling them to make the correct choices to support good health and not end up in hospital beds and a drain on the system is good fiscal policy. Enable them to obtain the latest in technology advances to keep these conditions in good order will save the government vast sums of money in minimizing the cost incurred by complications. Closed loop diabetes management systems, sensors to read blood glucose and report to diabetic pumps to enable automated corrective actions will reduce the amount of complications type 1 diabetics endure which way heavily in \$\$ on the system. Offer free dental care which would encourage many more people to move here, companies to possible move here due to benefits for their employees and Alberta government wins by increasing tax base.</p>	<p>Streamline processes, automate services such as prescription renewals, appointment bookings, lab bookings, this will eliminate \$\$ and make for a more productive and efficient system.</p>	<p>Government needs to encourage companies to come into Alberta and set up head offices or transfer head offices by selling our province and giving companies incentives to move here; lower their taxes, give them tax breaks and other incentives...sell the fact that the cost of housing, fuel, is less and our services are better (health care, etc.)</p>
T4E	<p>Pay off debt!!!! Government is screwing my grand kids!</p>	<ul style="list-style-type: none"> - Wage freezes. DO NOT cut pay. It is terribly unfair especially for younger government employees who are typically overextended with mortgages, car loans, etc.. - Cut expense accounts. - Demand each department submit a plan for a 10% reduction in expenses. - cut the horrendous waste from the medical system. - SMALLER GOVERNMENT!!!! 	<ul style="list-style-type: none"> - Cut taxes and regulation to promote business. - Do not stick your noses into the business world just give it the tools to succeed.
t6w	<p>Transportation this little cold spell we just had cost me \$848 I moved to my area because I was promised public transportation access but 2 years later there is nothing! I can't afford this!</p>	<p>Take services from less frequented routes or times when certain routes are not needed. Just saw a bus yesterday morning completely empty off of Henday and 153 Ave at approx. 10:20 am. Empty bus except the driver. Yet not one to service new subdivisions that are full of people depending on service.</p>	<p>quality education too many people are just rammed through systems without actual apprenticeships resulting in insecurities and job related accidents.</p>
T2Y	<p>More than ever we need to prepare young people for their futures. Instead of reducing the amount of resources for them, this is a time to strengthen their resources so they can broaden their ability to serve a useful and essential role in society. Education isn't only about textbook and classes, it is about building capacity and encouraging growth and knowledge. Professors are stretched to their maximum now just trying to get essentials done and that is with a lot of non-paid overtime hours --let us do what we prepared ourselves to do and that is to instill knowledge and create critical thinking your people with initiative and desire to be highly effective in their environments, whatever that may be.</p>	<p>There is always talk about savings within government itself, but that does not seem to be where nearly enough (if any) cuts are made. We continuously hear about major spending on travel and other events by politicians; each politicians appears to have a very well serviced office with many employees. Every government department I have had to work with is very well staffed and funded and I am not aware of anyone who has to volunteer 2-4 hours of overtime every day and numerous hours on the weekend just to get their job done. Either governments need to find ways to work more efficient (which is something that is not visible) or require staff to volunteer hours to get their jobs done. In education, we don't know what a 9 to 5 job means and our families, along with us, suffer for this.</p>	<p>I am very aware that we need to make cuts, but making cuts in areas that prepare individuals for jobs and economic growth is not the way to go. Governments need to continue to look for inefficiencies and possibly departments or parts of department services that we do not even need. Take banks, for example, making record amount of money have cut back tremendously of their services and made people more responsible for many of the services. This is not an entirely bad thing as it keep people who may have become dependent on others for doing everything for them, involved, and in many cases still learning and being productive. I am 17(1) and still work full-time and do everything in my job and personal life online and with very little support.</p>

T5T	<p>Justice department. Hire more prosecutors get the back log cleared up. Too many cases are being dismissed. Criminals think there are no real consequences. Health care needs to be a priority. 17(1)</p> <p>I feel as if regular Albertans don't count, only the very rich and oil companies.</p>	<p>Stop giving money away to oil companies! Most of those jobs will never come back because they have been automated. The break in property taxes is going to cripple the municipalities that have been depending on that revenue. If the UCP wants to do that then they should take the hit and help out the municipalities. Stop spending ridiculous amounts of money to undo everything the previous government did. It's a waste of money and costs more in the long run. Example: taking the cap off insurance rates. What did the government think was going to happen? Now average people are dealing with up to 30% increases! Nobody can afford that. Now a committee has been formed to investigate (more money being spent). If the cap has been left this wouldn't be an expensive problem! The war room is a travesty. There is no transparency or accountability. It is unfoipable so everything can be hidden there. It has been nothing but an embarrassment from the targets it has gone after (a small newspaper) to the logo debacle. I for one would like to know if Jason Kenney draws a salary from the war room. That would be corruption at the highest level and another place to save money because he is NOT entitled to two salaries.</p>	<p>DIVERSIFY! It would be great if we boomed again with the oil industry, but that's not likely to happen. To cover ourselves we need to look at alternate fields of work that pay living wages. We need to invest in tech companies and green energy as well.</p> <p>This is something I feel passionate about. We need to hire more prosecutors, more police, more social workers, and more immigration personnel. This might overlap a bit with the federal government. These are all jobs that need to be filled we have backlogs that can be crippling. So many criminal cases are thrown out every year because we can't prosecute them in a timely manner. The message this sends to criminals is that there is a good chance that even if you are caught there are no real consequences. We need the more probation officers to help supervise them if they are not given jail time. 17(1)</p> <p>Social workers help tackle all sorts of issues that can drain our resources. They can help people get help whether it's with food, shelter, or medicine before they have to hospitalized with serious issues that could have been avoided. They also help people get the skills they need to get a job so they can become independent. Immigration files are backed up as well. We need people to get through these files and get the ones deported that do not meet canadian standards. All of these are good jobs, which means people make a salary that they can live of and have disposable income. All of these jobs pay income tax. The important part here is disposable income, the money that comes back into the economy through eating out etc. A big problem now is many families are just barely getting by (especially with the insurance rate hikes) and they have no money to shop for non essentials. Without that disposable income restaurants and stores will suffer and their employees will lose their jobs. Another very important thing to remember is that the cost of living keeps</p>
T3J	<p>Education - all levels Health Care, including funding nurses. And doctors. Safe consumption sites and mental health</p>	<p>Eliminating the energy "war room". Reducing travel of government employees. Stop challenging the federal carbon tax</p>	<p>Restore grant funding for film and software Stop the war room and damaging alberta's reputation Accept climate change and put forward meaningful environmental programs Open way for economic growth in renewables</p>
T5E	<p>Education, healthcare and support for the jobs lost through the new govt</p>	<p>Increase business taxes, increase personal taxes for wealthy individuals, bring back the carbon tax.</p>	<p>By not dissolving positions in healthcare, but not cutting back on education, by increasing educational supports, by increasing supports for those who need them.</p>

T0E	<p>MSI funding needs to be reliable and consistent in order for communities to plan.</p> <p>Assisting tourist communities needs to be further addressed in order to help the small tax base in these communities (for example, Jasper, a community of 5,000 people with an influx of over 2M visitors per year). The province (and feds) get a lot of benefit from tourism communities and should assist these communities in order for them to claim a small 'tax' from visitors.</p> <p>Infrastructure needs to be addressed</p> <p>Climate change should a top priority</p> <p>Get rid of the useless "war room" and re-visit the issues of health and wellness of our province. For example cutting of nurses, reduction of AISH benefits, issues with education. Please do NOT take us back to the Klein years. It was a disaster which took us years to recover from. We need to be thinking ahead, not just focusing on today.</p> <p>Also please address diversity in our employment in this province. We cannot continue to count on oil and gas revenues. Again, I will point out that we have other 'industries' in this province other than oil and gas.</p> <p>Please do not waste any funds on exploring the idea of municipal elections being of a political nature. That is the strength of our municipal governments in each community in the diversity of the elected officials and lack of 'larger political' influence in decision making. Keep partisanship out of our municipal politics.</p>	<p>Cutting the 'war room'.</p> <p>Whoever savings are found should not be on the backs of the most vulnerable.</p>	<p>The wheel does not need to be re-invented. There are many community development models and organizations out there which have been successful. This government needs to be intent on the longer term success of the province with oil and gas NOT being it! We need to be open and welcoming to IT, education, technology, the film industry, etc. which will encouraged and welcomed with incentives to bring their expertise to the province. Again, look at offering assistance to 'tourism' communities to assist in dealing with infrastructure issues and marketing.</p>
T0C	<p>Breaking down interprovincial barriers to trade. Getting the pipelines built. Keeping frontline workers working. Assisting low income and seniors without putting the burden on the lower middle class.</p>	<p>Management of boards and committees. Whatever is taken from frontline workers must be done to middle and upper management. Nursing 1% decrease in frontline staff is also Alberta Health Boards 1% of middle and 1% upper management.</p>	<p>Decrease bureaucracy upper management give those funds to frontline workers.</p>
T5R	<p>Education Health Care Elderly</p>	<p>Not give billions of dollars to corporate friends to help save the oil & Gas industry.</p>	<p>Tax breaks for small and medium businesses</p>
	<p>Housing, Education, Healthcare, Research, basic income</p>	<p>MP expenses, reverse tax cuts to the ultra wealthy.</p>	<p>Diversify the energy economy, Tax on wealth so that money gets moving again instead of stagnating, accomplishing nothing.</p>
T2Y	<p>Mental health. Not phone lines but actual facilities and trained staff.</p> <p>Addictions, again more facilities. Reduce the wait time for someone to get into rehab.</p>	<p>Alberta health services. How are they so terrible?</p>	<p>Get our oil to outside markets</p>

T7X	Services and supports for children Vulnerable populations - People with special needs can be important contributing members of society with the right support. People at risk due to mental health, finances, abuse - prevention and early supports can reduce the cost of providing services during and after crisis.	See above - if the right populations are provided quality supports at the right time, government will find great savings. Supporting families may prevent the need to remove children from their homes and place in foster care. Supporting those at risk due to mental health and finances will save with emergency services, in the courts and correctional system. Supporting families with children with special needs from as early as possible can prevent the need for access to therapy later, and help set those people up to be active, contributing members of society.	Quality supports to newcomers to this area could reveal a great number of skilled, able people who may bring education and experience that could contribute in a number of valuable ways.
T7Z	Education and other public sectors.	Implementing a provincial sales tax	N/A
T2M	Delivering programs that the federal government isn't responsible for. Flattening bureaucratic structures. There are way too many managers and not enough front line people. Government management needs to be cut by mla's, they will NEVER cut their own staff!!!	Cut government red tape! There are too many rules and regulations existing that only get marginal results but drive up costs to consumers significantly.	Diversify the economy. Cut red tape.
T5t	Social services Harm reduction Opiate crisis Homelessness Affordable housing Environment	Cutting useless management position opposed to front line Taxing higher classes	Renewable energy Spending money on housing vs. Having vulnerable people in hospitals, shelters, drunktanks Encouraging Supporting local
T0H	10% cut in salaries across the board and a 5% sales tax. Legislation prohibiting deficit in operating budget without a referendum.	Salaries. Especially at the upper level borocracy	Stay the he'll out of the way. Cut taxes.
T8H	Infrastructure, healthcare, education. Not related - keep religion out of politics.	Healthcare accountability, law enforcement, equal taxing for everyone.	Get rid of tax incentives, avoid federal carbon taxes.
T8V	Homeless. Healthcare. Education. I dont want to see money thrown at anything either. There should be initiatives set up to encourage the homeless. Grants for education with outstanding student achievement.	Pay them selves less. Better decisions would be made about a majority middle class earners if those who represent us also made middle class wages.	Keep our resources HERE AND process/refine HERE. Clean up here.
T8H	Infrastructure, healthcare, education. Not related - keep religion out of politics.	Healthcare accountability, law enforcement, equal taxing for everyone.	Get rid of tax incentives, avoid federal carbon taxes.
T6l	Health and education	Corporate tax breaks and politician salaries	Support oil and gas as well as other industries such as entertainment
T2T	Health and Education Job creation	Health and Education Freeze spending and the agencies will be forced to find savings. Ignore the whining from the unions. They only care about themselves, not ordinary Albertans.	To a point. No corporate welfare. Support the firms that hire. No blanket cuts hoping they'll spur the economy. They don't.
T6A	Education and health care	Transportation potentially	They should not be cutting budgets in any areas, keeping them the same would help to foster jobs and not cut them

T7X	They should focus on youth because they are the future. If they implement free university or college (as long as the student kept an 85% grade average or higher) then our entire country would be full of working citizens as adults. SO many do not go through with secondary because it is just too costly. Example: If we trained more doctors we would no longer have the wait times we do now. So it trickles down the line of way more health care, and way less homeless. This is for every career.	Unfortunately I feel it should be taken away from welfare recipients. With the online jobs there are now a days there is absolutely NO reason why anyone can not get work. I also feel that no matter how much you make 25% of your income should go to taxes across the board. The higher paying worker almost always worked very hard to get that pay and now the government wants to punish them for it by taking more of it away. And those of us who are making less and paying less taxes no longer strive to make more because we end up paying more in taxes. If everyone strove to make more then so would the government. Simple math!	Same answer as question #1. FREE college & University. Set some limits like 1 type of course (like vet then after you cannot then decide to also take accounting, you would have to pay for second choice) & your grades need to be held to a higher standard. Otherwise you will end up with students being in college forever.
T4T	Education and health care	Justin Trudeau	Through pipelines
T4T	Education and health care	Justin Trudeau	Through pipelines
T6K	healthcare education	add a pst	focus on new, developing technologies
T2V	Reduce unnecessary gov't spending. Focus on bringing business to Alberta, to reduce unemployment.	Trim government and unnecessary public service jobs and benefits. Bring spending in line with other provinces. Make publicly funded employees have to prove their worth like private sector employees have to.	Encourage businesses to come to Alberta and/or stay here with attractive tax laws and a unique Alberta business platform, including targeted support for businesses diversifying our economy, entrepreneurship and energy businesses who are concentrating on smart low emission energy.
	<p>1. Diversifying the economy on industries beyond oil and gas. The UPC government tax-advantaged breaks for oil in effect since July 1, 2019, is not helping Albertans. For example, despite a \$233 million benefit from Alberta tax cut, Husky Energy is spending its capital in Saskatchewan and the US and laid off Workers.</p> <p>2. Stop eviscerating the public service. Public service workers, such as lawyers, nurses, and teachers are dedicated workers. The recent Justice minister decision to lay-off a significant number of civil service lawyers is short sighted. Such lawyers know the business of various departments of the government and save the Province from expensive lawsuits by continually helping it stay onside of its legal obligations. Justice lawyers have been on a wage freeze for several years. The alternative engagement of private firms will not save money as they would bill at much higher rates and not be bound by any earning limits.</p>	<p>1. Close the Energy War Room. Put any money involved into other projects. It is a waste of taxpayers' money and it is an embarrassment for this Province. For example, it used intellectual property inappropriately and it's members have misrepresented themselves as reporters. There are also no ways to actually measure its success by any metrics.</p> <p>2. Stop appointing and paying committees and panels to study issues that could be looked at internally by government departments who know the issues and can propose solutions. These committees and panels are just-kicking the problems down the road.</p>	re-instate suite of business tax credit programs for tech sector. Such credits help support and incent growth industries, such as digital animation and clean technology, to establish business in Alberta. UPC reversal of tax programs like the Interactive Digital Media Tax Credit was short sighted. Simple reversal of these previous NDP government programs is driving away a generation of innovative businesses from this Province.

t8c	i think the government should stop the ridiculous overspending on government and civil service positions--salaries/benefits/payouts have reached extreme heights, and have no relationship with the private sector! it has become a gravy train that politicians are either reluctant to tackle, or in on themselves.	mismanagement in pubic sector departments--make people accountable for their actions. no one seems to care when contracts overrun, or departments spend ridiculous amounts of money on mistakes, lack of oversight etc. there seems to be absolutely no one managing these departments who is in any way accountable to the public.	by encouraging diversity in the economy and supporting those initiatives which are most often taken by small business to those ends. big business seems only interested in wrestling tax cuts and laying off personnel. Our way forward is often thru the initiatives of those small stakeholders who have new ideas.
T2X	Healthcare and education. No payouts for renewable projects that aren't properly vetted. I.e. that light bulb replacement program the NDP had. Made no sense to pay for employees and vans to runaround to replace light bulbs!!!	Getting rid of programs that don't make sense like the light bulb one. I think we need to get aggressive about trimming down government.	Keep costs down for families so they can move upward economically. Reintroduce income splitting so family focused families can get a break.
t3g	cut spending	civil servants and unions and special interest groups and make them accountable	private sector jobs
T2W	Education, health and emergency services, helping to keep the population educated, healthy and safe.	Rationalized government administration. Less big business tax breaks.	Investigating and supporting long term initiatives that do not rely solely on the energy sector.
T0C	Economy, safety including more judges and courtrooms,education help for those changing careers.	No more than cost of living wage increases for provincial employees, education and nurses.(These persons have not been effected by unemployment and from what I have read do not get the dire situation too many families are in) this fact needs to be communicated. The unemployed are feeling helpless, worthless and futureless....all they want is to make a living for their families.	Relentless meetings with federal departments, marketing(debunking the myths) of AB oil industry around the world. Monies to re-educate the unemployed in new professions.
T1S	Health care and education at all levels	Large projects that do not affect health and education	Stop cutting health care and education. Both heavily influence social determinants of health which long term affect societal participation.
T1S	Health care and education at all levels	Large projects that do not affect health and education	Stop cutting health care and education. Both heavily influence social determinants of health which long term affect societal participation.
T9W	health.	Education, public service and MLA wages and benefits	not sure esp. not 100% in oil and gas.
T5t	Roads and infrastructure	By mandating more efficiency from major unions, e.g. nurses, city, etc. Some frontline staff have over ten managers, that's not efficient	Growth and support big projects, infrastructure etc. Whatever happened to the nuclear plant in North Alberta that was supposed to be built.
T5z	Healthcare, education	The war room	Support oil and gas but also other sectors including healthcare and education, need to promote oil and gas while supporting non-renewable resources for the future. It's not just today you need to think about.

T5Z	<p>I believe that spending priorities should be health care and education. I think education should always be number one in provincial spending because it is the educated people in this province which have made it great they are the ones who have come up with the innovations that we see today . Health care is also the most important and should not be privatized what made our province and country the most respected in the world is because we treat each person in our country equal and they get the same help when needed . It would be a sad day to see our healthcare become like America's.</p>	<p>I believe that we would be much better off if we were to have a sales tax it would go a long we could have a health care monthly fee this would also help to be able to keep our health care in tact . I also think that we have some minister and heads of government corporations which have to many assistants . When I saw Mr Kenny get off the plane in Ottawa he must have had at least twenty people with him did he really need that many assistants with him. 17(1)</p> <p>I also believe that giving corporations tax breaks does nothing Premier Kline gave tax breaks to large oil companies where are they now ?</p>	<p>There is no government that creates jobs .it is people that creat jobs and it is small business which is the back bone of this country they are the businesses that need a tax break. No matter what you give large corporations it has little effect on there ultimate decisions .They tell me that 33% of our unemployed are between the ages of 18 to 24 that tells me that most of these young people are not skilled . These people need training which the government should supply . We will need skilled people for the future and the governments job is to ensure that skill people and ready to that these new jobs .This is how our government will ensure we are on top . 17(1)</p>
T4B	<p>Education, especially in growing school districts</p>	<p>Efficiency in administrative staffing Increase sin taxes more Revisit the corporate tax rate</p>	<p>Invest in infrastructure projects for growing communities Support for municipalities (not just financial but understand their needs/priorities because they know them best)</p>
T0B	<p>Equal education Health care</p>	<p>Social programs</p>	<p>Support Energy, farming, forestry</p>
T5L	<p>Schools, hospitals, aish, mental health, community granting like cfep and cip</p>	<p>Dont waste money on researching separation from canada or splitting our pension from Canada pension. System is not broke. Focus on interest based problem solving to work with other parties in other levels of government.</p> <p>Municipal Gov't has the best way to manage infrastructure. They are closer to the ground. Increase their funding as they manage the funds better then the prov could at a higher elevation</p>	<p>Maintain minimum wages . Donot discriminate on age. Get the pipelines to market. Broaden our assets by developing strategies outside oil and gas. Health, innovation, technology, climate change.</p>

T2A	Economy improvement including oil and gas as well as emerging sectors like TECH and renewable energy.	Alberta Health Services: Senior executives should be paid well in order to attract and keep good talent, but salary+bonuses of \$700,000+ are too high. Compare to other provinces to regulate salaries and bonuses that are competitive but not outrageous.	<p>#1: Fix the war room: Give regular citizens and businesses the info and searchable/shareable resources they need to explain WHY Alberta oil and gas IS the best, and what the issues surrounding WCS oil really are and how they can be fixed. We need to be unified to bring back our biggest industry. Currently I have difficulty talking to others about these issues, and need reliable sources to cite to others. This could come in the format of websites as well as social media. With the right Tech, we can use social media to our advantage instead of our detriment and regain the confidence of investors and the world.</p> <p>#2 Incentives for energy saving initiatives as well as incentives for expanding renewable energy and TECH. This needs to be a combination program to be effective: The energy incentives stimulate the economy in the short term, while supporting innovation helps to make it sustainable over the long term. Otherwise all the jobs created by the incentive program(s) will disappear as soon as the incentive ends.</p> <p>#3 - tech is the future. Invest in the tech industry. It will help make oil and gas more and more sustainable for longer and also diversify our economy. For example, SAI'S new Information Systems Security program is highly in demand, but it is double the cost of many other similar length programs. This is a barrier to entry and limits growth.</p>
T6X	Adequately funded public education Adequately funded public healthcare Affordable childcare	stop giving Tax relief for large corporations Removing the Canadian Energy Centre	Providing affordable childcare to grow the workforce Support economic diversification with incentives for non-oil and gas industry
T2y	Education, healthcare infrastructure, transportation	School board administration their budgets should reflect the biggest portion being spent in the classrooms teachers, classroom aides, special needs training	Support infrastructure projects green line arenas etc anything that is diversified Oil reclamation can put a lot of people to work, subsidizing wages when there are slow downs
T2y	Individuals with special needs, seniors as well as the cost of living.	Province should stop giving money to Quebec for a start and invest in Alberta. Stop building sports facilities and buying art and invest in priorities first.	Fight for the pipeline which will create so many jobs.
T6g	Healthcare, environment, education - primary, secondary, post-secondary and green initiatives.	Taxing corporations Taking back my portion of the 4 700 million dollars that was given to friends.	Investing in infrastructure spending like Harper did in 08
T5H	More healthcare, teachers, nurses. Getting O&G to pay their fair share of taxes	Close the war room, stop the tax cuts to O&G	Resign
T3E	Mental health, education, small business	Salary of elected officials	Mental health funding, more mandated holidays, other initiatives for families and communities to come together

T3B	<p>Diversifying our economy. Supporting industries other than the energy industry (technology, agriculture, film, tourism). Environment (remediation, orphan wells). Education (primary, secondary, post-secondary). Savings - a percentage of all resource revenue from non-renewable resources should be saved for future generations.</p> <p>A balance sheet has two parts. Expenses and REVENUES. To improve public finances both sides of the balance sheet must be considered. A sales tax should be considered to get us off the resource rollercoaster.</p>	<p>Eliminate the Energy War Room. It is a waste of money. Industry has their own industry association and communication and marketing departments and don't need this subsidized by the taxpayers.</p>	<p>Support education so employers have a highly trained work force. This will also be a selling point for new companies to come to Alberta.</p>
T4T	<p>Balancing the budget and getting rid of debt, reining in education and health reasons spending. Resource industry innovation that eliminates need for carbon pricing.</p>	<p>Education and healthcare spending (doctor, nurse and teacher wages). Post secondary spending - get rid of tenured professors who do not contribute to education system.</p>	<p>Continue to reduce investment red tape and taxes for entrepreneurs.</p>
T0L	<p>Government should focus on Marijuana industry as Alberta major oil sector has seen lots of movements through out the years. Marijuana is new and building its roots in Canada by creating new jobs and education profiles. Allowing to have grants for attracting students to pursue this career. Promoting the industry to attract students will be a key role in this industry. More people gets educated better the sector will perform over long run.</p> <p>I also think introducing a new hotel green benefit program for all hotels throughout Alberta will motivate the owners to make their hotel green and show their support to the planet.</p>	<p>Government should introduce a land transfer fee for any new property purchase over 500k with a waiver for first time home buyer as residential home. This will add a revenue stream and will reduce residents from buying multiple properties</p>	<p>Government should focus on Marijuana industry as Alberta major oil sector has seen lots of movements through out the years. Marijuana is new and building its roots in Canada by creating new jobs and education profiles. Allowing to have grants for attracting students to pursue this career. Promoting the industry to attract students will be a key role in this industry. More people gets educated better the sector will perform over long run.</p>
T0C	<p>Schools, health care, employment , Rcmp, agriculture</p>	<p>Less \$ spent within the government spent on wages for the prime minister and cabinet ministers, less tax payer paid trips. Use the internet and phone for meetings and talks, less cost. Don't let immigrants into our country to live for free.</p>	<p>Grants to our schools,. minimum wage by age (gives our young people something to look forward to),. help farmers,. allow less immigrants into our country, think of Canada first before letting more people in to take our jobs.</p>
t3C	<p>Wild fire fighters need to be reinstated and police departments and RCMP need more support due to the DRAMATIC rise in gun and rural crime. Technology that would help with converting carbon and pollution such as burning waste for electric power making all plastic recyclable legislation</p>	<p>Get rid of the 30 million dollar War room it is a waste of money it is a failure before it started BAD MANAGEMENT Get rid of Mega infrastructure projects like the Green line and Stoney trail good concept but too MASSIVE Limit and accountability for expense accouts of all politicians in AB Have the Oil compnaies that owe small municipalities property tax pay the tax 157 million back to taxpayer otherwise the UCP appears to be ABOVE THE LAW!</p>	<p>No to all layoffs use wage and hiring freezes instead the government has created a fear for jobs and layoffs which has resulted in less buying by consumers. Diversify the economy quit the rhetoric Alberta has become a divided angry and fearful province. Clean up old oil wells!</p>

T3Y	Local and social services Fire/police/emergency Education Healthcare Small businesses- entrepreneurship Alternative, renewable energy sources	Sales tax- 1% would do wonders Quit cutting services we need! We're quickly becoming the old 90's Nfld trying to hang onto the cod industry.enough emphasis on oil and gas already. What's left is shipping out anyway. You're investing our money in a dying industry that is moving south regardless.... how about trying to get ahead of the game	Get rid of this ridiculous war room. Who are you trying to convince- us or yourselves?!? Start investing in our future- EDUCATION! My kids will not be able to afford post secondary if hikes continue.quit minimizing the basic need to learn. That is what leads to growth..
T6X	Education and health care. Nuclear power.	Tax incentives for corporations only if they show evidence of and commitment to staying in Alberta and creating jobs in Alberta.	Invest in research and creation of non fossil fuel energy sources especially nuclear power. Continue to support the oil industry that exists along with pipelines but we need to move away from fossil fuels. Get rid of the war room.
T1S	Reducing class sizes.	By reducing equalization payments to other provinces.	Getting companies to want to come and invest in Calgary.
T6H	I believe government should be cutting in non-essential areas such as administration	Presently the Government spends nearly 30% of education dollars on Alberta Education. Most of their duties (which include changing curriculum every second day) are not essential to education in Alberta although I know they are telling you otherwise. They always justify their own existence. One example of idiotic curriculum change is math learning by "discovery" It took centuries for the brightest mathematicians to develop theories of math--and our curriculum developers believe students should be able to discover all this? HOGWASH!! Alberta Ed is snowing you. The same way they snowed your government into thinking all students could study the same curriculum which sounds good to politicians but is a false assumption. And in the same way politicians fell for the idea that special needs students should be placed in regular classrooms. Politically it is a great move but it is causing elementary teachers so much grief that they are leaving --or getting stressed out so much they cannot run a classroom. I would not even consider becoming a teacher these days (And I did teach for the EPSB for 17(1) One other thing is the idea that students can be taught the curriculum individually. I used to call this the "hit and miss" curriculum which failed to teach even the basics to average students. So please don't be "snowed" by Alberta Ed and their silly curriculum ideas. If you cut 30% of Alberta Education, you won't have to ut eaching positions. Same thing goes for Alberta Health--cut the middle administration--not front line workers like nurses.	I think we need a viable energy industry. We should start by focusing on the improbability of climate change and particularly the idea that there is a climate disaster!
T1A	Health and Education	Over paid bureaucrats and the committee rates. Revise down the rates for created committee chairs and participants. Reduce the number of managers in public service. Target services for area of need rather than universal. Remember that whatever you add to the individual, really hurts fixed income and low wage earners.	Stay out of the way. No Corporate welfare.

T2J	1. Cut spending. 2. Cut spending again. 3. Reduce the size of government.	1. Reduce the size of government departments wherever possible. This includes layoffs. 2. Eliminate waste and duplication of services. 3. Never give handouts to corporations. 4. Reduce expense budgets of all managers and MLAs by at least 20%. Zero frivolity paid for by taxpayers. 5. Eliminate giving \$ to sports organizations on all bids like Olympics, Commonwealth Games, NHL teams, fieldhouses, arenas, etc. 6. For AHS discover best practices of other lower cost provinces (all of them are lower cost aren't they?) and implement them. Obviously layoffs are necessary. 7. Enact legislation to handle future strikes of workers of essential services such as doctors, nurses and teachers, etc. 8. Show you lead by example by taking minimum 15% pay cut for all MLAs and highest paid managers and Premier. 9. Flatten the management structure in all government and AHS departments. This means layoffs. 10. You know exactly where the money has been blown in the past and where it is going now - you have the documents. I've not seen them. We've elected you to fix it - so get to work! 11. Stop threatening Ottawa with getting our own provincial CPP equivalent and RCMP. Too expensive and unnecessary.	Get out of the private sector. Cut spending. Reduce the deficit and debt. Fix our equalization payments transfer of wealth to Ottawa. Do not give huge sums to any private sector. Or anybody else for that matter.
T4C	Reducing Environmental impacts	Giving Tax breaks to large corporations	Creating jobs to reduce environmental impacts
T8r	Health Care reform. Send undercover investigators into hospitals at all hours of the evening and eliminate those jobs that are not doing anything. Spend more on reducing awful wait times at ERs.	Generate revenue by bringing back health care premiums, so essential medicines are not cut. Give huge tax credits to those who donate towards imaging equipment purchased for hospitals	Put the insurance rate cap back on. We are going to see many uninsured motorists on the roadway
T9K	Healthcare upgrades Road maintenance Housing program to eliminate homelessness	Cut 25\$ Daycare Refugee stance	Oil, Gas & Pipelines
t8t	Job creation The economy A fair deal for Alberta	Reduce Government Reduce red tape Bring wages in line with other provinces Increase productivity and attendance for public employees (The pathetic amount of productivity by some public workers / union staff compared to private sector / self employed is brutal)	Reduce overall tax burden Reduce the cost of doing business in Alberta Do not listen to Unions - they are half the problem Attract business big and small to create private sector jobs Contrary to what the lefties say you are on the right track!

	Why are you cutting education??? Afraid educated would not vote for you??? Why cut spending on health care, want to balance budget on backs of poor and sick. Why not find green technology are you just looking out for oil and gas at expense of our environment	Stop doing town meetings and surveys if you have already made all these decisions before hand. Why was there no Townhall meeting in Edmonton. Shut down war room, this is not Russia or North Korea, we all have freedom of speech. Why aren't you looking at all the foreign oil companies funding climate change deniers.	Don't think that oil and gas is going to save our economy and don't blame the rest of Canada for believing in science. All your noise about not getting a fair deal and seperation is not helping to get investment in Alberta.
T0G	Healthcare is a priority. Keeping criminals locked up in jail is my priority. This catch and release we have going on in Alberta is just not working. Us rural Albertans are afraid in our own homes. We need castle laws here.	Look for savings in upper management positions within government ministries. Decrease the pensions paid to former MLA's and government officials. No government bailouts of private business. Decrease the funding to prisons. Cut internet access there, serve poorer quality food, turn down the heat, decrease access to professionals. Make it an place that criminals don't want to go. Maybe they'll choose an honest living instead. Government officials can decrease use of private jets fly commercial airlines. Sit in economy and have a chat with the people you represent. Have a cap on the things taxpayers are charged such as meals, transportation, good and services. There's plenty of waste within the government. Put a cap on what AHS managers are making. There's no need to be cutting frontline services and nursing positions to the public. Cut funding to immigrants. If you are moving to this province come here on your own dime. No handouts.	Continue to promote Alberta Oil and Gas as an environmentally safe & ethical option. Remind Albertans and the rest of Canada that we could not live in the Canadian climate without fossil fuels. Expose those fake environmental activists for what they are. No Carbon tax. This is an economic growth killer. Don't waste money on renewables that don't make sense in Alberta. Don't invest in EV charging stations.
T2Z	Education Healthcare Diversifying the economy- brewing, film production etc.... small/ local businesses so entrepreneurship is encouraged. Alternative energy sources	How about the war room?!	Yes but not at the expense of social services
T3J	EDUCATION	Get rid of the energy war room	...

T4B	Healthcare, education, emergency services, social services. As a society if we have sick, uneducated, unsafe, at risk populations what does that mean for productivity and future development?	Adding a sales tax, take the emotion out of the equation. A sales tax has the potential to make a huge difference in providing revenue to the province. It is ridiculous that AB is the only province without a sales tax in this economy. Cutting essential services should NOT be the answer. Providing tax incentives for the oil industry didn't seem to work either. Perhaps there should have been a clause to ensure taxes were paid in full if the oil companies decided to pull out of AB in a specific time frame. Decrease funding to private schools, people who send their children to private schools should pay for that privilege or choose public funded schools. I found it interesting that my MLA's child went to a private school and now there is increased funding to that sector, I'm not sure it's a coincidence. Lastly, the premier and MLA salaries should be scaled back, again. These salaries are some of the highest in the country, for doing the same job.	The focus needs to be on education, either in sustainable energy or sustainable educational programs. An economy that is hyper focused on one industry is a huge financial risk, AB needs diversity. The province needs to not only focus on the energy sector but other industries that can be more sustainable to our present economy. I don't know what those industries are but I do know modifying our present education situation can help with bringing the province into a 2020 mindset. I'm not an economist but what is being presently done seems like a waste of my tax money, two examples would be, "War Room" CEC, funding private sector business.
T6X	Jobs, retraining, just transition.	Healthcare, education, public sector collective agreements.	Promote investment and support business via a low costow reg environment.
T3H	STOP EXCESS SPENDING! Use your own life as example. If you have suddenly lower income and higher debt, and you continue to spend what you don't require to survive, you will be bankrupt in less than 6 months.	(1) STOP BORROWING MONEY COMPLETELY, REGARDLESS WHAT THE BUDGET or UNIONS DICTATES. It is impossible to truly balance the books with unsustainable compound interest. Again, use your own life as example. Buy a house with zero down, your compound interest will be painful in comparison to 25% down. (2) Reduce the SIZE and SALARIES of public service unions incrementally at 10% per year, begin from the TOP management positions working downwards until the unions match private sector equivalents in size, salaries, bonuses and raises. By doing this, will also reduce union influence over elections, but fear not, for NDP strongholds are by majority union members. Do that math.	Alberta govt cannot create jobs and growth, EVER. It is the PRIVATE SECTOR who does that ALONE. But, govt policies restrict private business to thrive, especially Fed policies. THEREFORE.....To be blunt, GRAB A SET OF BALLS. Set a new precedent of provincial government objection to National Policies which are destroying this entire nation. Kenny is polite and kind to TRAITORS in Ottawa. ENOUGH OF THAT! For it is IMPOSSIBLE to negotiate successfully with DICKTATERS. MAKE A HARD STANCE AGAINST FEDERAL ECONOMIC KILLING POLICIES. Example: FED LIB Carbon tax. UCP said "NO", promised to PROTECT Albertans, promised NO carbon tax. The first order of business should have been a PROVINCIAL REBATE AT SOURCE, beginning Jan 1, 2020. Why is there nothing but TALK? GRAB A SET....Put Ottawa's OVERSTEPPING, FRAUDULENT policies in the trash DIRECTLY, and then REALIZE there is NOTHING Ottawa could do to stop us. Lastly, while democratic processes are important, I must ask, when is it time to act? Rather than all this talk, surveys, and public opinion polls? JUST DO IT, and YOU KNOW WHAT TO DO.
	Alberta Community and Social Services front line staff who are providing help to vulnerable Albertans. These folks need to get back to work and access needed programs to help them get healthy so they can find work and maintain employment! We need contributors to our economy don't hurt front line staff!	Corporate tax increase and sales tax. So far corporate taxes decreases have only helped fat pockets they have not increased employment!	Training programs for skills needed in the various labor markets in our communities. Give us the tools to help people and don't eliminate staff in our ministry, cut our wages or touch our pensions! You harm us you hurt Albertans who need our help to get the training and support they need to become contributing members of our province.

T4X	Health care, education, and industrial diversification.	<p>Stop handing billions of dollars to oil company CEOs no strings attached - they are pocketing that money into tax-free offshore accounts, never to be spent in our country again.</p> <p>Make oil and gas companies pay the taxes they owe municipalities. If they can't fulfill their obligations they don't deserve to live as businesses, any more than any other business. Being oily shouldn't magically give them a special status.</p>	<p>Industrial diversification.</p> <p>It's time to face the reality that Alberta will never see another oil boom like the ones in the past, pipeline or no pipeline. The Saudis have a stranglehold on the global price, and it will never again escape their control - except downward, with world consumption dropping steadily. Once electric vehicles surpass gas ones in terms of mileage and initial purchase price, oil is going to become like coal - still necessary for certain uses, but largely obsolete.</p> <p>Let's stop putting all our eggs into that rickety old basket, and start getting ahead of the game for once. Alberta has all the components it needs to be a green energy giant: plenty of spaces with perfect conditions for sun farms and wind farms (not too mention all those abandoned oil wells that we could be using for geothermal heating), and a huge workforce at loose ends, ready to be retrained and deployed, already used to going where they need to go and working hard there.</p> <p>I know you can't call it a Green New Deal without giving your most right-wing members hives, but that's basically what it is. Rebrand it however you want. You've got professionals for that.</p> <p>Also, you have to stop slashing healthcare and education. People can't reach their full potential if they're sick and stupid. These things are investments, and destroying them is going to cripple to province for generations.</p> <p>Another thing we should be investing in is local food production. Times are not just hard and unstable here; it's like that everywhere. If global food trade breaks down, Alberta needs to be able to produce enough food itself to feed all our people - and ideally, to help others as well. This IS another</p>
T1J	Education, health care, policing	All government officials should take a cut in their salary and no bonuses for the next 4 years.	No cuts to front line health care workers.
T9E	To begin with the PC government did not contribute to the 70 billion dollar deficit. The province had a SURPLUS prior to he NDP's term in office. The government should look at all the over paid GOVERNMENT EMPLOYEES and cut their wages instead of increasing our taxes!!!!	CUT GOVERNMENT EMPLOYEE WAGES AND BENEFITS.	Focus on ALL ALBERTANS not just GOVERNMENT EMPLOYEES.
T2A	Public (not private) education. Increased per student funding with additional funds for students with complex learning needs.	appropriate salaries for government/ministry staff. Disband the war room. Hold O&G companies accountable for their taxes. No more corporate tax cuts.	Maintain \$25/day childcare so parents can afford to work.
T1J	<p>Infrastructure</p> <p>Job creation</p> <p>Healthcare</p> <p>Improve access to post secondary education</p> <p>Oil industry</p>	<p>Close the Lethbridge safe consumption site and have rehabilitation sites instead.</p> <p>Lower the import of foreign oil</p> <p>Use AB oil resources to maximum potential</p> <p>Drop conservation officers - an unnecessary second layer of law enforcement</p>	<p>Lower taxes</p> <p>Lower the minimum wage</p> <p>Incentives for small businesses</p> <p>Improving our natural resources would create jobs - oil, agriculture</p>

T4C	Decrease DEBT, reign in health care spending, education spending, social spending..	Stop subsidizing any company	Create an environment that encourages entrepreneurship, minimize bureaucracy, make it simple.
T6V	Health care, roads, public safety.	Do a 10% cut across the board. All public employees need a wage cut ? of 10%.	Lower taxes and fees.
T0K	<p>Municipal infrastructure needs to be at least maintained or enhanced going forward as they account for over 60% of provinces infrastructure. Tendered projects translates into private sector contracts and employment. Please consider not reducing the Local Government Fiscal Framework LGFF from MSI levels.</p> <p>If it is going to be reduced then have it tied to provincial revenues on an equal basis. Good years, revenues shared equally. Bad years, revenues reduce.</p> <p>Municipalities in linear rich areas should not receive MSI or LGFF municipal capital grants. This significant area specific resource leads to extreme discrepancies as to what infrastructure a community is building for their residents. Communities (big or small) up north with indoor rec centres and communities down south barely able to an outdoor swimming pool. Municipal capital grants should be income tested.</p> <p>Enhanced Policing model breeds to consider credits for communities that employ Community Peace Officers. We went with CPO's vs Designated RCMP as they have chronic staffing challenges and are not really interested in municipal bylaws etc. CPO's are much more responsive to municipal enforcement and credit should be extended in the same way it is for those communities with Designated RCMP.</p>	<p>Reduce restrictions on municipal grant projects both provincial and federally and reduce number of provincial stars needed to review and approve projects.</p> <p>Cut middle management positions at AHS.</p>	Maintaining or increasing municipal capital infrastructure grants.
T6j	housing for the homeless, increase in aish, help the vulnerable people first. fix the roads potholes everywhere in the city.	stop building new buildings period or new projects in this city it is ridiculous. ni wonder we are in debt.	the government should not be cutting back right now on public health police, nurses, etc. dumb move
T4B	pay down the debt	do not cowtow to the unions	stay the course with our natural resources, but invest in tech.
T8n	Health care , emergency over loaded ,rent control ,housing prices and rent to expensive , were seniors Really think 2nd education needs strong support ,we have 9 grandchildren 4 working for min wage	Get rid of Trudeau !	Need to get pipelines approved ,
T8S	Paying down debt Private sector jobs	Health care but also examine all of government top to bottom, provincially and municipally. I believe there are many many people who are overpaid and do not deliver results. Start at the top, eliminating and reducing salaries and benefits.	Incentives for entrepreneurs, private industry.

T1J	Infrastructure and other projects that stimulate industry and job creation	Reduce or eliminate conservation officers. They are a double layer of enforcement with way too much arbitrary power. Eliminate safe consumption sites especially the one in Lethbridge. The site manager gave herself a \$250k salary and has ballooned her staff using bogus statistical data.	The basis for growth is creativity in the human brain. When society degenerates due to a lack of healthy relational bonds, creativity is lost. Support families with both parents.
T6e	Education, health, arts	Taxes, aglc	Support, add and find jobs in the public sector
T0C	Public school education, and post secondary education for Canadian students should be the priority. Health care for the more vulnerable members of our communities is essential. Policing and justice departments that keep us safe must be a priority. Paying these workers a salary that reflects their responsibilities is mandatory.	Until we have an accurate view of expenditures I am not able to comment.	The government should invest in the above areas. Even the lack of health care providers available to treat patients puts employers and employees out of work for days at a time while they fight off the flu and other ailments. Each day of lost work is detrimental to one's income. Cutting education budgets so that school closures are necessary in rural areas depletes our work force in agriculture and our local businesses suffer.
T1k	Public service, education	By cutting the high salary of managers, ministers, judges, adm	By not giving money away to big corporations, and investing in diversifying the economy
T1A	Concentrate on spending resources that put us back to work; if we can get back to work we obviously pay taxes, we purchase goods and services which generates more income, taxes	Cut the programs that encourage people not to work. Reduce the size of the body of government employees, cut AISH, cut welfare, (Only help those truly in need, drop the liars, lazy's and the professional complainers/pretenders) cut paid maternity leave and above all REWARD people who display a strong work ethic.	Tax breaks?? Rewards/recognition for employees, companies that display a proactive attitude when it comes to working efficiently and adding real value to our economy?? Stop welfare recipients and bums/losers from moving into Alberta and getting on the dole?? Repeat of second item; reward good, conscientious, hard working individuals and companies. STOP SENDING MONEY TO QUEBEC!!! They hate Alberta, <u>excepting for the cheque's we send</u>
T0j	education. Health care	Cut the art and culture out. Anything that is not essential	Lower small business tax and corporate tax.
T6B	Clearing the name of the oil industry in Alberta. Too long has it been tarnished by those whose interests are in doing so. Creating long term infrastructure that could be maintained by the private sector. P3's Investments in diversifying the economy the past conservative gov blew this opportunity as well by not investing in the future at all.	At every department in the management category. Gov is too top heavy. Not only this but too many folks in the culture are not being let go based on lack of productivity or social issues. We need to stop this push and pull about the front line. Its the people in the middle and the degenerates wasting the tax payer dollars. I would suggest a whistleblower line at the provincial municipal levels as people are afraid to out folks taking advantage of the system without them themselves being singled out. This has to stop. Start pushing back on Ottawa and the rules that govern by using not withstanding. Its time the money made here stays here until Ottawa can start proving fiscal management and <u>fair distribution.</u>	Tax breaks for the actual people who create jobs in the economy not supporting the false economy by creating jobs in the government. Building long term infrastructure. Lets get back to recycling products that we could ten years ago. Hearing that its not market sustainable is not good enough. Alberta could create an industry of recycling and processing of materials that could then be re-manufactured into final goods by making partnerships with manufacturers within Canada or the USMCA. Would this not be an opportunity to negotiate the rip off called carbon tax by having industry that is supposed to help the environment
T3K	The government should not cut education.	Why do people who use medical cannabis have to visit a doctor every 3 months while other provinces require an annual visit? <u>This is a huge waste of money.</u>	How does cutting education (particularly post-secondary) diversity our economy? This is very short-sighted.
T9C	Getting Alberta back to work by focusing on our natural resources oil, gas, lumber and dare I say coal. Refining our own resources instead of sending everything out then buying it back.	Find saving by refusing to pay any more equalization payments to Quebec.	Yes

T5Y	the biggest and most important spending priority is the elimination of the debt, and maintaining balanced budgets.	Eliminating government waste and reducing the civil service. Public sector wages must be brought in line with the private sector.	Less government bureaucracy, regulations. Competitive tax structure to encourage new capital investment.
T5t	Education (public) and post secondary, including smaller class size, more support for teachers in the inclusive classroom.	Research into different school models who have found ways to save money such as adding extra minutes to the school,	Support job creation - listen to the people. Listen to teachers , the nurses , the frontline workers who are trying to tell the government that they need smaller class sizes, more support for inclusive classrooms. Hiring freezes do not support job creation or economic growth.
T3K	In the light of recent economic conditions there needs to be a a recommitment to the a heritage fund, and supporting our public service workers. We, as Albertans, need to think of our future, not only our personal interests. The manner in which this current government has handled this matter is repulsive.	We're starting by looking at savings which immediately fortells the direction in which this Government intend to move in regards with this budget. A penny now mentality will not create the long term improvement you so hope for, class inequality is on the rise and your government should fund public education, social programs and increase accessibility to post secondary, not restrict it as many of your cuts and claw backs have threatened to do.	A deterrent tax, such as the carbon tax, is a revenue stream to be applied to increasing support for and innovation in New sources of energy. Alberta will continue to be an energy producing powerhouse, not only fossil fuels, let's deversify and help out our of work Albertans back to they're rightful place.
T6E	Health care and the way health care is administered. A full review of how health care is administered and what is free and what Albertan's are willing to pay for such as MRI's. Let private clinics do MRI's and put them in competition with each other to drive down costs.	Administration of services. Needless spending of many departments on non productive meetings at expensive locations. Cut all provincial budgets 5% a year for 2 years. Then 3% a year for 3 years. Spending has gotten completely out of hand.	The raise in minimum wage has put thousands of young people out of work. We need to lower the minimum wage so young people have a chance to enter the workforce. We needed to attract investment back to Alberta by making the business environment competitive. There is far to much government regulation in business especially with safety for some businesses. These costs are non-productive hours paid.
T2Y	Education, health care, child care, reducing regulations and restrictions on small businesses and farmers who create jobs, oil industry support, infra structure... keeping roads in good condition and our electrical and water systems.	Evaluate and minimizee inefficiencies in government jobs that never change regardless of the party in power. Many departments were expanded in the good old days and maybe can be stream lined with new technology or training... or weeding out extinct positions!	Reduce regulations for all businesses, especially those that serve the public and create jobs.
	Education	Tax breaks to corporate companies Carbon tax Provincial tax	Broaden the economic portfolio
T7A	Highways, rural security	Wage freezing, rollbacks to gov't wages, just like others have had to do in the last 5 years.	I'm not too sure about this one.
T3P	Social programs including but not limited to: public health care, public education, post secondary education ect. I also think the government should do more to plan for the future. Tax incentives for start ups and tech companies, investments in things besides oil, and we should be looking at how to combat climate change.	Cut down on bonuses for higher tier officials, increase taxes on corporation, and if savings must be made in cuts to programs, I would rather see the cuts in systems such as transportation or if must be, public education.	Tax incentives for smaller start ups and tech, spending on infrastructure projects, and training programs for those in sectors who face layoffs. For those in the oil sector who face joblessness, a program to train them how to code, how to work on renewable energy alternatives. For those is customer service or government, the same. This province needs to plan for its future, now, and to stop doing the same old thing time and again.
t0I	LOWER TAXES	Cut Beuracracy	Lower taxes Alberta Pension Plan Cut the East off - Separate if necessary
T6W	Healthcare and Education. Cuts to these areas will have effects for decades.	Corporate handouts, especially if there are no guarantees that these businesses will stick around	By staying out of it, we need to diversify. Oil should not be our focus.

T2X	I think the government should prioritize saving and not spending and increasing efficiencies. While things like education, health care and the environment are certainly important, the spending can not continue to go up every year and taxes can not continue to go up.	By privatizing everything possible including health care. Reduce administration costs in education and health care. No private company would be allowed to operate with the inefficiencies of the government. Less government workers!!!!	By reducing corporate taxes, removing bureaucracy and government administration.
	direct health care - the face to face time. Albertans already face incredible wait times and don't deserve understaffed facilities that deliver less than adequate care.	Administration is too heavy - if cuts are made that should be where the money is saved.	Maintain or increase health programs. Let people stay close to home and still receive the care they need and have earned through out their lives. Fund the programs they know are needed. Give the money to the programs in place. Why start private facilities when they are already in place. Don't cut positions and reduce the effectiveness of the people who already are working to their maximal abilities.
	direct health care - the face to face time. Albertans already face incredible wait times and don't deserve understaffed facilities that deliver less than adequate care.	Administration is too heavy - if cuts are made that should be where the money is saved.	Maintain or increase health programs. Let people stay close to home and still receive the care they need and have earned through out their lives. Fund the programs they know are needed. Give the money to the programs in place. Why start private facilities when they are already in place. Don't cut positions and reduce the effectiveness of the people who already are working to their maximal abilities.
T0K	Lowering debt	Public sector wages	As long as it will benefit the economy
T0K	Lowering debt	Public sector wages	As long as it will benefit the economy
T9E	Healthcare Education	No more tax breaks for corporations. Lower government salaries	Stop making widespread cuts leading to job losses
T2M	The government should focus more on the child who have learning disabilities that are in a regular programming. I am a parent of two child with disabilities. My oldest has a complex social emotional issues and is currently on code 42. How ever my child does not receive enough services through his school and because we are forced to find other ways for him to cope with all the challenges at school.	On all the teacher conference	By providing more schooling and training at a more reasonable price
T2M	The government should focus more on the child who have learning disabilities that are in a regular programming. 17(1)	On all the teacher conference	By providing more schooling and training at a more reasonable price

T1k	<p>Seniors benefits — ridiculous how little money seniors are asked to live on. People are always saying that no one can live on minimum wage yet seniors get a fraction of this. I see how much my parents struggle financially.</p> <p>Health care — no beds available in Lethbridge hospital. No beds in nursing homes. Takes too long to see a specialist</p>	<p>Pensions for government employees - the real world isn't getting such generous pensions, so why should taxpayers pay for very generous pensions for their workers? My friend is a retired garbage collector and he makes a very generous pension and retired at 55. Who else can do that?</p> <p>\$400 million for private and charter schools. If people want to send their kids to private school, then they can pay for it themselves. public schools should be only ones government funded</p> <p>Indigenous programs sometime border on the ridiculous in how much is spent</p> <p>Safe needle consumption centres should be done away with and free needles should not be provided. This is called enabling.</p> <p>There seems to be so much wastage with so many special interest groups. It seems never ending.</p>	<p>I understand wanting to create jobs but giving government money to corporations doesn't seem to work. I don't have any brilliant suggestions, I'm afraid</p>
T1X	<p>Love the war room! Get the economy rolling by continuing to make Alberta an attractive place to do business.</p>	<p>I had a conversation with a surgeon who is a contractor to Alberta Health services. He claims that he can get considerably more done during his allotted time in the operating room than the staff surgeons because he is more organized and efficient than they are. Run our hospitals like a business, find the efficiencies!</p>	<p>Education- get the old to teach the young how to live within their means without credit. Every high school student should graduate with a trade. Too many people with degrees and no life skills. Teach our young people how to survive in the world, they should graduate knowing about mortgages, loans, interest and the benefits and dangers of credit, who the hell cares about algebra. Create some Entrepreneurs!</p>
	<p>Education: funding growth in enrolment and reducing class sizes.</p>	<p>Cutting spending from non critical services. Please do not cut education or health.</p>	<p>Encourage and hire locally.</p>
T6H	<p>Education because children are our future. Money spent now on students saves money in the long term on welfare and employment benefits.</p> <p>Health care is the next priority. Our health system is world class and needs to be maintained.</p>	<p>Reducing subsidies to mining and agricultural sectors. They are being enabled by government hand outs.</p>	<p>Strategies used in the last 6 months don't seem to be working. Time for a reassessment. The definition of stupidity is continue to do the same thing and expect a different outcome.</p>
T1J	<p>Education and Health</p>	<p>Oil and Gas Subsidies.</p> <p>MLA salary and perks.</p>	<p>Tax break for new job providers, incentives for new industries moving to Alberta.</p> <p>Emphasis job retraining for our young male workforce so they can find active employment in growth areas outside of oil and gas.</p>
T3Z	<p>Business (Tech and software, AI), agriculture and energy</p>	<p>Increase provincial tax a bit, and increase large corporation tax (not small corporation to encourage small business growth)</p>	<p>grants, create a need for alberta to become a leader in global tech</p>

	Social programs focusing on public education, homelessness, marginalized women and youth, and mental health. Public and separate school systems, working on the most modern and up to date curriculum possible for k-12's. Transitioning from fossil fuels to more renewable resources/expanding alberta's economy beyond oil and gas.	Tax the rich. Oil companies.	Focus beyond oil and gas. Think about teachers, public servants, health care, careers in the arts. Tax the rich.
T2L	Continue medical and transportation mega projects started by NDP.	Make middle managers accountable. Salary reductions across the board. Extensive program reviews.	Get out of the way. Encourage small businesses.
T6c	Priority should be on maintaining front line health care services but otherwise major cuts to spending are required.	Role back public sector and government sector wages and reduce the insane amount of benefits that are badly abused by public and government sector. Cuts to education need to be done also. Don't let unions continue to drag taxpayers down the rabbit hole.	Continue with tax cuts at the business and corporate level to encourage private enterprises to reinvest in Alberta. Continue to support oil and gas while encouraging diversification in the economy. Fight the carbon tax and look for sensible solutions to reduce emissions.
T9X	Basics. And trim the litter.	Almost everywhere. And I am not joking.	By being pro business and cut the red tape. When a new rule is brought in an old one should be dropped. At least things will be brought to even.
T6X	- education - health - insurance & electricity rates - transfers to municipalities	- public sector wages - energy war room - hold anymore tax cuts - no raises for mla's	- no tax increases - freeze minimum wage - keep pushing for pipelines - less regulations
T8R	I think government should focus on providing more resources for health care and education. Providing more help for education will produce a better educated workforce.	I think government could find savings by providing less help to big companies and providing more to small businesses.	Government should help bring more renewable resources industry to Alberta and help provide training to those willing to switch from non-renewable resources to renewable resources.
T7S	albertans deserve public education and funding is important. Spending should resume on public education and public healthcare. Especially now since Coronavirus.	Stop Alberta Pension Stop alberta own tax collecting Reduce politician spending Reduce management Reduce top exec salaries STOP funding private schools as they are for profit. STOP funding private clinics Reduce cabinet ministers to 1/2. One could do the job of 2. Implement a sales tax. This would reduce deficit	They tried already with lower corporate tax rate. That should bring jobs The indigenous people did not want the pipeline as well as BC. NDP wanted the pipeline.
T7x	Education	Building new recreational buildings	Don't cut budgets to essential areas like education and nursing

T4A	Health, Education, infrastructure, Seniors, The Poor, Fire and Police	<p>AHS Management Doctors Funding Model - they spend the money ordering lab and xray, etc with no fiscal responsibility. Review all of the expenses from the top of the hierarchy down to staff levels for excess expenditures and move revenue to where its proven its required. (That includes all Boards). Watch for a spike in expenditures for Feb & March as that's when depts waste money as they don't want to send the money back to Govt. Reduce the public sector. Consolidate Boards Keep following what the McKinnon Report said. If possible make 2 year operational budgets and capital budgets. It makes it easier for depts to plan.</p>	<p>I think you are currently doing a great job at this. Give companies incentives to invest here and follow what is happening globally. Get the message out like you are doing the benefits of investing here. Pressure the Federal Govt to support us. <input type="checkbox"/></p>
T7Z	<p>Doubt the government will truly listen or give albertans the real results of this survey.</p> <p>They should cut management jobs and not front line workers.</p> <p>Public Education funding should not be cut. Our Province is growing and we need our teachers. We also need our healthcare.</p> <p>The government should NOT implement our own Alberta Pension as that is a waste of money. We should not be using all our Albertan tax dollars to invest solely in oil.</p> <p>I disagree with our own Tax Collection as Federal govt CRA employees in Albert will lose their jobs - how is that helping</p>	<p>Cut from the top! Not the bottom where the work is done. Cut top salaries and reduce management. Reduce politician spending.</p> <p>Implement a sales tax instead of hurting education and health care.</p> <p>However you didnt listen to teachers regarding their pension so doubtful prov govt will listen to these ideas.</p>	<p>Definitely not by cutting frontline alberta health workers and not by cutting teachers. That will hurt our economy.</p> <p>Also taking our CPP to invest in Poorly in AIMCO is wrong!!!!!! i totally disagree. This is my money that I worked hard for and the provincial government should keep its hands off my CPP!!!!</p>
T1H	Healthcare and PUBLIC education.	<p>Eliminate the "war room". Immediately stop any corporate subsidies or bail outs, especially for companies that don't contractually commit to creating new jobs in the province. Eliminate all travel budgets for political travel unrelated to formal Provincial business. Eliminate the duplication created by the separate Catholic School Board and leave religion in private homes and churches. Insisting that oil companies who extract out natural resources pay a refundable deposit to eliminate the taxpayer cost of orphaned wells. Increase tax levels by a mere 5% to all Albertans making more than \$500,000 per year.</p>	<p>DIVERSIFICATION OF THE ECONOMY! Continuation of the increase in minimum wage across all employment spectrums to stimulate local spending by putting the money in the hands of people who will actually spend it. Offer tax breaks to small businesses for every Albertan they employ to offset the increase in minimum wage. Invest in innovative "Made in Alberta" renewable energy solutions. Join the rest of the civilized world and charge a carbon tax to be reinvested, locally, in Alberta.</p>

T9K	<p>Schools curriculum, achieving higher standards without passing kids simply to advance their attendance if they don't achieve 70 % or better.</p> <p>Global Attraction to investment in our resources and get pipe lines operational. Eliminate foreign oil imports!!!!!!</p> <p>Hospital and Health Care. Respect these folks who deal with all challenges for humanitarian needs.</p> <p>Greatly reduce the aid to other countries until ours is in good order. It's sickening to see federal spending on other foreign aid programs when we are not addressing our own issues with that money.</p> <p>Legal accountability to MPs and all MLAs for what they envisioned and promoted their party would accomplish. Failure to achieve these goals should reprimand their resignation and any benefits.</p>	Use our own oil supply and ban foreign oil imports.	<p>Reduced interest loans for capital start up loans on private business.</p> <p>Subsidies for post secondary evenly split across all provinces. No more special circumstances to Quebec for material leave and funded post secondary.</p>
T5X	<p>I think they should stop cuts to public education and healthcare. These should be the most financed.</p> <p>I think the government should bring in a sales tax to reduce deficit instead of cuts.</p> <p>It seems that the Premier has a personal vendetta against teachers and public education as well as health care. This is greatly affecting Albertans in a negative way.</p>	<p>They could reduce cabinet ministers. I think that like Alberta Government workers who do more work with less workers, the cabinet ministers should be reduced to 1/2 and one minister do the work of 2. I also think there should be a reduction in management and not front line workers.</p> <p>Workers have been facing cuts and layoffs for sometime, with same number of management and supervisors. That is unfair.</p> <p>We should not be spending money by implementing our own Alberta Pension. I think that is stealing money from Albertans. I disagree with An Alberta pension.</p>	<p>Well definitely not by cutting funding to public education and healthcare. Those are crucial to our province and should be well funded.</p> <p>We should not encourage more layoffs by trying to collect our own taxes as that would result in layoffs in Federal Government employees in Alberta. Those workers should not lose their jobs because the UCP cant handle the fact that the Liberals won-the Federal election.</p> <p>I think you tried already by corporate tax cuts</p>
T6C	Health care (including dental); education and student loan assistance; disability and old age pension.	Funding to oil and gas, corporations and the carbon tax.	Investment in green energy and education.
T2X	Education, both public and secondary.	Size if caucus is too big; too many managers in AHS; do not cut front line staff or wages!No need to give corporations huge tax cuts!	Support education-no cuts. Support healthcare with no cuts to front line staff.
T6E	Spending should be towards education and healthcare.	Getting rid of the tax break for corporations and charging these companies more instead of average albertans having to pay more. Also looking at what management in alberta health services makes and reducing their wage instead of the nurses. Getting rid of the war room. It's an embarrassment and not contributing and it's upsetting knowing that money could go towards albertans	Not be 100% focused on oil & gas. Re invest in green energy and the tech industry. Alberta needs to diversify their economy

T8N	Health. Education. Infrastructure. Diversification.	Get rid of the war room. It's a waste of 30 million dollars. Quit making stupid panels. Follow actual research. Trickle down economics does not work. We all need to pay our fair share. Adopt BCs income tax structure, quit with the corporate giveaways and adopt a sales tax like every other province. We aren't that special that we don't have to pay taxes. Quit giving tax breaks to corporations who aren't even paying the taxes they owe.	Quit investing in an industry that is dying. DIVERSIFY!! This means tech, solar, wind, research, tourism, arts. Anything that isn't oil and gas. We need to move on - the rest of the world is!!
T2x	People not unions	Clearly the public sector and any special interest group or anything lobbyists are after.	Lower taxes, cut red tape & get the hell out of the way.
T2M	Healthcare and Education and Diversification of the Economy	Get rid of the "war room" for Oil & Gas.	Encourage new investment and opportunities to diversify our economy and reduce our reliance on Oil & Gas
T8R	Health care Education Job creation / employment Infrastructure	Cut Government waste and unnecessary expenses Cut/dissolve MP's / Elected Officials pensions - they can use their own earnings to buy RRSPs/Mutuals like everyone else	By promoting oil and gas's environmental improvements By promoting environmentally safe technology to eventually lessen the need for our dependence on oil and gas
T8A	Health care , education and environmental studies for solutions to climate change crisis.	Taxes pst	Invest in new industries and studies for environmental solutions which would create new jobs. Support small business with incentives and grants, who employ a huge number of employees in Alberta
T6R	Whatever it takes to bring the deficit and debt down. Other than helping provide jobs for the unemployed who are willing to work, please cut out the frills and layering of administrative positions in health-care, seniors' services (especially) and education.	Until our financial position improves, please screen carefully the various grants to the arts, education (i.e. school bus trips and 'extra' learning experiences), and seniors' services which seem to be redundant in many cases (i.e. congratulations on removing the "Seniors' Advocate" position). With the financial crunch we have, studies on ageism, sexism, intergenerational exchanges supposedly for the benefit of seniors, could be postponed .	Support small business owners, provide initiatives to employers who will hire Aish recipients or disabled individuals who may have skills in areas in which they could be given a chance to prove themselves.
T6J	1)PUBLIC education 2) healthcare 3) supporting cities and municipalities in building infrastructure	1)MLA salaries. 2)Increase corporate tax rate	1)Support Indigenous Business opportunities, including oil and gas sector 2) support the Public Sector
T7A	Highway improvements and up keep. Learning facilities for healthcare workers i/e RNs and RNAs Larger police forces.	Healthcare administrators, there is way to many levels of admin, yet the gov chooses to keep shortages of front line health care workers Also the levels and levels of admins in gov itself are not justified!	Ensure to not shut down or cut back on funding on higher education facilities.

T4X	I would like the government to cut spending and tackle the debt. Spending has been out of control under the NDP and must be brought into control.	I agree with the implementation of private health clinics and more medi centres. They would take of some pressure from hospitals. More funding to in home care and seniors facilities to be able to free up beds in hospitals. I feel the education system should be looked at very closely as some kids graduate from high school without grade 12 reading ability. Wage freeze on any govt job till debt is under control. I do not agree with government subsidies for day care. Having children is a choice and if you choose to have kids make sure you can afford daycare if you choose to work. My tax dollars should not go to support daycare for your kids!	I feel the government is doing a great job with the business tax.
T9H	Health Care,Mental Health Seniors, Infrastructure	GIVING, GIVING AND ALWAYS GIVING TO INDEGENOUS PEOPLE INSTEAD MAKING THEM ACCOUNTABLE FOR THEIR DESTINY. ENOUGH OF BLAIMING THE PAST FOR THEIR PRESENT BEHAVIOUR, LET US MAKE THEM A PROUD PEOPLE BY EXPECTING SOME RETURNS INSTEAD OF GIVING THEM HANDSOUT. IT DOESN'T WORK,THE PAST HAS PROVEN IT TIME AND TIME AGAIN.	GOVERNMENT SHOULD MAKE IT EASIER FOR SMALL BUSINESS AND BIG BUSINESS TO FLOURISH IN ALBERTA WITH OUT SELLING OUR PROVINCE SHORT.
T0A	Ensure reasonable Infrastructure, health, and education spending without unnecessary spending on special interest programs. Fight for more balanced equalization payments, and reduce carbon taxes.	Education, special interest group funding I.E. LGBQ. Fight to remove carbon taxes	Create honest awareness, and promote the development of Alberta resources. Promote Canadian development environmental standards and how the world can benefit from them and why we need to ensure our resources are not left in the ground to appease special interest groups. Fight against Carbon taxes.
T2k	Economy growth, small businesses	Auditing government spending	Supporting small businesses
T5a	Aish, homeless, veterans	I've been a patient in hospital for almost a year due to my leg being amputated and while the government thinks laying off nurses will save money I've personally seen waste daily in supplies such as throwing out expensive slings for lifts instead of washing them. Single usage makes waste in hospitals all across canada	Pipelines put people to work
T2T	In my opinion the government needs to help seniors that are living below the poverty line and not just shove them aside like they are garbage. The renter's assistance program should never have been cancelled because it is needed by seniors who are living below the poverty line and having to pay big rents. I suggest that the premier restore this program immediately.	Didn't the government cut enough in the previous budget??? I don't think there is much more that can be cut without doing harm to many people especially the low income people.	I think the government is doing all it can right now to attract investment into the province to support job creation and economic growth.
T3K	I think cuts to health, education and Alberta Supports would be nonsensical at a time when the economy is weak. Also, the ND P are not responsible for the deficit. It can be traced back to 40 years of PC rule.	Get rid of the war room and tax cuts to major corporations. Travel and accommodation both inter-provovncial and international should be cut to the minimum needed to encourage trade and at cheapest cost possible. If Albertans have to trim their expectations, so should ministers.	Put more effort into diversification and get rid of the focus on oil and gas as our main focus.

T1R	The GoA should focus on building a competent civil service that will be held accountable for the quality and efficiency of service delivery. We need a new civil service that empowers front line staff, and provides opportunities for innovation.	1. You free up competent top managers to be creative in getting done what matters. 2. You give front line workers the tools to become more efficient. 3. You move to a decentralized management model.	1. Aggressively diversify by leveraging what is already in place through taxation, regulation and direct support (oil & gas-> petrochemical, energy intensive manufacturing, data centers; agriculture -> processing food, fibre, pharmaceuticals) 2. Provide a vision for rural development that is respectful of nature and will build rural communities. 3. Create centers of innovation for young entrepreneurs throughout the province.
	Public education funding Healthcare	Stop corporate tax breaks Stop funding the war room - it's ridiculous and embarrassing	Stop austerity measures! They will put Alberta into a recession
T7X	Healthcare, education, special needs funding, and climate change	By cutting down the paycheques of politicians and not giving tax breaks to large corporations. If you're really desperate then bring in a provincial sales tax	With investing in renewable energy sources
T0A	Education funding- our rural public school Boards work hard to provide good education for our students and should not have to constantly worry about where the money is going to come from.	Government offices and staffs are top heavy and too much money is spent implementing already failed projects from other provinces. If it didn't work in Ontario what makes you think it will work here?	Encourage companies to hire Albertans instead of foreign workers from the Philippines who contribute nothing to our economy. They just send all their money to the home country!
T4P	Cut the spending. Watch and check every dollar spend. Right now we do not have money for spend.	Cut the government spending by lowering Premier's salary by 10% and all government employees by 10%. The stop of supplying water and tissue in court room is a very good idea. I hope it is only the beginning. Do more same things like this one. Tell to all people of Alberta that we will do this till the deficit will be under control.	Fight for the pipelines. Tell this Ottawa's boy to keep his hands out of Alberta. Make the referendum if necessary. Keep money in peoples pockets for spend. In Capitalism money must circulate between business (salary), spending (people). As less money goes through government (taxes) as better the economy is. Absolutely no Alberta sales tax. Taxes kill every and each economy. Ask the teachers, doctors and others, where to find money if they ask for more money for them self. Be and act like Ralph Klein, Margaretha Tucker and Ronald Regan.
T1J	health care & seniors	govt ceo's cut wage 5%	sponser training
t2a	health care education and the myriad of other spending priorities you decided were not priorities	cancel the Canadian Energy Centre, have oil companies pay before drilling so that Albertans don't have to cover the cost of the clean up	invest in clean energy projects, high tech and expand our income portfolio so that we're less reliant on the booms and busts of the oil industry
t1w	Health Care and Education	Corporate Tax cuts	Talk to the Albertans and see what is important to us.
T8X	Focus on Education: inverse spending on All Schools and secondary education, not just select private school. Increase funding for smaller class sizes and special Ed support. Reduced student loan interest rates Make Affordable day care, Increase Medication and drug plan coverage Support our most vulnerable people,	Save a huge amount of money by Decreasing the vast amount of government officials over spending on their personnel accounts, lower their wages, pensions and personal spending budgets to a reasonable and comparable amount Decrease the huge hand outs to top CEO's and large corporations. Make all people, business and corporations pay there tax every year, and we will be swimming in money	Forward and progressive thinking, Support the new ideas that are out there, these will creat jobs and care for the environment. Listen to our youth, they are their own future, we are holding them back with our old ways and old boys club thinking ,of you scratch my back and I will turn a blind eye to your wrong doing. We have to do things smarter,cleaner,greener and make companies accountable.
T5m	Health and education	Re up the corporate tax rate	Diversify instead of beating a dead horse of the oilfield
T2T	Diversify the economy lowcost housing/homelessness healthcare	size of government low sales tax	bring in new business through promotion, tax incentives, support innovation, greenline, green energy, high tech

T1J	<p>Health System, reduce wait times and slowness of the system.</p> <p>Infrastructure in other places other than Calgary and Edmonton.</p> <p>Promote business investments.</p>	<p>Reduce burocracy and salaries of top management. Too many managers in different ministries.</p> <p>Do not waste money in EPR or Recycling initiatives.</p> <p>Reduce spending in Universities and a colleges, lower salaries of professors who make more than 150,000 for no reason.</p> <p>Reduce spending in travel and conferences</p> <p>Freeze salaries for 2 years and invest the savings</p>	<p>Promote opportunities for medium and big companies</p> <p>Invest in technology and diversify the economy. Not only oil and Gas.</p>
T0E	<p>Education, Infrastructure, Medical, Oil/Nat Gas Pipe Lines, to Churchill Manitoba.</p>	<p>Remove MPs Living allowance for out of town MPs, Remove other perks,</p> <p>Remove assistance for assistances, Stop unnecessary air travel,</p>	<p>However the US being its' typical greedy self, has realized that by keeping Canadian oil land locked, it will be able to buy that oil at a very large discount, because there is a lack of pipeline space to get it to market. Canada is currently producing more oil than can be stored or shipped, resulting in a discount of around 75% of the global price.</p> <p>We should be pursuing a new path for our oil. Lets look at building a double pipe line up through Saskatchewan, to Churchill Manitoba from there into the world markets. The amount of money we are losing every year is staggering,</p> <p>the cost of this pipe line and 6 lane highway (3 lanes each way) would be nothing compared to what we are losing each and every year to the greedy US. A double oil pipeline on one side of</p> <p>the highway, on the other side a double nat gas line. While these Hugh construction projects are progressing. Liquid Nat Gas Processing plant can be built at Churchill, bigger bang for your buck.</p> <p>Why should this new highway be 3 lanes each side, so as to transport the modules for the Liquid Nat Gas Processing Plant.</p>
T2Z	<p>Supporting vulnerable individuals</p> <p>Reducing government waste</p>	<p>Size of Government</p> <p>Bureaucracy and legislation</p>	<p>Finding alternative contractors and supports to replace expensive government services</p>
T5c	<p>Cut more spending. We can't afford to keep going down this road.</p>	<p>Unions they are costing is to much</p>	<p>Keep so ng what you are doing</p>
T8H	<p>Health care and education</p>	<p>Less funding to arts, and other non essential things.</p>	<p>Tax cuts for those who create new jobs. Wage subsidies for new jobs.</p>
T7p	<p>A balanced budget. Reduced middle management. Stop subsidizing industry</p>	<p>Bringing public workers salaries (and benefits/pensions) in line with COL adjustments to the rest of Canada.</p> <p>Healthcare needs a massive adjustment to compare with rest of canada</p>	<p>Reduced taxes (I understand this should then mean less services from the government)</p>
T5I	<p>Healthcare</p>	<p>Make a sales tax that will go directly to healthcare</p>	<p>Hire more healthcare workers</p>

	Police, Health Care and Education.	Cut Provincial Government Public Service.	Lower taxes. Allow private health care.
T8E	Healthcare , senior's benefits, invest in opportunities in the tech industry	Cut back on the arts sector, stop funding abortions and gender re-assignment operations.	Sell off the orphan/abandoned oil wells to private companies. Have an option to pay a fee to receive car registration and drivers license renewal notices.
T8S	Infrastructure health education	Upper management and non essential personnel	More bursaries and opportunities for education and starting businesses As well as encouraging sector growth not through tax cuts but project incentives
T0L	stop wasting tax payer's money and do what every citizen has to do: spend only what you earn	stop over spending	DON'T TAX BUSINESSES
T3L	Preventative health care, mental health and addiction support	Cabinet ministers bloated retirement benefits	Increase minimum wage
T0C	Health/schools/pipeline	Look at re-organizing AHS-VERY top heavy again-make them responsible for unnecessary layers on management-4 levels before a simple decision can be made	Continue to support the pipeline
T1M	Public education and public health care	Infrastructure and taxes to corporations which are the lowest in Canada and are NOT bringing in more business.	Promote new technologies and energy sources.
T6C	Health, education and economic growth	Hiring freeze, management pay rollback, training, consultants	Incentives for small business or corporations
T2L	Education and health. The cuts were devastating, we need well educated healthy Albertans to ensure a prosperous future.	By increasing corporate taxes. We had the lowest corporate tax rate before the cuts.	Diversify! Support alternative energy by giving subsidies to the businesses and those who purchase the products. Climate change is the biggest business opportunity we have.
T3a	Education and Health Care.	Raising corporate taxes.	Hire more nurses and teachers.
T3E	Cutting spending	Outsourcing all non essential services	By supporting the private sector not by creating government jobs
T0L	Don't cut health care we all need it, you g and old. Don't leave the seniors with no money,	Cutting some of the arts , things that arn't needed as much. We have a lot of people on ASH in our small town. Some of them can for sure do some kind of work.	To an extent,
T0G	Taking care of people and taxing corporations fairly.	The oil and gas war room could be cancelled which would save money.	By promoting initiatives that diversify our economy; in particular, developing sources of energy other than oil and gas.
	Providing increased funds to public education, nurses and front staff workers.	Higher taxes	More full-time positions rather than part-time
T7p	Frontline healthcare workers. School Curriculum.	Administrative positions .	Privatize some healthcare aspects
T2N	1) Infastrucure to get trade workers employed 2) health care it is essential and has not been treated as such 3) green technology investment we have an oppportunity to grow a new industry	Cut political salaries. If we need to tighten our belts it's time the government lead by example.	1) bring back the incentives for tech companies. It bring a new sector of growth and was rebuilding Calgary's core 2) invest in infastrucure which will create jobs for trade workers including former oil workers. 3) return spending to public sector jobs. AHS is the provinces largest employer health care employees who can't get work will leave the province which affects housing and other industries

T3g	Funding for special needs children (specifically funding for homeschooled special needs children to be able to access therapies) More funding and therapy options for children over 6 with special needs. Public schools- specifically TAs and smaller class sizes. More midwives available and midwife assisted births. Economic growth and encouraging small local business' to start up with an entrepreneurial spirit and positive energy	The catholic school system which shouldn't be government funded anyways. Increased hiring of midwives and encouraging home births to save the hospitals \$\$\$ More open conversations about home education and possibly increase the perks of home education to encourage more parents to take part in that to lessen the burden on the public school system.	Encourage diversification- offer breaks to start up companies in the first 2 years of business to get on their feet. Encourage local small businesses to start up and support those businesses in growing through grants, decreased taxes for a certain period and even offer personal tax breaks to legitimize small business owners.
A1A	Healthcare and Education. As our province grows, our schools expand, needs for mental health in schools and communities. Schools are the hubs of our communities, and already stretched thin in direct teaching and EA supports.	I think there are areas of government that are bloated, benefits to government workers is too generous, especially at the expense of the public purse.	Be careful of job cuts, no one can spend money when they are out of work. Tax benefits to corporations who do business and employ Albertans.
T0H	Healthcare, Policing, Seniors, Disabled People. Highway repair in the Northern part of the Province. Bar outside interests from protesting in Alberta against our Oil & Gas.	Close Safe Injection Sites. Teacher's take 5% wage cut. Retire older Nurses sooner. Gov't Employees take 5% wage cut & freeze all wages for at least 3 years. No funding for large projects like Arena's etc. Not all residents use them so why should we all pay for them?	Clean up Abandoned Wells. More support and Funding for Oil & Gas. This will cause the "Trickle Down" effect and all communities will benefit Support Oil & Gas wherever and whenever possible.
T0m	Education, keeping health care public, restarting the Edmonton lab	Collecting taxes from oil companies, reducing the payouts to fossil fuel companies, fine the companies of abandoned wells monthly until they are cleaned up.	Build or support companies to build recycling facilities, renewable resource companies and our own refineries for our gas and oil
T2W	post-secondary education Health Care (reduce # of physicians) government jobs social assistance for immigrants reduce financing of immigrant ethnics communities	reduce payments to the federal government funds cut funding of immigrants programs replace the international temp workers for kids and retired people stop paying any social help (like EI) to temps and illegals increase waiting time for a social assistance payment for legal immigrants	replace the all big and small retailers who hiring foreign temps and illegals for local retailers (as it was done in Seattle WA during 2008-2010 economy collapse)
T8R	Education and healthcare	The government should focus on revenue as we are already underfunding critical services. A sales tax and corporate increases seem reasonable.	Diversifying the economy, especially focusing on tech companies and renewable energy.
T3H	USE RESTRAINT IN EVERY LINE ITEM OF THE BUDGET. CUTS TO LINE ITEMS SHOULD BE CONSIDERED FOR EVERY LINE WITH NO LINE GETTING AN INCREASE.	IN ALL CATEGORIES	JOB CREATION IS IMPORTANT, BUT MONEY SHOULD ONLY BE SPENT ON JOB CREATION THAT WILL ENSURE LONG TERM EMPLOYMENT AT A MINIMUM COST. INDUSTRY WILL PROVIDE THE JOBS SO CUT RED TAPE AND ENCOURAGE INDUSTRY TO CREATE NEW JOBS.
T2V	The top spending priority is to reduce spending!!	Across the board 5% cut to all departments including all government salaries. Very simple.	The government has no role to play in job creation. This is a political fallacy! Government needs to get out of the way and the economy will do fine. Let the markets work without government manipulation. The government is, and always has been, the problem! \$70 billion debt- nice work on behalf of Albertans. Government is a bad joke foisted on the people.

T2W	<p>Spending priorities should be firstly on the inevitable:</p> <ul style="list-style-type: none"> - An aging population requiring accessible and sustainable health care. Creating barriers to health care will likely create other problems (e.g. higher morbidity, frequent burnout among providers, increased costs in potentially risky behaviors in those who simply need care, etc.). These problems will need resources to address later on; consider primary preventative measures - Investing in sustainable resources: perhaps I need to research more about what you have done to contribute to promoting use of sustainable resources but most of what I have heard/read is primarily to do with oil - Those of our future: it is easy to simply look to 4 years down the road but garnering knowledgeable, innovative, and optimistic generations to contribute to a sustainable Alberta is an investment. Seems minuscule compared to what Alberta is facing at the moment but cutting back on education, essentially making education less accessible, will impress on generations that education is not important. Is this a worthy sacrifice? Again, this would create further problems later on (e.g. less candidates to fill positions requiring post-secondary/graduate education, less job prospects, etc.) Again, think primary preventative measures. 	<p>If cuts are necessary, targeting one particular sector will not garner any level of sustainable unity or agreement. I understand there is a deficit. Yet why is it that the best course of action seems to be to hone in on one particular sector? I suggest finding savings in all sectors; that if there must be cuts, everyone contributes. A community that all shoulders sacrifice may create a better sense of contribution, less entitlement, and maybe a more sustainable savings plan. You might hate this idea, and maybe it is political suicide, but why does a province with such huge spikes of boom and bust not have a provincial tax? Why is it that every time we hit a bust, we're scrambling?</p>	<p>I do feel some level of sacrifice (whether it be budget cuts, less jobs, more taxes, etc.) is required to jumpstart our climb out of this deficit, but I suggest a long-term plan that involves all sectors and industries. In targeting the public sector right now, perhaps you may be able to save some money, but I feel this will last us only a few years (if Alberta's history has taught us anything, it is this). This is also at the cost of one sector, comprised of many valuable and necessary resources to a viable province (e.g. health care workers, teachers, civil servants to name a few). I implore that Alberta's government look to find a sustainable safety net that doesn't rely on a severe budget cut every time the economy is not booming.</p>
	<ol style="list-style-type: none"> 1. Environment/ climate change/ transitioning our economy away from oil and gas. 2. PUBLIC health care 3. PUBLIC education 	<ol style="list-style-type: none"> 1. Stop subsidizing the oil industry 2. Add a sales tax 3. Return modest health care premiums while ensuring low income Albertans are not charged 4. Increase corporate tax rate 5. Cancel the 'war room' 	<ol style="list-style-type: none"> 1. Encourage tech investment 2. Justly transition workers from oil and gas to clean energy jobs 3. Encourage investment in film industry 4. Stop cutting essential supports to education, health care and public service and forcing layoffs
T0B	Priorities! Great word!	Cut to the top first and foremost!	Look into renewables. Clean up some of our orphaned wells.
T6a	<p>Education and Health Care. Infrastructure. Cutting those departments and continuing to find ways to find efficiencies is not money saving. You can't cut what they don't have. Teachers have had 8 years of near 0 increases. Why are you picking a fight with them? Get Albertans working by spending on infrastructure during lean times. Your fiscal plan is too extreme and you will end up hurting future Albertans by not investing in new schools, hospitals, public transportation, and roads.</p>	<p>Return corporate tax rate to pre election levels. Why so obsessed with saving? Everyone who owns a house takes out a mortgage. You can't build a house without one. We need to attract people to Alberta and if you are only thinking about cutting spending, young professionals who will pay high tax levels will be discouraged from coming to or staying in Alberta.</p>	<p>Build infrastructure. Fund growth in school districts by hiring more teachers. Be like Suncor and diversify. They seem to have figured that out, why are you so set on bailing out the Oil industry when world market prices are the reason for the downturn. People still need good hospitals, schools and transportation.</p>
T0L	Education should always be first. Healthcare. Safety (police, fire & rescue)	<p>Long term views rather than short term answers. Equal taxation for everyone including corporations and small business.</p>	<p>By bringing investors back into OUR province! Tax break system that helps companies that promote economic growth and head count simultaneously.</p>
T9H	Schools, Hospitals.	<p>By decreasing their wages and bonuses and no pension, until they've earned one, after at least 25 yrs of service and paying in to it, up until the end of service.</p>	<p>Quit sending our hard earned money to other countries, quit the climate control agenda, which we all know is bogus, put the oil and gas back in to full production.</p>

T3A	Education and health care - including teachers, doctors and nurses. Please make them comfortable and not afraid of their jobs!	Stop large tax breaks to corporations. As long as there is a single well or abandoned well not paying their fair share or cleanup - all tax breaks are on hold!	Diversify our energy sector and economy
T5W	Aish, healthcare and education.	Stop funding the immigrants. I'm not prejudice but we should help our own people first.	Don't know
T3G	Public healthcare for all Albertans.	No more tax breaks for large corporations.	Support Alberta's oil industry and continue to fight for the Transmountain pipeline.
T3A	Public Education	Tax breaks to rich resource companies - they have not created 1000's of jobs as promised.	Diversify the economy
T2B	Education- public education	Stop corporate tax cuts and subsidies to industry	Diversify the economy!
T3A	Education - specifically public education. Teachers, teacher aids. Our kids have 30+ kids in their class and they list their French teacher, in class aids and support, and the music and physEd teacher's time was cut. This was before the budget. We have lost more classroom aids since the budget	Tax breaks to corporations.	Diversity in the economy
T1K	Restrict government spending to only what the government alone can do - ensure a fair marketplace, care for vulnerable; provide essential services. As much as possible, create opportunities for OTHERS to work rather than having government do so directly.	Change arts & culture funding (for example) to matching programs rather than direct grants, to ensure community support. Encourage local service provision by community groups and charities by funding them, avoiding government bureaucracy to do so. Stop funding elective medical procedures such as abortions and 'sex-change' operations.	Replace income tax with consumption tax. Reduce red tape and find efficiencies. Get government out of unnecessary areas.
T8R	Health care and education	Cutting out a 30 million dollar "war room" and putting it back in the classroom. Stop giving tax giveaways to large multinational corporations who can afford to pay provincial taxes while small business get nothing.	Investing in a well educated population, encouraging diversification and tech expansion
T3G	Teachers, AHS, Police deserve the funding, and resources needed to do their jobs. The province would be screwed without them. Who would teach the next generation? Who will keep you healthy and safe. Good hardworking Albertans are leaving to find work and start a new life, good luck getting them back.	Cut government employee salaries, cut the salaries of parliment, get rid of positions that are useless and rudundant.	Adding money to where it needs I am leaving Alberta because I could not get a fully time job. I was working 55+ hours a week between two jobs and could not make enough to survive. I probably will not come back if I can get a full time job.
T5Z	* Re-establishing previous funding levels and supports for health care, education, AISH, seniors, social services, etc. * Develop Alberta's previously ignored infrastructure in order to support potential finanacial growth showing "Alberta is actually open for business" * Support diversification through tax credits and financial incentives in area of reusable energy (including adapting/ scaffolding technology from the petroleum industry); biotechnology in agriculture and medical research; technolgy (cybersecurity, virtual reality, artificial intelligence); and tourism/film industry * Development of employment skills and opportunities for the individuals with the greatest unemployment rate (males under 25 and over 55) * Integrity in actions for all Albertans, not only those in the petroleum industry	* Eliminate Canadian Energy Center War Room immediately * Reduce the number of ministers in Alberta's legislature * Hold oil companies accountable for paying back provincial taxes * Eliminate tax reductions for large businesses * Eliminate cronyism and the perception of cronyism in all areas * Eliminate the development of straw committees which only echo the UCP party line * Use the work of the previous NDP to the current provincial government's advantage e.g., education curriculum * Stop the creation of "initiatives" which have no financial gain or validity in practice	* Allow open bidding on all contracts - current practices award contracts without * Employ full transparency and accountability strategies with regards to spending and awarding of government contracts * Provide incentive for entrepreneurs * Create provincial sales tax at 2% rate

T3R	Public education- we need to focus on smaller class sizes and meeting complex learning needs. With the rise of autism entering public school systems, facilities need to be in place to help families cope and children deserve proper educational experiences that will help them build life skills. Having them in mainstream classes is not helping them grow, nor the other children around them. Teachers are killing themselves to ensure children are getting quality education. Public tax money should absolutely NOT be used for private systems. If parents want private schools, it's out of their own pockets. The public school sector shouldn't turn into the piece of shit education system the states has created. We do amazing work and have phenomenal professional development that moves our children to be prepared for the future. Stop talking to the people up top and meet with everyday teachers, that work 50+ hours a week trying to help their students with shit supplies. They will tell you how funds can be allocated appropriately.	Shed up top! We don't need half the people involved. Especially in the Calgary board of education, make everyone work with children. We don't need an entire office full of people. They need to be on the front lines with children making a difference.	Make Alberta more than just an oil and gas hub. We need to branch out into other areas like nuclear power and technology to diversify our power generation. We need to be future forward/trendy to maintain a name for ourselves. Branch out with engineering in design and innovation.
T3e	Auditing all large publicly funded budgets like AHS, Education, police forces, etc.	Lay off unnecessary middle management. Offer bonuses for people to come in under budget. Cost justify all expenses over 50k	Get public spending under control and reduce personal taxes. That will encourage more spending.
T6H	infrastructure and basic services, and leave everything else out ...	a sensitive point but: limit government spending to its basic obligations, make sure that, even when cutting expenses (such as education and health), the cuts are aimed precisely at overlapping services even if you have to list them, explain, to teachers' unions that, for example, professional development days ought to be taken in their own time and on their own dime: all other professions do so ... a number of services provided by government at all levels are running side by side where one provider would suffice: find the most cost-efficient one, and remove all the others ...	cut business taxes to a reasonable level, remove as many rules and regulations that exist ... they make production more expensive and slower ... wherever possible, break unions' monopoly in individual industries ... provide initiatives (such as tax breaks, but NOT grants) to developing industries (research, etc.) ...
T6X	Healthcare and education	I'm a physician, and I know there are still inefficiencies in our system. However the way the government went about addressing them felt haphazard and without much thought. Straight cuts will not address the inefficiencies that AHS has. Also, the entire existence of Covenant Health is an inefficiency. Paying for 2 sets of administration to do the same job. Looking at merger would be a good decision.	I believe we need to diversify. O&G can be the backbone of our economy but it can't be the only thing. Bring back tech subsidies, look at taxes for small businesses.
T8L	Eliminate the deficit as soon as possible.	Keep public sector wages at current levels and eliminate perks.	Reduce taxes on private sector and assist small business startups. Provide infrastructure as needed.
T1M	Front line health care and education	By eliminating Upper management/trustee/executive positions and salaries in public sector.	Get rid of the big salaries employees that have no impact on the day to day work within an organizations front line. Hire more front line employees to improve the quality of experience the patron receives

T5L	Police and safety and help for seniors that were born here, worked here, and raised functional children to contribute to our society	By not funding special interest groups and take the necessary steps to help improve education by removing special needs children from regular classrooms and put them in an area where their needs can be met and 'regular' children can actually have teachers spend time on them. Also, by not increasing funding to facilitate drug use by providing seemingly endless resources to those that have no interest on ever helping themselves or contributing in a worthwhile way to society. The majority have chosen this as their path. I'm not their family and do not want my money wasted on them	By contributing to worthwhile endeavours by entrepreneur ps, not throwing money at someone's idea that we know will do nothing to help society. Keep it Canadian, and support jobs that are from Canadians that are keeping their workforce here
T6G	Social services to vulnerable populations and provide the highest quality education in the primary, secondary, and post-secondary sector.	Closing all loopholes for business to evade taxes, and introducing a sales tax.	Diversification of the economy to end the dependence on the oil and gas sector. Investing in a knowledge- based economy, as well as focus on progressive technologies which will be able to create solutions to contemporary and future challenges.
T2Z	The government should focus on balancing the budget at all costs.	Hold the boards and committees accountable for their spending. Establish a more economically sustainable management system for publicly funded institutions.	Balance the budget and reduce obstacles for business.
T0A	I think the spending priorities should continue to fund students to upgrade their education to get better jobs.	Less grants for big cooperation's that take the money and leave with it, instead of investing it back into Alberta.	By educating the people and making the big corporations invest back into Alberta, which would open up more job opportunities.
T7X	Infrastructure	Cut civil servant jobs	If we can't get pipelines built then it's time to split from this country!
T1S	Only the very basics. Infrastructure, health care and education. Everything else needs to take a back seat while we pay off the debt.	Reduce or eliminate spending on things that are normally funded by philanthropy, such as cultural and art based budget items. Give philanthropists the opportunity to fill in the gap and get a tax break for their generosity. Eliminate foreign funded ENGO's and put unions on notice that they will be put under the microscope. If there are any illicit or illegal activities going on they will be eliminated. There are too many unions funding political parties illegally.	Reduce red tape and lower corporate taxation. Reinstate the flat tax in Alberta. Take out ads in the US to call our energy sector back to work here. Promote capitalism and entrepreneurial endeavours.
	Disabled/Mentally Challenged/Seniors and Veterans	Upper echelons of Alberta Health for one, not the front line folks. Identify and eliminate waste. Incentivise agencies for cost cutting measures. Suspect there a many ways of cutting spending without cutting services, particularly to those mentioned above.	Fiscally responsible government with plan for balanced budget, simplified tax laws, creation of a law prohibiting government from running deficits...live within our means. As a blueprint, simply take federal government plan and reverse it.
T6T	Health and education - at least maintaining current service levels, adjusted for population growth - should be top priorities. Supporting municipal transit projects and other "green" projects is also important.	First, eliminate outrageous salaries at upper levels. Find efficiencies by combining similar services between levels of government - for example, I don't see a need for each level of government to have an elections agency rather than all using the services of Elections Canada. Stop hiring so many outside consultants to provide recommendations; maybe ask for the regular Albertans who elected you for their input, and put together a panel of volunteers with reasonable qualifications where more in-depth study is required.	Encourage development of oil and gas refining and processing facilities here rather than transporting our crude elsewhere for those steps. Encourage economic diversification so that our economy will become less closely tied to oil and gas. Ensure that any tax credits for companies are based on demonstrated job creation rather than blindly hoping that companies will be so good-natured as to invest savings from reduced taxes into new jobs. Create local and regional tax credits for companies creating new jobs in areas that most need them

T7S	On things that support the private sector and towards long term develop of our resources.	privatize services. cut public sector hard.get rid of the layers of waste in the public sector. Don't pay equalization	Cut red tape, fight fake news and fake enviromentalists Stand up for our resources
T9X	Health care and education	Get ride of the war room, examine travel expenses for government officials, have elected officials take the pay cut they are asking other to take and cut back on their pension.	Yes our unemployment rate is too high and we need new industries to move to our province.
T4C	With the debt where it is the priority is cutting.. minimum 20% across the board, let the union decide, wages or staff. Management could be likely cut mor	Holy crap.. just having the gall to ask this question shows how out of touch you are? Everywhere you look there is waste, over staffing...overpaid staff by 10-30% above other provinces and even a higher percentage about private sector... Useless regulation.. capital spending waste (March madness), useless policies...	Reduce regulation and contract out via bid process...and get the hell out of where government doesn't belong..... In short ...get out of the way... Jobs is not the governments responsibility.. Health care, policing, public safety
T1s	1. Cut business taxes to bring companies back to employ people. 2. Elimination of carbon tax by implementing a home retrofit plan for energy efficient home. Allow a grant for solar, geothermal and wind for individuals and corporations to retrofit and new builds. 3. Provide a tax exempt moratorium on taxes for up to 3 yrs on oil, chemical and plastics plants new builds and upgrades using energy efficient methods to run plants show the co2 gains. 4. Place a tax credit for individuals who utilize energy efficient means of heating homes, and utilizing energy efficient transportation.	1. Stop paying cronies for studies that are useless. 2. Focus on creating a business friendly environment \$\$ that will employ people bringing growth to Alberta.	1. Provide startup tax credits for new technology companies creating new employment opportunities for Alberta. 2. Get more pipelines to export our resources to the world. 3. Give credits to manufacturing companies creating jobs for Alberta.
t6j	My budget priorities are to support public health, public education, municipalities and the diversification of the economy at better levels than your 2019 budget did. Also, you should be engaging with these sectors and consulting up-front with these sectors before budget changes are made. Their input and the well-being of these sectors should be taken into consideration and the budget should reflect this importance. As far as I know, Alberta is still a democracy.	Not give tax cuts to corporations.	If your priority is to support jobs and economic growth, you should not be making budget cuts that decrease jobs in the public sector or decrease funding to diversification projects that assist in the development of newer industries, such as IT.
T4R	* New innovative Green technology & investment * Solar Energy investment	* Reduce health care costs & admin bloat by abuse. annual physicals unnecessary as an example. * Secure bonds and deposits for oil/gas drilling & environmental cleanup with set time limits to operate or forfeit licenses & deposits. (North Dakota is an example)	* A Gas Tax Levy * Provincial sales tax of 3-4% * Cut out annual physicals, Dr's bill about \$100 plus to govt. One of the only provinces to still allow this.
T5N	Please spend within our means, no deficit.	Infrastructure spending	Less red tape

T2Y	Only essential service. Cut everything else!	-overstaffed construction crews -no more renovations on anything in the parks for at least 2 years (Fishcreek SW Calgary just replaced all the buildings, it was not necessary) -no more renovations on any provincial buildings unless it is a safety issue -axe the purchase of all non essentials, art, decorative bridges, flowers, parties, celebrations, grants, expense accounts (cut by half), there are many many things you could cut! Think like you are a single parent and reduce!	-Actively speak with companies in all areas, tech, manufacturing, oil and gas. -keep taxes low
T1S	Necessary services and firewall implementing costs	Cut Public service jobs. Lower immigration.	Tax cuts and no red tape, putting Albertans to work first. Deals with US for trade.
T3B	Health care Education (K-12) Advanced education Expanding labour markets into other areas. Tech, agriculture, tourism, etc...	Support staff within many government ministries. Reduce the size of the government.	Th rough education at the post secondary level and through research initiatives.
T2W	cut public sector wages, benefits and pension plans, to put them in line with the lower benefits we get in the private sector.	stop paying for abortion as a method of birth control, which is what you are currently doing.	by cutting taxes and regulation
T2V	CUT SPENDING AND VALANCE THE BUDGET!	CUT ALL DEPARTMENTS!	LOWER TAXES, REVERSE C69! Allow pipelines to be built and allow us to sell to new markets!
T4a	Education, health, infrastructure	Shuttering the Canadian Energy Center.	Increased investment into economic diversification
T1A	1. Health - improving wait times for surgeries 2. Economy - diversification of energy resources 3. Education - Make provision of education for students with all ability levels a priority and provide the necessary supports (TAs, resources, Behavioural Specialists, etc.)	1. Close the War Room. 2. Start collecting taxes from Big Business on an equitable basis. 3. Introduce a Provincial Sales Tax.	1. Increase funding for those who wish to improve their education level or retrain for other types of work. 2. Support diversification of energy resources. 3. Fund Education, Health and Social Services at previous levels.
T0B	Create jobs get rid of Trudeau before he completely destroys alberta	DO NOT Give the feds any transfer payments grow a set ha	Subsidy only Alberta companys why do we get meals from Toronto for the HOSPITALS come on really
T0H	Corruption is a huge concern. I'm dealing with it right now on the county level and there doesn't seem to be a way to call our elected officials to be accountable!	They have a tendency to cut wages or numbers of the people who actually do the work. It's management who need to be cut. I see it over and over. There priority is to protect there position!	Put money towards fixing things that are wearing out such as bridges, That is a worthwhile project and it keeps us safer!
T3k	Put health care and education back on the for front. The economy will be stronger in the long term if these recive more funding. A healthier and more educated public creates a strong economy. Also harm rediction should be invested in more. Helping people like this will help reduce money spent on taking care of them later. Helping the lowest line rasies everyone else up. An increase in social services funding will help econmicilly in the future.	Less tax cuts for large corperations. These corperations should be paying higher taxes as they can afford it.Giving them tax cuts leaves money on the table that Alberta can use. Just making things more efficent will help too. Just make sure it is effective too. The main mindset though should be to ceate more value as saving will become less of an issue.	Diversify and stop relying on oil and gas as the main source of income. The industry has changed. Things like art, music, science, technolgy. Any investor would say keeping all the eggs in one basket is foolish. Oil should be part of the future but not held as the main source of provicial income as the infustry is not as large as it once was. It should also encourage people to start thier own creative busdiness that contribute more that just econnic value but educational and social value as well.
T8A	Debt reduction!!	Acrossed the board.	Become debt free. Get that under control - the rest should follow.

T4B	Cutting government personnel (bureaucrats).	Unions - teachers - health care - too many in administration.	Lower taxes on businesses and citizens so everyone is able to LIVE on lower paying jobs.
T0A	Healthcare and public education.	Oil and gas, CEOs, your own paychecks.	Reinstate old healthcare and public education funding
T6R	Additional funding to account for population growth and aging in the health care system.	That's your job, not mine.	Again, your job.
	Leave AISH & PDD funding well enough alone - these people need the supports they are receiving... Same with access to medications - & coverage of medications... These programs should be maintained to the actual cost of living... You keep these people stable & healthy - they contribute back by not costing more for illness & other...	<p>Politicians salaries & perks - The meals, transportation, clothing allowances & other stipends need to be stopped... The rest of us out here have to pay for this stuff out of our pockets for our jobs - Politicians should be doing the same... No more free rides - Cut at the top - not off the bottom... This *war room* thing is costing tax payers money to run this - & this lacks transparency - shut this down & be accountable to those who voted you in...</p> <p>Health - put a salary cap on positions of CEOs & those who are at the top running the show... Leave the nurses alone... Leave the drs alone...</p> <p>Run the hospitals 24 hours a day - surgery 24 hours a day - MRI 24 hours a day - this would clear the wait lists & cut costs of having everything sitting idle & unused at night...</p>	<p>By not giving their corporate buddies hand outs & hiring their friends & patronage appointments to boards & other in the province - Need to hire people who can do the job for their abilities - not for their political followings...</p> <p>Find fair taxation for all - not tax cuts & payouts for your buddies - enough is enough...</p> <p>Need to diversify & invest in alternate energy sources & other kinds of employment that benefit Alberta - not just your buddies pockets...</p>
T0j	Stop cutting public service support and jobs. Invest in diversity and renewables. Remove dependency on oil/gas	Stop funding the energy war room. Stop tax breaks for oil companies	Ensure public confidence by not slashing public funding. We have delayed/cancelled many purchases and renos do to current government policies causing job insecurity.
T1K	Education and Post secondary Education Health care	Eliminating the "War Room." Investing in drug treatment plans for addicts	Diversify the economy
T1S	Education and health care. If big businesses are given tax credits they must produce jobs. Making tax breaks for the middle class so they have more money for their every day lives.	Cutting the administration cost of education/health care. Buy out for senior teachers/ health care workers who are able to retire. Getting new teachers/health care workers in the profession at a lower salary. Cutting the red tape of that plagues health care and education.	Helping companies, organizations and individuals with cost effective loans to diversify the Alberta economy.
T2V	Healthcare Education Innovation	Close the "war room" (it's a waste of money and an embarrassment). Combine Catholic and public school boards Implement a PST	Bring back the STEP program. You have hurt students enough. Provide tax incentives for innovation and technology ventures.
T2I	Health and Education!	NO MORE tax deductions to oil companies. Make them pay their fair share. Cut the funding to the "war room", it is a ridiculous waste of money.	Diversify the economy. Give incentives to OTHER industries rather than just oil and gas.

T3G	The government needs to focus on eliminating the debt. It is a millstone around the neck and will only get worse. Any responsible individual or household should be debt-free or have a debt that is manageable. The government should do the same.	The government can find many savings in all the work it contracts and anything it buys. Some pensions are too royal and bonuses do not need to be paid out of the taxpayer's pocket. The government needs to contract and buy things from other providers because anything the government buys or contracts is simply way to expensive. Things are so expensive because everyone knows the government will pay good money and so everything is expensive. The government needs to be run like a corporation or an individual's business and the overpaying and spending needs to stop. We don't have the money that is being spent. Alos, all projects government spends money on should be vetted carefully. Government tends to throw money away on some very doubtful things.	Diversification, lower taxes, and lower regulations. Let's look at what president Trump is doing and his success with the USA economy. We need to have common sense approaches. One very important one is to not stifle the economy with unnecessary regulations.
T2T	Addiction, Mental Health, affordable housing, homelessness	Alberta health services management (too many layers). Investing in renewable energy sources instead of continually dumping money into oil and gas. Increasing corporate taxes instead of giving tax breaks that corporations are dumping into their own stock shares instead of creating jobs.	Move away from oil and gas and explore renewable energy technology. Invest in city infrastructure and continue to invest in affordable housing. Ban temp agencies as they only give the impression of economic growth and job creation.
T2L	Education Healthcare Restructuring Alberta's economy to RENEWABLE	Dissolve the "war room" Get the corporate welfare back that didn't do anything g but line the pockets of the rich and we'll connected.	Pivot to renewable energy Re-educate oil and gas workers
	Education and healthcare	Do not lower corporate taxes,	Diversifying the economy, bringing new industries and investors (such as renewable energy and high technology companies)

T6L	Govt should stop spending immediately on any ongoing govt project where the work has not been done more than 25%. no further developement needed onward.	This is worse case emergency situation going on in Alberta, so needs to do very strict following measures Salaries of all the govt employees should be reduced to 60%. Engineers, consultants, professional have become addict to old style wages style which is highest in Canada.Fresh university graduate 60k, with 10 years experience 80k. top boss like project engineer, head of the organisation 100k. Engineers do nothing except stamping. Fire them all getting pay above 80k and recruit new. Govt employees in edmonton voted agains conservative govt because they wanted to enjoy levish salaries. Stop all the envirmetal budget to zero these guys give zero benefits send them home. companies should be fined brutaly if some mismanagement takes place. Stop Phase 1 & 2 commercial and industrial envirmetal assessment, only phase 3 assessment should be compusory. eliminate all envirmetal organisations, they are burden on the economy and zero output. Only these guys are enjoying their jobswith handsome pays and they add zero to the work force, they dont let do any thing, whereas all other engineers have been laid off. Chage the Alberta Tax Brackets as below; Upto 50,000 8% 50-100k 13% 100k and over 15%	Govt should reduce highly paid technocrats reduce the pay of everyone to 60% and hire fresh graduates at low wages.At a site where 10 Engineers are working make it 6.Eliminate the red tap like environmental regulation who stop progress. Revoke all these environmental regulations through constitutional amendments. Make tax free economic zones in all the cities having a population of 25000 or more.Announce Tax holiday for 5 years in these industrial zones, you can get huge foreign investment and Boom in the economy all of sudden and ultimately economic growth.
T8L	There are no priorities. Spending cuts are imperative.	Anywhere possible.	Pipelines are a must going East, South and West.
T0E	HWY 16 WEST OF EDMONTON TO EDSON HAS MANY DEEP POTHOLEES.	CUTS IN PUBLIC BENEFITS. CUT ALL GRANTS.	GET OUT OF OUR WAY.
T1S	CUT SPENDING! We must live within our means to ensure our children and grandchildren don't pay for the mistakes of today.	Everywhere	By making Alberta business friendly. Governments are not job creators.
T6B	Education, health care, supports for seniors and the disabled.	Corporate tax rates/ breaks.	Support new industries/ renewable energy.
T8N	Debt reduction	Allow more privately run, government funded, health and education services	Less cumbersome regulation, provide more choice for productive sector in Workers Compensation, hours worked per day/week,etc.
T1S	Infrastructure	Audit the overtime being charged by ALL government employees and departments.	Get rid of all unnecessary red tape and regulations just like President TRUMP.
T6L	Affordable daycare. One school system-- no separate school system funded by taxpayers. Affordable post secondary for Albertans. Leave my pension alone.	Cut the task force on o&g Stop equalization payments to Quebec, that pours raw sewage into St Lawrence and stalls our pipelines and bc that does the same in Victoria.	Pipelines. Alternate energy projects .high tech companies Vocational schools
T2G	The government should focus on job creation, healthcare and senior's programs.	The government could find savings on employee wage and benefits, particularly pensions and by cutting non-essential services.	The government should give tax credits to businesses that promote onshore hiring, impose penalties for companies that offshore work and provide tax credits to companies that will help diversify the economy.

	Mental health/health care Social programs Environment	Taxing large corporations such as oil fields	Sustainable energy Support of Social programs (which will need employees and service users will become more employable)
T4C	I am in favor of LESS spending	all across the board. In all departments. We absolutely need to have the government to be more efficient and work more like the private sector. Don't be afraid to cut sick days, pensions and pays so that government workers are remunerated more like the private sector. There is still a deep-seated belief that one should work for the government to have a good pay, not work too hard and enjoy great benefits and pensions. Unfortunately this belief is based on reality	Less taxes, less red tape including less Federal interference in all matters including pipe lines.
T0M	Health care Diversity in industry	Fire Matt Wolfe Close War Room Cut MLA salary and pensions Reverse the tax reduction to Corporations Make O & G companies pay there taxes	Stop putting all our money in O & G some day it will be gone
t0c	roads,education at primary levels/k-12,INCLUDING puf funding which saves \$ in the future,physical infrastructure	provincial staffing levels-should be cut by at least 5% across board/and merged/eliminated. If asked I think almost every business person would agree that a 5% cut in staffing levels is possible/agreeable and the business would survive just fine. And if looking at the provincial 'swamp' that needs to be drained I think a 5% drain across the board and looking for more within individual ministries would be a great start	continue to cut red tape. Why can some jurisdictions get major project approvals 2 to 3 to 4 hundred percent faster than alberta/canada
T2X	Getting jobs back. Keep fighting g the carbon tax	You could find a ton of savings with the HR department (Public Service Commission) There are way too many managers/ directors. If you look at the size of Alberta Health Services and the size of their HR compared to the GOA you would be astounded of the waste. Senior leaders there protect one another and create unnecessary and unneeded director and manager positions. 17(1) it's over bloated.. their job evaluation and classification department are not objective and have over classified positions for their friends.	Work with businesses and keep up the war room. A rough start but get some legitimacy back Don't back down with the Unions Keep up with reversing bad NDP employment standards and regulations and labour relations board. You may need to put in a small sales tax to get us back
	Healthcare (especially Home Care and Palliative Care) Education	Decrease number of government ministries Create PST	Increase tax credits for small to medium businesses
T4B	Better fiscal management, hire more panels to spotlight overspending and make spending more effective in health and education etc. More police and other services that focus on the citizens which is what government is supposed to do. Not serve themselves. I'm a 17(1) old taxpayer and I feel I clearly work to keep government workers in the luxury they are accustomed to. They certainly don't work for me any more.	Reduce the size of the public service when times are tough. Not borrow to keep it bloated. For our future generations abolish defined benefit pensions now. Make defined contribution public pensions to industry standard of 6% match Make public wages equal to private industry wages Make budget deficits illegal. Me and my family can't go into debt to live especially in tough times. why should government be able to at my expense.	Wipe out the debt, have responsible government and not tax all business and people into oblivion. If you reduce overall taxes then businesses will choose to come here, jobs and prosperity will come to you. It's a pretty simple formula.

T2S	Alberta need a strong public sector. Undo the disaster you have created.	Public dollars should not spent on the disrespectful press secretaries whose job it seems is to troll taxpayers on the internet. They are the highest paid trolls in Canada, and they need their salaries cut to be in line with what the other trolls are being paid in this country. And it should go without saying, that the war room should be shut down.	Diversify, diversify, diversify. Do what Texas did and diversify economy, you can start by bringing back the incentives that the NDP put in.
T5b	How about people with disabilities? Or basically anything that isn't gas or oil since that is all you bloody care about.	Not giving corporations 4.7 billion dollar tax breaks. Building a war room, or taking expensive trips.	Get rid of Kenney.
T7Y	Getting rid of the FEDERAL Govt. Gov't can only redistribute wealth and it wastes way to much. Let people live their own lives. We know far better than you on how to spend our own money.	Cut the civil service by 20%. Allow private health and education services.	Create right to work legislation which gets rid of unions. Make unions collect dues from members directly, not through their employers.
	Public Education	Government bureaucracy	Good Question
t6h	Health Education	Taxing corporations. War Room cancellation.	Education Training apprentice Support research and development look at future needs
T3K	I think cuts to health, education and Alberta Supports would be nonsensical at a time when the economy is weak. Also, the ND P are not responsible for the deficit. It can be traced back to 40 years of PC rule.	Get rid of the war room and tax cuts to major corporations. Travel and accommodation both inter-provincial and international should be cut to the minimum needed to encourage trade and at cheapest cost possible. If Albertans have to trim their expectations, so should ministers.	Put more effort into diversification and get rid of the focus on oil and gas as our main focus.
T6H	Diversification of the economy. Education Health	Removing subsidies from the dying oil and gas industry. They should have long made their money in that industry. You lost your chance with removing the Provincial carbon tax! Cancel the stupid "war room". Stop flying your friends around for pancake breakfasts.	Diversification of the economy by supporting training through education, supporting emerging tech industries and alternative energy industries. Support new smart industries not old dying ones.
T1S	Protecting the people. Making Alberta independent in whatever ways are possible. Educating Albertans on economic realities.	Bloated bureaucracies. Allowing people to run their own lives. Cutting back on ridiculous regulations and red tape.	Provide an environment conducive to business. Protect property rights. Negotiate pipelines. Stand up firmly to those who try to slander our industries and way of life. Promote Alberta to a wide range of industries.
T4H	Support for people with disabilities and drug rehabilitation.	There is an excess of management in government programs such as AHS.	Support for businesses that hire young workers.
T1R	Rural Crime, Debt Repayment, More Judges so criminal cases don't get tossed out of court because they aren't tried in time,	Close Safe Consumption sites, Reducing labour unions (more contract work)!!	BUILD PIPELINES!! flat income tax rate, no sales tax, More opportunities for private enterprise,
T0E	Healthcare, education and affordable housing	Their salaries and expense accounts	Make it easier for small businesses to start and survive

T5M	Education and Research and Development: we should be looking toward the future, funding education at all levels, producing thoughtful citizens capable of critical thinking and being productive members of society; we should also be looking toward the future, doing research to diversify Alberta's economy, particularly in areas such as renewable energy	I'm not sure that savings are our highest priority when we're trying to deal with a recession. But the government's initiatives such as trying to rely more on technology for communication, rather than travel are a good start. And I'm pleased to see the notice that public sector institutions are not to do the usual "use up all the money by year end so that we get the same amount next year" spending. And perhaps we could try not to pay public sector middle and upper managers huge amounts of money and give them big payouts, when they don't create the same kind of money that business managers do.	Tax incentives for businesses; apprenticeship programs, training programs, education at all levels to create competent workers to hire; research in innovative technologies; encouraging innovative-technology businesses
T0m	Helping small business owners who are financially struggling and the recently unemployed. The increase in crime in this province needs to be addressed. People are getting desperate. Loss of jobs=increase in crime.	People who are abusing the healthcare system EI and AISH need to be corrected be it through education or copay in the case of abusing healthcare.	Incentives. Lack of spending is up in our province do to lack of income. If we could stimulate spending this would help growth. An example of that would be healthy eating and exercise give you a tax break because you are not a burden on the healthcare system. In our case we would be able to buy more veggies to feed our family better and be able to afford more services like dental care for my children.
T2Z	Getting jobs and investment to Alberta. Oil and gas.	Reduce public sector wages. Control costs by demanding vendors/suppliers reduce their cost or lose contracts. Renegotiate all building contracts. Put all contracts out for tender.	Lower taxes. Demand accountability. Quit bailing out losers.
T3M	Law enforcement and the court system. These are legitimate government expenditures that keep a free and prosperous society running. Fill the vacant seats on the bench and address rural crime before throwing more money at a failing public education system and failing public health care system that are both dominated by statist leftists and corrupt unions.	Decrease the bureaucracy, at least a third of which is entirely unnecessary. Cease corporate welfare. Stop covering non-essential services that are better addressed by the private sector in any event.	Lower taxes, both personal and corporate. Reduce redtape. Unshackle private enterprise. This isn't complicated. Government "supports" job creation and economic growth by getting the hell out of the way and providing an effective and responsive law and order regime and top-notch infrastructure.
T8R	Health and education. Stop cutting! This affects our children! Stop the funding of private education.	Upper management. Leave the front lines alone. Cut the number of MPP's!	Diversify.
T8X	Smaller government means more money for other things Roads Hospitals	Privatization of many services Smaller government Less regulations End equalization	Less regulations Lower taxes
	Transition programs to allow workers who are in petrochemical field to retrain for other areas.	Pharmaceuticals, health care, and education. Also, downsize the cabinet and make it more streamlined. Get rid of political appointees.	Eliminate provincial trade barriers.
T0K	Lowering the Provincial Debt	Stop all equalization payments to the federal government and pay down the provincial debt with it or insist that the federal government pays of that debt for repayment for all the lost revenue the pipeline feascal has cost this and other provinces.	Show investors that we have a plan to reduce debt and still be able to stimulate the economy. The balance is the key and as the jobs increase so too does the Tax based income for all of the province.
T6W	Healthcare and education	Implement sales tax, stop giving large corporations tax cuts. Revenue could be made off of these larger corporations if they were taxed more	Do not solely focus on oil field. This province needs to diversify in all job sectors.
	Education	Cut public transportation expansion	More teaching staff required, reduced class sizes. Allow our children to be taught to their highest potential, this will allow for economic growth.

T0C	Government spending. Cut backs for all govt officials	On the people who make unreasonable amounts of money and all their tax breaks.	Stop laying off people like health care education. Also stop making rich richer and poor poorer. Also get rid of Kenny's war bunker!!
T6V	Getting people back to work by diversifying the economy, developing industries where we refine our own resources instead of sending raw resources east to have them refined there. We should develop industry/business in rural communities. Discourage franchises that hire few people and offer nothing to workers beyond minimum wage. We should be allowed to trade more with other provinces.	Often there is too much variety in existing resources instead of promoting strong basic resources, we have catered to too many islands of people. For example, in education why are we offering courses in Arabic if there are 12 students when other courses require a minimum of 20 for the course to be offered? Why are we paying medical bills for non-essential medical treatments such as abortions, sex change operations etc. Discourage special interest groups that do not have a benefit to most of Albertan.	Support local small business such as cheese and dairy production, grain milling. Create a more diverse economy by encouraging local business in rural communities such as butcher shops, hardware stores etc. Encourage vitality in rural towns! Limit franchises and encourage small business.
T5k	The disabled, seniors, vulnerable people. Spending on citizens, not corporations.	Salary cuts for all government workers making \$100,000 or more. Government salary caps at \$300,000 max. Reduce redundant management.	Invest in SMALL LOCAL businesses and individuals.
t7x	health care, education and infrastructure.	MLA pensions/benefits. Get to where the private sector is, preferably with a reasonable, defined contribution to individual RRSP's. Administration cost of government departments. Reduce payroll/benefits for senior management.	Encourage/subsidize trades training and other "useful" training ie: training that will lead to a job. Reduce funding for secondary education that leads to no useful contribution and generally no employment after graduation. We have enough political science and psychology grads.
T2W	Reduce spending, don't spend more.	Most government expenditures arise from the number of public employees; therefore, reduce the number of employees. At the same time, reduce red tape by reducing even more employees.	Not your job. Leave it to the private sector.
T0L	Less spending everywhere. Reduce the number of government employees.	Reduce government wages to less than the private sector. Farm out as many services as possible to the private sector like was done with registries. Eliminate government pensions and pension matching. I have to plan and pay for my own pension/ retirement, so should they. For every new law or regulation considered 2 laws or regulations should be removed.	Job creation happens best when government gets out of the way of the private sector. For every new law or regulation implemented 2 or more should be eliminated. I loose hundreds of man hours every year to regulation compliance in my 17(1) company. I had to let 2 people go and hire a compliance officer and now we are less productive and less profitable and paying less taxes because of it. We were very safe before with very few WCB claims over a 25 year period. We are no safer today, just more frustrated and less productive.
t3r	- Boosting Economy with increased diversification - Eliminate non-essential services that do not add value - Improve existing operations to increase efficiency and reduce spending	Any public union services being offered is definitely priority no. 1.	Investing in more diversification by providing grants to companies to move their HQ to Alberta and new startup company which will in fact boost growth.
T8R	Healthcare and education Lighten the administration and support the frontline workers!! Cities can support private schools but small towns cannot! Provide proper education for rural students	Duplicated services	Investigate and support Alternative energy sources Do not put more money into oil companies who choose to mismanage their funds
T1p	Education and all the budget cuts need to be reversed.	Increase taxes. Cut government wages to be the equal with the lowest in Canada. Premier included.	Increase social spending, child care so both parents can work. Diverse get away fro oil and gas.

T0C	Reduce the size & role of government across the board & cut taxes, fees & fines to zero. Government should be limited to ensuring the protection of people and their property, and it should levy just enough taxes to finance services related to these purposes, such as national defense or law enforcement. Otherwise, it stays out of people's – and businesses' – affairs. It does not concern itself with matters such as employee wages, higher education, how individuals invest funds for retirement or how many miles per gallon a vehicle should attain.	See above	See above
T8H	Health care and infrastructure.	Reduced bureaucracy; fewer levels of management; reversing pay bracket creep. Requires in-depth program review by external resources.	Replace a portion of income taxes with an Alberta sales tax
T2E	Social safety-net for unemployed, disabled and disadvantaged Albertans; improved healthcare systems, including mental health, with a greater focus on preventative medicine; improved access to affordable, reliable, and comprehensive public transit,	higher corporate taxation rate and fewer tax cuts for corporations; higher taxation rates for individuals in high income brackets; minimum wage requirements that ensure workers are paid a living wage	development of sustainable energy sources and technology and incentives for individuals and companies to switch to alternative energy; diversifying the provincial economy to rely less heavily on oil & gas exclusively; investment in education at all levels, including providing educational institutions with greater resources to meet the educational needs of students and support educators, and reducing individual economic barriers for those wishing to pursue higher education
T2J	Health and education. This is part of supporting our children and youth (who are our future), as well as our aging population.	Consider the impact on working families of tax breaks for big corporations, who's employees make 6 figures per year.	Construction. Supports for small local business and entrepreneurs. Youth employment programs. Return to work incentives (after injury or with lay offs)
T7S	Paving highways Jobs Cut red tape Get our oil industry healthy Less pay for bureaucrats	Smaller government Less pay for ceos of health divisions	Less red tape less taxes Support training for people' who have lost jobs to industries that don't exist anymore
T2X	Spend whatever it takes to attract investment dollars back to Alberta, stimulating local businesses and creating jobs for Albertans. Once the economy is off its knees, focus on paying off the massive provincial debt created by the previous government. Be fiscally responsible and live within our means.	By trimming the fat from our bloated public sector created by the previous government and not caving into the outrageous demands of the unions. Dissolve inter-provincial trade barriers and stop over-paying equalization to the rest of the country to our detriment. Stop paying subsidies to so-called green energy and support our own oil & gas industry for the benefit of all Canadians.	Reduce business taxes and provide incentives to stimulate private sector growth, the actual economic engine of this country. Fight to repeal Bills C48 and C69 which have created an Alberta blockade by the federal government.
T1M	Debt, debt and more debt.	Decrease the size of our bloated bureaucracy.	Get out of the way: decrease corporate taxes and cut red tape.
T8N	Education and essential services and then in the energy sector. Building state of the art, highly efficient oil and gas refineries. Canada should be a leader in the oil and gas industry yet we send out our crude and get it refined in the US. We also need to lead the way in alternative energies.	Having our own refineries would allow us to export oil and gas and make revenue from our own resources. We need to stop giving our oil away and buying the refined product back at market prices.	Alberta should lead the world in refining its oil and gas, not sending it off to be refined then brought back at market prices. We should buy our own refined oil and gas that we produce ourselves, and no more bringing in foreign oil and gas. Alberta should also lead the way in alternative energy growth.
T0B	Education, healthcare, infrastructure improvement	Stop throwing money at oil companies just to have them leave Alberta	Increase focus on high-tech jobs

T8S	Primary focus should be on cutting spending and getting our debt under control as soon as possible.	Cut administrative expenses in education and healthcare. Re-privatize services like hospital laundry service.	Keep business taxes the lowest and most competitive in the country. Continue to demand the federal government repeal damaging legislation to our resource sector. Remove the government mandated oil curtailment as soon as possible.
T8A	Health care should be a priority	The government could not hand out money to companies willy nilly	Put some money into alternative energy and create jobs in those fields
T3A	The government needs to spend money on education, health care and social programs.	Quit giving huge tax breaks to corporations. The trickle down theory that tax breaks to business creates more jobs and stimulates the economy has been proven untrue... there are no statistics to back this up.	Diversify!!! Oil will still play a good part of the economy but new business like solar, wind, energy storage and carbon storage are all comers. These are exciting new business to do with the environment. Albertan are innovative and with investment behind new ideas, I think we can have oil, a healthy economy and environment.
T3A	Jobs Business opportunity. Pipelines. Access to export markets.	Reduce government involvement in health coverage except the basics. Increase private pay options for DI and specialist consultation. Deinsure elective cosmetic gender theory based procedures and chiropractic health coverage. Reduce the odd influence of some whacky university and college professors on teachers. Create portable voucher system for choice in education including an expanded role for private schools and charter schools at the expense of the terrible top heavy public school system; reduce the number s and influence of dysfunctional trustees and school boards. Terminate 40% of administrative positions and 30% of the consultant and resource teacher positions and keep a few more teachers in the classrooms. Drain the swamp in big government and civil service. reduce the role of government in all areas of life in Alberta. Fire or reassign and retrain the cohort of civil servants hired by the Notley crew especially those brought in from Failed efforts at government in former or current socialist provinces.	Create a favourable business environment. Lower taxes. Reduce red tape and time wasted on endless rounds of consultation especially with the likes of so called hereditary chiefs. Support carbon based industry.
T3G	We have a 70 billion dollar debt. Please reduce our spending, and start paying down this debt.	You would know better than I would where you overspend and where you can cut.	I think if we had less debt we would be in a better position to support economic growth. Right now, I think your primary job is to turn around our debt problem.
T6M	Over all gov spending.	Middle management throughout all departments.	Cutting the costs of hiring and adding staff for employers

T4H	1. Paying down, and eliminating, the debt.	<p>1. Eliminate all corporate welfare programs (ex. direct subsidies, grants, loans, loan guarantees, tax credits and other financial supports provided to businesses through any kind of government program).</p> <p>1a. Examples to eliminate: Petrochemical Diversification Program, Partial Upgrading Program, Petrochemical Feedstocks Infrastructure Program, Alberta Investor Tax Credit, Capital Investment Tax Credit, Interactive Digital Media Tax Credit, Incremental Ethane Extraction Program, the Alberta Enterprise Corporation, Alberta Bio Future Program, Alberta Export Expansion Program, the Alberta Media Fund, and Travel Alberta.</p> <p>2. Reduce compensation costs for government employees (not including doctors) to pre-2014 levels.</p> <p>3. Bring spending on doctors in line with Canada's other large provinces.</p> <p>4. Utilize attrition to permanently reduce the number of departmental positions.</p> <p>5. Eliminate defined-benefit pensions for new employees and replace with a defined contribution plan.</p> <p>6. Bring Alberta K-12 education spending and post-secondary spending in line with the rest of the country.</p> <p>7. Bring overall health-care spending levels (not including doctors' compensation) down to match the other provinces.</p> <p>8. Reduce spending on infrastructure and bring it in line with the national average.</p>	<p>1. Support school choice by funding options outside the government system and remove barriers limiting charter, home, and independent school development.</p> <p>2. Allow for greater business involvement in health care.</p> <p>3. Reduce and eliminate regulation and red tape across all sectors.</p> <p>4. Reduce the size of government and the related tax burden, allowing for reductions in the taxes Albertan's pay.</p> <p>In short, government needs to get out of the way of business and allow Albertan's to keep more of their money.</p>
T8L	1.JOBS 2.Health and education (because this investment pays back). 3.Infrastructure.	TRANSFER PAYMENTS.	More PROVINCE POSITIVE activities and advertising.
T0H	Frontline services to Albertans, frontline nurses, frontline social workers, and frontline teachers. Equalizing the negative impact to provincial government managers through the freeze - managers and opted out employees have received 0 %(including in range increases). This has resulted in undue hardship for some government employees and have negatively impacted them.	The government needs to review and REDUCE the number of school boards. The amount of money that is wasted on administration, superintendents, assistant superintendents etc is unacceptable. Superintendents / assistant superintendents make in average 265,000 per year, this is more than the deputy minister of Education, this makes no sense. By amalgamating school boards millions of dollars would be saved without having to negatively impacting students as teachers would not be decreased. Leaving the responsibility to find savings in education to the school boards will not create the desired outcomes as they are self serving and will protect themselves and cut frontline.	Revise Canadian policy and ensure that the entire country supports the Albertan oil industry.

T9E	Healthcare, education and social programs	Through evaluation of taxation. Perhaps more user pay taxes.	Support emerging markets and diversification in the energy sector, especially where it involves development of sustainable energy technologies.
T6I	Debt reduction and advertising for business and investment	Eliminate social programs, reduce government staff by 20% immediately, implement an immediate hiring freeze	Incentivize business headquarters to move to Alberta, eliminate anti industry red tape.
T7S	Reduce our deficit. We need to cut our spending	All government services, healthcare, education, social services etc. There is too much waste and we are not getting good value for our dollars spent.	Reduce red tape. Streamline government services. Keep things simple and to the point and quit servicing the special interest groups and focus on the main priorities only. There is no money left we are broke!!
T6W	Education including all special needs funding, healthcare, and all funding to vulnerable groups.	Program efficiency and elimination of duplicated services or efforts.	Investment in skills acquisitions and working on getting Alberta's resources to international market.
T1J	Stream line government ,remove layers of managers. Hold government official accountable for decisions that impede growth or private citizens rights if unjustly applied. Get rid of municipal affairs and replace with an oversight committee. Reduce number of MLAs. Combine school boards into one consistent board. Overall reduce government as we are over governed look at other jurisdictions to see what level could be obtained. Cut salary levels don't let one branch justify their salary by comparing to other government most would not quit or move if salaries were rolled back over time base, should be mean of citizens. Municipal manager salaries are outrageous when councilors direct what they do. Government was allowed to run away from reality with high resource revenues making underlying ability to support this bloated result.	Cut agriculture funding most producers have more than urban people. Eliminate support or if that is too drastic cap support for any entity at mean income of all Albertans. Eliminate crop insurance, insurance is available from private industry. Roll back rural property taxes levels of increase have been much higher than inflation Review all past programs and eliminate all that are past applicable use. Reduce regulation	Reduce government have managers do reviews to see if departments are helping or hindering private investment . Make sure if laws are enacted they are applied equally to all citizens . Speed should be an issue the delays caused by minor officials not doing their job can cause investment to be lost due to frustration.
T6w	Education and Health care	Relief to refugees	Support local business
T3A	Education and healthcare. Always. The children in this province are our future. Period!	30 million dollar war room for starters. The education system is working hard to find ways to save money, the government must do the same. Before cutting back teachers and nurses salaries two things should be done. First, stop voting increases for the ministers jobs. Second, each minister before voting should spend one day in an elementary classroom and one day shadowing a nurse. I strongly believe if you spend time experiencing what these two professions accomplish in a single day, you will think long and hard about the compensation they should receive. I am a realist and know there has to be belt tightening in education, but the disrespectful language used by our current education minister around education is absolutely appalling. This woman should be replaced!	Diversify industry in Alberta. I love the oil industry and support it 100%. However we must look to add other industries as well to have a more balanced economy. We should be encouraging the technology industry as much as possible.
T5B	Education and healthcare	Stop corporate tax cuts, introduce a PST	Support actual Albertans through public services, not large corporations. Large corporations are not Albertans! Cuts to public service have proven, time and again, to be the most ineffective way to reduce debt

T1B	<p>Job creation and giving Cost of living raises to public service employees (no raises in 5 years). Building free (20 years) Serviced industrial parks for secondary industry to locate in Alberta. Recycle and convert to energy 100% of garbage going to landfills.</p>	<p>Force walk in clinics to fill prescriptions for 1 year durations like Ontario does instead of one month and allow for up to ten medical issues per visit instead of one.</p>	<p>Create industrial parks between Calgary and Fort McMurray and Give foreign companies free land and services use for 20 years. Build solar and wind farms in the Badlands where the land is useless for farming and grazing. Use the power to convert water from the Saskatchewan river into hydrogen and oxygen. Build corresponding hydrogen storage facilities and use it to generate power during peak periods from fuel cells and sell the oxygen. Make arrangements with the other provinces to send their scrap plastics to Alberta so it can be converted to hydrogen and hydrocarbon fuels. Demand carbon credits equivalent to the transfer payments made to the other provinces since 1967. Eliminate all future transfer payments to all Alberta to build secondary industry and such things as an LTR between Edmonton and Calgary as well as VIA rail service between major cities (over 50,000 pop) in Saskatchewan and Alberta.</p>
T0g	<p>Highway maintenance Provides jobs = more tax dollars</p>	<p>Hire Alberta companies for highway maintenance contracts. Keep alberta tax dollars in alberta!! Should have learned that from hiring carillion. Tax dollars got shipped to ontario then the uk. They dont spend the profits in alberta!!</p>	<p>Infrastructure hiring alberta contractors. Keep the tax payers money in alberta!!!</p>
T3K	<p>Education Healthcare Seniors Vulnerable sector Note: go after companies that have unpaid taxes and put them on payment plans</p>	<p>Reduce staffing in ministers offices Digital copies of booklets and forms (people print or pay for printing) Streamline departments and websites Cut salaries and benefits for public sector managers and reduce middle management Find less expensive sources for supplies (eg office supplies, catering etc)</p>	<p>Incentives Investment in technology and new industry projects Cut red tape and make it easier for people to invest in business and private sector industries</p>
t3e	<p>Education and Health care need to be the focus, taking into account my thoughts below;</p>	<p>1) Giving option for health care to reduce the tax payer cost, ie if someone can afford to skip the line then they should be able to hire a private clinic as long as the same level of service for public is still available 2) go after the large salaries in the public sector as we have seen with recent budget cuts the school boards and universities are just firing the people in the trenches while the upper management goes untouched.</p>	<p>1) getting rid of red tape 2) going it on our own (seperation) so we can negotiate our own sale of our resources</p>
T2m	<p>-no more equalization payments to the east. you don't do this, Wexit AB will take your place.</p>	<p>-Cancel every single defined-benefit pension given to gov employees. defined-contribution is to be offered just like the private sector -make union membership optional for the ATA & nurses. give 10% wage cuts to all union gov workers & when they strike union bust (hire private sector)</p>	<p>-do a deal w Trump</p>

T6B	Healthcare and education. Spending cuts need to be implemented in education especially. Allow more independent/private schools to access government funding and cut funding to public and separate schools. Healthcare needs to be examined and funding for administration personnel needs to be cut. Use the funding from administration to pay for nursing and doctors, not for administrators. Cut corporate "welfare", private corporations need the government to reduce regulations and remove barriers that inhibit private enterprise.	Cut the number of civil servants currently on the government payroll. Replace them with private contractors. Cut government support for private industry including agriculture. Cut support for initiatives that don't help produce positive fiscal results(gains), ex. So called climate change, social issues(LGBTQ+S...), etc.	Make it easier for private industry to operate in Alberta. Leave taxes at current rates, for now. Taxes can be reduced later, once a firm economic base has been established in Alberta. Get people off of the government gravy train, this applies to lower level positions as well as upper level managerial positions (ex. WCB hierarchy from the top down, as well as senior ministerial positions, deputy ministers, the whole pack of them). It is time to radically change how government operates. Lean and mean.
T3A	Health Care, especially for geriatric patients, and education at both regular and secondary levels. Also, incentives for clean energy providers, and clean energy users.	Stop giving tax breaks to huge corporations that are in a dying industry (oil).	Stop firing all the people doing great work in the public sector (health care and education). Create incentives for companies providing green energy options, an area that is experiencing growth around the world.
T3M	Keeping quality of public education and health care.	Their give always to corporations	Diversify the economy so we are not reliant on oil prices
T0G	Transportation, keep highways in good condition. Necessary for enhanced economy.	Cut top heavy management and salaries of those remaining in in Education and Alberta Health care. Audit municipalities for unnecessary positions and programs.	Yes but not by subsidizing.
T4V	The Alberta Government needs to focus on investing in Services and Education. Without a baseline support in the form of Services, Albertan families cannot grow, without welfare they will starve in these uncertain times. Spending more on Education is an investment made to the future, a better educated population can innovate better and organize better to solve issues that we will have to face further down the line.	Vague question. Economically Alberta can raise taxes to multinationals operating in Alberta as well as increasing taxes on the wealthy. Tax people who 'Have' so that 'Have Nots' can be taken care of. "Savings" should not be a priority. Think realistically about the economic downturn and the burst oil bubble. People are suffering because the jobs promised to return up North have not. You find savings by saving the people, that means doubling down on social services, not pinching pennies and cutting services	Innovate. As I mentioned above, the oil bubble has burst, just like it would and always will. Change gears, invest in other economies in Alberta. We are an agricultural province, we can invest in the new Cannabis industry, for instance.
T4R	Health care STOP the cuts Red Deer Hospital has not gotten money for their needs in years	Yes cut some of the useless jobs in management And cut their spending for needless travel also	Get the Federal government to buy Alberta Oil and Coal not Arabian oil and US coal Get that pipeline going
	Sport physical activity for people with disabilities	Physician compensation Streamlining government staff expenses and processes	economic diversification stop job loss in public sector
T8H	Education	In bureaucracy & in the war room	Alternative energy sources
T9N	Big Union.	Big Union.	Get our Oil patch backup and running.
	1. debt reduction; 2. raising the basic personal exemption to keep removing lowest income earners from tax rolls	1. debt reduction reducing interest payments; 2. public-sector remuneration	1. reduce red tape; 2. stop trying to "innovate," let the private sector do it.
T8r	health care, infrastructure and trade schools	i think the UCP need to axe that wasteful funding on the so called, "War room" that's more freed up funding than being useless. more members need to take a cut in their wages and less spending within the parliment on travelling places in which don't care for or support alberta products or innovations.	charge all frieght that travels through alberta to Eastern and Western provinces when freight isn't dropped off here in AB. charge extra for products going to quebec

T2P	Roads	Education, healthcare, civil servants generally	Private business will usually pick up the slack if they r not taxed to death.... they r more creative and innovative than any government body... reduce regulation and taxation
T6N	Priorities should be to cut infrastructure and facilities that do not create jobs - (except during their construction). The class of the design of facilities should be for function and minimize architectural embellishments that can significantly increase costs.	Find a way to get realistic pensions for retired government employees. I see a bunch of teachers that are retired getting full pension for probably 15 years on average. If there was a proper saving plan for these employees then the government does not need to essentially keep these retired persons on its payroll!	Our business does R&D for product development and the SR&ED program that essentially returns a portion of payroll taxes for qualifying activities is a significant contributor to employment retention and creation. I think that I saw that Alberta was going to cut its portion of this tax credit - that would really hurt many businesses in Alberta that are innovating and creating new products and solutions.
T7Y	Focus on Healthcare and Education but try to find ways to cut waste in all departments.	If it has not been done already, cut the practice of departments having to spend their entire budget by the end of the budget year even if they don't need anything. Savings and underspending should be rewarded, not punished by having their budget cut the next year.	Lower taxes!
T0B	Healthcare and education-healthy educated people will solve problems	None essential services	Small business programs
T5K	Edmonton LRT contributions.	Government employee salaries and number of employees. Marginally longer work weeks for Government employees.	Lessen the "red tape" associated with projects.
T2B	more advertising to show what you have done. Counteract the nurses union miss information. Status quo on spending. No new programs.	Government employee salary increases. Grants, Social programs,Schools Kill more of the NDP social programs. Your current budget showed only a modest reduction, you should cut deep.	Yes to a limited amount. Alberta's biggest problem is Ottawa and the ability for capital to come to Alberta.
T0B	Provide opportunity for those on welfare to get jobs make it part of their duty to have a part time job to receive any payments. There are many low paying jobs that people refuse to do. Immigrants have been fulfilling these jobs with incentives to businesses to hire them. Have incentives to hire those receiving social assistance.	Savings with less people on social assistance. Limit the amount of \$ leaving Alberta tax those that send money abroad. No more tax to the feds without electoral change.	Incentives to have head offices in Alberta Stop the logging in Alberta and giving resources away water and lumber.
T1M	Addictions treatment and prevention.	Bring public per-capita spending down to levels comparable with other provinces. Paying down debt-less interest fees.	Keep corporate tax levels comparable to other jurisdictions.
T9X	The government needs to prioritize spending on services, health, education (both k-12 and post-secondary), policing. Essentially, the government needs to reverse the cuts imposed by the last budget.	Savings can be found in cutting projects such as the Canada Energy Center. This question implies that there are large inefficiencies that, if found, would amount to billions of dollars. Implementing new programs such as funding models, ending programs such as curriculum development or safe injection sites is wasting money already spent. It is making the government more inefficient.	This can be done by continuing to support family business including farmers. More protection for large companies is not encouraging job creation or growth. That money is going out of the province. Tax breaks and incentives to new industries, so we have a diverse economy (one not simply modelled on oil and gas), breaks us free from global markets.
T6M	Healthcare, public schools, post secondary schools	Sont give my money to oil companies	Support post secondary schools and diversify the economy. Oil wont save us forever.

T2Z	-Bringing our debt down. -Supporting small business. -Education -	-Government spending on employee wages -health care	-less red tape/regulations on business - lower taxes for business -support the training in the trades - give students economic incentives to go into the trades. -support women entering the trades.
T8V	The debt.	Reduce the size of the government. Combine departments reduce wages and benefits by natural attrition and hiring freezes. Get the cost of government under control. Get rid of the Alberta Human Rights Tribunal to start with. We have a court system already. At least with using the traditional methods both parties will have some skin in the game instead of one party going to the human rights tribunal and not having to pay a cent for lawyers.	Don't. Every time the government gets involved in these areas it costs the taxpayer money and puts an imbalance in what entrepreneurs are doing. Talk with entrepreneurs and find out what you can do to clear the way for them (with regards to regulations) to create businesses that will create jobs.
T0B	I think every budget should be looked at very carefully...be a Ralph Kline x4	cuts to every budget need to happen minimum 10% and some 100% until we get spending under control, If the project isn't something people will put their own money into then the gov should not be contributing either...user pay...as in arenas .. then no new spending unless we have the money in hand and then only on absolutely necessary projects. We are spending money foolishly handing it out to every and any special interest group that ask or has a buddy in Gov. If you need help with this concept I am available for consultation and assistance...Im a Steve West kind of guy... the budget cuts are to start with management and if necessary then workers. special attention needs to be paid to public unions and gov employee pension plans...all wages and staffing should be based on average and comparable private sector models.	gov could start to get the people back to work by upgrading our road infrastructure, promoting and defending our oil and gas industries (not financing or tax shelters) The oil and gas companies are all making very large profits and should be paying their own way.
T1W	Education and health care. Allow private insurance. I had to go to the USA to see a neurologist.	Civil servant salary should be the same as the private sector. Let the no essential go on strike. The longer the better. Essential services can be legislated to continue working	Fight Ottawa. Get the pipeline built
T0C	We have the highest-paid Provincial employees in Canada with gold plated benefits and pensions. Time to reign in AUPE and introduce them to the same economic reality thousands of regular Alberta's are facing. Do away with defined benefit pension plans and replace them with defined contribution plans. Stop building useless wind farms and solar arrays that will never pay for themselves and only disrupt the power grid with their intermittent power output. Work with the other Western provinces to fight back against the corrupt carbon tax; the Liberals proposed gun confiscation program and pipeline moratorium. Also, work with them to fix the equalization issues.	Reduce wages, salaries, benefits and pensions for all Alberta Government employees. Outsource all possible work being done by government employees to private businesses that have a bottom-line business mentality.	Encourage our youth to look at trade skills rather than gaining them useless degrees - drowning them in student debt. Provide tax incentives only for businesses that have the potential for growth in the 20th-century economy. Look at encouraging the recycling of plastics into diesel fuel or plastic wood substitutes.

T8v	Cleaning ministerial entitlement. Like I mean come 30 million for a quote.....WAR ROOM. there a big saving right there. Have government stop over paying for near every public project by being able to charge above scope and not on contract. It's sad.diversify from always the oil and gas.	Eliminate the massing tax break for business to make more in like with current financial conditions	Make oil and gas become the leaders in development of different sources of energy. This will also help with the peak and valley economies.
T2T	Cut spending, cut personal income taxes, get pipelines built, become an energy (all forms) powerhouse for innovation and development.	Reduce/fix public salaries and wages. Eliminate pension benefits for new employees. Open private health care.	Invest in all forms of energy production. Add nuclear energy to our mix of energy production. Become the centre for all energy production innovation.
T5R	Getting elderly hospital bed blockers out of hospital care and into more efficient and less expensive facilities.	Health care inefficiencies. The system needs to be more efficient with fewer redundancies. What about a two-tiered system where patients can opt for private care? Zero wage increases for public sector employees. In tough times, we all sacrifice.	Continue to lobby for pipeline construction. There is still a huge need for oil and gas around the world. We need to utilize our resources.
T4T	Education (Borrowing from our kids' futures is just not responsible) Infrastructure (Failing to maintain infrastructure is another form of borrowing, and it has an 'interest' cost because repair is always cheaper than maintenance) Rural Broadband (Essential for economic development) Health Care for Seniors (They've already paid their dues and we owe them)	STOP giving big corporations tax handouts. STOP IT! Rollback public sector wages Freeze public sector hiring Reduce FCSS funding (I see too much local funding of frivolous projects) Overhaul the health care system, WITH consultation from health care practitioners, WITHOUT cutting back services (which are already cut back too far)	1. Investment in Infrastructure (This is not the same as borrowing money to throw it into the wind. Infrastructure investments create jobs in the short run and support economic development in the long run.) I do believe government should own infrastructure, but in tight times an alternative might be to contract corporations to build it (with absolutely no cost overruns allowed), sign a long-term, fixed-price lease that stipulates once the lease is paid out the government takes over the infrastructure. Corporations have to get their quotes right, but they get a predetermined rate of return. (Pension funds might be interested in financing this.) In the end we still get to own our infrastructure. 2. Encourage increased immigration from other countries into our rural areas, to help us fend of population decline and its deleterious effects on our regional economies. 3. Government isn't very good at creating jobs frankly. Just keep cutting the red tape and mostly stay out of our way.

T4T	<p>Education (Borrowing from our kids' futures is just not responsible)</p> <p>Infrastructure (Failing to maintain infrastructure is another form of borrowing, and it has an 'interest' cost because repair is always cheaper than maintenance)</p> <p>Rural Broadband (Essential for economic development)</p> <p>Health Care for Seniors (They've already paid their dues and we owe them)</p>	<p>STOP giving big corporations tax handouts. STOP IT!</p> <p>Rollback public sector wages</p> <p>Freeze public sector hiring</p> <p>Reduce FCSS funding (I see too much local funding of frivolous projects)</p> <p>Overhaul the health care system, WITH consultation from health care practitioners, WITHOUT cutting back services (which are already cut back too far)</p>	<p>1. Investment in Infrastructure</p> <p>(This is not the same as borrowing money to throw it into the wind. Infrastructure investments create jobs in the short run and support economic development in the long run.) I do believe government should own infrastructure, but in tight times an alternative might be to contract corporations to build it (with absolutely no cost overruns allowed), sign a long-term, fixed-price lease that stipulates once the lease is paid out the government takes over the infrastructure. Corporations have to get their quotes right, but they get a predetermined rate of return. (Pension funds might be interested in financing this.) In the end we still get to own our infrastructure.</p> <p>2. Encourage increased immigration from other countries into our rural areas, to help us fend of population decline and its deleterious effects on our regional economies.</p> <p>3. Government isn't very good at creating jobs frankly. Just keep cutting the red tape and mostly stay out of our way.</p>
T2A	<p>assisting Albertans with gainful employment opportunities.</p> <p>resident's safety from natural disasters, i.e. Flood mitigation projects.</p>	<p>a lot could be saved in the Public sector; Union agreements could do with less compensation;</p>	<p>infrastructure spending creates jobs now, and provides future dividends.</p>
	<p>Front line staff for health care and appropriate class room sizes.</p>	<p>Have a small sales tax</p>	<p>Diversifying the economy. Oil and gas will not be needed forever. Alberta can not just depend on oil to support the province.</p>
T0C	<p>Cutting red tape</p> <p>Cutting back on political wage and waste</p> <p>Getting all resources to market</p> <p>Selling everything of value we can</p> <p>Start cutting back on services, then when we get control of the debt situation start cutting provincial income taxes so we all can benefit</p>	<p>Toll roads or putting a \$1/ride tax on LRTs, planes, and buses</p> <p>Open up contracts to all businesses for various infrastructure projects to get the best work for the best price</p> <p>Up traffic ticket prices for offenses and have a certain % go towards the Alberta Heritage fund</p> <p>Start an Alberta only Lottery with more winners of less money (prizes of around \$10,000) with half the proceeds going towards the Heritage fund or debt payments</p>	<p>Get our resources to global markets</p> <p>Cut provincial income taxes so we have more money to spend or invest</p> <p>Bring in Alberta bonds with 4% 10 year rates to incentivize the older population to invest in Alberta</p> <p>Cut the minimum wage</p> <p>Build an LRT line from the south side of Edmonton to the airport to gain income from travelers</p> <p>Look at building a high speed rail line from Edmonton to Calgary</p>
T6H	<p>Education!</p>	<p>No more tax cuts for the wealthy!</p>	<p>invest in renewable energy</p>

T5A	<p>Give the money that is needed to health care and education. Stop making cuts to health care and education without consultations with stakeholders.</p> <p>Prepare for Seniors book, increase in dementia, increase in aging population,</p>	<p>Stop giving incentives to international companies unless you and they can prove that there is more money in the province, more jobs in the province.</p> <p>Get the companies who did the spills, who used the land, to pay for reclamations and use Alberta as employees to do it. If you freeze or decrease salaries and benefits of employees of the government than do it equally to administration and politicians.</p> <p>Look at travel expenses and entertainment expenses of all politicians and questions the vailidity and the performance. Prove that the trips brought income to Alberta. Cancel the War Room.</p>	<p>Support your own employees. Support small business. Focus on the strengths in Alberta and stop giving economic incentives to international companies.</p> <p>Stop attacking teachers and health care workers. Work with unions and with associations and listen. If you look at others performances than use the same methods to look at our own performances. Practice what you preach. Walk the talk. Public and private can work together succesfully, stop pitted them against each other. Lead the way yourself. Leave education, health and transportation to the public sector. Every individual Alberta should have a basic living income.</p>
T1J	<p>Stop with cutting taxes for corporations on the backs of avg workers already struggling, and now even more with increases in Electricity, Rent and Condo fees due to removal of Insurance caps. If workers have money to spend will stimulate economy and money will work it's way to the top without skimming it</p>	<p>Govt salaries and double gold pensions, tax corporations and wealthy</p>	<p>Invest in renewable sector and transitioning and diversification</p>
T8N	<p>R&D in High Tech development A.I. and medical research. Healthcare & education must remain the priorities, no other single group or groups provide a better standard of living for the citizenry of Alberta, and a brighter future for generations to come.</p>	<p>Government itself should easily be reduced in size. Conservatives spend money far worse than the NDP ever could, sill providing cash incentives for dying industries and their friends/donors in these. Oil comes to the table with plenty of liquid cash at hand, no need to provide anymore to this industry, even by way of tax credits and other nonsense.</p>	<p>Divestment grants for research and development in high tech industries. Attract businesses that will promote regional growth beyond a resource based economy, specifically ones which tie into the Pacific Northwest businesses of the U.S., Pacific Rim countries, and Western Canadian needs.</p>
T0g	<p>Infrastructure, roads highways and better health care and a dental plan for Albertans.</p>	<p>Political salaries</p>	<p>As mentioned fix provincial infrastructure roads highways start a oilfield lease reclamation project you failed to bill industry in the form of taxes so now it's your responsibility to deal with. With unemployment at a high there are no shortage of trades and skilled workers available thanks to political interference.</p>
T8H	<p>As a Conservative Albertan for more than70 years, I have always favoured responsible spending practises. Therefore, I want to see major cuts to spending in the coming budget. Last year's 1.6% reduction over 4 years is woefully inadequate. Ignore the NDP's handringing and let's see some serious cuts. 17(1)</p>	<p>1.Management in many government departments is bloated and could stand to be cut back. 2.Allowing private health care would reduce wait times and health care costs.</p>	<p>Reduce red tape.</p>
T0H	<p>Paying debt, lowering taxes, reducing the size and scope of government.</p>	<p>Phasing out unions, getting an honest days work out of union employees, reducing the size and scope of government, Get things done. After watching the NDP force through various disastrous policies against most of the people's wishes the government can no longer use the tired old "things move slow we can't get things done "excuse.</p>	<p>Get out of the way, cut red tape and bureaucracy</p>

T0C	Lowering our debt!!	Cut administration in health care and education.	Build pipelines! Keep Corporate taxes as they are to get investment back. Pressure Federal govt to build pipelines. To use positive promotions indicating our clean environmental efficient oil that Albert already has. Promote “ Twinning the pipeline “ not completely building a whole new one in new area.
T2W	Cut spending!	Reduce salaries and benefits to private industry levels.	Reduce taxes and government regulations
V9T	veterans and drinking water	stop bringing in immigrants and renting hotels for them	hire people to look after aging people, hire people to increase efficiency in the home furnace, insulation, and safety
T6R	Support programs and services that provide albertans with the tools they need to get working. Stop supporting profitable corporations.	By increasing the corporate tax rate.	DIVERSIFY! Continue programs and services that support Albertans to participate in a diverse economy. Employment and economic development programs and services help move in the direction of sustainable employment through the province. We need to diversify the economy to have a strong, resilient economy.
T5N	Health care, job creation, upgrading education leading to employment such as that offered at accredited colleges such as NorQuest and NAIT, infrastructure such as provincial highways, roads and bridges. Continue to add new businesses to the province by extending tax benefits and adding incentives for companies to move to the province. Continue to encourage medical staff to relocate to rural areas of the province.	Cut funding completely to international and national sporting events, building of arenas and other recreation facilities. Reduce funding for city and municipal projects which are costly and ineffective such as LRT in Edmonton (rapid buses are much more economical), reduce the numbers and remuneration paid to the costly overpaid administration strata in colleges, school boards and hospitals. Instead hire more instructors and assistants and allow these lower paid employees to carry out administrative roles.	I believe that funding for upgrading and retraining must continue at colleges such as NorQuest, MacEwan and NAIT, but the cost of upper-level management (president and vice presidents) must be changed by government intervention. Teaching staff and assistants could be increased and retained if admin costs were reduced. More funding for retraining unemploye and working poor.
T1K	Cut all civil service wages. The Unions are so arrogant they don't seem to get it that who pays their wages are the taxpayers. Most taxpayers in the private centre do not get the of wages they do. They get all kinds of benefits as well they are a bunch of hogs..	Have less high pay surveys, we pay you to figure out the problems.	Get rid of Trudeau and all the useless NDP members .
T8A	Preventative Health Care & Technical School training programs for your young people.	Cutting non essential services, downsizing the number of government employees (at least 5%) and legislate tougher anti-union rules on unions. Public Sector Unions are nothing but well organized special interest groups who waste taxpayers hard earned money. The government needs to look at the employee benefits that government employees earn and begin to roll them back to reflect what the market realities of the 21st century.	Reduce government regulations and continue to cut corporate, payroll and property taxes. An overhaul of the municipal government act to limit taxing and spending powers of all Alberta municipalities would further help reduce wasteful spending. ie the Edmonton LRT lines. Also, roll back the minimum wage in the province of Alberta.
T4n	Road repair, hospitals	Groups that say they need money that dont. Stop supporting unions. Stol dumping money into special interest groups.	Lowering taxes and making alberta a business friendly, living friendly province.
T0B	Place as much money as possible into social services, education and health care. Focus on helping those most vulnerable.	Stop giving tax breaks to those who are already extremely wealthy.	Stop cutting funding to social services, healthcare and education. Cuts lead to loss in jobs.
T2A	cut more spending on hospitals and advanced education...your not cutting enough...cut more...the people want more cuts .	start with the refugee boards and contributions to municipalities.	incentives would be a good start

T1G	Providing support to municipalities/ organization of funds	Safe injection sites should go Carbon tax should go	Taxes for middle class could be correct
T2S	Community and social support and education	Reducing Bureaucracy	Economic diversification, support re-training of skilled workers who can't find work in the oil and gas industry. Incentives for new hires
T2Y	Education and health - portfolios that cost the most to run but can also be trimmed to reduce duplicity and reduce waste. Wages, in both portfolios, need to be reduced for management and not people working in the trenches so to speak. Too many management positions and not enough trench workers especially in healthcare. Rarely should a manager make more than the employee providing the care.	In many areas where waste happens - even the smallest saving can add up to large savings. As an example, there is a disgusting amount of money wasted in healthcare but managers refuse to ask workers on how best to reduce waste and save money. And stop paying people like Tom Olson \$196,000 year - there is nothing he can do that can possibly support this kind of a salary. Stop blatant patronage appointments - this kind of behaviour makes me not trust UCP or the decisions they make.	Through an educated work force.
T0A	Affordable housing and food.Cut carbon taxes for all grocery stores and utilities. Taxing Corporations Alberta first.	Corporations paying their share of taxes. Lowering CEO wages in Healthcare, civil servant CEO's stop equalization payments	Lowering taxes for small businesses so they could pay a few dollars more than minimum wage. expand fossil fuel extraction and pathways for export.
T6R	Health, education and economic development.Jobs!!!!	Not sure	I want to see a much more aggressive approach by the government in bringing companies into Alberta. Alberta's Premier should be on tv every week showing some company around the province pitching why we have the best place to do business. Start showing a scorecard of companies coming to Alberta. I'm seeing nothing on this from this government so far. All I see are clips of this gov't angry and fighting with Ottawa. And get off the dependence on traditional oil and gas. Its a dying industry. Diversify!
	Health care and public education Maintain infrastructure	No MLA cola increase No war room No politician travel	Maintain infrastructure Support small business Support post secondary students
	Public education and health care	Eliminate War room Eliminate all politician travel Eliminate MLA cola salary increase	Small business support Making all businesses that received corporate tax break provide jobs
T0M	Take care of budget.	Leave more money in pockets of business men and tax payers pockets. They'll spend wisely.	I this is also answered in the above.
T6I	Job creation	Cut welfare 1st class services like taxi transport expensive accommodation, cut teachers and nurses	Build pipeline
T6L	The nurses/school and the public service. Having appropriate taxation to corporations, funding the public service on tax base verses boom and bust oil. The cost of living has jumped significantly due to this government	Slow down in the corporate hand outs, consider a PST	Funding the public service/ which in turn supports the vulnerable
T1K	Education. Health care.	Higher taxes for corporations and the wealthy. Higher royalties from oil companies.	By diversifying the economy. By not relying on the energy sector and its historic boom and bust cycle.

T2Y	The War Room to get to the bottom of the plight to destroy our energy sector, ads/commercials on an international level showcasing our beautiful province and all it has to offer with a focus on our sustainable and environmentally friendly exploration and production of Natural Resources. Build refinery's and be like Trump and make Alberta great again! I do not believe in Unions, I do not think the government should respond to the public health care protests. Very few jobs offer a pension anymore, and given our current economic climate I feel we are all the same page no matter what industry you work for.	Use web conferences as much as possible to reduce transportation expenses, bonus of environmentally friendly. Reduce the size of the AER; certain aspects could be handed off to industry experts who could volunteer time to fill positions. What ever happened to our Heritage Fund? I thought that Premier Lougheed had started a lawsuit to find out where the money went under Stelmach? Provinces that are against our natural resource development should not receive any resources from us. If they do, we should charge a substantial environmental tariff.	Lower corporate taxes. Lower the minimum wage; In Calgary they have passed the small business tax increase on to the resident and this is so wrong in my opinion.
t7v	Environment. Public Lands and dumping and cleanup of waste on public land. Trash piles all over the place around here and nobody every cleans stuff up.	Reduce capital spending on government vehicles. Raise your mileage rate to match the federal government rate, and pay staff to drive their own cars rather than your huge capital expense of purchasing cars that then sit around in a lot getting vandalized more they get driven. A lot less administration and overhead when the employee does his purchasing, oil changes and repairs on his own time own dime. Shut down forestry's Edson air tanker base. It is noisy, right in town, unsafe clearance zones at tend of strip. It is close to Whitecourt and now that they they don't use the WW2 bombers anymore the planes are way faster which means <u>they need less bases</u>	stop importing American and overseas wine and beer, and set up a system through AGLC that lets them buy more small volume Canadian small wine and beer brewers stuff. drop your provincial cross border tariff's and get the Canadian stuff flowing every direction. Get Canada winning the trade wars, then worry about provincial trade. This will get Canadian micro brewers networks working for you. I want to see AB and BC wine and beer on the shelf before California wine them pricks. Coors light and other American beer too much \$\$ going south.
T2C	Health care, social services, supervised consumption	Stop giving oil companies money.	Renewable energy investment.
T6w	Reducing the size of the government	Reducing government size Wage rollback by 5% non funding of non essentials grant to artists museums arts etc	Get the pipeline moving forward
T5E	Notley hired thousands of public employees during her reign, focus on cutting those who add no value as well as excess management positions of those who fail to do the jobs taxpayers pay them to do. NO MORE TAX INCREASES, UCP pulled a dirty trick by increasing taxes after being voted in. Any other tax increase will assure your demise, Trudeau is bad enough without the UCP climbing onto his tax and spend wagon.	Civil servants are paid handsomely to do a job yet fail to put in the effort required to get the job done, especially in management. Review every department and clean out the grifters. NO INCREASED TAXES, Albertans can't afford it. The UCP have already hit Albertans with tax increases which is beyond disgusting.	Not by giving taxpayer dollars to corporations! What was your plan during the election? Albertans have been burnt enough by Ottawa and don't need a provincial government also increasing the cost of living. Three levels of government have taxpayers squeezed dry, use your common sense and not \$\$\$\$ extracted from the diminishing wallets of Albertans.
T2B	infrastructure	government departments with wasteful spending	lowering taxes and cut red tape
T0A	Health care, education, ending the drug epidemic.	No one involved in any civil service should be making more than 200 000 a year. Superintendents should take a pay cut and AMALGAMATE the school boards!	I have no idea...

T4E	Government needs to keep education and healthcare a priority. The cuts that occur will affect those most vulnerable in our society. The child in elementary school that needs support and the teacher is max. at 45 students with no support. The single mother of that child that has just been diagnosis with breast cancer and can't find a family doctor in the province. We need to take care of our citizens in an efficient, economical way.	I think they are on the right track by managing the pensions of AHC and teachers, perhaps adjusting the provincial government workers as well. Attrition is not a bad thing; we need to let some of those young teachers into our education system and along with that bring in new teaching philosophies and concepts. Also, increasing the tuitions in our post secondary institutions is not the answer, all that does is increase debt into the younger generation. Government funded businesses need to be run more like a business, if there is excess, cut it or share it amongst all employees for more efficiency and productivity. Look at 1000s if oil field workers effected in this province over the last few years. It was the top guys who made +\$150-200k that got laid off/and a lot that made less than that. No pension there!!! Government agencies need to be run more effectively and the big \$s up top need to spread the wealth down to more people and more productivity.	We need investment into our province. Our biggest industry has collapsed in the past few years. Yes the oil industry is Boom or Bust ... perhaps the government needs to regulate it more so that sporadic economic fluctuations in the industry does not occur. We are still sitting on one of the world's biggest oil reserves and our economy does not reflect that. We've been accused of leaving a carbon foot print while we produce some of the cleanest oil in the world. We have lost all confidence in our federal government (and feel manipulated by the large economic powers south of us) and feel our only hope is the protection of our provincial government. We voted this government into power in our province and have confidence we will become a province of economic and social growth once more.
T9K	Education is a crucial priority if we want to ensure our future generations are prepared to be successful Albertans. Cuts to that sector need to stop.	Oil companies have been great to help our province growth. There is also a lot of money in that sector so possibly cuts to that area.	Providing each albertans a chance to have a voice about their future. Getting input from each sector and how they could minimize expenses without removing quality of service offered. Perhaps increasing our tax sightly.
T1K	Healthcare, education, infrastructure.	Safe consumption sites, administration heavy health care and education, subsidies to welfare junkies	Lower taxes, personal and corporate. Get rid of drug sites!!!! Let natural selection take its course!
T8R	EDUCATION AND HEALTH CARE	I don't know... you spent most of that on corporate tax breaks. Just don't take it out of our two most important things to invest in. Teachers and nurses are getting hit hard, and that affects all of us. It isn't the "red tape" effectively that is being reduced.	Diversification.
T5M	Education Economic diversification Education Poverty reduction by addressing root causes, not symptoms Education	Government waste and inefficiency - give them incentives for keeping costs down Follow up on delinquent companies refusing to pay taxes (revenue, not savings per se, I realize)	Economic diversification - encourage tech startups and target growth sectors: sustainable hydroponic vertical farming, insect/microbiological food sources, alternative energy R&D, software development. We are a first-world province in a first-world country, and we should stop treating our economy as if we were a banana republic relying strictly on natural resources, especially when the primary one, petroleum, is non-renewable and we know it will run out. Let's be smart and finally plan ahead!
T5M	Health care, public education.	Their own salaries. The "War Room". Not engaging with expensive and doomed lawsuits with the federal government over carbon tax. Increasing corporate taxes and income tax on the wealthiest citizens.	Incentives for small businesses, energy diversification (ie solar), increasing minimum wage, not giving huge tax cuts to out-of-province oil companies who then vanish with the money. Bringing back the carbon tax so those dollars stay in Alberta rather than being remitted to the federal government.
T1P	Don't waste money on non-essentials: cut spending on things that individuals can pay for out of their own pockets. Recreation is good but it should be user pay. Don't fund things like football stadiums and hockey arenas.	Cut out perks for gov't employees and bonuses for jobs that people are paid to do. Cut back on hotel and travel expenses for Gov't employees. Travel on airlines should be regular seats, not business class. Book in to reasonable priced hotels and limit meal spending.	Hold job fairs, offer tax incentives for small businesses. Cut red tape for getting new construction of energy providers. Keep all business start ups within Alberta. Limit foreign companies from setting up business here. Let's get Alberta First going. And finally, lets support Wexit.

T2E	The basic services meaning services that impact the majority of Albertans and not just special interest groups. Government cannot be responsible for every financial requirement of it's citizens who have to take personal responsibility. Canada is becoming a socialist nanny state. Once a financial benefit is given to a special interest group it is more difficult to discontinue that benefit.	The majority of government spending is for salary and wages. There should be a wage freeze, hiring freeze and reduction in government employees by not filling positions that are vacated by retirement and employees leaving.	Support should be in the form of lower taxes and not corporate welfare. If a company cannot start up or continue operations without government subsidies then it obviously is not a viable operation. Taxpayers should not be responsible for subsidizing business who have to be profitable on their own.
T2B	Health care, and highways.	Get rid of Alberta Human Rights Tribunals, review delivery of services for cost saving by process changes, cut funding to special interest groups & special interest events. Move to Defined Contribution Pensions. Stand strong against government unions to limit increases.	Reduce taxes to SME, cut red tape, eliminate government duplication of bureaucracy between province/city
T0E	debt reduction	government bureaucrats	income tax reduction for corporations and personal
T9W	Education and health care. AISH. Subsidized daycare pilot. Early childhood programs such as Parent Link and FCSS.	Eliminate the War Room and several social media communications positions. Less trips abroad for the premier and staff. Implement a sales tax to help bring down the deficit.	Diversification. Invest in technology industries and infrastructure. Decrease costs for families so that they have more money to put back into the economy (ie reverse cap removal on insurance rates, reduce personal tax collected, give at minimum COLA increases to public sector workers who have had zero percent increases for years).
T8X	Infrastructure	Healthcare	Lower business and personal taxes, reduce regulations. Lowering personal taxes plays a large part in this.
t0c	Road maintenance and repair is a serious issue.	Education system at all levels. Pension set-ups for public service and politicians. All wages should be frozen for a 5 year period for the same above.	Freeze and reduce taxes in areas. Cut red tape and continuous delays to projects for studies, engineering reports, etc. Look to new US regulations just passed to solve these problems.
T8r	Education !! Early childhood intervention and education supports. Low classroom sizes. Consistent and dependable funding for rural municipalities in support for programs an infrastructure.	Reinstate mandate for inter municipal frameworks to continue. Large counties needs to continue discussion for join agreements that support the rural municipalities in their areas. Counties who contribute accordingly reduce the burden of municipalities needing provincial funding support	.
T2V	Education, university and high school funding, investing in technological and renewable jobs	Increasing taxes for the extremely wealthy. Increasing taxes for oil exporters. Removing tax incentives for the oil sector.	Investing in education. Creating tax incentives for renewable energy projects. Investing in local business and encouraging tech sector jobs.
	Health and Education should be affordable or provided for all citizens. Seniors should be looked after better and more affordable. The price of automobile insurance should be capped at a more affordable rate. Healthcare should never be privatized. Nurses teachers frontline people workers should receive salary increments and their pensions and unions should be theirs solely! Government needs to value the working people of this province. Those caring for our sick and elderly and those educating the children of tomorrow for jobs that have not even been created yet!	Higher taxes for ultra rich and big corporations. Oil companies. Less time spent concentrating on pipelines. Find savings taxing tobacco liquor gaming things not necessary to sustain life. Less concern about debt and deficits like the US. They don't seem concerned about debt. Just print more money. Lower salaries of politicians and government workers. Alberta heritage trust fund?	Raise minimum wage. Provide fair and equitable working conditions. Provide affordable tuition to higher education. Cut salaries of ultra rich. Invest in small business. Invest in education and healthcare. If Alberta has the best and most affordable healthcare and best public education lowest tuition fees attract many from our own country and others.
	Make more jobs for people in Alberta	Stop paying and bring people in to this country as we have no work for some of the people here	Investors and oil and gas stop trying to save the world over night

T2J	<p>Decimate the bloated bureaucracy that is Alberta Health Services. Then, as rapidly as possible, take decisive and courageous action to replace Alberta's dysfunctional state health-delivery monopoly with one modeled on the many European health care regimes that WORK VERY WELL - such as Switzerland, Germany, France, U.K., and also non-Euro Australia.</p> <p>Our daughter, who has lived in Germany for nearly a decade, and prior to that lived in England for 10 years, reports that since leaving Canada she has never had to wait more than two weeks to see a medical specialist.</p>	<p>1. Alberta Health Services - See above.</p> <p>2. Universities - Significantly scale back funding support for the ubiquitous plethora of undergraduate programs for which there is no job market demand - such as most liberal arts degrees, music, drama, etc. Just consider how many well known actors and music entertainers entered their careers via a university degree program related to their crafts. Nearly none.</p> <p>3. Public School System - Dispose of the Calgary School Board administration building. Then adjust downward the level of retained administrative staff such that all can be housed in ONE ATCO CONSTRUCTION TRAILER</p>	<p>See Trump's USA. Reduce taxation back to the "Alberta Advantage" level. Then GET OUT OF THE WAY!</p>
T5J	<p>Maintain spending in health and education but find ways to stop the waste of taxpayers money in those sectors because there is a lot.</p>	<p>Don't hire anymore public sector workers and through attrition reduce the size of the workforce. The NDP created an over inflated workforce when they were the government. Wasting tax payers money in all levels of government is a big problem! Pie in the sky projects we don't need at this time!</p>	<p>Reduce taxes! Encourage/supporting businesses through policy changes, like with trade between provinces and going to bat for them at the federal and provincial levels - especially with BC.</p>
T8V	<p>Education and health care. Increase funding! Do not reduce. Class sizes are higher now than they were 15 years when the Alberta Commission on Learning established the guidelines. Live by your own guidelines. Support special needs students. Don't continue to dump them into regular classrooms without adequate support.</p>	<p>Stop decreasing corporate income tax. It just increases corporate profit which then leaves the province or even the country. It doesn't create jobs. Increase revenues and that will save health care, education and families a ton of pain. Increase corporate tax. They should pay their fair share. Get after oil companies for abandoning wells. Make them pay for clean up, not the province.</p>	<p>Keep spending. It keeps people employed and primes the economy. Invest in health care and education.</p>

T4H	Identify the essentials which for me include efficient and quality health, education for children, post secondary education that includes putting real value on trades and opting for more apprenticeship training for the majority of careers, making sure that training for all health care workers (including Doctors) reflects the demographic needs of Albertans (example seniors health), safety and security , roads and associated infrastructure,a real plan to reduce red tape and focus on interprovincial "free trade ", and contracting work for human services to not for profit and charities where possible (with good oversight) and contracting work on roads etc in many ares of Govt.to private business (with good oversight). There are a number of tasks and jobs currently done by Govt workers that could be contracted out.	Do not put civil servants in charge of deciding where to make cuts. In my experience their first choice to cut will be those services that are contracted out to not for profits especially in human services.There are many union jobs that have been created as a result of onerous regulations and processes. Again it may need an outside firm working with Govt and Contractors to determine what can be stream lined.The Ministry of Health has too much under it`s mandate of responsibility.It may be time to provide a clear definition of what belongs under health and what does not. Some of the services it has under it`s mandate could be done differently. As long as Doctors and Nurses are the main influencers in deciding what they should be doing the focus of delivery of services will have that orientation.For example senior care including long term care really belongs under community with a focus on doing care differently.There are many senior facilities that are underutilized as people have to move when their support care needs no longer fit the "levels " that facilities have contracts to provide . This is backwards thinking.Many support needs could be met by delivering the support that is needed at the time thereby preventing unnecessary moves and creation of long term beds.Some of the support they need does not have to be done by a health care worker. My guess is that if seniors did not have to move to obtain care that families and communities could assist as well. It would likely have better outcomes for the health of seniors and their family members.Much of what is needed is social and emotional support, some physical care and being part of a community.I do not understand why every Albertan does not have a family Doctor as there does seem to be shortage of Doctors. In some communities, access to clinics is hampered by restrictive clinic hours requiring people to go to emergency when a Nurse practitioner or a community based doctor could have provided the necessary care. We	As stated previously we should be looking at interprovincial trade and reduction of red tape between provinces for trade, qualifications for employees (it is crazy that employment prerequisites have different criteria from province to province)Also we need to ask employers what skills they are looking for in employees and then tell our educators what they need to be focusing on in high school and all post secondary facilities including apprenticeships which could be expanded to many other occupations.
T3k	Health care, education and keeping social services available to those who need it.	Make oil and gas companies pay the taxes they owe, higher tax rates for those making over 6 figures and bringing back carbon tax.	Don't focus all our energy on oil and gas. Money has been taken away from start ups looking to diversify. It is Not a luxury to diversify our economy. We need to stop chasing the high that oil and gas was in before our economy dipped.
t9a	Infrastructure.	Cut all government salaries in half, fire 30,000 NDP bureaucrats regardless of cost to do so, they already fucked us, cut out the cancer now. AISH & welfare reform.....the abuse of these social services is mind blowing...I see it every month in my business just cashing the checks and who is cashing them. Abolish the climate bullshit rebate program the NDP brought in.....seriously, why has that not been cancelled yet!?	Get rid of the minimum wage mandate, encourage investment in the province, don't bring in foreign workers, get us a referendum on confederatiion, collect our own taxes & EI benefits.

T0M	Gov't payroll Health care spending - maybe give consideration to user fees to ease the burden, anything free always gets abused Education budget Keep on doing what your doing we can't have it both ways and some people arguing to be upset, we can't keep on doing what we have done since Klein eliminated the debt	See above	Businesses are leaving the province and closing up, this has to stop and we have to get more back and people working, most of this has to do with the Fed's and Trudeau. i don't know whether is can be done, or how, but we have to get control of the Provincial wallet
T2S	Education, health, public services	Getting rid of the war room (85,000 per day is way too much). Adding or raising taxes instead of transferring the burden to municipalities.	Diversification. If it continues to be a "luxury", people will start leaving for other places.
t3b	Education at all levels is very important, as well as Health, and especially for low income and Seniors with low pensions. (ps-Jason and team; you are doing a great job of controlling our spending and debt)	All Departments, and Boards, Commissions, Municipalities, Cities especially, should be reviewed for the multiple levels of duplication, Blatant Waste, and cleaned up. Make every possible efficiency you can.	Repair roads and highways, repair schools, hospitals, recreational areas, and assist new ventures, especially small local employment types.
T3K	Government should concentrate spending on hospitals, schools, transportation, highways, national security.	Spending on frivolous things..cut out spending where the government thinks they're buying votes. Cut the civil service! Too many employed.	Pay down the debt. Don't ask what the government can do for you but what you can do for your country. Support small business by giving a tax break. People are always putting this on government using top down approach but that's really not your job. YOU ARE NOT GOD! Tell those nay sayers to put their mouth into action.
T0H	It is obvious that Health and Education need to looked at. I believe they are very different though. Education spending can be frozen and redistributed and still function well. Cuts would be very hard and probably affect front line services. Gov has played a key roll under the NPD as far as inflating wages for unions and wages are hard to roll back. Health on the other hand I feel can be cut without affecting front line services. In dealing with Mental health and physical health issues I have dealt with several levels of bureaucracy that could not make a decision. This tells me they are redundant employees. Pay Dr.s and nurses and lab Techs and such but remove some upper management and empower local managers to improve service and cost effectiveness. Gov is too large and all ministries could be paired down but you must look at each one on its own merit and not make sweeping cuts, make calculated changes. I deal a lot with Transportation and many of the regulations and legislation, though intended to provide for safety, only increase cost and do not produce results. Melt is prime example.	As with any big change look closest to home first. The Previous Gov enacted PECBA legislation and formed TEBA to reduce costs and spent an additional 2M dollars to sign 2 of the most expensive contracts with the ATA in Alberta history. Gov as a whole has become too large and that is costly. Look at program spending and analyze results. I also think this province must stop cleaning up after companies that fail. Need a better system to hold land lease holders accountable for reclamation even if they go broke. More bonds of some such thing.	Stay away from sales tax and HST. Support local chambers and economic development when possible. We have had businesses that would have set up but Transportation has told them that due to the increased traffic you will generate, you will have to install turning lanes and such at their own expense so they decide to scrap the plan. All local planners and council did not agree but Transportation has all the control.
T8A	Public spending, schools, hospitals, day cares,	Cutting taxes of the rich	Elevating the minimum wages No allowing corporations to source joj positions out side CANADA

T3Z	Emergency services (police, fire, ambulance), Back to the Basics Education (reading, writing etc)and technical training , Medical services cost reductions.	<p>I have had two opportunities over 2018/2019 to observe medical services in two different hospitals for an extended time frame. My observation was this, several of the nursing staff spend the majority of their time, chatting at the desk. Two nurses in the Ward worked so hard the others did not. It is very frustrating to observe this. I feel there are several who feel they are entitled to their job versus working for it. I believe the Unions are the problem. These people need to have some sort of performance based increases versus the way things are done now. Patient or family input could be incorporated into this.</p> <p>Policing- In metro centres we could look at police only being called to injury accidents, freeing them up for important things. Perhaps responding to accidents could be taken over by Insurance Investigators.</p> <p>Education - Keep all religion and politics out of the classroom. Back to basics, teach useful skills like money management. Reduce the PD days at schools. Seems like the children have a day off every couple of weeks. Personal Development days should take place in the summer on their own time.</p> <p>Implement a 'Coin Your Idea' program for all government employees that would allow them to engage in identifying cost savings. They would provide an idea with cost/benefit to management committee, if the idea is implemented the employee could be awarded a nominal benefit calculated based on the savings it generated. Publish these savings to keep people engaged in the program.</p>	Reduce taxes and get out of the way of private businesses. I do not believe in any government subsidies for anything. Sink or swim on your own merit. The economy will look after itself if products and services people want to buy or need to buy exist.
T8R	Infrastructure such as road repairs. But in general, maintain the status quo on spending. Continue with the energy war room.	Over administration in both health care & education.	Laissez faire! Reduce government regulation of the economy & over taxation to allow investment in our economy.
T1K	Health, education, and social programs. The wealth gap in Alberta is far too large.	The government needs to stop focusing on 'finding savings' and start focusing on finding funds. Progressive taxation is an option as well as ceasing giving corporations tax cuts when they are not contributing to our province in positive ways.	All I have seen since the UCP came into power are cuts. These cuts have directly resulted in job loss for many people. Folks who do not have jobs or are concerned about job loss, don't spend as they normally would. This negatively impacts businesses causing further job loss. The economy can't grow when people are worried about losing their jobs.

T4P	<p>Welfare recipients should be getting more for their shelter costs. The current amounts are far less than even half of what is needed. Right now, a single person with no children gets only \$330 for both rent and utilities. That's insane.</p> <p>Schools need more funding, especially when it comes to the busses. A lot of parents who depend on school busses are unable to pay the higher cost due to Trudeau's carbon taxing.</p> <p>Essential services. Medical, police, fire, and infrastructure.</p> <p>Job creation.</p>	If it's not those areas, listed above, feel free to cut or even eliminate.	Make sure that nobody falls through the cracks. Find out from the career counsellors if there is anyone who isn't getting what they need from them because there are no available programs that work for them, and then do something about it.
T0A	Education, health, the poor and the old, the environment, and public infrastructure	They could stop giving money and tax cuts to the oil and gas industry, they could shut down their expensive propaganda office, the politicians could take cuts in pay like the rest of us.	They are doing the opposite of creating jobs and diversifying. They need to stop giving all the attention and tax breaks to oil and gas at the expense of all the other forms of business in Alberta.
T3K	Public Education... and start using the word PUBLIC again.	Stop giving the huge corporations big tax breaks. You are robbing the poor to help the rich prosper. Watch Robin Hood.	Taking away the high tech company tax credit was a stupid move. Reinstate it and figure out how to help small businesses while you're at it.
T3A	Education (particularly early childhood), front line health care, and preventative health care.	Middle management in the public sector.	Not sure.
T6X	Education, education and more education. An educated workforce will be able to tackle the challenges of the future and help to diversify the economy of Alberta away from its reliance on oil and gas.	The Energy War Room, obviously. Subsidies for oil and gas companies which are going out of business within 10-20 years anyway. There is room for efficiency in the health care system as well (for example, the Choosing Wisely initiative). 17(1)	Education, first and foremost. This will pay short-term and long-term dividends. Subsidizing fledgling industries (e.g. tech startups, alternative energy, pouring money into artificial intelligence).

T2V	<p>***Secondary high school/post secondary - career counselling -focus on career and employment training programs - specifically skills training in diverse career areas no just trades and oil and gas!</p> <p>***New training and employment programs for the "variety" of unemployed Albertans - not just trades or oil/gas or for immigrants, etc. -funding appears to be for exclusive groups and not based on individual situations.</p> <p>***Environmental innovations, research, etc. diversity in job creation</p> <p>***Building on alternative resources and selling those to other provinces</p>	<p>**Start at reducing jobs at the top of the government. All corporate organizations can also reduce the "fat" at the top, including education and health care.</p> <p>**If the everyday Albertan has to pay increased taxes then corporation taxes should also go up the same rate and not reduced!! We are not here to supplement businesses and shareholders</p>	<p>Getting Albertans back to work- so far failed Making life better for Albertans- failed many times over Standing up for Alberta - started and stalled!</p> <p>So far this government has failed in all areas...now with education, health and social programs budgets cut... not only is the economy falling but the ALBERTAN is now not being supported... it may be time to go elsewhere!</p> <p>**Investing in alternative resources and selling those to other provinces</p> <p>***Secondary high school/post secondary - career counselling - focus on career and employment training programs - specifically skills training in diverse career areas no just trades and oil and gas!</p> <p>***New training and employment programs for the "variety" of unemployed Albertans - not just trades or oil/gas or for immigrants, etc. -funding appears to be for exclusive groups and not based on individual situations.</p> <p>***Environmental innovations, research, etc. diversity in job creation</p> <p>***Building on alternative resources and selling those to other provinces</p> <p>When a business is failing - what does it do to revive itself? Keep doing the same or does it re-evaluate, reduce costs, cut management, and develop a new vision</p> <p>Invest in alternative power sources.</p>
t9e	Health care pharmaceutical care	Close the war room	

	<p>Economic diversification</p> <p>Health care and health technologies</p>	<p>I don't think the government should be solely focused on finding savings. It should be focused on revenues and bringing spending into our province. Yes, it is important to spend taxpayer money responsibly, but major cuts are detrimental to society. As one of the province's largest employers, continued cuts increase unemployment, affect livelihoods and the economy.</p> <p>There should be focus on our competitive advantages. We have a lot of land here in Alberta (and Canada) - in addition to agriculture opportunities, there is an opportunity to drive tourism by having a major attraction, and also opportunities to entice countries that lack land mass to invest in Alberta.</p>	<p>Personal tax cuts - with more disposable income, Albertans would increase consumer spending thereby increasing demand for more business activities in our province. Albertans may also have more opportunities to personally invest and support new businesses. Noting that there should be a sliding scale on how much is cut as this would help more with low and middle income earners rather than high income earners.</p> <p>Instead of general tax cuts for businesses, it would be worthwhile to offer tax incentives for businesses that contribute to social programs. Businesses need to reinvest in their communities that are supporting them. This may also promote partnerships between business and non-profits - if a building construction company sponsors a position or project at a non-profit on affordable housing.</p> <p>We need to focus on innovation and new technologies. Being a leader in health technologies has global implications. As well, we are missing opportunities in other technology sectors. We need to invest in the development and create a global technological phenomenon/campaign that will increase the influx of dollars into Alberta. For example: Rovio's Angry Birds reinvigorated Finland's telecom. industry and created licensing and ongoing merchandise and brand licensing dollars; South Korea's "Gangnam Style" bought economic activity for its music industry, tourism and fashion; Pokemon Go grossed over \$100 million in its first month and has since grossed billions. There are many other opportunities for licensing and royalties, which generate long term revenue for our province.</p> <p>Large telecom. companies are not contributing enough to our province's cultural and creative industries - I would like to see a modest monthly fee (say 25 cents for every smartphone and \$1 for every internet connection) be shared with our province's</p>
T6X	Eliminating debt, encouraging economic growth, education	I don't know. It would be nice to have a strong economy so we don't have to worry so much about finding savings.	Make sure high school kids are being educated about the job market so they will train to work in a field that has jobs instead of getting a useless degree.
T2K	Education and health care, diversifying the economy away from reliance on oil and gas.	If we are comparing our expenditures to other provinces, we should be comparing revenue as well. Our taxes are too low. Sales tax and indexed tax rates would be a good start. A better system of preventative health care to keep people out of hospitals where possible.	Support industries other than oil and gas. Stop putting people out of work through layoffs. Fund education properly to create a well educated next generation of workers and entrepreneurs.
T0A	<p>Making government services more efficient with less bureaucratic overhead.</p> <p>Roads and efficient health care. Bring back Alberta Health Insurance premiums for everyone except poverty level folks.</p>	Reduce complexity and amount of government departments and overhead.	Make it easy for business to come to Alberta by reduced overhead.... lower taxes, fees, wage limits, etc.

T9N	Gov't needs to focus on the future who are our children. Cutting important programs and funding is not the way to do it. Funding needs to be put into schools, not taken away. Cutting special programs such as PUF funding as well as causing an incline in class sizes is not beneficial to our future.	Big corporations continue to pay less taxes when they are the ones who can afford to pay it! That is where changes need to be made.	Cutting so many govt funded programs is not helping job situations.
T6A	Public sector wages, no carbon tax, no corporate handouts but create attractive tax environment for them & small business.	See item 1 above.	Lower taxes & red tape especially for small business
T8r	Education and Health Care	WAR room	Dont kill services that will always be needed and valid such as EDUCATION and HEALTH
T0A	Health care and education, including post secondary. Our health and our youth are our future, and these entities should not be farmed out as a for profit industry.	Savings can be found at every level and there could even be incentives within various departments for lower level employees to come up with innovative ideas.	Maintain and build infrastucture during this downturn. Having a massive infrastructure and personnel deficit in order to look good on paper will only mean years of catch-up when the economy rebounds. Move with the times instead of remaining chained to oil and only oil. If we do not we will truly be left in the dust.
T2C	Reducing Government debt.	Union wage rollbacks, divestment of non-essential services, ending corporate welfare, reducing wage and pension benefits for public servants.	Reducing Government debt and debt servicing charges. Lowering corporate and personal taxes. Divesting public services such as Land Titles to the private sector for more cost-effective management and delivery.
T6V	Class sizes Technology Technology PD for teachers to improve knowledge & increase productivity by becoming more efficient.	Increase school fees for single child families and reduce fees for multi child families. Merge school that are too close to each other that have enrollment challenges.	Teaching assistant program to further develop and become teachers. Financial aid for qualifying individual who want to become teaching assistant. More field trips or guest speakers to introduce career insights for upper elementary. More focus of teaching upper elementary grades financial smarts to learn the value of the goods they interact with daily.
T0E	Justice to enforce the rural crime strategy	Bring back healthcare premiums. I don't think that some departments are worth their expenditures - Status of Women comes to mind.	My family has been impacted by very high child support payments. This means that I have no additional money for investing or consumer spending beyond basics. If the government could do something offset what I know is a federal legislation, that would help me greatly.
	Rebuilding the infrastructure and public services the Conservatives destroyed during the Klein era.	Creating efficiencies and value with what we already have. That sometimes means investing a little in training and infrastructure and equipment for longer term results. But it appears that if results cannot be realized short term, then no attention is paid to that type of strategy.	Support residents with solid social and public services so they can create their own opportunities.
T4a	Starting our own pension and opting out of CPP Investing in ATB to get money flowing to AB businesses again	Already doing a good job there	Start promoting AB across the world. The feds won't do it for us. Invest more in ATB to get money to AB business Change the mortgage rules for ATB to get rid of the punitive stress test

T4C	No comment	Reduce public service budgets through hold the line salary/ benefits negotiations. Also reduce the absolute size of the public service, through attrition, but also through layoffs, if no, or minimal benefit is evident. Far to much featherbedding.	Take on the federal government in an aggressive manner, to resist and fight the c-69, etc bills, the carbon tax, and equalization. That will have a profound effect on job creation and economic growth.
T4C	Climate change: and practically speaking this translate into incentivising residents to buy electric cars, install solar panels, install energy efficiency measures etc. It should also mean accepting a higher carbon tax to encourage innovation AWAY from fossil fuels.	Stop the ridiculous "WAR ROOM"	support innovation in green energy MUCH more....
T1X	Creating jobs not reducing those and wages	Government management and projects outside of core services	Creating jobs, keeping money in economy by not cutting jobs/wages, look at diversity of economy
T0B	Cut spending universally, especially environmental initiatives, government wages. Trim the fat!	Health care	DEREGULATION!! Tax cuts to small business. Follow the Trump model provincially - US has the fastest growing economy in the world for a reason.
T2L	Government should focus on efficiency. I think that education and health care is very important but I do not know how efficient are those systems. Health care is a disaster that has to be fixed	Reducing taxes will allow companies and businesses to settle in Alberta	I think the best way is reducing taxes, allowing companies to establish in ALBERTA
t3e	Just the basics, get rid of all frivolous government spending	get rid of provincial human rights we already have discrimination laws just enforce them. Anything that isn't basic needs to be pruned the sooner the better.	We need a tax holiday!! Get rid of provincial income tax we have to make people want to start companies not chase them away! Inept government intrusion and taxing people to death is killing the growth of businesses.
T2V	No comment.	Cut public sector wages in Alberta such they are in line with the Canadian average.	Eliminate corporate welfare and business subsidies. Instead reduce overall business taxes. Reduce regulation. Implement successful models such as that of British Columbia to reduce regulation.
T1J	Cut their salaries and expenses	Salaries and expenses.	make it worthwhile for investors and business to do business in alberta
T2W	Overspending by previous Conservative and NDP governments has resulted in a \$70 billion debt. Focus on that!	Start with letting go the thousands of government workers that the NDP government hired between 2015 and 2019. Whatever they're doing is irrelevant, unnecessary and superfluous.	Be the private sector's best friend.
t0k	Bringing down the deficit and in time the debt. In a more significant manner. You can not cut spending, without cutting spending!	Middle management, and holding the line with the unions, Doctor's etc. We have the highest wages in the country. They should go no higher until the province's fiscal problems are solved. They shared in the good years they should share in the bad.	Let's not just focus on our oil and gas sector (those are important) in our area we have three companies that are looking to open coal mines (one of which as been in the process for six years) these would create between direct and indirect 1000's of high paying jobs. And revitalize an area that has little economic activity. The regulatory process for resource projects is brutally long, why would any company invest, millions and billions on projects that don't get approved for 8-10 years.
T5N	Infrastructure repair Public safety More Judges Fossil Fuel Promotion and Exposure of the US NGO's	Eliminate the 44,000 new employees the NDP hired Privatization of non-essential services	Expose the foreign organizations and NGO's dedicated to killing the fossil fuel industry Eliminate wasteful red tape slowing growth and development Make Calgary and Edmonton accountable for their out of control spending

T0A	<p>Reduce meaningless govt jobs. Reduce excessive pensions. The people have to work 40 to 50 years to get 12,000 a year. Why do the politicians get lifetime pensions for working 4 years. Stop bailing out big companies. When we lose our jobs the govt didn't send us a cheque to help feed our families! Why spend millions on the new technology in hospitals (The portable computer input centres) the nurses wrote in info down for years, now they are doing both. Not efficient! This wasn't responsible spending. Then you have to hire more techs to maintain the system.</p> <p>Stop spending money on climate change farce and concentrate on how technology that will fix it and just bandage effect. Windmills are not efficient! Solar isn't efficient. There is new technology out there but the powers to be are afraid they will lose their income so they don't develop it.</p>	<p>Negotiate the equalization agreement so it's fair to every province.</p> <p>Negotiations need to be revised re seats in parliament. We will definitely save money if that happens.</p> <p>We need to change so that big business are wanting to invest in Alberta not leave! I never understood. Greed has taken over and now we are paying for it.</p>	<p>I believe the govt is doing so now by reducing red tape! Awesome news keep going on that! Reduce taxes on small businesses. I mean reduce by 20% not 1%! Make it so the small guy can function and others thinking about it will jump in! Minimum wage is 15 that's ok but if reduce the the businesses taxes it's a win win. They will hire more people because they can afford it!</p>
T0C	<p>Funding for education</p> <p>Maintenance of healthcare in rural areas; more urgent care centres</p>	<p>Stop giving tax breaks to large corporations and oil companies.</p> <p>Increase revenue through a PST and increased taxes on the wealthiest Albertans</p>	<p>Support education and job training for sectors with demand.</p> <p>Stop focusing so much energy on the fossil fuel sector. Support other vibrant and growing areas of the Alberta economy. Ex: Agriculture, trades, alternate energy sources.</p>
T1J	<p>Increasing efficiency of operations, particularly in the area of healthcare. There's too much government red tape.</p>	<p>Stop contributing to capital building for hockey arenas, etc. although I do support road construction and LRT expansion.</p>	<p>The government does not create jobs! That is an oxymoron! The only person that creates a job is an entrepreneur! Reduce small business income taxes and that will stimulate economic growth. Alberta needs to get its own police, pension, taxation, firearms legislation and immigration. That will stimulate tons of economic growth, and we can stop sending money to Ottawa.</p>
T6J	<p>cut spending and get control of our debt.</p>	<p>Gov't employees have golden pensions and wages, get Unions under control, they think regardless of anyone they deserve a wage increase every year. Start firing some of the managers and assistant managers and give the front end workers more support.</p>	<p>That would be a change, getting the pipelines going would create huge jobs for the unemployed. Quite listening to fraud climate people "the sky is falling" . The western provinces are in need of jobs and stop handing out money like candy.</p>
T1X	<p>Actual infrastructure. Get some much needed high schools built in high priority areas.</p>	<p>Stop the boondoggle of solar & wind farms or the subsidizing of them. Expensive & intermittent energy is no solution for this area. AHA needs a serious gutting or overpaid upper management. There is bloat at all levels of upper management across govt. Be bold, make the cuts.</p>	<p>Get the hell out of the way and let entrepreneurs and private business handle that. Reduce govt size and scope of involvement across all sectors. Axe the climate change bullshit too.</p>
T1K	<p>Building our own refineries and food production sources.</p>	<p>Cut salaries or positions of CEOs who get huge salaries, instead of cutting front line staff which directly affects services to people, especially vulnerable people.</p> <p>Cut funding to art projects. Defund safe injection sites and fund more spaces for people ready to kick addictions. Tax alcohol and marijuana and gambling more as they create problems, and have the their tax money go into programmes to help the people for whom they create addictions.</p>	<p>Incentives to small businesses. Get the pipelines done. Incentives to people to work instead of being on social assistance.</p>

T5e	Only the very basics, till we get out of trouble. Every thing in balance!!!	Wage cuts for politicians! You do not need that much money to have a comfortable life! No \$ to illegals! No Canada pensions to any one unless they have been in this country for 30+ years Get the pipelines built! Only important trips via our tax \$. No personal trips, you get paid 10,000% more than an average person, use your own money! Taxing groceries, and utilities is not a productive way to collect more for your terrible government budget advisors. Cut some wages already, to the government overpaid government. Insurance, put a tap on that! We are paying out our noses and they keep raising rates! Governments and the people having accidents pay raised rates, and they collect way more than enough to cover damages, cut their pay! Cut back on government employees!	Build pipelines! Economic development...research. Charge less tuition, let the people that want to learn to help us, learn without owing hundreds of thousands to get their education. Offer free classes to help the poor that want to contribute more but can't! Do not let anyone into country unless they have a skill or trade. We give way too much to new people in our country. Some have money, but use the system any way. Taking away from the poor!
t3c	Reduce the size of gov't thereby reducing cost. Too many Politicians and civil servants eating up tax dollars.	Canadians can no longer afford their gov'ts, Municipal, Provincial or Federal. They are all too inefficient, too big and too expensive. Gov'ts need to privatize as many departments as possible. Gov'ts need to downsize and become more efficient. Gov'ts have to give up their special status and join the real world. Their pensions, their benefits and all the other perks have to be rationalized and come in line with that of the private sector.	Red tape and gov't meddling has to end. Gov'ts must become professional, develop a strategy, get a plan.
T4I	Health care Education Rebuilding the rutherford fund Seniors care. Child care	Revenues could be generated easily by taxing the top 10% of earners appropriately.	I think that the government could do plenty to support economic growth by honouring its collective agreements and increasing staffing levels to provide adequate care to people who need it. Providing a subsidy for child care allows parents to return to work. It's easy economic stimulus
T4H	Cut the civil service. Cut wages of nurses and teachers and Government employees.	See above.	Lower taxes
T2j	Debt repayment, job creation/diversification.	Police, art, social services, welfare, child tax benefit	Diversification, regulation

T6j	Core government programs such as healthcare and education need to be supported, however, costs and outcomes must be benchmarked to other jurisdictions so that taxpayer funds can be respectfully and effectively used. Public sector total Compensation must therefore also be benchmarked and brought into line with private sector compensation.	Bring public sector compensation in line with other jurisdictions and with the private sector. also, stand up to unions to allow government services flexibility to improve efficiency. For example, using shift work for expensive equipment such as an MRI would allow AHS to utilize this equipment effectively for both reduced wait times and lower costs. Improve communication and processes so that Homecare can be put into place more quickly thereby freeing up hospital beds. Also have Ahs assessment/coordination staff available 24/7 to allow hospital assessments at night and Homecare available next day. Match this with a homecare coordinator available 24/7. Spending more funds on these areas will free up expensive hospital beds. In other words, hire an efficiency expert to review and make recommendations and then stand up to the inevitable union opposition. Many of us work shift work and work weekends with only a small shift premium. It is not an unreasonable expectation.	It is governments job to create a business friendly climate. While competitive corporate tax rates are one element, all factors need to come into play: streamlined effective regulation, access to oil markets (pipelines), employment legislation that is fair to both employees and not onerous for employers, government investments in sectors that the province wants to encourage for diversification, ...
T1K	Debt reduction to include wage rollback for all government employees "INCLUDING" judges and an across the board budget cut for every ministry. AHS is very top heavy and this can be done by cutting senior management positions	A 5% wage rollback for all government employees "INCLUDING" judges and an across the board budget cut for every ministry. AHS is very top heavy and this can be done by cutting senior management positions.	Tax incentives
T3H	(1) Health care, with a focus on high-risk groups like diabetics. (2) Education	?	incentivize business growth, and companies relocating here.
T3j	Health care, education and investing into alternative renewable energy	The carbon tax would have helped but since it is no longer in effective for our province, savings have to be found in making the city more energy and water efficient. Roads can be fixed less if we looked into cement alternatives, and if less money was put into art that is put around cities that no one asked for.	Many oil and gas workers can be trained and educated to work in renewable energy sectors very easily, the rest of the world is progressing but instead our province is trying to put more money into an economy that is no longer relevant. We need to invest into renewable and sustainable energy and jobs that can be sustained as resources change. We don't have to take peoples jobs from them in order to create new ones in a different industry
T3K	Health care and education, unbiased support for all people.	Cancel the Energy Center. It is an ineffective, multi million dollar waste of money that is used to intimate people and is doing the job that the oil and gas companies can afford to do themselves.	By supporting green technology, the tech industries, small businesses and restoring grants for non profits.
T4L	All area's of government	Cutting the bureaucracy in all area's of government	Build pipelines to start with
T8L	Cut spending across the board! Find efficiencies!	ALL government services, cut the 48,000 new public service employees that the NDP hired. Cut AHS administration and the number of managers.	Keep going according to current plans and direction.
T6E	Building on industry that is sustainable and not reliant on the global market.	Taxing corporations. Absolutely no need to be attacking individuals and small businesses, giving large corporations tax cuts isn't feeding the economy, it's making rich people richer. 44 years of a conservative government did more damage than the 4 the NDP were in. Taking tissues away from government employees isn't where the money needs to be found.	Encouraging outside investment and focusing on sustainable resources to crest income. Eliminating public sector jobs not only impacts thousands of Albertans, it creates frustrating among the public for lack of access to services. It has a much broader impact than the governing body seems to recognize.

T0H	Healthcare, education, job creation	They could find it in the massive tax breaks they've given to large corporations.	Diversify our economy by expanding the renewable energy sector.
T5M	<p>Cut spending. Quit funding corporations unless there's a signed agreement in place that will help create jobs not fund CEO'S pay. If they don't use the funds for this then these corporations are required to pay the money back with interest.</p> <p>If the government funds an infrastructure project then the agreements should state a deadline of completion. If it's not completed on time then the agreements should state a financial penalties against the company who the agreement is with.</p> <p>The money used to send to municipalities should be reviewed and the above items such as financial penalties when the funds are not used appropriately should happen.</p>	<p>Lower the funding for the arts. Lower wages for the legislature. Lower spending in the legislature. Find the areas to cut within the legislature.</p> <p>It's time the members of the legislature assembly live like the rest of the Albertans.</p>	<p>Creation of jobs through various industries through job training. For example plumbers, electricians etc. Start job training first then after the first year the person would go to school etc. But job training first with the trades.</p>
	<p>Education and health care. Our schools and students deserve to have funding INCREASED, not maintained. There are a host of reasons that operating expenses have increased, and those needs must be met, maintained and increased. We can not afford to further marginalized students by reducing PUF, reducing support staff, increasing class sizes. Schools NEED to have their physical structure maintenance needs met. They need to have funding increased to meet the overwhelming increase in insurance. Maintaining funding, reallocating additional funds to private schools...all of these damage average Albertans ability to meet their potential in the education system</p>	<p>We need a provincial sales tax. We need to STOP giving tax breaks to corporations - they don't have Alberta's interest at heart; they have their own profit line at heart. We need the oil and gas companies to pay their debts/clean up their wells.</p>	<p>Diversify the economy. Bring back incentives for tech companies. Bring back incentives for arts/entertainment. Reverse the new post-secondary funding model so that Albertans can afford to train and diversify. SUPPORT PUBLIC EDUCATION so that the dominant narrative supports creating educated and informed citizens who are engaged in the democratic process. Crack down on Wexit because it makes Alberta look unstable and irrational to the rest of the country, which deters investors. Support our unions so that they can provide stability for their workers, who in turn will be more active in the economy with their spending.</p>
T0A	Maintaining/repairing road, rail and building infrastructure with safety being the primary focus.	Wages for public sector unions.	<p>Bring back paid hire a student type wage matching grants. Wage grants for entry level jobs for applicants without work experience in that sector. Rather than blanket corporate tax reductions give tax credits for non-overtime or bonus employment wage expenses. This would encourage higher base pay for employees and employment of a larger workforce.</p>
T4N	<p>Getting oil and gas industry back to work and our resources to markets.</p> <p>Hospital expansion and catherization lab for Red Deer Improvement in services and reduced wait time for surgeries and people facing critical health diagnoses</p>	<p>Restructure Alberta Health so there are fewer levels of bureaucratic red tape.</p> <p>Hire more full time nursing staff so there is less overtime being paid.</p>	<p>In Alberta, oil and gas is critical to a healthy economy. Keep pushing federal govt to complete pipelines and promote safety of our oil over Mid East oil.</p> <p>Work to reestablish markets for our agricultural industry.</p> <p>Diversify for long term</p>
T4B	<ol style="list-style-type: none"> 1. Cut the size of government 2. Continue to cut corporate tax 3. Cut personal income tax 	Not so much in health care but in other program spending.	Lower corporate and income taxes
T7X	Education and healthcare	In the government	Start financing infrastructure projects especially roads. Pave every gravel road in the province requires a massive amount of labour

T4A	Bringing down the deficit without raising taxes. Unions are pushing for this, but it is solely for their own agenda for more spending. We voted the UCP because the NDP were spending out of control. We expect you to follow through.	Wage freezes, reevaluating capital projects to see if money can be saved. AHS and Education board reviews to combat overspending and salary caps/rollbacks based on provincial averages.	It has to be closely scrutinized. I am in favour of supporting students and provide incentives to employers to hire students.
T3M	education, government unions	cut the waste, double dipping nurses, create non denominational school board similar to Quebec. reduce admin at all levels of education, health care, create fiscal monitors.	have Ottawa payback Alberta equilization over payment. fire YYC mayor and over spending council.
t2c	Helping to get small business started. Less red tape.	I beleive they could find savings by trimming back on the size of the government as well as reducing wages in every government employees.	Cutting red tape is the best way to get companys started. Too many regulations provincial and municipal. First startup business need help in getting their doors open.
T5J	Please cut spending in government non-essentials of which there are MANY. Please include companies like WCB as well. 17(1) did not suffer any lay-offs during Notley's time like the blue collar sector did. There are many non-essentials in companies like this as well as the federal, provincial and local governments. They must experience the same cuts that the oil industry did throughout all of Alberta, especially the major cities. The savings by doing this should go toward the oil/gas industry.	By minimizing government and cutting off all non-essential services which are many in all three government sectors. This includes large corporations like WCB, etc. The Government needs to drastically cut spending on migrant welfare. These people are not contributing but are a drain on our limited resources and spending needs to stop immediately for there to make a difference. We need to stop corporate welfare as well. Trudeau's east will need to find ways to take care of themselves while Alberta begins the recovery process after Notley's train wreck.	By focusing on Alberta citizens above migrants whose needs are taking priority over us. True Albertans WANT to work and contribute to our once rich economy. Government should support us by listening to us and taking concrete steps toward the betterment of our future which it once was. CUT OFF DRASTICALLY ON MIGRANT SPENDING PLEASE.
T8H	Healthcare and education	not supporting federal initiatives such as security funding for celebrity royals, not allowing the premier to spend like the provincial coffers are his own, tax the 1% for a change	Not trying to create a separatist movement is a good start; don't be so free with our resources to the states, invest the money that is needed for our kids to actually be able to afford post secondary school and become the next industry leaders. We have to outsource because we've starved our own youth of the chance to achieve. -because of the out of control school fees that we can't afford.
T6K	Health care. Senior's programs and services. Alberta NEEDS to cut so much spending and get the debt under control. AB debt is disgraceful. AB's loss in credit score is disgraceful.	Cut useless spending! Trim the fat. AB teachers are the highest paid in the country and I don't think that they are doing that good of a job for that kind of pay! Do not give money to unions! We pay such high taxes compared to other provinces and do less with it!!	Get our oil moving!! Get our economy moving!! My house price has dropped year after year in the last 10 years, my taxes keep increasing, groceries are more expensive and my wages aren't keeping pace! The current Alberta is NOT the Alberta of 20 years ago! I'm sorry that I've stayed in Alberta.

	<p>AISH - people who receive AISH have had one increase in I believe, 8 years. In 2018, legislation indicated AISH payments would have an annual cost of living adjustment. So, in 18 years, between 2012 and 2018, AISH payments went up roughly 6%. Kenney has pulled the plug on the cost of living adjustment, so perhaps by 2022, perhaps when AISH payment might increase (or not), people who live on AISH will have had, over then 10 years, a 6% increase. At a very simplistic calculation, this is 0.6% per year. I CAN ALMOST GUARANTEE THAT THERE IS NOT ONE PROVINCIAL EMPLOYEE, MLA, PREMIER - WHO HAS HAD THE EQUIVALENT OF 0.6% wage increase per year. But let's put it on the backs of disabled individuals - they won't mind!</p> <p>Revise the outrageous salaries paid to government employees - check the Sunshine List. Fire them all, rehire people who are just as qualified and hungry for the work, and will accept a reasonable salary.</p> <p>People who work in any capacity for our government, need to work as hard as others in the private sector. The 'word on the street' is that do not have the same expectations placed on them - whatever their position - yet are well paid, get great benefits, and are underworked.</p> <p>Allowances and special allowances - we have too many people earning salaries that are too high for the role they play. Kenney had the opportunity to cut back on over-spending on salaries when he was first elected, but seems he chose not to.</p>	<p>Getting rid of indexed pensions, cut back of the number of government employees, cut back on overpaid mid-management, go after the idiots who decided we cold wait until 2024 to 'review' the transfer payment formula - hence, GET TO WORK ON IT NOW - IF A SMALL GROUP DECIDED IT WAS OKAY TO PUSH FORWARD THE DATE BY FIVE YEARS, A FURTHER DECISION TO MOVE THE DATE BACK TO NOW, COULD OBVIOUSLY BE MADE AS WELL.</p>	<p>Get to work on reviewing the transfer payments earlier, include an additional tax for Albertans who earn more than 2 million a year (from whatever source),.....actually I don't think politicians ever listen to what we want anyway.</p>
T1K	Healthcare (physical and mental), education (K-12 and post-secondary), employment of young people entering the workforce, the environment and sustainability	Stop giving tax cuts to big corporations.	Support independent small businesses creation, diversify the economy (Oil is not gonna last forever), create employment opportunities for young people entering the workforce, stimulate the economy by increasing the amount of income of regular albertans, so that people can spend money.
T4V	Stop using credit to spend and start paying the DEBT down.	Cut all politicians expense accounts. Live out of their pay cheques like every Albertan does.	For the unemployed, offer re-education after their jobs are eliminated. Allow the pipelines to be built. Stop giving equalisation payments, make other provinces stand on their own feet financially.
T5Z	Education should always be a priority. Economic diversification. Health care.	I wonder if the govt has looked at efficiencies within school boards. Could monies not be saved by consolidating school boards whilst still respecting the need and want for catholic and Christian schools. Could there then be a reduced amount of trustees as well. Could more efficiencies be found within AHS? How is overtime managed? Is it efficient? Is it being abused? Could more staff be hired instead of...	We need a strong govt that will stand up to the federal govt and continue to support our energy sector not only as it is today but how it will change to be considerate of climate and environmental issues. Diversification will flow out from a strong energy sector. How can our govt and all it's agencies become more efficient? That is a question they need to ask themselves.

T8H	<p>1. Reducing taxes. 2. Control spending. 3. Reducing the debt.</p> <p>Basically, stop taking so much from people and stop trying to solve ever little problem. It's time to get people more self-sufficient.</p>	<p>Reduce the size of government. Reduce traffic law enforcement. If there is no victim, there should be no crime. I saw a guy recently get pulled over for rolling through a stop sign in a parking lot. Really? Law enforcement should be upholding real laws, not harassing a hockey dad in a minivan trying to get his kids to school on a morning where the busses aren't running.</p>	<p>By reducing taxes and regulations. We need more small to medium sized businesses. That's who pays taxes in this country.</p>
T5K	<p>Ensuring Alberta's students have access to adequate supports-especially vulnerable populations like low income and special needs.</p>	<p>Increase professional development days to decrease transportation costs in schools Evaluate superintendent and administration salaries</p>	<p>Create grant programs for schools to access in support of training and educating staff in how to better support vulnerable populations universally at the system and school level. Bring in experts in areas such as universal design, social emotional learning and autism to help schools feel more equipped to support students without needing to have each student with a 1:1 educational assistant</p>
T4S	<p>Stop the transfer payments. Become a have-not province also. Immediately address the orphan-well problem. Starting next mineral land sale advice bidding companies that before they drill a well they must deposit funds into ATB to cover abandonment and reclamation. If they can afford to drill, they can afford to leave that full amount in an account earning interest for the life of the well.</p>	<p>Stop investing in companies. Let the free market work by itself. Ambulance drivers sit around and get paid for nothing which seems dumb. Municipalities get too much help that they spend foolishly.</p>	<p>Stay away. Free market will work itself out. Stop giving away all our oil. We do not need more pipelines to give it away. It will be worth more in 100 years. All oil workers are way overpaid and spoiled and a lot of those wages leave Alberta.</p>
T4V	<p>Health Education Social assistance type programs</p>	<p>Don't give tax breaks to big companies Implement a provincial sales tax Get rid of the energy war room</p>	<p>Begin investment in clean energy</p>
T3G	<p>Infrastructure: roads, power distribution, internet Public safety: police, fire, EMT</p>	<p>Dunno</p>	<p>Continue with the effort to reduce red tape to allow small businesses to thrive. Support initiatives to attract high tech to the province</p>
T8L	<p>Get rid of the governments own spending,e.g travelling,meal allowance,private jets etc.</p>	<p>Practice what you preech,get rid of bottled water and tissues in your own government buildings,all your own little perks</p>	<p>Create different industries other than oil and gas and promote them</p>
t2y	<p>They need to do cuts. Cuts in wages, pensions, benefits, time to privatize services. Government employees live like Kings while the rest of us pay for it. We do not need all this government. We need to separate from Ottawa-get rid of the fake equalizaiton payments. Wexit 100%. We want a vote on it.</p>	<p>In wages and benefits. The size of government needs to be drastically cut. It is burden to taxpayers. We do not need all this government. It is destroying and bankrupting us.</p>	<p>They need to get out of business. Cut taxes and regulation. Let the free market run itself.</p>
T8L	<p>Health - education - new technology</p>	<p>Get rid of upper management - get rid of war room - instead of flying to meetings use teleconference</p>	<p>Build the pipeline - ensure that post secondary education is affordable - fix infrastructure</p>
T0L	<p>Stimulating the economy.</p>	<p>In government itself, all aspects of public spending from health care to mental care to education. These have all gone out of control.</p>	<p>That is tough. By any means possible</p>

T4R	Enough money being spent on everthing.Replecation in many departments I'm sure.	Reducing size of government in all departments.	Tax incentives .Reduces taxes substantially in many area's instead of raising them has shown in the past to encourage development.Grants are just a waste.
T4R	Enough money being spent on everthing.Replecation in many departments I'm sure.	Reducing size of government in all departments.	Tax incentives .Reduces taxes substantially in many area's instead of raising them has shown in the past to encourage development.Grants are just a waste.
T0M	My priority is to have government do less, not more. I have no areas I want more spending on, I want to see a continuous and sustained reduction in government spending every year along with tax cuts as expenditures go down.	Everywhere. Waste and overspending are rampant throughout the bureaucracy and public sectors. When cutting the bureaucracy look to cut the upper levels of management first. Every department is very top heavy with unnecessary management and those jobs cost much more than front line positions. Cut the ones at the top first before cutting the lower level positions. We have massively over funded education and health sectors with significantly overpaid public employees (teachers, nurses and doctors). Bring those two areas down to the national average based on per capita spending before anything else	By getting out of the way. Eliminate red tape, lower taxes and make it easier for private industry to operate. They will create the jobs on their own from there.
T3G	Education- fund for enrollment growth, class sizes and the needs of diverse learners I 100% disagree with public funds going to private schools. I am terrified that our public schools will become places for kids who, for whatever reason, don't fit the mold of private school environments. Public schools are only for the poor and children with learning, emotional or behavioral issues. What a disgusting state. Healthcare	The government needs to ask the doctors and nurses in hospitals where savings can be found. They are the experts. Education should not be in the transportation business. Other than rural students, if you want your child to go to a special program of choice you either pay or get them there yourself. Cut administration costs not front line staff. Have Directors and other upper level staff actually go in and work with students instead of visiting and asking students about learning intentions. All administration-Directors, Principals, AP's, VP's, strategists, consultants must actively teach and work with students in schools. Trustees must participate in front line activities. It takes a village.	Continue the fight to get the oil to market, but work on diversifying the economy. I would ask the experts in the respective fields. Ask educators, ask doctors, ask oil and gas experts for ways to improve their business.
T1W	Buy at least 3 water bombers so no more communities would burn to the ground like Fort Mac Murray and Slave Lake . These should be permanently stationed near fort Mac Murray (strategic ground for Canada's economy) , Banff (touristic worldwide renowned vital for Alberta's economy) and Jasper (another precious location that worth being guarded and preserved) .	Reduce substantially the government's high ranking civil servant staff as well as their compensations of all kind (hefty pensions and salaries well above the median earning of Albertans) .	Promote the unionized labour that have workers with less drugs affliction , more ethic and craftsmanship . It's not a crime to have health benefits and a pension plan . Sharing the wealth shouldn't be seen as sometimes unreasonable . Big oil makes huge profits and cuts in the wage of their workforce and still gives outstanding salaries to their CEO . That is immoral , therefore unfair .

T0K	Roll back wages on all health, civil servants, education unions and cut spending on major infrastructure projects until such time as we get spending and budget under control. Department heads of government need their wages cut back as well. Don't ask those lower down to take cut backs if the top doesn't as well	As above.	Pipe lines. Major tax cut across the board. We as Albertans are taxed to hell so turn it around. We know far better how to spend our money than govt. Get rid of the Fed carbon tax, keep the collected taxes here not to Ottawa
T6H	Invest in planning departments to study efficiencies in health care throughout the world, adopt systems that will lead to lower cost and better service for healthcare. Once proven, these methods can be adopted throughout other areas of the government where applicable. This will be costly upfront, but will lead to long term savings which will benefit all Albertans.	Decrease government workforce through attrition and laying people off when projects are complete. Hire contract workers for special projects. There is no need to hire more long term employees.	Decrease paper burden for all business, lower personal taxes for everyone, lower corporate tax. The number of law enforcement officials needs to be lowered as they have a negative impact on both business and personal growth.
T8N	Government employees, freeze hiring and wage hikes and benefits	Switch all new government employees to a defined contribution pension plan like the private sector did 20 years ago !	Already have by cutting the corporate tax rate
	- analyzing the prevalence of chronic health conditions (especially diabetes, hypertension, obesity, COPD, and heart disease) across the province as well as the efficacy of the efforts of primary healthcare and education centres in preventing these	healthcare: recycling/repurposing/re-selling unused or old technology and office hardware	- adding incentives for renewable energy businesses, such as solar, to make the energy market more competitive and diverse while keeping it worthwhile for oil and gas companies to stay in Alberta - Get rid of the career and life management course in high schools and instead facilitate partnerships/career fairs between schools and businesses/institutions from various sectors of the economy
T1H	Our Health Care system in Alberta is very good, but what people are unaware of, or don't care about, is the cost of it. Residents of Alberta should be sent a yearly information notice as to what exactly was spent on them personally during the previous year, also noting the total amount spent in Alberta for that year, and especially noting that this is part of the taxes they are paying (people need to be aware that the "free benefits" they receive are in fact NOT free!	Savings can be found in the Health Industry, specifically in the way AHS spends boatloads of cash. 17(1) A lot of "retired RN's" find ongoing jobs with AHS doing "special projects" and "special research"; I worked with AHS and know this is a waste of a lot of money. A lot of RN's are hired to do jobs that do not require RN expertise. Also, there is far too much money spent on IT and the services to support it. Concentrating on these will likely save several million dollars. Savings can also be found in the Education System. The salary and benefits of teachers is much higher than necessary	Pursue and assist the Oil Industry. Without this Alberta and Canada are going down fast!
T6X	Public Education and health care for all.	Eliminate funding to private and charter schools. Public tax dollars need to go to public institutes.	Diversify the economy. Oil and gas are very important to the economy but they are a nonrenewable resource. Alberta needs to look at all alternatives not just the one we are comfortable with.

T4B	Education! Medical Care! The cuts this Government has made is irresponsible.	You were voted in to increase jobs, not cut taxes and Government jobs. You haven't increased oil and gas jobs, and you've put families even more distressed by cutting their partner's jobs in education and medical care. Sometimes you need to spend some money in order to increase employment.	Fund the reeducation of employees from the oil and gas sector. Fund Health care and education as a priority, as Albertans work in those fields too.... firing your own staff is absolute madness when you say your priority is jobs.
T1A	Infrastructure -- like roads and maintenance of current infrastructure only until the deficit is paid off.	Reduce the size of government employees and unions. or do a PAY cut of 5 % across the board.	Please continue to reduce Taxes, Red Tape and eliminate those social programs that only benefit the Bloated government payrolls. Also FIX the Teachers Pensions so they fund ALL their own Pension Plan because us Taxpayers are being robbed by the Teachers Union.
T7x	Reduce the cost of things benefits don't cover. Everyone's benefits cover prescriptions. But dental, eye glasses, physio... I'm a \$150,000 household and can't afford new glasses or to get the physio my doctor wants me to do.	Teachers salaries should be dependent on what they actually do, not some fixed seniority scale. Nor should part time staff receive benefits. Someone I know works at 17(1) Leaves at 8, home by 4. Never brings work home. Never has to lesson plan. 17(1) And how does that require any actual skills? Meanwhile I have a higher education, leave at 6, home at 6, TWELVE months of the year, work hard, works overtime, and I get half the wage and no pension.	Employers need to provide more job flexibility and job sharing. Every organization should be required to have one full time position that is job shared and has the benefits of full time.
t2j	Spend on finding and implementing efficiencies in our public sector, specifically Health services delivery.Keep going Minister Shandro - we are behind you in delivering value for money.	Short term, in the Healthcare sector, since it's our #1 expense.It's clear to most Albertans that the unions want improved service to customers (we aren't patients anymore) via more union workers, and that in the long run equals poorer service due to the high cost of union delivery.	More apprenticeships for younger workers. It would reduce the costs to businesses struggling under the municipal tax hikes, and deliver valuable skills to younger people. P3's with businesses focused upon assisted living would unload the hospitals, and out more people to work. Use the P3 to get the support people in the facilities to be non-union folks. It's contrary to cost effective service delivery.
T3R	Assist the private sector in creating jobs by getting our resources to markets which includes oil&gas, forestry, mining and agriculture.	Reduce government jobs which are non productive.	Reduce red tape
t3g	Deficit, JOBS, JOBS, JOBS, Get rid of useless regulations, reduce corporate taxes , RIGHT SIZE THE ALBERTA GOVERNMENT EMPLOYEEES , make efficiencies , GET OUT OF QE. Alberta First,	all departments, ask for a 2% budget reductions Use the	Use the Alberta pension funds to invest in Alberta initiative's, provide tax free loans for small and medium business, cut out the unnecessary regulations that take year for a business to get going, work with the Indigenous community and provide necessary funds to buy TMX as partners.
T2J	Social services- sufficient, safe, adequate affordable housing funding so all Albertans have opportunity to thrive and live in dignity, childcare, economic diversification. Innovation, alternative energy and agriculture, public education for all, post secondary school, align with federal government .	Tax breaks to business	Small business is majority of Alberta's economy, support programs that help start and grow a business like I have done. Support public spending in Infrastructure that has economic multipliers, invest in keeping our talent from leaving- technology, innovation, IT, entrepreneurs. Address opied's and addictions and create cities that are safe (not police states but all people have opportunity, prevent early childhood trauma), magnets for talent, green energy, alternative transportation. Stop being a national bully and turning people off of investing, and moving to Alberta.

	none	no immigration into Alberta. roll back on wages. no lay offs. Cut back on MP wages and pension. Culture/Multiculturalism/Status of Women	less taxes. Do what President Trump did.
T1y	Stop giving government employees millions of dollars on pensions and lump size payment when they leave	Cut back on number employees they have working in the government	Yes they need to keep little business people stay in business there is way to many small shops that are sitting empty
T6V	Potholes, police	Any social programs that have to do with drugs screw those guys	Stop taxing companies, simmer down on OHS
T1K	Reduce spending to reduce eliminate deficit	Far too much waste, excessive bureaucracy	Make processes simpler and "get out of the way" of a free market.
t3k	Reducing debt	Bureaucracy reduction, dumping every single NDP enviro hire and department.	keep taxes low. Start making serious separation noises to the Feds.
T2Y	Health Care, Education, Nutrition Programs for Kids, Unemployment	Abolish War Room! Less Gov't Travel Cut Grants to Business	Co-operate with other levels of government Encourage a more diversified economy
T2p	Reducing spending and cutting the debt.	Social programs	Get government out of the way.
T9N	Focus on service and program delivery. Priorities should be Healthcare, education, municipal, rural crime and justice.	<p>In the one area where government is afraid to go. Oversight and overwhelming bureaucracy and "red-tape, specifically, health (AHS/Alberta Health) and education. For instance, it costs approximately \$50,000 to \$75,000 to affix a concrete screw into a wall in a hospital (under the equally perverse process known as infectious control). It takes 3 signatures to use a lease vehicle already in a fleet.</p> <p>There are too many rookie individuals and Ministers whom are taking blind orders without much consideration to the unintended consequences of continuing with a relatively secure bureaucracy and instead cutting core individuals and programming. In the north zone, a lower income individual must now wait for approximately June of 2021 for a CT scan however if they could afford, could complete their scan within 24 hours. This is perversely wrong!</p> <p>We must instead cease the practice of wholesale or quantitative cuts for the sake of the optics of a balanced budget. Instead, we must roll up the sleeves and shoulder responsibility to Ministers, DM's and ADM's to look with each of their departments and focus on the streamlining and reduction costly program processes and oversight and instead re-tool these processes in support of the delivery of the core program or service.</p>	<p>Job creation:</p> <ol style="list-style-type: none"> 1) Create an environment whereby needed upgrades to infrastructure can be funded and construction jobs to be created. 2) Focus on unintended consequences of arbitrary cuts to instead undertake an analysis of the implications of loss of jobs and programing. 3) Engage with a committee/committees of "non-partisan public expertise" to ensure core program delivery is adequately staffed and create harmonization between department budgets within a Ministry. Example: health programming cuts/implications to EMS/Dr recruitment/increased burdens to other facilities. The underlying priciples in the example can be applied to Education, Justice, Social programming, transportation and infrastructure. 4) Cease the practice of bias and departmental favoritism in the procurement of services (ie. Infrastructure) and instead retain competent individuals experienced in the fields of contract management (or the processes required) in an effort to streamline services. This may require substantial payouts, but will have a relatively short payback period. 5) Provide predictable and sustainable funding streams for municipalities to access for infrastructure, economic development and job creation. Fund on the basis of urgency, safety, need and cost rather than based on population. 6) Eliminate excessive oversight by bureaucracy. Allow ideas and alternative program delivery to be fostered, encouraged and implemented without all the "show-stop" barriers.

T9E	Balancing the budget is top priority.	Change government pensions to matching programs. consolidate purchasing in areas like health care into a single office in order to get bulk rates.	Cut red tape. keep taxes low. Don't prop up any company or industry.
	Health Education Seniors	Remove the billion dollar corporate tax cuts. The Alberta gas and oil industry did not go south both figuratively and actually because of taxes or government policies here. The will not return until economic conditions outside Alberta government control change.	Leave corporate tax rate where it is (lowest in Canada). Encourage businesses outside the oil and gas industries to come to Alberta.
T8A	Balancing the budget.	Health care project management staff have tripled in Alberta during the past ten years. The budgets available to complete projects are being reduced therefore management staff & leadership staff should also be reduced.	Completion of pipelines.
T0G	Infrastructure, there are many roads that are full of potholes. Including major highways.	Cut all funding/grants to all special interest groups. All of them, that way the government will not have to justify to the public which ones are cut and which ones are not. Reduce the amount of government employees.	Keep taxes reasonable and reduce red tape. Those are the main things that an entrepreneur needs.
T5T	Highways and road repairs fir example the stretch of highway between spruce grove and stony plain are awful huge potholes	Cutting galas and parties higher fines for breaking the law higher fines for parking bans don't raise taxes raise fines	Stop taxing so much
T3L	I think that the government should maintain current spending on health and education and not cut these programs any further.	It is time to get a provincial sales tax. We could then get more money from the federal government. We can't depend on oil and gas to fund programs any more.	The government needs to diversify the economy by supporting other industries in the province besides oil and gas and agriculture.
T0G	Balancing the budget and reducing debt	Overhead, red tape, downsize the Alberta energy regulator	Keep taxes low to promote investment, and work with provinces like BC to get pipelines built, or approach the US to get a deal tabled to leave confederation. And use that as a threat to Trudeau to get pipelines built and adjust the equalization formula.
T0m	Job creation, improve healthcare by looking at success stories like Costa rica	Time to privatize land Titles or outsource services. Fees have gone up to support high paying government jobs	Look at more provincial autonomy
T8B	Education and healthcare	Stop the kickbacks to oil and gas 'friends'. Stop ditching, in spite, NDP projects that were working and wasting money through childish actions	Quit focusing on oil and gas, reinstate diversity project that we're creating jobs, support families through childcare rebates, blue cross coverage for seniors, reinstae tuition cap, increase minimum wage, etc. All these will allow people to spend more and grow the economy. The very best action would be to find a new party leader that isn't an arrogant narcissist crook and someone who actually is looking to make things better rather than acting like a dictator who makes one wrong move after another
	Health care, education and infrastructure.	Operating programs more intelligently. No new initiatives unless they are critical.	Reduce bureaucracy in starting businesses.
T4C	Education and health care.	Reduce tax cuts to big corporations, look for the waste in education and healthcare(there's lots if you've ever worked in either).	Stimulate new company incubation and research in the areas that are inline with economic trends that the world actually needs - examples, electric buses, transmission of water and power east to west.
t5x	education and health	public roads construction	approve the pipeline

T2A	education, harm reduction/treatment, health care	taxing oil companies	stop wasting money and time giving to all of the oil companies and look at different ways Alberta can contribute. Start being more environmentally cautious - use this to the advantage, not disadvantages. Create jobs by new and improved systems - get away from the oil
T2Y	Education, healthcare, infrastructure.	Not by cutting budgets to the most crucial services and programs! Reduction of the layers of bureaucracy within health and education and the government itself should be a priority. Get RID of the so-called "war room!" This is a colossal waste of funding that could and should be used to meet needs.	Diversification of the base of the economy. End the nearly complete reliance on and focus on oil and gas and invite real innovation. Promote new industries and give incentives for those to start up here or locate here. Alberta must move forward quickly or be left forever in the antiquated past. So far, it appears nothing much is being done to broaden our economic viability beyond oil and gas, which are losing their prominence. Stop cutting budgets and funding that is and will result in thousands more job losses. Visit, seriously, the feasibility, beyond political motivations, a provincial sales tax. Alberta can no longer live and be strong and prosperous basing its economy and budgeting on the volatility of world set oil prices. To maintain a standard of prosperity here that invites growth, healthy investment and job growth, our province needs stability in its budgeting and operations. To constantly run it by attempting to balance underfunded budgets on the backs of people and their jobs is counter-productive. There must be a sustainable, steady source of fairly generated revenue to keep Alberta moving despite the price of oil.
	Climate change. Health Care Education addictions homeless people	Shutter war room put corporate tax rates back to where they were and keep them there. Trickle down does not work. Cut emissions instead of pushing for more tar sands mining or will you wait till wild fires consume the whole province before you see the light.	Building the medical lab you canceled would have created employment and could have made us leaders in the field. Stop all the talk of separation you're scaring all investors away. The rest of the country Didn't vote conservative because they believe climate change is real and want to address it not because they're against the west
T4R	education mental health services green economy	Freeze salaries for two years in health care and education and rest of public sector Decrease upper management positions in health care, education and other management government positions	step programs for university, college/trades higher taxes/sales tax
	Healthcare -don't change coverage for biologics, this is not fair to patients already on biologics like Remicade as switching to biosimilars could impact patients negatively.	-	-

T2T	The government should be focusing its budget on supporting individuals rather than just more and more cuts. I work directly with individuals who are affected by the cuts the UCP government has been making to create more jobs. We have seen no positive difference with unemployment, in fact I've just seen the numbers increasing instead of decreasing. I realize that things can take time but by the government focusing its efforts to help the top 1% instead of its people as a whole they are making huge mistakes. Capitalism is not the be all end all and those who make more money should be taxed heavily. That's what would help get the government out of debt.	Less spending on government employees, it's unnecessary for our Albertan government to be taking these trips where he says it is for job creation. This is unnecessary spending.	By relying more on businesses that are unfairly compensating their employees. if all the money is sitting at the top then those companies especially those companies should be paying more taxes. I know that budgets aren't easy but what I also know is that if you look around the world everyone is in debt, and very deep debt. Most countries are all in debt. So why not focus on other important things like creating a better more positive place for people to live and grow in.
T4B	Education funding and Health Care funding	Collecting taxes from corporations, taxing corporations properly. Oil companies do not need billions of dollars in tax savings when they are making billions in profits and their CEOs are taking home multi-million dollar salaries and bonuses.	Fund services that support low income families and individuals so they can get back to work to support the economy.
T0J	Education and Healthcare	Stop giving Oil companies money for starters.	Diversify. We do have other resources in Alberta - capitalize on these.
T7V	Education, health/social reform, our future!	Within upper and middle management. Reducing managers to managers. Wage freezes. Incentives for benefit opt-outs, early retirement packages, reduction in infrastructure (ie. HR, have working from home with exception of weekly/monthly meeting at one shared workspace), Having technology and web site that are functional and clear so you are spending money on people calling in for questions. Implementing a sales tax - It is obscene that we are the only province without one, and clearly, given the recent cuts to education, legal, health ect, we need to look at if we can not afford, as one of the richest provinces in Canada our basic services, we need someone to be brave enough to look at a tax	Small business grants, training programs, networking opportunities, financial grants and rewards for corporations that have a certain quota of employment growth. Investment in youth - Grants for education to train and expose youth to trades while in high school, more than the RAP program, have on site oppertunites. Small buisness programs at high school. Investment in indigenous youth - Reform in education for indigenous peoples, look at caultural needs and be brave enough to look at how we can better service this group. Limits on top earners in publicly funded positions.
	Maintaining Health, Education, and other social services that support Albertans. Building infrastructure to get Alberta's resources to market. Investment/incentives to promote diversification into other sectors (ex. financial, tech, tourism).	Maintain corporate tax at 10%, rather than reducing to 8%. Provincial sales tax.	Construction of infrastructure to get AB resources to market. Attract established companies in other sectors to invest in Alberta (ex. financial, tech, manufacturing, etc.) Incentives/Grants to assist small businesses in starting and growing, and encouraging Albertans to choose local.
	Social programs, health, education.	Tax corporations. Get rid of the war room and all the panels that aren't doing anything.	Provide universal child care.

T4S	<p>1. Rural crime.</p> <p>2. Hire enough judges so cases can be heard in a timely matter. No criminal case should ever be thrown out of court due to unavailable judges. Devastating to victims.</p>	<p>1. Initiate a 4-day school week for Alberta schools. A slightly longer school day would meet instructional requirements while saving millions in transportation, maintenance, and medical days for staff (and students).</p> <p>2. Offer a new school curriculum or scrap it. Designing, piloting, assessing, and redesigning curriculum that never sees the classroom is a waste of millions. Also consider that with new curriculum comes the need for new and updated resources. Where will that money come from? Educators and students cannot properly implement learning without necessary tools and resources.</p> <p>3. Close Safe Consumption Sites where increased crime is stretching the resources of police and emergency responders.</p>	<p>1. Trans Mountain Pipeline is essential.</p> <p>2. Flat income tax rate.</p> <p>3. No sales tax.</p>
	PUBLIC education, PUBLIC healthcare, reducing our carbon footprint.	Running a well funded province is expensive. Cutting funding to vital programs (education and health) is shortsighted. We need to look at raising taxes on the wealthiest Albertans and on corporations.	<p>-'Trickle-down economics' does not work.</p> <p>-Affordable daycare will allow more parents to enter the workforce and create safe, educational places for the future citizens of Alberta.</p> <p>-We cannot continue to depend solely on oil for jobs. Even if the price of oil comes back up, will it stay up forever? We need to incentivize other businesses - in tech, in green energy... businesses of the future. -We must continue to fund healthcare, education, advanced education, supervised consumption sites, diagnostic labs and other publicly funded services to keep good jobs in those sectors.</p> <p>-Let's look at job creation beyond oil and gas - which is becoming more more automated and will continue to in the future.</p> <p>- Times are changing. A great number of the world's citizens do not want to continue to rely on oil and gas. We can choose to ignore that fact or we can look at growing other parts of our economy (tech and innovation, green energy, etc)so that Alberta can be relevant in the future.</p>
TOM	Education and Health care. Our children are our future and need an education to become individuals who will continue to grow our economy in the future. If we invest in them with good, quality education, they will in turn, invest in the economy.	Reduce the size of the in office government employees , as well as their salaries.	Reduce the red tape (rules and stipulations) for infrastructure projects and small business owners.
	The government should continue to spend money of funding Public Education. Our children are our future. Supporting private schools only makes the gap bigger for our students. Health care as well should continue to be funded as our population is getting older and will require more care.	The government could find savings by continuing to tax large oil companies. It could find savings by cutting upper management in school boards and health care. (Not front line teachers and nurses and doctors.) It could also find savings by cutting the ministers salaries.	It should continue to lobby for the pipeline expansions and get them built.

T2J	Public education and health because a healthy, educated society is better able to work and contribute.	By not giving corporations tax cuts and incentives, they just leave with our money anyway.	Focus on ways to generate jobs here with what we have. Work on building a refinery to process our crude oil rather than shipping it out for a song for someone else to make the money off of it. Look at other areas for growth in the energy sector that don't rely on fossil fuels!
T9M	Education - funding rural colleges. People need to have training in something other than oil/gas related industry. Families cannot afford to send children away to cities. Get people back to work! Give money to municipal regions so that they can do the projects needed to keep people employed in the community and keep the money in the community/province.	Get people to work, then province would not have to pay out to people on employment benefits or welfare benefits. Give people back their pride in this province by getting them back to work.	Education - funding rural colleges. People need to have training in something other than oil/gas related industry. Families cannot afford to send children away to cities. Keep \$ in the community. Support indigenous communities by supporting education; many indigenous communities in our area need educated members to help them become stronger economically and socially.
T1K	Education, health, policing, infrastructure .	Don't take away speed cameras add more - earn money from those who disregard the law/rules. This also increases safety.	Education benefits, bursaries, tax incentives geared to jobs needing to be filled. Entice new industry in wind energy or film industry with support and facilities, tax incentives - advertise possibilities as the Canadian dollar is already a major incentive!
T2C	Education, healthcare and infrastructure. Not lining the pockets of oil and gas companies as that isn't a long term solution nor is it positively impacting Alberta's long term economic growth.	Not bailing out oil and gas. Look at 1% PST to balance the books	Investing in public sector Not cutting spending to workers as that results in people spending less, which has a ripple effect. Since the budget has been announced jobs have been lost not created. The fear tactics aren't working. Look to Ontario and you can see this drastic model that you're government has proposed only creates unrest. It helps the rich and has lasting social and economic consequences for the rest of our society.
t2e	increase funding for schools, decrease class sizes	why, public education is important and should cost money.	diversify the economy, we as albertans have had oil money for decades and not invested it properly
t2e	increase funding for schools, decrease class sizes	why, public education is important and should cost money.	diversify the economy, we as albertans have had oil money for decades and not invested it properly
T0m	Health and education	Stop the corporate tax cuts. Stop laying off people you are only creating more of	With tax credits for new businesses like film tax credits and technology tax credits for companies that actually create jobs not across the board no strings attached corporate tax cuts
T3G	Health , Education , Tax incentives for petrochemicals industry and new factories	The question should be How the government increase revenue? as some saving can be found in all the services that the government provides but these cuts will may reduce our quality of life.	Tax incentives for petrochemicals, technology industries and new factories. provide good services (health and education) and infrastructure. provide support for small business.
T4R	Education Smaller class sizes Teachers and nurses need a salary raise Increase in disability funding and senior funding	Cut administration costs principals and superintendents / associate superintendents Cut provincial salaries of superintendents and division office cuts	Continue the growth of oil and gas

	Education budget.	School's budget were cut off, not having snacks during PD or staff meetings etc. government should also start doing the same thing.	We don't need to create new job, what Alberta needs is to be more productive in terms of what needs to be done. We just have to modify some job description and if possible evaluate the existing job. This could mean overload or under load job with aligned salary. Specially for teachers... underpaid with so much work.
T5K	Education, healthcare, child and youth care, frontline employees.	Cutting funding to the "war room" which has not shown any positive results. Also, a moderate tax increase for corporations so as to still be competitive, yet not hurting education or creating a public deficit in our public service by under serving.	Diversifying investments, particularly in technology for long term sustainability. Also, by not cutting frontline funding resulting in job losses (education, healthcare) allowing the money to stay in the Alberta advantage.
T5K	Education, healthcare, child and youth care, frontline employees.	Cutting funding to the "war room" which has not shown any positive results. Also, a moderate tax increase for corporations so as to still be competitive, yet not hurting education or creating a public deficit in our public service by under serving.	Diversifying investments, particularly in technology for long term sustainability. Also, by not cutting frontline funding resulting in job losses (education, healthcare) allowing the money to stay in the Alberta advantage.
T9E	Healthcare & education, not war rooms. Some of fossil fuel royalties should be used to encourage the energy sector to get greener infrastructure in place before fossil fuels become viewed as globally unacceptable.	The war room budget.	Encourage growth in developing industries. I would love to see the oil boom come back but it is not likely, let's get people trained to do something else. Look to the future not the past.
T5G	Ways to mitigate the damage caused by the budget cuts.	From corporations, particularly the ones that benefitted from the \$4.7B cuts to their taxes.	Government can't create jobs, it requires employers to do that. Small businesses are more common and create more jobs than large ones. Giving small businesses a break would help more in the long run.
T8E	Diversifying the economy and investing in digital media, technology, etc. The jobs of the future will be in digital media and tech and we should take advantage of that upcoming opportunity.	Taxing companies that make billions and cutting taxes for lower middle class people to build a bottom up economy.	Tax incentives for startup companies. lower tax rates do not help startups or companies that take a few years to generate money. Many of the billion dollar companies we have today needed some sort of subsidies to get started. Invest in the future.
	Schooling, medical care, and social services	Infrastructure	Stop cutting billions of dollars to industries.
	Schooling, medical care, and social services	Infrastructure	Stop cutting billions of dollars to industries.

T3b	Healthcare Education Environment Green energy	Alberta health services has far too much middle management. Cost savings for AHS can easily be found through eliminating redundant positions. As a registered nurse we have six people in leadership positions for one unit. That's ridiculous and unnecessary. And all those managers have managers. And while I feel physicians need to be compensated fairly and paid well, they make \$40 000 for one week of work in the ICU. Not including the \$250 000 they make from their work with the University of Calgary. Radiologists routinely make over 1 million a year being on the old payment schedule. Yet family physicians have to deal with cuts which is unacceptable. How did the McKinnon report not see this as an issue or something to address? Also, I do not understand this government's persistence in attempting to return to a boom situation in the oil and gas industry. Oil and gas companies are leaving Alberta in massive proportions and have been doing so for years now. Why are we not investing in green energy or other options instead of giving massive tax cuts to corporations that then leave the province anyways? It does not demonstrate any support from the government for everyday Albertans, just Kenny's corporate friends.	Pipelines are much safer than railroads and while I am supportive of green energy, that transition cannot happen overnight. Transporting oil by rail is costly and unsafe. Building pipelines is safer and allows for the transport of other goods that we may potentially be an exporter of in the future (fresh water). So a focus on pipeline creation, green energy initiatives and Alberta's tourism industry I think would be good starts.
	Give AISH recipients back their indexed pensions. Stop messing with healthcare. We want great public health care. Stop pushing private health care. Increase taxes for businesses. Diversify our economy, stop trying to make oil happen again.	Look within government lower politicians salaries, benefits, and pensions. Stop corporate welfare. Cease giving away our tax money to big businesses. Invest in social programs, each dollar you remove now will create more despair which will increase health, social program, and judicial system spending in the future.	Increase taxes on the wealthy and big businesses. Diversify our economy. Invest in clean energy, thermal, attract other industries.
T5P	public service, healthcare, education	cutting managerial positions	stop attacking public servants, healthcare providers and invest in technology, computers to become "Silicon Valley" of the North.
T6T	Social, community and recreational programs including education and AISH	Cease the large tax handouts to corporations that no lo get operate in the province.	Stop increasing the cost of living for middle and lower class Albertans. Tax the corporations and upper class appropriately.
T5X	Teachers Educational Assistant support Staff Small class sizes	Not sure	Lower minimum wage!
T2e	The UCP government should reverse the recent spending cutbacks made to all public services and social assistance. (Police, health care, AISH, education, ECT)	Additional taxes to large corporations operating in AB. Cut back government employee salaries to match what the average middle class Albertain family is making. Cut alberta parks and art funding.	Stop giving money to large oil corporations who are moving their companies in alberta. Invest in infrastructure creation and INVEST IN CLEAN ENERGY
T0J	Arts and culture. Expanding tech initiatives such as AR and VR. Green initiatives to help stop climate change.	Cuts to oil and gas, taxation on the wealthy.	Support small creative business and diversify the economy instead of focusing on oil and gas.

T5a	Health care and education.	Raise the corporate tax.	Spend money on infrastructure, fix roads, create incentives for citizens to spend money to stimulate the economy such as rebates for home renovations. You can't cut back budget and expect the economy to grow.
T6W	Health and education	Increase sales tax on all residents of Alberta - those who spend more would therefore contribute more through taxes. A PST of 2-3% would still keep Alberta low compared to other provinces but result in substantial revenue without negatively affecting health or education.	By supporting alternative energy projects and small business initiatives instead of oil corporations
T0C	I think money should be spent on a grass roots committee focused on school curriculum. Kids are the stupidest I've ever seen the last 5 years coming out of school. What chance do we have if a high school grad can't add 3 columns of numbers.	Going after unionized groups should be adequate if your looking for savings. How much waste does it take to see how corrupt health care, nurses union, education, and government is? How much money do you need anyway? If your paying off debt people need to understand sometimes you have to eat rice and beans and if your tired of that, bean and rice. It what we have to do in our homes, we expect you to do it too.	Stay out of it. Put money back into our pockets by reducing taxes and punishing those who work hard. It seems when you put your nose where it doesn't belong, you decide to control it all. Not you place! Quit screwing up the province with promises you have no intention keeping. You chase away industry and you chase away the best of the best that were once here. Again leave businesses alone and lower taxes. That probably means you'll have to eat rice and beans for a while you greedy bastards.
T0k	Ab	Less middle and upper management positions at all government run occupations. I think the province needs to help with this as these managers want to shove all these cost cutting measures on to front line workers.	Cd
	Affordable housing	cut government pensions and pay	cut government pensions and pay
T3B	Health care and Education	Corporate taxes Balance the budget Freeze salary of 6 digit government employee	By creating more jobs and not cutting specially health care and education.
T2N	Health for people with diseases that is not of there choosing. You can pay for this by reducing the size of government and reducing all the benefits go along with working for the government.	To many employees and benefits	Absolutely 100% stop transfer payments or any version of payments to Ottawa
	Education and health care. And while you're at it, fire Adriana LaGrange and save her salary- she's hands down the worst education minister I've ever seen. She is utterly dishonest and incompetent.	Eliminate tax payoffs to oil companies who are automating and reducing jobs anyway.	Push for pipelines, stop the attack on the public sector. Promote diversification of the economy- in particular the tech sector. The oil boom isn't coming back and yoy ook stupid trying to make it so while closing the door to other industries.
T5K	Green/sustainably energy practices, creating new jobs in wind and solar Schools, teachers, education Mental health, hospitals, nurses and public services. Local theatre, artists, events Better public transit. More bike lanes.	Increases taxes for Large corporations and high income citizens. Bring Carbon tax back under provincial control. Focus on film industry and being the set for future films.	Grants and subsidies to company's wanting to go more sustainable.
T6R	Education and healthcare Specifically nurses	Oil and gas budget cuts	Allocate investments in oil and gas to the service sector
T2E	Education and public transit; a guaranteed minimum income	Reduce subsidies to large companies, if there are any	Institute a sales tax to invest in education and public transit and to reduce the deficit.
	Education and healthcare	The silly war room program	Stop cutting jobs

T0L	Homeless shelters, low cost housing, breakfast programs, health care and supports for chronic illness Such as diabetes pumps, universal daycare	Building ring roads and engaging in construction projects that burden the taxpayer and still provide no real improvements in quality of life for the working poor or anyone struggling to make ends meet	Invest in green alternative and encourage mass transit
t2j	A healthy and educated labour force. People and business will come back to Alberta when they know the elected government truly represents all its residents, not just oil and gas companies	Make oil and gas companies pay their taxes. Donate the money from your War Room back to health care cuts and Education cuts.	Spend your War Room money on different employment opportunities, not simply the ones that fill your pockets and get you re elected and donate to your party. People see your crooked ways and deceitful manner. Change you image and show investors that this province is the best in Canada as it is.
	do Not touch Alberta public service workers pensions or salaries	Federal Government and Tech investors pay Nurse Practioners more money and cut salaries for General MDs. Cut and limit all Managers that are not unionized	Limit damage to public sector and health care front line workers and teachers. Children's education is our future. Slowly divest of our unwavering support for Oil and Gas.
T9S	Education and health	Cutting the safe injection sites, art grants (how much were those brass balls in Edmonton), this is for all of Canada but not handing out money we don't have to other countries and financially supporting and housing immigrants and of course cutting salaries of the upper government. They do not need to paid that much to have lavish lifestyles while the rest of the province suffers.	Not bringing in so many immigrants that take Canadians minimum wage jobs
T8n	Social programs, healthcare and education. These aren't profit businesses. They are a service to a healthy and prosperous society. Assisting in stopping insurance companies from taking advantage of customers.	Stop large grants to corporations and businesses without attached expectations in return. Ex. Attach cleaner technology and/or environmental friendlier technology requirements. Get rid of the war room. Stop breaking apart working relationships between public sectors. Ex. Health inspection, fire and RCMP should all be working together when applicable. Stop breaking apart healthcare administration efficiency only to administer to privatization.	Reinstate environmental and sustainable energy funding as economic growth should be supported in similar fashion as oil and gas. Working with unions in diversifying with more sustainable projects. Roll back the education cuts and increased costs to secondary education. A greater educated society will grow and prosper above a less educated society. Stop major healthcare cuts. Not by handing over millions of benefits to companies that have CEO's that make more in a year than many make in a lifetime. Trickle down does not work for the majority of voters.
T2N	Healthcare and municipal funding such as transit	Implement PST	Fund orphan well abandonment
T6A	Education	Cut ministerial staff	Helping independent entrepreneurs grow.
	We need health care workers, teachers, arts programs, mental health support. Also, training in green energy fields. More money spent to try to diversify the economy. Post secondary institutions. Things like that.	Cut spending on oil companies and increase taxes to large, rich corporations. Tax the rich more.	Help students. Create programs that educate people in sectors where there is actually work. Oil is dying. Help the people losing their jobs get an education to do something else. Fund universal jobs like health and education, which are things we all need.
T0K	Keeping living costs low while maintaining a high level (the highest in Canada) of quality in public services.	Large government corporation salaries. Find employers who don't honour fair working conditions (eg. Contractors that don't pay overtime) and fine them as income. That encourages more and better paying jobs.	Find ways to attract and encourage investors to come back to the province. Stop favouring large farm operations - they are just big businesses with unfair tax breaks. However, smaller farmers need those breaks
t5k	We should be trying to help the economy and create jobs. We need to ensure the pipeline is built, but at the same time invest in research and development of sustainable energy and technology to diversify the economy for the future. Similarly, more value added services in the oil industry would help as well as promoting research into nanotechnology and medicine.	By ensuring all government projects are given to companies that offer the best pricing and have penalties for delays and added costs. Increase the tobacco tax, marijuana tax and cigarette tax. Tax gambling on aboriginal lands.	By supporting and creating programs and jobs in developing value added services to the oil industry, technology, medicine and sustainable energy. Alberta could support oil and the pipeline, while still investing in research and efficiency in sustainable resources and recycling. For example, developing an efficient and cost effective way to deal with waste.

T4R	Ensure that you fully fund public education and health care. Public servants spend a lot of money in the province but with uncertainty, they're currently spending much less.	You can find savings by eliminating tax cuts to large corporations. This will provide the province with a TON of extra money.	Invest in alternate energy. Oil will run out so stop putting all your eggs in one basket.
	Early Childhood Education, Early Intervention Supports, Accreditation for stand alone Preschools, maintaining and elevating existing education and healthcare standards	Trim the fat, cut the 2000 bureaucrats the NDP hired, stop worrying about orphan wells in the province, stop taking cuts from education and health care	Get the pipelines built and stop punishing Alberta's children for mistakes made by the NDP.
T5C	Focus on spending for Canadians, especially seniors, instead of big business and foreign interests. Don't forget who built this country.	Stop giving OUR money away to other countries that don't care about us or our values.	Show the world that we have some idea of leadership would be a great start.
T6V	Education and health and wellness. Please do not cut the PUF program as early intervention is crucial to the success of our next generation.	Putting less pressure on our healthcare system will generate savings. That starts with investing in educating our people on health and wellness as well as providing them with the right resources	Provide them with the right education and resources. Early financial literacy.
	Early childhood intervention Health Education Community mental health Child poverty	Tax breaks for large companies Get rid of the war room Oil subsidies	Infrastructure spending Tax rebates for job creation Fund summer jobs for students Diversify Alberta economy Fund innovation and new technologies
T5t	Health care Education	Managers	Stop cutting everywhere. No one wants to hire people when they don't know what the government is going to do next. Yes we needed to save money but they are hurting the regular people. Rich people can afford to pay for private health care and expensive education for their family
t5w	Education Health Care Social Support Services Safe Consumption Sites Innovative technology	Increase Corporate Tax Rate Introduce Provincial Sales Tax Carbon Tax	Fully fund education, including enrolment growth and support for diverse classrooms and PUF funding Increase funding for post-secondary institutions Provide grants for innovative, green, and sustainable technology Provide affordable housing for every single person in Alberta Provide funding affordable child care to allow everyone to work to their fullest potential
T6w	Education and hire more teachers!	Reduce government salaries	Cooperate with federal liberal government in power to build pipelines and get our resources to marketw
T6J	Health, Education, and infrastructure	Bring the corporate tax to its original form and reduce personal tax.	Yes, this will stimulate economy. Governments job is to work for the people, this is not a corporation, its a province
T6E	Public services to alleviate wealth inequities	Stop giving tax cuts to corporations seems like a good start	Invest in diversifying energy production and other economic areas. Public services jobs are also jobs (e.g., teachers and nurses).
T5E	Economic diversification, public transit, healthcare—primarily mental.	I don't follow provincial economics or spending enough to weigh in, but not through the cutting / downsizing of essential services.	Signal support towards energy diversification, tech futures, and small business over multinationals.
T7x	Education and healthcare	Their own salaries. They are freezing everyone else, how about their own or CEOs of large corporations?	People need to be educated and healthy to work. Cutting either of those will not help people keep jobs!
T5Z	Health care, social services, education, affordable housing/insurance	Corporate tax cuts, keeping the carbon tax,	Support renewable energy research, keep summer student programs.

T2V	Go back in the records a few years and study how Alberta had the Heritage Trust Fund and learn from it. By the way, what happened to all that money? We have a wonderful Art College so why are so many items purchased from overseas? (Paintings, horses, bridges, etc.) Priorities should be safety (medical, police, fire, etc.); (employment) Unemployed oil workers could be used to make pipe lines to take water from high flood level areas through to areas which need extra water. Quit spending money on new arenas, let the millionaires that use them most for hockey etc. pay for them. Did the Bank of Montreal pay for the BMO Centre?	Change the way government offices fill out budget requests yearly & do not allow perfectly good equipment to be removed and replaced by the most up to date model, replace only equipment which NEEDS replacing. The way the office budgets used to work was always to ensure that the government was asked for more money than the year before rather than based on what was actually needed. Change the "lunch" laws e.g. so that employees working in Kanankis Country have to provide their own lunch and are not allowed to drive out to city limits (Bowness) to collect a meal paid for on their expense accounts. Ensure office managers are more fiscally responsible for their staff, there was/is a tremendous amount of waste in some offices.	By need not greed. E.G. Cut unnecessary travel by ALL its employees.
T5K	Education and healthcare should be priorities for our province. Education provides us with the foundation for the future. 17(1) Our children deserve more access to support, smaller class sizes, and a properly funded public education system. Our school's population will grow by about 100 students next year.	Reverse the tax cuts to large corporations. Less focus on building pipelines and more focus on supporting Albertans.	The government should promote job creation in the fields that it is currently underfunding. Education and health care systems provide jobs to many people, not just teachers and nurses. The STEP grants provided students with valuable work experience to help them find jobs in the future, and helped organizations to create jobs for students- I know I was the recipient of STEP grants in the past, and they offset the cost of an organization having a summer student but they did not eliminate the cost.
T8N	Health care Education	Not giving tax breaks to those that can afford to pay Reducing upper management	Diversify Listen to input of successful ventures
T3A	Health care and post secondary education	1.Transport fair 2. can monopolize a part of vehicle insurance	Should not tax newly created businesses for the first six months or twelve months depending on how the company intends to be socially responsible
T6T	Health, Education and social serviced for disabled	By closing the war room. There is no war on our oil and gas.	By not cutting services and salary of public servants.
T8X	Education Healthcare Social programming	Their own paycheques The "tax" breaks they have the corporations that can't even "pay their taxes" now. The War Room budget	Encourage post secondary/trade school attendance by elimination of interest on Alberta Student Loans. Support education and healthcare so that people are healthy and educated and willing to work. Support world class education and healthcare and social programs so people will want to relocate to Alberta for work instead of just "fly-in fly-out" work.
T0K	Education,healthcare(making sure funding goes to frontline not management) increasing AISH, putting money towards FSCD funding for children with disabilities as well as keeping PUF funding in place.	The government could find savings by taking a harder look at how AHS and some of the larger school boards spend their funds. Having these organizations cap administrative and management wages would go a long long way. That being said MLAs wages could take a roll back as well to help.	To be honest this govt has done nothing but kill our oilfield. They haven't done any better than the NDP.

T5N	<p>1.Education. For a Government not focus in the short term, should be a priority avoid cutting funds for Education. As a famous quote says "The best investment for one year is to grow grains; the best investment for ten years is to grow trees; the best investment for a lifetime is to educate people".</p> <p>2.Health promotion and disease prevention: This is also a way to save money in the long run, proved by WHO.</p>	<p>- Reversing private health services, such as external services (MRI, X-RAY, mammograms, etc), which become more expensive in the long term.</p> <p>- More extensive investment in cleaning/ maintenance of roads/streets, because this will bring less accidents, less spending in hospitalization and less job hours lost.</p>	<p>- Transportation projects, such as improvement of safety of roads or in dangerous crossings, LRT or similar projects of collective transportation.</p> <p>- Helping companies to invest in renewal facilities, or build new ones.</p> <p>- Oil and Gas: Obligate companies in positive numbers to not do Lay-off of workers, more if they are receiving public funds or tax exemptions. Change legislation to avoid escape doors for Oil and Gas companies from Environment issues, such as Orphan wells. If no measures are implemented in this way, it will compromise future Government Budgets in the bad way.</p>
T6j	<p>Government priorities MUST be families and an educated population which would include a properly funded, strong, public Education and Public Health Care System, available to everybody. These were the envy of the world and why the government has been intentionally dismantling both education and health care is appalling.</p>	<p>No more breaks for big business and do not continue to invest in the oil and gas industry when the government has been saying for years we must diversify our economy.</p>	<p>Invest in our youth and a healthy population! Educate our population and ensure we have a healthy growing population by Investing in Public education and a free health care system for all. Diversify our economy by investing in future technology. Think big and beyond our borders - no more alienating groups, being unkind, and being divisive. Work respectfully and with integrity with others and make Alberta a place others want to invest in. We have been fortunate to have a strong industry, that has allowed many people from all over Canada to benefit from. Instead of cutting back on post secondary education and making a university education unreachable, Alberta should be trying to attract top notch people who will research and explore future industries.</p>
T0m	<p>Education and healthcare.</p>	<p>Oil and gas could be taxed more. We are treating them like they're the prized horse coming off of an injury. If you cut education and healthcare you will literally hamstring our province for the next 10 years.</p>	<p>Fund education initiatives, trades programs, and certificate programs to help students to get into the workforce.</p>
T2V	<p>By supporting all Albertan's, they can do this by helping our most vulnerable groups. These groups would be those in foster care, those in post secondary on government loans, those on AISH and government funding. By supporting these groups, the Albertan government would be helping to ensure that people from all walks of life would get better opportunities which would help to secure Alberta's future.</p>	<p>The government could find savings by doing things a bit more efficiently, such as reduce the amount of expert panels the government is using to help make decisions regarding our budget, health care, schooling systems, etc.</p>	<p>By helping support post-secondary students. By doing this the government can ensure they are supporting multiple job fields to ensure Alberta's financial and economic safety.</p>
T1b	<p>Aish and cpp</p>	<p>Fire Jason Kenny . Fire drew barnes</p>	<p>Cut ur government MLa salary</p>

T1A	I do not think the government should be cutting health care workers wages. The government should have no right to say where health care pension goes. The government should adding employees to health care. The lab services, laundry, housekeeping should not be private. A lot of private companies abuse residents and neglect there the patient needs. I don't think the government needs to changing residents prescription. All the public health care workers deserve a 8% raise over 5 years and better benefits. The government should not be cutting education. We should be investing in our post secondary students they are the way of the future. I think government should not be giving corporations handouts that money could of been used to give health workers and teachers a raise. I don't think government should be putting so much focus on the pipeline the oil is not the future of Alberta. We need find other resources that replaces oil. The world market of oil is down across the world.	The government could find savings by investing in oil resources such as wind power and solar energy. The government could save money buy not investing money into corporations. I think it is important to not put mental health patients into long term care. The government needs to build more mental health facilities.9	Finding other resources other then oil to support the wealth of Alberta. The solar power and wind power would create jobs for the oil wrokers. Having corporations pay for abandon oil rigs that are on farmers land. There could be Jobs for oil wrokers by cleaning up the abandon oil rigs.
T5X	Cutting middle management, there are way to many in EMS land	The amount of useless transfer done by EMS, causing massive strain on the system and a wild amount of none necessary dollars spent	Use of Carbon Tax moneys to get other methods of employment going ie) is someone want solar power or wind power or even thermo heating, help pay for this and more people would get on board
T2b	Homelessness, education and sustainable industries for sustainable jobs.	Frankly without the ability to view cost and spending reports I could not tell you. But public services such as health and education should be the last place to look.	By supporting sustainable industries.
T1E	Health teachers and low income supports and families	Tax subsidies to large corporations, cancel the "War room"- 120m over 4 years is a gross waste of money.	By diversification of our economic engine- adding innovation grants for alternative energy sources.
T0J	Getting the province out of debt and stop or reduce drastically our equalization payments to the east. Affordable child care and lowering energy distribution charges.	Raise gst to 7% for a few years	Support oil and gas workers while training them on new techniques for creating new forms of energy.
T0H	Making a difference.	Jason Kenney, the war room, the ministry of red tape.	Better supports for parents. Ensure that Alberta parents have more time for their children so they can better prepare them for adulthood. As well ensure that kids get a effective education so they can make a meaningful contribution to society.
T6H	Education and health care.	Get rid of war room. Quit messing with pensions as it will cost the government more in the long run. Quit forcing people to change to bio similar drugs. The health effects will cause more money to be spent in the long run. Quit cutting jobs in the public sector. We are Albertans too and you need us to teach your kids and take care of you when you're sick.	Invest in families and provide affordable child care so people can go back to work. Invest in a diverse economy. We can not afford to put all our eggs in the oil patch basket anymore.
T8a	Education and healthcare	Executive directors could be eliminated to a reasonable amount per program.	Don't lay people off. Don't stop funding education and healthcare. Put more money into the hands of the people, not big business.

T4J	Healthcare make sure you find it properly and not you think....that people are rich.	MLA expenses. Let's start there.	Stop relying so heavily on oil....try thinking of other ways to kickstart our economy. It's our main sources of income....but try to unite people instead of splitting us apart.
T8N	health care and education; job creation to assist the homeless populations	oil money and anything to do with religion	supporting jobs in sustainable environments; supporting education that will turn into jobs; focussing on saving the environment rather than destroying it with pipelines and oil money, and people will stay to live in the province and also just survive in general.
T2X	Education. Health.	MLA salaries and expenses.	Job creation grants such as those previously offered to the tech sector. The economy needs to be diversified.
T2a	Education Health care Climate action	1) Charge corporations higher taxes by not giving the richest corporations tax incentives 2) Stop wasting \$30 million dollars with a propaganda campaign and going after credible science. 3) put in a sales tax 4) increase taxes for higher income earners 5) stop funding private education 6) stop subsidizing fossil fuels	1) stop bashing public workers and overworking them 2) stop treating anybody who doesn't work in oil as not important to the economy 3) invest in renewable energy. 4) diversify our economy
T0k	Education, infrastructure, alternative energy and job creation	Automation of government services, reducing redundant positions in public sector, reduced government wages and bonuses. Centralized services and shared services.	Start up business grants, innovation grants to all sectors not just agricultural, job sharing innovation. Investment in infrastructure. Tax incentives for multinationals who bring their offices to Alberta. Investment in recreational facilities other than hockey.
T2V	Health Education	By recouping funds owed by oil and gapossible provincial tax to support public systems (the cuts always cost more in the long run...in this case possibly sooner...by creating more crisis with no boom in site	By NOT cutting jobs Adjusting for inflation in poor economic growth By NOT fostering a climate of government bullying, lack if transparency, hyperbole and micromanagent from a 1000 yard view.
T7A	Social sector (AISH & PDD). Schools (expand PUF to more than preschool kids or better support schools with special needs kids especially rurally). Roads need to be maintained better.	Restructuring and balancing money you have.	Start with expanding in tourism.
T4r	Education Health care Pipeline	Alberta health management- not front line Perhaps not giving tax breaks to the highest income earners and corporations.	Support local infrastructure and education programs.
T1k	Innovation, agriculture, education and health care	Health care and education are not efficient. Cut AISH to new Canadians capable of working.	Diversify. Oil and gas have been subsidized too long. Look at the orphan well issue - another welfare program to oil and gas
t6l	public education, public health and post secondary education.	tax	public education, public health.
T2M	education, healthcare, other shit	Stop spending on itself	see above
	Children and adults with disabilities. Public health care. Public education. Diversifying the economy. Tissues for victims testifying in court. Infrastructure: public transit. LRT. Oh, and tax the rich! Corporations and individuals.	Absolutely no more funding for religious education or health care. No more subsidies and tax breaks for oil companies.	Diversify! Income support for vulnerable individuals. Force employers to pay a living wage. Pharmacare. Quit cutting thousands of jobs every month!

T2T	Education, health care, social programming, arts, alternative energy, basic guaranteed income	Stop giving tax breaks to oils companies. Delete the "war room", it's a complete waste of tax payers dollar to create propaganda. Spending \$30Mil to argue with international credit ratings groups, foreign investment firms, and the rest of Canada is not only stupid it insanely irresponsible. Aquivitable to an ostrich sticking it's head in the sand.	Fund education, health care, social programming, and the arts. Support alternative energy projects as well as training programs to retrain works to transition into emerging fields.. like the rest of the world is doing!
T8N	Education and infrastructure	Increase taxes on corporations and people making over \$300k per year.	Remove business building barriers like how incredibly difficult it is to become a power generator. Small business shouldn't have to have a team of lawyers to get up and running!
T4N	Maintenance of a high quality public education system. Do not allow public money to be diverted to subsidize private schools.	End subsidies to chemical based Agricultural industry. There is no future in these systems. The science is clear on the toxic food being created. Eliminate government funding of pro oil and gas industry communications initiatives.This is clearly not the role of government.	Support a move to healthy organic agricultural systems. Organic systems create jobs and put people back to work. Support " new non carbon based " energy industry development, including the integration of IT.
T0H	Healthcare (particularly emergency care and support for long-term physical disabilities) Policing and justice Education Municipal government	Provincial government administration AHS management Duplicated services	Give more options and opportunity to municipalities to be responsible for local economic growth. Local gov't is the most efficient and accountable form of gov't and yet it is being trusted less. They work the most closely with citizens. They need greater opportunity to stimulate growth and development without increasing taxes. Downloading more responsibilities and requirement to municipalities while saying you are reducing taxes/spending, only moves the taxes and spending to another level of gov't rather than actually changing anything.
T6B	Post-secondary education and climate action.	The oil and gas industry.	Sustainably (no oil).
T6X	Education. We can not lose our amazing reputation and brilliant public education system that we have in Alberta. Our investment into the future, through education is paramount.	If the government implemented a provincials sales tax many of our problems would be eliminated, and likely cost the average Albertan less. Even if we had a 3 or 4% tax we would still be the least taxed in Canada. Right now offloading is just causing the average family house hold to pick up the extra costs from our schools, cities and municipalities. Our costs for insurance and transportation are also increasing. This isn't doing ANYTHING for the economy. No one us spending money. Particularly the public service workers who are basically the ones left with some sort of job security are NOT spending.	Quit making cuts to public service, Implement a sales tax Diversify our economy
T2P	Do not know	Do not know	The government should call Math Education Meetings, invite UofC math professors and everybody else who has something to say about math education. Math curriculum and math textbooks in Alberta are horrible - a lot of non-correct statements and exercises, no proper definition, no logical reasoning and no proof. This is why most high school students hate math - it does not make sense to them. 80% studying math is just a waste of time. Math education in elementary and high schools must be changed dramatically!

T6X	Education Healthcare Social Programs	Cut back spending on standardized tests and unnecessary testing, decrease spending on private schools	Expand the green energy sector , transportation sector Increase relevant student jobs ie. For university students
t6r	Maintaining spending in public health facilities such as hospitals and labs. Also, maintaining the professions where there are already staffing shortages like teachers and nurses. As well, development of lower carbon, sustainable energy such as wind and solar.	Government related travel expenses. Restoring taxes on corporations which received tax cuts and continued to lay off employees.	Not by slashing government jobs. Laying off thousands of workers does not support job creation. Investment in infrastructure using Canadian/Albertan companies. Support of a livable minimum wage. Support closing of the wealth gap because wealthy individuals do not contribute as much to economic growth compared to the same amount of money in the hands of less wealthy people.
T6K	Increase health and education spending to keep pace with population growth and make up for your underfunding in 2019. Increase funding for supervised consumption sites and expand coverage for mental health. Quit forming panels and spending money on looking at problems you created.	Fire Matt Wolf, disband Covenant Health executive, fire all 'issues managers and press secretaries, disband the failed War Room. There, I just saved the province over \$130million.	Quit taking money away from Albertans and handing it to corporations with no strings attached. Protect worker's rights and their safety in the job, basically the opposite of what you've done so far. Your government is a joke, welfare for companies and increased costs for regular citizens, typical cons.
T6m	Properly funding education and healthcare. Fund enrollment growth. Stop trying to copy a broken american system.	Tax credits for companies that then turn around and layoff hundreds of people. Stop funding private schools.	Reinstate grants that NDP created to encourage diversity of our economy.
T6G	Looking toward the future - education, healthcare (esp long-term care & preventative medicine), and the infrastructure to support it.	Bring back the AHC monthly fee. Sales tax 2%. We can't keep cutting without expecting severe consequences.	You need to spend money to make money. Incentives for SMALL businesses to set up shop in Alberta. More funding and focus on health care in rural settings.
T0A	getting trades back to work in oil and gas	reduce all gov't departments wages by 7.5%. including all elected officials by 15%	provide any new companies 2 year tax free
t6m	-education -healthcare -attracting diversified industries -debt reduction	-increasing tac for high income earners -holding oil companies accountable for their costs, clean-up and taxes -bring in PST	-invest in green technologies, be a leader in clean energy -attract digital and digital entertainment companies to our area - stop cutting infrastructure because those jobs will help people who face unemployment
T5a	Health care and education	Stop investing in oil and gas as this is obviously a trade that has come and gone. Start investing in technology and research for alternatives	Stop investing in oil and gas as this is obviously a trade that has come and gone. Start investing in technology and research for alternatives
T4S	Education!!! I'm an educational assistant at the top of the pay grid making barely over \$20/hr with children who have extreme behaviours, speech, OT, PT, social emotional and traumatic histories. Yet we are facing cuts. Children are our future!!! They NEED to be our priority. I am extremely passionate about my job and have been employed in education for almost ten years. These needs are not diminishing, they are growing!	We must move our oil...every day we do not we are losing. Transfer payments don't even get me started!!	We need promote and reward more small business grants

T4L	<p>The government of Alberta should focus on supporting Albertans with funding towards education, healthcare, and municipalities. Funding these allows for individual Albertans of all classes, and a stronger long term economy as a healthy and educated population tends to be more economically productive and funding municipalities means investing directly in improving the lives of Albertans by allowing municipalities to improve services, provide cultural events and invest in things like getting their youth work and life experience that helps them again be more productive and happier which should be a goal of their government.</p>	<p>Stop giving money to the oil companies that are leaving the province and giving tax cuts to companies that make millions of dollars and are using the tax breaks to either line their executives pockets or invest outside of Alberta. Also by instating a provincial carbon tax that would keep Albertan's money in Alberta rather than sending it to Ottawa to never be seen or heard from again.</p>	<p>Again support municipalities so that they can hire youth and other workers like city planners, interpreters, and other works that help make their communities more vibrant and economically effective, it also allows them to do things like revitalize the downtown core which builds jobs by attracting business, doing other projects to attract new business like building new commercial districts, or things like splash parks and playground which helps attract new families. It also would allow for municipalities to invest more in libraries which according to this study done in Indiana https://www.ibrc.indiana.edu/studies/EconomicImpactOfLibraries_2007.pdf put more money into the economy than they cost, by a significant margin. Libraries are a good value. The direct economic benefits that communities receive from libraries are significantly greater than the cost to operate the libraries.</p> <ul style="list-style-type: none"> • Indiana communities received \$2.38 in direct economic benefits for each dollar of cost. • Public library salaries and expenditures generate an additional \$216 million in economic activity in Indiana. • Academic library salaries and expenditures generate an additional \$112 million in economic activity in Indiana. • Public libraries account for almost 9,000 jobs in Indiana: • Nearly 6,900 employed by the libraries themselves • Approximately 2,000 additional jobs in industries that support libraries and their staff (page 5) <p>Other ways to improve would be investing in growing economic sectors that are growing instead of dying ones. Like green energy in the form of geothermal especially, but also solar. Or more digital technologies or tourism outside of just the Banff and Jasper hotspots.</p>
T0H	<ul style="list-style-type: none"> - Balancing the budget - Cutting the size of the government - bring into the national average the amount spent on health care and education 	<ul style="list-style-type: none"> - Cut the size of government - the middle management of both health services and the education - grants to the cities and municipal government - duplication of services 	<ul style="list-style-type: none"> - cut the tax as you are doing for business - eliminate more of the red tape that is required for business
T9S	<p>Healthcare Education Employment Social services</p>	<p>Top level of AHS- check sunshine lists, Deb Gordon etc Top level of Education Superintendent salaries Increase taxes for wealthy War room- CLOSE.... at 82,000/ day to equal 4+ billion dollars</p>	<p>Oil/gas pre-pay royalties 1 year in advance for wells on agricultural land owned privately. Freeze tuition...Bank rate....low, not increased</p>
T6W	<p>Health and education.</p>	<p>The government needs to stop giving tax breaks to businesses and oil companies. In other words: you need to tax them fairly and consider a provincial tax.</p>	<p>Diversify. The oil industry is turning automated. You must find other areas for people to work. Technology is the future. They should support early learners in school in order to avoid spending way more on law enforcement and jail time later on in life. People working = people spending.</p>

T8H	Education and health care. We need to ensure we have fair, equitable and SUFFICIENT funding for public education and post secondary education. The funding cuts (aka freeze) is creating a major discrepancy for funding for our students, and it will create a huge disadvantage for many. To not increase funding for an additional 15,000 new students coming into the system is not acceptable. Some of the new performance based funding will increase red tape for the government and it is proven ineffective. As for the health care system, yes there are some inefficiencies, going after front line workers and family doctors and pediatricians is also unacceptable.	Maybe stop giving industries such big tax breaks. Let's start looking at government spending within...	Supporting the youth of our province by giving them the best education system we can. We already have an amazing public education system... check out our current PISA results. Reducing education funding is not the way to approach this. Increased class sizes and reduction of funding to our most vulnerable special needs students is not okay.
T6K	Education and healthcare. Specifically home care	Increasing corporate taxes and royalties	Governments cannot create jobs, so I cannot answer that piece of this question. To create economic growth, I believe the government should be focusing on encouraging investment into our province from industries OTHER than oil and gas. While my family has always been involved, and directly benefited from the industry, I believe it is time to recognize the Golden years are over. We need to invest in New oportunities which can provide more stable income for Albertans.
T4S	Education, healthcare and job stability/creation...all the areas this government seems to have prioritized to disassemble and attack	Looking at the adjustments to the corporate tax structure that were recently introduced and assess if that best meets the needs of ALL Albertans. Reducing your self-proclaimed "war room" budget, rollback ALL public workers if you are going to do this anyways...especially the politicians who have had increases in an economy in which other public sector workers have received 0% for a number of years. Put your money where your mouth is and consider yourselves front line workers, and are not exempt from these budgetary decisions.	Striking that balance between getting oil field sectors back to work and creating tax breaks for small business to help these entities remain open in the floundering economy. What you should stop doing is sneakily attacking the public sector with massive cuts and unwarranted public criticisms which is only going to equate to massive job losses and an even higher unemployment rate.
T1K	Education & Healthcare. Lowering insurance caps	Paying over paid politicians, eliminate tax cuts for corporations.	Invest in green energy. Sun/wind
t3g	Education and Health	From corporate tax	By leaving students to get well educated and trained
T8a	Education	Combine school boards. You would save tons on administration and infrastructure if you got rid of catholic board and combined with public.	Diversity oil isn't the only industry.
T8n	Stop cutting jobs and reducing support services. With all these workers working again, the province would get more tax money and all these people would spend more money thereby stimulating the economy! Return AISH payments to those who need it like before! These people need \$\$ to survive and because their money goes to daily expenses, again more jobs/services will be created, more \$\$ circulating and a better economic life.	Cut out all these panels doing the work the mla's and their staff should be responsible for! Stop giving billions away to oil companies that don't deserve a handout. That type of incentive is known to be a waste!	This the ucp has blown! All those cut backs have ruined a working Alberta! Reverse all those cuts...now is the time while we will be getting some growth via pipeline work! More people working, more taxes collected and a more fluid economy. Incentives for environmental improvements such as new furnaces, electric cars, trucks and buses! Build a refinery to clean our oil so only well processed crude leaves our province!
T5x	Healthcare and schools	On there own salary	Pipeline

T1H	Education and health care including mental health	Drug consumption sites. We are just enabling them. Also farmers need to be taxed more... many of them write most things off... except clothing and food they consume. Every farmer I know is rich!	By meeting the communities needs.. which can differ in various demographics. We need to find ways to employ more indigenous people. Our oil industry must also be revived... keep pushing hard for the pipelines. Please no foreign oil sources as we have our own resources which we should be relying on.
T7x	Healthcare and education.	By introducing a pst	Further implementation of the 25dollar a day daycare so women have more choice to keep their jobs or go to school.
T6E	Education and healthcare, also known as the areas the government has been cutting. And actually implement the education revamp. The system needs to be updated.	Stop cutting spending. Increase taxes on business and reinstate the carbon tax you goons.	Reimplement the STEP program, fund social services, fund job support services, increase immigration, and above all, EXPAND FUNDING OF RENEWABLE RESOURCES.
T4N	Public Services. Half of the people in Alberta depend on a Public Service person to keep them stable emotionally and financially.	Cut back on all of the "Independent" reviews. A few people are getting rich instead of a lot of people having gainful employment.	Long term sustainable jobs. They should not be giving a lot of deals to new businesses. We need employers who can and will be willing and able to pay the proper taxes, etc. for their businesses.
T8H	Education and Health Care	Municipal affairs	By not cutting teacher and nurses positions. By diversifying the economy.
T4N	Increasing aish by a little bit to account for inflation.	They should use gambling revenues to pay for social assistance, healthcare and law enforcement.	Diversify the economy.
T9S	Education Health care Debt reduction	Introduce a Health care cap. Our healthcare system is amazing but it is abused because it's free. So have it free up to a certain point but then after you need to pay for dr. Appointments. Of course people with certain conditions should be exempt (cancer, diabetes, heart disease chronic conditions) Also focus more on prevention, so many diseases could be prevented by implementing a healthier lifestyle. So controlling things like obesity so that they don't end up with diabetes or heart disease in the first place. We could save a lot of money by preventing diseases before they turn into chronic illnesses that cause people to have to use the health care system so extensively...	Make it easy for investors to come to the province.
T5L	Education, health care, social services, housing for the homeless, supervised consumption sites and other services for those with addictions, AISH, infrastructure repair and upgrades.	The government could cancel its energy war room to save money, create a carbon tax, tax high income earners, create a sales tax, and ensure that industries that do not now pay for the cost of cleaning up their damage to our province through pollution are held responsible for paying the cost of cleaning up after themselves in future.	Investing in environmentally friendly energy sources such as wind and solar creates jobs, investing in creative industries such as film, arts, and culture creates jobs, investing in healthcare creates jobs, investing in education creates jobs, investing in social services creates jobs, building healthcare infrastructure creates jobs, investing in tech companies and software companies creates jobs, investing in our public services including but not limited to police, fire, and wildfire services creates jobs, investing in construction projects for municipalities and rural areas creates jobs.
T3h	Public services such as education and health services.	Corporate tax breaks	Don't cut jobs in education and health care
T0G	Government unions	By separating	Telling Trudeau and the liberal government to mind their own business. Now we have to sit here and wait for their "Tech" approval, like we can't decide the businesses we want. I'm done with this fair deal stuff. Will never happen

T1A	1. Education needs (increase in educational assistants, support programs, supplies for teachers) 2. Health care (increase in mental health and addiction services, NO cut backs!!!) 3. Support for local businesses	1. Cut backs for manager level and up Health Care works (ie non unionized workers) 2. Cut backs to excess government of Alberta travel spending 3. Increased taxes to oil and gas company executives.	1. Grant and loans offered to local and small businesses.
t5g	Health care (mental and physical), education, environmental responsibility, and helping people find work or retrain for new jobs.	Collect on outstanding taxes owed by businesses and corporations. Figure out ways that government itself could cut down on spending on itself. (i.e. encourage video conferencing rather than air travel, make sure that expenses charged to the government are for what they say they are and are within guidelines.)	Make supports for local business more accessible and/or better known; invest in and/or encourage growing areas of business (such as renewable energy, high-tech areas and medicine) Perhaps something that would encourage movie and television productions in the province - that would encourage people to come into the province.
T6E	Education and healthcare.	Not reducing big business taxes	Diversify economy
T8H	Decreasing class size in Education financially supporting post secondary education and decreasing management in health care, increasing front line staff. Increased construction. Of major project to stimulate jobs and the economy	Roll your wages back yourselves, axe the energy war room. Tax corporations and actually collect those taxes. Don't give pensions to government employees for serving less than 15 years. Decrease management in health care. Reduce supintendent wages.	Restart major projects- hospital, lab, etc
T5B	Public education, early childhood development, public health care, environment, regenerative farming and carbon capture, diversification away from oil and gas and development of new business opportunities and higher education opportunities including research and development.	Through the implementation of a provincial sales tax Cut upper management positions while maintaining frontline services and job positions.	No answer.
T3B	Health, Education, infrastructure, R&D grants, economic diversification, the poor, the young, anti gang violence, save use drug sites.	You dont need to find savings you need to raise taxes on corporations. Your lower tax attempt has failed miserably, you've started off in a net negative jobs position because you laid off staff. Its a joke.	Stop doubling down on the oil industry, its dying, you're attaching yourselves to its stinking corpse.
T3B	Health, Education, infrastructure, R&D grants, economic diversification, the poor, the young, anti gang violence, save use drug sites.	You dont need to find savings you need to raise taxes on corporations. Your lower tax attempt has failed miserably, you've started off in a net negative jobs position because you laid off staff. Its a joke.	Stop doubling down on the oil industry, its dying, you're attaching yourselves to its stinking corpse.
t6h	General life counseling programs for 18-30 year olds.	transfer payments (don't give as much to those who are trying to destroy us in the east)	Build up the Oil field and attract investment into it
T2Y	Job creation, health and welfare. Individuals with chronic diseases and life inhibiting ailments need help with the cost of medications. Money spent on things like safe injection sites takes money away from hard working individuals who actually have real medical problems rather than self inflicted conditions.	Increase taxes for the wealthy. Increased taxes for corporations are passed down to middle/lower class workers and consumers in increased prices and job losses and is seldom felt by high net worth individuals.	Encourage more diverse businesses to come to Alberta and not rely so much on the oil industry. Encourage oil companies to find new directions, new products, new production methods. In the meantime, get the message across that our oil is clean compared to other countries.
T0G	Healthcare, education, infrastructure	Raise taxes	Deregulation, reducing legal burdens
T3g	Health & Education	They should use video conferencing and webX instaed of flying around everywhere for meetings. "On Wednesday, NDP critic for democracy and ethics, Heather Sweet, said that the NDP had obtained invoices that show Premier Jason Kenney's principal adviser David Knight Legg had billed over \$45,000 in expenses over a six-month period, including \$18,000 in relation to four recent trips to London."	Protect Canadian jobs as many are being outsourced to other countries or technology is being built to replace people's jobs.

T5Z	1. Education 2. Social programs 3. Health care	1. Limiting invasive, lengthy hospital admissions by supporting Albertans to have goals of care and to set limits on medical interventions. 2. Limit repetitive restructuring of public systems for political motives. 3. Support families in need to prevent future reliance on public programs.	Support diversification of industry in Alberta. Encourage retraining of workers who rely on the energy sector to make them more employable in a changing energy landscape.
T3P	1. Health care 2. Education 3. Policing and safety	IMPLEMENT A PROVINCIAL SALES TAX. Even a 3% tax would help. Eliminate large tax cuts for big corporations, implement tax cuts for small business, reduce expense accounts and salaries for top provincial government officials.	Invest in technology and innovation rather than relying on an energy economy.
T3A	Education (Continuing with early intervention and all the way to Grade 12) Health	Looking at duplication of services. Reducing ministries by combining portfolios where possible. Infrastructure- maintain roads, buildings to ensure safety but not enter into new builds.	Economic growth will not occur with the continued loss of jobs and positions. Ensure existing jobs remain by supporting government funded areas. (Health, Education). Provide incentives to private businesses to come or stay in Alberta. Job creations provide financial impact to the communities in all areas. Provide
T8I	Education and healthcare.	Increase corporate taxes. Sales tax.	Tax the rich further and invest in infrastructure.
T6G	The government should be prioritizing education and health care. These two areas are the bloodline of Albertan society. The University of Alberta has a \$0 budget for building and maintenance. This is unacceptable. Post secondary education is investment in the future of Alberta. This should NOT be neglected or dismissed. This is a statement that the Kennedy government does not want to invest in resources, knowledge, skills and people for the future of Alberta.	The issue is not a lack of money. There is an issue with the distribution of our current budget. Let's be honest. How much money is going into private industries? How transparent is the Kennedy government with closed door meetings with private oil and gas companies? This is not socialism. This is not communism. This is diversification of our wealth into industries that sustain Albertans. Oil is not our bloodline. It is it's citizens, children, teachers, healthcare workers, ect.	What we should be worried about is not job creation. Creating 1000 minimum wage jobs is not going to increase satisfaction and happiness amongst Albertans. We need to have SUSTAINABLE jobs that can support families with fair wages. We cannot be looking and investing solely at industries that are traditionally successful. If we do not diverge our investments- we will sink. Look at numerous of corporations and companies that are closing in Western Canada and Canada. This should not be our future. This cannot be our future.
T5A	Maintaining public health care and education	Upper management salaries and by flattening the management hierarchy as promised instead of cutting salaries to individuals who make \$45000 a year.	Focus on encouraging businesses to reinvest in the province.
T5H	Children - those who are at risk and do not receive any intervention or prevention programming, will cost our system significantly more in the future in terms of interaction with health and justice if we ignore the needs of our young children today. The science is clear, brains develop in the early years (0-6) and to ignore this will cost society and me as a taxpayer considerably more in the future.	Look into the government to cut funding - the amount of money wasted in government is appalling. The layers of management are inefficient and need to be trimmed. We can do things in the community for a fraction of the cost the government does to meet the same deliverables and outcomes. We need services but they need to be delivered by non-profits in order to same money as the government does not seem to have the motivation or capacity to do so.	Diversify our industries so we can be less reliant on oil and gas. Invest in research and in technology to be more competitive. So many of our brightest talent go to the US or overseas as it is more attractive and supported in other countries.
T4v	Health care - chronic disease management Education Employment	Some inefficiencies in health care such as nursing	Getting oil to market
T6m	Non job eliminating ones.	Corporations should have to prove they created jobs with their tax cut in order to continue to qualify	Holding companies accountable for job creation, creating a realistic time frame for reducing the budget.

T2X	Public education	Sales tax	<ul style="list-style-type: none"> - Support new initiatives for new businesses - Continue to fight for Alberta resources within Canada - Increase new technology and innovation funding to slowly move away from oil sands economy.
T2R	<p>The big three: Health Care, Education, Public Infrastructure. Communities and people moving to communities are based on these simple priorities. Public health care costs less overall. People value universal health care and select the country and province to call home based on access to good comprehensive public health care that does not cost them their paycheck to afford or force them to remortgage their house like in the private health care world. 17(1)</p> <p>Sure, people don't die waiting in line for health care ~ they die because they cannot afford to pay for treatment. Education: Let's face it - public education is good for all. When kids are in school learning because they have great passionate teachers and they can afford to attend public school because the fees are low, all minds have the potential to develop into the next Einstein and better the world and how we understand it. Full day kindergarten allows kids to better integrate, socialize and develop their minds while allowing their parents to go back to work full time and contribute to the provincial tax revenue. Public infrastructure: It's 2020. Get with the environmental program. Roads and bridges need building and repairs to facilitate efficient transportation corridors. Cycle paths and public transit meet the needs of the environmentally conscious as well as foster tourism and better health through physical exercise which will result in few chronic disease health dollars being spent in the future as we age. 17(1)</p>	<p>Government could find savings by adding a provincial luxury tax to vehicles over \$100,000, jewellery over \$1000, boats, motorcycles, and secondary homes/cottages, among other luxury items beyond basic needs. Then save this tax to be used where deficiencies lie such as snow removal, indexing AISH to inflation, etc. The PC government SHOULD HAVE SAVED WHEN TIMES WERE GOOD and made a rainy day fund. That is where the government would now find savings. If they had saved. It's not a difficult concept.</p>	<p>Support a hire a summer student program through grants. Increase minimum wage so that people have money to spend. Support science and tech that it is advancing renewable energy alternative and get on board with the rest of the world rather than constantly looking back into the pit of tar. Offer a film tax credit to encourage Hollywood and Bollywood to make blockbuster films in Alberta like they do in Vancouver. The fallout is tourism and jobs for casting, crew, hotels, etc. EXPAND your vision!!! See what other provinces are doing and copy their foresight rather than look back in hindsight with regret. Again, a simple concept.</p>
	<p>Cities and need more infrastructure funding and universities need more stable funding. I do not agree with the UCP cutting approach on this matter. Both of those are economic multipliers. I also do not agree with all the public sector worker cuts. They have been frozen for years and some younger workers only stayed because of historical job security. I personally know three finance professionals and two lawyers that moved to Ontario or BC. Why not stay in Alberta and move to private sector? Because your economic policies and budgets are bring on a recession.</p>	<p>You need to focus on the revenue side. Cutting taxes does not and has not worked. Alberta needs one gov't with the courage to bring in a modest PST in HST form. Sure, some people will be mad. But don't you see that in long term you will be lauded as far thinking Peter Lougheed is today?</p>	<p>Stop cutting. You are creating a vicious cycle and brain drain.</p>

T1M	Addiction and mental health Environment protection Early childhood education Small business Rural law enforcement Agriculture research Education Health care. FCSS - especially in rural communities.	Stop giving corporate tax cuts. Reduce health care overtime and hire staff. Stop overpaid political appointments. Implement a carbon tax. Or a provincial sales tax.	Support tax incentives for tech and emerging sectors. Support education. Support clean energy industry development. When the boom comes again maybe the conservatives can plan ahead and put something into savings.
T0J	Teachers, EA's, support for students with higher needs.	Utilize google classroom and have textbooks and assignments online rather than photocopying pages from the text books. Or at least textbooks online. I'm sure there are some higher up jobs in Alberta education that could take pay cuts to save the classrooms.	I believe if the energy sector was supported the way it should be, then the government would have funds. They need to focus on front line in the schools.
T8H	Having enough teachers so class sizes aren't too big	Take it from the curriculum developers and all the people in the administrative jobs in the school head offices. There are too many of them and they get paid WAY more than the teachers.	I feel that most people already know that there are more teachers and nurses needed. The public will support it. They should ask the school board presidents what they need and take it into account.
	Health and Education	Not give tax cuts to corporations	Stop giving corporations tax cuts. Clearly it is not working. Not have Jason Kenney ad Premier
T8H	Health care, particularly upcoming cuts to senior's spouse coverage being cut, limiting family doctors' time per visit, and education.	Anywhere but healthcare and education. Focus instead on taxing business and industry that are contributing to climate change.	Support economic diversity rather than trades where jobs are currently lacking. Encourage using incentives to have people reduce their carbon footprint in the form of tax savings or grants to have people become more energy efficient.
T0L	If you have to ask, you shouldn't be governing	The government should be taking wage cuts	Stop telling the people about climate change. And tell them the truth about space
T6X	Education, healthcare	Proper taxing on higher incomes, oil sector. Rather than taking from those who are in need, take from those who have an abundance.	With proper funding to healthcare and education, there could be many much needed positions filled instead of running tight and understaffed schools, hospitals, etc. With proper supports to education we are investing in the future, providing students with the proper tools to grow in their education, and work force contributions.
T3Z	Education Health Care	Provincial politician salary	Promote private sector growth Environmental initiatives
T3M	Things that aren't necessary. Students need to be educated and we should invest in their future. I think it is pathetic that you are asking teachers to work for no change in salary, with reduced budgets, higher class sizes, and more expectations. Would you like to work for 8 years with not even close to a cost of living raise?	Trips by politicians, fancy hotels, expensive meals and dinners. You should live like the typical Albertan. In my school district, we have a pd day at the beginning of the year where we all drive from southern Alberta to meet together. Half of the day honors people who have worked a particular number of years, and the rest is a snack, a speaker who was a former student, then lunch is provided. I think it's an expense that could be forgone. Now, I'm not picking on our district, because I love it and feel blessed beyond measure, but cut things like this rather than our classroom budgets, or class sizes. I'm sure that the same thing could be done for many departments such as health care.	Invest in kids. Support entrepreneurs. Oil, we can't live without it. Also, we support much of the rest of our country.

T6H	Education (secondary and post-secondary), and diversifying the economy.	Reverse the corporate tax cut (or a portion of it) as that did not create jobs but was used by oil and gas firms to give out dividends and buy back shares. Trickle-down economics doesn't work.	By diversifying the economy away from oil and gas and retraining workers for a diversified economy.
T2M	Policing emergency services healthcare mismanagement upkeep of schools - repairs & Mismanagement Motivating the economy	At the top - management first at all levels Especially hospitals, School boards and PDD Give monies to policing and get rid of safe injection sites, come down hard on gangs. Create an institutional settings for addicts and homeless where when arrested then can do up to 20 months before the option of release.	Encourage more small businesses that hire and manufacture in Alberta Continue to encourage large companies to return to Alberta with not just Tax incentives but land use incentives. Regulate what Insurance Companies and Lawyers can charge - Flat fees!
T2Z	Education, education and healthcare	Infrastructure projects	Diversify the economy in terms of resources
T4N	Invest in 'Greener Energies' like the rest of the world and start to cut back on fossil fuel development.	Not from cutting public sector wages and stealing pensions ... tax oil companies and find ways to make them pay back their rural tax debts.	Invest in green energies and keep our technology development among the best in the world. Invest in people.
T1H	the best of treatment for the children (teachers , teachers aids and the cleanliness of the schools)	the board office is way over staffed , they have these positions with the statute of a president , and an expense account galore from catered meals to all at the board office ,quite often the secretaries even have a secretary so to speak ,to the principals with board office supplied credit cards , treating Tim Hortons real well . Also the purchasing dept . buying high priced products , when better quality similar products can be purchased at Costco with 50% more quantity (Vulcan brand - nitrile gloves 150 per box not 100). I believe as early as 10- years ago there was like 25-30 staff at the board office , now there is about 70 to 90 ,does not seem right , now there are rumors that the board office is contemplating reducing hours for me and other caretakers , can you imagine secretaries have secretaries -----and they reduce on toilet cleaning staff , is there something wrong with this picture , of course there is , SO do the cuts in the proper positions ! mention that to the Alberta government caucus , when it resumes , because we are going to !	allow the so called "little guy "to make a living
T4c	Services that just received large cuts to should be a main focus of budgets. The services specifically that I believe are vital are those fields in the human services. Human services includes nurses, early child hood educators, youth workers, FCSS, parent link centres, teachers. People who work hard to make others' lives better, keep people healthy, care for children and youth, and educate our children.	Large companies taxes, people with more income having appropriate levels of taxation, government no longer providing excessive funding for private trips/vacations.	Stop cutting funding to fields that could support job creation and economic growth - such as child care, nursing, or teaching. There will always be children who require care and families who require support and assistance. Everyone needs health care workers to stay healthy. Find alternative possibilities in different fields to invest in and stop relying so heavily on oil and gas.
T4R	Education, health care, programs for vulnerable Albertans (AISH, PUF, supervised consumption sites), diversifying (actually diversifying) our economy.	By not offering obscene tax credits to businesses.	By actually working to diversify our economy in ways that can still support oil and gas but also working to find other means of energy including green. By not cutting funding to programs that is resulting in all the job losses to date.

T8X	Education!	In government salaries, repealing the tax break to o&g.	Ask Notely, she was far better at this than you seem to be. I am ashamed I voted for you and won't make that mistake again unless things begin to change. Toews should be let go for his hand in the disastrous economic state he's put us in this far.
T8a	Healthcare and education	Cut war room and MP wage	Construction, infrastructure
T5T	Building schools, Recreation centres, and NON-LRT infrastructure (sorting out the mess of the Henday in the west end).	Stop sending equalization payments out East.	Sorting out traffic woes helps the economy, the west end in Edmonton is a nightmare between 4-6 on workdays.
T7X	Health Care - Keeping front line workers (and keeping them public) New and re-usable resources / old ways are not working	Tax the upper 1% harder. They can afford it. No more breaks to companies that take the breaks and then leave. Make them sign a contract - get big break have to stay in province - commit but constructive	Job growth - don't cut jobs! Economic growth - branch out. Look outside the box not in the oil barrels
	Child Care Job creation Health Care	Stop funding (subsidies) for-profit child care that are providing in many respects poor quality care and at times unsafe care. Use this money to support education for more Child Care Staffing as well as put towards a universal child care program for families to make quality care cost efficient. Wage freeze on all government salaries / wages in all areas from Municipal to Provincial. Give direct operational dollars to municipalities to operate child care which could cut down jobs at the provincial level.	Hemp education, forestry education and focus on environmental steering to support the renewable energy sector
	All public services. That is your mandate.	Don't implement your post secondary funding strategy which I predict will be a costly failure. It is micromanaging at its worst, adds red tape to institutions and government and is punitive by design.	Do away with corporate welfare. Tie any monetary benefits you give to big business to demonstrable outcomes.
T6E	public schools, post-secondary schools	It is time to invest, not to save.	Insist that the oil companies pay for clean up of sites, increase the percentage that oil companies pay to Alberta for being allowed to take Alberta's resources with no thought to how they are damaging the land and water. Corporations cannot rule us! It should not always be about how they can make more money.
T0P	Health care, Education, SENiors, Veterans, Disabled people	Bring in the PST. Cut out the WAR ROOM. Get rid of government officials whose salaries are ridiculous	We missed the boat on the technology fair that happened. There's job growth in our province. Leave the post secondary funding alone. Education is needed for both job creation and economic growth. PST will grow our economy
T4S	Job creations by helping to create small businesses that are able to employ people. Which will probably have to be some sort of tax cut if you employ others	This is a hard one with no jobs and a high addiction rate it would be hard to say "The Public Sector". Maybe this can happen down the road once there are more small businesses running again and not just for new Canadians.	Is there a way to help the businesses that produce and sell marijuana? There should be way more money coming into the government from that. Are there too many regulations stopping that? How are some of the States in the USA doing so well from this?
t8e	Resource sectors. Ag, Oil/Gas, carbon capture/carbon neutral innovations	extremely high wages over \$150,000/ year	investing in innovation in ag, oil /gas and other industries

T7Y	Senior citizen that do not have any additional income other than OAS and guaranteed income supplement!	Cut government spending	Jobs create themselves and economic growth follows (let an 82 year old tell you who never asked for a handout from government in his lifetime!!!)
T3A	health care and education	war room expense, tax cuts to businesses and clean up of abandoned wells collect taxes from oil companies	invest in education, retraining of obsolete oil jobs invest in green energy and technology
T3H	Health and education	Don't waste money changing processes in place that already work ie doctor payment schedules or education reviews.	Don't cut funding to education and healthcare which leads to further unemployment in our province.
T6j	Education - specifically reducing class sizes especially in kindergarten and elementary school and updating the curriculum. Healthcare	Bureaucracy and middle management positions government wide	Make large corporations pay their taxes. Support STEP programs for students. Reduce red tape
T6j	Education - specifically reducing class sizes especially in kindergarten and elementary school and updating the curriculum. Healthcare	Bureaucracy and middle management positions government wide	Make large corporations pay their taxes. Support STEP programs for students. Reduce red tape
t5x	Health-care. Education. Social services. Communities development	Reinstate corporate taxes. Trickle down effect is *not* real. Kill War room. Concentrate on economy boosting.	Reinstate diversification programs that attracts IT and other type of organizations to the province
	1: Public Education 2: Public Healthcare	1: Reinstate full taxation for corporations. 2: Eliminate the War Room. 3:) Excessive PR dollars wasted (Matt Wolfe)	Stop putting all our eggs into the oil & gas basket and support diversification.
T2p	Health care	Taxing the rich, whom earn over a certain income	Do not export jobs Education
	Making life better for Albertans- specifically healthcare and more specifically, diabetes management with insulin pumps and sensors.	Charge more for gasoline at the pumps.	Don't have an answer.

T8G	<p>Environment, education, long term economics.</p> <p>Retro fitting old buildings to be more efficient would create a lot of jobs all over Alberta and reduce energy costs.</p>	<p>Start metering water use and charging each household based on the amount they consume. The government could collect money from water payments and a lot less water would need to be processed as people would lower their water use in response to fees.</p> <p>Further increase taxes on products that lead to medical costs. For example cigarettes, vapes, liquor etc. You would be doing people a favor as less people would have medical costs later on in life. In response to higher prices, less people will smoke.</p> <p>^The above are much more reasonable options that cutting health care and education jobs.</p> <p>Government officials using Skype to travel less. Government officials only having 1 house which is in the area they govern. Government officials getting more reasonable pensions.</p> <p>Government employees getting less sick days and less paid vacations.</p> <p>Honestly, just be a government that thinks about the average person first and the rest is common sense</p>	<p>Promote higher education so future generations are more employable and smarter with money.</p> <p>Promote the idea that a strong economy can exist in a province where public health,safety and environmental health don't need to be compromised.</p> <p>Instead of resisting change stay up to date on trends, or even get ahead of the game. In order to be ahead of the game, invest in research groups.</p>
T0A	Education and healthcare.	The salaries of government managers and politicians.	Support subsidized daycares so that more parents can afford to work.
T6X	<p>Health Care</p> <p>Education</p> <p>Moving to sustainable energy while supporting the oil and gas through the transition</p>	<p>Increase taxes</p> <p>Add PST</p>	<p>Stop cutting jobs! Invest in health care and education.</p> <p>MAKE CHILDCARE AFFORDABLE so that women can get back into the workforce and families can have disposable incomes again (we are already stapped and other families are facing wage rollbacks) so we can do things like update our home (create jobs), buy vehicles (stimulate the economy), buy everyday items and access services instead of penny-pinching (stimulate economy), or even go on trips (revenue from travel).</p> <p>Stimulate the economy by getting into sustainable energy research and production. Make the province be the forerunner, have the patents on the technology, be the industry that everyone wants a part of.</p>

T6C	<p>I think the government needs to focus</p> <ol style="list-style-type: none"> on funding education so that our system stays a public system with smaller class sizes. Comprehensive Early Childhood education provided by well-educated professionals is vital to our education system. public health care for Albertans: including seniors on fixed incomes, people with devastating illnesses. Stay away from private health care for those privileged individuals who can pay for it. focus on developing the Tech Industries as an alternative to Oil and Gas. 	<ol style="list-style-type: none"> Forget about the ill-conceived, WAR Room for Oil and Gas. Divert that money toward education and covering the deficit. Incorporate a 1% or 2% provincial sales tax for non-essential products similar to the GST. 	Focus on alternate fields like the Tech industry, AI, biotechnology.
T5H	recreation for kids, good public transport, parks with enforcement of dog laws as Albertans rich and poor benefit from safe and beautiful public spaces. Immunizations.	cutting all funding to cannabis clinics Any alberta health funding to cannabis increases addictions, off work, other social problems in alberta and the doctors, in my opinion are fraudulently billing anyway. What other clinic promotes only one drug, and an addictive one at that. No Alberta Health services hires to have conflicts of interest with drug companies. no methadone no suboxone clinics. No chronic pain codes (the pain society of alberta is drug company funded) no use of public facilities for drug company supported talks. Naloxone kits ok, but stop the expensive and ineffective harm reduction programmes that include injection sites etc.	no promotion of any addictive substances nor gambling. The social costs of these habits are immense which will always work its way back to the government.
	Cleanup the mess that Oil and Gas has left in Alberta and have them pay for it. Educate everyone including government about environmental science. Promotion of green technologies instead of oil and gas	Trickle down economics don't work.stop tax cuts for corporations. You can't change the price of oil. Shut down war room,you can't change facts about dirty fossil fuels and what they doing to the environment	Don't keep beating a dead horse(oil and gas) how about using old gas wells for geothermal heat and growing produce in greenhouses. How about hemp products instead of plastic. Try being part of the worlds solutions to global warming instead of part of the cause
	Early Intervention, focusing money on young children i.e., PUF especially for speech and language where some of the impact can be reduced or mitigated through intensive supports. This will ensure parents and children have the strategies and skills to successfully navigate their education.	By making the oil companies pay their taxes!!!!!!	Focus on the IT sector and renewable energy sources. Look at solar power and wind generation. Provide incentives to small businesses, that are unlikely to pick up their roots and move just because of a downturn in the economy.
T0G	<ol style="list-style-type: none"> Class size should be a priority. I have 25 students (4 behaviour and 7 with disabilities). Funding for educational assistants (I have no help!). Provide funds to replace teachers who were not replaced (retired or temporary contract) to ensure teachers are getting the required amount of prep time (our prep time was slashed in half from 149 minutes per week to 80). Not enough time to get everything done. 	<ol style="list-style-type: none"> Try looking from the top down? How many superintendents, etc., does one division need? Cutting down the work week to four days instead of five saving in wages for support staff, bussing costs, and keeping the school open (minutes can be added to the other four days to ensure minutes are met). 	?

T6V	Education and Health	Savings is only 1 half of the budget equation. Reducing business taxes to below pre-NDP levels does not make sense. Finding savings is important but so is generating revenue. Oil and gas isn't going write the cheque anymore, even after TMX is built. It is time to implement a provincial sales tax.	Time to diversify. This government is stuck in the past trying to balance the budget on oil and gas revenues and program cuts. Green technology, biomedical technology are two examples of emerging fields that we need to tap into to generate economic growth.
T2T	Education, social sector and healthcare.	Upper management, not giving so many tax breaks to corporations.	Incentivize or subsidize training programs for tradesmen to enter into greener energy alternatives, incentivize local economies
T5K	Managing government spending without crippling to public sector.	Dissolving publicly funded catholic schooling, and integrating public and catholic schools. Requiring less new infrastructure, decreasing total board level educational staff, and likely seeing a return of smaller class sizes.	Invest in a diversity of jobs from a diversity of public and private sectors, not so heavily biased to the oil sector, to encourage long term economic stability (limiting the effect of oil prices on our economy).
	fund Health Care and Education appropriately	corporate subsidies	invest in renewable resources alongside getting the pipeline built
T7Y	Education and Health. Frontline staff are critical.	Stop creating panels and committees to undertake reviews and provide the government with direction. Officials were elected and should be acting based on campaign promises, not taking direction from none-elected appointed board/committee members. Salaries for the appointed members of these numerous "panels" are significant and unnecessary.	Stop focusing on the oil and gas sector. We need to diversify our economy and move away from oil and gas. It should be a priority to create jobs in the tech and film industries as well as research and development into alternate energy sources. Frontline public service jobs are also important.
	Education	Cut some of the perks in the government.	Education. Diversifying the workforce through quality subsidized programs to retrain workers for new paths.
T6K	healthcare and education	- efficiency - early retirement bonuses	-4.7 billion in tax reductions for corporations has gotten us? - making cuts without using logical moves - it might be smart to govern for a year and then make moves, just saying; appearing like a fascist government
t6a	Education Youth Health care	Close "war room" Collect taxes from derelict oil companies. Look at management positions in public sector	Diversify and increase support for growing industries, arts, tech sector

T5P	Public Education and universal health care are priorities. These are fundamental basic rights for each Albertan, and should be treated with special care, quality and equity. Quality education can be a tool for long-term success and by default, a preventative measure in later life for homelessness, poverty and risky lifestyles. Furthermore, it instills in our youth that they are capable of becoming something and can contribute to society through ideas, innovation and the workforce. Quality access to health care can reduce longterm costs of illness (mental, physical), especially if early screening is available. By reducing both of these necessities, we will end up with a sick society, a gap in education and therefore shortage of skills and it will be a big hit to future prosperity.	More equity in the taxing system. Very large corporations with larger capital should be paying more on taxes, as the public will benefit from public programs. I would also suggest providing more grants/opportunities for organizations with similar mandates to work in collaboration with each other, therefore reducing costs of hiring additional bodies. Internships (either free, or not full-time pay) opportunities for newcomers and grad students can also prove to be cost-effective as well as beneficial because it provides the incentive of practical experience. Increased experiential learning programming in post-secondary and high school institutions as well where students can commit a set number of hours to be completed on an agreed upon time in exchange for class credit.	It is important to provide opportunities for people, especially new grads, to be exposed to different work experiences either through internships, hands-on learning and spaces to encourage thought and innovation. This will ensure that we are addressing the skill shortages in the workplace.
T7S	Education, Early Childhood Intervention and Health care. For students and front line workers	Cutting MLA salaries and adding a PST. Alberta is the lowest in the country at only 5%- we could easily do a 2 or 3 % PST in addition	Have a diverse portfolio that doesn't heavily rely on the price of oil. Invest in other opportunities while also helping create jobs in the oilfield private sector
T3K	Education, health and wellness, social services such as care for senior citizens, early intervention for children with learning difficulties	-taking pay cuts from the top of government	By finding other avenues for revenue other than oil. Think outside the box
T5X	Teachers and classroom development,	Not from the education sector but from the federal reserve. Stop straining Alberta's taxpayers, let other provinces pay their fair share, cut down on government unnecessary spendings, reduce on how much Alberta puts into federal reserves, focus on Alberta and, lobby for the pipeline. Cut down on unnecessary political spendings, trips and compensations.	Enhancing the current education system, encourage more students to complete minimum qualifications standards
T4J	Health and education	Administrative costs	Don't over-tax the middle class income earners so they will spend more of their money on consumer goods.
T7x	Refocus on health and education. Stop cutting these.	Stop tax breaks to giant Oil and Gas business. Make adjustment to the sales tax, add PST.	Diversify and invest in non-trade education like technologies.
T3G	Public education and health care.	Making sure private companies pay their taxes as they become due. Do not give corporations, especially oil and gas companies, tax breaks. Shut down The War Room.	Provide opportunities for entrepreneurs who are interested in diversifying Alberta's economy.

T1P	Adequately fund all public services. Public education. Education enrollment growth. Small class sizes in early childhood education. Healthcare. Cap tuition fee increases and rising interest rates on student loans. College and university funding. Assured Income for the Severely Handicapped. Alberta Seniors Benefit. Special Needs Assistance for Seniors. Seniors Lodge Assistance program. Municipalities.	Reverse the corporate tax cut. Stop funding private health care and private education. Ask public employees how to make their work world better and more efficient so money can be saved. Actually listen to them and implement their ideas.	Diversify instead of putting all of our eggs in the oil & gas basket! Continue to offer subsidized child care so parents who want to work can afford to go to work because their child care isn't too expensive.
T7y	Schools	Private sector needs to be cut	Bring oil back
	Your cuts are going to cause a recession. You should focus on not cutting further, restoring funding to Alberta's most vulnerable (eg AISH recipients) and do some work on your revenue side.	With a modest PST Alberta would be able to function like a normal province. Very significant savings can be found in reducing your reliance on outside consultants and other for profit service providers (eg private lawyers, engineers). What I see spent in the public disclosures is very concerning. Also, stop undoing - at great cost - all the NDPs initiatives/projects. This is not conservative management of public funds.	Become more financially stable by working on your revenue side. The tax cuts you implemented have not done anything. Add all the cuts, and the trips to Texas etc that signal desperation to potential investors and you are poised to cause a recession. You may have already done so in Edmonton. Calgary does not seem improved. Ps- the war room and public inquiry into "enemies" is also a signal of desperation to those making investment decisions. Don't make Alberta, my Province and your Province, appear any more embarrassing with this next budget.
T4H	Education health care. Jobs not in the energy sector	Higher taxes for high income earners and corporations	Create more jobs that are not reliant on the energy sector. Support public servant jobs such as teachers, doctors and nurses
T6X	education, healthcare, infrastructure	end the trickle down tax cuts 4.7 billion and the war room 120 million	Yes by ending the trickle down tax cuts, having a PST and supporting Albertans by supporting education healthcare and infrastructure
T2R	Innovation in all industries, diversifying the economy, ensure AISH is brought back to include cost of living increases, education (and remove performance ratings from universities - supporting people to learn and think is incredibly valuable to a successful population).	Putting money into public health and fostering a healthier lifestyle for Albertans will save TONS of money down the road. Active living, healthy eating, stress management.	Support innovation! Bring back funding for the tech sector - this is the future and will enhance our economy for years to come. Invest in sustainable energy and take a lead on exciting projects - this could employ so many Albertans.
	Stop cuts to education, health Care and environment protection	Stop tax cuts, shut down war room, stop handouts to oil and gas. Why spend money pretending to listen to Albertans if you have already made all these bad decisions	Do exactly opposite what the conservatives have been doing for the last 40 years and don't put all in basket (oil,gas). Get over the federal election and stop scaring investors away from Alberta
	1. Education and health care (no cuts because of short- and long-term consequences) 2. Job creation	1. Eliminate \$30 million oil war room 2. Increase corporate taxes	1. Invest in education and training 2. Invest in clean energy technologies 3. Invest in technology initiatives

T1S	Safety nets for the less fortunate, youth health programs. The rest can be do with less services from the government. We can't afford to be everything for everybody. Bring back the Alberta Advantage!!!	Health Care, Resources, you name it! We are \$70B in debt after 4 horrendous years of NDP rule. We have a huge spending problem.	Lower taxes back to a flat tax rate. People are not spending because of high combined Fed/Provincial tax. 49% in my case and that doesn't include property tax increases and other fees!!! I'm tapped out!!! Will have to leave if things don't change.
	Education and health care	By trimming and streamlining government administrative spending. Stopping the subsidies to large government corporation.	Providing incentives for small businesses to encourage local job opportunities
T5G	Education	Wealthy companies and corporations	I don't know
T0M	Education, Healthcare the uses for our oil in Alberta	Bring in a sales tax. Every other province has one	By looking for other ways to use our oil manufacturing etc instead of just looking at a pipeline that is not necessarily going to make any jobs for more than 2 years
t4t	Education, Healthcare, Growing and diversifying the number and types of jobs, investing in rural broadband initiatives, tourism. Introduce a PST	Reduce the number of hospitals/emergency rooms in small rural centres that are within 60 kms of another hospital. Replace with clinics.	Look at the industries that are growing, like IT or AI, not concentrating on industries that have matured and are maybe shrinking like oil. Support broadband initiatives in rural areas, credits to tech and film industries.
T1S	Education	Size of government, particularly ministerial assistants and communications staff. 'War' room Panels	Invest in technology in all fields and expand its' significance in the health sector. Look for and encourage the development of innovative earth-safe solutions to economic diversification.
T2X	Education	A tax on excessive wealth PST.	Funding public services like health care and education
T6V	Education and health care.	Cancel the war room.	Support diversification of industry.
T3G	Healthcare and education are the backbone of a healthy society. We need to take care of everyone and grow our communities. All members of our society deserve quality healthcare and educational institutions that support everyone, no matter how much money they make.	We need to keep businesses accountable and ensure they pay their taxes. Businesses and the rich do not need tax breaks.	The government should support a diverse economic landscape so they should support diversification of industries. The government should also take care of people who are out of work by helping them go back to school and receive training so education is important and should be affordable.
T0C	Education and health care. Without educated healthy Albertans, there will be no growth in the economy and ultimately no income taxes	Stop spending money on committees and useless court cases.	Encourage new technical start-ups to divert from oil and gas industry.
T3G	Cutting costs, taxes, etc for as many [all] Albertans as possible.	Social programs, bureaucracy, pork barrel, advertising, travel, events	Reducing red tape, increasing regulatory environment efficiency (vis a vis reduction of regulations), reducing taxes especially in ways that help micro and small businesses that don't have extensive accounting and legal resources, reducing complexity of taxation structure
T8A	Public services such as healthcare, education, post-secondary education, providing funding for municipalities.	Eliminate the oil industry propaganda, that is, the so-called "war room". Quit surrendering revenue to the energy sector which has rewarded the province by leaving the province, not providing jobs, not paying rural taxes, and leaving orphan wells for the rest of the public to pay for.	It's called INVESTMENT in PEOPLE not a single industry that is weakening. It requires understanding that we need to address revenue and quit hoping for some nostalgia of a return to oil glory. Trickle down economics works only at concentrating wealth. Quit blaming the rest of Canada for Alberta's current problems and start coming up with real solutions, rather than wasting money and time on panels that are restricted to generate answers for pre-determined ideological interests.

T0H	Education at the school level, more supports at the school level. Decrease the size and number of employees at the Central Office level. Less assistant superintendents, coordinators and assistants. This money should be used at the school level.	Upper management and divert monies where it can actually be used to enhance student learning. All that assistant superintendents and coordinators create paperwork and download more to the schools. Simply a way to justify their positions.	Public Education is essential and it will always come with a cost.
T5k	Social services to help people who have fallen into vulnerable positions. Financial subsidies and supports. More affordable housing programs. More support to mental health and addictions services.	Unsure	If every Alberta resident was supported enough to be able to work, there would be tremendous economic growth. Putting more into supports that help vulnerable individuals heal and get better can help them get to a place to be able to seek employment. Mental health supports, addiction supports, affordable housing, affordable childcare.
t5e	Education	Stop giving tax cuts to oil corporations.	Put money into education and healthcare - not the opposite.
T6L	Education, healthcare and social services. Specifically funding for enrollment growth and inflation. Also ensuring that infrastructure generally is not neglected.	Return corporate tax rate to 12%, implement a provincial sales tax on luxury items. Less frivolous travel within mla and premiers office. Less panels to examine things that the government already knows the answers to.	Not cutting public sector spending. With a pst and higher corporate tax rate you would not need to cut.
T6X	Healthcare, education, infrastructure, mental health supports, supports for the disabled	Stop giving out tax cuts to corporations and the wealthy.	Supporting a diverse workforce, not just the oil and gas sector
T4A	Health care, specifically, redesigning the insulin pump program to operate like a health spending account.	reduce elected officials pension benefits and freeze their wages.	Get the oil moving.
T6H	Education.	Cut the government departments and Stop cutting the lower levels of government. Mandate that any cost savings in education and health care happen at the highest levels.	Continue to fight for Albertans at the federal level, but STOP cutting the education and healthcare so deeply. This will and has stifled economic growth. As a middle class family with someone in the education field, I can tell you that we are not spending the same as we have in past years because of the cuts to education and the UNCERTAINTY that this government is creating. THIS GOVERNMENT is stifling the economic growth within it's own employees.
T6V	Economy	No clue	Help business with finances so they can hire more people
T5W	Education (primary, secondary, and post-secondary) and health care. I also think that the government should focus on spending to create better social program, health care, and education and to generate more jobs in those sectors as well as others. Lower unemployment rates mean more money in the hands of citizens that can be spent in our province.	I do not think the budget should be about savings. I think it should be about leveraging industry and the taxes industry generates for a better quality of life for all Albertans. Without well funded public health care and schooling, there is no equality, no possibility for the betterment of people individually and the population as a whole, and no chance of creating innovative industries that can grow and evolve and supply Alberta with jobs and corporate tax dollars when the current oil industry continues to decline.	Trickle down economic theory DOES NOT WORK. This has been proven repeatedly. Cuts to funding and cuts to corporate taxes do not create more jobs or more income for the province. It is foolish at best, and negligent at worst to operate using these budget models. The government needs to support industry development so that we are not dependant on oil. They need to put money into the public sector so that those people retain their jobs and so that they can empower others to be healthy, happy, and well-educated enough so that they can contribute to the economic growth of this province.
T6J	I think they should be focused on education. There really is only one way to improve our future and that is to better prepare the rising generations. However, I think there are a lot of injustices and mismanagement in the school boards and the money doesn't end up going where it should. There needs to be more guidelines and regulations and maybe reworking of the system so the money gets where it needs to be so the children who need support, get it.	I am certain there are many inefficiencies in the bureaucracies of our institutions and the front line workers are taking the hit rather than the people in positions of power who are creating the problems by not streamlining processes and policies. Obviously cuts need to be made, money doesn't grow on trees but money is going places where it's wasted and that's a problem for me.	I think educating people on how to manage their income, would go a long way to help people keep jobs and stimulate the economy through responsible spending. In the end responsible spending will give our economy longevity.

T2J	Helping the energy sector to recover but just as important, if not more so, diversifying into tech and other non-energy industries. Calgary must keep up and compete, if not surpass, the Vancouver, Montreal and Toronto tech sectors, or it will face a rapid decline regardless of the energy sector. As a fiscally conservative person, I think this is worth spending provincial funds, regardless of deficits.	<p>Alerta Health Services is one of the most inefficient organizations in the country for two reasons.</p> <p>First. Reduction of front line workers is not the solution. It is an extremely "top heavy" entity. There are an obscene amount of non front line positions that are grossly overpaid.</p> <p>Second. I personally witness an overwhelming amount of people in lower socioeconomic conditions that have leaned to "scam" the system and essentially live in hospital medical units at an absurd cost to the province. These people have no reason to remain at the hospital, but are allowed to stay as there are no facilities to send them. Increase long term care beds outside of hospitals. That is hands down one of the most important health care policies that can take place.</p>	The Job Creations Tax Cut was a great start. Understandably the government needed to make some cuts to reach but anything such as tech grants, film grants, or other diversifying incentives must not be sacrificed. It is important we remain attractive for corporations by having the lowest taxes possible but we must attract more startups and "new economy" industries. We are falling behind BC and many other jurisdictions in North America. Please bring back grants, funds and incentives to diversify our economy. Let's fill the towers in downtown Calgary with companies tired of the high cost of living and low office space in Vancouver and Toronto.
T6J	Service areas- Nurses, teachers, caregivers	Increase alberta taxes	Turn the tide on the conversation - stop highlighting the negative, focus on positive, make people feel secure so that they spend and take risks. Focus on alternative energy sources. Promote the movie industry & the arts.
T6G	The people of this province. Right now, it feels as if the only thing that you are interested in is the oil and gas sector. There are many other sectors that could use support to help build the vibrant, productive Alberta of the future.	By not spending money on the "War room". Spending money to travel the world to sell oil and gas. The provincial government has a very small role when it comes to pipelines. They are going to be built. Once the product can reach tidewater, I believe that things will turn around.	By supporting emerging industries that will be the focus of Alberta's economy in the future. Recognizing the importance of the green economy.
T5Y	Education, Healthcare, and infrastructure.	Not pissing away 4billion to oil companies with no terms that guarantee they will invest any of those savings back in Alberta.	Support diversification of the economy instead of marginalizing any industry that isn't fucking oil and gas.
T8A	education!!!! this is our future. Green energy this is also our future. Healthcare, can't have a future if you are dead!	Get rid of diploma exams and have universities do entrance exams. Saves cost of marking them, making them and would allow more enrichment in the classroom and more community in education. Tax the rich!!!! give the middle class breaks on taxes this is the group who is doing the bulk of the spending.	Fewer international students let Alberta kids have the spots. They will stay here and work and give back down the road. Our kids shouldn't have such a hard time going to university and nait.
t8a	Infrastructure, roadways, lrt, etc.	government salaries	investment in energy diversity
T1K	Health Education Post Secondary Education Roads and other infrastructure	I believe the government should only build when the economy is down and delay construction during the good times. Building in the good times just makes the Alberta Government's projects fight against private industry thus inflating costs and ultimately draining the public purse. If construction and staffing is created during the off market cycles it would secure a steady workforce and employment and thus more tax revenue. secondly the work force would remain more steady and we would not see unemployment rates jump.	I believe the government should only build when the economy is down and delay construction during the good times. Building in the good times just makes the Alberta Government's projects fight against private industry thus inflating costs and ultimately draining the public purse. If construction and staffing is created during the off market cycles it would secure a steady workforce and employment and thus more tax revenue. secondly the work force would remain more steady and we would not see unemployment rates jump.

T7X	-Focus on investing in Infrastructure; reduce funding on social programming which as French language and status of women's office. -Focus on post secondary school funding to Student, not institutions -Focus on eliminating cost to taxpayers and NOT simply transferring costs to other levels of government or organizations for taxpayers to continue paying - Focus on protection of citizens, limited assistance for people to return to work, real reductions to living costs for taxpayers	MLA pensions - the short term of service to qualify for a pension is offensive and ridiculous. - Eliminate the photo radar cash grab for municipalities - Focus on things that provide real saving to taxpayers not simply to levels government without any savings to the taxpayer. - Savings in Healthcare - Savings in Insurance Industry - Define limits on Municipal spending - ie tax revenues used for social events or buying flowers etc.	- training programs - link municipal funding to the job creation or efficiencies they achieve - stop subsidizing organization that do not generate jobs or are simply social organizations
t7a	Education and shifting our economic dependance on oil production to other fields. Diversify our economy.	Delay non essential infrastructure projects.	Diversify economy.
T8e	Referendum on separation	After a referendum on separation, no carbon tax, no equalization, no bill 69, no bill c 48	Referendum on separation now
T1Y	Reduce size and restructure Alberta government employees, get government back to governing and out of every little issue. reduce government wasted give aways.. Focus on tax reductions, health care, education for Canadians and reduce immigration hand outs..	Staff and department reductions, let business take back business in Alberta we don't need government into everything,	Reduce taxes, let business and Albertans have enough money to stimulate growth.
T0L	Innovation - tech is the new employment industry Incentives for one parent to stay home with children Public funding marriage coaching- marriages that stay together produce healthy future citizens and reduce subsidies for split families with daycare and increased CTB Curriculum overhaul k-12 +including more transferable life and wellness skills Wellness of our youth means less cost to treat them later.	safe injection sites government-funded abortions increase corporate charitable donation tax offset to incentivize them to pour into nonprofits. For every \$1 an NPO's spends it could create up to \$4.77 worth of service a government entity does not have to provide stop renovating old schools at costs that are much more than new build replacements create school remove personal carbon tax rebate - it's an equalization payment and no incentive for low income to speak against the tax tiered medical service options	Grants for Innovation and tech. Grants for mature adults reentering education to update tech skills Mandatory computer science classes from grade 3 to 12
T5P	Education and health care budgets never should have been cut! We will never get back the services this government has already lost.	The "War Room" never should have been created and should be disbanded immediately!! We will not get OUR money back that you (UCP) are spending in such a frivolous manner.	You (UCP) cancelled the programs that the NDP brought in that were encouraging people and companies to invest in Alberta and now you want ideas? You should have looked at what was working already!!
T5W	Health care, education, alternative energy industry	Tax the rich and big business.	Focus on alternate energy industries, tax big business and increase minimum wage to \$18/hr.
T8R	Healthcare and education	In the corporate tax cuts they've created	By not losing 50k since being elected maybe? A large majority of them because of the cuts passed by this governments previous budget.
t6c	Education Health care	Administration Continuing projects that previous administrations have committed to, instead of scrapping them and eating the sunk cost.	Tax preferences to entrepreneurship

T3A	Pipelines Getting us back to work Getting spending back in line; eliminate debt	Public sector salaries; cut back on the number of employees Education Health Care	Get Ottawa's policies on oil and gas changed Change the transfer payment formula Stop Quebec from acting like Princesses and behave like the rest of us.
T6P	Senior, veterans, border security, Alberta recovery.	Prisons, verifying social service recipients I know there are lots of scammers, size of liberals, less big Ottawa pay cheques and retirement packages to parliament, less freebies in Ontario and Montreal, higher booze taxes.	Lower secondary education costs and offer incentives to students.
T8V	Alberta needs to spend at an appropriate level to ensure that we maintain our public services. In particular, health care and education need to be funded at a level to keep up with inflation and population growth, which means it will need to be increased every year. In addition, the government needs to invest in public infrastructure like roads and public transportation.	Contrary to what the MacKinnon report suggests (because it only focused on one side of the equation), Alberta does not have a spending problem, it has a revenue problem. We need to tax at least at the level of the next lowest taxed province in Canada. And we need to stop giving billion-dollar tax breaks to Alberta's wealthiest companies.	Alberta needs to invest in public service workers, particularly in health care and education. It should invest in building public infrastructure like public transit as well as companies that create renewable energy sources.
T5Y	The government needs to get wait times for CTs and MRI lowered.	Look at ER physicians that over order lab and diagnostic imaging. This could save taxpayers millions.	Stop giving tax cuts to the largest corporations. There is no such thing as trickle down economics. Tax savings to not get passed on to employees or consumers.
T6W	Education, healthcare and economic diversification (attracting new industries to Alberta)	Cutting the "War Room", minimizing travel and unnessecary expensing of luxuries for staff.	Trying to actually attract other industries to Alberta (not just Oil & Gas). Rather than no strings attached Corporate tax cuts (which we've seen just ends up in shareholders pockets), the hiring of Albertans should be incentivized through tax credits based upon hiring, setting up headquarters/offices/work sites with Alberta. This would support job creation and help boost our economy by putting money back in the pockets of working-class Albertans, who would in turn spend it buying groceries, going out to eat, shop, support local businesses, etc. Corporate shareholder payouts do nothing for our local economy in the slightest. Putting all our eggs in one basket solely focusing on oil & gas industries is also disasterous because it ties our economy directly to their performance, which is in turn tied to global poltics/events, and largely outside of our control. Diversification should be the primary driving goal of our provincial government.
T5Y	I believe we should focus more spending on healthcare and schooling/academics.	We can find savings by not giving multi-million dollar company's tax cuts and by taxing the 0.1% because even if they get taxed 50% income(just an example) they would still be richer than everyone and able to buy anything they please while places like hospitals have to be short staffed causing worker stress, and affecting patient care, as well as schools not being able to push students to their potentials and offer experiences that will create who they are cause of budget.	We can support public sectors, and also support the innovation of renewable energy like solar panels to be more efficient with energy. Also we can support the refining of oil and gas in alberta so that more jobs can be created and alberta can make more money. And by support i dont mean tax cuts to the corporate side where the top positions will make money and still wont create more jobs in alberta.

T4H	Education and health Fair wages for public employees - no roll backs as this creates insecurity and distrust Job creation Rural crime Seniors	Bureaucracy in many areas is "top heavy" Catholic schools could be eliminated. They are a duplication of the public schools and Alberta is too diverse to fund only one type of Religious school.	Keep public employees, teachers, Drs. and nurses working and secure. Consult and listen too professionals in these areas. Our province can't afford more insecurity. Encourage Apprenticeship Programs in agriculture, technology, senior care, construction, and industry.
T2R	Transit and focus on getting new industries into Alberta to create jobs	Freezing government employee bonuses, pay raises.	We need to focus on new industries and stop taxing small businesses out of business
T6j	Public healthcare and infrastructure to accommodate Alberta's aging population without funds to access private health services.	By halting, or not creating corporate circlejerks like the energy 'war room' and not feeding into voodoo economic processes.	Supporting the public sector, leading the innovation of renewable energy production and invention, supporting the refining of oil and gas production within our province, providing education grants for those transitioning from oil/gas sectors into alt. Energy sectors.
T6C	education. healthcare affordable housing/ homeless aish	tax large corporations. sales tax less excess top executive spending	tax breaks to small businesses. entice inovative /tech sector jobs
T6J	Health care, education, affordable housing, Harm reduction strategies, environment, arts and culture.	Corporate tax incentives, unpaid oil and gas royalties. Don.t waste public money on prejudicial processes like "the war room"	Invest in infrastructure and public services. Invest in changing technologies in energy industry like everyone else on the planet. ie. geo thermal wind and solar.
T8V	We need to curb our spending. Over the past 4 years money has been wasted focusing on keeping union jobs and government jobs, with no concern to the private sector that carries this province. Focus on savings, curb spending, in other words stay the course! Ralph Klein did it, you can too	Cut union demands to a realistic raise. Slightly below yearly inflation. Privatize pension by going provincial, have our own police force. Reduce layers of administrative services get Alberta health under control.	Eliminate red tape, start building facilities in our own province to process our own products (LNG, liquid propane, butane, plastics, etc)
t3e	provide sufficient funding/grants on education, as children are our future generations	eliminate unnecessary spending, such as admin cost, encourage applicants apply applications on line, for example, one application for different programs.	develop other source of revenues, such as tourism, wind/sun energy, not only rely on the oil and gas energy
T0G	Healthcare. Non privatization.	Ems transfers. Eliminate the Dr federal fee/bonus. Use Telehealth to assess simple things which would otherwise be hours or days worth of ambulance crews.	Invest in training workers and creating. Opportunities in future economic opportunities like A.I. and wind power.
	Improving and strengthening social services (including health and education spending), diversification of economy not including oil production, limit dental fees and enforcing adherence to dental fee guide.	Significant savings from reducing corporate tax reductions. Eliminating "war room". Revise physician payments and eliminate PCNs. There is a report identifying the sheer lack of value for millions of dollars spent for what should be a standard business expectation that is required to practice in Alberta.	Diversify, support those who are working in dying fields of oil and coal production.
T9G	Health and education, protection of jobs that ensure our populations learning and health. Our population is getting older and sicker. Medical staff are over worked and under supplied. Changing RN positions to LPN positions are putting patients at risk for health complications and critical incidences. Teachers are over worked with large class sizes and are not able to help any student that is struggling with a concept.	Stop giving oil companies tax breaks, get rid of ineffective "war rooms", cut MLA, and premiere wages and pensions.	Stop cutting wages and jobs
t5t	Health & education	Less politicians salaries	Build pipeline but also not just rely on the oil and gas sector!
t5t	Health & education	Less politicians salaries	Build pipeline but also not just rely on the oil and gas sector!

T2E	Healthcare and Education.	Ask your front line workers. They are the ones doing the work and know what can be cut.	Invest in Alberta's Infrastructure.
T8N	Public Schools are needed to pay teachers so kids can learn in better environments without having a lot of		Invest in the public sector
T6E	-education and health -keep life affordable for Albertans -spend \$\$ on taking care of the most vulnerable people in our province	cut the energy war room end corporate tax cut	-by providing stable front line services -promoting renewable energy and economic diversification -\$25/day daycare so that women can rejoin the workforce
T7z	Getting back on budget. Getting spending in line with revenue.	Tough question. How about we try to work with what we have. I hope you can find good leaders and good stewardship of our provincial money. Every business is in the same boat, getting the right people who have integrity and want to do what is right. Private business is better then government run.	Lower corporate taxes and allow the people to drive business and opportunities. I think how the UCP are out there to encourage investment from other countries and big businesses is the proper use of government. I am fine with tax breaks to encourage large scale growth.
T4S	Job creation. Diversifying Alberta's economy so we aren't forced to endure boom/bust with the Oil Field.	Tax big corporations more. Collect owed taxes from Oil and Gas.	Support Child Care so BOTH parents can work and become useful members of society. Examine the Marijuana industry for possible expansion and job creation. Low costs of goods so people are more inclined to purchase as well as increase tourism to Alberta.
T5G	Education Healthcare- more jobs= less over time = saving money and reduced stress on staff Universal pharmacare- if citizens receive the drugs they need and may not be able to afford, less will end up in the hospital and therefore decrease hospital visits Noting to being more eco friendly <u>Ban single use plastic</u>	Less foreign aid, less aid for refugees and immigrants. No tax cuts for big corporations	Invest in green energy
T1X	education, don't introduce the performance/outcome based model for PSE funding because it fundamentally misunderstands the purpose of an education, ie. getting a high paying job right out of school is not the only positive outcome of an education, the liberal arts make us better people and you don't seem to understand that <u>health care, don't introduce privatization</u>	eliminate the ridiculous war room, what an embarrassment, fire the twitter trolls like Matt Wolf who attack and undermine citizens you also represent, raise corporate taxes, premiere and MLAs should take a bigger pay cut	stop making cuts, they are leading to job losses; stop removing incentives for tech start ups; listen to your critics, take out your earplugs (literally! that "joke" was not funny, it was insulting), the attitude of this government is disgusting and entitled and is scaring away investment, I know people who are leaving because of attitude and policies of this government
T5X	Education and health, addictions programs	Taxes	Less rules for entrepreneurs and immigrants working currently in Canada that want to be permanent residents

T3P	<p>Primary, secondary, and post-secondary education in Alberta are among the best in Canada, even North America. Keep it that way by investing in schools and teachers and students. Children are our future, they need a proper education to make it to the future and improve society. Class sizes as large as they are prevent students from getting adequate education from their teachers.</p> <p>Healthcare & social services are essential to a developed and democratic province; by reducing their funding you are creating a province that is less able to allow its citizens to participate in democracy and our essential infrastructure will begin to fail at the expense of the most vulnerable people. Invest in healthcare and social services instead of cutting funding and creating a massive loss of jobs.</p> <p>Build inter-city transit.</p>	<p>Stop giving large tax breaks to corporations, if they can only function by paying no taxes, they should not exist, help the workers and their families instead of the corporation and their board members.</p> <p>Create a provincial carbon tax.</p> <p>Create a provincial sales tax.</p>	<p>Give public services enough financial aid to give workers their jobs back.</p> <p>Start offering training programs and tax breaks to former employees of oil and gas companies who are looking to get new skills for a different field or who are looking to go back to school so they and their families can properly take care of themselves and plan for their future.</p>
	<p>Your proposed budget cuts are revolting! All Albertans need a strong public health care system. An X-ray machine costs the same for a public or a private clinic, but the private one needs to add in PROFIT! How could that be cheaper! Even a farmer like me can see that. My mom is in a hospital!</p>	<p>Eliminate excessive tax relief for businesses that do not need it, given that they are showing more than healthy profits. Correct our royalties structure so it's in line with Norway's. Start collecting a SENSIBLE amount in taxes, given that ALL provinces collect way more than Alta. does!</p>	<p>Invest in public transportation projects, like LRT expansion, etc. Invest in developing green energy producers. Invest in green energy product manufacturers. Invest in home retrofit programs to increase local demand for green energy products. Invest in oil upgrading locally.</p>
T8E	<p>I think cutting the budget of Alberta Innovates was short sighted. I see many good ideas here. Maybe the focus should be more on "forced/assisted commercialization" to maximize the return from government contributions sooner.</p>	<p>Healthcare - but NOT front line staff (nurses and doctors). The bureaucracy and middle management in healthcare is where the zero value-added exists. However I don't think cutting the budget will do it as management isn't going to volunteer their positions. It will need a dedicated team that is compensated on their financial success. There are lots of examples out there we don't need to reinvent the wheel.</p> <p>Healthcare - I continue to hear stories of emergency waiting rooms full of non-emergency patients. Set up a triage at reception to major hospitals with an attached clinic that doesn't require the specialized skills and facilities of a true emergency center.</p> <p>Education - why do we have a fully funded public and catholic system and duplication of bureaucracies, facilities, bussing, etc? One education system with the option of going to a private school. As an accommodation for Catholics (or other religions) offer religion as an option.</p>	<p>Offer private medicine as an alternative to the public system for the wealthy - but they have to pay incrementally. Expand that to make Alberta a healthcare tourism center for the wealthy of the world.</p> <p>Targeted immigration. Fasttrack those with skills that can advance our economy - i.e. Anyone with AI skills, etc</p> <p>Encourage more privatization of government services. i.e. why do municipalities have hydro-vacs when we have numerous industries where this is their expertise. They will be cheaper and provide better service than government.</p>

T9N	Diversification of the economy. Mental Health of adults and youth. Health care.	effective prevention programs. It may be expensive at the beginning but would save money if they are effective. Fewer people committing crime, medically healthy people not going to the hospital or doctor as much. Fewer people in prison or committing crime, less need for police etc. But you have to invest in training and providing the necessary resources. Cutting taxes so families can afford to stay home with their children and having healthier, less stressed families.	Provide opportunities for work people to leave their job to train for new careers. Tax breaks for people researching alternative and new business opportunities. Offer more support for new business.
T3H	Health care	Thorough review of upper and middle management in AHS and EMS.	Unsure
T4J	We need to spend time diversifying this economy. You cant entirely base a huge provincial economy on one export it's just fiscally irresponsible.	Probably in the money given to big oil every year, maybe having proper royalties so our govt can make money from the current land and water currently being polluted in Fort Mac and beyond.	Yes however that doesnt mean just handing the money over to what company comes and takes it first. We need infrastructure projects, a couple of nuclear power plants and investment in public transit across the province. If we opened accessibility to work across the province there would be many more working albertans.
T0h	Health and education. Roll back all your cuts and restore higher taxes on corporations instead.	Restore higher taxes on corporations.	Support Albertans' economic situations by stop gauging them on tuition, car insurance, health and education as the government is currently doing or allowing others to do.
T6R	Healthcare is THE most important priority, then Education.	Reduce 'middle management' positions in ALL government departments/ministries.	Unsure
	Education, Health Care, Public Safety	Look into the salaries of those in the higher positions in Education, health care and all other public sectors. Rarely are the front line workers the ones getting paid extremely well.	Trimming fat from the top.
T0A	Healthcare Education, bring back the grants and increase funding as enrollment grows. We can't work with the same amount of money and more students. We have a world class system because of proper funding. You jeopardize that by not funding appropriately. You send the message you only care about the wealthy, not the average Albertan--who cannot afford to send students to private schools.	Corporate tax breaks. Eliminate the war room.	Invest in other industries that are not reliant on fossil fuel. Any good stockbroker knows not to put all your eggs in one basket. Why is the government trying to do this? It's irresponsible.

T5K	support the most vulnerable populations (Children services, disabilities, seniors) diversifying our economy (technology and manufacturing sectors) not just oil	costs that will be incurred by privatization of services. super high salaries (not the public servants but the CEO's, Dr's, and high paid consultants). stop paying consultants - you have highly skilled workers (often they leave public service positions only to come back as consultants paid 3x's as much - and worse, there's middle men that get rich too)	invest in your public servants incentivize/invest in small to medium enterprises, positioned to grow, who are less likely to move headquarters a decent minimum wage benefits the masses and encourages them to spend stop the fear mongering of service cuts - it impacts everyone, not just public servants. All Albertan's have dialed back spending as cuts to government services has a trickle down effect Don't allow private service providers to gouge the public - if my child care, car/home insurance, energy bills, cost of purchasing big things, etc. rise - i will dial back my spending on everything else that stimulates the economy introduce a small provincial tax, along with driving for more transparent fiscal accountability. even a single one percent provincial tax on luxury items would help (and go mostly unnoticed)
T6E	Education	By raising taxes on oil and gas companies.	Invest in green energy projects. In view of the global interest, this should pay off soon!
	Getting the pipeline back on track to create jobs and revenue for Alberta Ensure Frontline healthcare staffing - and increasing incentives for rural nursing across the province, many other provinces have provincial student loan forgiveness for nurses/physicians working in rural communities. Keep the subsidized childcare - you can create jobs, but if people still can't afford childcare, then the jobs are useless. Focus on hiring Alberta companies and workers	If the nursing/healthcare workers are not getting raises in wages, then there should be no raises for all of AHS leadership and no raises for the UPC government. The cost of living continues to rise for everyone, so everyone should feel the squeeze of no raises - including the government. If the government wants to lead by example and show they are also Albertans, then they should be showing that they are will to accept 'no raises' or 'roll backs', one of those wages would equal multiple wages of the working class, same goes for higher leadership within Alberta health Services. Same goes for wage roll backs, if Albertans are expected to have wage roll backs, the roll backs should start at the top of the pyramid and not the bottom.	Look at developing Alberta resources that are profitable, keep the business in Alberta and not outsource.
T2K	Creating jobs through education and health care. Focus on services that are government funded, rather than support for private industry. Support for those who need it - AISH recipients, young families, students.	Duplication of services in middle management. Lowering financial support for private industry, whilst still maintaining legislative backing.	By encouraging jobs in health care, particularly those that focus on wellness. Contribution to provincial infrastructure projects that create jobs and improve the life in general.
T4N	The government's spending priorities should be focused on the needs of the people in the province of Alberta. Government can and should look to diversifying Alberta's economy.	Government can find savings within the civil service; perhaps audits of high ranking civil servants would be beneficial. Looking at positions that may be duplicates; or reducing the number of full time positions that are redundant. Government can also look at reducing the number of perks that are given to cabinet ministers. They can drive their own car.	Government can support job creation by implementing opportunities for diversification; eventually the number of oilfield jobs will be reduced. New opportunities for research of alternate energy sources should be an area of investigation.

T5C	<p>Public Education.</p> <p>Diversification from dependence on the oil and gas industries.</p> <p>Tackle climate change.</p> <p>Nuclear, wind and solar power to reduce greenhouse emissions.</p>	<p>Introduce a PST, collect owed business taxes, stop cutting corporate taxes. Alberta has an income problem more than a spending problem.</p> <p>Introduce a revenue-neutral price on pollution with funds directed to job creation in renewable resource sectors.</p> <p>Savings could be found by amalgamating the Catholic and Public school boards.</p> <p>Savings could be found by providing low-cost childcare so that women can become tax-payers.</p> <p>Savings in the health industry could be found in centralizing lab-testing facilities.</p>	<p>By supporting the diversification from oil and gas. Create jobs in retrofitting homes to be more efficient. Develop an incentive program for people to upgrade appliances, windows, insulation, and home heating.</p> <p>Develop a high-speed rail corridor between Calgary and Edmonton to further twin the economies.</p>
T8N	<p>education is an investment in our future health care cuts serve no one investing in diversifying our economy. this is 2020 - we should make decisions that reflect the times. climate change - this cannot be ignored</p>	<p>Stop spending money on panels (Fair Deal Panel, McKinnon report).</p> <p>Cut Canadian Energy Centre(energy war room) stop spending money on "inquiries" that give us reports on things we already know (Inquiry into foreign funding of environmental groups)</p> <p>These are clearly politically charged initiatives that are unnecessary.</p>	<p>diversifying our economy and not relying so heavily on the oil industry</p> <p>alternative energy - where does Alberta's future lie?</p>
T0K	<p>Social Programs / Housing / Healthcare / Healthy Lifestyle Support</p> <p>Education</p> <p>Maintain and expand Infrastructure including Parks and Recreation.</p> <p>Maintain infrastructure needed for irrigation and flood mitigation.</p> <p>Maintain public lands on behalf of the public.</p>	<p>Collect all resource revenue on public lands that has been going to the lessees of those lands.</p>	<p>Support infrastructure projects that will have a very long term impact / payoff and only possible with public funds.</p> <p>Eyremore dam in the Bow River.</p> <p>Deadhorse reservoir in the BRID irrigation district.</p> <p>Other capital works in order to drought and flood proof Alberta</p>
T2G	<p>Education and Health</p>	<p>Get rid of teachers convention.</p>	<p>Education.</p>
T9e	<p>Health care and Child Care (the more able bodied people we have working while their children are taken care of, the more taxable income we create)</p>	<p>Reduce policing of homeless individuals</p>	<p>Diversify- stop relying on oil. It will run out and is part of an endless boom and bust cycle that the average Albertan seems to forget about, even to this day, as soon as we hit a Boom. Start investing in Wind and Solar, and create jobs in those fields.</p>
T6c	<p>Those with a proven return on investment: early childhood education, preventative healthcare, supports for those who have experienced trauma and poverty, and advanced education and job grants</p>	<p>Global investing. Right now too many eggs are in a dying basket subject to global whims of oil only. Boards need more scrutiny. Taxes need to be taken from those who make money including oil and gas companies. Taxes should be fair. Not in health care and education.</p>	<p>Invest in tech, invest in green energy, support and educate kids to be entrepreneurial, create places to holistically raise a family so that entrepreneurs can locate across the province and give back</p>

T1H	Education should be of the highest priority. The money allocated to Education helps to educate the entire child throughout their life and gets them headed to the world or work. Without the needed increase to BASIC funding for all Kindergarten to Grade 12 students these students will not be ready for what is needed for occupations in the near and distant future. Costs for student supplies, funds needed to keep schools upgraded, funding to run programs for students have all increased dramatically over the past number of years, and no increase to basic funding has or is planned to occur for at least 4 more years. This is in poor judgement I believe on the government's part.	Collection of tax dollars from businesses who have been exempt or have not seen increases in many years. Oil and Gas have outstanding tax debt upwards of \$173,000,000; it is not perfect, but it is a start. Another suggestion could be the introduction of a provincial sales tax of 3%. This could bring in Millions of dollars to help out areas such as education. Cutting jobs in specific needed occupations such as education and health care is not the way to go!	The only way is to provide jobs in all sectors of the economy, not just the oil and gas industry (which seems to be the only focus for the UCP government). While I understand that most of our income comes from oil and gas, there are also other avenues (businesses) who could provide more to our province. Areas such as technology and other forms of energy (solar, wind, biofuels, etc.).
T5E	Education, healthcare, homeless people including are war veterans making sure there basic necessities are covered ! Incredible why this not a priority	Don't allow foolish spending ie Trudeau's extremely pricey holidays that is taxpayers have to pay for ? Decrease wages of members of parliament and allow a realistic wage ie \$80,000 per yer to live	Those who at un employed should be made to take a corse on how to get a job ! Or you don't get any income help people find work ? This will increase economic growth
T5w	Education and health care	Parliament salaries	Small business grants for new jobs
T5B	Security, healthcare, and education respectively as well as investing in green energy options, especially solar	Freezing the funding provided to public sector workers, as they already receive salaries sufficient to meet a satisfactory quality of life; that being said, cutting back salaries may be going to far, instead having a 3-4 salary cap may help get the books in order. Removing the public funding of abortions in Alberta would save a great deal of healthcare funding, which can be used for any number of other things that heal and give life.	Investing in renewable energy would provide new jobs in the energy sector. It may be possible to have some sort of grants for small businesses who have difficulties hiring with the high minimum wage.
T5G	Economy, jobs, innovation	Legislature - Alberta per capita cost way more than others Roads - should sold to private industry Orphan well- the landowners collected fees all this time for nothing. Should take the liability. All regulation should be funded by industry.	Cut taxes. Eliminate red tape. Fund innovation.

T0J	<p>People (i.e. Public sector workers in health, education, social services such as Child & Family Services, Disability Services/FSCD, legal, etc.), new energy efficient transportation options/public transit, maintaining infrastructure and providing tax incentives to support companies that are developing renewable energies to help diversify this dying economy.</p>	<p>Having corporations pay their fair share in taxes. As a small business owner, I can honestly say that I can afford to pay more in corporate taxes than I am being asked to do.</p> <p>Eliminating tax breaks and freebies to large oil and gas companies that are essentially stores for antiquated technology that is on its way out.</p>	<p>See the above two statements.</p> <p>The provincial government needs to support public service jobs being maintained at decent wages. If you do NOT do this, you will see reductions in spending and will send this province into recession. Small business owners are avoiding engaging in any expansion or financial commitments as they are quite aware that if health and education sector jobs are likely to be cut, there will be less spending; this means LESS potential for small business growth despite your ridiculous corporate tax cut promises. Paying less tax on no income is easy! If public sector workers jobs are at risk, not only does this mean businesses cannot expand, but it also means:</p> <ul style="list-style-type: none"> - risk of foreclosures (and a crappy housing market) - more businesses closing - less demand for oil and gas (because no one will need to drive to their jobs) ...etc. <p>The current pressure that you are putting on the public service is harming Albertans.</p> <p>Stop throwing around divisive rhetoric - it doesn't help.</p>
T8A	<p>Education. Students are consistently falling short in all fields because they cannot get the right support needed to succeed. Their teachers' abilities to invest sufficient time into each student is stretched too thin due to larger class sizes, limited to no assistance with behavioral issues and the rapid decline of mental health among teachers. This spiraling descent must stop. Provide teachers with the supports that they are desperately asking for and you will see an increase in grades. This will lead to more students moving into higher levels of academia.</p> <p>Education is not heavy to carry.</p>	<p>Search for efficiencies in all programs; rather than cutting a few completely.</p>	<p>Eliminate minimum wage. Employees should be paid what they believe their work is worth.</p>
T5Y	<p>Healthcare, Education, without good healthcare and education a society will deteriorate.</p>	<p>I think there are too many government committees - how much do these cost? What is the point of having a committee looking into redundant expenditures, isn't that redundant!</p>	<p>Have hiring an incentive for employers! Training potential employees, or retraining employees to support the changes that are happening.</p> <p>The tax breaks for big industry has back fired with 3 major corporations leaving Alberta after getting millions of dollars in tax break. don't think that worked well.</p>
T8N	<p>education, healthcare, vulnerable communities</p>	<p>defund the war room</p>	<p>encourage diversification of the economy</p>

T2J	support our farmers and food processors to grow these two industries.	there are too many managers and not enough front line staff to do the work of the public service. for results we need good planning (but with less levels of management) and we absolutely must have the people in place to implement the strategies that will effect change. The decision makers in management are way too far away from the people and the companies that we in GOA serve. reduce that distance for more efficient and effective programming	we need to underpin and support the industries that are experiencing growth or that have the potential to contribute more to our economy and to the quality of life for Albertans. This includes the agricultural and food industry, which is where our rural population resides. We must process more of our food ingredients which can help to grow the economies on our towns and cities. Agriculture and food processing!!
T7Z	Health Care Education Environmental Clean Up Infrastructure Re-training oil workers	War Room Eliminate all monies spent promoting oil and gas Quit paying Kenney as he has done nothing to earn it - that goes for most of you. Eliminate most subsidies to farmers, all to oil and gas Make everyone pay their taxes - I do and I expect corporations to do the same - no exceptions!	Diversify the economy, retrain oil/gas workers or send them to BC or Ont. ala Klein. Institute a provincial sales tax as has been recommended by economist for years, you people have been at this for 40 years and still don't get it, as we go through these repeated cycles of boom bust - if it wasn't for this Trudeau or his father the Conservatives who have destroyed this province for the benefit of a select few would blame the mess on whom? It is YOUR fiscal mismanagement of the provinces resources that have put us in this mess - now man (or women) up and correct it. You want advice on how to spend my money - when in fact you will re-insert your heads up your collective asses and continue on the same path because it is all you know.
T5K	Health	17(1)	Buy local
t3r	Alberta needs to spend at an appropriate level to ensure that we maintain our public services. In particular, health care and education need to be funded at a level to keep up with inflation and population growth, which means it will need to be increased every year. In addition, the government needs to invest in public infrastructure like roads and public transportation. stop giving public money to private business	Contrary to what the MacKinnon report suggests (because it only focused on one side of the equation), Alberta does not have a spending problem, it has a revenue problem. We need to tax at least at the level of the next lowest taxed province in Canada. And we need to stop giving billion-dollar tax breaks to Alberta's wealthiest companies.	Alberta needs to invest in public service workers, particularly in health care and education. It should invest in building public infrastructure like public transit as well as companies that create renewable energy sources. Move on from oil and gas, its dead.

	education, healthcare, renewable/green resources	implement a provincial sales tax	put more money into education and make it easier to attend and get training in different fields that average people are able to access maybe through their current employers
T8N	Healthcare, Education, finding new ways to source energy, and job creation not job loss.	Taking pay cuts in higher levels of management, in companies such as Alberta Health Services.	Shift the focus away from oil, finding alternatives besides oil for energy purposes. Stopping equalization payments to other provinces and putting that money back into our own province.
t6j	education, infrastructure, social safety net	reducing corporate handouts, closing the "war room",	more programs to encourage entrepreneurs and small and mid sized business. diversify the economy to rely less on the whims of world oil prices.
T0B	Keeping jobs in all aspects of all if alberta.	Not on pensions leave our senior pensions alone. Stay out of employees pensions and teachers pensions we saved that money for years keep u r hands out of it.	Ues everyone should be employed. Oil workers need to go back to school and complete education they need to get ahead like the rest of us do.
T8N	Diversifying the Alberta economy to create and sustain jobs. Fight the federal government to revisit the transfer payments and have them reduced or eliminated to any provinces that are in budget surplus or economic boom such as Quebec. Support recycling and waste management companies to help reduce our garbage that goes to landfill and reduce our carbon footprint. Support the oil and gas industry so that it can move forward with projects and grow our economy.	I believe that there is too much wastage in our health care system when it comes to supplies and management of health care facilities. I still believe that in hard economic times such as we are in now that no funding should be given or they should have decreased funding to non profit and art programs that do not support the well being and necessity of Alberta citizens. Our tax dollars go to support so many useless organizations that I dont feel that these should be supported any longer.	I believe that supporting our post-secondary students with reduced or no interest student loans once they graduate will keep our highly skilled and educated students in our province where they will spend money to support the economy and help it prosper and grow. Otherwise, many students with high tuition fees and high student loans repayments will opt out of education and/or move out of province instead of helping Alberta prosper. Support small business and new business enterprises to diversify our economy.
T6C	Social programs, education, and healthcare.	No more corporate handouts! Raise taxes on wealthy Albertans.	Focus on alternative energy sources and retrain former oil and gas workers to fill jobs created by alternative energy sources.
T8L	Health care and education are a huge part of the budget. But by cutting front line workers and limited diagnostic procedures for example, you are putting the public at risk. At eventually it's catch up time and then we need to spend a lot of money to get back to where we need to be	In health care, my field, talk to the workers. We know where a lot of the waste is. Get the ordering doctors to quit using Diagnostic Imagine like a free for all. It is ridiculous the amount of tests that are ordered.	Well by getting rid of people from jobs that the UCP doesn't seem as important (healthcare, education)..... that's not creating jobs !
T6h	Education and Health. Sure, it's nice to have money around but not if the consequences is our population is sick and stupid.	All these think tanks and panels. They are just confirming what you want to do anyway. They are not bipartisan.	Tax people who can afford it like corporations and the super rich.
	Education, specifically classroom sizes and sufficient support staff. There's no way a grade 3 class should have to have 36 students in it.	Within their own departments. The majority of the private sector don't get pensions, paid days off, sick days, annual raises, vehicle allowances, etc, etc. So much waste.	Support the resource sector, get the pipeline(s) and refineries built. Support education and health care, don't cut it back.
T4P	Education, child care, health care, infrastructure, small buisness	Equalization payments and stop buying foreign oil and gas	Support local business and support Canadian oil and gas
T6W	healthcare and education	Large corporations	Yes
T4L	Post-secondary education, public education (k-12), environmental conservation and climate justice	Increasing tax's for oil companies and CEO's	Support young people and expanding markets like biotech, also supporting social services
T4L	Post-secondary education, public education (k-12), environmental conservation and climate justice	Increasing tax's for oil companies and CEO's	Support young people and expanding markets like biotech, also supporting social services

T0m	Cut back budgets. Our government has grown far too large.	Government jobs. The NDP INCREASED government jobs while private sector jobs were being cut all over the province. It's time government employment reflected the realities of our economy.	Cut taxes and let private sector companies thrive. We need to grow private sector jobs and not public sector jobs.
T3H	Healthcare, Education, infrastructure	Maintain provincial business taxes as the former higher rate. We were already low compared to the rest of Canada. Implement a 3% Retail Sales Tax, with legislation guaranteeing it all goes to Health and Education and increasing the funding as needed based on population growth. Budget surpluses should go to our depleted Heritage Fund.	Invest in supporting new technologies IE software, gaming AI development. Increase Business Taxes back to former levels. Invest in building our business in other industries than oil and gas. Solar, Wind, Methane, Battery Tech. etc.
T6B	Health care, education	Carbon tax	Diversify the economy as the ndp were in the midst of doing
T5K	Education, healthcare, and infrastructure.	Higher taxes for the wealthy.	Diversify Alberta's economy! We don't need to stop oil, but we can't rely on it as much as we are now. We need to diversify our economy to ensure we're healthy for the future
T5W	Education, Environment, diversifying economy	Sales tax	Allow free enterprise to take care of it and focus on other priorities like education and environmental.
	Health care and education. Grants for crown land, too, but that ship has evidently already left the harbour.	I'd like to hear about where the government might find alternative sources of revenue — pretty one-tracked mentality right from the get-go that everything needs cutting. Consumption tax? Heaven forbid a small sales tax? We Collectively rely on the government for services; those services are largely deemed necessary to a balanced, healthy, functioning, rich (in all senses of the word: there are <u>more than one</u>) society.	Incentivizing energy diversification. I'm not anti-oil — on the contrary. The actual mechanism of doing that is well outside my expertise.
T1V	Maintaining and enhancing public services and the public delivery of those services!	Start taxing Oil and Gas and other large profitable corporations and stop nickel and diming Vulnerable Albertans!	Definitely not the way you are not doing it now. Quit making scapegoats of public service providers and start listening to the actual experts not your political hacks!
T5k	Addiction, mental health, social supports! Early child intervention supports. Support for small and local businesses.	Less hand outs to big companies. Fiscal responsible budgets while still maintaining social supports	Support small and local businesses rather than giant corporations
t5g	waste of overpaid officials, stop the corruption and subsidizing the oil and gas industries, the legal industry.	Family courts, as in many other modern jurisdictions, equal parenting by default, only deviate in exceptions. That is all backed up by scientific evidence for years. They saved 100's of millions per jurisdiction. Alberta aka Canada is about 40 years behind. It is the same with MEP Alberta, very inefficient, incompetent people/directors, we have seen this for many years. Make them accountable, as no one is there and it is a well known mess. Health care, over time of nurses, poor HR planning Education, do away with all the little holy houses, merge and make it more efficient so teachers can focus on teaching, not the bureaucrazy. Social services, make people accountable, you will see what happens...	expand apprenticeships, stop importing labour as we have enough, provide incentives for corporations for added value hands on training (please do not subsidize hazy wazy training, e.g. law, policies etc.), promote hiring older work force (50 plus...) as they often can't get jobs....discriminated. Expand added value agriculture technology and industry, many smaller countries like Denmark, Netherlands, Germany are bigger agricultural countries on export/business than Canada which is so far behind

T5W	- schools (maintenance, teachers & supper staff) - maintaining infrastructure and hospitals	- cut subsidy childcare for middle class (keep those in most need) - covering cost of expensive medicine when then is a non-brand alternative - within government (being more mindful of the items being claimed by those working for government) - I've heard government jobs are pretty cushy (great pensions, some areas are relaxed as far as workload), perhaps ensuring everyone is at capacity. I do think it should be a desirable/good job as to attract good candidates.	Continue to invest in alternatives to oil and gas
T3B	Education	I am a high school teacher. During exams in Jan and June, many teachers leave their schools to mark Diploma Exams in Edmonton. Most schools call in substitute teachers to do the absent teachers exam supervision duties. These subs are paid by the government. But some schools try to save the government money by having absent teachers do their supervision duties before they leave and therefore not calling in substitute teachers. Teachers who do not leave to mark do their supervision duties after the markers leave. All schools should have the marking teachers do their supervision duties before they leave so the government can save money on bringing in substitute teachers.	See above answer
	Public Health. We need investment into innovations that can change our system to be proactive.	By investing in projects and ideas which are efficient and save money over time.	Have the minimum wage at livable wage range. Support those most vulnerable. Provide incentives for business creations (bottom up).
T6H	The general public's health and mental well-being. Caring about the worldly stresses being put on families and not adding additional stresses in the removal of services.	Subsidies to large profitable companies. The current government is looking to privatize sections of government on the mentality that the private sector is better due to profit. If that's the case then the private sector shouldn't need any help from government as the government is considered incompetent compared to the superior private sector at getting things done. With that logic the profitable private companies should be able to be profitable without government help.	Invest in new renewable energy and technology sector as those are industries on the rise around the world and will require a large labor force like any energy industry.
t8h	Infrastructure, Education (all levels), Innovation and Health.	Open up more convalescing care beds rather than having patients recover in acute care beds when they do not require acute care. Acute care beds are for costlier.	Infrastructure spending. Corporate tax cuts create relatively minimal new jobs. Whereas Infrastructure spending creates immediate Jobs as well as providing us with the infrastructure assets.
t3a	Public education.	Combine public and catholic school districts. Cut the number of high level administrators in half and spend all that extra money on the children.	Providing excellent public education so it prepares future generations for the workforce.
T6G	environmental responsibility and renewable resources. Stop subsidizing oil/gas development - divert those resources to cleaning up the mess: abandoned oil wells. Lots of work to be done in that industry.	In post-secondary education, reduce the duplication/overlap of programs among our universities. In Health, reduce the number of contractors. In all departments, reduce the number of managers, and ensure they are managing staff, not writing policy.	Invest in renewable resources. Get people working to clean up abandoned well sites. Develop more innovative wood products in Alberta instead of shipping out raw logs.

T0J	Infrastructure and Creating a Provincial Police Force	Health Care System. The overtime and shift switching is taking advantage of the system. Staff book off their own shift and take a different shift at a higher rate of pay. Benefits are costing a fortune. Way too many people in management.	Do everything they can to turn government jobs back to the private sector. Too many government employees doing jobs that could be contracted to the much more efficient private sector.
T0C	Health care and education need to be funded at a level to keep up with inflation and population growth, which means it will need to be increased every year. In addition, the government needs to invest in public infrastructure like roads and public transportation.	Alberta has a revenue problem. We need to tax at least at the level of the next lowest taxed province in Canada. And we need to stop giving billion-dollar tax breaks to Alberta's wealthiest companies.	Alberta needs to invest in public service workers, particularly in health care and education. It should invest in building public infrastructure like public transit as well as companies that create renewable energy sources.
T5X	Education, health care, diversifying the economy, jobs, oil sands sustainability	Bureaucracy, reduce tax breaks for big business	Diversifying the economy, investment in education
T4J	Alberta needs to spend at an appropriate level to ensure that we maintain our public services. In particular, health care and education need to be funded at a level to keep up with inflation, population growth, and an aging population, which means it will need to be increased every year. In addition, the government needs to invest in public infrastructures like roads and public transportation. Departments like the Office of the Public Guardian and Trustee need to have an increase in funding. There are patients stuck in acute care due to a lack of alternate decision making. Guardianship and Trusteeship needs to be in place as the private Continuing Care facilities require this to be in place before people can move in. This continues to be a stress on the healthcare system. Financial benefit programs (AISH, Alberta Seniors Benefits, and GIS - which is federal) needs to have more staffing as again people are being stuck in acute care while waiting for finances to be in place before people can be placed in Continuing Care. The private facilities will not admit without guarantee of payment.	Contrary to what the MacKinnon report suggests (because it only focused on one side of the equation), Alberta does not have a spending problem, it has a revenue problem. We need to tax at least at the level of the next lowest taxed province in Canada. And we need to stop giving billion-dollar tax breaks to Alberta's wealthiest companies. In order to save money, you need to strategically increase funding to agencies. Underfunding delays getting people out of acute care faster. If you increase funding to certain areas to make them work better you will have fewer people stuck in acute care medical beds. Fund the Office of the Public Guardian and Trustee. Ensure that benefit programs such as AISH and Alberta Seniors Benefits are processed in a timely fashion.	Alberta needs to invest in public service workers, particularly in health care and education. It should invest in building public infrastructure like public transit as well as companies that create renewable energy sources. The world is changing, we need to change with it. We need to be innovative and investing in new technology.
T8E	Maintain healthcare, education and vulnerable population (seniors and permanently disabled)	Upper management in provincially funded organizations, wage freezes	Initiatives to support small businesses and trades
t3g	Small business assistance, Health and Education, construction projects, transportation.	I believe there are savings to be found in public services such as the public libraries. It's nice that there's no membership fees/late fees/damage fees/photocopy fees/printing fees however I feel it's a little excessive to provide all this for free. I think it's reasonable to expect people to pay a minor membership fee and for anything they damage or return late, I find it very unreasonable that public property (books in this case) is okay to damage without consequence. Photocopying and printing should also have a minor per page charge, ink and paper get expensive! I imagine there are other programs that have similar circumstances however this is the only one I know about factually	Help small businesses succeed, they employ local and spend local for the most part. They buy lunches / coffee from restaurants, buy furniture from local stores for their office, etc. It's all linked up and helps the province grow, this is the way trickle down economics should be.

T5N	Health and Education, everything flows from that including economic prosperity	improving processes, applying process improvement science to all govt functions	By funding health (including research) and education. An educated population makes better health decisions; educated people contribute more to society and to the economy and decrease the burden on the social system. Better health service options such as primary care networks, full use of Nurse Practitioners, and preventative programs will decrease costly service use (including ERs), surgical wait times, and repeat hospitalizations. Get rid of fee for service schemes that reward system dependence. Explore the "hot spotting" theory of upstream prevention, and apply the principles to all sectors.
T5K	The creation of well paid jobs in an effort to reduce the burning of fossil fuels for energy i.e. upgrading the energy efficiency of all public buildings which will save money in the long run while creating jobs today and stimulating the economy. The obsession with balanced budgets is misguided in the current economy. Every time it has been attempted in history it has worsened the economic conditions not helped.	Eliminate subsidies for the oil and gas industry but keep them for small businesses	Retrofit all public buildings including schools and hospitals to be more energy efficient and progressively increase taxes on people with income in excess of \$200,000 per year
T5M	Education R&D to diversify our economy away from non-renewable resources	Department budget management (remove any incentive to spend all of the budget by year-end in order to guarantee similar funding next year) Wages, benefits and severance packages for senior civil servants - they are not CEOs and do not generate revenue	Education; internship and apprentice programs; diversification incentives; R&D for technological diversification. Stop putting all our eggs into the NON-RENEWABLE petroleum resource basket, over which there are too many external risks over which we have no control. Use technological advances (materials science, nanotech, communication tech, food science) to drive diversification and growth. Strong STEM support.
T8A	School, healthcare, environmental issues.	In your salarys.	Dont cut health care and education jobs .
T4n	Education of preschool and beyond. NO cuts to daycares or schools. Early learning education has scientifically been proven to enhance the education of children later.	New infastructure	New business , self employment Grant's.
T4G	public education and health care	safe injection sites	expansions of public health care and schools
T4L	I think the priorities of government spending should be focused on education, health services, social welfare (especially providing programs for kids), and supporting local businesses.	Increasing corporate tax rates.	I think the government needs to ensure the jobs that are being created are good jobs that will ensure economic security. There should be a focus on boosting job quality of both new and incumbent jobs as well as simply creating more jobs. Also, policymakers should aim to delink some key measures of economic security from employment.
T6J	- The justice system - the courts are already overloaded. Further cuts will harm Albertans. It's also no way to garner votes. - Education. Both primary and post secondary. Many of your voters are unhappy with current cuts - Healthcare. The province is aging. This is a given.	Stop cutting taxes for large corporations. You're spending millions doing so. That's where you find your savings.	Literally invest in education and a healthy population. The less educated and healthy your population is, the more strain they have on the system.

T4V	For us to have a sustainable future, we need to focus spending on sustainable industries. We need to provide full support to education at all levels including elementary schools, secondary schools, and post secondary institutions. Maintaining funding for libraries is crucial, as libraries provide so much support for all levels of their community. Healthcare is also very important.	There needs to be a shift from oil and gas focus, to sustainable energy. I realize this cannot be an immediate and drastic shift since so much of Alberta's economy is built on oil and gas, but there needs to be more conversation about how to make that change from oil and gas to other forms of energy that can take us into the future.	Support the institutions that keep Albertans hired and foster the growth of other Albertans. Health care, schools, and libraries...while we are having economic difficulties, making life difficult for these additional groups will not stimulate economic growth. I'm sorry, I wish I had answers that provided a better 'solution' but I feel that it is important these elements be a priority.
T5N	Education, health care and new investments (diversification of the economy)	Increase corporate taxes. A sales tax. Bring back a version of the carbon tax.	Diversification. Incentives to go back to school and retrain.
T4C	Healthcare and education	Get rid of Kenney's war room.	Infrastructure construction and repair.
T5N	Education, health, support for low income individuals and families	Stop providing ridiculous tax breaks to big business - especially O&G. Rescind ridiculous pensions provided to MLAs Stop privatization of services provided by government	Tax business at a rate comparable to other provinces Maintain \$15/hr minimum wage Stay out of private business & stop privatization of govt service
T6L	Reduction of debt. Infrastructure - Roads, bridges, public facilities and parks Education - a responsible plan fair to all Healthcare - same fair to all but allow people with money to go buy their services if they so want to Infirm and Elderly - Look after those who cannot look after themselves (needs assessment required)	As in private business, efficiencies through responsible cost control (purchasing and HR expenses) No welfare unless a D&A test is passed Collect payment(s) from tax owers (be firm, fair and friendly)	Reduction in business taxes - business creates job - not government Reduce cross-provincial trade barriers (fees and charges) - create an environment that encourages free trade within Canada. Make it attractive to open or expand a business in Alberta Careful on taxing agricultural (marijuana) businesses. They are the backbone of Alberta rural growth.
T9K	Education, Health Care, Social Services	Getting rid of the "War Room" Ending 4B tax break to corporations	Grow public sector Consult industry
T4P	HEALTH CARE AND SCHOOL	Increase taxes on large corporations	By not privatizing public sectors
T9H	Healthcare, education and sustainability	Adjust Alberta government employees income, introduce a small percentage PST, reintroduce the carbon taxes on the large companies.	Create and introduce jobs that will help support economic growth, think about jobs that will be needed in the future now jobs that are needed now.
T8H	Healthcare you fucking idiots!	Your salaries...	Not by giving massive fucking tax breaks that's for sure. Support universities better.

T5M	<p>Leave the seniors alone, not all seniors have savings, money tucked away or pensions other than CPP and AB Pension for low income.</p> <p>Taking Canada Pension Plan Funds is fraud and theft, those who contributed did this willingly and did not consent to having the Government turn the money over to anyone else.</p> <p>Incentives and assistance to the working poor. The ability to work motivates a great deal of the population but not if they are unable to keep up with the increased costs experienced. A working person on minimum wages cannot keep up with food, childcare, rent, transportation etc.</p>	<p>Travel/transportation for Government Elected Officials</p> <p>Focus on the corporate taxes, leave the middle class and lower income alone.</p> <p>AB Tax Base for individuals earning over 80,000.00 per year to increase.</p>	<p>More government sponsored programming for retraining individuals who require assistance to re-enter the workforce after unemployment, disability, age or limited job opportunities.</p>
T2E	<p>Education, Healthcare, Infrastructure Improvement, Social Programs, Employment</p>	<p>Don't give money away to corporations, stop wasting money on the 'war room', other ridiculous pro corporate programs that do nothing for job creation</p>	<p>By investing in education, healthcare, infrastructure improvement, social programs and industry putting money into Alberta</p>
T5T	<p>Health care - specifically surgical wait times. 17(1)</p> <p>By increasing access to surgeons/surgeries, it will reduce the number of clinic visits trying to manage pain/mobility issues.</p>	<p>Stop the handouts. Reduce social assistance programs - most of us have to work hard and make sacrifices to make ends meet without our hands out. Why do capable people on AISH have enough money to buy season seats to hockey and football games? Social assistance should be the bare minimum.if you want more, work for it. By the time some people finish getting all their handouts, they end up with more disposable income than two educated people working full time jobs. Stop spending money on a so-called LRT line that is really going to be a glorified bus down 104th Ave doing nothing but creating a traffic nightmare for those of us who cannot use public transit. Stop building new museums and arenas. And - probably the least popular idea - cut jobs. But stop cutting the little guy - cuts need to happen from the top. If you look at University salaries they are forced to make public, those are the people that need to be cut instead of always dumping on the administrative workers. If they're not careful, they'll have a wide array of people at the top and nobody left to do the actual work.</p>	<p>Get the oil field back to work. I know that there is some stigma to this but this province was built on oil and that's where the Alberta Advantage came from.</p>
T5K	<p>It's OK to have priorities but you can't keep cutting people and programs without investigating whether those people are needed no matter how what role they are in or whether they are temporary or permanent.</p>	<p>Keep up with the red tape group and start going into work sites instead of waiting people to come to the group. Sometimes people won't speak up. Cut managers who don't actually manage or downgrade their from management.</p>	<p>Stop cutting or do it more precisely than blanket cuts because you are cutting at the working levels where job creation and economic growth can't happen because there are no bodies left to enter the information to support the people who are trying to get jobs and grow the economy.</p>

T6C	Maintaining and improving public health care funding is vital to ensure that all patients have access. Education (including reducing ballooning class sizes) is very important.	Reducing government travel spending and government advertising/communications spending. Streamlining internal government processes.	Through funding non-profit groups focused on community development, investing in entrepreneurship and small business training and supports.
T6W	Investing in education and healthcare are very important, as is addressing our infrastructure debt. The biggest thing I am worried about however is that we are not promoting a diverse energy future. I am a pro-oil Albertan that recognizes that we need to diversify our energy industry, not merely for environmental reasons, but for the long term sustainability of our economy. Yes, Alberta has clean and ethical oil, but future investment will naturally shift towards greener sources, and Alberta needs to proactively invest in renewables (wind, solar, geothermal), carbon capture, and even nuclear. We have a workforce who is highly skilled and their O&G expertise can be transferred to other areas. We are letting Alberta of the future down if we only stick to oil.	I am not against finding efficiencies across the board, but I do feel the "war room" is not worth the investment. \$120 million over four years is a LOT of money, and because it has been set up outside of the purview of FOIP, Albertans have no way of knowing how their taxes are being spent. If the government wants to promote O&G that is fine, but do it under the banner of the province of Alberta, not a pseudo news agency. I would much prefer the AB government use those funds to actively promote targeted investment, not passively trickle out "news stories" in a vague manner - the audience you are going after is already committed, and those who are not will not be "spun" into loving O&G. The government also needs to go after delinquent tax payers, whether that be individuals or oil companies not paying municipal taxes.	Invest. Investing means not only promoting traditional jobs, but attracting new types of energy investment in Alberta. I also believe that Alberta cannot be a competitive place to live if we have a bare bones education and healthcare system, or antiquated infrastructure. The cuts in education (from K to University) are short sighted and do not set us up for a prosperous future. And finally, stop dividing people in Alberta - it's not "public" vs. "private" jobs. EVERYONE benefits when Alberta is united.
T6I	Health and education	Cutting out unnecessary taxes like the carbon tax. Start digging in the politicians pockets instead	Oil sector
T3B	Stop attacking front line workers. Support your health care workers, focus on making the public health care system more efficient. Support your teachers, and secondary school, stop attacking them and undercutting them.	Upper CEO and management wages, cut bonus. STOP attacking front line workers and their wages. Efficiencies in the system, stop repetitive over lapping systems.	Implement a provincial sale tax. Diversification into tech, environment tech and film etc. Stop only looking into oil and gas to save the economy and spur growth. incentives for small business in community.
T5X	School education , classroom supports , hospital care,	Charging more bus fees , raise up school register fees. Cut off some of the refugees supporting funding and supports.	It is ridiculous cut off the support for young generation education and senior health . They are needs in schools, because of the funding situation, they can not have any support. (In order to solve the economic funding situation,)having or :hiring another group of people finding the answers, at the same time , lay off the nurses, classroom supports , that does not make any sense
T6H	A focus on health promotion. What specific strategies do we have on upstream health strategies to keep the population healthy as compared to just taking care of them once our population is sick. Positive mental health, physical activity and school nutrition is important through a comprehensive school health approach. Spend on active transportation to municipalities. Support sport, physical activity and recreation.	By investing in health and wellness you will find savings in health care, justice, front line staff, etc. Find savings in funding to private schools.	Focus on youth. Create opportunities for high school completion, first job experiences, Focus on jobs / employment opportunities in various sectors, culture, health and wellbeing, community building, social services, sport and recreation.

T8N	Older Adults (Seniors) - Continuing care homes - need to increase staffing in order to provide a sufficient amount of nurses, as well as health care aides. Right now, there are 4 nurses and 2 health care aides for a nursing home with over 220 residents. The floors and bathrooms are filthy, and people are falling and dying because of insufficient amount of staff.	I'm sure that the government could share the ridiculous amounts allotted to pointless "research" including pine beetles, in favour of some of our most vulnerable and important citizens of this province!	Older Adults (Seniors) - Continuing care homes - need to increase staffing in order to provide a sufficient amount of nurses, as well as health care aides. Right now, there are 4 nurses and 2 health care aides for a nursing home with over 220 residents. The floors and bathrooms are filthy, and people are falling and dying because of insufficient amount of staff.
T4P	Health care, child care, education, and infrastructure. Local businesses and Alberta Oil and gas	Equalization payments and foreign oil and gas	By supporting Canadian companies and small businesses
T5K	Maintaining our health and education institutions. Maintaining our highway and transportation safety systems.	Cancel the \$30 million propaganda machine set up by the UCP. Minimize unneeded structural changes in the government that result in costly IT and infrastructure expenditures. Example: reduction in the number of regions means costly IT system changes that may overshadow the supposed cost savings in staff reduction.	Fund infrastructure capital projects to ensure construction trades stay employed during the economic slow down. Ensure the minimum wage gets raised to \$15/hr -- this money goes back directly into the local economy and a more livable wage reduces reliance on social services.
T6T	Schools Teachers Healthcare	Upper management Government committees Stop cancelling projects where millions of dollars have already been spent	Diversify Stop privatizing Build projects stop cancelling them
T8L	Education deserves more focus. Cutting funding from schools and forcing post-secondary tuitions up will result in a less educated population. Education shouldn't be for the well to do. A better educated workforce will also increase revenues, fill better jobs... it's very short-sighted cutting money from our future tax payers!!	Perhaps instead of coming after the front line public service, the government could look at some of these triple digit "executives". Some are grossly overpaid for comparatively little work that they do. Signing papers and delegating work should NOT put you at three times the salary of your direct reports.	Get behind education. Stop holding hands with industry and the wealthiest members of the population and support those who are struggling the most. Farmers, labourers, HARD working Albertans who are struggling to get by because of tax hikes and breaks that only seem to be offered to the wealthiest in the population. It's quite backwards if you're honest with yourself.
T2X	Healthcare education.	Increase taxes on big corporations.	Encourage diversification including tech and alternative energy.
T0c	Everything quit cutting are schools health care workers start cutting from the top of the chain	Getting along in the house u guys act like pre- schoolers can not get along or support each parties back stabbing each other and putting blame on past gov to responsibility for your actions u can never answer a questions when asked don't forget u work for us we are the ones that pay your wage	Start supporting Alberta fully
T1C	Healthcare and education	Tax cuts for large companies, welfare benefit revamp with mandatory drug testing.	Focus on supporting working women with subsidized child care and capped post secondary tuition.
T1b	Alberta needs to spend at an appropriate level to ensure that we maintain our public services. In particular, health care and education need to be funded at a level to keep up with inflation and population growth, which means it will need to be increased every year. In addition, the government needs to invest in public infrastructure like roads and public transportation.	Contrary to what the MacKinnon report suggests (because it only focused on one side of the equation), Alberta does not have a spending problem, it has a revenue problem. We need to tax at least at the level of the next lowest taxed province in Canada. And we need to stop giving billion-dollar tax breaks to Alberta's wealthiest companies.	Alberta needs to invest in public service workers, particularly in health care and education. It should invest in building public infrastructure like public transit as well as companies that create renewable energy sources.

T6E	School programs and teacher wages. Public security and rural crime. Mental health initiatives.	<p>Not in Kleenex boxes. Harsher penalties for rural crime, streamline traffic court to avoid people putting over court dates constantly which is costing money paying crown prosecutors. Incentives for paying traffic tickets early to compliment the late fees that already exist. Would cut down on court costs if made retroactive to Jan 2018.</p> <p>I work in the court system and have had many conversations with crown prosecutors who agree that if more people challenged traffic tickets and ran trials, the entire traffic court system would fall apart from the overhead. If you incentivize people paying tickets earlier rather than punish late, more people will pay their tickets instead of constantly putting it over to run trials where they are often found guilty of the offense anyhow. One could also reduce the fee for online ticket payment if it's feasible.</p>	<p>Provincial police force to combat rural crime and eliminate poor contractual staffing obligations of the RCMP. Could patch-over RCMP members to set the baseline and then create job opportunities in the smaller towns as base locations. More members on the highway means more traffic revenue as opposed to the under-review photo radar program.</p> <p>One could also reduce photo radar locations slightly, but increase the threshold for photo radar giving tickets from 10% over the limit to 15% over, and use that as a way to justify an increase in the monetary penalties.</p> <p>Freeze or reduce skyline and downtown development of major cities, unless privately funded, with the exception of road and public transport maintenance.</p>
T2Z	Health care, senior care, early childhood care (continue government-subsidized programs), early childhood development (full-day kindergarten), public education for K-12 (NO funding for private education, K-12), care for vulnerable children and adults with developmental/social/learning/physical challenges.	<p>-Stop giving tax cuts to large corporations.</p> <p>-Tie all wage changes for Members of Parliament and their immediate staff to the wage changes of public sector and publicly-funded organization changes (ie. nurses, doctors, teachers).</p> <p>-Limit pension (amount and length) for previous Members of Parliament, based on time served in that position.</p>	<p>-Support Research and Development, particularly in the energy sector, to move away from oil and gas.</p> <p>-Support companies that are working towards renewable energy options (tax breaks, hiring incentives, grants, etc.), particularly small businesses.</p> <p>-Cost of living (or inflation) wage increases for all public workers, and publicly-funded organizations (ie. public school boards)</p>
T8H	<p>I think the government should prioritize spending on renewable energy, education, healthcare, and affordable housing.</p> <p>Education, healthcare, and affordable housing are vital in creating a workforce that is resilient to economic change and changes in market needs!</p>	Tax incentives to oil & gas companies. The world is transitioning to an electrified economy. We can leverage our strengths - a highly educated work force and a technology focused economy - to take advantage of the market opportunities that are available now and coming available in the future.	Work experience programs and scholarships. The government could also provide retraining programs to professionals entering new fields like renewable energy and manufacturing.
T8H	So far I have not seen anything that will help working Albertans with the every day struggle that is life under the UCP. Labour laws are so behind the rest of the country it is shameful. The UCP needs to stop making war and find a way to include all Albertans not just the chosen few who already have wealth. Alberta's resources are for all Albertans not to be given away to huge corporations.	All Albertans need to pay their way not just the working poor.	We need to find ways to deliver our resources to market with a much lower carbon footprint. Use all the work force not just the high paid king pins who have for the most part ever had to struggle to be heard. Listen to the workers who are the people that will make the economy work again.
T1x	There should be more focus on development of transportation and accessibility between major urban centres and working sites. This would reduce costs for companies to send more workers and for maintenance.	Even though the government is trying to reduce taxes, I believe very large companies should be paying a form of royalties to Alberta. By paying royalties, companies could obtain certain benefits and support from the government.	Alberta should become more inviting for new companies, and not only natural resources ones. There must be forms of subsidies and incentives for them.
T6C	Education funding	Higher taxes for corporations	Diversification

T1H	<p>Diversifying our labour market. Develop emerging sectors so they can provide new employment opportunities. Help existing sectors develop their technology so they can compete.</p> <p>Ensure our workforce is skilled - help workers become skilled in the new emerging jobs so that once they are fully developed, we have workers for them.</p> <p>Ensure our public sector is strong, especially healthcare and education, including post secondary. If we are to compete in a global economy, we need a healthy and skilled Province. In order to have a healthy & skilled Province, we need a healthy public sector.</p> <p>We need our Government to take climate change VERY seriously. We need mitigation strategies, environmental policing and help for citizens who are now constantly having costs associated with climate change (increasing food costs, monumental increases in home & auto insurance due to claims resulting from climate change, the costs of trying to afford renewable energies in our homes and ensuring our homes can withstand climate change).</p>	<p>Completely discontinue any and all funding to the energy war room. Oil & gas is a dying industry. It will be needed for awhile, but the world is moving on. Once renewable energies are as accessible, O&G will not be in demand. The consumer wants clean energy, give it to them and stop trying to shove oil down their throats.</p> <p>Stop all funding for our Premier & our Government to advertise O&G or try to sell it to other countries, provinces, etc.</p> <p>Utilize technology like Skype to conduct Government business, whenever possible, including the Premier and his staff. This will eliminate travel expenses like mileage, meals and hotels.</p> <p>Stop funding Government salaries of people who appear to be paid to troll people online. Stop all funding for partisan advertising (including social media) with Government dollars. The campaign is over and that money is not for a political party.</p> <p>End corporate tax grabs, they should be paying their taxes, just like the rest of us.</p> <p>Tax the top income earners, immediately, and collect on taxes owed by top earners and corporations.</p> <p>Bring in an Alberta made carbon tax and make those that pollute the most pay the most. These dollars can then be used to offset the costs associated with climate change and hopefully some mitigation strategies</p>	<p>Diversify our economy/labour market. Stop funding dying sectors and, instead, fund the new emerging sectors like tech, clean energy and even healthcare. Give THEM tax breaks, development funding, a skilled workforce and the technological environment that can meet their needs. Alberta is going to fall behind rather quickly if this Government can't get with the times and move on from Oil and Gas. We need to have the skills, culture and infrastructure to compete in a global economy. This province has SO MUCH to offer and yet we are mired in the past. We could be global leaders in so many things.</p>
T0C	<p>To many to mention but most of all get Alberta working again we support Canada</p>	<p>Clean up government lots of people on payroll that do hardly anything for what they are getting paid for. Politicians living and spending be one the means living the high life quite taxes the people for everything cause u guys spend carelessly and quite giving are money away to big corporate business that can support them selves and to other countries that do nothing for us think about Alberta first</p>	<p>don't kill what we have we need fossil fuel to support Alberta so we can expand what Alberta is capable of doing alberta is the most cleanest province going</p>
T3E	<p>Health is number one, particularly areas where people rely on technology and supplies for their very lives, such as diabetics who are on insulin pumps, and better cancer treatment including scientifically proven immunotherapy e.g. autologous T-Cell Infusion Therapy, and PD1 Inhibitors, and lastly environmental causes of health problems, particularly industrial contamination.</p>	<p>There could be huge savings on the health care system by fast tracking life-saving cancer treatments such as autologous T-Cell infusion therapy, PD1 Inhibitors, and other immune system related treatments that have scientifically cured cancer in other places, but are not used here due a lack of profit potential by the makers of current treatments, which are very expensive. This is serious science, not simply the sort of immune system therapy one might run across at a heath food store or yoga class.</p>	<p>The government could create as many jobs cleaning-up the giant tar-sands mess as it could extracting oil from it by either creating or increasing the environmental levies on production. The argument that the industry cannot afford it due to low oil prices is an outright lie because financial reports indicate record profits, and studies indicate that only about 1% of profits would be required to clean-up the meass. The same people (truckers, laborers, managers, engineers, work camp personnel, etc, could be put to work on a massive reclamation project AND the industry would not suffer at all, despite their fear mongering and threats. Besides that, if they threaten to pack up and go, let them, and just take it over ourselves. No more being held economically hostage by big business.</p>

T6V	Home care Education (Grade 1-12)	Physician billing practices in hospitals	Job re-training in areas other than the energy sector. Look at the bio medical and tech sectors. Promote tourism and the entertainment industries. We have a beautiful province to show off.
t7a	Healthcare, Education	The irresponsible publicity stunt of the oil and gas war room, wasted money and time fighting Ottawa over equalization, implementation of carbon taxation that could raise governmental revenues while also fighting climate change	Investment in education and public works
	A strong public healthcare and education system.. you will only create a stronger province if all residents are given access to public health care and education. Increase health and education funding by 2%	Eliminate corporate tax cuts. All travel through commercial airlines economic class. Travel out of country minimized.	Support value added industries , tech, renewable energy , stop all the right wing craziness/war boards / separation talks - it keeps anyone wanting to invest away . Look at high speed trains , new train corridors , let's get creative .
T7N	Don't balance the budget on the backs of the sick, poor, or the children. While healthcare and education make up a large portion of the budget and therefore are easy targets for cuts. These two areas literally affect the health and the very lives of Albertans, as well as our future generations' ability to perform successfully in the future economy. Cuts to Education is shooting ourselves in the foot; cuts to healthcare is stabbing us in the back.	The government needs to look at the fiscal situation more broadly. The solution to every problem is not 'tax cuts' followed by cutting the budget. Why hasn't additional revenue been considered.	Yes, support for more local refineries, as well as further diversification of the economy. Leverage Edmonton's top tier post secondary institutions and focus on high growth industries, ie tech, software companies etc.
T5T	Public Health Care Education (including post secondary) Environment (promote and support clean technologies)	Stop spending tax dollars on political policies and ideology. For Example - cancel the "Alberta Energy Info Centre" and stop appointing your "friends" to expensive unnecessary studies and unproductive or repetitive "panels".	Stop the attack on public service jobs - laying off a great many middle class people when we are already approaching a recession is counterintuitive. Invest in the clean tech of the future Invest in our future generations education Invest in small business
	Keeping higher education more affordable, arts and arts education, support for families	Promotion, pay of high-up gov't workers	Investing in sustainable development
T3Z	Creating jobs in the calgary area by enticing other to move the head office to alberta. With the current market operational could be greatly reduce as the did for CP rail in 1998	By not passing expense down to the city but identifying real saving.	Go to other province and sell the benefits of Alberta low operation cost.
T0J	-Ensuring low income people eg: AISH, are not left further behind. It speaks to who we are as a society if we don't care for the most needy in our communities. -Education - Our children are our future. We need to give them the best chance to succeed and contribute to the future of Alberta. This starts in elementary school and carries all the way through post secondary. Make advanced education attainable for all and we will capture the best and brightest in that net.	The 30 million a year being spent on the Energy Center is a waste of money. Truly it is. That is a huge pot that can be put to better use elsewhere. The corporate tax reduction is too much with no discernible impact. All lost revenue. Remains to be seen what all these panels will cost as well. All for preformed conclusions.	The government has done us a disservice by not increasing the focus on renewable energy. Our energy companies are doing just that and we are swimming against the tide by not doing so. We could be world leaders and instead we are behind and falling even further behind. The writing is on the wall and we need to pay attention.

T1L	The Government Needs to Focus on Healthcare and Education. Our Government should prioritize the needs of those who are most in need of assistance and support. Children and the Elderly need not be lost in the shuffle. Our Children are our future and the elderly are the backbone of what Alberta is Built Upon. They deserve our Support. Spend Less on Able Bodied Men and Women who are looking for Government Assistance for Support Through Welfare and other Government Funded Programs.	The Government could find savings looking at Administrative Level Positions in Government Run Offices. Positions that could easily be Blended or Combined to Restructure in a more cost effective way.	By mandating the Hiring of Albertans First for Jobs that are in Alberta- Especially on the Oil and Gas Industry.
	Health,Education,and Social Services. Increased vigilance of the Oil and Gas Industry,by increased regulations on abandoned oil wells,and failure to pay their municipal taxes. Taxpayers should not be responsible for these costs,but should be completely borne by the industry.	Eliminate the Corporate Tax cuts without any conditions.ie.evidence of these being used to create increased employment. Reducing the frequency and/or necessity of medical exams for seniors drivers licences.	We presently have a very fair and competitive business tax structure.
T9E	Getting and keeping Albertans working. Alberta has such a high unemployment rate. Companies are still laying off we need to stop the lay offs. People who thought they had made it though are still being laid off.	Equalization payments ... the gov should look at the savings it has done already and keep people working	Programs which get Albertans working in more than oil and gas. The unemployment is across all sectors we need to try and help all sectors
T0H	Health for sure. I know in the North zone alone 1634 transfers and it's Jan 24. Whether it's mental health or physical health.	I don't think it's a matter of savings, it should be worded investing. We should be investing in our province. Drawing people in not drawing people out.	Maybe we need a provincial sales tax. We need refineries. Create jobs within
T2J	Education and Healthcare	Other initiatives and services that lend themselves to pay for what you use.	less government and lower taxes
T0J	Health care education environment economic growth	Ahs provincial team structure. Over the last 10 years they have grown so that they are farther away from front line and have taken service away from the front line to justify their positions. Remove duplication,	Try diversifying, quit being stuck on oil... a commodity. Encourage growth of new and innovative industries. Quit robbing from the poor and middle class, who do you think supports the economy. You have created a very scared population, staying put to try and survive the storm of thus government. Leave our pensions alone, no one voted for that dirty deal...it was a 10 year fight to remove government interference.
T8A	Seniors, healthcare, schools (all levels including College / Universities) and underground infrastructure	Upper management and general travel, expenditures in the government.	Consider more provincial grants for businesses. This allows smaller businesses to develop and established businesses to continue which stimulates the economy and creates more jobs. You must also support Post secondary education so people can afford to go to school, be educated and contribute to society, not be a burden to society which costs huge dividends.
T5Y	Alberta needs to spend at an appropriate level to ensure that we maintain our public services. In particular, health care and education need to be funded at a level to keep up with inflation and population growth, which means it will need to be increased every year. In addition, the government needs to invest in public infrastructure like roads and public transportation	Contrary to what the MacKinnon report suggests (because it only focused on one side of the equation), Alberta does not have a spending problem, it has a revenue problem. We need to tax at least at the level of the next lowest taxed province in Canada. And we need to stop giving billion-dollar tax breaks to Alberta's wealthiest companies.	Alberta needs to invest in public service workers, particularly in health care and education. It should invest in building public infrastructure like public transit as well as companies that create renewable energy sources.

T3L	The government itself. They should use skype like everyone else for meetings. Stop flying all around the country first class.	Hiring more people and stop paying overtime. Cut into non necessary management and administrative cost.	Diversifying. They are other things than oil and gas in this Province that could boost our economy. Information system businesses for instance.
T1W	We should focus on the environment, health care and education.	It appears there are several outstanding royalties on oil and gas companies. Instead of injecting money into a dying industry why not focus on the future. This short sighted view is sickening. Further savings could be obtained by correct taxation.	public works, health care and transportation.
T9W	Job Creation Rural Sustainability	By reducing the Private Vehicle Mileage Allowance 8(14)(a) N/A \$0.505 per kilometre travelled This amount is used by some municipalities and school boards and can be seen as another paycheque for some.	Invest in rural projects
T0R	getting the people back to work and making sure the unemployment rate does not get any higher.	I think the government should look at the savings it has already acquired and rethink the pace of savings if it means Albertans are losing their jobs. Stop the equalization payments or get Quebec to start paying equitation on the hydro it produces and sells.	Programs, grants and tech. Lobby the feds for programs which would create jobs.
T5e	Health care, education	Making cuts to higher up managements in ALL areas	Don't cut front line staff in all areas of work. You need people to do these types of work.
T0K	<ul style="list-style-type: none"> •Getting Albertans back to work •Making life better for Albertans •Standing up for Alberta 	Entitlement programs	Keystone Pipeline is key, Less regulations, encourage companies to do business here (We are open for business model)
t6x	Healthcare. Front line staff (IE nurses) diversifying the economy (investing in green energy and other economy builders such as technology) and school age education. Support family doctors and encourage people to have family doctors instead of accessing medicentres or emergency rooms for simple or chronic disease management. Maintain the funding model for family physicians.	Cut the catholic school board system and make it one. cut funding for private school systems and only support publicly funded education that is available to everyone cut the covenant health and combine the two systems into one reevaluate physician billing systems. They consistently over bill and over treat to pad their own pockets. If there was accountability and they required justification for their treatments it would save a ton of money. Make cuts to the top of AHS executives and managements. Not every small department in a hospital needs its own manager with their own personal secretary. example: combine ambulatory care and diagnostics department managers. Stop funding foreign aid. Take care of yourself and its citizens first. Push back against continuing transport payments against other provinces. Push back against provinces/organizations that resist or purposely try to hinder alberta economy	Focus on green energy. Look into the orphan well program and converting orphan wells into greenhouses. create incentives for millennials to start saving. continue to support appropriate infrastructure. Diversify economy and look into bringing in tech companies or other large manufacturers. small business funding models and support for small communities. invest in rural and northern communities to push people to development and grow businesses. wind technology.
T8e	Healthcare, schooling & oil field jobs	Top heavy management positions on AHS, redundant government policies	Tax breaks for the working middle class- we are the ones who will stimulate the economy

T8A	Maintaining our existing health care & education levels AND pensions (as is). If this means a wage freeze for a few more years then fine, but we do not need cuts! Morale is low enough in these vital areas at the present time!	Reductions through attrition in large sectors.	Diversification is essential. Oil & gas will not likely ever return to the levels of the boom, even if new pipelines get our resources to market. We need to develop other areas like AI, wind & solar, and so on.
T5W	Front-line health care positions Diversification of economy Low cost daycare fees	Cancel the "War Room" Stop giving handouts to big business, especially the Oil & Gas Industry	Continue efforts to raise the minimum wage to a living wage.
	Rectifying climate change. Diversifying our economy away from fossil fuels. Health spending to reduce downstream healthcare cost such as safe injection sites. Invest in education at the primary, secondary and post secondary levels.	Stop spending money on the Catholic school system. Stop giving handouts to large corporations. Stop spending money on private jets.	Diversify our economy away from oil, it will never be as good as it was, stop selling people a lie. Increase taxes on the wealthy. Stop retroactively taking money away from businesses such as pharmacies.
T4V	Quality of Healthcare, Education and Infrastructure.	Plug in loopholes that prevent large corporations from paying 0 taxes. If it is already done, great. Probably a payout for Alberta Healthcare top execs, who get paid more than 500,000\$ a year, reducing their funding only hurts the people at the bottom, which in turn affects Healthcare services.	I would suggest subsidies for startups in Alberta for employing more than 10 people for the first 5 years of their inception. Edmonton has been sort of a hub for software development in the past few years, try to capitalize on that, since that can potentially attract more people from Canada to Alberta, and also provide jobs for local Albertans.
T7V	Health care	Cut the government jobs, lol Don't get rid of RCMP, don't change the CPP plan.	Be smarter and don't waste are money
T5T	Do not de-index AISH. These people are at the poverty level and lowering any funding will only increase costs on medical and social services.	Have an independent review of each Government Department and determine staffing and expenditure levels are appropriate. Allowing this to be done by personnel tied to each department is self defeating.	Have employers hire Alberta workers before any workers from out of province. Quebec does this with limitations on ticketed trades people with inter-provincial licenses as they are not allowed to work in Quebec with out a Quebec ticket.
T1B	Funding public health care	Infrastructure	Not by oil. Find a resource that make Alberta stand out. Why not Solar energy farms like Brooks has? Sell the surplus to neighboring areas
T0a	Health care, education, DO NOT touch public service employee pensions.	Eliminate redundancies in management and streamline processes so not everything has to go through 12 people. Stop increasing treaty rights and offering them to more and more people. It's getting hard to sustain. Stop giving financial breaks to large companies	Stop taxing the crap out of people to give to people who don't deserve it so they actually want to keep working.
T1X	Post Secondary Education Public Services	Corporate taxes	Invest in infrastructure, which is education, health services, and other welfare programs
T1A	Public Health Care, and Public Education.	Government wages, and other wasteful spending.	By stop expecting the middle and lower class to carry the economic burden of corporate tax cuts ie...the drop from 12% to 8%. If companies want to do business in Alberta, they need to pay their fair share.
T5G	Health and education	big corporations should not get big tax breaks, we are all aware of short comings in funds in Alberta but targeting the seniors and most vulnerable is not the place to make cuts. I say more taxes on cigarettes alcohol and marijuana all things that cause major health issues for bigger costs down the line	Get the pipe line built

T5W	The government should be spending on essential services that will build up all Albertans, first and foremost. This includes healthcare, education, and social services. There is no excuse to cut spending in these areas, as they are essential for the future of Alberta.	The government could probably find some dollars by reducing tax cuts to businesses and the upper class. Heavily taxing those who can afford it (e.g., the upper class, large businesses, etc.) keeps money in the pockets of those who need it most (i.e., the lower class, people living in poverty and experiencing homelessness), while giving the government a bigger pot of tax dollars. The implementation of a carbon levy could also find some dollars that can be used to invest in Alberta.	Find a way to create incentive for business without reducing their taxes. Provide grants for local businesses who do their work in a good way and support job growth. Begin diversifying our economy, by bringing new industry into the province, for e.g., renewable energy.
T2b	we need to focus on the people creating a better life for the people. mental and physical health healthy people create a better economy supporting families and children and their early education and school education	by helping people who are using government funding find ways to work in jobs that they can sustain	open up more programs to help the unemployed and individuals on welfare find a job and a workplace that works for them.
T0K	healthcare, education, municipalities	what about revenue, low corporate taxes and no sales tax are not sustainable	forward thinking make alberta a place companies and individuals want to move.
T4V	Expanding mental health treatment and mental illness prevention strategies for all age groups but especially for kids and youth, and for older people at risk for loneliness. Transitioning to an economy that is environmentally sustainable and helping with skills training for people searching for work in the renewables and energy efficiency sector.	Preventing future problems that will cost more if they are ignored, and actions taken now may create benefits that we haven't anticipated yet, ie. helping youth struggling with mental health will help them reach a fuller potential later. Transitioning to renewables and green tech will open up new trading partners and keep Alberta from falling behind in leadership in this area.	Work with organizations such as the Pembina Institute which have a proven track record of creating solutions that support economic growth while protecting the environment. Invest in CCS technology for the oil sands, and work with oil companies to transition to renewables and helping older technologies become increasingly efficient. Oil companies want to move in this direction anyway, and the insurance industry and others are recognizing more and more that we need to transform to an environmentally sustainable economy, that assists people through this transition (ie. investing in skills training).
T8N	Education - building more schools, funding to keep schools operating and maintenance. I also think we need to keep funding the same for kids with disabilities and people who need assistance. Our future is children and we need to give them the best education and skills we can to maintain and keep Alberta running. Pension Plans LAPP - DO NOT touch the pension plans of union workers. That is their money and their retirement should NOT be allowed to be spent or invested by the government. That is NOT government money to be playing with!	I love the idea of one centralized bus systems to include all surrounding communities. Alberta should start the Provincial Savings Tax (PST) to help get us out of debt and pay for some of these services that are a requirements for the future of this province. I do think post secondary education can increase the tuition slightly as we have the lowest tuition rates.	I think we should reestablish the Home Renovation Tax Credit as its an incentive for people to build equity in their homes, create jobs and spending money on making Alberta homes more desirable. As well as home renovation tax credit would help create affordable housing as they can build legal basement suites.
T6R	Health Care and education.	Stop giving bail outs to oil and gas companies and close down this "war room." Invest in health care, education, small businesses, and alternative energy.	Invest in new and novel areas.

T0M	Public Education- proper funding for enrolment growth and funding the kids with special needs □	Stop giving businesses corporate welfare and make them pay their fair share. Ensure companies and corporation are paying their taxes Bring in a sales tax Bring in a wealth tax	Support research Diversify the economy. Put money into technological companies . Educate our workforce for the job of tomorrow not just oil and gas.
T6L	Healthcare, Education, Social Services	Cutting useless management positions.	By not cutting healthcare workers jobs, teaching positions or social services supports. When you have looked after the least of these, all will benefit.
T5K	1) focus on maximizing public education and post secondary education. I am 17(1) a tax payer that voted UCP. I do not support watering down public education to provide an elite education for those who live in the right area and/or have the financial advantage to send their child to charter/private schools. We also have an excellent university program in Alberta. Please do not destroy. Yes it needs corrections but not distraction. 2) medical system. Our professionals in our medical system have taken many years of training and education to be the wise ones in this field. We need them. Please do not make them feel under valued and make them want to leave our province. 17(1) Please help not destroy our system. 3) supporting and making jobs. I know this is your mandate, but I am so confused as all the steps being taken seem to be taking away and destroying jobs. Our province needs both a strong public and private sector. Not one or the other. Please quit trying to portray the professionals in our province as spoilt demanding people. Many are payed way less with way more training and self-payd-for education then people in the private sector. Please stop this you and against them propaganda. 17(1)	1) excessive guaranteed retirement packages and payouts for government officials. It is a hard job and compensation is deserved but it should follow reasonable standards. 2) the war room. Should not oilfield be paying to promote and show the world how green they are themselves. I agree the Canadian and world perspective needs to change but why are the companies not promoting and paying for this mind set change. How is this huge sum of money being spent, especially when we are being told there is no money for teachers. Nurses. Drs. 3) PST - I don't want one but we need money and I would prefer we didn't get the money destroying services that are also needed. Make the PST on non-essential items. Then it is the buyers choice on whether they want to pay the PST. And some may disagree but fuel is not non-essential in our province. We are rural please don't punish those who can't take a bus.	1) people recovering government financial services are in a job creation program when possible. Working makes a person feel needed and gain confidence. Let's help build these individuals in gaining confidence in the work force. 2) not cutting funding to front line workers in the public sector. They are needed and the jobs are needed. If you have to make cuts do not allow the boards and unions to cut devices and front lines workers.
T2X	reduce spending in all departments in redundant, frivolous or unnecessary costs	reduce spending on upper echelon government workers by streamlining responsibilities	do more to rejuvenate the oil industry in Alberta
T0M	balancing the budget in a reasonable time frame that DOES NOT put anymore people out of work.	cutting or amalgamating mid-level management in government and other public sector positions. finding efficiencies in the way government programs are run that make use of digital technologies for accuracy and to eliminate overlap.	Marketing of Alberta to other industries as a great place to do business. Some additional support to oil and gas sector, however, it is past time that our economy was diversified.

T3G	Education and health care. Albertans should have access to quality public health care and public education. This would mean making sure the public servants working on the front lines (ie- nurses, teachers, support staff) are valued and have the support they need to be able to do their job.	Eliminate funding to private education. Reduce salaries of the premier and MPPs as well as their travel expenses. Implement a small provincial sales tax.	Diversify the economy so it is not completely reliant on oil and gas. Build up renewable energy sectors. Tax breaks to major corporations is not a solution as trickle down economics does not work.
T6H	-health care -building a greener economy -education	-stop subsidies/tax breaks to the resource sector and the ultra rich -stop wasteful spending on things like the 'war room'	-support economic diversity, green jobs and tech innovation -invest in sustainable and significant tax revenue multipliers like culture/arts/film T6
T1S	Instead of focussing on salaries of front line personnel in teaching, civil service and health care the government should set up an independent task force to review business processes and find efficiencies through methods of work rather than salary reductions. The cost of living is not falling and salaries have remained stagnant across the majority of industries.	Renegotiating the equalization payment, it seems that if Alberta wasn't sending money out of the province through this payment then Alberta wouldn't have a deficit at all. Why should Alberta fund a federal system in which Alberta has no power or voice.	The government should take and invest royalties from the Oil and Gas sector in a sustainable way like the Norwegian government has with the Norwegian Sovereign Wealth Fund. Revenue taken from this fund should be at a level such that the value isn't depleted and this wealth should be used to fund or subsidize growth in new sectors and/or in the expansion of Oil and Gas areas such as processing or final product manufacture. Alberta should seek to make deals which do not include the federal government and which locks the federal government out from the revenue. If it is legal and possible to direct revenue from Oil and Gas exportation directly to a Sovereign Wealth style fund without that money ever truly entering the hands of the Alberta government then perhaps this would prevent it's inclusion in the equalisation payments.
T6T	PUBLIC health care	Upper Management	Diversify in something other than oil and gas (ie: renewable resources) and support public health care through job creation and not job cuts
T6H	Education and early childhood Health care - particularly reducing wait times, senior care Child Care- supporting low income families, single parents, non-profit child care Environment - limit use of pesticides and herbicides	Increased tax for large corporations, provincial sales tax, hiring freeze in Alberta government	supporting education and health care creates continued jobs in these sectors. Supporting child care lets more women go back to work
T3R	Creation of more jobs public service Tuition fees	Fee hike for international students fee hike on immigration by motivating people to work instead on social benefits	my attracting foreign investments, diversify the industry, should develop other industries like dairy, farming, tourism
t6g	K-12 Education and Family Support for Children with Disabilities	Eliminate funding for the Canadian Energy Centre.	Reinstitute the provincial top-up to Ottawa's Scientific Research and Experimental Development program as well as the interactive media tax credit, the Alberta Investor Tax Credit and the Capital Investment Tax Credit.
T6L	All spending should be critiqued and eliminated or reduced if possible. All unnecessary spending should be cancelled. Change the way supplies are paid for. Have competition rather than a sole source provider.	In wages. bring them down to the higher of what they are in BC or Saskatchewan. If a teacher in BC can get paid less then they can here as well.	Change the education system to focus on jobs for what the economy needs. Business needs to chip in as well for job training e.g. if it determined that more welders are needed then the businesses that need welders chip in for training etc. Use Germany. Switzerland as a model of what to do.

T3A	A just transition from an economy centered on extractive industries to a more diverse and better regulated economy, and putting money back into health care and education, just the way it was without weird-ass religious exemptions and other such bullshit that allows bigots to do hateful shit in the name of some sky wizard they claim wants them to follow the dictates of bronze age con artists and charlatans.	<ul style="list-style-type: none"> - End energy sector subsidies that are not actually helping create or even retain jobs in the sector - Roll back tax breaks for large corporations and wealthy individuals - Tax churches and religious organizations on their income - Make all government employees fly economy class - Stop wasting my fucking tax money on regressive right-wing bullshit 	<p>Cut the lowest earners a giant tax break, tax the top earners, close loopholes that the top earners can use to avoid their civic responsibility which is paying their fucking taxes, tax religious organizations, use the money to subsidize other industries and markets than energy, and see if your whole trickle down bullshit doesn't work better when the people have more money, less debt, and dont need 3 part time jobs to get by and remain functional.</p> <p>You really dont even have to do anything but tax the people making the money, put it back into education and health care, and make sure more people have more money and freedom and social care. The rest will take care of itself.</p>
T5N	Public health services especially mental health, education (primary, elementary, secondary and tertiary), public services such as affordable housing and safe injection sites,	Taxing oil companies, harsher regulatory penalties for environmental breaches, not giving payouts to large corporations. Taxing higher income earners. Implementing PST	By diversifying the economy, allowing tax breaks for software start ups, investing in renewable resources and not depending on oil and gas to create another boom
T6T	Electronics, extra curricular	Get rid of useless teachers.	Getting rid of the teachers that aren't living to there full potential and getting ones that do.
T2G	I believe the government should remove the cap on our provinces film budget. It provides a lot of work for Albertans in many different skill sets and right now the work is scarce.	<p>By investing more into our film industry!</p> <ul style="list-style-type: none"> -the workers will stay in AB & invest their money back into the province. -more productions will come here and pay Albertans employees and businesses. 	Removing the film budget cap. There's no reason BC, Ontario & especially Manitoba should have more film work than Alberta!
	education and health care, funding for PDD and special needs children	having oil companies pay their share of taxes - helping to recover unpaid taxes. Limit the size of government.	supporting infrastructure spending for municipalities. Incentives for small businesses.
T1G	While the provincial economy is suffering, start on infrastructure like the Canamex highway that has been on the books for years	<p>Reduce choice based health care procedures. These include abortions, sex changes,</p> <p>Require reduction in management of AHS (and other Govt departments) instead of reducing services.</p> <p>Stop giving golden parachutes to public servants for poor performance</p> <p>eliminate the requirement for LGBQXYZ facilities in public buildings (Ei in schools)</p> <p>eliminate the provincial "parks" the NDP put into place</p> <p>Tie provincial employee benefit packages such as retirement to match the private sector. (move to defined contribution rather than defined benefit)</p> <p>Compare Alberta costs of public servants to other provinces. I believe we are the highest paid in the country. Teachers, nurses, doctors. Reduce this so we are average not best.</p>	Infrastructure to facilitate the transfer of goods, this would stimulate the construction industry and benefit us in the future.

	Technology and innovation	I think savings needs to be balanced with investments into the future. I think the biggest savings could come from decreasing bureaucracy.	I think that direct investment into companies that are innovating technology to become more efficient, productive and sustainable is the best way to go. The differentiator in modern economies is technology and access to technology. Alberta cannot rely on oil production forever - a technological base needs to be built that can compare with other provinces (such as BC's investment via the SR&ED program, or Ontario's ORDTC) or even other countries.
T1Y	Health, education, infrastructure, social programs for disenfranchised, elderly and the poor. Do not increase the privatization of health care. This has been shown to decrease the health of the population and increase wait times in other countries that have moved to a dual system.	Pharmaceuticals: making the prohibition of generic drugs shorter Trickle down economics does not work. Implement fair taxes for all including big corporations and the ultra rich. Subsidies of the big oil companies did not result in jobs nor did it bring business to the province so abandon the subsidies for big oil companies.	Diversification. More support to small business and innovators. Do the job of government which in my opinion, is to support the people so that they are able to contribute to the economy. Consider strategies to bring oil refining back into the province. Continue to support the building of the pipelines.
T4R	Libraries, Education and Healthcare	The Canadian Energy Center can save 30 million per year for reallocation to public service	Invest in Education and divest from Oil and Gas
T4R	Libraries, Education and Healthcare	The Canadian Energy Center can save 30 million per year for reallocation to public service	Invest in Education and divest from Oil and Gas
T4R	Libraries, Education and Healthcare	The Canadian Energy Center can save 30 million per year for reallocation to public service	Invest in Education and divest from Oil and Gas
T0A	Education & Health Care. We need to re-educate those who have lost jobs in the falling economy. Overloaded and top heavy departments need to be evaluated. We need the front line workers like nurses kept, not forced to take pay cuts. Re-educating requires money to make this happen. Cutting during this time to education makes no sense.	Management at all government levels. Red tape reduction..... need to be able to do our jobs without all the hoops that need to be jumped through to get a result. Get rid of the GDL driver's license nonsense. If clean record for 2 or 3 years straight should be an automatic removal of this. Costs taxpayers and government money for this.	By investing in post secondary education and k-12. Government has promised jobs and dedication to education but now tying the hands of the institutions to be able to provide this training. Health Care has tremendous turn around in staffing and burn-out. we need to be supporting our front line workers (nurses) not penalizing them, Gov should "encourage" AHS to take a look at the Management structure as I believe they are also top heavy.
T4R	Libraries, Education and Healthcare	The Canadian Energy Center can save 30 million per year for reallocation to public service	Invest in Education and divest from Oil and Gas
T0C	Environment, Healthcare, education, infrastructure and our military	Cut spending on keeping dying oil and gas industry running, no more corporate buy outs, stop sending so much money overseas to other countries, maybe the overpaid politicians could take a pay cut for a change	Creating jobs within our tourism industries to help support environment. Fund more green energy jobs.
T4R	Libraries, Education and Healthcare	The Canadian Energy Center can save 30 million per year for reallocation to public service	Invest in Education and divest from Oil and Gas
T4R	Libraries, Education and Healthcare	The Canadian Energy Center can save 30 million per year for reallocation to public service	Invest in Education and divest from Oil and Gas
T2Y	Reducing class sizes, creating one public education system to reduce spending on trustees and boards	Create one public education system... stop funding religious and private schools, this needs to stop	By investing on people not handing out Corp tax cuts in hope they will create jobs... hold private sector accountable

T5C	Spend on front line Registered Nurses and Doctors. Stop the cuts to these two professions. They are the highest trained, hardest working and most necessary people involved in our healthcare. Please do not force new Canadian schooled/graduating physicians to practice rurally. Make the new to the Country medical licenses practice rural instead. We need our newly graduating Canadian trained doctors to have the freedom to practice wherever they want to within Alberta or we will lose them to other provinces. Do NOT replace Registered nurses with LPN's. Our RN's are some of the most highly trained, best quality nurses in the world - replacing them to save what - \$8 to \$10 dollars an hour - that is not acceptable. Health care needs to be a priority.	The government needs to cut high level duplicated and unnecessary management positions within GOA. They need to cut their own pension getting after serving only one term. Why do our politicians get a tax break on their income? Eliminate this! They need to cut breaks to big business - raise the business taxes! We do not seem to be creating jobs by lowering big business taxes. Do whatever it takes to NOT affect our healthcare - add a provincial sales tax if that will save us. Find a way to STOP the transfer payments to other provinces- it is about time we get to take care of ourselves. Fire-fighters, police - stop the generous pensions - these professions can retire after a mere 20 to 25 years - how is that fair to the rest of us? Create our own police force - eliminate the RCMP from our province- the duplication of services and upper level positions is a joke. Create a provincial police force. Integrate the aboriginal folks into the general population; we cannot afford to continue to carry certain groups - the time has come to make a change. Stop the tax breaks to churches and religious organizations - they should all pay taxes like the rest of us. Even out the playing field so that middle class Albertans can afford to exist. If you want to save money in healthcare - stop the waste of medical products, centralize and specialize our hospitals, eliminate some of the rural hospitals - people may have to drive further but the cost of running these buildings is outrageous, cut upper hospital /AHS management positions and spend the money on the doctors and registered nurses.	The government needs to create more jobs with benefits. People need benefits to survive. Banks, insurance companies, utility companies, tech. companies - all need to employ more local people - these are the companies with the money. Employ Albertan's first - the people that are born and raised here; support them to save our province. This is about protecting our economy and we are a diverse workforce. The government needs to look at alternate energy sources - create jobs by building solar energy, wind turbines, geo thermal - we need to have affordable and easier access to solar panels - help us save money on our insanely high and rising heating and electrical bills by promoting solar.
t5n	Schools - teachers, teacher aids Health - drs and nurses as valuable resources diversifying economy	reinstating Alberta Health Care premiums with appropriate subsidy. NOT using tricks-down economics. no corporate tax breaks for big oil	diversificaiton, small business tax incentives for hiring
t5y	Health Care Public Transit Affordable Daycare	Everywhere could use a review with an efficient lens. Less corporate tax cuts Minute sales tax Increase corporate taxes	Promote entrepreneurial vision in tech sector Diversify away from the traditional oil and gas mindset Subsidize post secondary programs in which jobs are in demand
T3C	diversifying other fields and not only focus on oil/gas.	Reduce waste on organizations that are stealing money. AHS execs are the highest paid execs in canada. Instead of reducing budget on healthcare and letting employees suffer restructure the management/execs, canadian blood services asking for free donations from people and overcharging blood back to hospitals. These are only some of the issues, look at restructuring the head not the bottom.	by creating and promoting job growth you will see a ripple effect and see economic growth. Oil will never be high as before and we should be diversified and not only focus on oil. Need to spend money to make money.
T3L	Education	PST Royalties	Take foreign oil companies

T8A	Healthcare. Education.	Submit a list of true tax payer dollar spending and I will answer that	Focus on supporting present priorities. Healthcare and education. Ask those on the front line where cutbacks should be . They are a wealth of info .
t2j	LRT (expand on) to help reduce congestion on the roads and simplify how people travel to and from work. (and allowing job creation) B) Affordable housing by enticing builders via low interest loans, etc. Ask Feds to match dollars spent by AB gov't.	A) Show Albertans austerity in gov't admin. budget where cuts should be made; B) Define social pgms budget based on # recipients i.e. under a 1,000, stop providing funding. C) Reduce # govt trips within Canada, suggest hosting them here instead. D) get more money on oil well ahead of them being put in the ground to recoup cost when out of service. IMPROVE relations with Fed gov't with collaboration approach	Grants, lower interest rate loans to small entrepreneurs. Increase taxes & accountabilities to larger companies. Increase royalties to oil sector. Inasmuch as the oil is resource of Alberta, the gov't still needs to stand up to the oil company and get their fair share (royalties). Ask Feds to match Alberta's funds relating to LRT jobs
T2V	Health and education.	Big infrastructure. Duplicate government services	A labour tax credit for media content production. Tax incentives for innovations in technology and agriculture. Alberta should be a leader in media production but government is afraid of the optics. Billions of dollars in foreign investment is being ignored.
T0C	Definitely animal welfare including agricultural livestock. Preserving Forrests and wetlands.	Government can find some money in the healthcare industry. Someone should be looking into the billing aspects of doctors in the province. Even if you don't need to see a doctor they have you come in to get a prescription renewal or to get a Form for bloodwork etc. That's because They don't get paid unless you walk through the door. So what ends up happening is you go to see the doctor for an issue he'll give you requisitions For x-rays or bloodwork and then you go back to see him so he can read the results to you. Really these requisitions could've been forwarded to the applicable labs and then forwarded back to the doctor and then if there was any concerns you could go in. So instead of two required visits to find out your results you might not have had any required visits unless of course the news was negative you had to go in for further discussion. Basically I'm saying a lot of this can be done over the phone and resolved. Yes the doctor should be paid for phone calls and their expertise that's fine but you shouldn't have to go in to and three times to get the same results you could have with one. This goes on all the time.	Cut back on corporate taxes. There has to be some initiative for companies to expand and be able to hire more employees Also the government should look into mineral owners for the province. Seems like everybody's benefitting except the people that actually own the mineral title. I don't think oil companies and governments should be able to take money away from the people that actually own the mineral rights.

T5T	Public education, public healthcare, support/grants for development and transition to sustainable energy sources, social programs which lessen the increasing economic disparity in Alberta (AISH, childcare, income assistance, housing), maintaining and improving infrastructure. This is not a support for absolute economic equality, aspects of capitalism and entrepreneurship have provided an excellent quality of life and standard of living in Alberta, but history has shown that they have also not been perfect, and government must intervene in the economy to decrease economic inequality and promote economic prosperity for all. Everyone in Alberta benefits from decreasing disparity/businesses benefit from a safe/secure province and an educated, healthy & motivated/fulfilled workforce.	The issue is not that the government is spending too much, it is that they are not collecting enough. The government's job is to respond to the will of the people- all people- and work in the best interest, to the greatest extent possible, of all people in the province. The government cannot focus on finding savings without considering the revenue side. Refusing to consider a provincial tax and providing large tax cuts to big business and top earners cannot be made up through cuts to essential services. Those cuts can't make up for the loss in tax revenue. The government could find savings through not wasting money on ideologically driven decisions- "war room", removing "public" from names at great cost/changing emails, signage, forms, cancelling contracts that have to be paid out, etc.	A strong middle class drives the economy. It's not businesses that create jobs, it's people with money to spend that creates jobs/keep businesses open/thriving. Raise corporate tax, institute a provincial tax, stop cuts/rollbacks to the "little people" whose spending drives the economy. My husband and I work in the public sector. I'd like a new car- I'm not buying one because the government is going to roll our wages back/job may be lost. We're not eating at restaurants. We're not going to plays/movies/sporting events. We're not buying new cloths, pillows, toys for our kids... the list goes on. The 1% only buy so many houses/cars/clothes/pillows etc. The province needs a strong middle class to spend if the economy is going to grow/jobs are going to created. Create law which encourage, not discourage people and businesses from relocating to Alberta, immigration/strong population growth promotes strong economic growth. Diversify the economy- government has to support through law and policy or it won't happen. Individuals working in the fossil fuel industry, and any transitioning industry in the province, should be supported by policy/opportunities for education and retraining. Oil and gas resources have benefited the province greatly (maybe not to the extent it could have with 50 years of improved government management, but...), and there is not anti-oil agenda in the province, there is scientific and economic fact/reality that is impacting that particular industry. The world moves forward, change continues- strategic and well-informed decisions, supported by facts and evidence, will best support Alberta's future economic growth.
	Where's the question regarding revenue? If you won't even hear feedback on budget revenue, only cost, it shows you're not actually listening and/or don't care what Albertans have to say.	Cut that stupid energy war room.	Change the revenue structure of the budget. Less income tax, more sales tax.
T0M	Health care, especially expanding the Red Deer hospital. Specifically the cardiology department. Being central Alberta, Red Deer should have the proper means to deal with heart attacks and more.	Quit funding the drug addicts and safe consumption sites.	We are an oil province, support this field. Also we need more paramedics spread through out rural communities
T3N	Not making huge cuts to health and education	Not giving tax breaks to large companies	Not be cutting public service jobs and diversify away from oil and gas
T5K	Keep funds in public healthcare where they actually benefit everyone and don't further damage a system that is already stressed. Invest in education so this province actually has a future (grade school and post-secondary).	Less money and tax breaks to large private corporations so that they can make even more money to benefit the few. Private/religious-based health institutions and schools should not see public funds to maintain them.	Incentives for small businesses and stop cuts to healthcare, which is arguably one of the biggest, if not the biggest, industries in the province. Diversify from fossil fuel based industries into more sustainable options.
T5p	Education and healthcare	Fair taxes on large corporations, cuts to government offices. Publication of privately contracted business with detailed expense reports	Government funded jobs are necessary during economic downturn. We should increase infrastructure spending

t6t	Post secondary education - to diversify our economy and workforce and to get more Alberta high school students into universities and colleges and NAIT/SAIT, and to get more Alberta residents back to school to upgrade themselves so we are not reliant on new immigrants.	Cut 10% out of the health budget, as that is too expensive. Cut 20% out of the physicians budget, and put all new physicians into a salary - that is less than the average amount paid to physicians in Alberta through the fee-for-service payment system now.	Post secondary education - to diversify our economy and workforce and to get more Alberta high school students into universities and colleges and NAIT/SAIT, and to get more Alberta residents back to school to upgrade themselves so we are not reliant on new immigrants.
T0A	Agriculture (which is the second largest industry in the province and is very neglected by the province), infrastructure as our highways are falling apart, education as we need informed citizens in the future, and front line health care workers (you need to cut management)	Alberta Environment could use a reorganization. There are too many managers and repetition in the department. Everyone is in a silo and there is no consistency in the ministry. Stop contracting everything to private corporations. Also stop giving handouts to the oil and gas big business.	By funding front line workers in health care, education and research. We need a well educated healthy workforce to drive the economy forward.
T2N	Diversifying the economy and supporting research and development in the province, but putting financial support back into programs such as Alberta Innovates and SR&ED credits. Also important is supporting our post-secondary institutions and not making it for the elite and wealthy only by brining back caps and properly funding them. Health is the most important thing in life, universal dental care should be for all. Regular cleanings and bi-yearly check-ups should not be paid by the individual	By cutting MLA's salaries. Otherwise no cuts, look at instead brining in a sales tax and using carbon tax to fund programs. I don't think we should be cutting.	Diversifying the economy and supporting research and development in the province, but putting financial support back into programs such as Alberta Innovates and SR&ED credits. Also funding for re-training programs.
T2M	Education, health care, the arts	Corporate subsidies	Encourage diversification and provide training paths for people to transition out of dying industries
T2N	Funding Education, Healthcare, and public services with public money greater than what they are now	Greatly reducing oil and Gas subsidies, and no longer giving large handouts to corporations	Funding a just transition from Oil and Gas to sustainable energy, and re-instituting the STEP program.
T8E	healthcare and childcare	by taxing the corporations and not giving them tax breaks that obviously do not translate into benefits for regular Albertans - als by shutting down that ridiculous War Room that is nothing more than an excuse to create a divide between Albertans	stop cuts to Education - which only result in very short term monetary gain but has long, long term detrimental effects on all Albertans
T9C	Health care, education, and economic diversification. The government should be focusing on these areas in terms of investing and not cutting.	Canceling the "war room" and "anti-Alberta" investigations.	Not giving tax breaks to large corporations. Encouraging and supporting small businesses and start-ups. Exploring economic diversification and investing in same.
T8A	Publicly funded, publicly delivered health care. Publicly funded, publicly delivered education. Accessible, affordable childcare.	Get rid of the energy war room. Stop thinking that cutting costs always results in savings - pay attention to the downstream costs of cutting. Firing 90 government lawyers equals millions to hire private law firms to do the work and means that the preventative advice is not available. Cutting dependent benefits for seniors means people don't get the medications the need and end up much sicker.	- improve availability of affordable chilcare including retaining and expanding \$25 per day childcare - diversify the economy by investing in green technology research - be realistic about the true long-term viability of oil and gas as the only economic engine in this province - improve access to post-secondary education
T5A	Health care Education Policeing Job creation	Get rid of Kenney CEO and managers making over 150,000 a year	Do not cut front line workers in health and education. Stop paying for those that abuse the health care system. Stop giving tax cuts to big business

	- Healthcare - Renewable energy infrastructure and R&D. Ex. High capacity electrical storage and distribution. Could Alberta be marketed as a new centre of energy innovation? We'd have to walk the talk. - Education, particularly k-12	End public funding for private schools	Lower barriers for new small businesses
T6E	Education, healthcare, environment.	Cut fossil fuel subsidies, fire Matt Wolf.	Invest in infrastructure, public transit, education, & renewable energy.
	Healthcare and education. Diversifying the economy into other resources other than oil and gas industry.	Stop giving tax breaks to big corporations. If companys want our resources they will pay to get them.	Tax breaks for small business owners. Invest in education for the future. Incentive programs for small business. Incentive programs for trades and technology programs.
T3c	Insulin pumps and sensors which are very pricey. The cost of my sensors are 3800.00 a year and no insurance companies will pay for these sensors. These sensors have kept me out of hospital and very healthy.	Less income for the politicians and in order for the politicians to get a pension, same rules need to apply as the Canadian citizens, 30 or 35 years of service to get a pension, not under 10 years of service.	Go ahead with the pipeline, more jobs for us Canadians and curbing refugees being helped financially over the citizens in Canada, our own homeless situation and helping hungry children.
t3k	Health, education, for Seniors and Low income families.	decrease salaries and spending of politicians	They should not focus on oil industry. They need to find and develop other industries here in AB so it can create jobs and economic growth.
t6l	Health, Education, Infrastructure, Social Issues	Repeal the tax breaks given to corporations. These seem to be doing nothing but reducing the revenues the Government receives.	Diversification in energy, Education, grants towards electrification of the transportation system.
T2A	Education Health care Small business Alternative energy	In there own salaries, pensions, and expenses	Funding alternative energy sources and small businesses Giant corporations can and do take care of themselves
T6W	Education and healthcare	corporate tax revenue	providing either tax benefits for average income earners to promote more spending in the retail and services market. Provide business start up incentives.
T8A	Education and Health care, the two things that ensure a future.	The environmental sector. We pay so much into green that we are being drained elsewhere. Tomorrow won't matter if we can't make it through today	Find ways to open the oil sands more fully again.
T0M	Maintaining and improving services, and infrastructure.	PST and indexed income tax.	More funding to schools and training, as well as, transitional programs to move funding from oil and gas to more environmentally sustainable energy industry.
T6w	Actually assisting the seniors. As I've found very little help since relocating here. Everyone in these offices pass you off to someone else.	Start with there own pockets. Its hard/tough to live on nothing. More programs to ensure seniors are actually looked after.	Hire us seniors we need funds just like the rest of the human race. I'd gladly work part time and be productive. But its all about youth looks and what businesses are as essential which isnt seniors. We are responsible, loyal and ready to work at the right job.
T8B	Education, health care and the environment.	Stop providing tax breaks or incentives for big industry. Re-institute the carbon tax so that money can be focused on diversifying our economy in our province instead of the money now being taken by the Feds. Should the question not also look for opportunities for revenue instead of just cuts?	By increasing support for education, health care and the environment. Look to support our social services and diversify our economy so it's not solely focusing on oil and gas. What changes in the last year has actually created more jobs? The impacts that have been made to our social services not only impact those industries in terms of jobs, but cause people without jobs to feel even more pain when their services are being cut too.
T1J	Climate saving incentives, actions and promotions. Indigenous health and communities.	Re-evaluate the profit of short term investments. Think sustainably. Think long-term.	Climate saving incentives, actions and promotions. Alberta has a lot of work to do in this area. People will save money in the long term. We are ready to work hard now so we (and our future generations) can benefit later.

T2z	Health care and education	Pay cuts and/or wage freezes	Cut royalties on oil and gas production and do whatever it takes to encourage business to want to be in alberta
T8N	Health care and Education	Put in a PST and much of our "spending" problem as well as "revenue" problem will drastically decrease. With all the tourism we have in Alberta (Calgary Stampede, mountain visits, etc.) we are missing out on taxes (revenue) from non-Albertans. Any changes (cuts or user fees, etc.) that you have proposed only hurt Albertans, while a PST would impact everyone visiting our province.	Please stop cutting to start up businesses and those trying to be innovative. There used to be many more grants available to assist those who want to start something new (like new energy initiatives).
T1J	Health, education.	Less spending on political propaganda that divides Albertans.	Diversifying our economy - less dependence on the oil and gas industry. Investing in other industries that offer long-term sustainability.
t5x	Classroom size Quality of education Support for special needs	Longer school day over 4 days	Focus on quality education. Reduce Premier and MLA salaries, tax corporations, find alternatives to fossil fuel and support worker re education initiatives. Leave education and healthcare alone!
T8N	I think the government need to focus on growing our economy and getting us back on track. However some of the cuts really scare me. Education is so important for our youth and what they will contribute to our province in the future. Understanding that this is a huge cost to us but to me seems so important. There has to be a way that we can maintain what we have now and same for health care. My thoughts are we need to be helping them restructure from the top and demand they leave front line staff as be. As I feel that this service is stressed as is. 17(1) For us growing the economy is of the utmost importance as both of our incomes have been drastically reduced over the last 3 years	Honestly if need be I think we need a PST. I hate saying it but I would rather pays this and bed get for this than see a bunch of services cut. Maybe we could re implement Alberta health care costs like we had before. I think we also need to look at government departments. Is all the staff needed, can we merge departments. Can this be more efficient.	I think we need to promote all new business in our province. Can we look at incentives to bring companies here and hire local. Can we look at maybe a one time 2 year tax break for companies that hire over and maintain a certain number of local workers. We need Albertans working and paying taxes so we can fund our province. We need to find an alternate source of income besides oil. Obviously we can't forget about it or not work to develop pipelines but this oil crash will happen again. Will we be prepared or will the same thing happen again.
T2P	Medical treatments that: return willing citizens to work, enable flexibility in employment options (i.e. diabetics tend to be tied to their private plans at their employers. it makes moving jobs within the province more difficult. Moving this to provincial care will increase employability and flexibility)	Medical services: remote appointments, ownership of medical data by patients.	See above
T0L	Healthcare and green power initiatives. Rural internet infrastructure.	Stop giving tax cuts to O&G companies. Get rid of the ridiculous "energy war room". Stop inserting yourselves into and micromanaging higher education and the healthcare system.	Fund tech companies. Bring back the solar initiative.
T5R	-Keeping adequate front line health care workers (adjust spending to reflect population growth) -keeping class sizes to recommend levels (consult teachers association), adequate numbers of EAs in classrooms. (adjust spending to reflect population growth)	Less corporate tax cuts. Bring corporate tax rates Back to pre-UCP level	Continue work re: pressuring for Pipelines
T0K	health, education, small business start up incentives,	health, education, redundancy	No new govt jobs. Decrease govt spending and decrease taxes. Spend govt money efficiently.

T3A	Healthcare, education, police, other essential services	Tax breaks and bailouts for oil and gas companies. Could also introduce a PST	Diversify. Stop focusing so much on oil and gas
T6E	Focusing on moving towards clean and sustainable energy, on housing and care for those living in our streets, a functional and all-encompassing transit system, public education FOR ALL, public healthcare FOR ALL, initiatives to assist climate and other refugees and immigrants, indigenous reparations and genuine acknowledgement of genocide, as well as continued building of public spaces such as libraries.	There is no need for a military. There is no need for new airplanes which only exist to murder civilians a world away. THERE SHOULD BE NO MORE PIPELINE CONSTRUCTION. All efforts towards continuing the advancement of oil WILL HURT FUTURE GENERATIONS. Also, tax the rich. Exorbitantly.	By moving in conjunction with the federal climate emergency declaration of June 2019. Any "economic" growth that we work towards is incredibly futile, if not overwhelmingly harmful to the world around us. We know that the Global South and peoples living near the Equator have already been facing life-threatening and life-changing consequences from the climate emergency. It disgusts me to think that those in power would still continue to pressure the layperson to focus on "economic growth" rather than the protection of our remaining populations of both humans and all animals. Any actions that are not directly related to mitigating the climate emergency are a WASTE OF TIME, RESOURCES AND ULTIMATELY, LIFE. THERE ARE NO JOBS ON A DEAD PLANET!
T2X	Health care and education. Infrastructure.	Narcan program scrapped Tax breaks for corporations scrapped Tax breaks for the wealthy scrapped Safe consumption sites scrapped	Diversify. Oil is dead stop allowing that to be the primary focus. Tech, alternate energy sources, etc. Continue to support post secondary institutions not cutting!!!
T0L	Diversification of province's commerce and tech sectors to complement the decline in oil and gas. Education. Health.	it's own administrative costs. I don't believe in this climate austerity will help pull us from this hole. Minimize costs on efficiencies but don't burden everyone with looking over their shoulders in admin checking up (re: recent education funding plans)	Development of tech (future tech, think power generation (and all around it) not just raw resources) and tourist sectors.
t0b	k-12 education, keep healthcare affordable, invest in rural municipalities	post secondary that doesn't produce desirable outcome, adding privat health care providers, the way grants and funds are allocated and used for	cut red tape, offer incentives, invest in new technologies
T8X	Education, Health, Social Services	1)Taxing oil companies proportionately, and actually forcing them to pay what they owe. I used to work in the patch, and if they are struggling then it's definitely the best kind of struggling. 2) A sales tax. So blindingly obvious! A 5% sales tax is barely noticeable, and combined with the GST to make 10%, we would still be lower than most provinces.	Diversify. Invest in the people on top of the ground, not the oil beneath it. Support the transition to sustainable industry and wean Alberta off of its economic reliance on fossil fuels. I'm from NS and I've watched as my home province dumped far too much taxpayer money into the dying pulp industry for short term political and financial gain. Once the money is gone, the corporations leave. I've seen retirees forced back into the workforce because their pensions were cut. Alberta isn't there yet, but it easily could be in a few decades. There is a global move toward cleaner energy alternatives. Whether a person agrees with the scientific reasoning behind this or not, it will be hard to argue that maintaining our economic reliance on an industry that the world is shying away from is a good idea.

T6H	DIVERSIFY the economy!! That way you will have the budget to fund the most important things: education, health care and care of vulnerable groups. Support ALL Albertans!!	Tax big business and the rich in our province- just like the NDP were doing and then diversify our economy, like the NDP. That way, we can start making money in a non- boom & busy fashion! Get rid of the super expensive and ridiculous “war room”- focus on building new economy, by putting that money into new business and education/health care so people want to live here. Support ALL Albertans!	Again, diversify! This government has cut diversity out, taken away grants for new business that then located elsewhere, stopped construction of labs that would help diversify, cut income to so many Albertans. The oil & gas industry will always be needed, but should just be one of MANY economies in Alberta, so we don’t have such huge boom & busts!! Stop kicking a dying horse and actually be leaders in thinking of Alberta’s future and how we can make our economy diverse & strong for all Albertans!
T1J	Education, Health and Energy Diversification. Stop relying so much on oil and gas to solve everything!	CEO salaries in the education and health fields. Start at the top instead of cutting workers at the bottom. I would also like to see oil and gas companies pay their fair share of taxes...no more tax breaks! I would also support a sales tax if it meant keeping social services.	Support diversification of the economy, health care and education. E.g., new technology and innovation.
T1K	Primary and post secondary education. Agriculture research and development. Infrastructure.	Reduced administration and government size.	Education. Small business support programs and loans. Reduced ALCB red tape
	Health care and education because we have an ageing population and we need to educate our young so they can make informed choices.	Taxing corporations and raising taxes on the rich.	Diversifying Alberta's economy away from oil and gas so people are not so reliant on oil and gas jobs and have other forms of work when the gas industry goes bust.
T5Y	<p>While I do feel that spending is an issue, what is currently happening and what is being proposed as far as cutbacks is way too extreme. The cuts are affecting Alberta's most vulnerable (all ages) and these cuts are only going to make things worse; we must think long-term as to how this will affect our society. Cuts to the social income assistance programs and what is currently happening with the rental supplement program, not to mention funding cuts to so many community support agencies is going to affect thousands of people that rely on government support.</p> <p>Also, cuts to frontline workers is also too drastic. The public service workers that are being let go by attrition (eg: temporary positions not being renewed) is just not the way to go. I have seen very low paid people (admin workers) that are absolutely necessary in their organizations being let go rather than having a review of government position to see where savings can be found. 17(1)</p> <p>that staffing has always been an issue and it is very scary to think about what will happen in the near future. Over the years I have seen and personally suffered (physically and mentally from the consequences of high workloads and with further cutbacks this will affect the remaining staff by having to take on more than one person can handle. This government is focused on creating jobs and getting people to work. What about it's own staff?</p>	<p>I think that one of the main ways that the government can find savings is doing a full review of all government programs and focusing on the top earners. Government is very top heavy. I can provide two examples - 17(1)</p> <p>approximately 60 front line workers, 10 supervisors, two managers, and one senior manager. Are all of those managers and supervisors necessary? Each department seems to have many supervisor, managers, directors, etc. and are very high paid. This is what the focus should be on, rather than letting go the lowest paid staff that are the most needed.</p>	<p>All I can say is that what the government is currently doing is not working. So many people have lost jobs recently so another approach is needed. Something needs to be done so that the people that are currently employed keep their jobs. This is in all employment sectors in Alberta. Government must support it's province; not make everyone suffer.</p>

T5E	Spending priorities should be get work for the out of work people.	By separating from Canada, pulling our Pension (CPP), Quebec has there own (QPP)...Stop all Transfer payments... Cut middle management out,	By giving the workers the Tax Breaks, not the Corperations, (10%) credit on there personal income taxes...
T0L	Economic diversification; upstream support for people to prevent mental health and addiction issues-community health supports, diversity and inclusion work at the community level, access to affordable housing. Dealing with full blown addiction is costly.	Get rid of the war room. I am not pleased with the divisive anti-Canadian discourse this thing has been creating. Also too much time spent spinning stories on social media that are meant to distract people from the main issues while questionable policy is pushed through. Get rid of the disrespectful Issues Management director and actually do some work on helping Alberta move forward with benefits for the people not just oil corporations. Collect those taxes oil companies are not paying.	Diversify the economy. Previous premier was trying. This government needs to quit with the ideological spin and put some effort into making things happen. I am so disappointed in the difference in what was promised and what is happening. It is pathetic.
t5x	Education, Health care and low-income financial assistance	Corporate taxes	Support for job creating starts in education. Adding required supports for students to aid in their education journey and follow through to post-secondary support and funding.
T3K	Healthcare, education	It's own party	Support the healthcare and education of Albertans. Make these things a priority that doesn't become threatened with each election. Use research to drive decisions on staffing levels and classroom sizes. Consult those who work on the front lines that have an intimate understanding of the issues and risks at hand.
T3H	Post-secondary, education and healthcare	Mid-level management	Support oil and gas, but also work to diversify the economy. Support nascent industries
	Giving teachers at least a cost of living adjustment for at least the past few years, instead of 0/7 during the past 8 years. Increase education funding so classes sizes can be reduced. Increase health spending so front line jobs can be kept.	Increased taxes on big business, investigate the possibility of a provincial PST.	Invest in education at all levels.
T4N	Child Care Agencies - do not cut funding for non profits Senior Benefits - do not cut funding	Funding for big companies - why do they get the tax breaks	Support the businesses that provide care for low income families. If the low income families can not work because they can not pay for child care there will be more unemployment.
T2N	Healthcare, education, poverty reduction, investment in social services.	Collecting tax from oil and gas companies. Not giving oil and gas industries tax breaks. Getting rid of the Canadian energies war room.	Diversifing from oil and gas. Investing in green energies. Not cutting public sector jobs. Investing in preventative supports- poverty reduction, safe injection sites
T0b	Heath care and education. Cut the hirelevels Of pay and more on the ground (nurse and teachers)	Taxing hire income. Taxing business. Oil.	Getting our oil to the coast and having a refinery built here
T2H	Public healthcare, public education, public transportation, attainable housing	Tax corporations	Diversify the economy, invest in alternative and renewable energy, reduce income inequality
T5Y	Health care and education	Tax breaks to big business and higher royalties for non-renewable resources	Diversifying the economy and stop trying to make 2006 happen again. It won't. Move on
	Healthcare, education, infrastructure	Redundancy, unnecessary bureaucracy.	Supporting innovation and research, looking to new industry beyond oil and gas as it is no longer sustainable as our main industry and is not renewable. We need to look forward not back. Support tourism as tourism can bring in good growth

T8N	<p>Healthcare, education and social services for vulnerable populations.</p> <p>Making more revenue - all you can think about is cutting, but there is another part to this equation - we need more stable revenue. If you can't recognize that than you are being willfully ignorant, which is not a good look for government. If we are in such dire straights, why aren't you looking at ways to increase revenue?? Taxes (corporate and personal), diversifying the economy, supporting women to get into the workplace so that they can pay taxes and contribute to the economy.</p>	<p>The Canadian Energy Center is sucking up valuable money that could be used to actually support Albertans. You say that you want to have programs and funding more outcomes based. I am having a hard time understanding the outcomes of the War Room.</p> <p>Reinstate the corporate taxes that you cut for large businesses.</p> <p>Why are there no questions on here about how to get more revenue- "finding savings" is only one part of the equation - what are you going to do about our revenue problem???</p>	<p>Shifting our economy from an oil and gas dependent economy to a more diverse mix that looks to the future. Not putting all of our eggs in one basket and looking for opportunities to invest in technology, renewable energy and people centered economies.</p> <p>Your policies are failing badly and you need to readjust and shift your thinking if you don't want this province to continue into this downward spiral.</p>
T3M	<p>Health, education, childcare. Do not expect physicians to only spend 10 minutes per patient this is absolute insanity. Dont privatize healthcare or take steps to break the current system to undermine public health which is exactly what you're planning on doing. Shame on the UCP for being the enemy of the working class, the students, the seniors, and the Alberta family.</p>	<p>Stop corporate tax cuts period. It does not work!!!! 4 billion dollars wasted!! Encana just left the province and they got a 55 million dollar tax cut!! That 55 million could have been used to support subsidized child care or education.</p>	<p>Spending money on new infrastructure projects that will create jobs. Like the green line in Calgary or building new hospitals. Stop cutting funding to social programs. Most economists will agree that trickle down economics does not work. In difficult times, governments need to spend money in order to stimulate the economy. Not cut back. In the great depression, they bounced back because of social spending. Not because the government cut back. Stop being an enemy to the working class. Start diversifying the economy so jobs can be created in sectors other than oil and gas. Invest in education so that we have a skilled workforce in the future.</p>
T2K	<p>Affordable, reliable, well-trained and capable child care providers. The cost of childcare - regardless of subsidy - is a huge burden; forcing many to choose between working and caring for their children. And the health care system; particularly mental health resources. 17(1)</p> <p>But health care in general is overworked and underfunded! We are in the midst of a serious opioid crisis. The government should be looking at why that is - why are people medicating themselves to death? It's totally avoidable. You can lead a horse to water, but when the water won't be drinkable for about 6-8 months, what's the point?</p>	<p>Where the hell does all the money from tickets and fines go? From minor speeding tickets alone, I could have funded a much-needed vacation 3 times over. Most people don't have time to go to court to ask for a reduction, so these tickets of 100+ bucks from cameras - how are they being used? Further, the transportation ministers press secretary could - literally, I am not exaggerating - pay my rent with their salary for about 8 years and still have a good chunk of savings. How about a salary review???</p>	<p>By working for the people instead of for their paychecks.</p>

t8s	Health, education and infrastructure.	<p>Cut the old timers within our ministries who are simply milking the system and staying along for the easy ride. They do nothing and are not bringing anything constructive to the table. If the issue is packages/\$ - just take the hit and pay now, push them out the door so people can move on and government can actually take some proper steps forward. There's nothing that will change except you will end up with poorer results for as long as they stay on especially after cutting more staff.</p> <p>Stop all creation of programs or spending on garbage programs the government use and hire a private sector company to evaluate what would actually be worthwhile to use. The sharepoint being created/used in transportation is not thought out, does half of what it should and is supported by people who shouldn't even be considering its use. So you're left with mediocre results with people who are holding positions that are costing far too much for what you're getting and wont look for proper solutions.</p> <p>Cut Minister/politician salaries as year in year out no matter who they continue to fail Albertans.</p>	Consider bringing back elements of private sector back into public sector while not using unions to fill those positions. Keep it competitive so people who have drive for results will push for the betterment of government.
T5L	Healthcare and primary education	<p>Restructuring the way spending is done. Instead of going with the "cheapest" (because these always seem to go over budget), go with the ones that guarantee their work on time and on or under budget, or penalize the ones that go over. Penalize shoddy work.</p> <p>Pre-emptive healthcare (keep people healthier in general and find things before they become real issues and they'll rely less on the healthcare system).</p>	Push job creation in growing sectors, IT, eldercare, maybe tax breaks for new businesses or for businesses willing to provide job sharing positions
T1Y	Public transportation, health care, other industries such as uranium, helium, or renewable energy sources	Adding a provincial sales tax of even 2% would help substantially without significantly impacting Albertans	Addition of PST and investment in uranium helium exports and renewable energy sources
T2B	HEALTH, ROADS, EDUCATION, CONSTRUCTION, NATURE, OIL/GAS, COMMUNITIES	CONTROLLING BETTER WHERE MONEY GOES NOW	WISELY DIRECTING FUNDS
	Health and education and supporting the vulnerable sectors of our society.	In your own offices and upper management of provincial structures. NOT on the frontlines and taking away from the people who need it most.	A sales tax. This is a long term user based sustainable source of income. Why not? I would much rather see this than all the programs being cut.
T3B	Job creation Health care Education Seniors	<p>Cut back on the size of the civil service - not cutting front line health care and education. Hire more full time nurses with benefits to reduce outrageous overtime costs.</p> <p>Quit hiring panels to make recommendations - we elected you to make decisions, not panels.</p> <p>A "means" test for \$25 per day day care - I know of couples making \$400,000 receiving \$25 per day care - just ridiculous.</p>	<p>Start up incentives for new businesses</p> <p>Support small business through lower taxes</p>

T3L	Education	PST Royalties	Take foreign oil companies
T2a	Education, healthcare, job creation	The tax cuts and bonuses your giving the big companies. If you don't up their tax at least put it back to what it was. Stop only caring for the rich white man and start thinking of everyone. You are making the rich richer and the poor poorer, with worse education and healthcare.	Dont cut funding to things like the Calgary cancer center. Invest in renewable energy (this does not mean to forget about the oil field!)
T2Z	The government should focus less on corporate tax breaks and more on public infrastructure. Public transit, public health, etc. Trickle down economics has been proven time and time again to be ineffective. Especially in an industry such as oil, which is spiraling down.	The government should introduce higher taxes, especially on corporations. A sales tax would also be beneficial to balance the budget.	By supporting public infrastructure. Rather than cutting nursing jobs through attrition, actually hire new graduates. Support students through internship programs, thus encouraging companies to hire students. Invest in green energy projects.
T5P	Spend on public health and education and prevention programs. We understand not paying nurses/teachers more but don't try to take away stuff from their contracts.	Don't cut corporate taxes, they literally took the money and ran. Raise corporate taxes. raise taxes in the highest bracket (right, for your buddies!). Reinstate carbon tax and all associated programming. Basically, don't be conservative. Oh, and a low provincial sales tax would also really help. Yes I live here. Yes I'll pay it.	I don't know.
t5g	waste of overpaid officials, stop the corruption and subsidizing the oil and gas industries, the legal industry.	Family courts, as in many other modern jurisdictions, equal parenting by default, only deviate in exceptions. That is all backed up by scientific evidence for years. They saved 100's of millions per jurisdiction. Alberta aka Canada is about 40 years behind. It is the same with MEP Alberta, very inefficient, incompetent people/directors, we have seen this for many years. Make them accountable, as no one is there and it is a well known mess. Health care, over time of nurses, poor HR planning Education, do away with all the little holy houses, merge and make it more efficient so teachers can focus on teaching, not the bureaucrazy. Social services, make people accountable, you will see what happens...	expand apprenticeships, stop importing labour as we have enough, provide incentives for corporations for added value hands on training (please do not subsidize hazy wazy training, e.g. law, policies etc.), promote hiring older work force (50 plus...) as they often can't get jobs....discriminated. Expand added value agriculture technology and industry, many smaller countries like Denmark, Netherlands, Germany are bigger agricultural countries on export/business than Canada which is so far behind
T7x	Albertans! Ensuring all Albertans have a quality of life. Social programs, low income housing, transit, education, healthcare, renewable energy	Stop creating all these panels! Actually reduce red tape not create more. Look for efficiencies.	Through investing in renewable energy and all the great things already happening in Alberta.
T2c	Job creation, education, affordable healthcare, affordable housing, transit	Cutting welfare off for healthy, able bodied Albertans who should be working. Also maybe stop buying these terrible public art pieces nobody likes but guaranteed costs \$500k each	Why do we not have more oil refineries in Alberta? Why are we shipping it off the US and then buying it back at a premium? Take out the middle man and build some more refineries here so then we have the job growth and less expensive oil and gas prices. Maybe I'm an idiot and that's not how it works, but if it is then this could help tremendously.
T2N	Public services especially health care and education. Development outside of oil and gas.	Not increasing tax breaks for companies. Maintaining the carbon tax. Reducing spending of premier and advisors for travel. If necessary increasing PST.	Funding health care and education. Encouraging development outside of the oil and gas sector.

T7V	Creating jobs (in the public sector as well). We need more nurses and teachers! Also diversifying our economy and not investing everything into oil. Oil will not be around forever. We should be investing in technology.	Get rid of the War Room and Matt Wolf. That would save over \$30 million a year. Jason Kenney also does not need to be travelling all over the world on the tax payer's dime.	Get rid of the Conservative government! But you won't, so Alberta's economy is going to go down the toilet.
T1J	Health care Education Environmental protection	No more tax breaks for big oil.	Education and the promotion of alternative fuels. Alberta is far too deeply dependent on the oil industry.
t6b	The spending priorities should be on healthcare, education and public service such as income support to better provide better staffing, case management, and molding peoples minds. You can't create a better world, and more/better productivity with people who aren't trained properly and paid well. We need to stop spending on jobs within the oilfield as there will never be a booming economy the way it used to be.	Getting big companies to pay bigger taxes rather than the middle working class/lower class, having the oil. Getting the oil companies who owe 173 million in property taxes to actually pay their property taxes.	Providing funding and staff to public service that assists people in finding employment, to stop allowing immigrants into Canada to sit on income support and to provide proper training and education to Canadians. You should also be looking at other renewable resources rather than oil. It's also important to look at what places like Sweden and the Netherlands are doing. Their quality of life is better, they have lots of renewable resources, and they actually have to pay people to use energy.
T8H	Schools Emergency services	Lower high government employee wages so they get paid like everyone else.	By ensuring more emergency services in big cities have the budget to hire more staff. Public safety and police response in some cities is a joke and needs to be fixed.
T2N	- access for resources to markets (ie: pipelines and more) - diversify economy away from oil and gas (ex: green technology) - making the provincial health care system more efficient - not by cutting staff, but by looking at systems elsewhere and incorporating better models of service delivery	- orphaned oil and gas wells - make companies pay for these - taxpayers shouldn't have to. - increase corporate tax rate - a race to the bottom isn't in the best interest of anyone in the province. - eliminate the provincial corporate tax collection unit and hand it over to CRA like every other province has done.	- diversify economy, focus on green technology and innovation - get resources better access to markets so prices can rise
T5M	Healthcare and education.	Taxing the rich.	Diversify the economy past oil and gas.
T1k	Health care & Education.	GST. Stop lowering corporate taxes with no strings attached. They should only get further tax breaks based on job creation. Fire AHS management that is grossly incompetent as leaders and causing good workers to quit and ruining the morale of the others. This is a huge factor in why our health outcomes are worse.	Stop cutting everyone's budgets and causing layoffs and mass fear of job loss. I can tell you that I'm not spending my money at all for this reason and many others are doing the same. How is that good for the economy? The government needs to spend money (to a point) to stimulate the economy. And don't just focus on oil and gas. You are losing voter support outside of that sector in masses.
T2v	Education, health and social services	Decommissioning the war room, increasing business taxes, and reducing MLA wages	Increase taxes on public good exploration and sale of NG, oil, minerals. Support investment in education and IT development Invest in media projects Develop aerospace programs
T4s	Education. Health care	Cutting their own wages . Getting rid of some of them.	Pipelines.
	Public education and health care	Introduce a sales tax. Fewer tax breaks for major corporations	Stop cutting funding that pays teacher, nurse, EA, etc wages

T3Z	Education, health then economics If you want my vote again you will show across-the-board all politicians in Alberta willing to take a pay cut and taking the pay cut the same as the nurses doctors teachers CEO,s and everyone else that is doing this just to keep their lights on.	Eliminating pension packages for government political employees. Setting a pay cap for politicians no one makes over \$95,000 a year. No one makes less than \$45,000 a year. Stop chasing your tail around all the issues that really aren't important and start moving forward with a positive form that betters all Albertans instead of a reactive form that continually leaves us scrambling.	Not by pulling your pants down and taking it up the ass from everyone else. By eliminating all pointless ventures that have committees reviewing ideas on how to make them work or even move forward. Stop making up bullshit about environmental and climate control issues when our entire solar system is in disarray you are lying to people it's bullshit anyone with half a sense can go and do some research and find out our planet is not alone in this era of super storms and tectonic shifting. Figure out as a province how we can adapt and benefit from this celestial event instead of blaming ourselves.
	Getting albertans back to work. Job creation...	The war room. Aish program recipients get far more benefits for the same items than income support recipients do. Lots could be reduced or eliminated. Aish recipients are allowed thousands of dollars in assets and given multiple financial benefits still that they could afford. Aish program needs to be seriously reviewed and made more means tested to reduce unnecessary benefits to those who can afford them themselves. Reduce and eliminate a lot of management positions. Reduce the number of management levels. Your government workers are already working multitaskers and committed to providing the best they can...no need for supervisors for three employees. Reduce the amount of supervisory roles and it will give more working staff for front lines that are already stretched way too thin.	Hire a student programs. Retaining from oil and gas related types of jobs to other environmental industries. Build more low income housing units and assisted living u it's for the baby boomers.
T2S	Services that impact people directly - preventative healthcare, children's services, AISH and income supports. These services are expensive in the short run, but they pay dividends in reduced healthcare overall costs, reduced law enforcement costs, and reduced costs to society.	In giving tax cuts to corporations.	Let it happen on its own! Stop giving big cuts to large corporations; there will always be some constituency that's prepared to give more, so they'll go there anyway. Invest in what makes our province unique and incredible - its people.
T6C	Health, education, social programs	Increase tax	Invest in areas outside of oil and gas
T4X	Healthcare and infrastructure	Administration, cut the government salaries and bonuses. Close their war room.	Stimulate jobs by spending on infrastructure (roads)
	Front line health care staff	Decreasing the amount of management we have	100 should support economic growth
T5r	Keeping our kids and work force up to date and attractive for existsting and business	How about taxing corporations and not giving away our resources rather than trying to cut a province that has almost doubled population in 15 years m	Looking for big resource companies is not the right area, encouraging small and medium business growth. Health small businesses can employ more people than large corporations and small business is where you can measure "trickle down". Reduce small business tax, create funds and incentives to help people start.
T1K	health and education and no cuts to public service jobs. Maybe its time for a provincial sales tax just like the other provinces.	By implementing a provincial sales tax like the other provinces.	By not cutting existing public service jobs. Why pick on those good people who support other Albertans. This was tried years ago by the Klein Government and turned out to just Alberta behind in services to people and infrastructure. Why be so negative to repeat poor choices.
T5Z	Pharmaceuticals (drug plan)	Alberta Health Services (hospital system) -decrease management wages.	Reverse cooperate tax cuts , put in a small sales tax - invest in AI, health as an economic driver

T7S	Job creation, healthcare, education, looking at root causes for addiction and mental health and support those areas. Support following job loss. Especially in rural communities.	Creative renovations do we really need all new new new ...	Incentives to hire youth, older workers. Free for Alberta Employment services help tremendously. Helping rural communities diversify economy.
t4j	highly educated and skilled labour force, support for growth of businesses of all sizes, spend money to keep jobs not cut jobs. balance the budget over 20 years if that's what it takes.	eliminate energy war room; create jobs not job losses. tax the wealthy. learn how the trickle down effect doesn't work.	stop cutting jobs in all sectors. invest in new technologies. invest in education at all levels. invest in municipalities. get your priorities straight because right now you're really, really bad at your jobs.
T3H	Healthcare, Education, and Social Services. When your citizens are healthy, supported and educated they put more back into society and into the economy, because they have more to spend. Oil & gas is important, even the NDP maintained mandates to keep working on getting the pipelines, but focus on educating and building relationships with those opposed rather than attacking. It's a waste of money. If you attack people just dig their heels in more. Diversify... Tech, Film, and the dirty word - renewable resources (and more) have their place in Alberta and will be necessary as we rely less on oil in gas in the next 20-30 years. Be progressive and not regressive like Ontario who is striving for the bare minimum for its citizens.	Stop giving the wealthy tax breaks and stop making the choice to spend frivolously. Those are two simple things. And stop spending money trying to fight people against oil and gas... it's as much a waste of money as you would spend trying to convince "flat earthers" the world is round. Please recognize we do not have a spending problem and you do need to keep up with population growth and inflation. (It's like looking for more ways to save when your a home owner and unemployed... you can't keep cutting, you need to find a source of income - taxes). We have an income problem and you may actually have to consider that a provincial sales (which I hate to point out but a provincial carbon tax would have acted like a sales tax and we would have kept that money in the province rather than give it to the a Federal government). Focus on actually hearing Albertans and those doing the work in Alberta... you may be surprised at the good ideas they really have. Please don't forget if everyday Albertans have the health, education, and money in their pockets to put back into Alberta. It's like renovating an old home and spend money on fixing the fence, the roof and siding and, insulating it and new furnace (that's investing in health and education). The \$\$\$ comes back down the road. But if you piddle it away to host parties for your rich friends and on expensive food and wine... (Tax breaks, spending money on the war room, fancy flights and hotel) your house is worse and still needs \$ put into but you won't have any)	Forward thinking and not backward thinking. Invest in your people so they invest back into Alberta!!! Albertans voted for a Progressive Conservative Party who promised the "Alberta Advantage" but so far I have only seen regressive cuts and changes that are taking us backwards... all to be like Ontario. Instead of being different, and smart by diversifying and investing into our home, we are lowering our standards and looking at short term instead of the long game :(
T8N	Health Education Bringing new business to Alberta and retaining current businesses	Instead of cutting jobs/wages of the people at the bottom how about the top officials of education and AHS getting their wages reduced to a more respectable amount....no need for them to make \$400000+/yr.	Spend on key elements, health, education, oil and gas.....can always bring back the arts when there is a turnaround in the economy. No one can say that health and education should not take top priority.
T5H	Health care- mental health and addictions (also making dental part of our covered health care), education (smaller class sizes and more funding for sports and arts), law enforcement (crime is rampant through the province and victims have less rights then the criminals. The crown needs to stop dropping charges against life time criminals and become Stricker. Gang violence needs to end. infrastructure major job creation projects should be fully funded (public transit for major city's and twinning of major highways.	A provincial sales tax is the best way to find money. Attacking front line workers at Ahs and in education is not the right way to go. Times may be tough for oil and gas workers but that's not there fault they already do there part everyday. Telling them they need to do more is not okay.	Financial incentives for new technology and new business. Funding for re education of our out of work oil and gas workers, in new feilds. We need to diversify away from oil and gas

	Healthcare, especially for seniors and mental health. Education.	Cutting expense accounts for senior officials and management. Reducing privatization, because it ultimately costs more in programs to oversee contractors, lawsuits, inadequate supervision, and shoddy work that never gets fixed.	PCs slashed and burned private systems and laid off public servants 20 years ago to achieve a so-called balanced budget. Didn't work, obviously because UCP is slavishly following suit. How is it that PCs and UCPs, in one of the richest provinces in the country, cannot seem to get it right? Stop pandering to the oil and gas industry and start looking at other options.
T5T	Support k-12 education Support the creation of technology related jobs. Our kids are graduating with digital media and tech degrees. Give them a reason to stay in Alberta	Government salaries for higher roles, e.g presidents, premier Tax oil and gas companies, get orphan wells under control	Generation and support of tech and clean energy companies
T9K	Reduction of class size, increased integration of technology in all classrooms, updated curriculum resources so teachers are not spe doing so much of their own money on TpT.	...	Increase teacher pay; increase incentives (both short and long term) for teachers to live and work north of Edmonton, because life doesn't end after you cross over the St. Albert mine;
	Early intervention for kids as it is proven to have a positive impact	Non-direct service positions should all be under review in health and education	Continue to lobby federal government to get out of the way of the oil and gas sector. What can we do to support more tech jobs?
T5A	Mental health and social services	Oil companies paying their taxes	Not cut jobs and start looking into renewable energy
	Kids	All management levels in public sector need to be reviewed (correction from previous submission)	Diversify
T3H	None. We are broke.	Download some services onto communities, contract out some services and cut others right off.	Communities that take over services get grants.
T3a	Health and education	Management costs in all levels and areas. Increasing taxes on businesses and people with high profits and income.	Diversifying the economy is the only answer
T9X	Infrastructure, pipelines, military.	Spend less on everything. It isn't your money so you should think small.	Spend less taxes. Lower tax rates. Allow job creators to be able to hire more people.
T7x	Creating a better job market so that you are able to gain experience through the job instead of education which puts you into more debt & not everyone is good at test taking. Making it easier to have kids because there is not much help & they keep immigrating more people.	The big corporations who are online & don't pay taxes or the big corporations that avoid paying taxes. Cut budget spending on unnecessary jobs and creating more updated versions.	Create updated positions & cut out the old jobs that are not needed anymore.create different variations of jobs that we actually need in the economy & offer training.
T0E	Childcare for all families Healthcare - PUBLIC Education - PUBLIC Affordable housing Harm reduction Aish recipients and our more vulnerable population	Talk to the frontline workers Talk to the businesses Tax the wealthy!	Not by cutting jobs and giving 4.7billion dollars to the wealthiest corporations! Supporting unions and their power to create better working environments. Childcare - get women back to work! Proven to be very effective for economic growth! Ban self check outs - imagine the jobs.
T2Z	Health Care, Education, Innovation for new industries, Diversification of the economy, Public health interventions, Transportation, Mental Health.	Get rid of the "War Room". Remove unnecessary positions in cabinets. Tighten Spending by members of the UCP on frivolous expenditures.	Stop supporting the oil industry 100%, and put the energy into diversifying the economy. Tech sectors

	We need more low-cost housing since most of Albertans are living in a hand to mouth existence. The health of Albertans, educating them about healthy living.	Let the Landlords and owners of big companies pay more provincial tax.	If you help us pay our electric bills; if we could only pay the amount we used for energy. I wish you could provide free education or training for all Albertans.
	Alternative energy, healthcare, education.	Axe the "war room" = 30 million dollars in savings. Stop subsidizing fossil fuels. Find revenue in a progressive income tax and a sales tax.	Invest in alternative energy.
T4G	Education and Health Care	Road Construction, tax breaks for Oil and Gas companies	Support small businesses
T5R	- Stop cutting funding to education and healthcare - Universal subsidized daycare for everyone - Warm places for individuals living rough to sleep, housing first and harm reduction initiatives	- Increase taxes, particularly to the rich and large businesses - Increase/keep carbon tax	- Increased funding towards retraining for those laid off, unemployed or underemployed - Increased taxes for large businesses and those in the top 10%ile of earners
T8H	Public health care, public education. Take care of the citizens of Alberta before corporations.	Retraction of the 4.7 billion dollar corporate tax cut	Diversify the economy so we aren't dependent solely on oil.
T5h	Diversifying the economy. Infrastructure.	Institute a provincial sales tax. This would balance the budget. Provide rebates for the lower income brackets to ensure they do not unduly bear the burden of the pst.	Diversify the economy into renewable energy sources. Provide Grant's for training in alternative energy and provide incentives for homeowners to install these energy sources.
T7N	Health, Education (preschool to grade 12), roadways/infrastructure	Reduce or eliminate severance packages and lower wages of very top management level employees. Ask front line workers how to save money in their workplace...each of them know their jobs best and see where resources are being wasted. Open walk-in clinics in small towns to avoid abuse of Hospital ER's for routine medical needs. Bring back health premiums and consider small user fees for some health services to deter unnecessary visits (waive these for low income residents),	Control (set maximums for) banking/transaction fees for small businesses. Offer tax incentives for the first year or two for corporations moving offices or operations into Alberta. Keep us the only provide without a provincial sales tax.
T0L	Healthcare and Education	Not giving taxpayer money to big corporations.	By not contracting out jobs. Alberta is more than oil and gas. Stop making out public sector workers are the issue.
T5K	Public K-12 education and class size reduction. Investment in technology and video game industries and attracting new investors and companies to the province in those industries. Public health care and access to family doctors. Maintaining support for safe injection sites to reduce strain on emergency rooms. The opioid crisis needs a solution and removal of these sites are a step backwards.	Shutter the Ineffective Canadian Energy Centre. Collect owed taxes from delinquent corporations. Get people back to work so that they're paying taxes again. Invest in growing industries to attract high paying jobs to prevent the need for massive sweeping cuts to essential services like public education and public health care.	Support for small an medium sized tech and video game companies to promote their products to international markets. Offer tax incentives to help tech and game companies grow. Encourage other companies in tech and video games to set up shop in Alberta to maintain a stable job market for the talent within the province to prevent a creative brain drain to BC, Ontario, Quebec, and the USA. Invest in emerging technologies in the energy industry such as batteries, solar technology, carbon fiber and material sciences, and artificial intelligence relating to: forecasting, data analysis, etc. Create a retraining program for out of work oil field workers to work in related emerging energy industries.

T1H	Health, Education, Infrastructure.	Shut down the "War Room". and invest the money in Health Care, Education, and Infrastructure. No more Corporate give always. A Provincial sales tax would bring in enough money to balance the budget. Some corporations are not paying taxes, this is wrong, the ordinary tax payer cannot do this.	Stop the cuts! Invest in alternate energy sources, the days of huge oil and gas revenue are no longer realistic to rely on.
T4L	public health care that includes dental. Employ enough doctors and facilities because middle class and poor can't afford private health care, yet the wait lists are too long waiting for public system, and not enough doctors. Almost impossible to get a family doctor, no-one is taking new patients. Consequently usually you have to go to a walk-in clinic rather than a family doctor who knows you.	By not paying government management employees such big wages, unreasonable benefits, and MLA's should not get pensions, and payouts. They aren't in lifetime employment to deserve it.	Get Alberta's oil industry booming again.
T5Z	Health care, court system, policing	Provincial managers and politicians salaries are ludicrously high. Some get more than doctors, lawyers or surgeons and to pay them bonuses to cut the budget is counter productive because then they keep cutting jobs and workers are left overworked and stressed out due to staffing shortages. The cuts need to come from the top!	Cap managements salaries to more reasonable ones and what you save on one manager could easily employ 5 or 6 regular workers to reduce staffing shortages and stress in the provincial workplaces. Cuts to provincial business taxes for small business would help small businesses and for heaven's sake, reduce the minimum wage back to something more in line with BC or Ontario where the cost of living is the highest. What are we trying to prove? We're killing small business and it's not helping minimum wage workers either because they are either getting laid off or their hours are being cut to save money. It only hurts everyone!
T0M	Education, health care, infrastructure (especially broadband internet in rural areas that remain trapped in the digital dark age with lost economic potential), help Albertans make their homes and businesses more energy efficient, support more arts and culture, explore the potential for geothermal energy, and protect the environment.	Immediately pull the plug on the oil and gas propaganda machine, I mean, energy war room, and cease and desist unconstitutional attacks on free speech by ending the Orwellian inquiry into anti-Alberta activities. Boom, \$30-plus million saved right there alone that could now help people on AISH. Stopping with all of these stacked panels whose findings are a foregone conclusion would also undoubtedly save plenty of funds as well. Additionally, trickle-down economics do not and never have worked, well, not for anyone other than already wealthy. Profitable billion-dollar corporations that are largely foreign owned don't need tax breaks. If you're going to provide tax relief, give the middle class and small business community a break. They actually spend money back into the economy, unlike the international conglomerates that lay people off after taking our money to a tax shelter, showering shareholders with dividends, or awarding their CEOs obscene bonuses that most of us wouldn't earn in lifetime.	As stated above, provide tax breaks for the middle class and small as well as medium businesses, *not* billion-dollar corporations. And instead of distributing wealth upwards, raise taxes on the one per cent and use that revenue to invest in Albertans' education, health care, and infrastructure. If we really want to incentivize new businesses to invest in our province, we need a well-educated, healthy, happy work force with good roads and bridges to get them to work. After all, if we don't want to invest in our own province, why should a major enterprise? Lastly, this survey is missing an important question: how do I think the government could create new revenue streams? A PST, while unpopular, would alone provide the funding we need to ensure the quality of our already-strained public services do not deteriorate further. Stop trying to convince us that maintaining funding amounts to anything less than a cut when our population is growing.

T6h	Education Health care Social services	PST Liquor, tobacco, cannabis, gaming taxes Increase carbon tax	Education funding
T2Z	Expand the \$25/day daycare program!	Fire the top AHS executives and get someone in there that can manage a budget better.	\$25 daycare and diversify away from energy sector by promoting new programs
T5R	EMS, health care, and education.	Get rid of the war room. Get rid of all contracted EMS dispatching centres and merge them with North communication center, central communication centre, and south communication centre depending in contracted service location. Make doctors more accountable for unnecessary hospital to hospital transfers. Allow EMS and other health care full time workers to pick up extra shifts as straight time if mutually agreed upon by employer and employee. Get rid of contracted EMS services and merge as one service one uniform.	provide more security and incentive to pursue careers in the public sector (health care).
T2Z	Expand the \$25/day daycare program!	Fire the top AHS executives and get someone in there that can manage a budget better.	\$25 daycare and diversify away from energy sector by promoting new programs
T1B		HIGH LEVEL Administrative Jobs. NOT front line worker healthcare wages.	
T8L	Education, Healthcare, Specialized services (PDD, PUF, AISH, ETC)	Getting rid of the 30 million dollar war room and putting those dollars back to where they belong! Do away with the 4.7 billion dollar tax break for the top 1%.	Not give away 4.7 billion in tax dollars for nothing in return! Support industries other industries along with oil and gas so we can be more than a one trick pony.
T6V	Education	Raise taxes to 7%	Invest in our schools and universities. Support the upcoming workforce.
t3g	small business infrastructure tourism	fix tax loopholes ensuring that government spending is directed to core programs and services reduce government spending on travel, meals, and hospitality	support initiatives innovation projects
T0A	Healthcare and post secondary education.	Government management positions. Front line workers are under staffed.	Post secondary education- without educated youth we cannot create growth. Infrastructure municipal projects. Research into production and extraction of greener fuels. Stop corporate handouts to oil companies and the ineffective 'war room.'
T5X	Health and post-secondary education	Hosting and travel budgets	Listen to Albertans and support what they do. That will lead to optimism.
T0K	Addictions treatment (rehabilitation) , law enforcement (especially rural),	Healthcare and education represent the largest portions of our provincial budget. Even moderate cuts in these areas could result in massive savings. Government administration and capital projects could also be reviewed. Government buildings seem to be very grandiose and public salaries/benefits should be brought in line with private equivalents.	Deregulation, tax reductions (business and private)
T3j	Allowing families to access Affordable and quality CHILD CARE, by not removing the \$25 daycare, this allows more people To enter the workforce because they can afford and trust the child care they have. Make it across all non profit programs.	In places that don't affect families, education , health care system!	By not cutting everything. Many things have been cut therefore removing hardworking people from the work force for no reason, which is flooding our unemployment rate!

T4x	Education and health	Upper level management wages, bonuses, committee compensation pay. The allotted time a Member must serve before allowing full pension.	By investing in education, increased funding for post secondary or trades school students. Decreasing student loan interest rates. Make education more affordable so albertans can go to school and get appropriate education so they can apply for jobs.
T6W	Infrastructure, Education and Health	Wasteful winter plowing	Invest in science and technology. Be a leader innovative thinking. Dare to try something new. Focus on our natural resources and profiting from them.
T8H	Health care (nurses, dr. all do work most of us would never last a day - pay them more), seniors deserve better, the vulnerable need more help, K-12 education shouldn't be left behind, advanced ed needs money (I like your funding tied to performance and outcomes - good job!). I do think our justice system needs an injection of funding as so many things are broken. I'd suggest some data analysis that immediately recommends new policy (ie. get some of the crap out of the courts - focus on the severe/serious/vice crimes. Get rid of things like speed ticket court - Waste of money. I can't believe I'd say this but I'd be OK with a sales tax. We are not in a good spot and I hate debt. this would help to get out of the mess of previous power trippers.	STOP PAYING THE APPRENTICE TRAINING PROVIDERS FOR UNFILLED SEATS!!!! WHY not adopt a model where they get paid only for apprentices who sign up instead of a guaranteed payment for a filled class with half the students? Why are apprentices more special than other occupations? (Hint: they're not!) I don't see Universities getting paid for any unfilled seats in their schools so why are NAIT, GPRC, so special? You let the instructors unions run the show - this would be a bigger savings than the DFI somebody came up with to remove the tissue and water in the courts. YOU NEED SOME LEADERSHIP WITH BALLS AND BRAINS! SEEMS LIKE BOTH ARE MISSING here. Why are taxpayers subsidizing training providers like GPRC - Fairview (do people still live there??), Portage and Northern Lakes. Taxpayers are tired of subsidizing these providers. Shut them down! Do the math to determine value - its not that hard! Millions can be saved and the apprentices can travel (cheaper to subsidize their travel than continue these providers).	Oil still important to the province income so we need a better price for WCS. American refineries need our oil. Create an oil crisis by reducing the supply (this should also reduce what we pay for transfer payments, right?) Best way to increase the price. Shut off the gas to BC and let them freeze and deal with high prices at the pump. Stop allowing any project (esp any oil sands related) to go to Quebec - they are not our friends if you haven't figured that out.
t5X	Health care , early childhood education . Education in general. Jobs ,	I will be okay paying increase GST ,	Not cut jobs, especially in areas that are crucial healthcare and education
	EDUCATION and health care	Not giving tax cuts to big businesses. They could also implement a 3% sales tax- lower than any other province still- which would lower our provincial debt.	By lowering the cost of post-secondary education, for trade schools and universities; all areas of post-secondary education. Also diversifying the economy to provide opportunities in renewable energies,
T5t	public healthcare funding Public education funding Tax incentives for students trying to further their education to earn more money. Infrastructure Grants for renewable resources to stimulate the economy. New resources means new jobs.	The wages of top earning ceos and higher income residents of the province. Tax them. Ps I am over the 125,000 a year and would pay higher taxes to support our health care and education systems. Drug testing those receiving public assistance. They fail. They don't get. Higher taxes for corporations that make significant profits. Not mom and pop shops but large companies.	Grants for research into new technologies, retraining the unemployed. Invest in our provinces current available systems that employ people say like teachers, public service workers. Nurses doctors, ems, fire etc. They spend what they earn here in our province they leave that revenue is lost. And they will leave

T0A	Deal with people getting income support and committing fraud. Cutting off those who do not tell the truth. It's the same people who keep getting money over and over because there are no negative consequences	The GOVT is too top heavy. Too many managers , get rid of some save money, people on AISH and those who know the system come in crisis 70 % of the time because want more money Do u realize that if a client has IQ lower than 70 get AISH right away bc low IQ then how do u expect them to manage their money. Pay landlords rent so they have a place to live and people don't take their money. U save on always giving thousands per mth extra away when their money spent within a couple days of getting their cheque	Have those who are committing crimes give back to community and cleaning hwys, beautiful clean and can hire those to watch over them to create jobs. Also The prisoner will get cut of money but it is put away so when they leave they leave with money. This way they do t leave jail no money and break into house to get items and steal Get oil going. Hirer more frontline staff in GOVT so u won't have so many people leave and have to work along get stressed then medical leave etc
T6W	Health care and education. Period. There is no way to justify decreasing the amount of funding to these two areas. It doesn't matter if you dress it up by saying that "funding per student isn't decreasing"; no, you're just decreasing or eliminating grants that provided services for those students. And it doesn't matter if you say that Alberta spends more on healthcare than other provinces; there is NO EXCUSE to decrease the amount of frontline workers (and I included RNs, LPNs, HCAs, housekeeping, physiotherapists, doctors; everyone who interacts with patients). If you had mentioned management, I might have a different response, but this government seems to be trying to paint nurses as the problem, when they are not.	Not giving tax cuts to corporations and the most wealthy. Decreasing salaries to upper management in the government.	Investing in Alberta; the proposed new hospital in south Edmonton that was promised by the previous NDP government would be a good start.
T4B	crime reduction and economy boost	art and architecture	increase business growth
T6V	Attrition, Austerity in government ranks. Pension review and localization of Pension programs. Opt out of CPP. Tear up RCMP contract. Create provincial police to tackle rural crime.	Expose faulty federal equalization program and plebiscite on withdrawal. If Teck kyboshed by feds or TMX is delayed yet again and Energy East remains a non-start: secession referendum	Regulation reductions. More projects approval and progress. Raise hell over federal C68, C69 and lack of resource export pipelines
T3E	- Climate change adaptation and transitioning our economy to a greener, lower carbon one - education - health care and mental health - transit	-Stop subsidizing the oil and gas sector - less funding for the arts	They should assist out-of-work oil patch workers with retraining programs for the green economy. They should subsidize post-secondary programs for jobs that are in demand and subsidizing up-skilling and retraining programs for out-of-work Albertans
T5t	Education, health care and jobs	Provincial sales tax. Stop giving money to corporations that just leave or lay off people	By not cutting jobs and going with the NDP budget plan
T2E	Healthcare and education	Fewer Corporate rebates	Support small businesses rather than large ones, encourage entrepreneurs, encourage growth in industries not tied to our natural resources, and fund education.

T5T	Alberta has long been known to be the hardest working province. Also, is known for having the highest spousal abuse. Probably because we do not, now, or never did get a fair share of our hard labor. And cuts to child care will only compound this problem, because for many children "child care" is the only other experience they will have with the world in their very most formative years, the first five. An experience that can teach a child from a stressed home, that this is not normal and they have a chance for better outcomes in life. It is our misfortune of how little understanding our leaders have yet to learn of the importance of great and equal beginnings for all children. And, what a healthy society that would build.	What can we do about the equalization payout? Just how does Quebec get away with being so hard done by, and having the most SUV's per capita???	The government can not control corporate greed. Canada used to have laws about that before greed became acceptable in the 80's. Corporations want economic growth without job creation, and presently they are winning.
T2W	Public Education and Public Healthcare	War Room	Public works, public sector pay raises, infrastructure, deficit spending, diversification from oil and gas.
T8W	families Special needs individuals seniors Working families below the poverty level	I don't know if when you make cuts to various ministries (health, education etc) you can require that the cuts have to be from those shuffling paper, sitting behind the desks and not of those who are actually doing the work.	Taxes have to be cut for all Albertans.
	Education	No tax cuts to large corporations	No budget cuts to teachers or health care
T1A	Increasing money in health care and not cutting public health employees wages. Not changing prescriptions for patients for the government to save money	Not giving corporate business handouts. Not focusing so much on the pipelines finding other ways for Alberta to make money focusing on technology	Investing in students in education not cutting teachers. Giving post secondary students opportunity to pursue there education different resources would make Alberta stronger. I think the problem with oil & goes further then just being a problem environmental problem. The world market in oil is down. We need future generations to focus other resources that will create stronger economic growth in Alberta.
T5Y	Healthcare, education and infrastructure.	Increasing the corporate tax rate. Also would probably be beneficial to not handout 4.7 billion dollars to companies that immediately leave Alberta and build new infrastructure in the states with our tax dollars. At the minimum if the UCP is going to keep throwing away tax dollars make a clause that the handout at least has to be spent in ALBERTA... The UCP provide corporate welfare but fail in supporting everyday taxpayers.	Diversify the economy, which this province has lacked for the last 40+ years. Allow tech/research companies to expand into our neighbourhood instead of deterring them with backwards thinking and oppressive values. Be on the cutting edge of a new industry instead of providing corporate welfare. Invest in something forward thinking for once.
T0E	Homeschool families, we get a small fraction per child when we homeschool \$850-\$1400, though if they go to school at a brick and mortar school the government spends over \$10,000 per child. I would like to see a balance there. It cost to do programs for music, sports, which are like gym and music class in a brick and mortar school. Supplies can get expensive, sometimes are homeschool children don't get all the supplies they need due to financial situation at home yet the commitment to homeschool is huge.	Their own pay checks	Community programs for young families to met and learn. There is a great program being shit down in many communities that really need this certain program called Parent Link. It supports families and build connections. Sad to see our community is losing such a great program due to cuts.

T1H	Education, health care and social programs. Needs in schools continue to grow and require more intensive supports than what the education budget will allow for providing.	No tax breaks for big business and industry. Regulate wages in highest administrative positions in government and public sectors.	Invest in research and establishment of alternate energy sources.
	<ul style="list-style-type: none"> •“Stand Up” for Public Education by recognizing the actual cost of public education and funding it instead of diverting more tax money to privatized ed •“Make Life Better for Albertans” with ongoing funding to Alberta Health services •“Get Albertans Back to Work” through Diversified Economic growth led by professionals who know what this actually means 	<ul style="list-style-type: none"> •quit wasting time picking fights with your own govt employees on twitter and actually govern and lead like adults •hold your ministers accountable to hours they should spend working to learn about their portfolio so they can make informed decisions vs. hours they spend focused on social media smack talk, evasive interviews, and coming up with “solutions” to Alberta’s problems based on what appears to be input from your fundraising dinner suggestion box •eliminate the “war room” and all associated spending. •Do not spend money on “fighting misinformation” or the federal government by filing court cases that will end up to only waste time and line the pockets of legal teams •Appoint ministers with actual relevant professional experience in their portfolio. expertise = efficiencies and relevant outcomes •Consult/collaborate with actual experts and professionals in the areas you are governing instead of relying on the random appointed politicians’ personal opinions and un-researched, often biased viewpoints. It is embarrassing. 	<p>Diversify Quit putting all your eggs in O&G basket Provide funding to actually hire teachers to meet recommended class sizes and staff to appropriate ratios for patient support in healthcare—that would employ a whole wack of people and “get Albertans back to work” while “making life better for Albertans” at the same time! ??</p> <p>How are these 3 very limited questions being marketed as a “budget survey”? Ridiculous.</p>
T8A	Healthcare, education, homelessness, poverty, and the energy sector.	Increase taxes for big businesses, they can afford to pay more as they make billions. Also discouraging businesses from then increasing prices as that does not promote positive economic growth.	Dissuade layoffs (the more people that are working the more people that will spend money and contribute to economic growth), work with businesses to provide employment opportunities for new grads, students, and others who may have a harder time attaining a job, and push industry to create more employment opportunities even if “it is out of their budget,” they can afford to create more employment opportunities even if they might not want to for financial reasons.
T4A	I think we need to continue to invest in public healthcare, public education, infrastructure, and diversifying the economy outside of the oil and gas industry. In that order.	Corporate tax breaks for large companies. Legal action against the federal government on the carbon tax issue.	By investing in new energy businesses outside of the oil and gas sector, and by investing in our students by financially committing to public education and universities.
t4G	Education and health care. Ensuring rural communities aren’t overlooked	Upper management. Drug test people who go on welfare	Perhaps provide some sort of tax break for small businesses based on the amount or jobs they create
T2J	Health and education	Stopping the hand outs and tax breaks to oils and gas companies and other foreign companies. Make Jason Kenny pay back the billions he wasted	Diversify the economy. Expand the tech sector, renewable energy etc
T1J	Education, Healthcare, & Sustainable Energy	Reduce tax incentives and subsidies across the board.	Support SMALL businesses and startups in Alberta. Encourage an EDUCATED population for a more EFFECTIVE workforce. Invest in alternative, sustainable energies to ensure the longevity of prosperous economy.

t4p	Education is not something that should be cut, it should be bolstered. Education in Alberta measured in \$\$\$ per student is very very very reasonable and produces very very very good results for the entire public. Please do not destroy this system. All of kids deserve a great education. You're destroying the future of Alberta. You're suppressing the marginalized. You're perpetuating classes.	Please fund education. Our children deserve it. No one voted for this. Your government is robbing Albertans of their future.	Focus your priorities on creating unity and respect among all aspects of Alberta. We are in this together, your government needs to start acting like it. Stop public vs private - that's not Alberta. That's not the future. That's not what was voted for.
T0M	Healthcare especially for the Seniors who worked so hard to get our province where it is today. Incentives to get small businesses back IN business, that's what Alberta has always been known for.	Tax those(if there are even any left)businesses/companies that actually made money and leave the middle class alone—do not raise our taxes. I understand it makes sense for politicians to have perks in their positions, but they should be held accountable with taxpayers money and how it is spent.	Tax breaks, tax rebates,
T2z	Education and health care	Get rid of the war room implementation of a 2% provincial sales tax.	Look for investments other than oil and gas like technology investments and Green energy
T2z	Education and health care	Get rid of the war room implementation of a 2% provincial sales tax.	Look for investments other than oil and gas like technology investments and Green energy
T0B	More support for rural education - rural schools face higher expenses than urban. Bus routes are already long for kids. Costs for building maintenance are higher per capita. Small communities rely on the schools to prosper (students support small stores, school functions are community functions, etc). Frontline health care.	High priced administrative positions!! This could be in any government ran office. Put the money back into front line jobs where it is needed the most.	As above, reduce high paid admin jobs to create more front line. Encourage more industry growth. Choose Albertans first! Offer incentives to employers who hire permanent alberta residents before out of province.
T6J	- healthcare (no privatization) - education - reasonable childcare - services for those in need - support diversification of the economy	- the war room - reinstate corporate tax rate to 12% (previous conservative governments had 10% so why the reduction to 8% when its proven not to be an incentive for jobs)	- incentives to diversify the economy - approve infrastructure projects - finding ways to cut taxes from private citizens instead of corporations
	Education, health care	Eliminate some post secondary duplicate programs - e.g. not every one needs a business program!	Invest !!! and refrain from ending programs like seed and step initiatives.
T8A	Funding social service agencies and properly supporting education by unfreezing funding to school boards	Lowering salary for the premier and MLA's	Reverse funding cuts to AHS and Alberta Education where jobs have been lost
T8N	Sustainable Healthcare, Renewable Energy, Innovation in technology	Grow up, stop acting like toddlers and play nice together. Just because an idea came from a different political party does not mean it is useless. Enormous amounts of tax payers money is being wasted on political pissing contests. Remember the tax payers pay you and we expect you to use your time in office wisely. DO NOT waste it.	Look beyond your own lifetime and use your common sense. Invest in renewable energy, Alberta is well poised to become a world leader in solar energy. Invest in science not oil, so many Albertans feel you only invest in oil to get votes. We should innovate and allow small to medium businesses to flourish. Your policies keep hurting small to medium businesses. Tax incentives have only been offered to large business. Give small to medium business tax incentives.

T4L	Front line health care	Upper management. Make everyone wear a GoPro on their forehead and you'd see who the time-wasters are!!	Stimulate the economy by continuing infrastructure repair and maintenance. Close the "War Room".
T3G	Stop cutting low and middle class jobs and services.	Get rid of top heavy positions and the sunshine list. 17(1) Asking managers who created top level positions for their buddies to cut jobs will only cut services, not redundancies.	Cutting jobs hurts economic growth. All you've done is cut.
	Health care and education (university and elementary/junior/high schools).	Increase taxes that large corporations pay, marijuana income, also increase taxes from 5% to something that would be helpful.	Invest in services such as health care as people are unable to put money back into the economy if they do not have any jobs or income to use.
T4a	Health care and education	Stop giving major corporations tax breaks.	Give workers fair wage increases instead of laying them off (nurses, lab techs etc.). People dont want to work jobs where they are bare-bones staffed and overworked because of it. This makes people want to leave this province to find jobs elsewhere.
T6R	Classrooms and education. This is our future. The negative impacts of even small changes and cuts to education (or increases in insurance!) funding are significant. One year of crowded classes without EA support increases anxiety, and reduces learning, which reduces literacy ...and it will take years to fix this.	A provincial sales tax!!!!	Continue supporting the pipeline. But start diversifying so eventually we aren't solely reliant on oil.
T0B	1) Spending to maintain PUBLIC education and PUBLIC health care, especially for vulnerable groups. Programs such as AISH and FSCD and PUF need to be maintained. 2) Also supporting rural areas (who continually vote to elect Conservative governments) by addressing funding equations (not solely based on population) for both education and health care because rural communities continue to be a major part of Alberta's economy, and maintaining these communities despite small populations is essential. 3) Diversifying the economy to be less reliant on oil and gas.	1) Reducing middle management in government. 2) Encouraging AHS to reduce middle management. 3) Stop tax cuts to large corporations who have no obligation to keep their business in Alberta. 4) Consider increasing income through sales tax.	1) Invest in/incentivize diversification of the economy. We can not get back what we once had in oil. We need to look forward. 2) Protect employment of Albertans in health care and education. These jobs will maintain economic stability as those who have lost jobs in oil and gas re-educate and find new employment.
	Orphan well cleanup. Essential infrastructure upgrades. Rural policing.	Reducing administration and overhead/ benefits in healthcare. Ensuring government runs atleast if not more efficiently than the private sector.	Subsidize the eventual transition to green energy instead of fighting it. Bring back subsidy programs for homeowners to improve home heating/ electrical efficiency. Continue cutting the red tape for essential fossil fuel projects.
	Education, health	Photo radar should stay - it is a self imposed tax - if you don't speed you don't pay fines. Speeding is illegal. Make oil companies pay their taxes. Can't believe that the premier of Alberta says it is ok for them not to pay! My husband is not working - we can't afford taxes, yet we have to pay!	Quality child care will support families so both can work. Quality child provides an economic benefit to all citizens

T1S	Education and healthcare, as they are the pride of Canadian public services.	In the grossly huge handouts to the massively successful corporations that single-handedly run our province from the top down.	Invest in renewables and job-retraining. Oil is going away for Alberta. We will never see another boom. Hard as it is, the investment in a new economic structure is needed NOW.
T5T	Diversification of the economy, health care, education and infrastructure.	Corporate tax rate back up to what it was, MLA representatives are not effective - less of them and less "management/director positions in public sector plus they should be paying their own disability premiums and employee/employer pension contributions should match same as non-mgmt - employer should not be contributing more, money is wasted on fluff such as kdays premiere's breakfast and uneffective court fights with union. Stop doing repeat "inquiries".	Be more forward thinking like the NDP gov was - think forward growth rather than trying to go back to the way things were - it's a different world - our economy cannot rely on oil and gas. Make a true statement of Jason Kenney's quote "Alberta is open for business".
T0E	Small business tax breaks, grants and training subsidies Health care: dental assistance/subsidies for low income families Education: teacher's assistants for children with special needs, smaller class sizes Investments in alternative/green energy sources, research and development Subsidies for homeowners/small businesses investing in green energy and energy efficiency upgrades Social/financial supports for First Nation communities.	Provincial gov't can make money by instituting a modest provincial sales tax (2-4%), a liquor tax, and increasing large corporations tax rate	Allow tax breaks and subsidies for companies investing in and developing green and efficient energy, low waste options
T3A	Health Care for aging population Education and Secondary Education transitions to work Rural Internet Services	Separate Edmonton/North (splitting Central AB) and Calgary/South MLA meetings to decrease travel and hotel expenditures	Offer better and more option courses in junior and senior high to reflect job vacancies, including school to work transition.
T9K	Repairs and upgrades to transportation infrastructure (bridges, overpasses, etc.) is something long overdue across this province. I once had pride in the state of our highways, but not any more. The previous government seemed more preoccupied with the bandaid solution of patching and pothole repairs, and it shows.	Salary and wage cuts to province employees, funding cuts to arts and culture and looking more to contracting the delivery of many services by the private sector. I'd also like government to undertake a study on what programs and services are essential and what are nice to have, then act accordingly.	Government should support the private sector in that area by reducing red tape and onerous regulations, and by carrying on with its plan to reduce the tax burden borne by industry and businesses. They, not government, are responsible for increased standards of living and improve our overall economic health through the jobs they create.

T4x	Anything that was in the Climate Action Plan that could encourage new energy industries or the home energy rebate plan or other industries such as the film industry, or the other tax credits that were cut. I can tell you to STOP finding the war room.	<p>By not funding the war room, the legal costs to fighting climate change, the costs of going around the planet to sell others on Alberta's oil or stop spending money on private planes and what ever else you are doing to "host" your corporate friends.</p> <p>Look at health care and lead the way in Canada to establish a proper pharmacare program where you can use the free market to have big pharma bid on our drugs and help lower the cost. Change our medical system so that our doctors are similar to the dental system: there is a fee guide, but docs can also charge for certain services. You don't need to do everything that the US does - INNOVATE! Think outside the box. Plus it's not just about savings it's also about generating revenue. Charge user fees that are more market competitive and then reinvest the money. Don't be afraid of charging taxes like the Carbon levy. That was a VERY good idea and nobody noticed the impacts - your own economic analysis proved that. A PST is also not out of the question if done right.</p>	By funding new industries that will bring Alberta into the future (like green tech, nano tech, creative industries, medical R&D, etc) and by investing in post secondary to enable bright educated Albertans to bring about innovation into the future.
T8A	public education and public health care	Increased revenues from taxation	Increased government spending - basic demand-side economics
T6J	Preventative social services (education, AISH, supports for child welfare, supports for parents, public health - all cost money now and save society a ton in the long run - there's so much evidence) and job growth	Bureaucracy, middle management, operational inefficiencies,	Investment in infrastructure and services to keep improving our communities
T0K	Canadians	Stop supporting other countries	So canada can grow
T5t	Infrastructure, education, health care	Get rid of the war room, reduce bonuses for senior management, get rid of redundancies	Stop laying off staff and hiring contractors when you realize you need people to do the work. Diversify the economy instead of thinking an oil boom will return.
T5P	Researching, designing, and building clean-energy projects. Making sure all have adequate 'public' healthcare. Helping people with things such as homing solutions, childcare support, pharmaceuticals support, etc.	Stop giving billionaires billions. Increase corporate tax. Pay for 50 fewer committees a month.	Job creation ... yes. Creating economic growth ... yes ... as long as they quit equating economic growth with corporate profit.

T0B	Education Crime prevention on farm (rural areas)	Well due to the fact I also work in healthcare and have been telling managers where they could do cuts and no one is listening. For example in the lab systems there was microbiology pulled from all the "smaller" labs. Except covenant sites. Now that we are all APL you should be looking at these sites that have more staffing than any other APL site. And also pulling the microbiology from them and moving it to dynalife like all the others had to do (ex vegreville.) also you should be allowing combined lab and x-ray techs into the lab. It would save money for callbacks (as if you have a chest pain come in you are now calling an X-ray tech in and paying them for 6 hours of work for 5 minutes of actual work time.) where the combined tech would have been able to just do that extra 5 minutes while they are waiting for their lab samples to run.	Do not cut front line staff in health and education. Get more money from oilfield. (Oilefield workers make way more money than doctors/ nurses/ frontline healthcare.) and yet you want to give them tax breaks. Pathetic.
	Quality child care which means a well resourced and well supported ELCC workforce	Health care - let Albertans know how much the cost of health care is each time we use the system. How much does the doctor claim? Diverse economy, don't put all the money in oil and gas Take an extra 1% from the higher income earners - they don't spend their money here.	Diversify the economy - jobs will not be coming back to oil and gas because of automation. Child care support for families Education is important -
T5K	Alberta's health care is suffering, the budget should remain the same or have a small increase, with a decrease of upper management positions and salaries. I also feel Alberta would benefit from investing more into renewable and clean energy sources, we need to catch up with other leading countries in our world.	Removal of unnecessary government positions (ie. Matt Wolf who is paid \$200,000 a year to tweet and harass people online). Not giving 4.5 billion dollar corporate handouts to oil companies who already owe money and are not creating jobs. We do not need a 30 million dollar war room, that is outrageous and embarrassing.	See above comments regarding excessive handouts of Albertan's tax dollars and unnecessary government positions. Return the pension of those individuals/public sector workers to them for management by a more proven financial company.
T2L	Spend more money on education, both on K-12 and post-secondary. Our children are our future, and saddling them with debt makes them wage slaves, not innovators.	Tax the wealthy, and go after the oil companies who have evaded taxes.	Work-integrated learning, a higher minimum wage, and stronger/better funded social programs that help people find employment.
t1s	Assisting those Albertans who are in need Seniors' medications & housing Diversifying the economy	Cut out the unnecessary 'war room' Stop all those 'blue panels', just look at the stats! We don't need dozens of people studying every little thing in the province!	replace the incentives for technologies and alternative power sources that were stopped
T1J	Education, health, infrastructure.	Get rid of that stupid war room!! Follow up on unpaid taxes (especially in big business and oil and gas.)	You have to spend a certain amount money to make money — slash and burn simply doesn't work.
T7Y	Cost of operation for all government operations. Eliminate extra layers of admin, keep front line.	Performance based tenders for all construction. Infrastructure buildings should be modularized. We dont require tax Mahal for all infrastructure.	Programs for trades, privatise local survices to help employ locals instead of Union. Incentive to employers to hire pre trade employees to help them get started.

T4S	Education should be the first priority- cutting funding from Program Unit Funding will only cost the government down the road. Parents should not be expected to pay for support for their children with severe delays or disabilities, and early childhood services make a huge difference for later education outcomes. Healthcare is also top priority, as current resources are already stretched. It is clear that the current government wants to undercut both education and healthcare, and diminish services to such a degree that the door is open for further privatization.	Shut down the war room, try to collect money from orphan wells, raise corporate taxes (even a tiny amount).	Fund or subsidize childcare (more parents would be able to work), give tax incentives to tech companies. Put limits on university class sizes for jobs that there is already an abundance of workers for (in education, trades, etc) to encourage people to diversify their training and/or education.
	Quality child care which means a well resourced and well supported ELCC workforce	Health care - let Albertans know how much the cost of health care is each time we use the system. How much does the doctor claim? Diverse economy, don't put all the money in oil and gas Take an extra 1% from the higher income earners - they don't spend their money here.	Diversify the economy - jobs will not be coming back to oil and gas because of automation. Child care support for families Education is important -
T5A	Education Healthcare	Savings in offices - being efficient with photocopying, office supplies, etc. Volunteer opportunities for the public to help upcycle and build things such as wooden stairs in parks and benches.	Create volunteer opportunities so people can gain field experience in a variety of fields. Funding education and healthcare Look into green power sources
T2E	Increasing support and funding for public sector and health care.	Reduce tax breaks for Clarke corporations and enforce collection of corporate and personal taxes.	Support retraining of out of work oil and gas workers in health, sustainable energy, and technology.
T5z	Education, and health	From not giving cooperate tax cuts	By reversing healthcare and education cuts.
T8n	Education and health care.	Higher tax on corporations and high income earners.	Stop demoralizing essential service workers. Stop cuts to essential services like education and health care.
T0M	I want health care wait times improved. Specifically quicker access to diagnostic testing and more doctors!!! I want more oil and gas jobs. 1000s ++ more!!! I do not want the carbon tax at all!!!	Creating more Oil & gas jobs. Reduce the number of people on AISH by making the allowable requirements stricker and reviewing existing clients.	Create more oil & gas jobs
T4N	Education	Close "war room" and all the commitees and let Ministers responsible find savings with input from managers and public.	Grants for start-ups and innovators in tech and research.
T0A	small business development (b/c local business supports locals), health, public awareness about our incredible environmental standards/speaking out in support of our oil & gas industry, supporting agriculture in light of a disastrous harvest	not sure ...	support small business with tax breaks, business development incentives beyond the first year etc.

	Health care and education.	When making cuts (and yes, you ARE making cuts although you call them by different names), cut from the overloaded top layer, not the front line that is already desperately dog paddling to stay afloat. Ensure that this happens instead of acting surprised when the top layer saves itself and cuts the front line.	Diversify.
T2R	-Healthcare -Education -Post-secondary	Reduce spending on the Canadian Energy Centre	-Diversify our economy for the future, invest in renewable energy -Support building an inclusive workforce (people with disabilities and youth)
T4X	Healthcare Education	“War room” to be dissolved Caps on top executive salaries of publicly funded positions	No job cuts in any industry Maintain what we had no roll backs in education and health care.
T2T	Funding for early education is absolutely essential for Alberta’s long term growth. 17(1) It is well-documented that early intervention is the key to ensuring that children with delays experience academic and social success - and successful citizens that contribute to Alberta’s economy are a return on investment (please research - there is empirical evidence). The fact that my wage, and potentially my job, is at stake with threats of healthcare budget cuts is unnerving 17(1) But taking away the opportunity for children to get a head start on their future, in order to balance the budget or foster short-term economic growth is frankly quite sinister.	Looking at salaries of managers and executives rather than front-line workers.	... Invest in early education!!! Also, when I entered the workforce, colleagues moved to Alberta rather than other provinces because of competitive wages within the healthcare system. If this edge is taken away, why would anyone want to move to rural Alberta?
T1K	Health care and teaching	Cut upper management positions	Don’t cut front line staff from teaching and health care
T2S	Economic diversification	Build broader revenue base	Increase incentives to technology Increase incentives to non oil and gas energy initiatives Tax credits to film, alternative energies development, transit infrastructure
T6M	Education. Ensuring teachers remain in the classroom with a good contract and class sizes staying the same or decreasing. There are more diverse students and funding needs to reflect that.	Efficiency in infrastructure projects. No War Room for Oil - what a waste, get with the times of technology. Ensure Oil companies pay their taxes.	Support technology industries who are creating sustainable products for the future
T1J	Healthcare Education	Cut wages of top earners in AHS/Covenant Health. Find ways to help reoccurring patients in our health care system. Example - AADL only pays for approximately 1 catheter per day. Reusing catheters increase the risk of infection, which can lead to sepsis, kidney failure, etc. Paying for 5-10 catheters per day is more cost effective than having multiple patients in the Emergency rooms/ hospital admissions.	Look into alternative energy projects. Wind turbines, solar, hydropower. Instead of cutting corporate taxes, how about only giving those tax breaks if they are hiring people?
T2S	Education	Administrative spending	Continue to recruit educated working professionals by maintaining jobs that require degrees

T1B	<p>Focusing on spending is not the only answer. You can't just save your way to prosperity. You need to look at revenue, like increasing the corporate tax. You can't blame the federal government for your lack of vision. Stop pissing away money on the premier's pet project, the Canadian War Room. It's nothing more than a propaganda machine to make it look like you're actually doing something. There's nothing that can be gained by spending money on this pet project as all it does is focus on saving a dying industry.</p>	<p>MLA's and Premier taking a much larger cut in their salary, since they as politicians expect all the teachers, healthcare workers, etc. to take wage cuts!!! The politicians also figure we as Albertans need to pay for more services, yet the politicians GAVE 4 BILLION \$\$\$ away to the oil companies that are using that money to leave the province. How about realizing that no matter how much money you give away to oil, it's not bringing jobs back to Alberta. Good companies look at both sides of the equation, revenue and spending. Instead of giving tax breaks to corporations, start collecting taxes again from them, especially oil and gas. Oil and gas companies are walking away from paying their taxes, leases to farmers, and refusing to pay for abandoned and orphaned wells. Why should they get tax breaks when they are screwing over Alberta. You gave our future away by bowing to the oil whiners in this province and gave them their golden handshakes to walk away with a pat on the back, and a kick in the pants to the ordinary citizen. You wanted a balanced budget, but you spent 2 billion dollars more than you projected to bring in. This government continues to blame the NDP for 4 years of spending, yet there was 40 years of PC government that spent ALL the Heritage Fund and didn't prepare Alberta for the future. STOP the talk of pulling out of the Canadian Pension Plan, or forming a provincial police force. These are going to cost the province more money than what the "forecast" from your so called professional advisors have said. All this talk does is put more uncertainty on investors coming in to Alberta, and making us as citizens of Alberta rethink what province we want to live in. What's the better choice, have your population leave in large numbers, or look at better ways to run this province than the old PC ideas that you keep recycling and they have failed miserably. All you have done</p>	<p>You campaigned on no cuts to education and healthcare, yet those are ones that you used an axe to cut without any thoughts as to what it will do for the future of Alberta. Our educators, doctors, nurses, and other jobs associated with those career paths, both present and upcoming graduates, are going to leave this province for jobs elsewhere. They will have better opportunities in other provinces and countries than what they will get here. Job creation in your eyes is only within the oil patch. Education is the key to job creation because we need to have a vision of where the future jobs will be. You need to embrace technology and need to embrace climate change. Stop relying on oil as being the lifesaver of the province. We are like a hamster on a wheel, that we keep relying on the wheel of oil being the only thing that can save the province. We are the picture of insanity because we keep doing the same thing over and over again. We spend and spend when oil price goes up, then when the bottom falls out of oil, we continue to spend but refuse to see that our lack of diversifying our economy is the real problem here. We are totally reliant on oil and gas. We need to have a government that has a vision of a much more diversified economy!! You are failing miserably on seeing what the real issues are.</p>
T4V	<p>Infrastructure Debt reduction</p>	<p>Review funding of social programs, people need to work it gives them dignity and purpose. Nominal ER user fees or health care premiums, there is so much waste in the healthcare systems. Cut the size of government.</p>	<p>Support private sector initiatives vs government intervention.</p>
T4N	<p>Health care and job creation</p>	<p>Review and cut upper management positions as needed.... review salaries paid out (ie. Ahs) for upper management and cut accordingly</p>	<p>Provide rebates and feasible loans for homeowners for green energy projects. Also look to forgive student loans to stimulate more spending within communities by individuals</p>
T6T	<p>Education Health Care</p>	<p>Increasing corporate taxes</p>	<p>By not laying off teachers and nurses</p>
T8n	<p>Public education Health care Clean energy</p>	<p>Cut back in government expenditures, stop creating new panels to asses things that are already being looked into</p>	<p>Encourage, invest and offer incentives for clean energy creation in Alberta</p>
T6G	<p>Education</p>	<p>Less tax rebates for billion dollar companies. Premier salary. MLA travel expenses</p>	<p>By funding public sector appropriately; teachers nurses doctors. Less tax breaks to big companies</p>

T1X	Focus on capitalism and funding new innovations as well as small businesses.	Cut funding aboriginals with money and start by educating them properly so that the money they receive is well managed.	Look at new industries such as nuclear power. Proper waste recycling so we don't have to ship it overseas
T9M	Education, family services, healthcare, sustainable energy initiatives.	In discontinuing subsidies for certain resource industries	Fund retraining oil workers to work in the renewables sector. Fund healthcare. Fund education. Those are good jobs.
T0J	Protecting publicly funded and delivered healthcare and education. Providing universal childcare and pharmacare.	Increase corporate tax look at adding a provincial sales tax	Diversify economy develop more alternate energy environment jobs
T8n	Put money towards public services.	Stop giving money and tax breaks to big corporations and support your public services as well. Stop giving money to support private services and private education.	Put the money back into public services to provide those jobs back to those that lost.
T1k	Education (primary, secondary, AND post secondary). Health care Climate change issues and responsible resource management.	-	Support and subsidize alternative resource production.
	1) Early child education and health care 2) PUF funding to support young children with special needs in home, preschool and school. Early supports result in the best success. 3) Community-based family supports like Parent Link Centres	Less managerial positions in health and education 0% public sector wage increases	Sadly, I have no idea. My main reason for filling this out was to stress the importance of maintaining early supports for children, especially those with special needs.
T8N	funding public education funding public health care creating stability rather than trying to seem decisive/ revolutionary (measure twice, cut once; cost effective in the end)	eliminate giving money to private corporations in lieu of public services (private health care, schools, large corporations) war room and advertising for Alberta oil sands keep the education curriculum which was already drafted rather than paying Americans to write it for us	by keeping jobs in public healthcare, public schools (not cutting staff), looking at alternative revenue sources (oil will sell if there is a need, \$ should go to building other industries, not being so impulsive economically as it creates no sense of stability to investors, making clear lines when it comes to WExit craziness (not helping with our current companies, ie. WestJet)
T6E	Education, environment (parks and renewable resources), healthcare, arts and entertainment	Fewer tax incentives to large corporations (especially O&G), carbon taxes for the highest emitters (that money needs to entirely be reinvested in renewables), keep the money in the province by promoting local goods, funding to institutions focusing on prevention (i.e. safe injection sites, mental health clinics, planned parenthood) rather than behaviour punishment (i.e. police enforcement).	Diversification by support to small local business in under-represented industries, retraining programs for stale industries, improved pension and welfare support to people who need to work for money despite not being efficient workers
T0K	Early childhood education, public education, housing for seniors and the disabled, seniors medical aid, front line health workers	Top echelon wages could be cut	Invest in local commands, note multinational conglomerate. Focus on IT, small business. Expand energy sector so we won't be left behind as we move to more sustainable sources.
T1A	Public education and Healthcare	Eliminate the "Energy War Room". Reducing MLA salaries, putting a cap on MLA staffing and expenses. Increase taxes on large corporations.	By diversifying the economy. Increase incentives to the tech sector. Increase funding to the orphan well program.
T9C	Education, Libraries, Municipalities and policing	Bureaucracy, advertising, transportation, highway maintenance contracts, sports	Support things like libraries and social programs that are feeling the results of people who are out of work and support them and help them find work
T9E	Education. PUF funding as it extremely important for early intervention. It supports kids and families and saves money in the long run.	War room, tax breaks for multi billion dollar corporations.	Diversify the economy - we are more than oil and gas.

T3H	Education and healthcare. If we truly have a free market let it recover, the things you should focus on are things the market won't.	Not reducing corporate tax.	Don't cut funding to tech and green industries. I work in tech industry and finding enough candidates to grow is a constant challenge.
T3B	Healthcare, Police, Fire Education - to some extent	Education - cut programs of choice CBE - too costly. IB program is 18K us dollars a year. Cut some administrative positions CBE. Can reduce some teachers but focus on back to basics education. trim some gov't depts	-lower taxes -incentives for tech, green industry
T9e	Diversifying our economy. If you keep focusing so hard on oil and gas eventually we will all go under. Fair compromise? Become leaders in carbon capture technology.	TAXING THE COMPANIES. Everyday life has become so much more expensive as a result of this new budget. Kids get less, seniors get less, and the middle class gets all the taxes with none of the benefits of being too rich too care or poor enough for assistance.	Grow the carbon capture industry, we are going to need it. Show them we are leaders in caring for the environment. Reduce the cost of living. Subsidized farmers who provide FRUITS AND VEGETABLES. If possible, lobby to change the mortgage requirements so more people can buy.
t2a	education and health care	political salaries.	make Alberta a place people want to live. With good education and healthcare, decent living costs.
T6H	Infrastructure, health care, police, public education/post secondary, increase funding for low income, diversify the economy (green and high tech), don't defund the Lacombe crop research station (it is hugely important for the development of new crop varieties which generate a lot of money (taxes) for the economy)	Increase taxes on middle to high income, don't give money to corporations/enforce taxation on them, re-cap electricity and insurance, sales tax, defund energy war room, don't go on a huge advertising tour of the world, listen to your ministry of finance	Continue to fund summer student employment program, fund programs to retrain oil and gas workers, bring back the software company tax credit
	- funding for schools - funding for health care - people with special needs	-MP salary -Stop giving tax cuts to large corporations - remove War Room	- Proper funding in education - Smart investing in oil and gas and environment
T4S	Health Maintaining Public Service and not private industry Energy Diversity for our provincial economy	- dropping the War Room - focusing in energy diversity instead of fossil fuels - stop wasting time and money on cutting Public Service and legal action	- It's time to stop investing focus in a dying fossil fuel economy and look to making Alberta a leader in alternatives such as solar and wind energy.
T6r	Public education supports all Albertans. Move away from the bubble economy of Alberta	Big business needs to pay taxes. Trickle down economics is not supporting Albertans.	Support innovation. Move away from the bubble economy of O&G. I am worried about my children.
T5T	Health and Education	Minister of red tape reduction and energy war room. Make corporations pay their fair share not reward old PC boys club members for their political support.	Should be forward looking searching for new economic growth and opportunity instead of trying to make the public buy into the oil and pipeline dream of prosperity. It's never going to happen get over it and move on.
T4X	Public education	Create provincial sales tax	Public services
T8W	Education and health.	Subsidies and supports for business and corporations. The ridiculous 'war room' waste of money. Constant 'commissions and studies' these dog and pony stores are designed to get answers that the government wants. Eliminate the advertising telling everyone what a great job the government is doing. This is campaign advertising and should be paid by the UCP.	NO financial support. The corporate tax break was supposed to do this wasn't it? Streamline regulations but not at the expense of the environment and employee safety.
T3R	Reducing infrastructure debt and investing on better/efficient health care.	Not giving business tax breaks. Or at least a smaller reduction.	Diversify and provide incentives for the tech sector.
T1H	Social services. Public education, front line health care.	Stop giving tax breaks to the wealthy.	In order to have money to pay taxes and support the economy people need to be employed. They government needs to directly create and maintain jobs, not just hope they trickle down from the wealthy.

T5E	Schools, affordable housing, childcre	By not go into tax breaks to rich oil companies	Renewable energy
T1j	Stop giving tax breaks to the already wealthy!! Start diversifying our economy, and to do that you need a highly educated work force so stop making cuts to post secondary!	In the tax breaks it's giving large cooperations that are creating no new jobs!	Through continuing to support post secondary education and diversifying the economy, you have way too many eggs in one basket, and you have no control over oil prices or what corporations decide to do with the money you have so generously given back to them, like packing up and leaving.
T6C	Health Care and education	War room is a joke and a huge waste of money	Diversify the economy! Invest in green technologies and alternate industries! Stop firing nurses and teachers!
T7X	Services for the people: health, public education, infrastructure because that's who taxes are for.	Rescind hard earned tax dollar giveaways to wealthy corporations; trickle down has been proven to not work. Cancel the 30 million dollar 'war room'; it's plain silly for a political party to be a lobby group for one private corporate body and allot the saving toward services for the people. Increase taxes for the able and wealthy. Make delinquent oil companies pay their fair share of taxes Insist that oil companies and other energy projects create a surety fund for guarantees of tax or royalty payments.	Encourage diverse energy projects such as wind, solar and geothermal where feasible. Champion diversification of tertiary and quaternary industries rather than relying on one sunset industry. Fund post secondary institutions including colleges, universities, and trades.
T4N	Seniors. Social services. Health. Education.	Stop trying to buy friends in O&G with big hand outs. You are never really n the big boy club unless you actually work in oil and gas. And Make them pay taxes they owe.	You spend money for more trades to work in oil and gas but cut funding to companies that not only trained folks but helped them secure work - Make sense ?? Not one bit.
T2L	Health Care, as well as preventative initiatives. Education: more teachers, lower class sizes. Diversifying the economy.	Eliminate the Canadian Energy Centre. Increase corporate taxes; Alberta would still have the lowest tax rate, as well as no PST. This should be a no-brainer: \$4.7B in revenue.	Diversification. Tax incentives for tech, tv/film, animation. Alberta is a great place to live and raise a family - we should be able to attract these industries too.
T4C	Leave our priority services alone. This province is not a work camp. I live in a society, that society is based on minimum standards to ensure civility and basic human needs. If I want to live in an uncivilized dump like Mexico with low taxes I'll move there.	Cut upper management. Leave the front lines alone. The front lines are here to serve us. They are not here to be IN service to us.	Stop giving every oil company a break. Either you can your business efficiently and effectively or let market forces take over and kill the business. No more insane tax breaks. Be tru conservatives and let market forces dictate business supply and consumer demand

T4N	<p>My submission is based only on the budgetary issues that I am aware of. My concern is the lack of support for the working poor (people who are working at or near minimum wage). Especially the removal of things like affordable child care). Lack of affordable child care will take many of the working poor out of the job market and onto the unemployment or welfare line. Children of the working poor are starting to miss out on proper education opportunities by not being able to attend field trips etc. School costs (busing, field trips, lunch supervision fees). I recognize that the fees mentioned are set by the school board but some and likely most school programs are impacted by the removal of Provincial monies.</p> <p>Lets give the working poor an opportunity to keep their jobs and contribute until the economy improves and better opportunities exist.</p>	<p>I suspect that a lot of my suggestions are already being acted upon. What i would like to see is:</p> <ul style="list-style-type: none"> - a review of the mandates of all government agencies and boards; - a review of all government positions to weed out duplication and make a flatter organization. rather than mass lay offs consider giving government employees scheduled unpaid days off. - cancel all school field trips, encourage parents to take their children to museums, zoos, cultural events. 	<p>Build the pipeline and diversify the provincial economy.</p>
T0H	<p>Absolutely on Social Services-Healthcare and Education primarily.</p>	<p>I don't think the implementation of a provincial service tax is unheard of. I would be willing to be taxed more to receive essential social services.</p>	<p>More funding to healthcare and education to increase much needed jobs. Actual positions receiving benefits and guaranteed hours should be created rather than only casual worker roles. Incentives to expand industry beyond fossil fuels that we've become dependent on. Exploring nuclear energy, mining lithium deposits, etc. could utilize transferable skills from workers who have oilfield experience but have fallen out of work due to the current economy. I believe we need to push for more diverse options rather than just try to assist the oilfield itself which will boom and bust regardless.</p>
T6L	<p>Education, healthcare, infrastructure, innovation technologies.</p>	<p>Dismantle the "war room", eliminate the "red tape cutting" committee, stop spending money on attempting to sue the federal government, stop creating consultation "panels" that only employ those people who already support the government's mandate.</p>	<p>Stop creating more unemployment through budget cuts and instead invest in education, healthcare, infrastructure, alternative energy, and other innovative technologies. Recognize that times are changing and we can never return to the past. Be flexible, adaptable and think outside of the box.</p>
T3H	<p>Health Care and Education</p>	<p>Stop giving tax breaks to corporations Senseless court challenges Special panels</p>	<p>Diversification Alternative Energy Projects</p>
T2t	<p>Public health care and education. Taking care if our seniors, vets and children.</p>	<p>Stopping direct support for rich people and oil and gas industry. Giving all the breaks to companies instead of investing in healthcare and education.</p>	<p>By supporting education and healthcare. Supporting basic needs ensures that people are educated well and healthy so that they can work. Also when you support healthcare a d education you provide jobs!!!! I think this government has forgotten this completely.</p>

T0B	1: Investing in opportunities to broaden opportunities in the Provenance away from oil/gas.	<p>**Close smaller rural hospitals; 1: They get abused as walk-in clinics, 2; They send majority of their patients out via ambulance to larger centers for “real” treatment, 3; It would utilize EMS more appropriately and cut down on inter-facility transfer costs.</p> <p>**Centralize EMS services to “mega-stations”- This will save on renting spaces in every town.</p> <p>** Make Doctors more responsible for their actions; it’s a free for all allowing them to book any test, treatments and ambulance transfers they want, “just because”</p>	Find ways to Move the Provenance AWAY from oil and gas
T1J	Fixing health care, getting oil to market, supporting small business	Middle management in government, hospitals and schools, wasteful spending at public institutions, over paid educators. Less government!	Give small business an incentive to grow, tax credits, lower taxes
T1J	Fixing health care, getting oil to market, supporting small business	Middle management in government, hospitals and schools, wasteful spending at public institutions, over paid educators. Less government!	Give small business an incentive to grow, tax credits, lower taxes
	The government needs to continue to provide adequate funding to health care. Decreasing the number of frontline nurses is only going to put more stress on an already strained system, less time for care per patient is associated with poorer outcomes for patients. Additionally, this puts more stress on nurses, leading to burnout among nurses and adding to strain in the health care system. Supervised Consumption Sites should continue to receive funding and remain open. These facilities provide a crucial services access point for some of Alberta's most vulnerable. Research on Supervised Consumption Sites suggests that these facilities are having a positive effect on health outcomes in Alberta.	Savings can often be found by making administrative processes more efficient.	I appreciate this government's support of the oil and gas industry, it is possible that this support will create jobs within the industry. However, the world seems to be going in the direction of green technology and energy production. Investing some effort and money in this new field could create jobs and help Alberta keep-up with this global shift to greener technology. Promoting programs that train individuals in trades and skills related to green technology may increase the workforce qualified in this area and help to improve the viability of green technology in our economy.
T9V	While doing your very best to preserve our fantastic social services network - - 1. Live within our means - within a reasonable period. 2. Begin incentivising LIKE CRAZY industries that will make our province GREAT in 2045.	Oh man - bureaucracy - but good luck - if I ran my business with as many levels - I'd be out of business - - the focus is on the customer.	If we produce the cleanest - best oil in the world - and can PROVE IT - (I know, its heavier oil) - and can let people know why this matters (CHINA GET OFF OF COAL because of that work) - I'm not an economist thought, I really don't know.
T6k	Public schools. And public health care provided by public health care employees.	Closing down the war room. Ending the corporate tax give away.	Bring back the tech subsidies for all businesses. Not just oil and gas.
T1k	Health and education including post secondary	In administrative costs not Frontline workers. Need to change the statute so hospitals and universities for example are not autonomous. Otherwise any cutbacks simply is shuffled on to Frontline workers making nurses and teachers and professors part-timers. This impedes the quality of Frontline service and does not do anything to get rid of the administrative bloat.	Get pipelines built by being willing to create more autonomy within Confederation or even in join the United States. Current situation is a loaded deck against our province.
T5g	Education, health care, investing in renewable energy technologies.	Increase corporate taxes,	Invest in renewable energy

T4a	Education Health care Mental health	Micromanagement/Gatekeeper gov jobs Put money into special education programs Get rid of Standardized tests in schools Get rid of grades and let students learn to mastery level in 10 months vs grade level Get rid of recycle programs that do not sustain themselves nor do what they claim to do Get rid of Nutrition programs in schools Make parents buy school supplies for children grades k-5 Year round schooling Staggered hours for students- schools should run 8-6, 12 months of year, and have smaller class sizes and make better use of daylight hours and space	Create a curriculum that is current and promotes independent thinking and learning...not hoop jumping and checkbox ticking
T4m	Health care, front line staff in social services and all education.	Not providing handouts to oilfield. I dont find investing in oil the way of the future.	Not putting all our eggs in the oilfield basket.
	Health, education, subsidized daycare	Get rid of energy war room and Twitter trolls (Matt Wolf), Kenney's travel and unnecessary chartered flights.	Diversify our economy. Invest in startups.
T6C	Raising taxes to pay for services. Don't cut services.	Getting rid of the war room. Eliminate the department of red tape reduction. Stop the anti-alberta inquiry.	By raising taxes to increase service levels.
T6M	Éducation! Class size	Tax dollars!	Oil and gas industry
T6T	Healthcare, jobs by diversifying the economy, education, PEOPLE first	Not giving corporate tax breaks, efficiency in public sector does not mean cuts as it will cause more cost in the future, the government needs to invest in its people	diversify the energy sector, support an educated population, support all workers private and public
T2A	Health care and education	Not give tax breaks to business	Not cut education or health care
T6M	Éducation! Class size	Tax dollars!	Oil and gas industry
T7A	Health and education. Research has proven educational investment decreases health costs for many populations within their lifetime.	Huge corporate handouts to international companies.	Addressing class sizes and hiring more teachers and EAs. Increasing appropriate staffing for front line health workers.
T9H	End the war room disaster	By consulting with all stakeholders prior to legislating nonsense nobody wants. Transparency is at an all time low right now similar to harpers dictatorship	Raise corporate taxes and invest in public education healthcare and infrastructure. Transparent decision making. Quit the politics of division, stop pretending wexit is real, stop blaming the feds and the UN for alberta misfortunes
T9h	Social programs	Place a sales tax	Yes
T0K	Education. Getting Pipelines built.	Implementation of a provincial sales tax. Get rid of middle managers gluttony in AHS	Get pipelines built
T0h	Health care-no privatization just a big waste of money no cutting front line staff education - smaller classrooms which means more funding to hire more teachers	Stop creating panels that cost money and get us no where Including the stupid war room 30 million a year wasted	Incentives for new technologies stop putting all the "eggs" in the oil basket. time to look to the future and new innovation. DIVERSIFY
T3J	Public Education, public healthcare and government assistance programs (AISH)	Limiting corporate tax cuts to oil and gas and technology corporations.	The government should be diversifying their interests in job markets other than oil and gas and tech. Due to the concentrations of such industries, we fall further into recessions and the fluctuations of market demands.

T2M	Education, health care, environmental pursuits (Green energy), business diversification (get out of oil)	Trim excessive administration within your own government offices	Lower small business taxes, raise large business corporate taxes, raise tax rate on higher income earners
T1k	Growing our resources, tax incentives for companies and investment in our resource sector	Trimming government growth, cutting grants to green energy, wage freeze for government employees and public employees.	Tax cuts, less red tape for small business, investing in infrastructure and means to get our resources to the world market.
T5T	Healthcare and education Building alternatives to the reliance on oil and gas, i.e., supporting the tech sector and innovative small businesses	Stop providing tax cuts to large corporations. If you feel the need to provide these, ensure that what the corporations and businesses save is reinvested into their workforce, not taken as shareholder gains or executives' bonuses	Stop cutting existing essential service jobs. Leave healthcare and education jobs alone. Accountability to large corporations to show what they do with the tax breaks they receive. Develop the tech sector, there are brilliant entrepreneurs in this province. Stop the American interference in manipulating the price of our oil
T1a	Childcare, addiction crisis and the public sector.	In oil revenue.	Look into renewable resources.
T5T	Education, Healthcare, concentrate on people as opposed to corporations.	Raise the corporate tax and create provincial sales tax.	yes, but in all sectors and not just in oil and gas. Government should be providing re training of laid off workers and promote other sectors.
	Public Healthcare, public education, investment in alternative energy and innovation	By raising corporate taxes	Investing in innovation, alternative energy, supporting city development of new hospitals and schools
	Healthcare. Providing support for seniors, education. STOP CUTTING HEALTHCARE AND FRONTLINE WORKERS.	Reduce numbers for transfer from rural hospitals by ground EMS. Stop sending ground EMS on transfers that can go by private vehicle	Public works
T7a	Education, Health care	Getting rid of the war room, not giving massive tax break to the richest.	Diversity
T0P	Post secondary education for Alberta residents/ Aftercare programs when clients leave a treatment drug facility/ assisting single parents	Governments salary	Work with contracting business and get job creation for the unemployed provide them with employment opportunities for clients on welfare/
T4C	Health care and education.	Not providing oil and gas tax cuts. Not funding the Canadian energy room. Implementation of health care premium or consider provincial income tax. Education user fees to keep classroom sizes down.	Diversity!!! Be forward thinking whe it comes to the workforce future jobs. We are too focused on oil and gas which is keeping us in the dark ages. We need to be thinking tech industry and renewable energy. These companies should get a taxbreak to set up shop in Alberta
T0a	Health, education, infrastructure	Political costs, politician travel, duplicate services, multiple school boards, subsidizing corporations Provincial sales tax	Support employment efforts for both public and private sector
T3L	Education and health care should be top priorities	Salaries and travel budgets/other "perks" of MLAs and top government jobs could be trimmed; using technology/telecommunications to cover long-distance communication and meetings when possible to cut down on costs	Less major corporate tax cuts and providing more resources/incentives and breaks for small businesses who will be the real drivers of economic change

	<p>Education (regular and advanced) Health care including social service support (like affordable child care so more parents can afford to work) Agriculture (2nd major primary industry) including research and industry growth support for diversification</p>	<p>Get rid of fossil fuel war room (worthwhile idea but cost should be covered by industry) Cut MLA numbers (if they only represent party instead of constituents, then not as many are needed) Focus on value of quality service, not just savings. The wording of the question indicates a failure to recognize that balancing of income vs. expenses can be done by means other than just cutting spending.</p>	<p>Government likely has little ability to influence this as main factors (global fuel price) are outside government control. Provide support for diversification and entrepreneurship. Recognize that while Alberta had been spending more per capita than BC, ON, QC (why wasn't SK included in comparison?) and has experienced economic downturn, it is still the highest per capita income province in Canada, and the provincial government is collecting the least amount of provincial GDP of any province in Canada...there is ample room to increase personal and business (especially business) taxes and still retain a favourable tax situation. Low taxes for local business activities of international corporations extracting Alberta's wealth has only limited value for Alberta. The objective should be to maximize the value Alberta gains from its resources, not maximize international wealth extraction. Capping fossil fuel production rates to ensure favourable pricing works, it has been done in the distant (decades ago) past of Alberta and is a major strategy for influencing fossil fuel price supports (i.e. OPEC). Pursue increased federal income stabilization (different from federal transfers which are simply premised on progressive taxation and equality of services) to help ensure service standards (education and health care) can be met despite boom/bust cycle of fossil fuel industry. Attract more federal investment (i.e. service centres, national support offices, etc.) to start equalizing regional federal expenditures vs. revenue extraction. These should not be exclusive to Ottawa or special interest groups in Quebec or eastern Canada.</p>
T9H	Healthcare. Threats of laying off nurses and other healthcare professions scares me. The health of my family is most important.	Discontinue the "war room".	Invest in other industries besides oil and gas.
T6X	Health care, education, public sector all together, private sector should get least amount of funding	Shutting down the war room, increasing tax's on big corporations	Investing in the future not the past, diversifying Alberta's economic growth out of just oil and into technology etc
T3a	<p>Health and education</p> <p>Marginalized operations</p> <p>Diversifying away from oil</p>	<p>Create a sales tax</p> <p>Get revenue from companies that haven't paid taxes</p>	<p>Don't lay off more people</p> <p>Diversify to things other than oil, become a leader in technology and other areas</p>
T2X	<p>Education</p> <p>Health care</p>	Infrastructure	That's your job!

	<p>Health Care-stop cuts immediately. Invest in Mental health services and quicker access to the same. There is huge need for increases in seeking these services . I It is shame that in our province and country this is an issue. Wait times are up to 12 weeks.</p> <p>Continue funding for Safe Consumption site with expansion to detox and rehabilitative services without wait times.If one community is facing wait time find available beds and access for services for residents in some other community in Alberta.</p> <p>Expansion of hwy 2 between Calgary and Edmonton to 3 lanes or build the fast rail-road between two</p> <p>Increase child care subsidy or continue funding for affordable childcare places of 25 per day</p> <p>Increase AISH and Income support as per previous government guidelines</p> <p>More funding for Women's shelters to increase capacity so that women fleeing abused relationship are turned back due to lack of space</p> <p>Green Line project in Calgary</p> <p>funding for more employment programs and retraining in communities outside Calgary and Edmonton specially rural communities.</p> <p>Expand occupational health and safety in area of bullying and harassment in the workplace and have tougher stance in legislation to ensure employers are in compliance in this area. Workers face serious mental health issues which is fault of employer. At the end of the day health services funded by government are utilized for care from, doctors, specialists, mental health services and workers pay all the price which drains the health budget, disables workers from employment and as result have them dependent onto government financials systems while there is 0 consequences for employers. All this have ultimate impact</p>	<p>Increase taxes for corporations</p> <p>Less travel for premier and ministers where they are advancing agenda of UCP or other PC parties across Canada. Connecting with Albertan's and for Albertans by visiting our communities not traveling across Canada. Invest in video conferencing and connect via technology with Ottawa and other premiers. Many departments at Federal Level are doing the same</p> <p>increase % of fuel consumption gas fro 13% to 15 and decrease it for corporations by those 2%</p>	<p>Immigration landings for Alberta have been down which means we are not providing enough settlement and employment services for newcomers specially in small in rural communities. Newcomers are known for entrepreneurial skills and open many small business. Provide monetary incentives for business start-up, child care, training and affordable loans; encourage newcomer women to start-up business specially in small and rural communities. Job support programs and skill training for seniors who want to re-enter work force for additional income; Attract the upcoming university students born and raised in Alberta to study in Alberta by connecting them with employers and jobs upon graduation so we dont face outpour of youth to other provinces to study, spent money there and use skills upon graduation in other provinces. Look into loan elimination if students stay in Alberta, get job in Alberta and work for an employer for 5 years. Lets make it attractive to young people and students to stay here specially in town where they are born and raised.</p> <p>diversification and moving eventually from dependance on oil to green economy- look at Norway and how they did it</p>
T4h	<p>Smaller class sizes</p> <p>Health care</p>	<p>Management jobs-AHS and school board superintendents</p>	<p>Environmentally friendly industries and power sources</p>
T0H	<p>publicly funded healthcare for all albertans. INCLUDING lab and EMS services.</p>	<p>CORPORATE TAXES!!! stop giving corporations a \$4.33 billion dollar break.</p>	<p>by increasing wages of public sector employees, they will spend more money locally, increasing economic growth.</p>
T6E	<p>Justice issues, unified family court system, legal aid</p>	<p>PST</p>	<p>Tax credits for technology start ups</p>
t5a	<p>Healthcare and Education. The two critically important, Canadian things that you cut.</p>	<p>1. Investing in better long term sustainable energy sources like Solar.</p> <p>2. Stop giving billion dollar welfare deals for already profitable companies.</p> <p>3. Less gratuitous, wasteful spending, i.e. "The War Room"</p>	<p>By not cutting funding to areas that create jobs. Either increasing or at the very least, not decreasing the minimum wage, so that even those working at minimum wage can make enough money to spend and thus contribute to the economy. There is overwhelming evidence that an increased minimum wage is beneficial at best and negligible at worst, so to reduce it is inane.</p>
t6w	<p>Education and health</p>	<p>Oil industry war room, social programs</p>	<p>Invest in public works to support Albertans; I advise raising taxes or implementing a provincial sales tax to do so</p>

T5K	Government needs to allocate more money towards education and healthcare. EMS is constantly in the red zone with limited resources for the public. This creates a danger to those who need lifesaving care, as well as perpetuates burnout and PTSD in those that hold the public's wellbeing.	Less money towards government travel, less money towards government hotels, less money towards rejuvenating the oilfield—it is a natural resource, money isn't going to stimulate oil.	Rather than creating cuts that makes businesses lay off employees to keep the doors open, put money into the economy to stimulate growth and jobs. You need to spend money to make money.
T0H	Infrastructure	Reduce travel expenditures by avoiding useless trips to Texas, Ottawa, and Europe. Reduce or eliminate MLA bonuses and benefits. Overhaul MLA pensions.	Support upswings and focus on economic diversification.
T4S	Education and healthcare	Increase taxes to corporations and the rich.	Invest in education and healthcare
T5Y	Tourism. Big sporting events. Also the hyperloop or some form of fast transit between Edmonton and Calgary major cities.	I think you have done alot of cost cutting and dont need any advice on that.	Tourism/ fun things to do attract more people to come to alberta to live will enhance the GDP.
T2z	Healthcare and schools	Oil and gas bail outs, subsidies	Keep your population healthy and educated.
T0L	Keeping Class sizes low. Teachers, assistants.	School boards accountable with their budgets. Top heavy. In public sector 1/3 ratios. In private sector 1/8-10 ratios.	Support private sector growth because it funds public sector jobs.
T1V	Education Affordable Housing- Veterans, seniors, low income etc Drop-in centers Health care/Emergency services-Police, Fire, Ambulance etc Rural Crime	Government salaries and travel expenses. Live within 'means'...like any other household budget- don't have the money then don't spend it. Is it a want or a need?	Stand up for ourselves and our resources

T0E	Effectively utilize the red tape reduction program to not just eliminate unnecessary tape but also to exploit the government's vast IT resources to improve efficiency and effectiveness of all processes and programs.	<p>Cancel all funding for the City of Edmonton's Valley Line West. The line is unnecessary, expensive, and very poorly planned and designed. While no provincial capital funding is to be provided until after the next election, much preparatory work is being done now that would be cancelled. The funds the city is expending on that work could be directed to other city work which would reduce the draw that the city requires from the province. Such a move would also assist the long-term outlook for the provincial deficit. The UCP has nothing to lose by doing this. They only have one seat in Edmonton, won by a very thin margin, and the vast majority of Edmontonians, if asked, would say that they oppose that line for reasons stated earlier. In fact, such a move would likely improve the UCP's standing in Edmonton.</p> <p>While I completely support current and future development of Alberta's energy industry, the "war room", formally named the Canadian Energy Centre, is an unnecessarily extravagant expense. While their logo debacle was nothing more than a minor embarrassment, they do seem to be flailing about searching for things to do and ways to accomplish their mandate. Sharply focused efforts aimed at identifying foreign funded organizations and individuals who slander one of our two major industries, followed up by targeted initiatives to refute and overcome their shrouded undermining of that major industry, could surely be done by existing government resources at far, far less than \$30m/year.</p>	Reduce the size of the bureaucracy by incented attrition but by attrition only, without layoffs. Forcing more people out of work will only increase the provincial unemployment rate further harming the provincial economy and hampering deficit reduction efforts.
T6A	Education Healthcare	From their salary	Stop giving so much to big corps and help the small guys that actually care about our community
T5L	Education and health care	Cut perennial and lavish pensions to MLA's	Support local, smaller business. Support green technology and innovation.
	-Investing in a knowledge based economy with a focus on tech. -Staff development	Outdated processes and red tape.	Tech sector investment. Foreign investment and trade partnerships. Attracting the global community.
T1a	Post Secondary Education for oil field workers including student loans for upgrading	Taxing oil companies	Funding research
T6w	Education and Health	Cut art work. Our future isn't in art and sculptures	Unsure
T6W	Infrastructure Economic Diversification	Grants to arts spending Paper processing and double entry clerks. Intermediate management layers taking the place of empowerment policies.	Make it possible for employees to be hired with ease. Reduce overhead burden on small businesses. Facilitate venture capital to get Alberta ideas out to the world.

T7V	Health care and education	<p>Have the right people for the righty job! Stop paying registered nurses to complete tasks that should be completed by other departments. You eliminate stock personal, laundry personal, unit clerks, environmental services.... who do you think picks up the slack??? The job still needs to be done! So now the RN's are stocking and ordering supplies, folding laundry, making beds, making charts, and cleaning. Ridiculous.</p> <p>Cut social programs. Cut safe injection sites. Stop handing out the free narcan. Stop handing out welfare to everyone who just doesn't want to work. Most don't need to be on it</p>	Support the oil companies
T8s	Health and education	Increase corporate taxes	Support all jobs which includes public sector. Keep money in the hands of the local people
T6G	Education and healthcare	Increase royalties and taxes to generate more revenue which can be invested in transforming the natural resourced dependent economy. Savings can be found by investing in transformational, visionary projects in public service delivery. Those transformations will take for than 4 years, ie one election cycle.	through economic diversification. The next big wave of new jobs will be in innovative technologies. Those jobs are talent driven and by the fact who controls IP. Alberta needs to catch up with the rest of Canada i that regard. The population is young and needs these jobs
T2T	Spend more money on Health care and teachers	Stop giving hand outs to oil and gas. Cancel the "war room". Reduce middle management in AHS.	Diversify industries through subsidization
T4C	Education and Health Care	in almost every department, by eliminating middle management that does alot of the same job. If you look at organizational charts of many of the government organizations there is lots of layers that don't need to be there, and or reduced in size.	Increasing education funding, more schools, easier to afford post secondary education. A well educated population is more productive and contributes to a healthier society.
T9V	<p>Create a climate to encourage Investment. Ensure Nurses, Teachers, Public Service are paid among the top 4 Provinces. Review spaces that the Government is leasing/renting to ensure we are getting what we need. Justice (To many people walking from Serious Crimes), Health, Education,</p>	<p>Find additional revenues (Tax on Cannabis products) Similar to tobacco. Review Schools, Seniors housing, Government buildings are necessary or can be renovated/repared/updated for less than new. (Example 163 new schools?) Eliminate some of the minor incidents that go before the courts Persons trafficking in drugs should have personal items seized if convicted including Bank Accounts, Vehicles and Houses - accommodation should be taken into account the family members that had no involment. Ensure that defendants are not changing lawyers and or deliberately delaying court procedures to have charges dismissed because not being tried in a resonable time frame</p>	<p>Provide advice, support, some cases financial support for new/existng, innovational ideas, feasible small businesses. Create a Provincial/Private business to look after oil leases that are orphaned - Fesable to produce and or decommission (ex Primer Wall in Sask asked for \$200 mil from equilistaion workers to employ about 1000 workers To work on abandoned leases. Fed Govt said NO it did not fall in the line with their environment policy</p>
	Health Care Education Social programs	Billion dollar corporations!	By not supporting lay offs in public or private sectors.

T4R	<p>Items that provide economic and social value.</p> <p>Build a nuclear plant near Ft McMurray, use steam and electricity to heat the bitumen, would greatly cut the Carbon impact and provide reasonably priced electricity.</p>	<p>Cut upper management. The nurses and teachers I've seen are being worked very hard. Do NOT cut "The Troops on the Ground".</p> <p>Add a sales tax.</p> <p>Removing "Public" from the name of school district has to be one of the dumbest things I've every seen in AB. How can that save money? Really guys...</p>	<p>You tell me. You're the government. You promised a lot. I voted for you as the NDP hadn't gotten even close to a balanced budget.</p> <p>Get the pipeline to the coast done.</p> <p>Promote secondary industry where we can win, Dow / Nova Chemicals. Get out of the producing and shipping the raw product.</p> <p>Think solar. We get incredible solar hours in AB.</p>
T6w	<p>Healthcare and education. It's not all about balancing budget in this economy. Yes making some cuts is great but we also need to sustain jobs etc. We just need to make sure we don't go more in debt</p>	<p>Managers at hospitals. They sit in meetings how many times a day. 17(1) had mgr role their eyes at the meetings they have over and over again on dumb things. How can they manage and help out staff being in the same meeting all the time. I see it every day at work. 4-5 30-60 min meetings a day. UnreAI. 17(1)</p> <p>Look at extra sheets that can be cut out of charts and saved. Thank god for connect care. Make it move faster!!!! Part timers also get half the benefits. Yes it's great but maybe give smaller options. Different levels of benefits. I worked at McDonald's and they had four levels of benefits. Consider this a factor. Look at turn over of units. Maybe it's the mgr. maybe certain staff. Maybe we need more accountability for People and work</p>	<p>Just save going into debt and look at simpilar ways to cut. Not affecting the major industries. Trickle down factor is a theory but s never been a reality. It's the middle class still spending and going broke to maintain economy</p>
T8N	<p>Infrastructure (road maintaince, access to public recreation to reduce impacts on health system, ski trails, bike trails, hiking trails, running trails), sport funding, healthcare (to an extent), education, clarify the environmental regulatory process, unify the environmental regulatory process among sectors, flood studies.</p>	<p>In the public sector (reduce bureaucracy), healthcare (overhead), union funding, make firing public sector workers easier.</p>	<p>Build pipelines, promote forestry (in castle mountain region), support alberta innovation, encourage investment, reduce taxes on small businesses, reduce minimum wage, prohibit automation in the grocery, retail & food sector (i.e. self checkout, screens to order fast food, etc) to provide more jobs for students & untrained workers.</p>
T1G	<p>Rent subsidies, education, AISH (give back there indexing for inflation) seniors.</p>	<p>Hold back on spending for the government parties, flights , hotels etc. Increase liquor tax, hold back on the arts and sports. centers. Hold back on increases to government employees wages, Mps etc.</p>	<p>New opportunities for technology and climate change.</p>
T3L	<p>Education, Infrastructure, renewable or alternative energy</p>	<p>From their own pockets. Pay freezes for politicians and a smaller cabinet. Also enough with the war room.</p>	<p>By accepting the fact that oil and gas can no longer be the primary or sole source of our energy and income and focus on developing jobs and education towards alternatives like nuclear.</p>
T0J	<p>Advanced Education. Basic education. Reducing liabilities associated with orphaned wells. Getting albertans a fair return on their renewable and non-renewable resources.</p>	<p>I'm interested in government getting more revenue from resource extraction industries, land users.</p>	<p>Advanced education and resource revenues as the basis of a transition to an advanced economy.</p>

T4B	Education and health care	This government clearly wants to find savings by cutting the aforementioned essential services... breaking a campaign promise. It's pretty clear that this government doesn't care what Albertans think so what's the point in giving my opinion.	Diversify our economy. Alberta is clearly reliant on one resource and this is a dangerous path to follow.
T6B	Education, Healthcare and Diversification of industry	Add a sales tax, add a nominal monthly healthcare cost, tax higher income brackets a small increase	Support Education, healthcare and diverse industries! We are so much more than oil! My kids education and health matter!
	Education should be a priority. Not undermining the systems we have in place, but making them better, and investing more money in K-12 and post secondary education.	Eliminate the safe injection sites and the war room. If junkies want to overdose and die, let them. If they're not being rehabilitated, we don't need to be spending money supporting their addictions. Actions should have consequences, and by supporting safe injection sites, the government is refusing to hold these people accountable for their poor lifestyle choices, and giving the middle finger to the rest of us who go to work and pay our taxes.	Instead of continuing to waste money on a war room, run by people who are so inept they can't even get a logo right, why doesn't the government spend money on an initiative to help diversify the economy.
T0B	Education	Just get the money back that oil and gas owes	Invest in green ideas and a promote a 2% sales tax
T3A	Alternative energy sector and technology industries.	Corporate tax breaks.	Diversify Alberta's economy to attract investment.
T6W	Education Health care Child care	Large corporations Politicians salaries Equalization payments	Support small businesses Support our teachers Support our healthcare Support childcare
T3A	Investing in new technology companies to diversify Alberta's industries. Education and health care.	Tax breaks for oil and gas companies. It's an industry that isn't going to be around 100 years from now. Alberta needs to begin to transition out of it.	Investment in alternate industries than oil and gas.
T4N	schools and hospitals	senior bureaucrat and MLA salaries/expenses drop the "War Room" and promote the efforts and achievements of those Albertans and companies who have succeeded in reducing environmental impacts. We have much to be proud of!!	invest in and promote "made in Alberta" solutions that currently reduce carbon output and market those innovations to the world. Until recently we have never been a province of whiners; help Albertans celebrate our collective achievements instead of blaming everyone else for our failure to respond to a changing world.
T5e	Spend more money on healthcare and education!!!!!! Cutting front line staff is absolutely ridiculous. Our province needs those nurses. They do so much that the government does not realize! Without them, our families and loved ones will not get the proper care they need.	Big corporations. Administration.	By not cutting hospital front line staff... create more jobs.
	HEALTHCARE AND EDUCATION	Less handouts to the oilfield and the rich.	Hire more (NOT LESS) Healthcare workers, in particular nurses
T1J	Healthcare and education	Politicians taking a wage cut, instead of cutting frontline workers thin out top heavy management, and stop equalization payments to the Eastern Canada.	By not cutting the frontline workers jobs, encourage and support the oil and gas industry, and stop the wage freeze of frontline health care workers forcing these workers to leave the province and go south in a brain drain.
T0B	Education	Infrastructure	Get some ideas from the NDP

	Health care including preventative health care. With the aging population we (recreation therapists) are expected to have a worker to client ratio that is unsafe (some places we are responsible for over 100 people with maybe one assistant if we are lucky). I think more spending is needed for people with disabilities most cannot live with what they get. They did not choose to be disabled and should get more than under the poverty level. For instance 17(1) doesn't have any money to use and be apart of the community. Programs that help people with physical disabilities get jobs by providing training so they may be able to get a full or part time job	Make people/businesses pay taxes that have evaded taxes. Taxing big corporations 1-2% more. Having another tax bracket for the people that make over \$250,000. Doing a carbon tax with the money staying in Alberta. Fighting equalization payments when Alberta is struggling to provide for itself. Politicians can take a 10% reduction in pay. Not wasting money on a war room that isn't even transparent to the public if it's using public money...use private money.	Increase money for Healthcare...when it got cut I saw the job openings from AHS go from 150-200 consistently to 25-50. In my field alone it was about 10 consistently to 0-1. Make it clear in a contract that the amount that is given is used to fund a blank number of jobs. Or for every person they hire for a new position they receive an incentive
T6G	1) health care , keeping home care public 2) keeping public education public 3) free dental care 4) pharmacare	Increase taxes on the rich 1 % Progressive taxes Collect royalties on oil and gas Sales tax	Alternative energy program Reduce, reuse and recycle Art's Build Low cost housing units
T4P	PUBLIC Education PUBLIC Healthcare RCMP Social services for those who can't advocate for themselves	-getting rid of war room -wasted money on curriculum reviews and fights with school boards/teachers to change something that is already world renowned -elaborate trips for cabinet and their families... at ridiculous costs (this is why the PC were voted out of office 4.5 years ago!) -legal representation to dispute the illegal activity that this government is being accused of	By NOT cutting jobs of thousands more people than were ever laid off in the oil industry By NOT overloading the people doing the jobs that care for others to the breaking point By NOT pissing off the doctors to the point of leaving the province
	Education Health care Environment	In their own cabinets	Invest in health and education

T6C	Education (adequate numbers of teachers, adequate resources at grade school levels; at higher levels, less job-as-an-end-result driven funding, more emphasis on an education for the sake of exploring personal potential resulting in the job that fits best); healthcare (including provision of basic care for those without that "don't qualify" for made up, usually discriminatory reasons); care (beyond health care) for the elderly and infirm, the homeless, the Indigenous & others left out of the current system; infrastructure maintenance (roadways, public buildings (including schools, hospitals and housing for the poor, etc.); diversification of our economy, funding and assistance for startups ...	Strike the 'war room' - ; Belt tightening by politicians themselves ... roll back pay increases, curtail travel, limit entourages, stop unethical use of spending allowances, etc.; Cutbacks in civil service, specifically middle levels of management - that is, positions created to reward party loyalty which are eminently unnecessary.	Provide funding and support for diverse start-up businesses, especially those that can replace aspects of gas/oil industry. Reinstatement of the carbon tax; institute a sales tax; replace flat tax with one that will properly tax very wealthy individuals and give a genuine break to the less privileged; simplify, simplify, simplify relationship between small business (including farming) and government, and be authentically supportive of small businesses so they can support families and employ others; tax big business / corporations appropriately instead of supporting them with (financial and regulatory) breaks that cost others the breaks they ought to have; adopt a mind-set which speaks to the public in a way that supports cooperation and working together, contributing to the good of all, equality of all (stop bashing the teachers, the intellectuals and the scientists, the Indigenous, the so-call 'criminal' element, women in general), cooperation with federal government, actual cooperation with other provinces to promote Canadian economy (rather than the side-taking, razing, bashing and trolling that currently seems to pass for communication); genuine justice that benefits all (especially the poorest and the misfits) so that all people get to contribute to the economy;
T3G	Education	Oil and gas tax	Not cut education and health care
T6M	-research on new industries in the province different from oil and gas -education	better administration	less taxes for small and medium size enterprises, as well as other incentives, such as promotion and partnerships
T6I	EDUCATION!!!!	Stop giving tax cuts on bit corporate businesses! Put in a sales tax	SUPPORT EDUCATION!!!!
T1H	Education and healthcare	By clawing back the 4.5 billion dollar corporate tax rate that has not shown to benefit anyone other than people already making enough money they don't need that type of tax cut.	Create a provincial sales tax.
T2J	I don't think spending can be separated from revenue and I think the government should stop reducing revenue. Corporations should pay more in taxes which will allow us to spend in priority areas. Cutting taxes, and then cutting services, has only left us with a larger deficit. I think the government should focus on health and education.	Eliminate the war room. Stop creating all these commissions to rubber stamp UCP policies.	Well, cutting billions from health and education will result in many people losing their jobs. This certainly does NOT support job creation and economic growth. But it seems our government is only interested in oil and gas jobs. Maybe you could invest in health and education - that will support job creation and economic growth.
T1B	Education and Healthcare. Alternative energy and economic diversification.	Eliminate the "war room" Cease corporate welfare. Collect taxes from delinquent companies and individuals	Research and implement alternative energy development. Keep post secondary tuition low so more people can retain.
T6W	Education: funding for more teachers, smaller class sizes, support staff, etc. Health care: Funding for more nurses, doctors, therapists to help reduce wait times and provide quality care	Less tax breaks for big corporations	By allowing local companies the opportunities to build new infrastructures, bridges, roads, etc.

T2S	Public sectors that create jobs. This would include healthcare, the arts, renewable energy and education	Dismantling the environmentalist war room would be a great start. As very few people honestly believe the propaganda it creates, making it largely unproductive by proxy	Well firstly, putting funding back into programs and services that create meaningful jobs, but a great next step would be to reinstate youth rights in the workplace. As currently any job that a youth can do will always be given to a youth given how corporations can pay them illegally low amounts of money without getting punished, thus in turn starving and limiting the adult job market. After all pay gaps directly result in the oppressed group getting hired more.
T1A	Quit embarrassing Alberta with the 30M waste called the war room, put that money back in education. Focus on public services and infrastructure spending that's in line with inflation and population growth. Stop austerity and trickle down economics.	Shut down the war room, put money back into education	Stop austerity and trickle down economics. Increase corporate taxes and oil gas royalties. Stop tax bracket creep.
T6A	Economic Diversification, the world is turning away from fossil fuels, I'd prefer to be ahead of the curve than behind it. No more gifts to well to do corporations that don't care. It was a forgone conclusion that the UCP was going to win, yet corporations left even after you sold us out to them.	Reduce the premiers pay Reduce the MPs pay No more austerity cuts for the poor, take from the rich for once.	Bring back the tech subsidies that were actually fueling job growth. Subsidize solar and wind. Let's build a nuclear plant, we're an energy producer so put some effort into looking at the next big energy.
T6r	Healthcare, education, renewable energy	Oil and gas industry	Support healthcare jobs and jobs focused on developing renewable energy
T6A	Healthcare, schools and jobs	provincial sales tax	Funding industry to support alternative energy sector. Incentives for oil gas workers out of work to learn new technologies.
T8A	Small local business incentives, education and healthcare	Healthcare, billing system for physicians	Support local businesses, incentives for investments in the province (pipeline)
T2X	Infrastructure, health care, education, alternative energy, alternative agriculture.	STOP GIVING OIL COMPANIES FREE MONEY!!!!!! AND STOP LINING YOUR OWN POCKETS!!!!!!	Actually make Albertans the priority. We need jobs, doctors, teachers, healthcare (Not private), police, EMT's, and a future for our children.
T2N	1-Ensuring quality education at all levels, for everyone. 2-Ensuring efficient and quality medical and health services. 3-Providing fair and reasonable chances for ALL Albertans (including, but not limited to: LGBTQ+, First Nations, Elderly, Children, Disabled, Minorities, Low Income, Young Workers, Immigrants, Small Business Owners, Workers of the Private & Public Sectors) 4- Diversifying the Economy 5- Innovation & Technology 6- Fighting Climate Change	Reduce payouts to big corporations, invest in local industry & businesses, sales tax	Invest in education, especially post-secondary. Diversify the economy. Help small businesses. Reduce excessive cuts that are causing massive layoffs and job loss.

	Healthcare for seniors and education.	Government expense accounts should be trimmed to the absolute minimum and every single expense should be receipted, and justified, just like every operating expense is vetted right now. Accountability and transparency. Stop blaming NDP for everything. That stunt is getting old. Twenty years ago the Conservatives laid off employees and now it's doing the same thing again. It didn't work the first time obviously so why is UCP doing it again? Public services were decimated and we still haven't recovered from the Klein era. stop shredding public services.	Stop destroying public services.
T1J	Health care, education, environmental issues	Corporate taxes—increasing them rather than giving tax breaks. Salaries of top people in all areas. Decrease them rather than cutting front line positions.	Unsure
T4I	Research into how Alberta can explore alternative energy. Look for ways to support growth of the economy that is not solely in revenue that we already have.	Tax on the wealthy.	Support for small businesses and encouraging consumers to buy local products rather than imports. We should be making everything we need. We have the resources but have squashed our own industries by giving contracts to out those that are out of country.
	Education Healthcare Alternative Energy Alberta parks and protected spaces	Stop subsidizing oil and gas Decrease MP wages/spending	Invest in people through education and healthcare Alternative/green energy Tourism
T1K	Healthcare and education.	Holding oil companies accountable for rural taxes, not funding the energy war room, not giving cuts to corporations	New renewable energy sources, investing in finished products, funding education for new technology
T0L	Infrastructure	Education voucher system	Low tax and low regulation
T2C	Spend money in ways that actually increase jobs and not throw it away at companies who pocket the money without job creation. So jobs created by building facilities for population use, infrastructure that is cheaper now than in 10 years. Let businesses survive on their own	Stop corporate welfare! Look at MLAs own spending habits, double pensions and cut their sizes and staff.	Absolutely because private for profit companies only interested in mega profit not job
T5G	Health care and education. Forward thinking solutions to create employment. Not relying in past economic sources of revenue (oil and gas).	Top heavy management organizations such as AHS.	By looking after its population. The point is to get tax dollars. Make sure your population is healthy, educated and stable in order to create and bolster a population who can become employed and then in turn pay taxes. The wealth of a government isn't the natural resources; it's the people.
T4N	Getting Albertans back to work and trained Getting our Oil and gas going- we can do this and save the environment too Taking care of our youth and seniors- you could easily accomplish this with seniors taking care of youth and youth taking care of seniors...I wonder why you do not get this	The government should look at what they are spending money on... Cut up management positions- great workers need little management Cut non essentials and help lift our homeless/addiction population too make them contributors to the economy Empower people vs enabling	Train people and they will help you find growth situations....the smarter people are, the more they see is possible. This is not difficult if you have the right people in the seats.

T4L	Rent Supplements and more Seniors subsidized apartments in smaller towns. The education system needs a lot of work. Christian schools should get government funding to make the tuition more affordable for families.	Cutting high level administration	Making it more enticing for small business owners, offer incentives, tax relief etc
	PDD services delivered in communities across the province. Education to ensure smaller class size and adequate supports for children with disabilities. Publicly funded healthcare ensuring access for every Albertan	Cancel corporate tax cuts Implement a deposit system for new gas and oil well development so funding in place for clean up. Implement a sales tax	Support the development of alternative energy to build capacity to lessen dependency on fossil fuels. Promote employment for marginalized groups (people with disabilities and immigrants) to reduce reliance on Alberta Works.
T2J	Always enough for good education, health, law and order. Depending upon immigration, more may have to be spent on teaching English as a second language. Other related costs like health costs will go up as well.	Listen to knowledgeable people who can find savings in their fields of expertise.	Make it easy and affordable in terms of licencing, taxes and incentives for small businesses to set up and operate in the province. Capitalize also on natural resources and marketing, assist with their "greening", and advertise to other Canadians what Alberta is doing commercially and environmentally. Have the "war room" challenge doomsayers with accurate information. Prioritize Alberta residents for available jobs.
T0A	Reinstating funding for heritage, infrastructure, education, and healthcare.	Closing the Canadian energy center. Investigating Panels should be voluntary positions instead of paid.	Increased investment into economic diversification.
T8N	Education and Health Care	Cut the war room. Although unpopular, we need to move beyond trying to prop up the energy industry in its current form. My children, grandchildren and future generations need us to be forward thinking beyond non-renewables.	Stimulate growth in NEW and future industries. Although we can not simply drop coal and oil, we need to be working towards what is the next big thing for Alberta
T2K	Strong families mean strong nations. Yet astronomical amounts go into breaking families apart. Audit how much the crown pays lawyers for their child protection with unlimited funds , yet just recently huge cuts are taken from paid advocates who help parents know their rights to help them keep their kids. Much of our justice system and homeless are former foster kids. This cost Albertans huge amounts in court , jail, health, crime. Also Kenny is wanting to dump kids at age 22 rather than 24 which will create more homelessness since these kids have no families to turn too.	Using the bank of Canada , it's treason to the people to not be using it. https://youtu.be/UbACCGf6q-c Supporting https://www.google.com/amp/s/www.cbc.ca/amp/1.3065650	Open source ecology, permaculture, funding for low income to go to school. Turn to and support hemp farming based which produce materials for oil and gas which is way cheaper to produce than fossil fuels and much better for our environment. Also hemp is amazing for food , clothing non toxic building materials for houses, cars and can replace toxic plastics made from oil.
T7Y	Health benefits for spouses of seniors	Transparency in spending, including MLA's expense accounts. Open to full public scrutiny the slush fund you created for oil	Stop handing out funds to large employers.
T6H	Health care and education.	Less corporate handouts.	By diversifying our economy. We can't only count on the oil and gas industry.
T6L	Supporting the arts community especially film and music. It has been proven time and time again that iconic movies create iconic landmarks that increase tourism. Ghostbusters 3 was just shot here. That is COOL and people care about that. Plus it brought millions of dollars to the province and hundreds of jobs.	Travel budgets for government officials.	Increasing tax credits for artists. Removing the cap on existing credits.

T5S	Education, health care and support for essential services for cities and municipalities.	By having companies and high income earners pay a higher proportion of taxes rather than giving them tax breaks.	Focus on alternative energy and economic diversification. Reduce reliance on oil and gas. Promote and incentivize other area of economic growth.
T7A	Trimming spending! NO bureaucrat should make more than an elected official!	Cut bonuses and over paid Bureaucrats!	Remove red tape impeding workers! Young men out of work should be filling the need in Trucking!
T8A	Healthcare and education. New technologies to diversify the economy.	Longer legislative seasons, to maximize the time and \$ spent in top level of govt. Stop hiring consultants and panels for every issue. Disband the War Room - a complete waste of 30mill and so far an inefficient and unnecessary disgrace. There should be publicly available oversight of this is a supposed govt-sponsored committee. Why is it a private org?? Ridiculous.	Invest in tech that will diversify the economy. Wind? Solar? Look 50 years in the future, not 10.
T2X	Education Health	Reducing beauty ratio red tape and agency redundancy	Invest in technology Invest in infrastructure etc
T8V	Diversifying our economy, particularly into renewable energy sources. It is clear that our province can no longer rely predominantly on oil revenue. Also, with a weakened economy and with interest rates as low as they are, we shouldn't be so focused on balancing our budget as we should be on investing in infrastructure spending and upgrades to aging medical facilities. In times of economic turndown, you must invest in jobs and building. This is basic economics proven time and time again.	Perhaps the premier could stop flying across the country with 18 ministers at a time? And get rid of the war room. 35 million wasted dollars. Our oil speaks for itself and will continue to be used, and Tom Olsen being put in charge was clearly an excuse to give him a job when he didn't win his seat.	For one, cease the attempts to reduce funding for education and health care. A healthy and educated population is one that contributes to economic growth. Give the health care workers, teachers, and government staff a wage increase, even if only a small amount. 8 years with no wage increase with cost of living on the rise is not feasible for anyone. Work with energy companies on the province and offer them incentives to diversify their energy offerings. We are a province with much to offer, not just oil. Finally, quit trying to create a war with Ottawa. We don't want to separate, and we don't mind supporting those in need. Perhaps if you tried to cooperate more, the Feds would work with you. We are all in this together.
T2y	Education and health	Tax breaks to the wealthy and large corporations	Promote jobs in areas it's cutting
T0M	Education Healthcare	Their wages Travel expenses	Tax cuts for small business Diversify the economy by recruiting new business adventures Diversify our oil and gas reliance and increase our production with our own refineries
T5P	Sustainability.	Fossil fuel subsidies.	Education
T8T	Education and Agriculture.	Oil. Limited resource and if the market floods like it did a few years ago then Alberta will hurt.	By providing our children with the best education possible and investing into tech companies and not oil CEO's that will take the money and leave Alberta.

T4R	SOCIAL SERVICES. HEALTH CARE. EDUCATION. TRANSPORTATION. EMERGENCY SERVICES. THE LEGAL SYSTEM, PERHAPS STARTING WITH PREVENTING CRIMINAL CASES FROM GETTING THROWN OUT OF COURT BECAUSE THE LEGAL SYSTEM TAKES TOO LONG TO PROSECUTE, AS THEY ARE NOW.	Taxing large private corporations. Especially the oil companies who like to claim bankruptcy in order to avoid reclaiming their dry wells, abandoning them to be cleaned up by the government using taxpayer money. Then these companies re-incorporate under new names to do the same thing elsewhere, often on some poor farmer's property who has to wait years to be able to let his cattle graze on the field because the government is years behind in remediating these sites, which have grown by 320% in 5 years during the last decade. "The cost of cleaning up after Alberta's oil and gas industry was estimated by the Alberta Energy Regulator to be as high as \$260 billion." Stop cutting healthcare and public service sector worker raises, for god's sake. Shutting down all of the CNIB satellite offices in Alberta, really? How much did that save Albertans per year, a silly million? I'm glad to pay taxes for blind Albertans to live a better life! Why are you even looking at disabled people for tax cuts? Last I checked, this was Canada, and people who were born with or who develop disabilities are cared for by the rest of us. Seriously.. that was just shameful of you to do to CNIB. GO AFTER THE OIL COMPANIES WHO MAKE BILLIONS STRIPPING OUR LAND AND LEAVE THEIR MESSSES FOR THE PUBLIC TO CLEAN UP.	Stop having a different minimum wage for young people, it's ageist and completely discriminatory. I seriously can't believe a government in a developed country in this day in age would pass such a ridiculous law.
	job creation for all industries - not just oil feild reducing costs (insurance, carbon tax, income tax)	stop giving cuts to companies who move out of alberta STOP making a panel for EVERYTHING - if you think about decisions before you make them, then you make fewer bad decisions.	STOP treating your government like they are the problem - if they are allowed to hire enough staff programs can run properly and do their jobs to suport job creation and promote economic growth. Realise that companies you are trying to attract will have to live in this province and if insurance and tax costs keep going up they will not want to do that.
T0L	Health and police. More regular police and more highway patrol. Speeding fines would, probably pay for the extra highway patrol.	It should not be necessary for every small Alberta town to have a high school. Consolidate some high schools and thereby reduce # of buildings and staff. Buses often do alot of travel for to pick up only a few students (for example a 54 passenger bus with 9 students).	I think that this is already going in the right direction. We need pipelines.
T6J	Education Health	Any kind of tax break to the oil and gas industry	Diversify, start looking seriously at alternatively energy (solar, wind) as well as new technologies, support for university research.
T3R	Education, specifically to reduce class sizes. We are leaders in education, far superior to the United States yet this government seems to be trying to follow the disastrous methods of funding used in the states. Using a voucher method would create ghetto schools and increase class sizes at high achieving schools.	Force school boards to eliminate excessive middle and upper management bureaucracy that are a waste of financial resources and do not provide any direct benefits to students. Implement the new curriculum that was ready to be rolled out to teachers and students and leave it alone. Forget the politics of who will take credit and put the needs of students in this province first.	Pressure Ottawa to complete pipelines and build more refineries in rural areas on the pipeline routes. Start a worldwide ad campaign to inform governments about how clean our oil is. Develop alternative clean energy sources, solar and wind. We have the climate to support these technologies.

T9A	Debt pay down and job creation through smart stimulus.	Cuts to middle management in the public service. Ignore climate hysteria.	Again, ignore climate hysteria and junk science. Pursue the NGOs. Challenge federal carbon tax and climate change justified programs based on contingency of providing legitimate proof of anthropogenic drivers. This has never been provided.
T4N	PUBLIC schools, mental health, health care, and all vulnerable populations that they have recently robbed.	Giving tax breaks to oil companies	Stop cutting funding and forcing places to cut jobs, diversify from oil, invest in tech
T6V	Education spending - smaller class size and better support for teachers	Get rid of the assinine "War Room". Cut /Rollback wages for politicians.	Tax big business and Oil&Gas. They don't need or deserve breaks while low and middle class Albertans suffer
T3m	Education and healthcare	Abuses in the system Overtime in healthcare Over spending in post secondary	Ask business for suggestions
T0K	The rural crime around the Pincher Creek area is ramped and totally out of control. Our RCMP squad at Pincher Creek has been reduced to such a minimal amount the RCMP can't possibly keep up with the crime, and there is NO ONE on shift from 4 to 7 A.M., and the criminals know it. Also, the crime ring is aboriginal, and as we all know they get let off far more easily than we caucasians. We have been told that response would be at least 45 minutes for 911, because it goes to Red Deer, then they have to find someone to come out, etc. It is 20 minutes to our place from Pincher Creek driving the speed limit. There is another gang in the Crowsnest Pass, methods, some people had their whole house gutted. People are afraid, and something serious needs to be done.	Most unions are top heavy, and people who don't show up for work can't be fired, and there are many of these kinds of people who make the health systems and other things totally inefficient. So glad you are standing up to the unions, they should have to feel the pain just like the private sector.	The new Tech development in the oil sands has to happen. Finally someone wants to come to Alberta again instead of leaving here. That is a great beginning to getting Alberta back. I agree with what you have been doing to get more confidence in investing in Alberta, but don't forget the technology area as well.
T0K	In the energy sector.	Try to reduce the equalization payments to Quebec.	Taxes on small businesses,
T6T	Education and health care	No corporate tax cuts or giveaways - trickle down economics DOES NOT WORK	Diversify resource development
T8r	Essential only	By cutting the bureaucracy in every department!	Keep up with cutting red tape, and lower taxes
T8r	Essential only	By cutting the bureaucracy in every department!	Keep up with cutting red tape, and lower taxes
T5H	https://www.acklandsgrainger.com/en That's a link to a well established company that should have enough rope for the UCP to hang Jason Kenney with.	Cut that dumb war room shit out. Also keep your religion out of the legislature.	Well if you just stuck to the NDP's plan I'm sure we'd have seen growth in renewable's. Also getting rid of jobs doesn't really help this either.
T1K	Education, health, and career retraining.	Directly indicate where redundancies need to occur: health care administration (of course they will lay off nurses and preserve themselves) and in Education, begin by getting rid of half to 2/3 of the assistant superintendents who aren't worth their salt.	I'm conservative and support the energy industry. But for heaven's sake, diversify. We need far more types of industries and businesses to survive economic downturns. Go after perks including your own. And reign in cities, particularly Calgary. And no I don't live there. Finally, stop pretending. If your ultimate goal is to reduce public sector salaries, just bloody do it by 10-15%. And cut MLA and Premier salaries by at least 20% to show you mean it and are willing to lead.
T1j	Early Childhood class size funding. Maintain inclusive ed funding, PUF funding for all qualifying students. It's crucial.	Not education or health care	Invest in green energy

T9S	Health system properly funded Keep the public education system properly funded Fund new ideas to continue to diversify our economy Keep up with infrastructure on a timely basis	Stop the silly expense on war room. Pharmacare would benefit all Albertans Collect a realistic amount for all Albertans resources	Promote a climate that promotes ideas to benefit all Albertans Use this time to improve our crumbling infrastructure
T6R	Education and health care Child care which keeps single women working and not relying on benefits . Senior care work to keep seniors in their homes .	Bring in Sales tax or bring back the carbon tax which funded projects I am a small c conservative but found that particular tax a very worthwhile one. Less money to corporations which are not giving back to Albertans	Stop the cuts keep people working they are then paying taxes and buying within the community Invest in Farming and agriculture , look at Holland . We could , with solar energy become once more the bread basket of Canada . Less worry about oil which is never going to bring the riches it once did Premier Prentice said for what was wrong with the Province , “Look in the Mirror”
	Focus thinking of the public and NOT cutting back on Health care, social services. Putting a plan together to reeducated people from the oil and gas services... finally get it right and diversify the economy.	Stop giving away money to the corporations, they aren't going to create jobs just because you are giving them money. Reeducate people in different areas. We have gone through so many layoff since the 70s and still this provincial government never learned over the 40 years.	First by not eliminating jobs where they are needed. Also, had the conservatives diversified the job markets, economy over the 40 years they were in this government and not given away so much royalties to the corporations when there was a boom we wouldn't be in this mess. We shouldn't have to have our social services cut back just because the conservatives messed up. They need to take accountability and stop pointing fingers.
	Maintain essential services such as police, fire, health, and education. Do not cut here.	Our justice system. Ongoing delays in trials because of ineffective lawyers, disorganized. Constant adjourning of court cases. Our prisons; don't make them such an attractive place to stay. Back to basics. Essentials only. More psychological help for criminals who suffer from PTSD and addiction. Treat the problem while they are incarcerated. Cut pensions for all politicians; they shouldn't be collecting until age 55 minimum and after 25 years service.	Invest in alternative fuel. Support those in the current industry to transition over. Lower salaries of politicians Lower tuition fees for university students. You want your people educated to compete on a world scale. Continue on the path you are presently on and you will make it unaffordable; for the rich (who won't necessarily be the brightest).
T4J	Healthcare, education, orphan well reclamation, infrastructure	MLAs salaries, connect care,	Focus on initiatives that will diversify our workforce and economy instead of subsidizing oil companies through tax cuts in the naive hope oil will go back to 120 dollars a barrel. Don't take away money from nurses, teachers, research and higher education.
T1W	Building a diversified economy less focused oil and gas, so Albertans can prosper even during the all too common oil and gas bust times, as well as during the inevitable reduction in global demand that will occur as the world works to reduce their greenhouse gas emissions.	Stop giving tax breaks to large corporations just because they are large. There is no particular evidence that large companies reinvest tax savings in growing our economy. Too much of it goes into shareholder pockets, (which includes taking it out of the country), reinvesting in automation (which decreases jobs), or just goes into growing the cash balance on their balance sheets. Give the break to companies that actually create jobs instead.	Give tax breaks to companies that actually create jobs, not just all the big ones. Invest in economic diversification so we can have an Alberta strong enough to weather the oil and gas bust times, not just the booms. Support home renovations to increase energy efficiency. This saves every resident money forever (which they can spend in the local economy), while also supporting the building sector.
T4c	Climate change initiatives	Increasing revenue opposed to cutting services	Diversification of industries under utilized in Alberta

T6X	Healthcare and education. Keeping programs to help children with learning or physical disabilities.	Also focus on increasing revenue rather than finding savings - such as introducing a provincial tax or increasing corporate taxes	Diversify from a focus on the oil industry
T8R	Education, health and childcare. Creating jobs.	Tax cuts to the wealthy and corporations. Wage cuts for government administration. Get rid of the war room.	Make it easier for people to return to work with affordable child care.
T5S	Healthcare!! The proposed cuts to professional RNs is so wrong ... god help you if you, your family or loved ones end up in the healthcare system .., hopefully you won't be assigned other healthcare providers instead of RNs , especially if it's critical care... which is largely unforeseen to most of us . Their training allows for critical thinking, observation, intervention and prevention while the other disciplines are task focused .	Government buracrazy, administration!!!!	Support pipelines, essential services in healthcare , education
	Education & Healthcare	In their own spending of tax payers money & their wages & their pensions, in the "war room", in all the red tape committees created, in all the tax breaks they are giving companies that are still laying off workers, in all the projects that were started & then canceled in the middle of building	Diversity. Less focus on oil & gas. Explore the technology that is popping up everywhere. Try to be a global leader in new technologies.
T8V	Diversifying economy away from carbon based energy.	Investing in harm reduction for addictions.	Model your economic growth around sustainability/systems thinking and look for opportunities within these systems to support bottom-up organization. Now we're talkin'.
T3C	Health care, we need a more robust system that can take care of all our citizens. This is not the time to make cuts to health care but rather figure out how to improve and enhance our public healthcare system. Even if private clinic open- we al still have to pay taxes into the public system- so why create more costs for Canadians.	Cut defence spending, tax items that cause health problems - alcohol, processed foods,	Help cities diversify their economies so they are not reliant on one economy.

T5B	<p>Investment in public services that properly accounts for both, population growth and inflation. This includes investing in health and education, but also in childcare. Rather than eliminating the NDP 25-dollar childcare initiative, for instance, the government should expand it.</p> <p>In general, the government should consider priorities that reduce rather than increase the costs of living. Policies that result in increases to tuition fees, school bus fees, museum fees, vehicle registration fees, property taxes, income taxes, and child care costs, as well as in reduced drug coverage for dependents of seniors and larger class sizes are making life harder for Albertans.</p>	<p>The 30 million war room (the Canadian Energy Centre) can be cancelled. The government, however, should not be limited to the expenses side of the budget. It should consider raising additional revenue. Freezing the basic personal credit increased the real taxes for all Albertans, while corporate taxes are planned to be reduced year after year. This is not fair and does not help the province.</p> <p>The government should also take a look at the many forms of privatization that have been implemented in the health care system over the years and assess how they have affected costs. If these initiatives cannot be proven to have reduced costs (as seems to be the case), privatization should be reversed and public solutions that increase efficiency should be considered. The Edmonton Public Lab seemed to address precisely the type of inefficiencies created by a fragmented privatized system, and scrapping its construction was a mistake. To realize efficiencies, you have to invest money. You can't take advantage of the efficiency in electronic services if you refuse to buy computers.</p>	<p>Invest in public infrastructure (roads, schools, universities, etc.), support public and private research on green technologies and low greenhouse emissions. Cancel the general corporate tax break and provide instead tax credits for new investments only. Support home buyers through a provincial plan to help the residential construction industry. Companies do not look just at taxes to make investment decisions, they also consider how skilled the labour force is, the affordability of housing, the additional costs of health insurance, how connected a city is, etc. A growth strategy must address all these areas, it can't single-mindedly focus on corporate taxes.</p>
T4p	<p>I am a single mother trying to provide for my daughter, hearing the child care funding may not happen anymore really concerns me. I know while I am at work I know my daughter is well taken care of.</p>	N/A	Childcare funding
T0L	<p>Recognize that the oil boom is over. The bumper sticker asking for a second boom that we would not piss Away was just a pap to the masses. Our conservative government allowed our resource to be pissed away. The big American oil guys are buying their islands and yachts they got their tax breaks and then abandoned Alberta to clean up their mess. Salvage what Alberta Owned components can be salvaged of our oil resource and focus on developing alternate resources to create wealth. Dirt, sunshine, wind, education, healthcare, computers,</p>	<p>Increase our taxes. A sales tax specifically labeled for health care and education is the fairest tax. We do not pay enough to live the life we live. Scrap the centralization of education and healthcare it has not worked, management and administration simply found a way to protect themselves. It gave over control of health care and education to government agenda and not delivery of good care or education, and the vagaries of coffee shop politics. No more severance packages for the people who were found to be unable to do their jobs. A health board member told me his mileage claims exceeded the cost of running our local hospital board. We ran our board with a surplus, we ran our school board with reserves and surpluses. A manager in healthcare went from running her own department within the constraints of her budget to needing six signatures to get paper clips.</p>	<p>Oil boom is over. Education, healthcare, pull your head out of the sand and identify the other developable resources and exploit them. Dirt, sunshine, wind, travel, secondary and tertiary processing of every raw product we possess, value added processing, of our dirt products, oil and gas production, educated people will develop services and products for sale to the world. We should not be importing our macaroni in from California, we should be manufacturing our own solar panels and wind mills,</p>
T5N	<p>Education, healthcare, municipalities, and infrastructure.</p>	<p>Reducing the size of the provincial government; ie. number of MLA's and the bureaucracy that goes with it. Reduce government staffing at the legislature.</p>	<p>Introduce a SMART sales tax that targets luxury goods, while omitting necessities like groceries, gasoline, and utilities. Generate important revenue by adding a 5% tax. It is the most fair tax.</p>

T8N	1)Education 2)Health care 3)Transportation 4)Increasing access to electric vehicle charging stations	1)Quit giving huge tax breaks to rich corporations!!! 2)Cutting MLA pay and pension 3)Eliminating expensive government trips and perks 4)Eliminating the ridiculous war room	1)Diversifying away from oil and gas to sustainable industries like solar. 2)Invest in high tech research such as that being undertaken by the U of A's nanotechnology department. 3)Fund universities
T2J	Heath Care	Collect taxes from oil companies	Invest in City projects
	Healthcare,Aish Cheques, Continue Rent Subsidies,Low Income Housing,Childcare Subsidies For Low Income Families,and a Cap On Rental Rates Of Houses,Apartments,Etc.	Closing The War Room, Taking A Cut From There Salaries,And A Provincial Sales Tax.	N/A
T6W	Healthcare and education	government should focus on creating more revenue instead, with higher top bracket rates and 5% sales tax	By reintroducing support for sectors booming elsewhere in Canada and have potential in Alberta too, such as the IDMTC and investor tax credit
T3K	Education Health care	Cut back on managers that manage managers! The people that are not working with the students and the patients but are making all the decisions, should not be the ones making the decisions. People abusing there benefits and the waste involved with unions. Employees that shouldn't be employed but are because there part of a union.	When the oil patch was good people spent money so it helped restaurants, stores, house builders etc etc. And charities did better.
T6A	The people of Alberta which include people on AISH, SENIORS,health care and education. This will and should not include CPP or Alta. Gov. Pension!	Cancel your 4.3 billion tax reduction to corporations. Legislate the oil companies to pay their taxes, reduce your cabinet level travel .Close your embracing war room and stop convening your expert panels . Put the people of Alberta first and not last!	Diversify the economy, embrace alternate energy, mandate energy companies move towards renewal energy, encourage tech companies to start up in Alberta. Stop living in the past and move forward instead of backwards.
T2T	Education, health care, environment, tax credits for tech companies, tax credits for film and TV industry, DIVERSIFICATION OF THE ECONOMY - please lets not put all our eggs in the O&G basket.	Subsidies to oil and gas, government overhead.	Tax credits for growth industries - like tech and film / tv.
T5S	seniors prescription medication- wave dispensing fees and decrease the amount of co-pay for seniors from 30% to 10% as most seniors are on a poverty level pension plan and therefore cannot afford the necessary medications and therefore often end up in hospitals costing the province even more money.	see above notation- reduce hospital costs by enabling seniors to get the necessary prescribed medications. Some do not take the proper dosage, skipping a day etc. ending up in the hospitals.	continue with the building of trans-mountain pipeline, invest in tech companies and give grant incentives and tax breaks.
T0H	Our Government needs to reduce silly spending. They should bring in an independent auditor who can go through all the expenses with a fine tooth comb and help us get rid of a lot of unnecessary costs. AHS should also do the same thing as there is a ton of unnecessary costs there as well. We need to pay down our debt as well, it shouldn't be up to the kids who aren't even born to pay that. Everyone in the private sector is earning less money so this needs to be reflected not only in the spending habits but also in the wages our tax dollars pay.	-Implement mandatory drug testing for anyone who is receiving AISH, Welfare, EI, etc and stop payments for anyone who is positive. Tax payers don't mind helping people who really need the help however we don't like enabling drug addicts. -Wage freezes and/or decreases for big Government employees if they're already earning a fair salary. -More restrictions on travel and -Combining different branches together to save overhead costs. -	By doing everything in it's power to get the oilfield back on track and immediately stopping the transfer payments to other provinces. It's completely unfair that Quebec has a ton of things which are beneficial and we don't even have yet we pay for them to have. They're boasting a surplus...but its because of every Albertan's dollar.

T6G	Social Services and renewable energy sources. I think sectors including education and health care are imperative for the success of the citizens of Alberta. By making education a first class privilege, a huge population of intelligent and motivated albertans are not able to receive the education that they deserve. Proficient health care should not be a privilege but a right in a province like Alberta that has the means to make it so. By taking away funding for hospitals, units are understaffed, research is being halted, so that Albertans are no longer able to receive the health care we deserve. On the subject of renewable energy, we know that the oil and gas industry is not only finite, but is also markedly worsening the state of our current climate crisis.	The carbon tax should be brought back, Alberta is one of the richest provinces in Canada but has some of the cheapest gas. It has also already been proven with the previous government that Albertans were able to easily manage the carbon tax previously. Additionally, the government needs to stop giving massive companies and corporations insane tax breaks. You are creating bigger and more divisions between the rich and the poor in Alberta.	By reinstating all of the front line workers the government promised they would not lay off, but did anyways (nurses, university professors, teachers). An immense amount of jobs would come from investing in renewable and sustainable energy sources.
T2J	Health care and education.	Jason Kenneys salary, private christian school funding.	Focus on new green technologies
T0M	Green infrastructure - trains/LRTs Transition away from coal power faster Remediation of abandoned gas/oil wells Health care - especially PREVENTION programs	No more tax breaks or subsidies for the fossil fuel industry Simplify social services - maybe universal basic income - reduce barriers to access and reduce the amount of administration required Defund the Canadian Energy Centre Increase income tax for higher brackets in Alberta	Use the skills we have in other sectors - invest in geothermal energy, attract more technology companies to Calgary, put back the subsidies for arts (especially film/TV), research in alternative agricultural processes that are more regenerative - become world leaders in this Use the carbon levy to encourage jobs in the green economy - solar/wind/other Encourage more food processing in Alberta - why do we import so much?! Allow for small scale abbatoirs with less restrictions so that small farmers can move their meat to market - creating local jobs and keeping money in Alberta instead of leaving the province (ie imported meat) Reduce restrictions on the "cottage" industry - allow more people to create food at home - this creates all sorts of jobs for local markets and reduces our carbon footprint.
T5T	- Additional funds directed to public schools - Additional funds, tax credits, or incentives to high tech companies (including game studios) to help Alberta build a stronger 21st century economy.	---	Similar to my answer to the first question, Alberta needs to plan for the future. Eventually we're going to need to transition away from oil as a key industry. We need to invest in technology companies and other innovative areas in order to attract top talent.
T2P	Develop an Orphan Well Program to deal with the current problem (my company would love to provide remediation services!) and establish strict timelines to ensure we never have to deal with this problem again! Maybe copy North Dakota's program and collect a 50,000 bond from the oil companies upfront to avoid any bankruptcies problems!	The Energy War Room.	Start dealing with the orphan wells - my company would love to provide remediation services!

T2L	Health, Education, Welfare, & Environmental Sustainability	Stop subsidizing fossil fuel industries Collect taxes from corporations delinquent in paying their property taxes Hold owners of orphan well sites responsible for clean up	FULL universal health care, including pharmacare, dental coverage, ambulance, etc basic universal living wage subsidized or free early childhood care and education Free postt-secondary tuition A HEALTHY & EDUCATED population is more creative and entrepreneurial
T0M	Infrastructure	Cut government staff	Lower taxes
T6G	Healthcare Education Investing in ways to combat climate change including instituting a carbon tax and developing and encouraging green technologies. An example would be Norway where 50% of cars on the road are now electric.	Stop giving tax breaks to oil and gas companies. Ensure oil companies pay into a reserve clean up fund for orphan wells BEFORE they initiate exploration or production instead of waiting until they're bankrupt and have no money left. Institute a sales tax.	Heed the advice of Mark Carney (Bank of England governor and new United Nations envoy) and stop promoting and investing in fossil fuel production. This is bad business. The future is with green technologies and this is where Alberta needs to invest. Institute a carbon tax and a sales tax.
	Healthcare, education, vulnerable populations, sustainable energy sources	Travel of political representatives, imprisonment, corporate business	Invest in sustainable jobs, support small businesses, support opportunities for students who will grow to support our economy in the future
T9A	Get Alberta's Public sector in line with other provinces.	Reduce or freeze public sector wages until they are in line with other provinces	Business tax breaks and pressure on Ottawa to get the energy industry thriving
T1K	Education: early childhood (kindergarten), grades kindergarten-12, post-secondary Health Care - promoting good health (ie. maybe provide tax incentives for gym memberships, eating healthy, etc.) Innovation - creating new areas of economy for Alberta (tourism, entertainment business/movies TV, agriculture - food sustainability)	Calgary Energy Centre (30 million) Education - be sure \$ gets to front line teachers and staff Mailings like Christmas cards and notes from politicians More transparency on government spending Tax higher income earners (200,000 plus)	By providing a high quality public education system that provides a diverse and education. Interdependence is a key skill needed in the modern economy. People from all areas will need to work together to be successful. Apprentice-ship programs and work co-ops - partnerships with high schools and post secondary institutions to address the challenges of gaining satisfying work versus 'McJobs'.
T2N	Healthcare - reducing wait times, new hospital in Edmonton, hire more nurses Education - reduce class sizes in K-12 education, increased funding for post-secondary education and job retraining programs. Increase number of teachers in K-12 education Infrastructure - improve investment in infrastructure	Eliminate the War room immediately Increase corporate taxes Make oil companies pay for orphan wells	Increased spending on industry diversification programs Reverse cancellation provincial SR&ED programs and Alberta investor tax credit
T2E	Economic development and diversification; Creating pride and confidence in our province through cultural activities and tourist events;	Reduce administration at all levels of government and institutions, re-focus on front line delivery in health care, education and community support services	re-energize capital investment in resource sector, diversify in growth sectors (e.g. tech), major events and tourism development

T8X	<p>Investment in public services that properly accounts for both, population growth and inflation. This includes investing in health and education, but also in childcare. Rather than eliminating the NDP 25-dollar childcare initiative, for instance, the government should expand it.</p> <p>In general, the government should consider priorities that reduce rather than increase the costs of living. Policies that result in increases to tuition fees, school bus fees, museum fees, vehicle registration fees, property taxes, income taxes, and child care costs, as well as in reduced drug coverage for dependents of seniors and larger class sizes are making life harder for Albertans.</p>	<p>The 30 million war room (the Canadian Energy Centre) can be cancelled. The government, however, should not be limited to the expenses side of the budget. It should consider raising additional revenue. Freezing the basic personal credit increased the real taxes for all Albertans, while corporate taxes are planned to be reduced year after year. This is not fair and does not help the province.</p> <p>The government should also take a look at the many forms of privatization that have been implemented in the health care system over the years and assess how they have affected costs. If these initiatives cannot be proven to have reduced costs (as seems to be the case), privatization should be reversed and public solutions that increase efficiency should be considered. The Edmonton Public Lab seemed to address precisely the type of inefficiencies created by a fragmented privatized system, and scrapping its construction was a mistake. To realize efficiencies, you have to invest money. You can't take advantage of the efficiency in electronic services if you refuse to buy computers.</p>	<p>Invest in public infrastructure (roads, schools, universities, etc.), support public and private research on green technologies and low greenhouse emissions. Cancel the general corporate tax break and provide instead tax credits for new investments only. Support home buyers through a provincial plan to help the residential construction industry. Companies do not look just at taxes to make investment decisions, they also consider how skilled the labour force is, the affordability of housing, the additional costs of health insurance, how connected a city is, etc. A growth strategy must address all these areas, it can't single-mindedly focus on corporate taxes.</p> <p>Other ideas brought forward:</p> <p>Increase the Mental health network and make it easier, cheaper and faster to access.</p> <p>Increase funding of addiction and rehabilitation centres.</p> <p>Reopen the rent supplement applications for Albertans – it's been reduced and no more applications are being processed.</p> <p>Put the cap back on insurance and utilities.</p>
T6H	<p>Not wasting money on 'improving' services that don't need it. Take the automated voice systems installed. Now it's impossible for people to have the silence to THINK on the transit system. But hey, at least three hundred blind people in a city of one million can ride and know where they are going.</p>	<p>Eliminate funding for non-professional university programs, such as Women's and Gender Studies and the Humanities. Seriously. Public money is being used to finance essentially political activist programs, without purpose in society.</p> <p>Also, fire anyone with 'Equity' in their job title, eliminating the positions across the province.</p> <p>Also, terminate all government worker pensions.</p>	<p>Not providing tax breaks to companies that bail would be a start, idiots.</p>

T6H	<p>Decreasing class sizes for all elementary and secondary schools where the class size is more than recommended by the Research on this at the Alberta Teachers' Association. Increasing the numbers of teachers in our public schools, and returning the title 'public' to all the existing public schools; this is essential to the realization that it is through all cultures and abilities learning together through a publicly funded school system, that our future will be built upon people who can speak with and appreciate one another. Improving the working conditions for Registered Nurses (RN's), and increasing the numbers of RN's in all hospitals and care centres. The present negotiations, where the government is planning serious cutbacks must be withdrawn, as this is not within the safe standards for nursing care. Nurses would be terribly overworked, with little to no extra recompense, only having to continue to work in extreme tiredness. Much research shows that this is unsafe in any working situation, especially in work such as nursing, where lives are being saved. There must be an RN on every shift in care centres for older people and in rehabilitation centres. The knowledge and skills of RN's is so superior to all the lesser educated nursing staff, that RN expertise is necessary for safe care. There are many examples of this.</p> <p>Increasing funding for all universities, including for all Arts programs, as these are struggling and need government support to help realize this very great value to any civilization. The University of Alberta began with a Philosophy professor and an Educational Psychology professor, the latter of whom was responsible to begin 2 departments, the Department of Psychology in the Faculty of Arts, and the Faculty of Education, as an Educational Psychologist is educated in both fields. The Professor of Philosophy began the Faculty of Arts, and put the University</p>	<p>By ceasing the 'War Room', a costly and erroneous project, that does to acknowledge that international companies and people of all kinds are in our province, that focussing upon the few environmental experts who help to educate us here is a blind act, as it would deprive us of some of the helps we might need to prevent calamities like the Australian and Fort MacMurray forest fires.</p> <p>By taxing the oil industry much more heavily, as Premier Peter Lougheed did, as the resources of this province belong to all of us, not to oil companies.</p> <p>By insisting to oil companies 1. that when and if an oil company declares bankruptcy the cleanup costs of that company's activities are the first to receive monies in the dissolution of the company, 2. that the provincial government will determine whether this is a bona fide bankruptcy or a hiding of monies to allow the company to not fulfill its responsibility to the people (the government of Alberta and individuals and families, all of whose lands are affected) whose land has been used for oil work (drilling, transporting, expanding storage, etc) for cleanup costs. I suspect that some executives have walked away with plenty of money, while we in Alberta are left with oil industry equipment and toxic oil wells not cleaned up.</p> <p>The issues above amount to billions of dollars, thus would enable all the priorities I listed to be accomplished.</p>	<p>In the ways I outlined above in "Where do you think government could find savings?"</p> <p>Most important is not to continue to not put low income and average workers in dire circumstances while giving money to the already wealthy, both of which you government has done, to the detriment of this provinces economic, health, and educational well being. Lowering taxes to the wealthy has caused these companies to leave Alberta with full pockets, and has not led to their creating jobs for Albertans, only more debt. Soget after the wealthy, get them helping, as they got rich through the work of all who now are being punished when they have in fact worked very hard, got the education they needed, and are a credit to the strengths of good governments of Peter Loughheed and Rachel motley. Please learn from them, and take on some of their ways, and soon, before we go bankrupt through your terrible choices. Thank you for the opportunity to respond.</p>
T6M	Education and Public Health Care	Increase Corporate Tax and High Income Tax	Encourage innovative industries
T7A	Helping those in need. Such as the poor, the chronically ill, and single parents.	Cutting their OWN salaries FIRST. I make \$15 an hour, and the government tells me I make enough to survive, so why can't the premier, and the MLA's make that as well?	Quit fucking firing people from needed fields such as healthcare. Build a pipeline.
T6G	Increase corporate taxes and taxing the wealthy instead of giving them a tax break. Please invest in health care and education instead of cutting front line staff.	Government travel expenses – no need for fancy jets and travelling to London. Please focus on Alberta and lead by example	It is irresponsible to cut spending in health care and education (particularly front line staff) and not taxing the wealthy. Government should develop a plan to diversify the economy instead of chasing a non flourishing energy industry

T0J	<p>*Public Education (all levels) *Private schools should NOT receive tax payer's money *Religious schools should not receive tax payers money.</p> <p>Leave the Public School system intact.</p> <p>Prevent American-based anti-science religious organizations from dominating our home schooling industry.</p> <p>Leave pensions alone.</p>	<p>Stop giving corporate handouts (corporate socialism has no place in a free-market economy).</p> <p>Return ownership of our electric grid to Albertans (see next section).</p>	<p>Embrace the reality of climate change and its shifting economic realities (do some background reading in the Economist to see how the rest of the world is dealing with these realities).</p> <p>1) Emplace a thoughtful mix of green energy alternatives for new homes and communities.</p> <p>2) Retake control of OUR electric grid, from American corporations (Klein's late 1980's privatization of our electric grid continues to cost each Albertan thousands of dollars each year.) My electricity bills are ridiculous: I pay 10x more for delivery charges than for the electricity I consume. WE PAID FOR THE GRID, NOT THE AMERICANS!</p> <p>3) Support viable bottom-up incentives for homes and communities to produce their own, as well as extra electricity using alternative sources. (Such an approach would create a boom in small-to-medium sized support businesses across Alberta, and when combined w #2 above, would help staunch the flow of our money south to the USA, providing more poortential tax dollars for the GOA.) This is no-brainer stuff.</p> <p>4) Continue to support hydrocarbon use in heavy transportation industries (trucking, rail, flight), where technology currently does not allow use of green alternatives; but also subsidize exploration of increased efficiencies in these same heavy industries (e.g., in research departments of Alberta Universities etc.)</p>
T5H	Fund the school boards for the extra students.	All the committees that are only setup to employ friends of the UCP. Cut the wages of MLA's since most are collecting income from other sources. Cut the funding to the private schools, if you want to send your child to a private school then pay for the majority of the fee.	Support other types of businesses and industries not just the oil sector. The oil sector will not hire back as many employees as they had before, because of efficiencies discovered.
T3Z	1. Front line medical workers-doctors, nurses, operating room access	1. AHS administrative overheads. The system is ONE GIANT, NEVER-ENDING MEETING. 2. Boards of Education who turn out illiterate students based on useless, experimental teaching methods. 3. Government bureaucracy.	1. Get out of the way! 2. Stop trying to pick winners. 3. Just set up a good business climate.
T2Z	Education, the only hope for a diverse economy is a well educated one. - Health care- healthy people work.	Quit traveling unless you do it by regular airlines, economy, or car. Lessen pension contribution to all provincial employees, including MLAs.	Education,we didn't qualify for the Amazon contest in Alberta because our workers were not ready for big Tech.
T4P	Child Care and those struggling from the economic hardships. Education and providing a more affordable standard of living for families.	ARCQE is not very helpful and outdated. More money could be put into the child care subsidy program to help families who need the funding.	Diversify the economy and look to support economies that are doing well even if they are not directly in Alberta. Create partnerships to create demand for manufacturing and maintenance services.

T0A	With this unstable economy, should be focusing on education to re-train those who have lost positions in oil and gas NOT REDUCING education. Also, although AHS needs a major re-organization at the top and to cut red tape it should not be at the expense of those needing medical care - WHY are nurses on the firing squad?	Various departments within the Ministry - if you expect the average Albertan, I will refer to Nurses, to take pay cut, institutions to reign in spending (travel, etc.) then show it from the top - Government of Alberta. Show us you can reduce your wages and expenses.	Once again, there are thousands of Albertan's who lost positions due to the oil and gas downturn. Let's give these people the opportunity to re-train themselves in other areas if they chose to do this.
T2N	Health - universal health care/universal day care for young and elders/ universal pharmacare Education - both k-12 and higher education Infrastructure - build/ rebuild things that are falling apart from neglect such as roads/cities/schools/ hospitals	Stop ministerial (including premiership) travel nationally and internationally Stop giving billions away to corporations Join national pharmaceutical purchase programs with other provinces	Support small business and entrepreneurs with innovative loans for new technologies and green technologies Have oil companies pay money owed to municipalities (owed to province) at all levels Have a sales tax (even just for a short period until revenues and expenditures balance) Increase taxes for top 5% corporations and citizens
T6J	Health, education, infrastructure, and supporting harm reduction for drug users.	Cancel corporate tax reductions. Close the Canadian Energy Centre. In order to eventually achieve a balanced budget - which is definitely NOT an immediate priority - implement a consumption tax in Alberta.	Invest in infrastructure throughout the province.
T9K	Being able to provide good quality education & healthcare, within a reasonable budget while ensuring our healthcare and education employees are making wages appropriate to their true value and contributions.	Provide wait times for all emergency rooms, it's been proven to cut down on number of visits. People have to pay a nominal fee for access to emergency rooms (will have to take into consideration people on social assistance and how that would be identified), will greatly reduce people over utilizing the system. Remove independent phone lines within Alberta Health, we already rely heavily on Skype for Business and do not have the need to have a landline. Increase access to provide medically assisted deaths. Allow more working out of home options so we are not paying rent in Health Care.	I think instead of cutting so many costs they should have looked to implement a provincial sales tax.
	-public health and education -infrastructure	-cancel the war room	-return corporate income tax to prior levels and invest that revenue in job creation programs and infrastructure projects -hold oil and gas companies accountable to pay their taxes and support local economies
T5H	Social supports and infrastructure. Diversification of our economy support to small businesses. Tax the rich and support the poor.	This is a terrible question FYI as all answers equate to budget cuts. Instead I'll tell you how it could generate more income - increase taxes for the wealthy and increase taxes for large corporations. Introduce a PST if needed.	Recognize that the province is more than oil and gas. Find revenue from increased taxation of the wealthy and infuse money into the local economy.

T0C	Ensuring our health care and education field are being funded adequately. Bringing business to Alberta in ALL fields of industry (oilfield, agriculture, film, graphic design etc.) Promoting Alberta Tourism. Revisiting the court system process to better facilitate court cases and hearings.	Responsible Government spending/expenses for business trips, office supplies, utilities etc. Alternative service delivery, and strategic sourcing and re-negotiations for service provider contracts.	Provide incentives for businesses to invest for new job creation. Reviewing job mobility AND any trade barriers between provinces to better support all provinces for economic gain for goods and services.
T6E	Getting our sale of oil back in the world market. Lowering the equalization payment to an eastern province that is not part really a part of Canada...Think Alberta..Getting residential Alberta back to work.	Stopping paying the carbon Tax. Lower the amount of equalization payments made.	Stop giving away our money and projects to non resident Companies and Stop giving work to over sea's fabrication companies. Support existing/established Alberta owned Companies
T6H	education both public and university level. Healthcare investing in registered nurses. Funding research in universities and masters programs. Give AISH their funding back. Reduce the interest on student loans back to what it was. Fund schools so they have more teachers so that students aren't so packed into classes where the teachers cannot properly teach the children.	Oil industry, tax breaks and handouts to huge cooperation's, taxing the rich and big cooperation's more.	by funding education so that youth can give back in meaningful ways. providing housing and resources so that homeless populations can work their way back into providing for society.
T4T	Spending priorities really need to be on education, health and mental health and job creation	I think Governments could find savings in the bureaucracy of Alberta Health and within school divisions instead of these departments bringing the cutbacks down to the bottom of the education and health systems such as teachers, education assistants, nursing staff of any sort. I often feel like the upper echelons of these departments don't look at themselves for cutting back enough. They should be considering doing more work with less pay because they are often over paid compared to the amount of salary spent on frontlines staffs. Teachers and nurses, and other frontline staff are paid relatively well but often in adverse conditions such classes which are to large and the teachers don't have enough time to spread themselves among their students, not having enough staff support such EAs to help with unruly students who are continue disruptions and attention seeking thereby drawing the teaching resources away from the students who require assistance but don't draw attention to themselves. Nurses and other hospital staff are also paid appropriately but not staffed appropriately. The demands on their time is often such a burden that patients are not able to receive the proper and the right amount of care needed. I feel very strongly that upper management in these areas of our government are not going to cut themselves even if they are over staffed and/or overpaid. I think the government really needs to look in this deeply and find out why we have so many issues with overspending and where the problems really lie.	Economic growth and job creation should be supported by ensuring that money from corporations and government departments are spent on the lower class and not just the ones who contribute high taxes and overloaded upper management. Upper management must be willing to put themselves back and see how their greed affects the balance of our society

T6W	education, health, transportation, social services,	events, celebrations, redundant job positions or organizations - reduce	identify redundant job positions and reduce organizations who are doing the same thing and centralize / automate common services.
T3E	Health care, education. Tax the rich. No handouts to big companies of any kind. Close your stupid war room.	Being back the NDP.	Leave office.
T6H	Education, post-secondary education, health, mental health, funding for social programs, AISH	Taxes, especially corporate taxes. Stop cutting valuable programs	stop focusing on oil, diversify through the economy through supporting multiple industries (e.g. tech, public service, social services, education), support all Albertans through social services and education and health care to be well enough to participate in their community and reach their full potential
T2X	- Post secondary education - Job creation - Attracting non-energy industries	- Cutting social programs - Administration costs - Less pet projects	- Attract non-energy industries - Reducing red tape on existing industries - Lower barriers to entry to small businesses - Push municipalities to reduce tax burden on businesses and homeowners
T6W	Education , trade schools for adults and teenagers who feel the mental incapacity to focus and retain in regular schools/universities that Provides internationally recognized certification and places for practicum.	Oil and pipe lines will bring in a lot of funds , that's one area savings could be taken from, tax the lottery winnings more if already taxed.	With trade schools that are well recognized students leaving with certification and training will open more job opportunities plus eventually promote more businesses.
T6W	HEALTH CARE AND REGISTERED NURSES	well in AHS there is many jobs so why is it only the front line getting roll backs and cuts?	stop giving out tax breaks...
T3M	Getting and keeping Albertans working.	Within the government operations. Decrease in cooperate taxes should be dependent on job creation and investment in Alberta on a prorated basis to the maximum of tax decrease. Capitalism is founded on companies/cooperation making monies and re investing a large portion of those gains in job creation and increasing the workforce and improving the standards for its workers.	Diversify the economy to limit the effects of our traditional boom and bust economy. Diversify the economy so the province is not dependent on our traditional boom and bust economy. Offer financial assistance for those who need reeducation to change careers. AS mentioned above offer tax cuts to cooperation with conditions they work to improve the standards of living. If we support you you support us.
T2Z	Protecting the environment and reducing our carbon emissions. Lets make sure Canada and the world know this is a priority for us, even as we support our economy.	The Canadian Energy Centre - sorry, but so far I've seen no value.	No Corporate tax breaks for any companies that owe taxes to rural municipalities; if I have to pay taxes, they do too! Create initiatives that will bring non-oil and gas business to our economy; we need to diversify and be less dependent on the price of oil in order to have a stronger economy. Get the pipeline built but lets bring other industries to Alberta to spread our hard-work ethic around!

T1J	<p>Healthcare needs to be a priority. Making cuts is going to be devastating to not just staff, but the entire population. Privatization would also be devastating with our large population of low income, and even middle income families would not longer be able to afford healthcare.</p> <p>Assisting middle income families. You cut the Kin care program which is so beneficial to people who need family to care for our little ones. A lot of people work shift work where day care is not an option.</p> <p>Education. Everyone needs education. Cutting there again is just setting up the children of now for failure.</p>	Higher up positions. You want to cut front line workers, take a look at managements 4 managers, and a lot of desk jobs that really aren't needed.	By actually taking into account the general population. I have a good job but still barely manage to scrape by. Cutting Front line workers is in fact the complete opposite of what YOU mr Kenney had said you would Not do
T2W	I believe spending classroom priorities are very important. I challenge the government to access the amount of Volunteer Hours that are put in by Parents / Grandparents / Retirees and give the specific school (boards) a credit against their budgets. I think you would be very surprised at the hours / days / months that are volunteered.	When I ran my own company I looked within for everything. If the government requires savings look at Travel / Lunch / Lodging budgets as a first step. Second look at how many assistants that each department has - Run a small company you don't have any? If your / the government job does not make a direct contribution to the taxpayer "your boss" uour NOT needed.	Innovation is the answer to most problems - you have to learn how to fail before you can move forward - This and previous governments have that down pat - NOW move forward LET INDUSTRY MAKE IT HAPPEN - GET OUT OF THE WAY.
T3E	Social services, health care, education.	Stop handing out money to oil companies. If you think they need a hand out then you don't trust their ability to be profitable long term.	Investing in training, education, rare-earth metals, and a green energy shift.
T2C	<p>I recently read Larry Fink (the CEO) of BlackRock letter to CEOs in which he comments that climate risk is investment risk. He believes finance is going to change and that in the near future capital will be reallocated to mitigate climate risk.</p> <p>This concerns me as I feel our oil and gas industry could be influenced by such comments and that it could affect current and new investment in these industries negatively.</p> <p>Therefore we need to spend money on innovation and develop some products and processes which have a positive impact on climate change. We will need to prove to the investment world what the smart, creative government, schools, businesses and citizens of Albert can do.</p> <p>I ask you to get the perspectives of many people to go forward with this type of spending priority because I think the government alone could make a mistake if it alone decides.</p>	I don't know because I do not have any cost or expense actual information.	Research and development funding. Low interest loans

T4S	Jobs	In house. Eliminating positions that are not needing and control spending. Investigate and release findings from all public sectors to show actual spending	Embrace it and bring back corporations.
T3B	Keep the 25 day care, but it must be income tested	Use more Midwives for births in and out of hospital	Alberta has a highly educated workforce. Alberta could be the hub for a world renowned problem solving centre . Adam Legge wrote about this idea recently it has merit
T2J	Increase spending on Education (grade school, post-secondary, and related organizations). Increase spending on Culture and the Arts (especially museums and libraries). Increase spending on public Healthcare. Increased focus on economic diversity, especially in future-focused areas (such as green technology).	Remove subsidies to oil industries that aren't immediately tied to specific programs or initiatives to improve the environment or worker conditions/education. Take back money spent on the Canadian Energy Centre. Increase attention on tax dodging companies. Increase attention on ethics concerns in government positions.	Increase spending on Education (grade school, post-secondary, and related organizations). Increase spending on Culture and the Arts (especially museums and libraries). Increase spending on public Healthcare. Increased focus on economic diversity, especially in future-focused areas (such as green technology).
T4V	Alberta does not have a spending problem, it has employment and tax revenue problems. Without full employment we can finance our existing spending. See below.	Remove risk management from AER and outsource it to the private sector. This has worked well in transportation, like auto insurance, and many industries now served by bonding companies. Resource extraction companies need to be bonded, not regulated directly by government. This will reduce our beaurocracy.	1. Have an "Alberta first" policy for purchasing goods, like Walmart has had for many years here in Canada. Purchase goods or contract with companies outside of Alberta if they are more than 10% cheaper than from an Alberta based supplier. Counties and towns should be encouraged to do the same. This will protect Alberta jobs. 2. Give first priority to workers who have or will have an Alberta address on their tax returns. This will protect and grow Alberta's tax base from being exported to other jurisdictions after Alberta has provided day-to-day transportation, health, education and other services to employees from elsewhere.
T5R	Education, Health Care, and Infrastructure. Easing financial burdens on middle class families.	The War Room. Oil companies mandated to pay their taxes, no tax cuts for multi million and Billion dollar companies.	Economic diversity. Support oil 80%, look into Green energy 20%. Grow green energy each year by 1-2% while still supporting oil
T2Z	Healthcare (mental and physical), public education.	Reduce handouts and cuts for businesses.	Reinstate industry diversification programs (technology, green energy, etc). These fields were brining in jobs and paving the way for the future.
T2A	low income, education and health	from casinos, the lottery the oil industry, the rich,	offer money to for people 18-25 to try trades or offer money for the woman to go to school, offer more training programs
T2A	low income, education and health	from casinos, the lottery the oil industry, the rich,	offer money to for people 18-25 to try trades or offer money for the woman to go to school, offer more training programs
T0C	Education, health, climate change	Not give corporations tax cuts	Support the development of alternative energy. Hire unemployed oil workers to reclaim wells in the province. reclaimalberta.ca seem to have a very reasonable suggestion of how to do that
	Healthcare education support services	cancel the tax cuts for business	fund green industries

T0G	<p>The GOA really needs to look at how AEP manages Crown Lands and dispositions. Excessive timelines here create red tape and limit opportunities to create wealth in Alberta. A corporate review is needed here.</p> <p>A review of waterbody approval practices is necessary. Projects near waterbodies are subject to unnecessary extra work and better assessment from a cost-benefit (monetary-non-monetary benefit cost) perspective.</p> <p>Ensuring that oil and gas companies with unwanted assets are not bundled to be dumped into the orphan well fund. It upsets those in the industry and affects municipalities' tax base. Failing municipalities will turn to the government. Stop cute moves of trying to get AB pensions to loan money to these companies that are going to walk away stiffing the funds so the GOA can say those funds should have made a better investment...</p> <p>Take lottery/casino funds away from community groups and NFPs. Sounds cruel but these funds create more infrastructure that requires more dollars for sustainability. Use the money for replenishing the Heritage Trust fund so considered use can be contemplated. Smaller fund raising expectations may build community and what really is necessary in a community.</p> <p>Provide incentives for co-gen for forest companies so we are not giving money from Alberta to Berkshire Hathaway and others. Energy (gas) is cheap and is a source of competitive advantage for Alberta for industry.</p> <p>Shutdown near dead municipalities that are dying or ones that should be consolidated. Draws on provincial funds for</p>	<p>It is not all about cost cutting. The GOA has to not be a walking embarrassment within and outside the province so that good people will commit to work on its problems. Its a great province but from all the whining, you would think we were a backwater. Let's up our game. Engage capable people. Treat those people well to bring you the ideas to make opportunities known and the pie bigger. Or you can do traditional farmer welfare, cater to yesterday's people, and make enemies when you should be making friends. Meanwhile the smart money moves to British Columbia or to the United States.</p> <p>So its about attitude mostly. The GOA is so focused on people getting something they aren't (Quebec). Yes there are imbalances but focus on win-win. When you are yelled at, do you rush out and help that person and immediately change your mind? We know the answer to that.</p> <p>Canada was built to create a market separate from the US. We need remove barriers to internal trade. We need to be our neighbour's champions so they will do likewise for us. Let's see what we can do to expand with CETA, that Pacific trade agreement, and of course the new NAFTA.</p> <p>Cut back the funds to political staffs (non-department staffs), kill, enmass, communications departments and faux stakeholder relations people. When people have a problem they want to speak to someone who will attempt to solve a problem and not be manipulated.</p> <p>Preventive maintenance on highways will save you money. Also, bring one or two highway divisions into the GOA so you can cost compare to your private sector divisions -- that will keep both honest</p>	<p>The Kenny war room needs to outline its priorities and be transparent with its outcomes sought. It doesn't need all the money it has. Let's get our heads around value and that investors want dividends and share buybacks. Also Canada as a country has issues with access to financing that the US does not have and that it is the nature of financing in the 2020's that is the problem in oil and gas. Let's address that problem and let's focus on innovation in the current energy sector and be open to the new. There is some incredible technology held by the industry that actually could uplift the image of the current industry as we meet Climate Change targets. TransMountain will be built and done so using the rule of law, which is also important. Remember, currently growth is down in the sector both in Canada and the US.</p> <p>We have foolishly subsidized the energy industry with recent corporate tax cuts. GOA timing was ill-timed. With supply at capacity and oil and gas revenues back to pre-2014 levels, the GOA cut tax and now citizens have to pay the price with nursing and service cuts. The highways are disgrace. As an energy company shareholder I appreciate the flow through of your efforts on my investments, but your efforts will not create jobs. Its about our province, and really what should have been entertained is a cut in rate once the pipeline capacity has room (ibid for trains) for stimulus - if at all. Perhaps as pollution decreases.</p> <p>War Room Again: Let's not make advertisers rich. Be targeted in the outcomes you seek. Instead of being the agency that feels that AB is being wronged, seek out strategic partnerships. You might even get the NDP to support you in protecting Right Whales in the St. Lawrence so foreign oil tanker traffic is limited and Energy East makes more sense. (We can have fun with this, grow Alberta, and save the environment)</p>
A1A	<ol style="list-style-type: none"> 1. Increased funding to keep up with cost of inflation and overall increase in cost of education 2. Updating new curriculum - we are way behind other provinces like BC who are doing competency based curricular outcomes 3. Targeted monies for students with complex needs 	<p>Education is not a money making business. A good government spends money on education to ensure we have the most educated citizens, thus increasing life chances for all.</p> <p>Don't cut education!!</p>	<p>Trickle down economics does not work. Do your research. Educating your citizens is the single most effective way of stimulating economic growth.</p> <p>Diversify the economy...refine oil and gas in our province rather than shipping it to other countries to be refined. Spend money on green initiatives so we are less reliant on the oil and gas industry.</p>
T5M	<ol style="list-style-type: none"> 1. Health Care 2. Educations 3. Social Programs 4. Infrastructure Investment 4. Investing in Diversifying our Economy 	<p>Get rid of the War Room!</p> <p>Revert back to how the NDP was addressing Health Care, Education, and Infrastructure Investment.</p> <p>Stop wasting money trying to erase red tape.</p>	<p>Invest in Diversifying our Economy. Give tax breaks and interest free loans to start up companies. Give tax breaks to corporations that are actually going to hire more people. Invest in climate change solutions and stratagies.</p>

T3M	Education, Healthcare, and Infrastructure.	Combine all catholic and public school boards. Eliminate private school funding. - Make it a requirement that Health boards employ sufficient people in FT positions to eliminate the excessive overtime by nurses and other medical professionals, along with the proliferation of PT employees. - Cap tax-payer paid salaries at \$200k. - Switch MLA pay to performance based. - Eliminate the propaganda arm of the government (Energy War Room) - Eliminate MLA and Premier travel	- Restore the innovation + technology tax credits to encourage investment in Alberta businesses. - Provide a significantly higher budget for higher education. - Invest in people.
T0J	Keeping nurses and doctors in Alberta. Keep schools funded well. Public daycare or support federal government to help fund that.	Cut spending for higher up executives and MLAs. Do not let corporations have tax breaks.	Create a refinery here in Alberta. Do not cut wages to Nurses, teachers, or physicians but instead hire more part time employees as the new generation values balance between work and family and struggles with fulltime work and no universal childcare.
T6G	Energy efficiency and greenhouse gas management.	Energy efficiency of government facilities.	Support and fund the Energy efficiency and greenhouse gas management industry in Alberta.
T4A	Investment in public services that properly accounts for both, population growth and inflation. This includes investing in health and education, but also in childcare. Rather than eliminating the NDP 25-dollar childcare initiative, for instance, the government should expand it. In general, the government should consider priorities that reduce rather than increase the costs of living. Policies that result in increases to tuition fees, school bus fees, museum fees, vehicle registration fees, property taxes, income taxes, and child care costs, as well as in reduced drug coverage for dependents of seniors and larger class sizes are making life harder for Albertans.	The 30 million war room (the Canadian Energy Centre) can be cancelled. The government, however, should not be limited to the expenses side of the budget. It should consider raising additional revenue. Freezing the basic personal credit increased the real taxes for all Albertans, while corporate taxes are planned to be reduced year after year. This is not fair and does not help the province. The government should also take a look at the many forms of privatization that have been implemented in the health care system over the years and assess how they have affected costs. If these initiatives cannot be proven to have reduced costs (as seems to be the case), privatization should be reversed and public solutions that increase efficiency should be considered. The Edmonton Public Lab seemed to address precisely the type of inefficiencies created by a fragmented privatized system, and scrapping its construction was a mistake. To realize efficiencies, you have to invest money. You can't take advantage of the efficiency in electronic services if you refuse to buy computers.	Invest in public infrastructure (roads, schools, universities, etc.), support public and private research on green technologies and low greenhouse emissions. Cancel the general corporate tax break and provide instead tax credits for new investments only. Support home buyers through a provincial plan to help the residential construction industry. Companies do not look just at taxes to make investment decisions, they also consider how skilled the labour force is, the affordability of housing, the additional costs of health insurance, how connected a city is, etc. A growth strategy must address all these areas, it can't single-mindedly focus on corporate taxes. Other ideas brought forward: Increase the Mental health network and make it easier, cheaper and faster to access. Increase funding of addiction and rehabilitation centres. Reopen the rent supplement applications for Albertans – it's been reduced and no more applications are being processed. Put the cap back on insurance and utilities.
T6C	Primary Education, Post Secondary Education, Research and Innovation, Investing in Renewable Energy, Technology and Gaming industry, supporting the public service	Halting all the useless panels they have created, shutting down the useless "War Room" and firing the cronies they have hired to work in it, stop unnecessary travel to work on oil and gas files, collecting the unclaimed taxes owed by oil and gas companies	Diversifying the economy to areas outside of oil and gas, supporting post-secondary programming, removing the minor minimum wage, invest in technology and gaming industry, support the blossoming AI and health tech sector

T1K	Health Care Administration costs. There is incredible waste and redundancy in both Alberta Health and Alberta Health Services (AHS). There are branches in each department (agency) that are doing the same thing. For example, Alberta Environment & Parks has an Indigenous Knowledge, Community Monitoring and Citizen Science Branch. This is certainly redundant and does not belong in Alberta Environment and Parks when there already is an Indigenous Relations Department in the Government. There is also an Environmental Regulation branch within Alberta Transportation. Why is this needed when there is a similar branch within Alberta Environment and Parks. Also, the Climate Change Division in Alberta Environment has grown to an astronomical size with little benefit to the taxpayer. The costs of Government can be reduced by eliminating or merging the number branches in each Department along with the associated Executive Directors. Also need to control the waste in Municipal Government administration by reducing the amount of grant money given to cities and municipalities.	Reduce management staff in both Alberta Health and AHS as well as other departments such as Alberta Environment and Parks. The number of staff in these departments has grown exponentially over the past 5 to 10 years. There are also new branches in the Government departments that are redundant. For example, Alberta Transportation has There are too many branches that each have a highly paid Executive Director. Some of the branches can be merged into one resulting in less and more effective branches.	Use the savings from streamlining Government administration to further reduce corporate and personal taxes.
T2E	Public education, health and the environment	The war room and Matt	Bioeconomy, renewables acknowledgement of economic opportunities associated with climate change
T5H	Health, education, environment, economic diversification	Efficiencies, cut funding to private schools	Invest in areas like AI, video games, movies and plant-protein
T3M	Health Care Education AISH	Terminate Matt Wolf (Your Twitter Troll).. He doesn't deserve to be paid \$220K, considering he was once fired/quit whatever it was from the UCP.. Reduce your UCP MLA Office wages (They don't need to make over \$100K+ for a bloody press sec Make MLA's pay for their own expenses, no more billing tax payers for office stuff. If they can't afford to buy their own tim hortons etc then they shouldn't be in Government.	Don't cut Health Care staff, hire more. Don't cut Alberta Government Staff (Clerks, Admin etc) Hire more. Ask for the \$4.5B handout money back, especially from Encana! Get the I.T Sector back in Alberta (Shame on the GOA for not going to the Las Vegas Tech Sector show.. But you can go to London for nothing right!)
T9C	Public health care and public schools	By taxing the oil companies the conservatives gave a massive tax break/gift to.	Fund new green energy projects Oil is not going to last and Alberta needs to start taking steps away from an oil based economy for when it does run out.

t1j	<p>Investment in public services that properly accounts for both, population growth and inflation. This includes investing in health and education, but also in childcare. Rather than eliminating the NDP 25-dollar childcare initiative, for instance, the government should expand it.</p> <p>In general, the government should consider priorities that reduce rather than increase the costs of living. Policies that result in increases to tuition fees, school bus fees, museum fees, vehicle registration fees, property taxes, income taxes, and child care costs, as well as in reduced drug coverage for dependents of seniors and larger class sizes are making life harder for Albertans.</p>	<p>The 30 million war room (the Canadian Energy Centre) can be cancelled. Companies do not look just at taxes to make investment decisions, they also consider how skilled the labour force is, the affordability of housing, the additional costs of health insurance, how connected a city is, etc. A growth strategy must address all these areas, it can't single-mindedly focus on corporate taxes.</p>
T0M	Frontline healthcare workers. Surgery wait times. Get rid of the administrators in healthcare who are not doing their jobs.	Getting rid of government staff that are not doing their jobs . I am sure the previous NDP govt overfilled govt job positions to lower the unemployment rate. Wage freezes.	I think what they currently are doing by lowering tax rates for business will help. To hopefully bring new business to Alberta. Wish we could be assured they are hiring Albertans first.
T4V	education	Top people in all areas should have salaries looked in to to see if they are paid too much.I think an efficiency team should be hired to look into all aspects of government jobs to see where cuts could be make.	have more government controlled things. No private schools or medical things.
t6k	Focus increased spending on all kinds of education/ healthcare and reduce funding infrastructure projects	The government is already doing a good job at this. I think the focus should be on increasing revenues, can we introduce PST or create jobs that will increase taxes thereby improve revenues.	Diversify . Diversify, Diversify : Bring specific pharma/ advanced manufacturing- petrochemicals, food based industries into Alberta.
T2W	Education, Health care, affordable housing, transportation projects, social services, parks and greenspaces.	bailing out business.	actually diversify the economy and stop talking about it and only supporting a dying industry - oil and gas.
T4X	- pharmacare so seniors do not have to pay atrocious amounts that we can't afford - adequate affordable housing for seniors - affordable transportation so seniors are not isolated	- reduce MLA salaries - stop all pay outs to corporations - increase taxes for corporations	- reduce taxes on middle class - diversify the economy. Oil and gas alone is not going to grow the economy
T6G	universal daycare for Albertan's, health, education	Alberta pension, Alberta law enforcement (replacement of the RCMP), "war room"	embrace the fact that the world is changing, automation is coming but that doesn't necessarily mean the end of jobs but that we need to prepare for different kinds of jobs. Diversify the economy, we need to invest in technology and AI and make Alberta a leader in this sector.

T5X	Providing funding to support smaller class sizes and more staff support. Teacher wellness is a major issue and this model cannot be sustained, otherwise our students will not have anyone to educate them. Providing a budget that allows schools to provide for learning needs as well as maintaining older buildings and other infrastructure expenses unrelated to education MUST be considered. Our students are not getting the education that we can afford them due to the lack of funding we can allocate to their needs. Governments need to support public buildings and ensure they are in working order, not educational dollars. People who work in education and health care fields should be making these decisions, not ministers and premiers who have little experiences and are ruining what was once a great province. Think about longevity and sustainability and about the future... if you lessen the education system you are ruining our future!	Not by taking it from education or health care. Implement a small sales tax (3%) to cover the costs. Reduce top heavy manager positions that are repetitive in Health Care and Education so that frontline workers are more supported and paid enough to handle their jobs without burnout. Re-think allocations that are wasted in business sectors and move them to public sectors.	By ensuring that education and health care are the top priority. If you don't have a properly educated population or healthy population...you will have no future economy.It is time to start looking to nations such as Norway, Netherlands and Sweden who place great emphasis on the supported education of children, family supports and healthcare which in turn has produced a highly educated population who are able to be innovative in supporting job creation and economic growth.
	Education and Healthcare.	Raise corporate taxes.	Diversity, bring back technology incentives and programs.
T7E	Healthcare and education	Start a pst Maybe start paying for healthcare monthly again like bc does	Infrastructure Get the pipeline built Support healthcare
	Education, Health Care, Seniors, Child Care, Public Service, Infrastructure Programs to boost Economic growth, Renewable Energy and Technology	Cutting some executives, they are WAY over paid for what they do. In some areas there are 6 executives where there used to be 1 executive 8 years ago. That is in one area. This should be audited and paired down. That is millions in savings right there across government. Also, the war room is a waste of money, scrap that. Stop giving money away to oil companies and actually start taxing them and collecting back taxes on them. You keep blaming the weak members of society for your economic woes when it is your rich corporations that do not pay their fair share.	Infrastructure Programs to boost Economic growth, Renewable Energy and Technology. Stop attacking schools and health, we need education to feed growth and health to keep a healthy work force.
T6C	Healthcare and education.	Energy war room seems like a pretty big waste of money.	Stop laying everyone off.
T8A	Diversifying our economy. Continue what the NDP were doing by making us a province with more than ONE revenue stream. Focus on social programs including Health and Education. Stop treating these as cost instead of an investment.	Get rid of the War Room Get rid of the giant corporation of AHS. It doesn't work. The theory of one policy fits all of Alberta is ridiculous. Going back to health regions. Bring all physicians into a salary based compensation. The physicians specifically within hospitals (not GP's) are overpaid and are the biggest part of the problems within AHS. There is no autonomy within them. They have no <u>accountability</u>	Bring back our own carbon tax and continue with investing that money into diversification. Bring in a sales tax.
T0M	Educational, healthcare, eliminating poverty, economic diversification.	Reducing MP's and their staff salary, eliminating positions such as "issues management", Canadian Energy Center should be fully funded by industry and not taxpayer funded, reducing unnessesary travel costs.	Bringing back tax incentives for non-energy industries, work on diversifying the economy, stop talking about separating as it is driving away investors.

T2K	Health, education and services. This is what governments are supposed to provide.	How about making oil companies pay their taxes? Restore corporate taxes since the cuts you gave them didn't trickle down to the employees, it went into the pockets of exec & shareholders, you know, your friends.	Stop giving tax breaks to your buddies in big industry. It hasn't worked and isn't working. You cut funding to education health and services throwing thousands out of work. Unemployed people don't pay taxes, don't shop, don't stimulate the economy. Your 1% friends don't pay taxes either and most of their money leaves Alberta. Perhaps get an honest leader who doesn't cheat to get his position.
T1W	Climate change, energy efficiency, natural resiliency, reconciliation, education, healthcare, wildlife crossings	stop funding the war room	Through the renewable energy sector
T8N	Social Services Health Education	Travel Budget for MPs Communication staff Energy War Room	Stop laying people off
T6G	The government should focus on increased spending on healthcare, education (both for teachers as well as universities), and social support for people.	Less spending on the oil field and trades	By supporting teachers and nurses, among others of that sort of job, more jobs will be created rather than being cut as they have, which will help the economy as well as keep people working.
t7z	Health Care Education Social programs	stop giving tax breaks to big oil corporations. Close the war room. Stop forgiving the taxes owed from oil companies. Make oil companies clean up their abandoned oil wells.	Diversity by giving incentives for alternative green energy companies, tech companies, etc. Make ALL businesses feel that Alberta is up and coming in supporting alternative businesses. Fire Jason Kenney.
T8E	Health, AISH	Get rid of war room, make oil companies pay their taxes, get rid of drug consumption sites (put that money into bio drugs	Not sure, maybe tax incentives
T3E	Health care, education, child care	Get rid of the \$30 million "war room". It's a huge waste of money that could be better spent elsewhere.	Support families (with health care, education and child care funding) to make Alberta an attractive place for young families to settle down and stay. The UCP government has so far done nothing to convince my family that Alberta is the place we should stay and raise our family. We are young professionals (over \$200k income) with a toddler and plans to expand our family. Many of our professional friends are considering leaving the province because of the poor decisions of the UCP government. If the government does not support children and young families, there will be even more job losses and investment leaving the province as those who are privileged enough leave for better opportunities elsewhere.
t2I	Health care, public safety, education	Reinstate the carbon tax. Save money by cutting corporate bailouts, especially from non Albertan/Canadian companies.	Diversify the economy away from failing oil and gas. Invest in "mass timber" research and production with BC. Create incentives for companies to open wind & solar energy equipment production facilities, farms and economy.
t6b	Infrastructure repair. Stop building LRT for now. Focus on water, sewer and road repair. Also work on the garbage dump and recycling.	Terminate all LRT expansion - it is the most expensive project on the books. Make government employees work longer hours like everyone else. Reduce the benefit packages as well.	Stay out of this domain. Make sure we do not end up with environmental disasters, garbage issues, etc. at the expense of corporate and developer profits.

T0H	<p>Revamp Education like has been discussed for the last 15 years. Reduce class size, bring in mental health support for students k-12, include child care and education for children 3+ utilize rec building for gym classes that are close to existing schools. force schools to amalgamate no need to have 3 schools in an area that are all half full you can still have unique programs in one school there is no need to have an only English and than an only french school.</p> <p>Use the same plans to build infrastructure if a building worked no need to have a new one engineered just to make it look unique. GP hospital is a example of what not to do.</p>	<p>Place a maximum salary for publicly funded Jobs Im not sure why my tax dollars are paying people making 250k+/year and than we are upset that we don't have enough teacher, nurses, functional hospitals but we continue to pay CEO, managers and Administration these large sums of dollars but the issue never get fixed. We need to be realistic on what a far working wage is i would suggest no one in the public sector with a pension receive more that 175,000/year. Government needs to manage there cost no different than a normal business however some of the compensation is out of control.</p>	<p>Bring back grants to employ young people for the municipalities, Non profits and small business. Provide funding for companies to send there current staff for more education even a program that would Encourage to send there staff to get a degree or diploma.</p>
T5Z	<p>More money for Health Services, and Education with absolutely no cuts.</p>	<p>It's more about finding the revenue. We can't afford to cut programs and services. Perhaps a provincial tax, excluding children, seniors, and basic essentials. There's money out there, just look at Oiler game turnouts. Why should our children, who are our Country's bright future, suffer the consequences of our debt.</p>	<p>Keep the economy stimulated. No more cuts! No more job cuts. Offer incentives to small businesses. Invest in Education and career development.</p>
T5N	<p>Education and healthcare</p>	<p>Make oil companies pay taxes We don't need a war bunker</p>	<p>Diversify the economy The super lab should never have been shut down as it would have provided several new jobs. Make it easier for small start up companies. Stop laying off nurses. Give education enough funding to hire new teachers</p>
T1W	<p>Keep our healthcare continually moving forward with the latest things for healthy people. Do not cut spending on education, we need a well educated population.</p>	<p>Do not cut health care services, do not cut education, these are essential services that we should be paying for. Your priority is not to save money it should be to offer Albertans the best possible quality of life available. If you really think you need to save money look internally and try to cut down some of the government bourocracy.</p>	<p>Get The Alberta oil patch booming again, by continuing to push the construction of pipelines, negating all the negative propaganda about the oil sands, and reduce the rail transportation of oil.</p>

T4E	<p>- Free and accessible health and pharmaceutical care - take care of Albertans. Expand the Red Deer hospital, which not only serves Red Deer, but also rural central Alberta communities that are really hurting for better care.</p> <p>- Equitable and accessible education - invest in the future of Alberta and give schools the funding they need to set our kids up for success.. and make that success all the better by making post-secondary more accessible.</p> <p>- Make sure all Albertans have access to basic human needs - that will in turn help with a lot of other issues our province faces with respect to crime, at least.</p>	<p>- Cut Deputy Minister positions from every Ministry. This would save the government over \$6 million per year, not including the amount you would save if you also removed or reallocated all of their support staff that duplicate work done at the Minister's level(e.g. MCU). DMs are not elected officials but have a heavy hand in the decision making process and add a lot of red tape in the approval process for anything that goes to Cabinet.</p> <p>- Remove the war room, unless you can provide empirical evidence that the costs associated with that group are having a positive impact for all Albertans.</p> <p>- Reverse the "job creation tax cut" that has yet to show any success, but has had negative impacts on budget for other areas.</p> <p>- Stop creating task forces - there's a reason unnecessary boards and committees were cut before you came in. You're just creating more that cost time and money - rely the expertise of your public servants and consultations with the public to make informed decisions, not executives with a political agenda.</p>	<p>- For one, don't add to unemployment by cutting nurses, teachers, and public servants who will then compete with average Albertans for jobs in an already tight market.</p> <p>- Go beyond the oil and gas industry - everyone talks about diversification but hasn't been successful in doing it. Support innovation and allow for the growth of technological companies, AI.</p>
T2X	police for rural crime,education loans ,hospitals	Hospitals ie more education for proper use of walk in clinics instead of ER	exactly what they are doing now, come down to the workers and find out what they need and what is actually going on at the ground level Support new entrepreneurs and more jobs in the Private sector to take the load off supporting public workers
t5m	Climate change, Truth and Reconciliation, Education, Health Care	Increase corporate taxes Increase oil royalties Carbon tax	Encourage diversification away from oil and gas and into green energy. Encourage high tech buisnesses
T0B	Healthcare and Education	By taxing large corporations more. They should pay their fair share. Trickle down is a myth.	By creating a plan for diversification of our economy. Encouraging green jobs and sectors.
T6L	Supports for Seniors, mental health and vulnerable people. There should also be a focus on quality accessible healthcare for all people and affordable housing. Continue investing in infrastructure because when it is not maintained it needs to be replaced which comes at a greater cost.	By investing in long term sustainable programs that keep people healthy and in their communities longer. By investing in the work force and creating jobs in all sectors so people are gainfully employed and contributing to the economy again. When these things are not invested in things break and end up costing the government more. The government could find savings from collecting more taxes from large corporations and from refraining on investing in things like the energy war room.	By supporting existing jobs and creating new ones. Excessive layoffs in the name of balancing the budget means less people are employed and those who are still employed are worried for their jobs which overall means less spending and contributions to an already fragile economy. By making existing staff do more with less, huge burnout rates will be created in staff and clients will fall through the cracks as there is less capacity to help people. When people fail they end up in emergency rooms and correctional facilities which end up costing more in the long run.

T0H	Health, Education and Highways.	Cut back on government employees. Hold back on increases in compensation to all government employees, cut back on pension payout to all elected MLA's, they should have to wait until they reach retirement age like all the rest of us do and then receive pay equivalent to what we receive as private citizens. The pay they receive would make it possible to set up there own private pension with out any thing from the government coffers.	Well the first problem is government employees, how many contribute income for the province?
	Healthcare, Schools, Public Education (k-12, Uni/College, Technical schools)	Rather than savings we should increase taxation, institute a PST	Invest in green energy, tech incentives, film/movie tax grants. Diversification is our way out of the boom-bust cycle.
T5I	Healthcare retention and recruitment	Make a new tax and don't let big corporations have so Many tax breaks	Increase wages
T5I	Health care! Rolling back wages of any sector will not help the economy. It has been proven that it harms it	Cutting the wage of the high upper management at ahs and implementing a new tax	Increase wages so there is more money flowing around the province
T2w	Spending priorities should include, in no particular order: education, health care, economic diversification, infrastructure	Governments could find savings by decreasing the amount of incentives given to larger corporations to invest in the province. It hasn't shown to work and really has only made it easier for corporations to take more of our provinces money before leaving.	By diversifying the economy and investing in emerging industries and technologies, job and economic growth would incur
T3B	Education, health care, and diversifying our economy beyond oil and gas.	Scrapping the tax cuts for corporations and wealthy individuals. Not schools, Not health care, Not services, Tax the people who actually have the money.	Diversify away from oil and gas. Make Alberta more appealing to investors by providing the best infrastructure, education, and health care possible. Stop flirting with separatists. End oil and gas subsidies, instead offer tax credits for small businesses in other sectors.
T1K	Invest in renewable energy technologies. Not to say that oil and gas don't have a place in the economy, but we need to attempt to wean our economy off of it.	Removing subsidies given to profitable oil and gas companies.	Invest in technology development, especially renewable energy and artificial intelligence.
T8V	Health, Education, Environment, Renewable energy development, green tech and environmental protection need high priority spending.	Shut down the war room nonsense! Carefully examine all contracted billing and see who is overcharging and double dipping. Get after those companies that haven't paid taxes.	Push development in renewable and green energy projects. Pursue hi tech and make sure valid science based data is used in decision making. Yes we need oil support but we desperately need to realize the industry and world has changed and will never be what it once was. Wind, solar, geothermal, hydrogen, electric vehicles. Come on government step it up!!! Things are looking dire and it doesn't need to be that way!

T2N	<p>17(1)</p> <p>I would ask that the current government support our industry. As a 'clean' industry, the trajectory for our industry is trending upwards. Ontario and BC both have over \$3B+ of production each fiscal and Alberta is prime to be part of this ever increasing industry. The Film and Television industry was listed a priority area by the UCP in its election platform and honestly this industry is primed to explode with jobs and opportunities on all levels for Albertans. Please consider spending/allocating more funds into Alberta's film and tv industry. The returns would be substantial.</p>	<p>The government can find savings within its own provincial GoA employees, some of who admit there has been a pattern of overspending in their departments with the hiring of too many managers and not enough front line workers/analysts. Trim positions in upper management at all levels of government. I know this will be difficult as middle and upper managers exert a lot of control in their departments, but it is shocking the number of managers that outnumber those that work below them.</p>	<p>Pertaining specifically to the film and television industry in Alberta, I think it's important for the GoA to not only look at the outlay of money to our programs but also look at the revenues generated via jobs and money spent in Alberta on businesses (ie: hotels, restaurants, vendors, gas stations, etc) that support our industry. The rate of investment is approximately \$3 for every \$1 spent. Plus money that is provided to our industry is issued AFTER monies have been spent and audited statements have confirmed the spend. Job creation and growth is very much evident in the film and TV industry and the more money is allocated to our industry, the more jobs and growth is created. If the GoA were to remove the 'cap' that is currently applied to our industry, outside investment (ie: building film/tv studios) in Alberta would be immediate. Investment money would flow quickly into Alberta and the jobs created for Albertans to build the infrasture to support film and tv productions would create a boom for our local workers.</p>
T3B	Hospitals, Schools and Universities	<p>You can't. Start taxing the rich. Make corporations pay their taxes. Institute a PST and a carbon tax.</p>	<p>Resign. It's actually the only way to increase economic growth and support job creation. You have stopped every other method of diversifying the economy from new energy technology to computer technology. You will drive all youth out of the province.</p>
T7E	<p>Job creation and reduction of bureaucracy. Develop private alternatives for education and health care. Improve Long Term Health services delivery. Move Alberta towards greater independence within Confederation. Pension Plan for Albertans. Income Tax collection. Policing. Immigration. Follow the Quebec precedents. Quite subsidizing the ROC.</p>	<p>Limit the % of block funding grants for health and education, that can go to Administration, forcing funds to front line services. Eliminate jobs created by Notley Government. Privatize delivery of Government services.</p>	<p>Right to work legislation. Regulate use of small, clean, safe nuclear power technology to dramatically reduce carbon footprint of oil sands developments. Privatize delivery of government services where ever possible, including delivery of long term care service. Provincial delivery of Federal services wherever possible including AG Pension Plan; Collection of income taxes etc.</p>
	<ul style="list-style-type: none"> - Social services (all levels of education, health care, maternity leave, affordable housing, affordable daycare etc.) - Sustainability and environmental causes. - Art and culture <p>So essentially everything that the current budget doesn't address.</p>	<p>I think eliminating the corporate tax cuts for the ultra wealthy would be a start!</p> <p>I would much prefer an increase in taxes (either income or sales) than cuts in savings. I'm happy to pay more to receive better social services. That said, I think it's time to come to terms with the fact that oil and gas as in industry is never coming back to what it was. Use that funding to put towards alternative programs instead.</p>	<p>By not cutting but investing.</p>

T6H	Education, Post-Secondary Education, Healthcare, Arts & Culture, Tech Investment, Vulnerable Youth, Public Transportation, Public Services/Public Sector, Environmental Protection/Combating Climate Change	<p>By increasing taxation for high income earning individuals and increasing corporate taxes, especially for oil & gas companies.</p> <p>By not spending millions of dollars on a 'War Room' concerned with uplifting the image of oil & gas in the public eye. This is a losing battle.</p>	<p>Diversify investment away from oil & gas companies/corporations. This industry is not environmentally sustainable and is dying. I'm not even saying stop investing in oil & gas altogether, but start making moves to sustain other industries and areas of economic development.</p> <p>Other industries need to be supported and invested in by the government to stimulate job growth and the economy, such as investing in healthcare, education, technology/AI, small businesses, arts & culture, and the public sector. Investing in job retraining for individuals who have worked in oil & gas would also be encouraging and beneficial to encourage them to gain the skills necessary to enter a different industry.</p> <p>Fiscal debt is not the only debt that a government or society incurs. Lack of investment in healthcare, education, and the environment also creates significant debts to the absolute detriment of society as whole.</p>
T6M	The serious needs of working people.	Stop giving handouts to your business friends.	Raise the minimum wage.
t6a	public education , health care and infrastructure is usually the sphere of influence of government to aid the people it serves/	They could find savings in reducing upper management of their own departments first then pursue reducing upper management in any sector rather than slash and cut mentality that has long term effects on the quality of key factors affecting society (health care wait times, students ability to properly fill positions in our growing economy, crumbling infrastructure that does not support residential or commercial growth)	<p>By leaving the working persons wages alone allowing the working person to buy things and stimulate the economy. Cutting the working persons wages causes them to curb spending further reducing the economy. Maybe an increase in spending in education to promote tertiary industries rather than always depending on primary industries (natural resources) to somehow get us out of a slump. What will happen when these natural resources are no longer there? (much like the present value of them is not worth excavating)</p> <p>Do something different (promote industries, offer tax incentives,etc) rather than putting all of our eggs in the oil and gas basket which has been done for the last 30 years with less than stellar results</p>
T2Y	Education Health Business development programs	<p>1.Cut liberal's federal programs including equalization payments</p> <p>2.Decrease foreign refugees support</p> <p>3.Decrease provincial construction projects spending till better times</p>	<p>1.Cancel ALL federal programs pushed by "climate change" extremists, rationalize related spending and action considering global (world) issues vs only Canadians</p> <p>2.Invest in and support all (including conventional and "green") energy businesses</p>
T2C	Education, health, and medicine	By not ya ding out money to corporations who contribute little to the economy and culture of Alberta and Canada at large	Investing in public projects and public sector
T4B	Ensuring our public sector is well staffed, well paid, and well cared for. They are the ones working	PST.	Look at areas other than oil and gas.
T3E	New and evolving industries - more then focusing on a single sector of Oil and Gas, which is of course important, but not the only industry.	Create a AB focused Carbon Tax so the funds stay here.	The Film and TV industry brings millions to communities. B.C. is taking advantage of it and Alberta should too.

	Public Healthcare Funding Public Education Funding Non Profit Organizations	It shouldn't be saving, it should be investing. Cuts are hurting the province	Grants for more job sectors. Diversified investments business wise
T6W	Health and Education, as well as social programs.	Tax corporations more, not reduce it!	Support public sector as much as private.
T5X	Health care Education Child care Seniors care/accommodation Maintaining current support for medication (colitis, Crohn's, IBS, epilepsy, etc)	Corporations, CEO/management (particularly bonus payments), higher royalty tax	Diversify- encourage tech companies, cinema industry, alternative energy ideas
T3J	Growing the economy.	Public transportation	Yes!
t3k	education and health	management, government	pipeline
T0H	health care and not giving money to refugees but to our vets who fought for our country!	by cutting the salaries of themselves and fellow "high up managers" especially at Alberta health services the amount of work they do for the pay is ridiculous! I used to work for them and know first hand!	bring our oil and gas sector back we didnt have a problem when there was work now we are hurtin albertans!
T5E	Education, health care, infrastructure.	Bureaucracy, redundancy, add a PST.	Make sure that Alberta is a good place to live and work.
T4T	EDUCATION back to smaller class sizes, pay teachers a reasonable wage, more EA's, etc..	Less support for welfare and immigrants, less money given in equalization payments.	Support oilfield jobs...we are so lucky to live where we do and have these opportunities More jobs in Education Help support rural
T3C	I think the government should prioritize spending time thinking about the bullshit they're putting us through- this is not what I voted for.	Stop paying yourselves for giving Alberta an enema- we can squeeze our own douche bulbs thank you very much. Your salaries are wasted money. Additionally the useless, unconstitutional "war room" (Canadian Energy Centre/CEC) should be scrapped. Our government shouldn't be lobbying for industry, nor should we be funding you giving your cronies million-dollar contracts to "disprove true facts"	Reverse the corporate socialism, no jobs tax handout and invest in the formerly growing tech industry, arts and culture (specifically film- the filming of Ghostbusters recently generated 1 million in economic activity in drumheller) teachers, doctors and nurses.
T2W	Health Education Climate Change Arts	This isn't real savings but you could generate revenue by initiating a provincial sales tax.	By supporting growth across the province in both public and private sector. Make sure the youth have a broad education, not one that limits their point of view or subject matter learned.
T1H	Health care, education, social services	Scrap the war room and stop subsidizing oil and gas companies. No industry in our history has had the kind of handouts this province has given to oil companies who rack up profits, don't pay municipal taxes and then cry poor. Also, stop giving breaks to large corporations who do not reinvest in the province.	Stop funding cuts that result in employees being laid off or losing their jobs. They cannot contribute to the province's economy if they are unemployed.

T4X	Nuclear power sources. We live in the most stable environment in the world. No tornados, no earthquakes, no civil unrest, highly educated population. Its a no brainer. Wind power is expensive, and needs boosting from gas power. Look at the cost to replace a single turbine blade. Not to mention the fuel to bring in the large crane from another part of the world to replace it. The overall energy footprint is not very environmental.	Scrap any push for electric vehicles. Alberta is not the part of the world that would benefit from this technology. The power we generate for these cars is not that clean, and the car manufacturers do not include the power consumption of having your car plugged in every night in the winter to keep the batteries warm. The infrastructure costs to provide everyone power are prohibitive as well. Plus the cost of the car is unattainable for 85% of the population. There is no win here, just a shuffling of money from one pocket to another, and a pat on the back from the sales guys that sold this idea to the government.	Push for Federal support for our industries more. Don't be our worst enemy. Get rid of carbon tax as well, or explain how this tax is supposed to help us. By making fuel cost more, it raises the prices of all of our products and food as well. Where is this money all going. How does it actually help save the planet.
T1K	Maintaining sustainable levels of Public Services.	They can cut their own (MLA) salaries and increase corporate taxes. Find new ways to increase revenue and grow wealth. Stop the oil and gas roller coaster. That doesn't mean stop supporting oil and gas but stop basing all of our revenue on it. Diversify.	Invest in the economy and stop using trickle down economics.
T6R	Health care, education, affordable housing	TAX THE OIL COMPANIES. it makes no sense to me why oil companies need to make hundreds of millions while other in their province cant afford a meal. How greedy do the wealthy need to be to make 1 billion instead of 700 million.	tax the wealthy companies. filter that money down. create more jobs in healthcare.
	Social issues Modernize the way Alberta have been drafting policies and programs in a more system approach.	I am working for Alberta Health. Between the Assistant Deputy Minister and there are three managers. The issue with this type of structure is that the Assistant Deputy Minister has to go three levels of management before getting an answer from me, which is in 99% of the case not necessary. One manager and a team lead (if needed) should suffice between the ADM and the employees. Reducing the number of managers we give more clarity on who is doing what and what do they bring to the company.	diversify the markets support innovation through funding to university Have 30 year plan for the future of Alberta.
T5Y	PUBLIC education	Eliminate the war room, jets for premier's pancake breakfast	Focus on PUBLIC EDUCATION and Support Post Secondary institutions.
T8W	maintain efficient health care services provide efficient education for our youth maintain our roads, maintain our safety	1)cut down on all levels of government 2)bring government pensions in line with industries, eliminate defined benefit plans, and replace with defined contribution plans 3)bring government worker salaries inline with rest of working class	less red tape, less taxes, eliminate carbon tax, giving less money to every group that is continuously in need
T4R	Environment, renewable resources, climate change, sustainability, health care, K-12 education, post graduate education, public transit, low income housing and other supports, senior care, environmental monitoring, ways to mitigate natural disasters (forest fires, floods, drought), a robust and well supported public service, crown prosecutors, technology innovation	Reverse corporate tax cut. Stop cutting public servants and services (this will cost more in the long run!). Shut down "War Room" project. Increase income tax for high income earners. Reduce subsidies to oil and gas companies. Stop western alienation rhetoric (do not change CPP, no need for provincial police force, etc). Stop fighting federal carbon tax in court.	Find ways to diversify economy and move away from over-dependence on oil and gas industry. Focus on renewable resources. Introduce a sales tax. Fund infrastructure projects. Increase funding to cities and municipalities, hospitals, schools, court system, public servants to drive economic growth. Improve conditions for low income people.

T1K	Education and Helath	Abolish the War Room! Quit wasting money on private trips to foreign countries with nothing to show for it.	Create the best living and working conditions in the country!
T1W	Increased funding for the public education sector. Include inflation and student growth.	Smaller government.	Implement a provincial sales tax! We have to pay for want we need.
T5K	Healthcare, education, alternative industry. Whatever you do, please stop giving away my tax money to oil companies.	Oil bailouts	Supporting alternative industry, healthcare and education
T0H	Pipelines, CN, and supporting our economy.	By pulling funding from environmental groups similar to the EPA, and by not supporting groups only because it's politically correct.	Concentrating on agriculture and oilfield support, our provinces two main sectors. Making education in trades a priority.
T4H	I believe that Union positions be monitored regularly. As Alberta teachers make some of the highest salaries, their should be a salary freeze, until we are under the highest paying provinces. I personally know teachers who want to go back East, but can't because Alberta pays the most! I do not want to be First in highest paying Union Jobs	Reducing middle management positions! Assess front line workers, but do not lay off to save Middle Management Positions! Waiting to retire does nothing to enhance our communities and province!	Good Salesmanship! Proactively seek Businesses to expand to Alberta. S.T.E.P. - not sure why this program is decreasing. Students get a decent job , finish their education and become tax-paying citizens. We are investing in our youth. This is a very good plan!
	Health, Education	The province should not even be considering giving tax breaks to oil and gas companies. These companies need to pay their property taxes.	Don't let 16 year old drop out of school.
T6r	PUBLIC education—lower class sizes, proper support for kids with special needs, PUBLIC healthcare, investing in alternative energy sources.	Raise taxes on the highest income earners and corporations.	First of all, don't cut jobs in the public sector. Invest in alternative energy sources and jobs will be created both in the present and sustainably going forward.
T7A	education(all levels), health, income supports(ie AISH), environment, diversification(phase out O&G industry while we have the opportunity to do so)	Reduction in salaries for Premier and his cabinet as well as any lower ministers. Tax the 1%, oil companies, and take back the 4.9 billion cut for big business.	DIVERSIFICATION!!! Put support into tech, environment,alternative energy, public infrastructure and services.Theses industries will lead us into the future not O&G
T6E	It should reverse its freezes to public education and health and commit to expanding both in proportion to population growth. It would also stimulate the economy to finally work on transportation infrastructure such as passenger trains between the province's major cities.	The Canadian Energy Centre and all the superfluous committees and panels the government has recently assembled. Stop letting oil & gas skate out of the province without paying their share.	As the province sinks further back into recession, it should abandon balancing the budget as a priority. Recessions are precisely the correct time to run deficits, especially if it's to expand infrastructure. Deficits are ordinary decisions made by governments all the time. Trying to run a balance or surplus now will only exacerbate the recession. You can balance the books when the province is finally back on the upswing by taxing profitable enterprise.
T2L	Social Programs, education, heath care and taking care of Albertans. Ensuring we have proactive programs in place that will take off the burden on our health care system Ex. Homeless initiatives, supervised injection sites, more funding for vulnerable Albertans on AISH or PDD funding.	Stop corporate bail outs. Stop funding the "war room". Force Oil and Gas companies to pay property taxes. Stop creating needless committees to study things that have already been studied.	Funnel money into education and retraining in tech and renewables. Encourage oil and gas workers to look at other industries and not hold onto the hope they will retain their wage and position. Stop giving people false hope that they will be rehired after industry layoffs resulting in individuals living off credit cards and EI. Do actual research into market trends and employment opportunities instead of repeating outdated and incorrect information.
T6K	Social services, health care and pharmacare, education, promoting the transition to renewable energy, investment in projects that will support long-term job creation and growth	Decreasing funding to its "war room."	Through increasing spending and support of emerging industries, tax credits for emerging sectors like digital media and film.

T8N	<p>The first priority listed in this communication is stated as follows: Getting Albertans back to work. For this very reason, I do believe that to maintain the funding required to provide adequate education and health care to our students should be a number one priority. To cut teacher and nurse positions will not solve any issues. I do believe that the per pupil allocation in education should be maintained and even increased. I also believe that additional funding in Education to support vocational programs such as Knowledge and Employability in High School should be increased. These programs have a direct impact on student retention in schools and High School completion.</p>	<p>Some possibilities in this area are as follows: 1) Reduce expenses or even terminate the Provincial Achievement Tests program in Grade 6 and 9. 2) Put a cap on the income earned by Superintendent of Schools and Health Care administrators. 3) In the private sector, it is clear that some corporations allow huge bonuses to their senior administrators while terminating some employees to maximize profits. This practice should be under review as maintaining employment should be clearly stated as a primary goal, even in the private sector.</p>	<p>A 4% or 5% sales tax would allow the government to maintain all jobs in the public sector and even increase the quality of our education and health care services. Of course, it would require political courage. Again, to cut teachers and nurses will not support job creation and economic growth.</p>
t5y	<p>Education (class sizes are simply too large, and you cut major programs to help kids with speech problems, bring this back), sport/recreation (we have world class facilities with no one using them), Diversification (oil is dead, Alberta will be a wasteland without this happening)</p>	<p>Alberta does not have a spending problem, Alberta has an issue in generating money. Thanks to Ralph Klein in pushing all major projects back 30-50 years (in a terrible attempt to be dept free), we are now having to spend a lot of money just to get caught up to where we should be. Oil and gas are not the be all end all, Alberta used to have a diverse portfolio, but since the major boom in the 80's all Alberta government sees is oil. This is not the solution, diversification is the only way out of this mess.</p> <p>Stop catering to unions, how is it possible that nursers who work part time (20 hours a week) can pick up extra shifts and earn 1.5 X their pay as overtime, when everyone else has to work 40 hours first? This is where a lot of health care funds are going and its crazy. They should be \$30 for morning shift, \$34 for evening shift, \$36 for night shift and \$40 for on call. No more paying nurses \$70/hr for OT after working only 20 hours that week.</p> <p>Education, private schools should not receive public funds. As a parent it is my choice to choose a private school and thus whatever costs are associated with it. No more public funds.</p> <p>Government can stop making agreements with foreign countries that allow them to sue Alberta if law changes to make their company less profitable (China bought lots of oil and gas companies and can sue Alberta because of Alberta says to protect environment), decisions and agreements like these have cost taxpayers way too much money both federally and provincially.</p> <p>Stop spending tax dollars on things you know you will not win, stop your grand standing (ie BC on the oil pipeline expansion-they knew they wouldn't win as its in the constitution, but spent nearly \$1.5 million in tax payer dollars)</p>	<p>Become the new silicon valley, get new tech companies here. Stop making stupid cuts, Calgary asked for \$13.5 million to host the X-games for 3 years and the expected economic impact was estimated at \$250 million. That is a great return on investment, and Calgary was looking at taking on the X-games beyond 3 years. Even if you put in a stipulation that they repay the \$13.5 million over a period of time, this was a huge win for our economy that you axed. Perhaps instead of making cuts for the sake of making cuts, you look at potential rates of return of investment, you would look smarter.</p> <p>For job creation, well people need education (which you cut) and re-education because Oil and Gas are dead, it will not rebound to what it once was. One cannot say for sure what education programs are needed, until Alberta begins to diversify.</p> <p>Look at Manitoba, they have diversified and continually show growth year after year, even if oil drops. This is how you run a province. Drop the egos saying you can do it better than other parties, because you have shown nothing in bringing Alberta to a brighter future. The previous conservatives with all the extra money they had from oil blew it stupidly, rather than reinvesting it into other ways to grow our economy. Be forward thinkers, not reactionary knee jerk decision makers.</p>

T5M	Infrastructure, roads, keep the staffing up in hospitals and schools.	Cut unnecessary high level staff duplication in the government (not front end). Cut down on consulting fees, stop paying large companies large amounts of money to 'improve jobs'that are non-existent.	Get the oilfield back up and running. Improve alternative energy projects such as solar and wind power. Diversify more, don't just concentrate on oil and gas, look into bringing more tech companies or movie industry here. Talk to the youth to see what they are looking for. Have an open mind.
T2K	Job creation and RETENTION at all levels.	<p>Funding to organizations that provide Human Services (HS) programming.</p> <p>More money is given to these organizations automatically every year without thought or hesitation, because it 'pulls on the heartstrings', and would result in public outcry if there were cuts. Some of these organizations use the money honestly, others do not (e.g. Outrageous ED salaries, automatic annual staff salary increases, other perks). Why should these organizations get a 'free pass' when all others, and government are being pushed towards fiscal restraint?</p> <p>Funding to these organizations needs to be better tied to outcomes and performance, and not 'automatically' doled out year after year to satisfy the public's emotions. There is a big 'oversight' loophole here that needs to be addressed by government. The 'performance based' funding model being used with Universities would be an excellent start if it were applied to HS related organizations.</p>	Any way they can.
	Education, health care, early childhood education and resources.	Cut useless management positions. There are too many management positions within the government. There are also many useless management positions in healthcare. Don't cut the frontline nurses. They usually work short staffed and suffer burnout from it. If you want to cut healthcare positions, look into upper management!!!	Support nurses and teachers!
T3m	Making it easier for private health care. Many younger RNs are trapped working casual positions with no hope to get a full time AHS. Let free market dictate wages for RNs, Doctors etc. We need more private for profit clinics offering surgeries to take pressure off the public health care budget and open up more jobs.	Definitely management level of AHS. Should privatize all positions at AHS that didn't require bachelor's degrees such as food, laundry, cleaning and such.	Mr. Harper's Canada Economic Action Plan was a favourite of mine.
T3m	Seniors health care Hospital health care Health care	Upper management systems	Offer more front line worker hours in hospitals
T1J	Healthcare, education	Stop giving tax breaks to big corporations.	Support the oil field. Push the federal government to get trans mountain done. DON'T your universities' funding to wages of alumni - this will KILL the arts! Just because we don't make much, doesn't mean we don't want this career or this career isn't necessary. Universities WILL let the arts suffer and put their efforts towards the "money-making" programs like management, business, etc.
T4J	Health care. And education	A sales tax on luxury items, hotel stays, pop, chips	By not laying off government employees!

	Education, health care - including mental health, police services.	I'm NOT giving billion dollar corporate handouts, and not spending money on bringing other politicians via private jets etc. Politicians should make an average Canadian workers wage to be able to accurately represent the population and understand concerns and ideasz	By NOT trying to privatize essential service.
t4v	Heath care Education Infrastructure	Unfortunately we need revenue. PST	Needed infrastructure, developing new sources of energy besides oil and gas.
T2R	Education, Health Care, Oil & Gas, Tech Sector,	Roll back your salaries, the so called war room,	Properly fund Education and Health Care so there are competent and healthy citizens in this province.
T6R	Elementary, Highschool ,Education and Health- especially primary care, increase in family doctors and a team approach to primary health care.	Middle management positions .. review needed	Support diversification in fossil fuel industries. Aid oil and gas workers switch to other industries.
T6E	keeping healthcare and education funding, and not cutting or creating private service lines	removing the corporate tax cut, and letting these corporations pay their fair share	by investing in green energy
T8N	More money and manpowershould go into the investigation of the UCP leadership campaign. This is a far more serious issue than the economy. If there is no honest democracy there is anarchy.	Stop giving tax breaks to anyone. End all panels and shut down then CEC. Stop the legal challenges These are costing albertans Millions if not Billions of dollars	Show more interest in diversification and less on oil. Alberta was a growing province until the new government cancelled alternative energy programs We all know oil is a dead end and to support it only prolongs the inevitable.

<p>T8N</p>	<p>Your budget plan has been an epic failure, stop and turn it around! I was offended when I heard you say that you can't ask struggling oil and gas companies to pay their taxes but you are asking struggling and suffering families to do more with less?!! Stop your attacks on vulnerable populations, it's horrible. So far this has been the impact just on my family (I am a single mom 24/7 of 2 kids with special needs who left Life threatening abuse): our abuse recovery counselling has been cut, our AHS counselling has been cut, my kids services and supports at their school have been cut, are home services are threatened to be reduced/cut, daycare costs are going up, insurance costs are going up, the cost of everything have gone up dramatically and everything has been cut. Why are you asking low income and struggling families to do more with less when we already don't have anything?¹⁷⁽¹⁾ kids have significant health issues and the wait times have increased, services have decreased and outcomes will be poor. You are jeopardizing lives and the future of Alberta.</p> <p>Also, cutting Kleenex and water from Alberta courts? Clearly you have never been an abuse survivor attempting to bravely tell what your abuser did? A lot of Kleenex and water is needed! Stop your cruel and heartless cuts. You absolutely will not get re elected ever based on heartless and cruel cuts like this. Protect the vulnerable, support families and protect health and education. The system and societal costs of cutting all these services and supports will be much higher than any small savings you may be claiming now.</p> <p>Do NOT cut FSCD, PDD, AISH, health care and education etc. Invest in people!</p>	<ul style="list-style-type: none"> - cut all government travel and hospitality - reduce wages of high paid government staff - have all MPs take a wage cut - stop War room immediately, complete waste of money - stop handouts to the rich - stop costly lawsuits 	<ul style="list-style-type: none"> - stop cutting jobs and services, you are literally cutting jobs not creating them. - focus on diversification and strong public services (which creates jobs) - stop handouts to the rich - your plan is having the absolute opposite effect and even your previous supporters are seeing that. It's not too late to change the path! - stop creating chaos and panic in the economy, people spend less money during times of panic and chaos
<p>T6T</p>	<p>Support teachers and nurses by removing the overpaid top levels and investing more in the classrooms where it matters. Teachers are faced with larger class sizes, higher number of special needs than ever before and less educational assistants. And fewer "managers" so that we can have more nurses on the floor actually caring for patients.</p>	<p>In education and healthcare specifically, there are so many levels of "upper management" that are paid ridiculously high wages. Eliminate those positions and put the money back into the classrooms and hospitals.</p>	<p>Ensure public servants are getting fair wages and accurate cost of living increases. Getting the pipeline projects going will help the oilfield sector to get moving again.</p>

T6K	Education, Health care, infrastructure deficit,	War room, oil company subsidies, tax cuts	By opening up the field to new technologies, looking at innovation in research, medical technology, geothermal heating, artificial intelligence, harnessing all the young educated people in this province to achieve new economic goals through projects that expand our product range. Start moving away from oil dependent industry into things that will be around longer, hydrogen fuels. Better energy storage systems, zero energy outcome housing modules. Ask all those bright young minds where they see the world in 50 yrs. Finally introduce a sales tax to pay for things, increase business tax to a reasonable level. Bargain basement tax does not appeal to companies as much as healthy infrastructure.
T8N	<p>Your budget plan has been an epic failure, stop and turn it around! I was offended when I heard you say that you can't ask struggling oil and gas companies to pay their taxes but you are asking struggling and suffering families to do more with less?!! Stop your attacks on vulnerable populations, it's horrible. So far this has been the impact just on my family (I am a single mom 24/7 of 2 kids with special needs who left Life threatening abuse): our abuse recovery counselling has been cut, our AHS counselling has been cut, my kids services and supports at their school have been cut, are home services are threatened to be reduced/cut, daycare costs are going up, insurance costs are going up, the cost of everything have gone up dramatically and everything has been cut. Why are you asking low income and struggling families to do more with less when we already don't have anything? Both my kids have significant health issues and the wait times have increased, services have decreased and outcomes will be poor. You are jeopardizing lives and the future of Alberta.</p> <p>Also, cutting Kleenex and water from Alberta courts? Clearly you have never been an abuse survivor attempting to bravely tell what your abuser did? A lot of Kleenex and water is needed! Stop your cruel and heartless cuts. You absolutely will not get re elected ever based on heartless and cruel cuts like this. Protect the vulnerable, support families and protect health and education. The system and societal costs of cutting all these services and supports will be much higher than any small savings you may be claiming now.</p> <p>Do NOT cut FSCD, PDD, AISH, health care and education etc. Invest in people!</p>	<ul style="list-style-type: none"> - cut all government travel and hospitality - reduce wages of high paid government staff - have all MPs take a wage cut - stop War room immediately, complete waste of money - stop handouts to the rich - stop costly lawsuits 	<ul style="list-style-type: none"> - stop cutting jobs and services, you are literally cutting jobs not creating them. - focus on diversification and strong public services (which creates jobs) - stop handouts to the rich - your plan is having the absolute opposite effect and even your previous supporters are seeing that. It's not too late to change the path! - stop creating chaos and panic in the economy, people spend less money during times of panic and chaos

T2V	Economic diversification Education	Identify and reduce overheads Simplify processes (e.g. approvals) Hire employees rather than outsourcing and paying for contractors' profit margins Hire and contract to Albertans, to recycle some of the cost back into Alberta Treasury through taxation	Incentivize economic diversification, leveraging Alberta's resources and Albertan's high-value skillsets; focus on creating / retaining high-paying jobs for Alberta's STEM workforce that has been especially hard hit by the oil & gas industry downturn. For example, reinstate SR&ED and Alberta Technology Futures programs.
T5T	Social programs, healthcare, education, mental health, and addictions support	Quit fighting the federal government on the carbon tax	Focus more on diversification, invest in education and job skills development
T8n	More public health care, more k-12 funding, more university substitudy, more funding to municipalities	No more bail outs for oilfield companies. Decrease privatized health care. Cut the wage of the premier.	Stop stimulating fear that alberta will separate from canada. Invests dont want to be in markets if alberta becomes a rogue state. Help finish the NDA and federal government mission of building the pipeline.
T6J	I believe strongly in efficiency but I do not believe efficiency should come at the cost of care/service. Alberta's government must maintain services in our publicly funded institutions without undo strain on front line workers. This means maintaining class size commitments for students Gr 1-4 and lowering still class size caps in Gr 5-12. Maintain existing staffing of Nurses, Nurse Practitioners & other highly qualified health care staff. Stop closing hospitals and start funding every student entering the school systems. Stop providing corporate business tax cuts. Start supporting to rural municipalities who are endeavoring to collect back taxes from business, especially those in the energy sector. Many of the decisions made by Alberta's current government seem to reflect a value of profit and private enterprise, not the value of shared responsibility and service for all.	Find savings by reducing unnecessary government spending such as the Fair Deal consultations, the Energy War Room, and investigations regarding foreign targeting of Alberta's energy industry. I don't understand why Alberta Fish and Wildlife is traveling the province to consult Albertans on stocking lakes with walleye when rural crime continues to escalate in frequency & intensity. It seems like such a misalignment of values and priorities.	Stop cutting grants and budgets. Stop advocating for 1 sector of Alberta's economy alone and advocate for all sectors of Alberta's economy. Support and advocate for Alberta's film and television industry or it's burgeoning tech industry. Alberta must become a forward thinking, innovative jurisdiction and this will not occur if our leadership believes 1 economic sector, that has struggled for over 10 years, holds the key to Alberta's prosperity. Again - short sighted. Think beyond the next election cycle.
T2A	Health Care, Funding For Special Needs People And For Our Seniors - Our Most Vulnerable Citizens, And Essential Infrastructure.	Cuts To Spending On Public Arts Which Should Be The Responsibility Of Private Coffers, No New Taxes, Cut Taxes To Small And Medium Size Businesses, Cut Spending To Post Secondary Education Such That Tuition Fee Increases Will Reduce The Number Of Graduates Entering The Labor Market-The Market Is Swamped With Too Many Graduates In Most Disciplines, And Last But Not Least Get Rid Of Public Sector Redundancy And Hence Trim The Fat Off Wasteful Spending.	Keep Business and Corporate Taxes Low Which Encourages Companies To Hire And Rehire Staff. Invest Smartly In Other Job Creating Industries While Maintaining A Strong Energy Sector. Keep Fighting Together With Other Provinces To Kill Carbon Taxing Against Trudeau's Draconian Style Of Governance. The Public Cannot Afford To Put Money Back Into The Economy If People Are Out Of Work And The Tax Man Is In Your Pocketbook All The Time.

T5R	<p>Quit cutting public sector! You cut front line workers not the 'fluff'. Fire executives. Quit comparing AB to other provinces and quit funding private companies, schools etc. Our education, health systems were just starting to recover from Klein cuts and lack of investment since. I fear the 'brain drain' from our province will be so much worse and take far longer to begin to recover from. Klein cuts is why the health and teacher unions are so poisonous. Cutting the staff is NOT going to help that. Quit putting off investing in the infrastructure needed to keep our province running (it's not going to get better, cheaper). Bring in a PST. Our province resources were sold By Klein and Albertans are not benefiting. The free for all Wild West of resource development has left a legacy of abandoned environmental liabilities and this government keeps handing more and more to operators with only the hope they will somehow bring back the prosperity of the past with no requirement that industry even pays taxes?</p>	<p>Quit wasting budget dollars on moving staff a million times (office after office, desk after desk - it's a HUGE waste of \$/resources). Quit the practice of 'use it or lose it' every March for government operations. This shouldn't dictate a departments budget year after year. Budget for projected use not what was used. It causes departments to spend their budget on equipment that's not needed and sits in storage rather than being re-allocated where it's needed (ie staff). It's a waste of money on equipment, storage space and inventorying. This is a broken way of budgeting particularly when more staff is required not equipment. A budget should not be hard and fast allocated to staff or equipment. If a department is given a chunk of \$ let them decide over the course of a year if they need to shift \$ from equipment (for example) to staff or vice versa.</p>	<p>Diversify! The previous government didn't have the tunnel vision this government does and was investing in ALL industries not just O&G. Our Tech companies are now suffering, green industry, etc. now that we have lost jobs across board - not just O&G, there is less purchasing power in the hands of Albertans to help keep our economy going and businesses which rely on the public to spend are suffering. It was bad before but I am scared to see what is going to happen now. I have been part of O&G my whole working career but I learned that you need to adapt and adjust to other industries and opportunities to stay relevant and employed which too many other Albertans haven't learned. Our public sector (not just nurses, teachers etc) is what keeps the province running. Keep in mind ministers this includes you!</p>
T3E	<p>Education, sustainable tourism and new technologies to capitalize on our educated workforce and grow an economy that will be sustainable and viable long-term. Capitalize on the Alberta entrepreneurial spirit and get some good ideas going that aren't crying about how good things were a decade ago.</p> <p>Infrastructure and transportation between and within the major cities and airports. It's ridiculous that neither of our major international airports have train service between them and the cities they serve. How can you expect to be internationally viable?</p>	<p>Closing down the "Canadian Energy Centre." We need to focus on new technologies, education, and creating a new world, not yelling at people who don't like the (now outdated) ways of doing things. It's unprofessional, embarrassing, and does not position Alberta as a desirable place to live--even for us living here now! Spend the money creating an Alberta we can all be proud of for years to come.</p>	<p>Invest in alternatives to the old boys' O&G. Yes, we have significant resources, and maybe we have been treated unfairly, but we have to see what's in front of us and start investing in new tech, education, and other sectors that will actually grow our population long term (not just bring in hoards of unskilled labourers that buy big trucks and leave when they're expected to get an education past grade 10).</p> <p>Other provinces and countries are way ahead of us. Our politicians need to get their heads out of the (oil) sand and start finding solutions, not bemoaning economic realities.</p>
	<p>Health, Education, Infrastructure. We need roads, schools and hospitals. Not focusing on health is a slap in the face to everyone, especially seniors who have made the province what it is today. Not supporting Education means the next generation is going to be uneducated and unable to be employed. But I suspect that is what your government wants. Keep the masses ignorant and maybe they'll not notice all the bad that the UCP is pulling.</p>	<p>Shut down the war room and stop giving bailouts to Oil and Gas. Actually reducing red tape. My friends who work in the government have told me stories about how many more committees have been formed to try and approve government spending. What a waste of time and labour costs. I think if all elected officials had all their tax benefits removed and had to live like normal people that would save lots of money.</p>	<p>Support all industries and sectors of the province. The current view that only oil and gas matters is insulting and frustrating.</p>
T8A	<p>Education, health care, and adopting strong targets for reducing climate change emissions should be priorities. Increase taxes on the rich and corporations or bring in a PST which is a consumption tax.</p>	<p>Stop subsidizing the oil and gas industry through royalty credits. Make them pay for abandoned wells and allow no further drilling without a bond covering all reclamation costs. Reduce spending on tourism, recapture the hotel tax for general revenues. Stop taking money from the Heritage Savings Fund. Introduce a PST.</p>	<p>Oil and gas industry is a dying industry. Stop counting on it. Stop talking and do something to actually diversify our economy. Encourage renewable energy industry, agricultural processing, technology and aerospace industries, communication industries, innovation and research. Tax breaks for these new types of industries only. Use a PST to balance budget and support new industries. Adopt a longer term view than 4 years.</p>

T8W	I have concerns about cuts to education. I do not like the idea of 100% funding for private and charter. Why are we providing money to those students whose parents have opted out of public education? These parents are able to afford to send their kids to these alternative solutions. They have chosen to pay for the child's education. Why would we fund the rich? Why is public education not the place for the funding? Why are we enlarging class sizes? With a lack of increase in funding to hire more staff to cover the increase of 15,000 students anticipated, larger class sizes are the only solution. It makes it impossible for teachers to provide a more personalized educational experience for their students. More students in class means more time managing behaviour than being able to teach. Education is our future. Are they not worth it? I'm a passionate teacher about kids. Endorse our future.	How about deleting the 'war' room which is costing us? Why are taxes being cut for corporations?	By investing in the future. Not treating a university like a business.
T6w	Education for the kids, cut red tape for small business trying to open in a tough economy.	Legislative assembly should all take a pay cut and set an example	Support small businesses
T4B	Education and healthcare	Taxing large corporations appropriately	Stop cutting funding to vital social services like education and healthcare. If we want our next generation to be successful and better our society they need to have the proper tools to succeed instead of being cut off at the knees. By cutting off education funding we are setting up the next generation for failure and they will only become a larger drain on our quickly depleting resources
T9E	Education Healthcare Social Programs	Cutting unnecessary government jobs Cutting from the top positions and not the front line	Investing into renewable resources Stop cutting funding and front line jobs
T9G	Creating/maintaining jobs and economic growth.	Improving internal and external government processes so that the processes are more automated, efficient and streamlined.	Don't lay off government workers, invest in capital projects to create jobs, issue grants to small businesses that promote economic growth and job creation.
T6L	Education, Healthcare	Executive level salaries, tax the richest, increase taxes for high-earning businesses and corporations.	reduce taxes on the poor, fund social programs to support those entering or re-entering the work force, provide accommodations for those who need them to enter the work force
T5Y	Education. Keep all schools public. We need smaller class sizes for our kids. There are too many kids in a class and some/many with special needs. Our students are not getting the attention they need in order to reach their full potential. Keep healthcare public as well so everyone can be their healthiest- especially the children. If we want a "strong Alberta" we need to make sure our citizens are well educated and healthy first. That is the foundation to any successful society long term. The last thing we need is more division among people. We will be stronger together.	Less spending on the oil industry alone. Yes it brings in revenue and jobs, but it is not all our province needs to thrive. Perhaps the government leaders could take a pay cut and spend less on travels as well - like the rest of us are doing.	If people see that Alberta is a good province to live in - in all aspects - then we will attract people to move here and businesses will want to invest here because we will have the people to support the businesses. Supporting locally owned businesses is important to support our own residents as well. Ensuring our youth know and understand more about the types of jobs and businesses offered/needed in Alberta will also help encourage them to go into those fields and we

T1S	Alberta Film/Screen industry tax credit. The credit should match or exceed British Columbia's tax credit. WITH NO CAP. The screen industry is a Billion dollars industry that employees large about of blue collar jobs.	-Cutting upper level government salaries. -Increasing taxes for anyone making over \$250,000 a year.	-By diversifying the government's focus and spending into other industries like the Alberta Film Industry. Oil and gas is important but we struggle as a province when we have all our eggs in one basket. -Create our own oil refineries so we dont have to export.
T0A	Lowering income tax	From over paid union runners. Who needs that much to sit in an office and look pretty .	Incentives
T4H	Education - class sizes Health care Police	adjusting programming instead of getting rid of it completely. Getting used to a little less instead of nothing at all.	?
T8A	Sustainable funding that will allow public schools to maintain their excellent standing in the world. Sustainable funding for health care to ensure a quality public system. STOP farming out our health care to private, for profit institutions!!!	We need a sales tax, not enough revenue can be generated from other sources. Stop giving incentives to business. p	Diversification.....stop just focusing on oil!
t2v	Health System Education Economic Diversification	Eliminate the Oil war room Cut back on new infrastructure projects	Bring back the SR&ED Invest in Tourism Invest in Tech Research grants Invest in Sustainable energy projects
T5H	PUBLIC Health. Environment.	Stop giving tax breaks to corporations and bending over backwards for industry. They aren't profitable or sustainable and we've all been aware of this for some time.	- provide incentives to companies moving toward sustainable energy - push companies in O&G to clean up and reclaim wells - support the tech industry, they're here and not going away
T0E	Healthcare, education & elderly care & lowering debt	In government staff wages, traveling and other frivolous spending.	In the best way they can.
T5n	Education, post secondary education, retraining for those losing their jobs	Remove Tax breaks for oil and gas	By diversifying and focusing on strengths outside the oil patch (tech, medicine). Look at what Pittsburgh did when their main industries collapsed.
T9H	Public education and Health Care	In my opinion, it is entirely too simple to believe that you can totally balance the budget responsibly by focusing on only cost cutting measures. When considering the removal of, or streamlining of various services, it is imperative that you consider the impact on your citizens. Cutting costs from a provincial perspective by shifting the responsibility for these services to municipalities or ordinary Albertans, is disrespectful and deceitful. I believe that you must also consider the revenue prospective as well. It is obvious by the actions of certain corporations that the recent tax cut did not inspire them to hire more personnel, therefore eliminating the planned tax cuts for corporations would help by improving revenue. Increased revenue directly, and indirectly brings savings to the government.	Innovation and research into broadening our province's revenue base is key. While the oil and gas industry has provided us with great prosperity over the last 50 years, there are pressures negatively affecting our ability to continue our economic path using these same processes. I am not suggesting that we eliminate oil and gas, as I believe that a transition to include other sources of revenue is better for our province as a hole.

T6H	Education and healthcare, including post-secondary.	Don't give billions in tax breaks to corporations. Also, it's totally possible to balance the books by RAISING more money as well, such as increasing taxes on the 1% and implementing a PST. Savings is only one side of balancing the budget.	Fund post-secondary. Reinstate grants such as the technology grant that help diversify the economy.
T5t	Health care, education and technical training	Salaries of politicians	Diversifying the provincial economy! We have oils and gas but we need other industries to employ Albertans. We could have a thriving film industry but that was killed by the government rolling back tax incentives. We could have had a thriving tech industry but again tax incentives roll backs killed that. The government needs to see that oil and gas will only employ so many people, we need other industries to fill in the gaps and stabilize the provinces economy as the price of oil fluctuates
T3Z	clean energy and the energy transition, we need to find ways to redeploy our skills. Diversifying the economy into up and coming sectors like tech, film industry, biotechnology	use IT to replace bureaucratic jobs. decrease the vast amount of useless reporting in, for example, health and education spending.	help Alberta get a slice of the renewable energy/cleantech sector using our existing infrastructure and educated workforce particularly in drilling, engineering and business
T8L	Diversifying economy away from fossil fuels Restoring funds for schools and healthcare Drug addiction prevention strategy	Ending panels such as war-room adding provincial sales tax Taking fewer staff and aides on trips around Canada and the world	Diversification. We are more than oil and gas! Educate our public. Invest in technology
	Education & health funding	Taxes on business, decrease spending	Rewarding businesses that create more job opportunities
T6C	social services supporting the disadvantaged: youth, disabled, seniors, poverty, unemployed.	Stop politicizing government decisions.	Support other industries besides oil and gas (and I work in oil and gas!) but it's critical that the province diversifies.
T2X	Schools, university, hospitals.	Better management of government funds. Charging more taxes to big corporations.	Invest in infrastructure. Incentives for the small businesses, not just the big ones.
T2T	Focus on supporting the post-secondary sector. During an economic slowdown, Albertans need access to additional education and training. The province already has the lowest participation rate in Canada and we should improve in this respect.	The government could find additional revenue through increasing the progressive taxation measures in place and by introducing a sales tax.	The government should support job creation and economic growth by providing Albertans access to low-cost, curiosity-driven education at all levels.
T2R	Health care, education, transportation, roads, and low-income families.	Stop giving tax breaks to oil and gas companies.	By diversifying the economy and making it lucrative for tech companies to startup in Alberta. Bring back the tax credits!
	Jobs!!!! Health Care - stop laying off the front line workers. Having just spent some time in hospital they are short staffed as it is. Laying more off will only make the situation worse. Mr. Kenny you need a reality check. Try being a patient for a week or two and see how you feel about the current staff shortages. DON'T MAKE IT WORSE. Education.	Try taxing the high wage earners instead of socking it to middle class and low income. You try living on a fixed income of under \$1500.00 per month and see how you feel about raising taxes. Why don't you take a pay cut? That would save quite a few dollars I'm sure.	Why don't you try fulfilling your election promises instead of cutting back on health care workers and raising the cost for students trying to get an education. Quit lying to the general public. Get the pipeline going.
T7A	I think the spending priorities that the Government should focus on are Schools and Health Care. These are the 2 main departments that need the most help instead of cutting this back.	I think the Government could find savings by cutting back on staff in Division offices and focusing on putting more support in the Schools and Health Care.	I think the Government should support job creation and economic growth by supporting the Schools and Health Care more instead of cutting these jobs back. It's the children and patients that are suffering without having the support they need.

T0J	The government of Alberta will S.P.E.N.D.?	Tissues... get them out of courtrooms. In fact, remove all public toilet paper, paper towel, toilets, and soap too from every government facility. Alberta has plenty of leaves (in summer) to wipe with.	By strategically placing UCP supporters in the War Room. That way, they can use the UCP propaganda & rhetoric to woo oil companies to the province who will subsequently withhold municipal taxes. In short, DOUBLE DOWN on oil & gas Mr. Kenney, the base supports your efforts.
t9k	hiring more nurses to ease wait times in hospitals more snow plows in Fort McMurray the way the roads are in the winter are absolutely ridiculous and embarrassing better busing system in Fort McMurray in a small city it shouldn't take 3-4 hours to get to a destination	cutting public sector workers sick days as they are heavily abused	create more jobs add to the already existing not cut 1000 and then ad 500 then say we created new jobs
T5x	Front line staff, nurses, teachers.	Trim the fat. Why is there 7 managers to front line staff offices with only 6 staff?	Tax the big corps. They don't need huge bonuses in their pocket.
T1H	Education and Healthcare	Reducing inefficiencies top down in some of these organizations. The front line workers are already lean. Look to the top and see what is needed and how efficiently it is running. Grants and initiatives.	People need to be educated to work. People need to be healthy to work. Parents need their children to be safe and cared for to be able to work. If people are educated and supported they will work and help the economy.
t6a	Not Matt Wolf... Maybe making sure your citizens can survive daily life. Stop giving breaks to oil and gas companies. First 4.7 billion dollars in handouts, now they don't have to pay their arrears? GARBAGE.	Stop paying Matt Wolf almost 200 grand a year, when you won't even pay head nurses that wage! They save lives! Matt Wolf is a) not even an Albertan, b) sits on his butt all day formulating awful tweets and c) is a despicable human being.	Subsidize schooling, get people into the trades, encourage growth instead of just focusing on one sector.
T1K	By making the oil companies accountable versus giving them a handout with a \$4.5 billion tax cut. They have not paid taxes to multiple rural municipalities and we have thousands of orphan wells that have been abandoned across the province. Meanwhile, they only pay a pittance on royalties and Alberta has nothing to show for it, so something different needs to happen. Also, reversing some of the economic practices that happened in the current budget year are appalling. Thousands of Albertans lost jobs (versus 'going back to work'), and life has gotten more expensive for all of us; increases to our municipal taxes and insurance costs.	Two ways; Close down the ridiculous "Red Tape" Ministry, and focus on diversifying our economy, and get back the \$4.5 billion that you gave to the oil and gas companies.	Support diversification, and create a more robust royalty model from the oil and gas producers.
T9K	Improving the deficit issue and promoting jobs	How much is given to Ottawa	By not cutting jobs that are essential like medical employment like nurses and cleaners at the hospital
T9K	Improving the deficit issue and promoting jobs	How much is given to Ottawa	By not cutting jobs that are essential like medical employment like nurses and cleaners at the hospital
T1K	Health care, education, and social programs.	Stop subsidizing the dying oil industry.	Invest in education
T5H	1. Education - K to 12 and post-secondary 2. Hospitals and medical 3. Homeless 4. Mental health	Cut funding the oil and gas war room - \$400+ million saved right there. Cut elected politician's salaries to \$50,000/year. Cut elected politician's spending accounts to \$25,000/year. Stop trying to cut your AB employee's yearly salary unless you ALL do the same!!!	Diversification and promotion of technologies within and beyond the oil and gas sectors (green tech, alternative fuels, etc). It's great that you want to stand up for Albertans in the oil and gas sector but you need to stand up for ALL Albertans in ALL sectors. The lack of support (perceived and factual) towards various technology companies is disparaging. If you don't work in oil and gas, the current government couldn't care about you other than your perceived vote.

T5T	Education, Secondary Education (colleges, universities, trades, etc), Bussing initiatives and affordability, Healthcare, Senior Care, Affordable Day Care, Universal Pharmacare, Getting Tax money from Oil Sector, Negotiating to have Carbon Tax reinstated & to be collected as it was before—with revenue staying in Alberta, Infrastructure, Small Business incentives, Roads, Public Transportation....AND GIVING THE PUBLIC SECTOR EMPLOYEES THEIR PENSIONS BACK—you KNOW you had NO RIGHT TO MAKE THAT GRAB WITHOUT CONSULTATION WITH MEMBERS!!! That alone has cost you 100s of 1000s of votes!!! Leave the lotteries alone too!!	Instead of waging wars with public sector employees and their unions—be serious and HONEST and cull the over abundance of middle management EVERYWHERE; why is the CEO of AHS earning a very healthy six figures AND BEING ALLOWED TO DOUBLE DIP AND CHARGE FOR HOURS, working a SECOND POSITION IN AHS??? Tax breaks for small independent business owners; INSTITUTING A PROVINCIAL SALES TAX, investing in all of the audio/visual/film making industry, JOB CREATION, decreasing government travel expenses (especially in this day and age of technology), CLOSE YOUR DISASTROUS WAR ROOM, maybe have a consultation with the other party to determine some GOOD plans for this province! I can guarantee that you will not get in to power again, running this province the way you are!	STOP. GIVING. AWAY. BILLIONS. OF. DOLLARS. TO. COMPANIES. THAT. ALREADY. MAKE. BILLIONS. OF. DOLLARS. AND. ALREADY. RECEIVE. RIDICULOUS. TAX. BREAKS. AND. INCENTIVES. Instead of hurting industries, invest!! Is this really news? Does anyone know how to do their job??? Why hurt the film industry? Why hurt small business owners? Why go after doctors, lawyers, teachers, nurses, police, fire fighters, paramedics? Get the province working! Ed Stelmach at least had the Anthony Henday project moving in his downturn; get your public sector workers working! Their taxes will help your bottom line! NO PRIVATIZATION. That is a one and done deal, we have seen it before and we all KNOW friends and family get the deals; with subpar work and the province left holding the bag with bankruptcies and bills left to pay....FFS, BE SMART. Tell me, do you REALLY believe Oil and Gas will come back to the way it was?
T0A	Healthcare and education	Get rid of the unnecessary war room ideas.	Work on getting the pipeline approvals, stop taxing everything to death, cap insurance and utilities, and people will put money back into the economy.
T6W	Education Healthcare	Cutting or freezing the salaries of managers, CEO's and other high paid office official positions. Also introducing increased sales taxes. Many albertans would gladly pay slightly increased taxes instead of seeing frontline health care worker jobs cut and budgets for public schools cut or "redistributed"	Unknown at this time
T2z	Increasing Education Increasing Healthcare Making the rich pay MORE not less	Reduce the premier's and cabinet's salary and bonuses.	Bring back tax incentives for non-oil companies that you just eliminated to diversify the economy

T8N	activities that fuel and stimulate economy. encourage business investments	<p>Laying off public servants may provide instant savings. But in the long run, it will slow down economy as there will be less money flowing in to the system. For example, laying of lawyers will not necessarily provide savings, there will still be a need for legal advice. Outsourcing or getting advice from outside will be more costly and not necessarily get the best advice. How much savings can there be? And there will be hidden costs from other ministries.</p> <p>Within the government, review employees from different ministries that sometimes requiring to work on weekends. Make them change their worktime instead of working weekdays (monday to friday) and always get overtime for the weekends (saturday and Sunday), let the staff take 2 days weekday off so when need to work on Sunday, there will be no overtime pay or banked time which is time and half and double for sat and sunday.</p> <p>There are many social programs that are not income tested. I suggest all the social programs need to be reviewed by a fresh eye. Asking social workers or their executives to review them will not get good feedback.</p> <p>so many \$ spent on social service to agencies and contractors. Not enough audits and controls in place on how they spent money. These should tighten their belts along with all Albertans.</p>	<p>US has been very aggressive in encouraging investments. Trump has been doing the right thing and the stats are proving he is doing the right thing.</p> <p>Our Federal government is not showing any aggressiveness in making the business environment conducive. All Trudeau says is he wants to increase employment. But who will employ Canadians when there is no right business environment.</p>
T1J	Health and Education	Do away with elected school boards Reduce administration across all ministries, hospitals, school boards and other agencies.	Reduce regulatory roadblocks
T3b	Education, Social Services, Health care, Infrastructure	Tax corporations and businesses at the same rate as the rest of Canada. Eliminate incentives.	<p>Diversify: as long as all Alberta's eggs are in one basket (oil and gas), our economy will continue having a boom and bust cycle.</p> <p>Infrastructure upgrading creates job, which in turn help the economy.</p> <p>Think long term: band aid solutions do not solve problems. Invest in youth programs and initiatives.</p> <p>Support affordable child-care: lack of affordable child care is the number one reason for mothers lack of employment or under employment.</p>
T6R	Health and the arts. Incentives for new grassroots businesses. Support those trying to make a difference by starting new local Albertan businesses.	By giving fewer tax cuts to multimillion dollar corporations.	By encouraging new avenues for business. Making it more affordable for home based businesses to pay for and maintain licenses.

t0I	<p>Education Healthcare Infrastructure</p> <p>17(1) I voted UCP even though I knew it would hurt my field of employment it was what was best for our Province. Please take into account we have a wicked Province but you need to prioritize "need to have vs nice to have" services.</p>	<p>Non essential spending Salaries for unionized workers that are not do not have a specialized skill set Arts and Culture spending: this is a nice to have not a need to have when we are in our current economic situation</p>	<p>Government needs to lower corporate and small business taxes as well as work with municipalities within the Province to ensure we are not taxing businesses and corporations. Doing business in our Province should be accessible and encouraged it should not be a deterrent.</p>
T2K	<p>The well-being of Albertans, particularly vulnerable Albertans, meaning a focus on healthcare and education as they are both investments that will make the province stronger. For example, investment in early childhood education yields long-term ROI. Protecting our most vulnerable people should be the top priority. And that's not Oil and Gas Companies.</p>	<p>The Canadian Energy Centre has been a boondoggle of stolen logos and spending without insight. Bottom line is, we have a revenue problem, not a spending problem. Corporate tax cuts are only creating the need to find savings, they are clearly not creating jobs nor are they keeping O&G companies from leaving Alberta. They are being supported at the expense of vulnerable Albertans. Also, it's time for a sales tax. I don't love paying tax but I would feel better about it if it was being invested in our future, and not in the pursuit of bringing back the old oil boom days and corporate welfare. Start by collecting the taxes owed to rural municipalities by O&G companies!</p>	<p>Investment in daycare would allow greater workforce participation by many Alberta parents. Diversifying our economy has to be a priority for economic growth, given the divestment from oil sands by so many international players, the need to reduce our use of fossil fuels, but most of all, to keep up with where global industry is heading. Diversifying into tech, and providing mechanisms for growth and investment in this area, is key. I feel like the government is currently trying to pull our economy back into the past, and has lost sight of where things are heading.</p>
T5J	<p>Healthcare and education.</p>	<p>Corporations and sports - do NOT subsidize or provide tax breaks!!!</p>	<p>Stop cutting existing jobs.</p>
T6A	<p>Preserving and up-scaling social support programs. It doesn't matter if the economy is fixed if the workforce is broken or crime is so rampant no one wants to move and work here.</p>	<p>Remove tax incentives for business. Stop trying to deliver community programming in house and instead fund community not-for-profits who have the expertise to deliver programming. Stop costly court cases against the Federal Government. Implement a provincial sales tax and a provincial carbon tax.</p>	<p>By focusing on the health and education of our population.</p>

	<p>Health and education. Health can be made more efficient but it shouldn't be done by cutting corners and dumping on nurses and physicians. We have worked tirelessly for years to attract physicians to rural parts of the province and these proposed changes to their pay structure will undo that effort with one stroke of the pen. Perhaps you don't realize doctors (and nurses) can work anywhere in the world. Right now, one in five albertans don't have a regular doctor and if they leave, it will get worse. There are way to cut costs by working together. You don't have to be so combative all the time.</p>	<p>Cut your stupid war room!!! What a bunch of nonsense. You spend the salary of one front line worker every day doing what exactly? Picking fights with Alberta reporters and ripping off logos. Also stop with the travelling all over the world for the sake of travelling. Do you have any metrics around the cost benefit of these trips? Are they evaluated against any criteria? Are they done at the recommendation of Alberta businesses that trade with other countries? Are they based on statistics around success rates of FDI companies? Also stop showboating by flying other premiers around in your cool jet. They have their own budgets and that should be able to manage their travel within it.</p>	<p>Stop taxing the crap out of everyday albertans. Your government has raised the cost of living of every household by 1) education cuts which translate into increased school and budding fees, 2) removing insurance caps, 3) allowing 21% tuition hikes in post secondary, 4) eliminating the education tax credit, 5) changes to the personal exemption,6) removal of the cap on electricity rates, 7) reduced payments to municipalities resulting in increasing municipal taxes, 8) elimination of the \$25 a day childcare program to name a few. What this means is people are not spending money. This is hurting small business and the economy in general.</p> <p>Second, I thought you might be interested to know, Alberta has a large number of industries in which we are a world leader. Stop focussing all your efforts and propaganda on oil and gas. You make us look like a bunch of redneck cowboys when in reality we are an educated and innovative province with amazing entrepreneurial spirit and get dressed done attitude. You are driving away industries that don't feel supported or valued and missing out on a huge opportunity.</p> <p>Also, you should really stop unfairly discriminating against women in the workplace. The elimination of the \$25 a day childcare program will result in a large number of women leaving the workforce because they can't afford childcare. The translation of your cuts to education are resulting in bussing reductions which impact those who rely on before and after school care in order to work. Women have always carried the bulk of responsibility when it comes to childcare. Alberta has (or had) the highest participation rates of women in the workforce - one of the reasons Alberta has been so prosperous in the past. Forcing women out of the workplace is archaic and downright wrong when it comes to provincial policy and spending. Do better</p>
T0G	The public sector- healthcare and education.	Paying their employees less.	By NOT killing the public sector. Also they could find growth by diversifying from something other than oil.
T2J	Health Education	Cutting back on bureaucracy. Lowering wages for administrative staff. Eliminating task forces and "war rooms" Increasing taxes on the rich.Eliminating subsidies to big businesses.	Eliminate subsidies to big business. Provide incentives to smaller businesses.
T1J	Healthcare and education. Actually fund them, don't lie and say you are when actually, accounting for inflation and student enrolment, you are making massive cuts.	Not lowering taxes for profitable oil companies that continue to lay off employees while further enriching themselves. I want my tax dollars to go towards healthcare and education not corporate handouts.	Investing in people, not gas companies. Invest in education and healthcare. Invest in diverse industries not just oil and gas. It is not that hard.
T4V	The government should focus spending on education, healthcare, clean energy and climate change.	The government could find many savings in tax breaks and benefits to large corporations.	By investing in students and supporting small, local businesses.

T6J	<p>Making life better for all Albertans, creating jobs that ARE NOT in oil and gas, and investing in the future rather than looking at the current year or two.</p> <p>Oil demand is falling all around the world. We are behind in making the shift away from the oil industry into other industries that will be successful long term. The government needs to stop pandering to the oil companies and start investing in a diverse economy that will carry Alberta well into the future.</p>	<p>Finding savings is the wrong way to go about it. There is nothing left to cut.</p> <p>The government needs to find a way to increase revenue streams. This includes diversifying our economy so we are not so reliant on the ups and downs of the oil economy (news flash: global demand for oil is DECREASING), and introducing a small PST.</p>	<p>DIVERSIFICATION!!! Don't rely on the oil companies for all the jobs. Attract different industries, provide support for retraining, and shift the focus away from the oil economy.</p>
T2V	<p>Diversifying the economy away from oil and gas as soon as possible or we'll be left with "a bunch of fishing boats and no fish" like in NL some decades back!</p>	<p>Any moneys going to support O&G should be stopped immediately... let them pay their own way.</p> <p>Further, we should implement a pollution tax (use of fossil fuels, abandoned wells, ...) to avoid the need to "find savings"</p>	<p>We have a young and educated workforce... move our people to the future including green energy, green tech, tech, etc... this will support urban and rural folks</p>
T4P	<ol style="list-style-type: none"> 1. Hospitals and patient cares facilities 2. Highway improvements, as making the QE 2 six lanes. 3. Make welfare recipients take weekly or biweekly drug tests 4. Senior residences that they ca afford. 	<p>Government has too many people working for them, start there. Limiting pensions of MPs and high ranking officials. Use the taxes of programs such as taxes on fuel.</p>	<p>I suggest that Alberta do the same as some of the States do. Companies that want to build facilities if they ask for tax concessions, work with them. Yes it may be a short time pain for long term gain, but it also puts people to work.</p>
t3b	<p>services for Albertans, health care, public service employees, infrastructure</p>	<p>management in public sector, corporate tax credits</p>	<p>support small businesses and entrepreneurs, diversifying our economy,</p>
T6R	<p>Education, Health, Infrastructure & not to forget - Environment.</p>	<p>By not giving those already extremely financially advanced people more tax credits & building are war - room with millions on dollars in there.</p> <p>Instead work for the people who are in needs and looking for some lifts in every day life's.</p>	<p>By looking more for things which support the future and not hanging only on the idea in the oil & gas industry. Supporting more new ideas which might bring more work in the long term for the people.</p>
T5E	<p>A mixture of Keynesian economics linked with strategies designed to find efficiencies and better economies of scale in both the public and private sectors. There should also be some built in accountability for the private sector to demonstrate it is investing in the Alberta economy with monies saved from the corporate tax reductions.</p>	<p>By implementing strategies for improved accountability in all government ministries, especially basic education, health and post-secondary education.</p>	<p>Define better human resource development approaches across multiple ministries with responsibilities that overlap this area. E.g. see the draft report, Skilled and Capable Albertans, the Key to Alberta's Future (June 1992) if you can find a copy.</p>
T3C	<p>Healthcare and education.</p>	<p>Stop putting money into corporate tax breaks for oil and gas— with no pipeline here (blocked by federal govt) there is nothing for these corporations to invest in! Waste of money making the rich richer and the once-middle class poor. Consider investing in newer forms of sustainable energy. Plenty of wind and sun in Alberta.</p>	<p>Don't require massive budget cuts that result in layoffs to nurses, teachers, and university administrative staff. Your government has caused far more job loss than growth.</p>
T6w	<p>Education for ALL ages, focus on k-12</p>	<p>Mindful spending. For instance the cost of changing the name of a service/program. For example unemployment insurance to Employment Insurance.</p>	<p>SUPPORT oil and gas industry. Put \$\$ into diversification if economy. For example Lithium</p>
t1w	<p>Education, Health Care, services that better the province as a whole. Everyone needs health, everyone needs to learn, everyone needs services such as police, fire, etc.</p>	<p>Likely in environmental taxation. Increase tourism taxation.</p>	<p>Build from the ground up, the better our province is as a whole the better off we will all be. Don't cut jobs from government related services as those have significant residual effects through the entire economy</p>

T1P	education that doesn't push an agenda for some group. health care front line workers without AHS protecting non union workers	Stop allowing unions to run government. Get rid of AHS administration that is duplicated. unions are misinforming the public on front line workers, by protecting non union jobs.	Hold the referendum NOW. Start moving forward. Nothing changes by standing in one spot and waiting.
T1w	Health and education	Not subsidizing profitable industry Taxing corporations	By not cutting front line workers, Through social programs that support people Through a minimum wage that gives the whole population real buying power
T6W	Economy, Education and Healthcare	Cut down on immigration and support for addicts and low income who are otherwise healthy and can support themselves	Support local talent and train locally.
T0A	Excess travel	Use of technology for meetings/documents	Looking at aiding institutes on creating MOOCs and other online learning for people to better themselves
T8A	Diversity of Alberta's energy industry through the development of nuclear power. Specifically Thorium based nuclear power. Safe, reliable, expandable and zero emissions. There is no logical reason we should not be looking at this.	A proper review of AHS. I know several people all working there in different departments and they all claim AHS has too many managers and not enough front line staff. Earlier reviews of this are not accurate.	Development of nuclear power would not only position Alberta as a leader in green energy but bring jobs as a result.
T5Y	The government should be focusing on the future of all Albertans. The Province has already invested so much money and infrastructure for social programming to end domestic violence, homelessness, overdoses, etc. The completely deplete the funding for these programs creates a greater strain on our society as a whole. This will impact our future generation as well as the social programming we currently have available. Let's think proactively and from a trauma informed harm reduction lens. victims should NEVER have to bring their own kleenex and water to court. We NEED a sustainable healthcare system. What is currently happening is not sustainable and the results will be a suffering society. We need nurses, doctors, patient care. We do NOT need a privatized system which is quite frankly the way things are going.	Perhaps reevaluate all of the construction and infrastructure and be creative and innovative with the space we already have available.	More programming for individuals who are reintegrating into our society from homelessness, domestic violence, or criminal charges. Offer programming to offer these individuals jobs, under a harm reduction scope.
T7A	Health and Education	In my opinion and experience we are mid level heavy. Many employees are able to layer up and not be accountable for outcomes in the mid range. The public can phone and do not get the same person twice. People don't do their jobs, are poor at their jobs, or are bored with their jobs but can hide in plain sight.	I think you are on the right track by getting rid of a minimum wage and supporting employers as I think they are often taken for granted in getting people back to work. Build the pipelines!
T0M	Education and Healthcare	Reduce Government bureaucracy Ensure companies are playing their taxes Cut down on committee work	Ensure all students have access to financially accessible post-secondary education. Incentives for small business owners Properly fund education so that future adults have necessary skills
T0H	Public Services, Teachers, Nurses.	No more corporate tax breaks. Eliminate the war room and committees that are there to pay lip service and be responsible with hiring (ie your social media buffoon)	Invest in people, not companies.

T0H	Public Services, Teachers, Nurses.	No more corporate tax breaks. Eliminate the war room and committees that are there to pay lip service and be responsible with hiring (ie your social media buffoon)	Invest in their people. not companies.
T5G	Education and healthcare.	Supporting preventative healthcare to decrease healthcare costs later.	Support education so that we continue to have skilled workers in Alberta.
T9s	Healthcare and education	Management and reevaluating contracts with vendors in larger government sectors. For example, ridiculous amounts of money are being spent on office supplies from grand and toy when despite the discounts, the same quality products can be bought elsewhere for cheaper.	Invest in the people of this province and job creation, not cutting positions. People who have money to spend will spend it.
T7x	Public education and health care including mental health for children	War room	Yes
	Education and health care	Impossible Legal battles and Kenney's war room. Less corporate handouts to companies still leaving the province.	Incentives for small/startup businesses Diversify resource spending on new technologies
T5M	<p>1. The Family and Community Support Services (FCSS) program should be increased. As the economy has slowed and employment is extremely low under this government, people are needing more social services than ever. This program is unique to Alberta and deserves to be highlighted more and enhanced.</p> <p>2. Maintain and expand the \$25/day daycare program after June to ensure that both parents can go back to work. The research demonstrates that when women can go back to work it is not only good for society to have more diversity but it increases the GDP.</p> <p>3. Investment in green energy including solar and wind. Oil and gas is a diminishing resource and cannot continue to be the base on which the Alberta government makes financial decisions</p>	<p>1. Implement a provincial sales tax. It is absurd to not have one like every other province and could bring in billions of dollars to be spent on social services, health care, education and employment.</p> <p>2. Increase big business corporate tax back to where it was under the NDP.</p>	<p>1. Restore the nursing positions that were cut from the health care system.</p> <p>2. Diversifying investment into green energy. Create a program for former oil and gas workers to learn these newer technologies.</p>
T4S	retraining of the under or un-employed ways to make access to employment opportunities more readily available	less reprinting, less logo work, less new initiatives that have high start up costs. More using what is already in place.	re - training, taking our province into new energy sectors. more solar- more development of renewables and reusing in solar. More encouragement and ways to help people be energy and other resources(water) conscious. Use train the trainer models to employ more people in energy (non- oil and gas sectors). Help people find work that pays more than EI but help them understand they won't have the level of pay of oil and gas in the past. Set employment standards that support family life-transport back to your home regularly is part of the job benefits for example.
T5T	PUBLIC Education! It is easy to see through the government's agenda to create a fully funded private ELITE education system while slandering/diminishing/dividing the current world-class system. Why the need to perpetuate the gap of rich and poor?	<p>Less review boards, less war rooms, less deregulation so that the private sector can take advantage of Albertans (eg. insurance).</p> <p>The government wants to save money, but Albertans are paying more and more. Not what I voted for.</p>	Fight for energy - that is fine. But understand that it will never be the same and the PC party from 20 years dropped the ball when they didn't invest in refinement and infrastructure to get the product to market. Now the US doesn't need our energy and we don't have the means to get it anywhere else. TIME TO DIVERSIFY!

t3p	The GOA needs to focus on things other than oil. The age of oil is no more with the growing movements of green power and protests around pipelines.	<p>Savings, the premier and MLA's took a "roll back" MLAs from \$127,296 to \$120,931 as of Aug. 6 and Kenney's pay was cut from \$206,856 to \$186,170. Since most senior management make over 6 digit salaries cutting them by a couple percent should happen. A regular "peon" as I call myself makes 17(1) a year and pay the same type of payments the 6 digit people do. I can make those ends meet why can't they afford to take more of a roll back. May I turn your attention to the sunshine list where the Assistant Deputy Minister made \$192890.10 salary, 104375.55 in cash benefits and 45852.89 in non cash for 2018. According to this site this particular individual received 104375.55 in Cash benefits including earnings such as overtime, vacation payout, northern allowance, vehicle allowance and lump-sum payments. Instead of looking and cutting the average Albertan's salary perhaps taking a better look at this list and finding ways to cut from the upper crust should happen. The rich get richer it seems.</p> <p>The goa can also save money by having their employees scan more material versus faxing (save on paper costs). We have an outside contractor doing grounds maintenance and shoveling, why can we not use the inmates to maintain flower beds, sweep parking lots, paint the lines for the stalls, clean office areas. They do some of these things under supervision already why not expand.</p> <p>I believe that the goa should not supply management or supervisors with their own printers (toner costs etc can exceed 250\$) because they are too lazy to leave their office and walk a couple feet. I think if all areas are getting supply cuts (no kleenex, water, post it notes, paper etc) the Judges should also follow suit. Overtime is another area of contention with me. I came from a department where OT was plentiful but people milked it for all its worth. With less staff</p>	<p>The current goa is killing any prospects or ideas of job creation. With the pipeline being built some jobs will be created but not enough. The GOA plans to cut 2500 from public service, 2000-3000 at AHS, 400 nurses and many more. Pushing towards private healthcare, another tool the rich can access easily. Perhaps trying to save jobs they plan on cutting would be a better question. It seems there is alot being done about oil and gas workers and not the goa ones. It seems like we are being vilified in the media as spoiled. I have offered many times to show my pay cheque if they show theirs.</p> <p>The GOA should capitalize on things like the legalization of marihuana and build processing plants which would create jobs. Oil and gas seems to be our bread and butter why don't we refine it?</p>
T6J	Healthcare, e.g. waiting lists for specialists, tests, surgery, etc..	Have fewer levels of management. Cut management perks.	Sales tax on luxury goods, e.g. non-commercial vehicles over 40K, all non-commercial boats, electronic goods, e.g. TVs, over 1k, RV's.... in other words, a tax on non-essentials.
T2K	Homeschool education fund. Parents are only given \$830 per child per year to cover all the costs of home education. This amount doesn't come close to covering the costs of supplies, books, class room materials, physical education, music and art. We are spending hundreds of dollars out of pocket to give our children a rounded education. We save schools \$10 000 per child and would like to be compensated fairly!	<p>Stop spending millions of tax payers dollars on city "art works" like stupid round lamp posts and rainbow coloured crosswalks.</p> <p>I also believe the city of Calgary should be outsourcing their construction projects. Get quotes from different companies, and hire the best for the job. Stop wasting tax payers money to have 10 guys hired to do one man's job! You'll save our hard earned tax payer money, get the job done quicker (and better!!), and support local businesses.</p>	Bring back the oil and gas industry! This would create thousands of jobs for Albertans, it would bring money back into the province, and strengthen our economy.
T4S	Health, education	End War Room, Stop corporate tax cut, decrease number of MLAs.	Fund arts and public services, invest in alternate energy

T6W	For global competitiveness, we need to focus on education, healthcare, innovative energy technologies, technology in general, and healthcare.	(1) Raise corporate taxes to levels similar to other provinces (2) Eliminate the Canadian Energy Centre -- energy companies have their own budgets for outreach. (3) Upper management: there are too many sunshine-list managers who are unnecessary. (4) Paid boards, committees, and panels: being part of these should be part of members' normal salaries	By helping Albertans educate themselves to be globally competitive in the booming low-carbon, technology-driven economy. By helping develop innovative technologies to reduce the carbon footprint of our oilsands. By re-implementing our own carbon levy to further legitimize our energy industry.
T6C	Healthcare, education, and investment into alternative (sustainable/green) energy sources, as well as the transition of O&G workers into this field.	They should start by immediately discontinuing the "War Room" (Canadian Energy Centre) as it clearly provides absolutely no value and is a burden on taxpayers (not to mention an insult). The government should also severely restrict travel spending, especially for the premier and staff. Absolutely no need to be regularly taking national and international flights when we have Skype technology. If traveling within Alberta, the premier should demonstrate fiscal conservancy and use mass transit options (i.e., Red Arrow) to show how he, like all Albertans right now, are tightening the purse strings.	As above, the government should support O&G workers with re-training and continuing education incentives to transition their skills into green energy industries. The government could further support job creation in this area by revisiting the Energy Efficiency Alberta program and ensuring a viable local market for these skills.
T0E	Childcare - making it affordable	help Canadians before any other country	by decreasing childcare costs so parents can go back to work
T8g	Job creation & health care.	Public servants (ie office & admin staff) receive a wage and benefits that are disgustingly disproportionate to private sector employees. They are also extremely over staffed. Not to mentioned the money wasted on office supplies and furniture. There needs to be more accountability for spending at each area. le) Alberta education, Alberta health services, Alberta transportation, Alberta infrastructure. They don't need 1000 different types of pens in each branch supply room or "special pens" for special managers or support staff. Or 40 different colours and styles of post it notes. Or a new ergonomic assessment annually that results in new furniture for each employee in which no expense is spared - it's ridiculous. The amount of admin staff is simply wasteful. There's is at least twice as many admins that would actually be required to get a job done properly and in a timely fashion. Not to mention the wage on travelling for managers. Welcome to 2020... video conference. And not every meeting needs to be catered.	Taxes should be reduced for business/corporations. We need to attract investors back to Alberta. Maybe additional tax incentives for new companies looking to set up shop here. Minimum wage hikes hurt small and medium business. If not a reduction on minimum wage a freeze for the foreseeable future would provide confidence to struggling small businesses.
T5T	Home Care.	Reducing salaries of public employees. Shifting funding from long term care and nursing homes into home care so that people can stay at home longer.	Supporting innovation and investments in areas outside of oil and gas.
t6w	Public education, especially early education which is crucial in helping to identify and support/treat any concerns as soon as possible. This will save money in the education system later on as fewer years of intervention may be required. Healthcare	By increasing tax on higher income corporations	Promote innovation and start-up companies, and lowering interest rates. Strategically using tax cuts and rebates (not to high income corporate companies who have no allegiance to Alberta)

T6G	Reducing all spending, across the board.	Reducing the number of public sector staff.	Expanded job creation tax credits.
	Get Albertans back to work Education Health services Environmental practices	Cap salaries	Create opportunities through creation of oil projects, new green practices
T0A	* Education - Alberta has the highest standards for education, producing highly educated work forces. * Health Care - self explanatory. Keep Albertans healthy, working and off of government assistance * Infrastructure - harsh Canadian winters are hard on our roads. Also job creation. * Referendums for equalization and/or separation * Evaluate/investigate insurance companies & skyrocketing premiums * Helping Albertans get back to work - through retraining work forces, attract and retain businesses, continue to push for pipelines	Reduce Albertas contribution to equalization payments. "Alberta contributes more to Canada than any other province. Canada's economic success over the past decade has largely been thanks to Alberta's success.Jul 13, 2017" Now Alberta is struggling and the need to take care of our own economy first, will only benefit the rest of Canada in the future.	- assisting with programs to retrain the workforce. A lot of emphasis has been on a trade related work force, but the trades are struggling to find consistent work. - assemble a government led agency to combat climate change rather than having the federal government tax the crap out of everyone. The agency could come up with, and implement ideas such as tree planting, controlled burns on a schedule, greater protection of rivers and lakes, incentives for companies actively looking & implementing climate protection strategies, including "green" energy additions. Alberta has some of the most environmentally responsible resources and really should be advertised, aggressively, as such! The general public really are uneducated to these facts!
T6J	Education, health, alternate energies.	Corporate handouts and subsidies. Raise corporate taxes.	Provide training for energy workers to switch to alternate energy jobs. Diversify.
T6M	In economic crisis, focus of priority has to be on education and health care.	Decreasing the amount of funding to privatized and chartered schools.	Focus on claiming a stake in renewable energy resources while slowly decreasing the reliance on fossil fuel recovery and production.
	Diversification of the economy, city infrastructure, rural security, healthcare, education (elementary, secondary and post secondary), social supports (ex. AISH). As a side note, how heartless is removing tissue and water from courtrooms - attacking the most vulnerable will do nothing to endear the UCP to Albertans. Robbing Peter to pay Paul doesn't fix an economy, it just hurts people (Peter).	The disastrous "war-room" needs to disappear! Find savings in middle and upper management of the large corporations like AHS, not at the frontline. Things like mandatory retirement ages in healthcare and education would do wonders in getting old crusty but highly paid people out of the way to make way for new graduates.	STOP GIVING CORPORATE TAX CUTS TO OIL!! IT DOESN'T WORK!!! Welcome to 2020, the world is changing and Alberta's support of industry needs to change with as well! Nobody is saying stop oil and gas, we're saying let them support themselves. Support for other industries such as tech, film or sustainable energy would encourage more stable jobs and put more money in Albertan's pockets.
T6G	Physical activity programs, and programs supporting individuals with disabilities.		By supporting post secondary education and its institutions
T8I	Healthcare and education. There is always people getting sick, and always kids needing to grow and learn.	Make a "fee" per emergency visit. Decreases the frequent flyers that are wanting narcotics.	Cut higher management. Our ER has 3 managers for one department. We work short every single day
	Abolish animal agriculture.	Stop persecuting animal rights activists.	Provide funding to vegan businesses and animal rights activists.
T0M	Protecting vulnerable Albertans (like AISH recipients and domestic violence victims), post secondary funding including grants for unemployed Albertans to upgrade their skills, and converting to green energy to diversify our economy.	Not giving tax breaks to oil and gas corporations. Trickle down economics don't work and this past year has proved it.	As above, green technology funding. Alberta has the most sun and some of the highest winds in Canada, we could be diversifying our economy and being environmentally responsible if the government would support businesses starting to switch.
T0G	health care, Schools, roads	Take a Pay cut and eliminate some support staff.	Take back the tax cuts to big corps. as they are leaving anyways

T6R	<ul style="list-style-type: none"> - RENEWABLE ENERGY - Affordable housing - Improving accessibility (to areas such as recreation, employment, housing, etc.) for people experiencing disability - EDUCATION - Senior care - HEALTHCARE 	- Please, please, tax the rich. It's so simple. Tax the big corporations.	- Invest in the renewable energy sector. And do it now.
T2R	Clean Energy, Education & ensuring smaller class sizes and a curriculum updated to reflect Canada in 2020, Healthcare, protecting and enhancing benefits for the most vulnerable Albertans.	I think there is a revenue problem, under former conservative govts better services were provided, under the NDP the size and cost of government did not grow significantly and where it did it was to meet the needs of Albertans. The climate war room is 30 million lost. A PST of 1% would likely cover our debt and reflect how most provinces work in this country.	<p>Hold off on any cuts that may occur, the APS is likely to be significantly impacted on March 31 and beyond. These jobs will be lost and unemployment will increase as a result of those decisions.</p> <p>Investing in small businesses of all kinds including tech, clean energy etc to bring new industry to the province. Incentivise these new and emerging trends, be a leader in those industries.</p>
T2T	Education! Education! Education! Small class sizes, reducing stupid expensive tests that give no actual data. Health Care! No "savings" at the expense of people's lives. Social programs with proven results.	Corporate tax breaks. Reducing payouts to companies that are failing. Property taxes. Reducing MP salaries and compensation. Stop wasting money on public studies and inquiries of things that were JUST studied under the NDP just because you don't like the data.	By supporting their obligations to EDUCATION and HEALTH CARE. The UCP has lost more jobs cutting funds to these areas while pouring money down the drain with Oil & Gas companies. Stop pretending another Oil boom is coming. Invest in new technologies and sustainability.
T0C	Social services, libraries and school.	pay freezes for government workers in all areas. Enough C.O.L.A increases. Almost every other industry in this province is feeling the economic struggle. You should also look at the hardships you have caused your people. Insurance increases of over 100% and tuition increases. The people of alberta will be unable to afford to get to work with these increases and further more hurt the system by relying and increasing the reliance of the social services you cut. The small village I live in no longer has any social services offered as FCSS and Neighborhood place have been forced to shut down requiring our people to travel to another town for these services when they can no longer afford the costs of insurance. Don't even get me started on the police module you so kindly threw at small villages with ZERO level of service and a 'promise' of 300 new positions. Where are you finding these 300 new warm bodies?? Easy to create positions but to find the trained staff is a whole new ball game. We now have to pay higher taxes for ZERO service. It's wonderful when you call the cops and are told they MAY come in the next day or two.	Tax cuts for big businesses it's big business that hires our local workers and pays wages.

T6M	Job creation, education, healthcare	get rid of the war room	Make doing business here attractive, but not at the expense of the people. Stop taking funding away from innovation projects that can help diversify the province. Find other ways to encourage businesses to grow outside the traditional hierarchical business models. Reward innovation, not tradition.
T2C	Public healthcare not private for profit. Education at all levels including post secondary. Again public education not private for profit education.	By raising corporate taxes and to stop giving oil companies unneeded breaks. The province was doing fine until you got your fingers into it.	By supporting other industries that are not oilfield based. There are more industries that just the ones that produce oil and gas.
T2W	I believe that hospital and city infrastructure should be a priority, but totally agree it is time to rein in the administrative salaries and bonuses. We have to maintain and grow our infrastructure, it keeps the workforce moving forward, hence paying taxes, but it is time to overview general spending.	Again by taking more control of the money they allocate to hospitals, schools, and provincial operations. I think salaries and bonuses of anyone in administrations, paid by the taxpayer should be posted publicly every January in 1 big summary. I know you can look it up, but I think you need to publish it outright for all the people in Alberta to see. By doing this and also showing that you have increased, not decreased the actual infrastructure budget will make your government more transparent and take away some of the union control. Overall spending has to be cut from the top, not the lower positions and I think if the public paid a bit more attention, it would override the continual attacks by the unions.	By spending on infrastructure, as previously mentioned. I think the government needs to also prioritize more on the amazing advancements in other industries besides oil and gas. I moved here from BC last July, and would never have known the degree of progression in green agriculture, technologies etc. This province is always attacked as being major polluters of the environment, and what I have actually found to be true, is it is one of the most advanced green provinces in the country. I am not saying oil and gas don't matter, but there are many other sectors being ignored because the focus is always on that sector.
T2G	Education and Health Care (including and focusing on Seniors and AISH recipients). The AISH payments should increase and they should be paid until the death of the recipient.	Unnecessary activities such as the so-called "War Room". Also stop the very expensive court proceedings against the Federal carbon tax.	Put more money into Education at all levels.
T6M	education, environment, clean energy	Eliminate tax cuts to wealthy foreign corporations.	Supporting education and innovation, build infrastructure, build a legitimate worldwide reputation for innovative clean energy production.
T5T	Seniors veterans and seniors medical	Less welfare for long time users and people not working less funding for immigrants and Indians	Grants to higher people on welfare and not working
T6T	Health care, education and getting the oil industry booming again	Stop giving money to other provinces	More support for the oil fields, increase health care coverage/jobs
T6k	Schools, health care, public service, municipalities, policing, fair collective bargaining _ diversifying the economy , seniors	Middle and upper management we need less of these none front line positions	Diversification, taxing big business as they should be, more front line worker not less to provide service Albertans deserve
T2X	1.) Health 2.) Pipelines AND Diversify Economy 3.) Education 4.) Infrastructure	1.) Infrastructure (ctrain in Calgary is a want, cancel it) 2.) cancel connect care Once Edmonton is finished. 2.) War Room - a failure, add these responsibilities to an already running ministry 3.) Tourism	1.) incentivize job creation 2.) encourage the tech sector. These are high paying jobs of the future 3.) get the pipelines built
T8n	Healthcare, education, diversifying our economy, changing to greener resources	Tax more corporations, implement pst	Building new industry for oil and gas to greener energy sources and supplying demand such as more teachers and healthcare workers
T2A	Education and health	Beauracracy	Divesification so we have other industries besides oil and gas.

T6E	PUBLIC healthcare Stop cuts to our schools and public resources	- save 30 million by dismantling the 'war room' -our healthcare system is still needlessly management heavy - get rid of middle management and give our doctors more say in implementing cost cutting measures that are safe for Albertans. - restructure fee for service - there's a lot of double dipping going on and it's not family physicians that should be targeted by cuts. - provincial sales tax	Building up and maintaining public infrastructure, our roads, our schools, our healthcare system. Provide incentives to businesses that diversify our economy so that we are less reliant on oil and gas. Support small, local businesses
T3g	Education, healthcare including mental health, and climate change action	Their salaries, taxing large companies	Climate change action, better access to education, helping small businesses
T7P	Education-an educated population will transition to a knowledge economy. Infrastructure. Actively ensure companies remediate abandoned wells.	Kill the Ministry of Truth, waste of money. Patronage is all it is. Stop stealing the pensions of hard working Albertans. Have the balks to enact a sales tax like all other provinces.	Not through patronage appointments to cronies. Go into dept and create jobs in well-site remediation, support daycares so young moms can work. Keep tuitions for post-sec low so that graduates don't have crippling debt.
T3M	Education and job creation beyond the oil industry	Cut their own wages instead of public service workers. Stop providing tax breaks to large corporations/oil companies.	Look into/support other energy sources. Get ahead in this.
	Health care !!!	Building arenas a pools and shit	Healthcare! Pipeline! RoAd repair
T4N	Education and Health Care	Albertans should not forget that one of Jason Kenney's first acts as premier was to max out the province's credit card on a \$4.7-billion giveaway to the largest and most profitable corporations. We know this money has already been distributed to corporate shareholders without creating a single job. More than 27,000 Albertans have lost their jobs on Jason Kenney's watch.	Stop investing in Oil and Gas. This is not the way of the future.
T4R	Education and Health Care	Albertans should not forget that one of Jason Kenney's first acts as premier was to max out the province's credit card on a \$4.7-billion giveaway to the largest and most profitable corporations. We know this money has already been distributed to corporate shareholders without creating a single job. More than 27,000 Albertans have lost their jobs on Jason Kenney's watch.	Stop investing in Oil and Gas. This is not the way of the future.
T2K	Health and well-being of citizens - cutting back AISH funding puts the burden on friends and families to try and support their severely disabled loved ones. Same goes for nursing.	Corporate taxes - all businesses across Canada pay substantially more in taxes and it makes sense for Alberta to catch up. Also, a provincial sales tax on luxury items (not necessities).	Through training incentives - work with energy companies to transition workers so they can grow into clean energy operators.

T2C	<p>Infrastructure, because if we allow infrastructure to deteriorate too far we will forever struggle with increased maintenance and replacement costs which grow ever larger with time and inflation. Maintenance is far cheaper than replacement in the long run.</p> <p>Education, because it is the foundation to everything we do. However, we need to reduce the number of foreign students in our universities and get more of our own children into advanced education. The universities love foreign students because of the extra revenue they bring in, but we are crippling the opportunities of our own children. As an Alberta-born citizen, I've paid taxes here my entire life but my kids can't get into university because the programs are full of foreign students with high marks (possibly fake) who have "bought" their way into the system. This makes me furious. And audit the universities to see how they spend their money. The president of the University of Calgary spent \$800,000 on a custom-made boardroom table! Is this an appropriate use of funds???</p> <p>Continue operating the Energy War Room and vigorously defend Alberta's interests against fraudulent claims and interests.</p>	<p>Expand private-provider health care options where appropriate. Centralized health care through AHS can be very inefficient and has far too much overhead cost. Private clinics can be more cost-effective, but gov't must maintain a close watch/audit on private clinics to ensure services are up to par and billing is not fraudulent. Consider a fixed rate-of-return in much the same way that regulated rate options for utilities provides fixed return to the operators.</p> <p>Be very miserly in respect to handing out money to special-interest groups unless it can be shown that they represent the wants of a majority of citizens.</p>	<p>Gov't has put all its eggs in the oil and gas basket for far too long. Diversification is necessary. Gov't should be promoting research and development (with commercialization as the goal) of small molten-salt thorium nuclear reactors. Alberta could lead the world in the technology of these safe means of electricity generation. Current nuclear reactor technology used in electricity generation is a derivative of the nuclear weapons industry and is poorly suited for the safe efficient generation of electricity, not to mention dangerous. Thorium molten salt reactors are a different concept entirely and operated successfully in the 1950's and 1960's in development trials. Alberta could lead the world in the development and production of this game-changing technology which would go far in addressing the concerns over climate change. Canada could also profit as one of the world's leading producers of radioactive ore suitable for this purpose. This is such an amazing opportunity and we are ignoring it.</p> <p>Provide grants to industry to clean up and properly abandon orphaned oil and gas facilities. This would provide short-term employment opportunities but also long-term environmental and social improvements.</p>
T3M	Healthcare.	<p>Trimming off the fat in upper management positions in AHS as there seems to be numerous salary positions that do absolutely nothing but waste taxpayers money. Cutting back with education seems to be a wise decision as the schools have not been using their funds wisely; according to reports the schools just need to budget their funds and they should be okay.</p>	<p>Save healthcare jobs. Focus on expanding research and development in new hospitals like South Health Campus. SHC has so much potential that requires more funding to save and prolong Albertan lives.</p>
t8n	<p>Education, specifically early years education (pre-school) and elementary school, particularly K-3. Redevelopment of a very old k-12 curriculum that does not reflect the skills that the future workforce will need, particularly, financial skills and relationship skills should be taught from kindergarten and children should receive more exposure to the workforce, something more concrete than bring your child to work day in grade 9? Children should have more outdoor education, children should study subjects outside that fit naturally with outdoor education, such as science.</p> <p>Healthcare - reducing long waiting lists to see specialists and have surgery.</p>	<p>The government should stop giving industry millions of dollars.</p> <p>The government should stop forming "committees" to give their friends jobs.</p>	<p>More work-integrated learning funding and supports in post-secondary, including in areas that previously did not have work-integrated learning such as liberal arts education. Invest in areas like Alberta Innovates where for every dollar invested many jobs are created. There are many talented, professional, highly educated newcomers to Canada, their education and international experience are not recognized. More funding towards helping newcomers get their first Canadian job, related to their field. Constructing Futures, out of EMCN, is a wonderful program that helps internationally trained professionals enter project management careers, it should be a model for other similar programs.</p>
	<p>opportunities for children, youth, and adults experiencing disability to access physical fitness.</p> <p>decreasing class sizes</p> <p>funding education</p>	decreasing salaries for top level government officials	diversify the economy. stop focusing on oil and gas and start focusing on IT, AI, small business, post-secondary education

T7X	Education, healthcare, \$25/day daycare	Taxes on the wealthy and corporations	Invest in our children by funding public education and post secondary. Open more \$25/day daycares so families have more spending money to reinvest in the economy.
T6H	Healthcare, education, infrastructure.	The tax cuts that were afforded to oil companies who then left the province. Possibly the large amount of tax owed by oil and gas companies.	Put back 25\$ a day daycare so that women can work. Expand daycare subsidies. Reinstall the economic diversification programs the Notley government enacted. Support our tech industry. Reinstall the STEP program for post secondary students. Support green energy alternatives and research.
T6C	Public health care, education, social programs and diversity of economy	In the day to day processes, minor details and increase taxes, sale tax, decrease funding for travel expenses for the premier	Yes. Diversity in the economic availability will help encourage sustainable energy
T0A	The government should focus on health care, education, and building a strong economy.	Cut the fluff! Cut arts funding. Cut the layers of management at the government level in health care and education - keep front line people. Get rid of school boards; they act as puppets for the superintendent anyway. School boards are a huge waste of taxpayer money. The buffoons we have in our district are nothing but housewives, retirees, or people killing time to make a bit of money. It's ridiculous!	Continue to cut red tape. It's still a burden in so many areas. Also stimulate the economy through infrastructure projects. Our roads are in terrible shape; put money into those types of projects. Green initiatives. If our oil and gas is threatened we need to diversify.
T4G	Education and Healthcare	Increase corporate tax	Continue working to build the pipeline while investing in alternative energy. Put money back into the pockets of low-middle class Albertans so they, in turn, put money back into the economy.
T4P	Social programs as welfare/Aish are still living under the poverty line and seniors benefits need an increase and schools (technology funding), and policing in smaller cities like red deer where crimes are on the rise.	Don't know	Bring back economic growth in oil & gas as you never hear anyone complaining about it during winter months!!!
T6B	The government should prioritize healthcare, education and infrastructure.	By reversing the tax cuts to corporations and the wealthy.	By focusing on diversifying the economy and not solely supporting the oil industry.

	<p>Creating Jobs, hire more crown prosecutors to keep up with the rural charges by the RCMP. create apprenticeship incentives to industry (by the way, apprenticeship should also be offered in government - IE maintenance in hospitals and GOA buildings).</p>	<p>Too many top management positions in Social Services and AHS... Past premiere Redford wanted 30% cut to managers in the AB social programs. Then the super ministry was created - Human Services and the managers found a way to reinvent their jobs. - GOA to have better hiring practices (not who you know) and stop offering jobs to individuals from other towns (again jobs offered to friends) with GOA vehicles to be used from one site to travel on company time to work at a distance site where the job is. Hire local site talent! AISH - Why do youth who turn 18 get on AISH and keep the assistance to build their savings account. These individuals are still living with family and do not have expenses! do Not what I want my tax dollars to be used for. It is for individuals who are experiencing financial hardship. PDD - Change eligibility criteria so that a neuropsych can be rejected. An individual does not function when a mental health diagnosis is untreated.... a youth or adult will perform poorly on the IQ testing due to poor mental health (diagnosed) but yet PDD feel this is valid. Most cases IQ level increases when a Mental Health diagnosis is treated and individuals function at a much higher level saving thousands of PDD funding AB Supports - Why have individual's participate in a neuropsych assessments when it is very clear the individual has mental health issues. Very costly! Individual goes to gets the Neuropsych and it says IQ is low so go get PDD and AISH....really??? Have a triage system...when individuals have Doctor notes (used to access income support) that states "mental health concerns unable to work" then the individual should be expected to seek treatment before a Neuropsych is requested by the AB Supports worker. - Some GOA positions - need to be reviewed. Why is the tax</p>	<p>Industry Project initiatives. Offer training for those out of work. Cut the red tape in areas that make it hard for business.</p>
T9A	Education and Healthcare	Government should stop tracelling	Provide sufficient funds to avoid layoffs in Education and Healthcare
T3M	Education and health.	Decrease government officials whose jobs are not necessary. Take a page from CP rail when they laid a bunch of management off. Saved the company a ton of money and made it more efficient.	Push for the federal government to support oil and gas. Provide subsidized child care so people can return to work. Provide student loans for families who may have a higher income where one party is going to return to school. Losing one income makes this option impossible for some families who make too much money.

t8n	cut wasteful spending of monies, get municipalities to cut their wasteful spending, stop overpaid government bureaucrats (in many countries there are wage caps, even for the top executives of no more than 200k per year...and no one runs from their positions to the private sector....), automate many archaic processes (e.g. the banking, IT systems) before you lay people off....., reduce work force through attrition, not lay offs...	reduce workforce through attrition, automate (e.g. get with the times as in many areas we are about 30 years behind many north european countries, e.g. health care automation, efficiency, provide homeless shelter saving lots of \$\$), Law courts...save 100's of millions in family law by setting the standard (all research shows that, and many jurisdictions implemented it) of equal parenting by default, only deviate in exceptions (that is about 1%) as well as in all divorce cases 95% of the case is non legal related. Equality is key...as that is best interest of the children. Real free market (not the corrupt free market here), stop subsidizing oil and gas, they have to become more efficient and cost effective of themselves. Diversify.	Modernize Alberta, as investors won't come here (that is what they tell me) because it is such outdated systems, banking is expensive, the work force has this entitlement, the market is protected to the hilt (e.g. water treatment etc.) while the world has moved on many years ago. A government who cannot do basic accounting, is corrupt (some investors tell me that is why they left)
T1K	Education should be the highest priority. We will not have healthy thriving communities without educated Albertans who are able to contribute.	Increase revenue through a sales tax. Eliminate tax savings for corporations and the wealthy.	We need to diversify our economy. Oil and gas supported the growth of the province but we need to look beyond to more innovative alternatives. To achieve this we need creative and educated citizens.
T4H	Encouraging private sector growth and tax generation through increasing the tax base, not taxes themselves. Privatization.	Salaries, middle management, administrative inefficiencies, exorbitant administrative salaries, privatization of some healthcare services, larger class sizes (30 is a good target), less alternative classes (get back to cores + basics), less PD money and required courses (seriously, my kids have several PD days off a month), elimination of consumption sites, increase post secondary fees for international students, reduction of per diems for gov employees, economy transportation for all public employees (taxis and coach, not limos and 1st class), use of remote presence rather than requiring face to face meetings and appointments, reduce or eliminate business incentives and subsidies to wind/solar. Make all maintenance, construction and menial contracts for public short-term RFP, to keep bidders competitive. Cut contracts with RCMP, EI and other federal programs that can be ran more efficiently than the Feds. Separate from Canada if necessary.	Lower the minimum wage, leave tax rates, lower the first tax rate to 9% and shift its bracket upwards. Have a “personal exemption amount” for business taxes and increase the minimum bracket (making it easier for small businesses). Creating public sector jobs does not count, only private sector jobs do (for tax generation).
	I think it's important to look at all the energy options available so that we can begin to think about having a future with a future. An ideological attachment to oil (when we are competing globally) feels like we're on a sinking ship.	Cutting the energy war room, & adding a tax to large corporations profits	By lifting the freeze on government positions - so many services have suffered in the name of “getting Albertan's back to work” when you are the very people that control this.

	<p>Increasing safe consumption sites. Having so few just concentrates problems in specific areas. By having many sites widely disperse, problems will disperse as well.</p> <p>Also hiring more nurses and teachers. Healthcare and education are the two fundamental building blocks of a just society, and that is where any government 'of the people, by the people, for the people' should focus its attention.</p> <p>Offer a guaranteed income to all Albertans, and eliminate disparate and overly complex, bureaucratic social programs.</p>	<p>By greatly reducing the number of tax credits available to corporations. Ensure that businesses are successful on merit, and not just on Government subsidy.</p> <p>Eliminating costly social programs through a guaranteed income supplement.</p>	<p>By encouraging a shift in what society values from consumptive and extractive activities, and placing a higher value on labour itself. Work with unions to increase their representatives and memberships.</p> <p>Also, mitigate the risk to entrepreneurship by creating a Guaranteed Income Supplement. By granting every Albertan basic human needs, more low-income residents will feel emboldened to bring their entrepreneurial ideas to life (without the fear of becoming destitute if they fail).</p> <p>Create a centralized marketplace for capital investment in entrepreneurial projects and provide a backstop, that allows for a more open application for financing process and higher risk tolerance</p>
T6E	<p>Healthcare and healthcare personnel, the education system: lower (or even better eliminating) student debt, raising standards for education and showing that our youth are cared about and supported. Environmental programs and funding to switch problematic things over to an eco friendly route (ex. Switch out plastic bags and instead support the hemp in's us try and have hemp bags, these would be environmentally friendly and the crop of hemp is much easier to produce maintain and regrow than trees). And of course: people need a livable wage. No not minimum wage. Your dog couldn't live on minimum wage so why are we asking any human to?</p>	<p>Bluntly? The politicians and those in government need to take a large wage decrease. There are students with three jobs that cant afford rent or tuition, there are single parents struggling, there are communities and social programs in trouble, the homeless problem needs to be addressed (and let me tell you something: taking away safe injection sites sure as hell looks like a way to systematically kill homeless and vulnerable people). People in government don't do anything to deserve that amount of money.</p>	<p>QUIT LOOKING TO THE PAST!!!! No more oil or jobs that people looked to years ago. We need new technologies and programs that will create jobs that will last for years and help create new jobs in the future.</p> <p>Ex. Hemp farming: lucrative, eco-friendly, can be used for a variety of products from food to clothing to paper products.</p> <p>To put it bluntly: you are kicking a dead horse. Nobody ever got anywhere in this world without wanting to go above and beyond what we do now. So let me ask you why you are looking for every opportunity to stay in a time that is long gone? Either get with the times to take a step down and let a younger, smarter, and more dedicated generation take the reigns cause you are driving us all off a damn cliff with your reckless driving.</p>
T2P	<p>Health care FRONT LINE WORKERS specifically and education.</p>	<p>Utilizing internal audits to implement findings of where savings can be had.</p>	<p>Implement findings completed by economic groups.</p>

T6S	<p>1. Supporting our vulnerable populations - elderly, those with disabilities/medical conditions/mental health,those receiving public assistance, veterans. *no reductions, in fact, our seniors especially deserve a significant increase since most live below the poverty line. Create affordable housing for all/ when the basic necessities are handles, ppl are more able to contribute by working, paying taxes etc.</p> <p>2. Ensuring our healthcare is restore and maintained, it is already overtaxed with wait times, not enough doctors or health care professionals. No more layoffs, re-hire.</p> <p>3. Supporting the oil/gas sector while diversifying industry/business including green energy initiatives additional business streams.</p> <p>4. New comers - immigrants *labour shortage forecast throughout the country and we need more taxpayers.</p>	<p>1. Ask those who are receiving benefits eg. seniors/other and have a healthy income, to voluntarily be cut off.</p> <p>2. Keep our transfer tax or at least take a significant portion of it - use it for the above items and a reduction in our debt.</p> <p>* do we see other provinces stepping up to financially support Alberta now that we are a have not province, they still expect monies to run their provinces.</p> <p>3. Wage freeze for public sector *** short term, revisited annually.</p> <p>4. Income cut back for those in politics *would be an incredible gesture of good will / majority of Albertans are experiencing significant financial hardship. * we are in this together, tighten the belt at the highest levels.</p> <p>5. Pensions for politicians * reduce, reduce, reduce the amounts and provide term pensions equaling the years of service! Their service does not equate to the length of employment that others work to garner full pensions. *unfair for taxpayers to support this for a lifetime when many wont ever have access to a pension.</p> <p>6. Increase the costs for other provinces/out of country to access our healthcare system/education.</p>	<p># 1 Job creation *must spend to move ahead/survive Increase funding to training programs that target populations and areas of the of the labour sector. Train up all Albertans!! *senior care, green energy initiatives including in the oil/gas industry .. education, healthcare</p> <p>#2 INVEST in diversifying businesses different from the oil/gas industry, technology for green energy use, other streams that will put Alberta in a competitive market.</p> <p>#3 We are soon to be at a significant labour shortage in our country/province (2030) - we must attract individuals who can/will contribute to our economy and growth.</p> <p>#4 Attract people into fields/industries that are currently short or anticipating a significant decrease.</p> <p>#5 Best case scenario, post education available for all Albertans at no cost OR Decrease the cost and/increase subsidies/grants for students in post secondary. We are unable to achieve a higher level of education for the average Albertan due to in part the exorbitant fees and burden of debt.</p> <p>*increase the cost of tuition for foreign students, especially if they are planning to return to their home countries and reap the benefits of accessing our world class education.</p> <p>Raise business taxes/no subsidies Increase taxes on alcohol, cigarettes, cannabis.</p>
T6C	Arts, health, education, diverse economies rather than focusing solely on gas and oil.	Procurement strategies, rehabilitation projects over new build outs for capital projects (regenerating infrastructure that is aging rather than abandonment). Private practice incentives for large companies that are not invested in the development of the provinces economy	Diversify rather than focus in a dying oil and gas sector. Bring opportunities to the farming industry through research and sustainable practices to keep creating new sectors as well as support and develop tech friendly strategies to allow our province to be relevant
t6t	Perhaps some benefits to Ministers should be reduced as in other countries. These individuals are in these roles because they want to serve public office, not for the financial benefit. The Red Tape reduction is ridiculous, and is doing nothing but create additional work for an already taxed workforce.	I think the government should stop spending time and energy on an Alberta exit. We are proud to be Canadian and it is a complete waste of time. While Alberta may have been taken advantage of in the past its time to work towards solutions that are actually applicable.	While oil is important there needs to be other viable ways to support the economy. There are thousands of tradesmen unemployed in this province, so why not work with unions to retrain and educate these people.
T4T	health and education	new initiatives - reinventing the wheel	encourage oil industry in alberta

T6H	EDUCATION and Healthcare. Children in grades K-12 make up almost 20% of the Alberta population, it is such a disservice to these kids by making cuts in education, especially with children with learning/physical disabilities.	Cut the war room and tax incentives to oil companies that are continuously leaving Alberta and/or cutting employees irregardless of the tax breaks they are getting.	By not cutting funding to public sectors, they are large employers of Albertans and when people have jobs and are not fearful of losing their jobs they SPEND MONEY. As well, any transient oil workers should have to pay Alberta taxes.
T5M	Education and Health Physical activity and sport initiatives Supporting the volunteer sector: sport, cultural, etc	In not giving over \$4 Billion back to corporations when, right around the time of the announcement, one of those benefiting from millions in subsidies announced massive layoffs. Just a mindless decision that has not proven to add jobs as promised	Firstly, eliminate the \$4 billion in tax breaks to big business and utilize those same dollars to support actual job creation initiatives.
T4N	Diversify our economy!	Reduce bureaucracy. Put government employee unions into check. Challenge equalization payment to Ottawa.	Reduce red tape for companies. Make an environment open for companies to develop in Alberta. Get the federal government out of our way!
T4g	Climate change and forward-thinking economic diversification	Corporate welfare	Imagine the world 20 years from now and support education and job diversification that prepares Alberta for that. Renewable energy, net zero building practices, biodegradable plastics, upgrades to infrastructure to include more renewable-based grid ideal, geothermal conversion of defunct wells
T5A	Health care and education.	By rolling back the wages of the top heavy AHS system.	By not cutting jobs of the public sector.
T3L	I think that you should maintain services like health care and education and not make further cuts to them.	Why don't you amalgamate some of the smaller school boards? Do we really need to have so many?	The government should attempt to diversify the economy by supporting things like tourism, the tech sector, and the film industry
T7y	Education, health care, and highway maintenance	Increase tax on large corpportations	More funding to education. Fund a green energy transition which will create many new jobs.
T5Z	Health, education, transit and infrastructure	Instead of finding saving government should focus on increasing tax revenue through a PST and significantly increased corporate taxes.	By increasing public sector employment by creating an orphan well cleanup company owned by the province and employing out of work oil workers.
T4A	Healthcare Education Oil and gas	Take away provincial standardized testing in grade 6. Tax bigger corporations and higher incomes more.	Don't take away jobs from public services. This is only setting us up for future failure. Kids who don't get a proper education will not be proper members of society. For now, don't cut budgets in public services like teaching or healthcare.
T0m	Health Care, emergency services and schooling	Government travel, salaries and drug consumption sites	Unknown
T2H	Education (university) and Health Care	More taxes or raising fees for license renewal and registration	Create incentives for tech industry to enter Calgary. We need to focus on gaining a secondary source of income instead of only relying on oil.
T4g	Keep as much front line services as possible such as health care, education, Help Albertans get back to work creating jobs and training opportunities Put the drivers lic back the way it was now you wait 3 months for appt.	Downsize management in the GOA by attrition. I worked at GOA for 15 years and saw a lot of waste. Run GOA like a business and pay them like the private sector.	Spend money on infrastructure Create training programs Give employer incentives
T0A	Education and Healthcare	We don't have a spending problem, we have a taxation problem. Taxes are so low compared to the rest of the country.	Incentives for small businesses, and small businesses just starting out. Tax large corporations that are stable/rich

T3B	Public transportation in cities. Invest in the rail line between Calgary and Edmonton.	No more corporate tax cuts. Disband the war room.	Make computing/technology a priority to attract new companies. Support small businesses. Increase minimum wage so people can do more than just survive: a decrease in economic instability has a flow on effect in terms of reducing risk of homelessness, decreasing domestic violence, substance abuse and emergency service interventions.
T2X	Insure essential services are not gutted. Continue to invest in education including post secondary institutions. Invest in public healthcare. Return AISH funding that was cut.	Take what was spent on the "war room" and invest that money into the sectors mentioned above. Cut salaries temporarily to upper government positions or have a wage freeze.	Invest in the tech industry. Find a way to attract growing tech companies to come to Alberta. Use this growing global industry as a way to diversify our economy. The oil boom is not coming back, it will never be the same as is once was. We need to diversify so this same economic crash doesn't happen again.
T0B	EDUCATION. HEALTH CARE. THE END.	Roll back MLA salaries and then freeze them for the next 7 years, like teachers and nurses.	Depends on where that money is going. If it's paying big oil to "stay in Alberta" just to have them take the money and run, THEN NO.
	Healthcare that is not privatized. Education including post secondary.	In healthcare, reduce levels of upper management. Reduce numbers of paraprofessionals and hire more professionals. Allow said professionals to practice at the full scope of their profession. Wage roll back in health care.	Increased reliance on tourism in our national parks. Provide incentive for small businesses to provide tourist services such as housing, transportation and experiences. Provide more funding to grants to assist people in getting a trade or skill for employment instead of providing services that isn't enough to live on and doesn't assist people in acquiring work in a sparse and progressively more skilled job market.
T5j	Healthcare, education, childcare	Oil and gas tax breaks	Childcare
T2M	Public Education and Health Services. It is important that everyone has the same access to these services and not privatized. That would mean people with the money will have more advantages because of their financial situation. When it is usually those who are running corporations that are getting the tax breaks and laying off or not paying or giving hours to those who don't have the same financial benefits.	Not giving tax credits to corporation. Increasing taxes to corporations and the high income people and they will reinvest money into the economy because they won't want to pay the government money. Spread the wealth. Having the working class paying the majority of the taxes compared to the high income companies and people while they are getting tax breaks is not acceptable. Greed is taking hold instead of compassion for their fellow man.	Making the corporations and high income people pay more taxes will increase the money in the economy. They will think of ways to use their money for the good of society and not just their own pocket. Giving money to corporations who then lay off thousands of people so their CEOs get the big pay is not what our society needs.
T3C	Arts, diversifying the economy, helping those in poverty such as single parents, the DOAP team in Calgary desperately needs funding, they help keeps streets safer and prevent unnecessary deaths.	Stop giving hand outs to large corporations that could care less about our province. Especially foreign corporations that are leaving.	Have tax incentives for small businesses and help the tech industry grow. Also increase funding for the arts as the arts contributes way more to the economy than most people realize. Also stop letting people go! It's hard for the economy to get better when even more people are losing their jobs.

T3E	<p>Reducing process time. An example is going to your doctor who then passes you onto a specialist who sees you for two seconds only to send you on to the next specialist. Cut the middle doctor out.</p> <p>Operate like a private company and cut things that just take up time. Allow individuals to make decisions without needing four levels above to be involved. They cut jobs.</p>	<p>Why do we have two school board? New immigrates are NOT catholic! Combine into one school division. Kids go to the CLOSEST SCHOOL. this will reduce transportation fees right off the top. Kids who want a religion class take one. This should be any religion class not just catholic. We need to catch up with the population trend. Now lay off head office staff, remove all the duplicate IT systems etc.</p> <p>GCA gas cost allowance it's a credit received on crown invoice bills. It is painful to file for industry. The rules are grey and the AER then audits. Yes creates jobs but inefficient jobs. In Saskatchewan they just pass over a dollar value credit on the bill that they think is fair. It doesn't change. They then don't audit and industry doesn't have to process paperwork. You just removed a whole department at the AER and laid off staff at every oil and gas company. Again all cost reductions!</p> <p>Why two health care systems? Same as the school board have one. No two heads which are paid \$500k each. Huge savings right there.</p>	<p>We need to diversify. Corporate Tax credits for other industries who move into the province. They employ individuals who then pay tax back.</p> <p>Pipelines would help.</p>
T5X	<p>Switching to clean energy Education Healthcare</p>	<p>Cutting government officials bonuses and wages</p>	<p>Switching to clean energy</p>
T5N	<p>Education and Healthcare</p>	<p>Oil and Gas</p>	<p>Funding Education properly, funding post secondary education. An educated population will lead to greater economic growth.</p>
T6W	<p>Public Education Funding New Student Growth Funding Inclusive Education Supports Funding Teacher Wages to Accommodate for Inflation Health Care Funding Nurses Wages to Accommodate for Inflation Adequate Post Secondary Funding</p>	<p>By not providing billion dollar handouts to oil and gas companies. By demanding oil and gas companies pay their taxes like all Albertan citizens and companies.</p>	<p>By providing appropriate funding to education, health care, seniors services, daycare, small business, \$15 minimum wage, tax appropriately to all sectors.</p>
T0C	<p>Reducing spending in every area and eliminating the debt. Continue to fund education and healthcare, but stop having the government run schools and hospitals.</p>	<p>Allow private medical and surgical clinics to open which would allow Alberta to participate in the medical tourism industry. I understand this would eliminate our federal health transfer, but one more way to get out from under Ottawa's oppressive "thumb". Reduce the size of the civil service.</p>	<p>Reduce and eliminate regulations. Eliminate minimum wage. Eliminate corporate welfare.</p>
T6X	<p>Making sure front line services remain intact. Nurses and teachers are 2 jobs that should NOT be cut and should be properly funded to accommodate population growth.</p>	<p>Stop giving tax breaks to multi million dollar companies. Trickle down economics DO NOT work. War room is an international joke. Stop creating panels to investigate things that are already working.</p>	<p>Diversification. Oil and gas are never going to return to their former glory no matter how much people want them to. All the pipelines in the world can't bring back the good old Alberta Advantage.</p>
T1H	<p>Fully funding education for enrollment, daycare, health care</p>	<p>Reduce giveaways to large corporations</p>	<p>Affordable daycare which allows families to work.</p>

T5t	Healthcare Education (not schools being built but supporting teacher resources) Stop the war on unions	Need to focus on sustainable income via taxing businesses or introducing PST	Stop cutting budgets and provide support financially to your constituents
T6H	Education Healthcare Mental health (including safe consumption sites and AISH) Care for seniors Climate plans Diversify our economy Promote technology in Alberta	PST Cut the War Room Cut unnecessary travel (ie. trip to London, for what?) Cut MLAs salary and expenses	Diversify the economy Stop cutting public sector jobs Stop relying on only O & G Promote Alberta rather than destroy it - who wants to live or invest here right now?
T2N	Education, health care and small business	Within taxes on large companies, travel costs for politicians, and by cutting back politician salaries.	Give tax breaks to small businesses, grants for starting up own companies, and more funding for education aids
	Increasing funding to education and health care to allow these sectors to continue to provide high quality service to all Albertans.	The government should be spending. Increase corporate taxes, increase personal income taxes, or create a PST to fund increased spending as the province's largest employer.	Increased spending in the public sector, and increased spending on public projects (building roads, hospitals, and schools). The government is the largest employer in the province and increasing the number of public sector jobs will drive economic growth immediately. The government should NOT, under any circumstances, cut corporate taxes. Trickle down economics DOES NOT WORK.
T1H	Healthcare, especially in the areas of harm reduction and rehab systems, and education.	Reduce corporate tax breaks	Investing in renewable energy production, including training opportunities for those looking to get into the industry.
T4T	Education Healthcare	Stop supporting people's bad choices.	Invest in education so we can help our youth grow into people who will contribute to the province
T3R	Healthcare and education.	The war room. Your own salaries and spending on travel etc. If everyone else in Alberta has to get laid off or take a pay cut, so should you.	DIVERSIFY. Renewable energy. Technology. Encourage innovation in post secondary institutions.
	The government should focus spending on diversifying Alberta's economic engine, investing in technology, the arts and green energy.	The government could find significant savings if the subsidies to oil and gas were reduced.	The government should encourage Albertans to create and empower small and local businesses by providing grant funding dedicated to creating new ventures.
T0L	Restoring and increasing funding to education and health services	Roll back corporate handouts to oil and gas companies, eliminate energy war room	Invest in / support growth in new technologies including those in the renewable energy arena
T6E	Healthcare, schools, alternative energy, transit,	High level politician wage reduction , raise corporate tax, stop creating useless committees like the war room, cut travel expenses by attending via Skype.	Alternative energy grants, medical superlab construction, cap insurance rates,
T4V	The government needs to focus in many areas - but giving tax breaks to corporations hoping they will invest those savings in new jobs cannot continue. It doesn't work. Create a climate where people are looked after, where people want to live, work, play, spend their \$. Invesheaviely into tourism. Get those Americans and Canadians here to spend their \$.	Get rid of the war room. We are not at war - why is our government making it look like it's us against the world. Savings are good, but look at proven economic ways to improve the economy. Make this province a place a destination - that means a great medical system where the medical professionals are happy; invest in education so people want to have their children educated here. Give opportunities to the weak.	By investing in people. Make all Albertans happy. Invest in oil and gas - but don't ignore the amazing opportunities in renewable energy. Make these scientist and professors want to come here to work. Don't ignore climate change. Invest in your cities and municipalities. Partner with them to make living everywhere in Alberta a great place to live.

T3g	Medical care, education.	Regulate the marijuana industry more closely in the west and lighten the regulations in the east. Lower the price of marijuana to be more competitive to the underground market.	INVEST IN RENEWABLE RESOURCES. Canada is a primary industry country, we should be investing in secondary or tertiary manufacturing instead of exporting huge amounts of resources. With specialized government funded training it would be possible to stimulate the economy.
T6E	Education, post secondary education and healthcare	By not providing oil/gas corporation incentives	By investing in publicly funded systems such as education.
t5r	Expand not CUT the Capital Region Housing Program Increase Alberta Seniors Benefits and NOT cut benefits for spouses of Seniors Increase Health Care Funding to reduce wait times for surgery, follow through with proposed projects for hospitals etc Increase not CUT funding for EDUCATION for schools and universities etc.	seriously consider a PST as a viable option.	NOT CUT PROGRAMS. By your 2020 proposed cuts you are hurting our children, our students, our families, our seniors in other words EVERYONE in our province.
T1G	Education	Middle management/administration cuts at gov't of Alberta, health board offices, and school board offices.	Get the pipelines built before anyone else can file a challenge. GET GOING ON TRANS-MOUNTAIN.
T0L	Education, healthcare	Their own raises	Diversification away from an oil and gas culture
T0L	Education, healthcare	Their own raises	Diversification away from an oil and gas culture
T0c	New initiatives on community ... people helping people. Healthy community. Healthy environment. Shared resources and stop wasting resources. Community Health should be a 1st step.	Feeding the ones in need by not wasting food that is not sold or almost to expire rather than throwing it in the garbage.put an end to provincial parties fighting..time to work together and stop wasting time and money. Turning people against one another. Initiatives for shared accommodations to make a better quality of life for everyone. Do not enable corporate greed.	Create jobs for ways of helping community and stop wasting resources. Create jobs for people to take unsold food to the hungry. All the regulations on standards is a waste of time and money. Stop segregating people on classification.there should be no special handouts based on groups.eg natives. Accountability. people are people. There is no need for hunger or homelessness. Everybody deserves the basics.News channel promoting mental health. News channels showing all the good in community.
T6G	Healthcare, education and mental health services.	Abolish the "war room" and stop advertising the oil industry. The oil industry can defend and advertise for itself.	Create a tech tax on automated industries where people can be replaced with machines. Reinvest this money through start-up business grants or creating more public service jobs.
T6T	AISH, Healthcare, education, infrastructure.	Corporate Tax-Breaks, CEC "war room", MLAs could move back in with their parents and take at Least a 20% pay cut.	UBI, subsidize common industrial safety certifications, generally avoiding Trickle Down economics like the Plague it is would be a good start.
T6C	Return funding to public education and health services. Invest in attracting green energy companies.	Start with legislative salaries, remove war room	Diversify energy industry to sustainable resources such as solar and wind. Include First Nations as equitable partners in this as sustainability is part of their ways of knowing.
T6R	Education and healthcare	Healthcare OVERTIME payouts Middle management positions	Pipeline Small business tax break incentives

T0K	<p>Education. This is an absolute must!! We need teachers, we need teacher's assistants. We need to support the kids. Not to mention we need to ensure that access to post secondary school is affordable. No one can excel if the cost of going to post secondary school is so high.</p> <p>Second, WE NEED NURSES and other health care professionals. Nurses are the keystone to the health system. Reduce nursing positions and wages and this is what will happen - Burnout, fatigue, mental, physical, and emotional instability, lack of job satisfaction, mistakes will be made with the mentioned above. An RN is just as important as an LPN. WE DO HAVE DIFFERENT ROLES. It is too bad that this isn't recognized. Reducing RNs IS NOT IN THE BEST INTEREST OF THE CLIENT. It is not fair to the LPNs either who practice within a certain scope (task oriented) and RNs provide more critical thinking and problem based learning skills for the complexities of family dynamics, unpredictable health statuses, and behavior management... to say the least.</p>	<p>There are too many managers managing managers managing managers.. I think you get it. These people are making the moolah. But let's go after the first line workers..</p>	<p>The only way is to support education. With education this allows opportunity and expansion. Smarter people = success.</p> <p>Another is to support healthcare. You can't do much if you don't have your health. Health is everything. Job creation and economic growth will only happen if people have their health. How do you expect people to have their health if health care positions are cut and the healthcare professionals begin to burn out too?</p>
T4R	<p>Mental Health. Supports for the vulnerable. Energy Industry. And finding renewable energy sources.</p>	<p>Executive salaries. Corporate management structure that is too top heavy. Corporate tax breaks should be reduced. Better management of funds. Accountability across all levels of government spending.</p>	<p>Invest in new kids of energy. Invest in the the wellness it's people. Education.</p>
T5Y	<p>Decreasing the homeless population by creating jobs! Get Albertans back to work!!</p>	<p>Health care, as nurses get overpaid when the actual doctors do the bulk of the work, as well as getting double time on weekends for no real reason.</p>	<p>Absolutely imperative! Not sure how, but job creation and a growing economy are imperative to thrive as a province</p>
T6C	<p>Finding MISSING INDIGENOUS WOMEN, helping indigenous people reconcile, finding sustainable energy, high school education(put funding into good teachers and back into art and sports programs), create easier access to mental health programs, make public transportation reliable and lower cost.</p>	<p>I don't understand this question? Is Alberta broke?</p>	<p>More city jobs, encourage sustainable energy businesses. fund startup costs, grants for small businesses, more education grants for post-secondary NOT loans. Invest in people who will make big differences.</p>
T8h	<p>Communities and social services</p>	<p>By cutting the war room. Increasing corporate taxes. Introducing a progressive income tax. Adding pst. And stop with the obscene private flights and for executive council</p>	<p>Technology investment. There is a way that the government can capitalize on the world class tech that the oil sands developed to redevelop lands that have been drilled on. Selling this technology and technique to different jurisdictions should be a money maker make us an energy capital of all types of energy. Not just oil.</p>

T8a	Jobs but not just jobs for typically male fields of work. Many women are the sole, or main income earner in their households. Many budget decisions to date seem to disregard the importance of jobs in typically female fields of work. People are noticing this. Priorities that don't result in MANY people I know being much worse off now than they were three years ago.	Should have left the carbon tax the way it was (and where the money collected came to the Alberta government coffers. Perhaps this would have avoided the future need for a sales tax.) Stop fighting pointless posturing legal battles with the federal government over jurisdictional issues. Get rid of the war room or whatever it's called. Staff salaries in premier office and upper echelons of power. The info seems less available than in the past. We notice. Gradually and responsibly reducing public service via attrition.	Diversification. Stop with destabilizing the oil industry (e.g. messing around with the carbon tax. Industry wants consistency and level playing field. You are creating problems. Stop focussing only on the oil and gas industry.
T2T	Increasing support for social services, healthcare and education. Diversifying the economic opportunities for Albertans with developing technology and energy businesses that will help to transition to a post fossil fuel economy. Invest in geothermal R&D, become a world leader in geothermal tech, construction and generation.	Increasing corporate taxes to 15%.	Put more money and programs into renewable energy. Support local agriculture and diversify our food security. Reclaim and repurpose abandoned oil wells for geothermal power generation.
T3p	Health care	Highways road construction	Build the pipelines
	Healthcare Education Disability services	City architecture	By allowing companies to open more part-time positions and allowing the services we have now to become really good before opening new ones
T5x	Oil and gas, education and healthcare.	Fighting for equalization payments for Alberta and pushing for oil sector to expand and turn our local oil back on! No more international oil!	Build our pipelines! Once our oil is moving again, the province and country will be more profitable. We need to support our oil and gas industry, we need our current companies who have stayed during this downturn want to continue to stay. We need a government willing to stand up and fight all the slander directed at Alberta!
T8S	Maintaining Provincial infrastructure, completing projects that have been on hold, improving funding to smaller municipalities that are facing major funding shortfalls for basic infrastructure needs. A rollback of capital expenditures, and more funding for maintenance and rehabilitation.	Attrition in the public service, introduction of some user fees for services, increase in some service fees, reinstating health care premiums, mandating efficiency reviews for all Ministries. "Pay as you go" taxes, where payroll tax deductions are made, rather than waiting for annual income tax revenue. A look at the existing tax code to determine if changes can be made regarding out of Province workers. Many people work in Alberta for years, but do not switch their Provincial residency, and pay their taxes to their Province of origin, not their Province of residence.	Tax incentives for small to medium size business, tax deferment for larger businesses that need a short term boost, more predictable funding for Provincial projects that would allow business to be able to plan rather than just react, the expanded use of P3 type projects to get more people working in the short term, a fresh look at the nuclear power option, which would give Alberta access to cheaper electricity with opportunities for nuclear medicine and nuclear technology programs at our Universities and Colleges, as well as the ability to sell medical isotopes to the world.

T6H	<p>Actually creating jobs, and not just talking about it. Stop wasting tax dollars on this "war room" nonsense and the other panels getting news coverage. Those decisions can more effectively be made in a streamlined, integrated process rather than something entirely new and silo-ed. This government campaigned on job creation and reduced spending, so I impatiently wait for them to start acting like it.</p> <p>I recognize that public service jobs are a huge source of contention, but healthcare should in absolutely NO cases be privatized-- we're in an economic downturn, who do you think can actually afford private care costs? You aren't serving Albertans, you're serving wealthy people in Edmonton and Calgary.</p>	<p>Cut tax breaks for multi-billion dollar companies. I agree that there should be consolidations in government middle-management where redundancies occur. But for heavens sake STOP cutting front-line workers. The rural areas are suffering enough, and what benefit does cutting healthcare workers serve?</p> <p>Also, if a PST is what it takes to make up the deficit and kickstarting economic growth, I'm all for it.</p>	<p>Look at who actually needs to "get back to work". Let the profitable private companies work without you interfering. Invest in fields that stand to grow in the province, like forestry or catering to long-needed public construction projects. Make a plan for the next recession, with all this fear one is on the horizon in 2020 and 2021. All I see that these current supports doing is trying to create instant growth, but I want sustainable job growth - year-round, reliable, continuous positions. I just want to feel that this government is serious about their goals, and not headed back to the PC days under Redford and Prentice, of all talk and no action, rampant nepotism, and money mis-management.</p>
T3G	Education, health care, diversification of the economy, supporting small businesses NOT big corporations	Get rid of standardized testing in Education, streamlining government bureaucracy, their wages	Support small businesses, support family farms, support forestry
T2X	Class size Support for inclusive education Transparency in policy making with proper communication to all stakeholders	Senior corporate CEOs Tax incentives to the major private corporations Politicians	From the bottom up, focus on everyday people
T8n	Education and health care.	Start by the salaries of the politicians by 50%	Tax businesses and give bursaries to areas like technology, health, education and infrastructure.
T3j	Education, health care, social services	Don't give tax cuts to big profitable corporations. Tax the rich. Tax the oil companies	Incentives for "green" businesses, incentives for tech companies that would like to set up shop here
T4B	<p>Diversifying the economy away from oil and gas and towards more renewable clean energy like solar, wind and hydro.</p> <p>Increase spending on social supports and services for low income, disabled and marginalized Albertans.</p> <p>Reconciliation with indigenous peoples: Adopt UNDRIP; commit to the Truth and Reconciliation recommendations; investigate justice for the Missing and Murdered Indigenous Womens and Girls and Two Spirit peoples.</p>	Utilize progressive taxation and ensure corporations and the highest income individuals are held accountable to pay their taxes. Do not give tax breaks and bail outs to corporations and big business. Stop paying for the "war room".	<p>The Alberta UCP government should not be making cuts to education and health care forcing job loss. Increase spending in education, health care, arts and social services to increase job and economic growth.</p> <p>Provide incentives for new renewable green energy entrepreneurs and businesses to spur job growth in new sectors.</p>
T5I	Education and health	<p>Quit subsidizing the oil and gas industry</p> <p>Abolish the "war room"</p> <p>Cut out all this nonsense about fair deal for Alberta</p>	<p>Education education education</p> <p>Encourage the new industries involved in green energy</p> <p>Embark on programs to deal with orphan wells.</p> <p>Quit giving corporate tax breaks</p>
T7X	Spend on Education and infrastructure. Quit giving money to oil and gas	Reimplement the carbon tax use that money to invest in green technology. You can get rid of your war room. Also take back the 4 billion dollars you gave away to oil and gas.	Find new industries to invest in. It can't be all oil and gas.
T6E	<p>>bringing back and reinforcing social programs that support the most disadvantaged (e.g., re-indexing AISH)</p> <p>>healthcare staffing and infrastructure</p> <p>>diversification of the economy to help create jobs</p>	<p>>less subsidies for oil and gas companies</p> <p>>trimming of administrative bloat</p>	>By putting more spending towards diversification, including more funding (or less cuts) to industries that bring in considerable money to the Alberta economy (e.g., arts and culture, video game development, music)

T1A	Getting nurses paid. Flat or low wage growth is okay as long as there is no plan to claw back other perks or conveniences they get.	Cutting all funding to the Canadian Energy Center. Trimming Doctors salaries. No raises for elected or appointed provincial government officials. Reduce infrastructure maintenance dollars.	Tax rebates for start up companies. Or tax rebates for larger companies who are investing in Alberta based startups or who are researching in Alberta.
	Robust public health care for physical AND mental illness. Strong public education system that ensures that the unique learning needs of children and adolescents are met. Investment in diverse fields such as tech, scientific research, and other innovative developers in order to make Alberta a desirable place for business. Focus on reducing child poverty and hunger and promoting a genuine living wage. Working to repair relationships with Indigenous peoples and following treaty obligations.	Tax businesses and income brackets appropriately. If employee cuts are to be made, don't cut those on the frontlines. Train staff well and provide solid resources instead of relying on external consulting for so many things. Focus on what businesses are already here and help them thrive instead of spending so much on trying to get external business to move in. A healthy business community will be a great selling feature.	Invest in diverse fields, not just oil and gas. While that is important it cannot be the only focus. We know what happens when all the eggs are put in one basket... Look at infrastructure projects; the Hoover dam (while it caused a lot of problems) was initiated to create jobs. Stop focusing on eliminating the debt so quickly that in a few years time we are going to be suffering consequences of poor health, uneducated people, youth having moved away for better opportunities.
T5K	Post secondary education - large and quick cuts are reckless and detrimental to future generations. Needs a more moderate approach - agree cuts can be made but the speed at which it's done is irresponsible Capital maintenance and renewal - current assets across the system are underfunded Focus should be on truly public builds as opposed to govt offices.	Medical salaries - doctors and nurses Post secondary faculty salaries - no caps on salaries for professors is completely unreasonable as are tenure positions. These are out of touch with reality. Government parking program should be cut - employees pay taxable benefit which goes to feds while cost of parking is borne by Alberta tax payers Unnecessary government positions - lots of overlap with director, executive director and ADM positions. Not all are necessary nor do all these layers exist to the same extent in other jurisdictions. Stop funding private post secondaries - let them be private and invest in the public institutions. Proper space planning to get rid of excess space and manage inconsistencies in space provided. Government should take its own advice and stop travel and hosting including meals for meetings and mandate use of per firms for meals. Stop preparing Audited ministry financial statements - AB is the only jurisdiction that prepares them. They are of no use publicly and could still be produced as unaudited to continue to provide information. Cut DM and ADM salaries. They are out of touch with reality, higher than other jurisdictions and out of line with other public sector salaries.	Stop the cuts - a first step would be managing layoffs happening because of reckless cuts. Job creation in a time of government forced layoffs doesn't seem viable. Diversification of the economy - still too great a focus on oil and hopes of increasing oil prices. Also need to focus on programs that stimulate other funding - federal, private, research based etc. Again current cuts are contrary to achieving this.

T4N	Public services included health, education and environmental services.	Cut the tax gift recently given to big business!	Support all government supported jobs: nurses, teachers, government employees, environmental workers, etc. Stop the cuts! Reintroduce the tax incentives for industries like the film industry and other industries to diversify and grow economic diversity.
T4N	Public services included health, education and environmental services.	Cut the tax gift recently given to big business!	Support all government supported jobs: nurses, teachers, government employees, environmental workers, etc. Stop the cuts! Reintroduce the tax incentives for industries like the film industry and other industries to diversify and grow economic diversity.
T2Z	Education/health/Senior support/ child care/kids with special needs.	Reduce Public service workforce. Specialty close satellite offices such as HR offices.	Build pipeline
T6t	Health care and education	Personal salary	Helping small business taxing big business more
T6G	Health care infrastructure (mostly primary care facilities, mental health, safe injection sites)	Wages, wages, wages, benefits, wages, sick days, benefits, wages, and wages. Did I mention wages? Physicians fees too. Note that I did not say jobs. More people working, each paid 5-10% less.	Speed regulations. Time delays and uncertainty kill projects.
T1H	I think the government should increase the funding to homeschool families. As it stands, I receive around \$830 per child. In the elementary years, this amount may be sufficient but as my children get into the higher grade this funding will not be adequate.	As a homeschooler, I save the government around \$10,330 per child per year. I think the government can continue to save this money by promoting parent's choice for education for their children as well make homeschooling a viable option by supporting homeschool boards.	Oil and gas is great but as a province we need to diversify our economy. We need to bring other types of business to Alberta to get Albertans back to work.
T4H	Education and Health Care	reducing the salaries of the Premier and MLAs	By not pitting public sector versus private sector. By diversifying industry in our province and not just focussing on energy.
T5E	Education, Healthcare and social programs to support our most vulnerable. Sustainable industry and renewal energy. Increase possibilities for the tech sector to develop.	By taking back the money given to corporations and shutting down the "war room".	Entice tech sectors Support public servants- aka teachers, nurses, social workers DIVERSIFY the economy to not be solely based on the oil industry
T8A	Infrastructure. Social programs, disability, youth employment, basically every damn thing you have been cutting.	How about not giving billions to large corporations who keep leaving the province with the savings. Get rid of the war room.	Stop screwing the little guy. Help out small businesses instead of large corporations who don't care. Small businesses are going under left and right causing unemployment and the large players are leaving with our money.
T7X	Healthcare	-finding a cheaper alternate than ambulances doing inter facility patient transport. -bring back two doctor goals of care decision making. Most Families don't have the capacity or knowledge to make informed decisions. - not build a 30 million dollar war room.... that's ridiculous. -build a new chronic vent unit at a hospital! Numerous trached patients occupy ICU beds costing the government thousands of dollars a day where if they had an appropriately staffed vent unit it would save money.	Build that pipeline and stop importing oil from Saudi Arabia

T3M	Health care Education Diversification of industry	I think MLA's should try to live pff minium wage while in office.	Fund education and health care
t5a	-Maintaining the quality of public services such as healthcare, education, and infrastructure -Developing policies that target issues of poverty and income inequality, such as ensuring that youth are able to afford post-secondary education and are not overly mired in debt when they start out in life. Over the longterm, a shrinking middle class could sink our economy	Government should focus on finding alternative revenue streams. We wouldn't need to find savings to balance the budget if we had a PST and we brought our corporate tax rate back up. Moreover, Alberta is still trying to catch up to a period of rapid population growth, so we can't afford to be making cuts right now. Vital services need to be paid for, and if we don't pay for them now, we'll just pay more for them later, so we're not really finding savings.	Growing the economy through targeted economic development and investment attraction programs aimed at diversifying into promising sectors such as tech. Wholesale corporate tax reductions have been proven to do little to attract investment in other jurisdictions. Good data analysis will be key in identifying diversification opportunities.
T5A	- Healthcare. - Education. - Social Security.	- Stop corporate tax cuts and large expenditures for government officials.	Diversify the economy. Stop investing completely in the oil industry.
t9e	Better recycling systems.	cutting wages to politicians.	by making it easier to get training wanted.
T9S	All Education, Health and Environment.	Only give corps money back if they create jobs and build more stuff here. If not, no corporate tax breaks. Institute a sales tax to bring more sustainable bottom line dollars to the table and get away from oil dollars.	collect the carbon tax yourselves and diversify the economy here
T5K	Public education, health care, senior citizens housing and diversifying the economy.	Shut down the Canadian Energy Centre aka war room. Tom Olsen is incompetent. Tax the rich. Implement a Provincial Sales Tax.	Funding like the S.T.E.P program, energy efficiency grants and incentives, tax big corporations and individuals.
	Public Health care, front line staff, Public education (post secondary, elementary etc) infrastructure improvements	Cutting upper managers in health care it's too too heavy, close down the war room it's ineffective, stop creating so many panels on work that has already been done. Quit giving large companies such big tax breaks.	Bring back tech initiatives, cinema/movie benefits, alternative energy initiatives, invest money into infrastructure projects (roads, hospitals, super labs) which will employ Albertans
T6G	Healthcare, education, public services, and public infrastructure.	Government salaries, and government travel expenses.	Diversifying their investments to fields outside of oil, not abandoning it but looking into other fields that they can also invest into to help create new industries in Alberta. Also, through government public service projects that need workers to complete, and the money earned will go into other areas, stimulating the economy. Also, introducing at least a 1% Provincial tax would help increase Provincial revenue and balance the budget without decreasing social services for those who need them.
T4M	Increase homeschool funding. Home schooling is becoming more and more popular. Not only does it ease the strain on already over populated educational institutions but it also saves tax payers a lot of money. If there was more funding there may be more interested.	Foreign affairs or charging more commercial taxes instead of personal	Put minimum wage back to where it used to be so businesses can afford to stay open and employ people. If servers are being paid that amount then put a cap on tips like they have in New Zealand.
T4G	Healthcare, education, Community services funding	By reducing redundant, duplicate jobs	Encourage domestic growth by Albertans, for Albertans

T1P	Healthcare and increased policing particularly in rural areas.	Eliminate redundant positions. Politicians are paid too much and use so much public money. Expense accounts are ridiculous. Funding spouses to trips and meetings abroad is ridiculous. Stop giving ADHD patients AISH AND PDD funding. There are far too many individuals getting PDD funding who do not require a support person. There should be streamlined processes for all government related issues. Stop bailing out corporations and giving tax breaks while middle and low class Albertans are struggling.	Encourage and fund oil, gas and renewable resources within Alberta. Build refineries, focus on Alberta first. Build and encourage recycling facilities within Alberta. Cut taxes to hardworking Albertans. Wages are not realistic to support individuals and families. We are taxed on everything, sometimes disguised as delivery or usage charges.
T4G	Education and healthcare. Two areas it's unreasonable to cut from as long as it's front line costs in both.	Take out the too heavy jobs. The job of a supervisor for a supervisor of a supervisor. And that is for many areas. Including education and health care. Don't cut front line staff - they're needed. Take the ones who make the insane salaries!	Mandatory drug testing for everyone in all fields. Drug, alcohol, whatever. Let's keep us clean!
T6E	Administration costs and how the budgets are allocated inside governmental organizations.	Supporting local businesses and providing better incentives for them to invest in. What budget cuts do at the moment is that the working force at the bottom who are already struggling has to pay since large organizations do not make dramatic changes to their high ranking positions or administration. By closely monitoring how and where the budgets are allocated the government can help the province save.	By supporting the more vulnerable groups through helping them to find jobs, monitoring and advising large organizations to create better opportunities for their employees and supporting local businesses through ongoing consultations and public engagements.
T6H	Healthcare, education, investments in diversifying our economy	Decrease tax breaks for the wealthy, use things like carbon tax to fund public sectors	By stabilizing current job markets, like public sectors, leading in new energies, moving away from oil.
T6L	Education and healthcare. We cannot create a demand for our oil, nor change the direction of world economics. Let us then focus on an educated and healthy population, who can diversify and grow our economy and create sustainable opportunities for all Albertans.	Corporate tax cuts, government created departments to promote the interests of the government.	By adequately funding a healthy and educated population.
T2N	Education, more teachers and more resources to fund special education classrooms Health care- adequate staff of hospitals and clinics	Big corporations (increase taxes) Introduce provincial sales tax gradually	Invest in renewable energy sources and turning our oil and gas sector into something more sustainable for future. Use current oil and gas workers in process.
T3H	Education Public Transportation	ENGINEERS	cutting down on unnecessary areas
T6R	Public education and healthcare	?	Public education
T0E	Subsidized childcare, infrastructure, tourism and education	Staffing (outsourcing certain work) and option for private healthcare	Promote tourism, allow More international airlines to fly into Calgary and Edmonton like Emirates , Qatar, Japan airlines, etc as this will draw & retain migrants in the province instead of everyone settling in Ontario GTA and main reason is more connectivity options from Pearson airport
T8B	Healthcare and education	Look at government salaries and their pensions.	Education so we have people qualified to work in the future! Healthcare jobs and support so that people can stay alive and not live with chronic health problems or die needlessly because of cut backs

T5R	Education Green industries Tech industries Senior and long term care	Stop giving tax breaks to oil and gas companies.	Invest in green energy and Alberta based tech companies.
	Healthcare. Drug coverage for seniors and Albertans	By reducing politicians wages and spending accounts. Reduce politicians pensions Increase tax for corporations	Reduce costs for tuition so albert an children will become educated and productive members of society and feel fillies in their roles
T6R	-education and health!!!!	-corporate tax cuts, removing caps on insurance	By having a well educated and healthy population!!!!
T2Y	Education	Not having a 'war room', have large companies pay appropriate tax instead of bailing them out.	Diversify- computer programming, robotics, renewable energy. Give the tax breaks to new small businesses
T0A	Focus on creating a more independent economy away from goofs in Ottawa.	Join all school boards together to save money on half used buildings and a waste of money on school board management and staff. All schools can teach what ever religion or language in separate class rooms in one system/ building.	We are an oil province we have the resources so let's start refining more of our oil to gasoline and other sot after produces. Developpe the medical specialties to cut down on wait times and bring in extra money from other provinces and states. Create an independent Alberta.
	Education and health care	Increase corporate tax rate	Support diversification
T9V	I think the government should focus on increasing homeschool funding.	The government will save by increasing homeschool funding. More homeschoolers means more savings in the public school system.	The government should work towards allowing/supporting pipelines and getting Albertans back to work.
T8N	Fighting against the wrongful perception of Canadian oil and Gas. Focus on educating Canadians and our students on the truth. The students are getting taught that we are causing climate change.	Get a provincial police force and punt the RCMP.	Continue to support Canadian oil and gas. Double down on the effort.
T8N	Fighting against the wrongful perception of Canadian oil and Gas. Focus on educating Canadians and our students on the truth. The students are getting taught that we are causing climate change.	Get a provincial police force and punt the RCMP.	Continue to support Canadian oil and gas. Double down on the effort.
T6E	Health Care Education Economic Diversification Post-secondary education	Stop giving massive tax rebates to corporations.	By not cancelling projects that were already in the works which would have employed hundreds. By not cancelling incentives for the tech industry. By not cutting back on health care. By not cutting back on education. By not cutting back on post-secondary education funding. With the job losses you've already incurred, you could basically do nothing and still come out ahead
T4X	Health, Education and Crime	Your salaries, and ridiculous handouts.	Start focusing on other industries as much as you do oil and gas.
T2X	Education Health care	Downsize upper management	Reduced Tuition for people needing to diversify their skills
T3K	Health Care & Education front line workers	Force cuts to middle management.	Diversy economy (more than Oil & Gas)
T0L	Homeschool funding for secondary education needs to be higher.	Promote and support homeschooling in rural areas to save on infrastructure and bussing.	Provide business consulting and mentorship for small business and offer financial management education.
T2N	Education	salaries of elected officials	through organizations that stimulate innovation

T5x	Schools and public services	Their structure and waste no front line services	Support other industries other than oil. Tech and video games
T6T	Education Climate change Welfare, social development	Cancel lawsuits against carbon tax Cancel the Canadian Energy Centre Reduce wages, pensions and other benefits for elected officials.	Invest in research and development of renewable energy sources. Support innovation and basic research at post-secondary institutions. Cancel the corporate tax cut and invest in training for non-fossil fuel based jobs, give hiring incentives to small businesses who don't benefit from the corporate tax cut.
T0A	Education Health Care Courts and prisons (get rid of PCJ Ivan Ladouceur) Roads	Politician salaries, allowances, perks Corp taxes - increase Special interest groups Cultural groups	More funding to education, the key to ALL growth!! Cheaper education allows more residents to get an education.
T2X	Economy, lower tax bill's to keep more money in everyone's pockets	Cuts in hospitals & schools.	Put tax payers money into prosperous growth projects.
T5A	Diversifying the economy beyond Poland gas, support for extensive public infrastructure projects, forcing oil and gas companies to clean up orphan wells, and expanding healthcare	Increasing corporate taxes, implementing a sales tax, ensuring that corporations and industry pay municipal taxes that are in arrears so municipalities need not rely on govt for services they could pay for with those owed tax dollars	Diversifying the economy, value added initiatives, green industry, nanotechnology
	Education Standards, Schools, Health Care, Infrastructure, Reinstate the Energy Efficiency Alberta Programs.	Cut Government Salaries of MP's, Stop the Alberta Senate Election, Completely disband The Canadian Energy Centre War Room, Stop tax cuts to Oil & Gas.	Invest in renewable energy, Sensible infrastructure projects, Invest in Technology solutions and companies.
	Health care, education.	The government is hemorrhaging money through ineffective management and useless initiatives and privatization. Contractors run by former employees provide substandard work and are paid obscene amounts of money for it. Ridiculous amounts of money are spent on lawsuits dealing with private contractors. Massive amounts of money are spent on expense accounts. No expenses should be reimbursed without receipt. Managers are ineffective and should be assessed on the VALUE they deliver, not how much they "save."	By providing value driven and effective public services, a secure well-educated population will create its own jobs and economic growth.
T3J	1. Education 2. Health Care 3. Children Services 4. Social Services	1. I do not think we need to balance the budget making such drastic cuts. We as a province will be dealing with the consequences of children not being properly educated, and lack of health resources for years to come of the government continues on the path they have started. 2. Examine top level positions in government services and trim jobs that overlap. 3. Less travel expenses given to representatives. 4. Scale back infrastructure projects.	Invest in alternative energy sources to create jobs. Do not rely on oil and gas to solve economic growth. Begin to diversify investment in alternative energy sources.

	<p>We should be working toward generating businesses that contribute to a sustainable future. We should be transitioning agricultural farms to plant based farms. It is 2020, these practices are no longer necessary. We do not need to abuse and murder animals for our selfish desires. Farming animals in this manner disrupts the delicately balanced food cycle – creating more herbivores than there are plants (or more readily, space), and more carnivores (i.e. humans who eat meat). Industrial farming has also shown to have a number of detrimental environmental impacts, including high greenhouse gas emissions, extreme water usage and land exploitation, and air pollution.</p>	<p>Instead of using our resources in the most energy-efficient way possible by growing plants to feed directly to people, we currently use our dwindling land and water to grow grain to then feed to animals who we then eat, giving us considerably less bang for our resource “buck.” The problem is that the standard Western diet is extremely resource intensive. In order to produce animal products, land, water, and energy are required to grow, harvest, and transport the feed that is then fed to the farmed animals. After feed for livestock is produced, additional land, water, and energy resources are required to house and raise the animals and dispose of their waste. Eventually, even more energy is required to transport these animals to slaughter and process their bodies. To give you an idea of how this all breaks down, it is estimated that people who eat beef use 160 times more land, water and fuel resources to sustain their diets than their plant-based counterparts. Because we are already struggling financially, we should be adhering to a diet that minimizes the use of our precious resources – not a diet that requires astronomical amounts of resources.</p>	<p>Many factory farms cause substantial mental health issues for their workers resulting in depression, PTSD, and abusive behavior. By transitioning factory farms and slaughter houses to sustainable plant based companies, we would be creating products for consumers that are not harming the animals and in turn also not harming the workers who have to normalize such horrific things on a day to day basis just to cope mentally. All of this can be done without anyone being forced to lose their jobs. It’s time that the government and the people in power take this matter seriously.</p>
t0l	seniors and their dependents	redundant committees to study things that have already been studied and recommendations not implemented	get the .. out of the way and let business do their job
T3H	Healthcare and education	I’d be willing to pay higher taxes for better services like the Nordic Countries do.	Canada should be self sustaining in the oil and gas sector.
T8n	Education, social and mental health services, health care, pensions	Regulating tax contributions from large corporations. Redistributing wealth from wealthy household incomes	By supporting public sectors. Funding government programs accessible to all
T1k	Education!!!!!!!!!!!!	Idk	Idk
T3K	Primary health care flowing into referrals. Urgency for specialists.	Reduce Travel. Use Skype.	Support back to work education. Fill vacancies with out of work Albertans.

T6C	Healthcare Education - primary, secondary and post-secondary Safe consumption sites Creation of a "super-lab" for all laboratory work in Alberta Renewable & Green energy technology & production	Stop the payouts & bail outs to oil & gas companies Cut the salary of the premier Stop funding all these red ribbon panels and review boards, when they are just being paid to echo the premiers wishes	- Invest in Green & renewable energy technologies and production - create a provincial carbon tax - incentives for technology businesses to operate in Alberta - reinstate the incentives for television, video game and movie media to be produced in Alberta - create more teaching & nursing positions and increase funding to healthcare & education - stop spending money on bailing out oil & gas companies - disallow oil & gas companies who are on the verge of declaring bankruptcy from using their remaining funds to pay their board of directors and executives, instead reroute those finances to cleaning up abandoned wells and back to the municipalities the companies operated in - focus on expanding post secondary funding & grants, to attract more talent to Alberta's universities - increase corporate taxes - promote marijuana tourism internationally - increase taxes on the top 10% of private income earners - invest in infrastructure - stop wasting money on vindictive cancellation of NDP plans and policies, like the oil by rail contract
T6T	Public Education accessible to all regardless of income, public healthcare.	Not wasting money redoing work that was already done (like redoing a well thought out and much needed curriculum rewrite) and instead spend that money on updating the rest of the curriculum.	Diversify the job market and not put all our eggs in the oil and gas basket.
T8a	Education, mental health, health care	Corporations	Tackling issues that affect employment like addictions, mental health
T2J	Education, healthcare and social services in general	Nowhere. Cuts are not appropriate; increase taxes for the rich.	Increase funding to government agencies, hospitals and schools so they can afford to hire more staff
T2R	Jobs, taxes, education, health care	Companies like Amazon - are they taxed? Instead of making blanket cuts, look & analyze. Ask people, where can we cut? It is always easy to cut from the vulnerable. ASK ...	DIVERSIFY Let's get out of the oil & gas box! Yes it is an important resource in AB, BUT, it is not the only one! AB = agriculture; AB = forestry; AB = big, blue, sky ... Tourism! Water, wind Let's support oil & gas, AND develop other economic projects!
T5Y	Healthcare	Government wages, equalization payments, carbon tax,	Spend money on infrastructure and hire local people. They will need to spend more money
t5r	Health Care, education, low-income and back-to-work support, cheaper day care (get people to work), middle class support, diversification of the economy (tech industry, start-ups, alcohol, cannabis, other untapped markets).	ministers budgets (everyone is feeling the pinch, the people making the rules should feel it too), Government 'war room' is a waste of money with no foreseeable gain	support tax credits and economic benefits to diverse economic interests (not just oil!), support start-ups, big subsidies to tech firms (like you see in Vancouver), support innovation and education that stays in this province, move money out of the hands of oil and into the hands of other groups to shield Alberta from the turbulent oil market.
T2e	Diversifying Alberta's economy by investing in green energy projects.	I think politicians should look again at their own super cushiony pensions and wages. I would support a sales tax so no services are cut.	Create more crown (provincial) corporations that for diversifying the economy.

T0L	Helping small businesses succeed, getting the economy going again.	Cutting wasteful public spending, but doing so by consulting with the front line to take advantage of their insights, and to avoid making cuts that will lead to increased costs down the road	I wish I knew. I am not sure the corporate tax cut is working...
T8A	Government should focus on public funding such as health care, education. We have a revenue problem, bring in a sales tax or raise taxes.	Yes. Start by getting rid of the UCP War (propaganda) Room. It is a total waste of my tax dollars. Business tax was a stupid move. It has been proven fact that triggle down economics does not work.	Maybe by actually supporting job creation, rather than cutting it. UCP policies are not bringing jobs or job creation to Alberta. Use technology to improve Alberta job creation.
T4P	We need to spend more on public education and public healthcare	I'm sure there are a ton of political events and funding to ridiculous things that are redundant and could be cut. Also, politicans could take a pay cut.	Focus on growing public healthcare and education. Better education will provide more opportunity.
T1x	Sustaining and increasing funding to public education as this is our best investment in Alberta's tomorrow. Maintaining a strong public healthcare system that allows all Albertans to access the very best services	By not giving large private corporations tax cuts. Explore a sales tax The energy warm room is unnecessary and extremely costly. Cut this department due to redundancy Bring back the carbon tax to pay for community growth	Grants for innovation in the oil and gas and alternative energy source industries. Maintain education funding. Create well paying jobs for young Albertans in all industries.
T6J	Alternative forms of energy production - shift focus from fossil fuels (create employment by diversification in energy production) Environmental protection - pay attention to climate change and act accordingly - LISTEN to the SCIENTISTS!!!! Preservation of endangered species and natural areas Education - youth are our future Health care - ensure quality care is available to all citizens - focus on prevention Law enforcement Efforts to promote national unity	Chuck the energy WAR ROOM!!!!!! Focus on essential services Do we really need a Governor General? Streamline provincial courts i.e. attach unpaid fines to driver's licences, property taxes etc. Ensure the government isn't on the hook for all the abandoned wells. Stop letting energy companies get away from their responsibilities.	Encourage/support businesses that think outside the box when it comes to job creation. Alberta could be a great tech hub, what about a movie industry? Do a better job of promoting agricultural diversification in the province (beyond beef and pork and grain). Take measures to ensure pollinators are protected. We need them to grow anything!!!!
t3m	Aish,Health care	By not sending so much out of country.	get pipe lines. Build more for tourist
T4S	Health care and education.	Management at AHS. Keep our money in the province. Limit how many people are hired from outside of Alberta. I.E easterners working in fort Mac.	Put the tax back to the multimillion dollar companies and maybe increase gst back to 7%
T2X	Transitioning our food system to a more environmentally sustainable and just plant based food system. Keep your oil and gas, animal farming is the leading contributor to our top three environmental crises today - direct exploitation, habitat degradation and loss, and climate change.	Stop the corporate handouts. Are you government or are you a business man? Quite frankly albertans now can't tell the difference.	A plant based food system supports more jobs because it is more labour intensive.
T3G	Supporting Albertans basic needs: health care and education	Stop giving tax breaks to large corporations. Stop funding the Kenney "war room."	Rebates for the public for alternative energies such as solar and wind to create new jobs in these sectors.
T2E	Education. You may have a case that we spend too much on health care but you have no case that we spend too much on K-12. On a per student basis, we lag behind other jurisdictions. Despite being much wealthier.	Close the Energy War Room. That's real money.	Fund diversification efforts. We have a natural advantage in a dying industry. Without investments in the next thing, there won't be one.

t2e	Get help to those who need it, those who are facing mental illness and addiction. Deliver education and rehabilitation programs to these populations. For those repeat offenders who continue to commit crimes, deliver a stiff jail sentence but offer education programs inside our correctional systems. Force education on incarcerated populations by reducing sentences for inmates who improve their situation. This would work.	Healthcare - Focus on preventative care and healthy lifestyle choices. Create an advertising campaign around citizens making these choices (remember Participaction?). Continue to tax unhealthy lifestyle decisions. Make some hard decisions around spending caps for healthcare; protect frontline nurses and doctors. We cannot afford to spend millions of dollars on every elderly person. Education - Eliminate unnecessary transportation costs to and from school. Example - Langevin School in Calgary is busing in kids from all over the city and has eliminated priority enrollment in the school for those kids within close proximity.	Support the oil and gas industry but prioritize the diversification of Alberta's economy. Moving oil out of the province has proved extremely difficult with the political situations of our adjacent neighbors. This is beyond our control. Our focus must be on innovation. Tax cuts for corporations work to a certain extent but corporations should contribute their fair share. Where is all the money that the province saved from the prior decades of prosperity?
t2z	Getting Alberta back to work with sustainable jobs	Government salaries - cut your own salaries not front line workers	Stop taxing us and cutting everything, look at other ways to pay the deficit down. WE can't go out and spend money in the cities when we can't afford our bills
T2N	Supporting the needs of health care, education and the disabled. Not tax breaks for corporations. Increased funding for schools, AISH, and doctors. No cuts to nurses or doctors.	No tax breaks for large corporations. Stop funding the Kenney "war room" that is wasting millions of tax payer dollars.	Fund growth in sectors other than oil and gas, such as renewable energy sectors. Stop cutting funding to schools and health care that results in job loss.
T2v	Public Education, public transit, making child care affordable, climate change mitigation and preparedness, preventative health care, public health care, harm reduction.	Close the war room. Use proper procurement procedures.	Diversify the economy.
T2R	Invest in diversifying the economy. We all love oil money but we have to behave responsibly. It won't last forever.	No more tax cuts to foreign companies. That 4 billion could have funded schools, tech, innovation. It could have kept the Superlab and the cancer centre. Investments in business must demonstrably benefit Albertans, and not in an abstract, wishful, trickle down way.	See above. Don't cater to the already wealthy. Help small businesses.
T4G	Schools and hospitals	Within Gov't itself. Eliminate lengthy studies if research has already been done. Look at travel expenses, etc.	Lower small business taxes.
T1B	Education, healthcare and job creation	Cut contracts with seniors facilities and fund individuals instead of facilities. Let the person be funded not the bed. Cut high administration government jobs similar as the private industry has had to do. No need for 10 levels of managers to manage each other	Make it easier for businesses to deal with employees. Currently employees have all the power.
	Healthcare, education, public services	Impose a provincial sales tax to increase revenue. Stop paying for elected officials food/lodging etc. Spending account freezes for those in elected positions.	Diversify economy
T6l	Education and healthcare	MLA wages. Taxing multi million dollar corporations more. I will admit I need to look at this more to find good places to cut	Diversification. Oil revenues are important to pay for diversification now. Though anyone that thinks the oil reserves are going to last forever is only kidding themselves
	Education Health Job creation	Wages at the top of many boards could be reduced.	Do not cut front line employees in health and education. Diversify, yes oil, but also invest in new technologies.

T3H	Health care and education	efficiencies within bureaucracies	Tax incentives
T3A	<p>Healthcare - maintaining services and investing in wellness programs including mental health, safe injection, harm reduction and long term care.</p> <p>Education - lowering classroom sizes and modernizing learning technology and invest in teaching resources such as special needs, early childhood education and outdoor education.</p> <p>Climate Change - increased investment in economic diversification, green technology, electricity transmission and generation infrastructure, public transportation (green line in Calgary, high speed rail Calgary-Edmonton) and retrofitting buildings to be more energy efficient. Oil and gas green technology. Investments in climate change resilience (Calgary dry dam).</p>	<ul style="list-style-type: none"> - consolidate public and separate school boards - eliminate all public funding of private schools and require charter schools to elect trustees. - Increase Corporate tax rate - introduce 3-4% PST to pay down debt and reduce to 2-3% once paid off to fund programs and investments in the future. - Expand PSW roles in healthcare and increase nurse practitioner roles to reduce nursing and physician costs. 	<ul style="list-style-type: none"> - investments in economic diversification and green jobs. -
T6C	Health care and education	Inefficiencies in the City	Creating cheap affordable housing
T1K	Education, Green Technology	Higher corporate taxes	Fund education. Green technology
T5M	Health, infrastructure, education, with the caveat that we should ABSOLUTELY NOT be doling out corporate welfare, or stealth-supporting privatized healthcare or education.	<p>We should start by cutting down on the amount of handouts given to private businesses. Defunding and/or rolling the Catholic school system into the public school system. Trimming bureaucracy and middle-management in the healthcare system, rather than focusing on front-line workers.</p> <p>Let's be real, though. Alberta has a revenue problem, first and foremost. Man up and introduce a sales tax, you cowards.</p>	<p>Increase funding to sectors promoting a diverse range of economic opportunities instead of throwing money at oil companies and hoping they'll stick around. Innovation, technological advancements and diversification of the economy will all lead to long-term economic growth. Bleeding those sectors dry while single-mindedly trying to boost the oil sector (a sector which is entirely at the whims of international forces) will only lead to Alberta dying a slow death as the rest of the world moves away from fossil fuels.</p> <p>Do we want to be the people developing the next metaphorical automobile, or do we want to be the suckers who went all-in on the horse-and-buggy industry after seeing the internal combustion engine demoed for the first time? "GOOD OL' DEPENDABLE HORSES AND BUGGIES. NOTHING WILL EVER REPLACE THEM!" -- the UCP Government, 1853</p>
T6W	Transit more for LRT expansion	Tax corporations higher	Expand LRT
T8N	I think the government should focus on health care and post secondary	I think the government could impose a provincial sales tax so instead of cutting funding to crucial sectors they have more money to support them	They should support education at all levels so people are encouraged to stay in Alberta and start their business especially in regards to developing alternative energy
	PUBLIC Education Funding renewable resources Green projects	Recoup unpaid taxes from oil and gas Stop giving tax breaks to the rich....	Supporting renewable energy and projects

T5K	17(1)	taking some of the salary of ill doing doctors and ill doing university staff.	violating human rights is huge obstacle to economic growth ,hence the government should make sure the rights of all citizens are respected.
T0M		Cut the propaganda machine! Less political staff, get rid of the war room and less control over communication.	Diversify by investing in education, renewable energy, tourism, and making our communities sustainable. Make people want to stay in Alberta rather than move to BC!
T2N	Primary health care is essential. Public education. Stop privatizing health care and education.	Increase the corporate tax rate that was recently dropped. Big business is not coming back to Alberta!	Increase corporate tax to fund public programs. This will lead to a healthier and better educated population which will ultimately create more jobs and economic growth.
T1p	Jobs, health care and persons with disabilities	Government contracts. Building less leisure centres and more focus on what's important, like health care and schools.	More movement in the Oil & Gas sector.
T5w	Education, child care, Heath care	Cutting wages from Big box companies, CEOS, Etc	Unsure
T2Z	Public education and public healthcare, retraining of Oil and Gas workers, new energy.	Not handing out tax breaks and payouts to corporations who leave anyway. Impose a PST.	Make it easier and more feasible for young people to attend Post-Secondary education. Diversify into new energy sources.

T4H	We must maintain strong PUBLIC services in Health, Education, social services, etc. Do not continue to cut in these areas as planned. These areas make us one of the strongest areas in the world. I do not support in any way cuts to these areas. We must spend first on these critical public services. And...we must look at heightened supports for rural services. Urban is becoming more and more advantaged in this province. Rural needs to be funded in ways that address their challenges.	<p>Stop the corporate tax breaks! Enough. We need to quit being tax adverse. These tax breaks will not bring back the oil and gas industry. We must secure these taxes for revenue.</p> <p>Stop creating layer after layer of bureaucracy at the government level in Edmonton. Look deeply at the ministries and the layers of staff and projects...is this needed? Out in the work trenches of hospitals, schools, etc there are few funds to maintain the quality Albertan's deserve. They are hurting where it matters most. Do not cut the money directly serving regular Albertans and making them competitive on the economic global stage.</p> <p>Are Boards necessary? i.e. post secondary boards, school boards.</p>	Keep money flowing to municipalities and all public services. The only plan I see right now is cut, cut, cut budgets...but give breaks to the big corporate world. This is choking regular Albertans whose pocket books now have limited disposable income. We are spending less....except on everything costing more as the government has underfunded multiple areas now causing increased fees, etc.
T7Y	Education and health care. Two services that are too important to suffer the enormous cuts that they saw in the 2019 budget.	Funding to those that do not contribute to society.	Supporting all education. Both public, catholic, and private.
T1Y	<p>Spend it to fight for Alberta's right to develop her resources</p> <p>Spend it on a PR campaign to expose the climate change carbon tax flaws and hypocrisy</p> <p>Approach all AB schools to investigate the consequences of the carbon tax policies and the effects of the climate change activists on Indigenous young people and the dismantling of their job prospects because pipelines would bring jobs to the the Indigenous men and women</p>	<p>Stop the transfer payments</p> <p>Shut down SCS</p> <p>5% pay cut to every government employee</p> <p>Cancellation of all duplicate pension plans for (MLA, Alderman, Mayor, etc)</p>	<p>Lower taxes</p> <p>Build pipelines and provide incentives for businesses to return to AB</p> <p>Offer the best film industry tax credit in all of Canada</p> <p>Offer other incentives to lure film production to AB</p> <p>Fight for the worker and the right to work</p> <p>Powerful PR campaign defending ABs natural resources citing the support for green energy but not at the expense of killing off the oil and gas industry. Having both will prosper AB</p>
T8A	Child care, public service, education	Taxing large corporations	Support small business. Lower the cost of living so that regular folks actually have extra money to purchase services/products as a result business stay open and create jobs for Albertans.
T3m	Roads/maintenance/ necessary public services- AHS nurses, childrens services and early intervention services for at risk populations	Where money is being mismanaged/overspent- CBE audits AHS audits, subsidized childcare for those abusing the system, anywhere NDP just threw money at without asking questions	New building projects, Stoney trail west, The SE part of the LRT, keeping the city of Calgary councils overspending in check.
T2t	Education - funding for growth and teacher wellness Health care - do not privatize. Put more money into the health care system of every day Albertan.	Tax breaks for big corporations.	Diversify.

T4C	<p>Healthcare!! Without a healthy population, you can forget everything else. If you want to attract talent for the oil and gas industry and other industries to the province, they need to know that they will be moving to a province that can offer them excellent healthcare. Hearing of cuts to the frontline does not instill confidence that Alberta is a excellent place to live and raise a family.</p> <p>Education. Like healthcare, families considering a move to Alberta want to know that their children will receive an excellent education with classrooms that are promote a strong learning environment.</p>	<p>A smaller cabinet. This government is just too big.</p> <p>Ditch the War Room. It's a frivolous expense that comes at a cost of forfeiting Services that contribute to a high quality of life and standard of living that is important to Albertans.</p> <p>Time to finally rationalize and streamline the very top heavy and bureaucratic management of Alberta Health Services. This has never been done since it was formed. There are many management redundancies that could be eliminated so that we are not having to forfeit frontline resources like nurses and doctors. We need them; management not so much.</p> <p>Look at the remuneration for doctors. It is long past due time to salary doctors off.</p>	<p>Ditch the War Room. The province does not want it and we can't afford it. You can achieve the same result by retaining the services of a good Communication firm.</p> <p>While oil & gas are important to the province, there are few signs that the province is actually diversifying its economy. Seems to relying on same old, same old while other Canadian economies are evolving and therefore attracting new talent and new industries.</p>
t8c	Arts and culture programs	investing in long-term sustainable alternatives in new building infrastructure therefore diminishing the amount of spending per year	investing in making education, especially post-secondary institutions accessible to a wider portion of the population thus making the emerging work force more diverse and less competitive
T3m	<p>Healthcare</p> <p>Early intervention</p> <p>Srs health</p> <p>Ways to bridge energy sector both traditional and new technologies</p>	<p>Not marketing a "war room"</p> <p>Not rebranding things the "public" school board</p>	<p>Start finding ways to work with existing structures or unions healthcare workers. STOP divisive language between groups. It is not pipeline vs public service. Find ahs to build practicals between different groups so we are learning skills!</p> <p>Look at WHO is being hired into union jobs for ex:AHS: most ppl hired have had experience in thier field before being hired in. It is NOT their first job. They also require advanced degrees and training and required to be regulated unlike private sector or not for profit</p> <p>Diversify our energy sector.</p> <p>Support families : when you take away subsidies like early education then ppl can't get back to work. You need strong health outcomes so in the future those kids are healthy qnd can contribute</p> <p>read research on adverse childhood experiences so you understand how trauma is the largest health loach in healthcare costs</p>
T0M	Education, healthcare, and infrastructure	Not handing out money to private schools and rolling back the decision on the corporate tax cut.	Support diversification programs to help move Alberta off of oil only.
	EDUCATION and HEALTH CARE	Taxing large corporations, eliminating higher up positions, and creating more lower end positions (cutting at the top, rather than the bottom)	By listening to the people, focusing on areas of need and growth, rather than oil and gas, which is a dying sector
T2W	Healthcare and Education	By not allowing huge corporations to have tax breaks.	By putting funding into education. Citizens need a strong foundation to create a strong workforce.
T0g	Education Health care	Spending less on themselves	Stop giving the large corporations tax cuts

T6r	Health care and education	Cutting mla/premier salaries, travel expenses and spending Instead of politician travelling should do more Skype meetings	Not cutting people's salaries like teachers and nurses!
T5X	Education, Health Care, Get pipeline built.	Stop all the committees and all the meetings that just line the pockets of the ministers. Everyone including you know what NEEDS to be done.	PIPELINE and diversification.
	Healthcare, education, senior care.	Stop giving tax breaks to millionaires. With the current push for renewable energy sources, oil is a thing of the past.	Local business bursaries so they can afford to pay their staff, and to hire new employees.
T6A	Education - keep funding model from 2018 Health Care - keep funding model from 2019 Invest in Alternative Energy Maintain Funding in Infrastructure including Transit Do NOT scale back funding on programs where the disadvantaged do not have enough to begin with.	Stop giving our money away to large corporations that are not ensuring added employment in our province. Introduce a 5% sales tax. Our province is the only one in Canada that doesn't have one. Properly fund education now so that we are not suffering the consequences later.	Invest in Alternative Energy by funding those entrepreneurs who have viable solutions. Invest in computer technologies that support both human and physical resources. Ensure that we utilize our workers who are parents by supporting subsidized day care.
T6T	Education. Kids are important. They're the future. 17(1) So far with Jason Kenney's education cuts and backwards antiquated education plans, it's clear he doesn't have kids of his own nor does he care about my children's development. It's sad. It truly is.	For starters there's a trade mark violating "war room" that's costing Albertans \$30 million. I'm sure that money could find a better home than a hypothetical tantrum clubhouse. Seriously though, it's as big a joke as Trump's wall. Jason Kenney and the UCP make me ashamed to be an Albertan.	By not cutting costs to healthcare and putting nurses and healthcare professionals out of work. If that's not an essential service then I don't know what is. By not making daily life more expensive by eliminating childcare aid and subsidy programs. You want both parents to work and spend and get the economy moving? Stop reducing/eliminating measures that allow childcare to not cost a hardworking family a second mortgage worth of payments. Oh wait, Jason Kenney doesn't know what raising, caring for, and feeding a family is like. Kenney doesn't care, unless you have money to line his pockets with. The only Albertans Kenney cares about getting back to work are ones that make HIM and his golf buddies richer.

T6R	<p>People experiencing disability (children, youth, and adults)</p> <p>Environment (figuring out a way for Alberta to be more environmentally friendly)</p> <p>Homelessness</p> <p>Health care</p> <p>Education</p>	<p>If you are giving companies tax breaks, you should be sure they are putting that money back into Albertans and Alberta. Where is the proof that the money the companies save is going into the pockets of their workers or back into the Alberta economy, rather than the CEO's bank account for his next vacation out of Canada? If there are policies in place to be sure of this, you should be highlighting it for the public so the public better understands what tax breaks actually do to create jobs.</p> <p>Focus on raising the lowest common denominator and everyone will benefit. Focus on ensuring everyone has the bare minimum that they need. Look to countries like Denmark and Sweden. Look to studies of what a basic income has done for people. I am not saying that we absolutely need something like a basic income, but the evidence shows that when people feel supported and have what they need, they become more productive members of society. The Alberta.ca website talks about the housing first initiatives, but what else is being done to help people who experience homelessness? How is the government ensuring they are helping those who need it most? Homelessness is a complex problem that includes addiction, trauma, mental health considerations, etc. We know that the cost of these on the health care system can be immense, especially because small problems turn into extremely costly ones quite quickly. An ounce of prevention is worth a pound of cure.</p> <p>Find ways to bring Kinesiology into the health care system. Many Kinesiology graduates have knowledge on how to get people more active. What happens when a doctor prescribes "exercise"? Typically, the patient is told to go to the gym or start adding activity into their day, but the patient receives no support. Much of our health care costs come from</p>	<p>branching out into the environmental sector. Yes, we can solve our immediate problems with oil, but quit looking into the near future and start looking to be ahead of the game. Get on board or we will be left behind, and when oil and gas aren't relevant anymore, we will be kicking ourselves for not jumping ahead of everyone else. The opportunity is now. It may be a larger up front cost, but in the long term (for \$\$ and the planet) it will be a better investment. I feel like the government thinks they will get the most popular vote with oil and gas, but guess what? When the province misses out on this opportunity, people will remember that Jason Kenny was the one who didn't bother to get ahead of the game. Alberta could make a real name for itself world wide if they focused less on oil and gas and more on ways to be more economically friendly. What a wave of change it could create - one of the top producers of oil deciding to focus on other energy opportunities.</p>
T5Z	Education and health care	Government pensions	Get the pipeline through
T6w	<p>K-12 and post secondary education</p> <p>Kids are the future</p>	<p>Not giving tax breaks to businesses unless they actually create jobs</p> <p>Collect the unpaid taxes from oil companies</p>	<p>Listen to albertans</p> <p>Think of the future. Invest in educationn</p>
T4C	<p>Healthcare</p> <p>Education</p>	<p>Consider funding healthcare BLS extension course instead of paying each healthcare worker for 4 hours each year for CPR.</p> <p>Not find a new NHL arena.</p> <p>Infrastructure dollars relocated to priorities</p>	<p>Laying off healthcare workers and first responders leads to longer wait times for health services therefore requiring longer medical and disability leaves coming out of provincial and federal budgets.</p>

T9h	Education, health care, social services. If we could re-educate generations of work forces in botany, organic sciences, and computer sciences and hardware. It would introduce a new wave of businesses and new needs and services.	Taxing oil companies, auditing 10 years worth of budgets in order to see which programs have no place in 2020. Recycling, by reducing outsourcing of certain products, invest in repurposing. Maybe including some bylaw changes to accommodate growth, but not cluttered.	Cheaper education, and updating courses every 4 years . With cheaper education less debt for every income bracket, it'll be easier for the general workforce who don't make the average income to upgrade, and grow in the workforce.
	Education and students. Funding the future should be the way to go, not consistently funding receding industry like the oil industry. Additionally, clean energy.	Cutting funding to the oil industry.	Fund education and education jobs. If schools and universities are understaffed and programs are cut, Alberta will become weaker overall in economic growth.
T3M	Healthcare, diversifying our economy, green energy, education.	You need to spend money to improve our economy long term and invest in the people of this province.	EDUCATION - Free post secondary school or better options for student loans (no interest for loans if you stay within the province,) Diversity in our economy - we cannot survive off only oil and gas
T4C	Education. Health Care. Access to Justice. In that order.	Upper management and oversight. Trust your front line again. Stop micro-managing everything. Demand that for every dollar spent on an administrative or management budget, 12x as much be spent on the front line. Teachers need more money, admin and head office needs less. Curriculums need to back off and give teachers liberties. Let direct managers MANAGE their staff... Not policies. Policies are a pathetic attempt to litigation proof yourself and convince the public you are doing something while actually doing nothing. I am not in Education yet I can see through this. Cut policies. Grow teacher education and trust in them.	Stop focusing on only one dying industry. I work in oil, I love oil. But f off. We need support in other areas. Badly. Bring in a carbon tax and invest the money received back into alternative sources. I would love to work on other energy projects too.
T8R	Health care	Management. Political salaries and benefits	By encouraging ideas that provide value for dollars spent. ie adult day support for group respite as opposed to individual in home respite
T2S	Bringing business back to Alberta.	Cutting "premium" social services.	Reducing unnecessary yellow tape and offering tax breaks for businesses.
T4E	Education Health care Transportation	Top-heavy administration	Give tax breaks to the little guy!
T9E	Greener energy, diversification, healthcare and education	Reduce government salaries or increase tax for wealthiest companies.	By being open to renewable energy sources and not having all eggs in the oil basket.
T6I	Healthcare, education, social programs. YOU KNOW, the things that give us a higher quality of life.	Tax large businesses and corporations APPROPRIATELY. QUIT GIVING TAX BREAKS AND GOVERNMENT HANDOUTS TO YOUR MILLIONAIRE BUDDIES. QUIT WASTING OUR MONEY ON ASININE PROJECT'S LIKE A BOGUS "WAR ROOM" TAKE A PERSONAL PAYCUT. YOU ALL MAKE TOO MUCH MONEY TO BE SCREWING US SO HARD.	Quit giving our oil away for basically free. Invest in green energy and infrastructure. Join the rest of the first world in environmental concern. Quit gutting our healthcare, education, pensions etc. You're literally fucking average Albertans. Thanks.
	Higher spending on education and helping those with a low income/no income. Stop cutting funding to programs people need to survive and not be in debt	Stop giving so many tax breaks to big corporations that are already rich. Get taxes from them instead of lowering them and impose environmental taxes	Stop focusing only on jobs in the oil sector, there is more to Alberta than that. Spend money on infrastructure and such instead of austerity measures. Lowering the minimum wage for those under 18 and for servers will just require them to find second jobs and thus make jobs even harder to get. Make new projects sustainable

T6x	Low income services. Healthcare, education, daycare, social securities.	Tax the rich. Stop giving a billion dollars to billion dollar companies who then refuse to invest in alberta meaningfully. Slash MP wages, since you've gutted the rest of the public sector taste your own medicine.	Increase budgets for daycare, education, healthcare, public works. Diversify the economy away from oil and gas, which has 30 years left tops. Look at west virginia for gods sake.
T3G	Funding Education properly. It is shameful that in a schooling system that requires pre-teen children to travel many kilometers to school that school bus routes are cancelled or parents are forced to pay public transport fares to get their children to school and back. It's shameful that a public education system should be forced to operate like a private school system and be charging fees for nebulous services just to be able to carry out the curriculum. What sort of backward, 3rd world, country does that make Alberta look?	I'm sure that there must be lots of admin that can be made more efficient but the two things that cannot be cut are investment in education and investment in healthcare, both of which need to increase year-on-year.	Invest in infrastructure, schools and hospitals whilst interest rates are low. Invest in diversity - oil is not the only valuable commodity in the vastness of Alberta wilderness.
T6R	Job growth and education	Government personal spending	Make higher education cheaper or student loans easier to pay off
T3I	Education for children. Especially the children with disabilities	Health care in ways of collective agreement language around Overtime and providing a realistic budget for medical professionals to patient ratio.	Pipeline
T2J	Introducing a pst. It can be reviewed later "when/ if" oil prices increase again.	Reduce the number of management within AHS. It is totally top heavy.	How can you support job creation and growth by getting rid of thousands of health sector jobs. You have tried fighting the unions before and you lost thousands of nurses to other countries and provinces. I agree that part time nurses shouldn't get paid overtime until they have worked full times hours, but reducing their shift differential payments so no one will work nights or weekends. Who will you get to work all these shifts when the casual staff that AHS currently depend on decide it's not worth working them?
T8N	Quality Public Education for ALL students! Quality healthcare	No more tax cuts to big companies	Diversity. Oil and gas is fine, but let's expand our options.
T6a	Education and healthcare	Tax cuts for oil companies	Affordable daycare to keep parents working
T8S	Education through all ages but especially early years learning Ensuring affordable and flexible childcare so women are able to contribute to the economy. Healthcare. Particularly primary and preventative health care. Rural and remote health care and healthcare for vulnerable populations	While looking for some improvements in efficiency is fine, the government may need to look to a small sales tax for increased revenue or higher taxes for large corporations and the very wealthy including closing tax loopholes to prevent large companies and the very wealthy from avoiding paying taxes.	Infrastructure improvements Economic diversification
	Health care, education.	N/a	Invest in infrastructure
T2N	Public services (health care, social programs, low income housing, public education, PDD, etc.).	I don't think it's just about savings but increasing revenue. Corporate taxes should be increased and a provincial sales tax should be introduced.	Consider public sector jobs as jobs. This government is causing massive job loss.

T6b	Health and education	No more incentives for big businesses thinking it will draw more investment in Alberta. It doesn't seem to be working	Stop cutbacks.
T5x	Healthcare, education, diversification of our economy	War room, 4.7 billion dollar give away to oil companies who did nit keep the money in alberta	Continue to support oil and gas ASWELL as diversification, including other soruces of energy
T3M	Children's services (advancing futures bursary, reinstate funding for youth 22-24, prevention services like wrap around, healthy families, kinship), services/programs for families, social services such as aish. Education (lower class sizes, busing, more teacher, funding for mental health and support staff), healthcare.	Less tax credits to corporations, get rid of the war room. Anything but cutting services for vulnerable people. Honestly, shame on you.	Fund childcare, give back finding to vulnerable people, stop cutting jobs! Work respectfully with unions. Diversify our resources, oil and gas is not the end all be all. Bring back the alberta tax credit so we can manage the money. Be creative and get to know the humans in this province.
T6A	Housing, Jobs, Minimum wage	Tax the wealthy	invest in solar and wind energy, support locally based businesses and not big business.
T3M	We need money directed towards the opioid crisis, other addiction, and mental health. Education and health NEED to be a priority, if they are not strong, then everything else fails. We need more low income housing, money to combat homelessness, support our veterans. Property taxes are ridiculously high, something needs to be done to decrease this for both residential and business tax.	This war room is not needed. We do need a dedicated marketing team to manage negative publicity against our oil, but not to the extent the UCP has directed. Money towards multi levels of management should be reduced, specifically within AHS, CBE etc. We need to diversify our energy sector. I do absolutely support the oil and gas industry but the trend globally is moving away from oil. Alberta should not be left behind. We need oil righ tnow but we should be investing in research into other methods of energy. If we could provide energy from multiple facets, we could be strengthening our income.	Again, investing into new energy sources which would produce more jobs and more income. We need MORE nurses not less, with more nurses there is job creation and it decreases costs of overtime due to nurse burnout. We should encourage entrepreneurs to come to Alberta. I think Alberta could be a tech hub and a bigger tourist destination.
T3M	Ensuring all Albertans have proper, timely access to quality education and health care	UCP leadership wages! Less focus/payments to support dying oil and gas industry. Get rid of the ridiculous war room	Work with the universities to see how Alberta can diversify.
T2W	Education and health care.	I do not think the government needs to find savings it needs to increase revenue by introducing a sales tax.	By spending money on infrastructure and working to diversify the economy.
T4r	Education, healthcare and job creation in sectors other than oil	Stop giving corporations tax breaks. They are taking the money and leaving Alberta. Such a foolish mistake on the part of government to do this.	Focus on industries that show long term growth such as technology and renewable resources.
T2x	Education, health, roads.	Everywhere other than health, education, roads. Even this survey is rediculous and a waste of money. The analytics out of this should be selected choices not text input. The data would not be confused and could be analyzed with much I as effort. This is a joke.	This is a loaded question. Why would you be asking people this in a text field? We should be supporting industry, of all kinds, and making it worth their while to come to Alberta. Let's talk tax dollars from Cannabis. In only a few months the UCP has taken Alberta from a leader to a follower on Cannabis tax. This is a joke of a survey. How is this helpful in any way? Let my company run this survey. I will do it for free. I will get you exponentially better and more actionable data

T5B	Climate change, health (front line health care workers), education (teachers and other front line staff), keeping/expanding the Supervised Consumption Sites program, post-secondary education, diversification of industry,	<ol style="list-style-type: none"> 1. Get rid of the "Canadian Energy Centre". 2. Stop giving handouts to large corporations who have simply just failed to keep up with the times 3. Stop with the ridiculous inquiries into things that have just been researched (eg. SCS's)... 4. Some of the decisions that this government have made stand to COST the province a lot of money in the future. For instance, gutting Alberta Health Services ensures a crap product. People will stop going to health professionals by choice or for prevention. This means people will only go when the have to. And at that point, their health issue will be much more expensive to take care of. The government could find potential savings by undoing some of the damage they have done to the health care system. Another example, AISH... if people can't cover their rising costs, they will end up homeless, which is much more expensive to the province than any other option. 	<p>First, undo all the cuts that have been made since this government has been in power.</p> <p>Second, continue to invest social programs that ensure people can actively participate in the economy in a meaningful way.</p> <p>Third, look at some of these top heavy institutions and instead of having them cut at the front lines (or in the case of universities, pass the cuts on to students), explore the possibility of thinning out the upper levels. Perhaps there are inefficiencies that can be discovered there.</p> <p>Fourth, invest in industries other than oil and gas. Diversify. Get with the times.</p> <p>Fifth, kind of a social program (see #2), BUT quality, universal, \$25/day daycare. How can people work if they can't afford to have their children safe. AND also, the investment in these children - the labour force of tomorrow!</p> <p>Six, work with leaders in the oil and gas industry to grow this industry in a balanced, responsible way (and not at the expense of other industries).</p>
T8G	Job creation, focus on oil and gas but at the same time support those business that are contributing to the environment and sustainability. Healthcare. Nurses and doctors don't need more money for wage, they need more staff on hand so they aren't short handed and are experiencing burn out, sick days. Provide discounted mental health care for all Albertans which in turn would cause less hospitals visits. Turn the Sherwood park hospital into a real functioning hospital. It's a waste of money and time for patients to go there only to be shuttled off to the grey nuns.	<p>Pensions and wages spent on politicians wages. Get rid of safe consumption sites. Get rid of personal days for nurses and doctors, I feel they abuse this.</p> <p>Also hospitals should keep track of repeat offenders costing the health care system money (ie. coming in for prescriptions, alcoholism, overdoses etc).</p>	Provide incentives for companies under a certain income (mid sized) to open business in Alberta. Provide grants for businesses that focus on sustainability.
T4B	Education, child-care, public services, and exploring renewable energy sources.	I think the best idea would be to avoid handing big corporations 4.7 billion dollar handouts. Also maintaining the curriculum draft changes that were already in place, rather than hiring a new committee and restarting an incredibly expensive process. The government should not fund increased standardized testing in schools.	By listening to research and professionals by investing in renewable resources. Increase taxes on non-renewable resources and companies.
T8L	Public Education Healthcare	Ridiculous tax cuts to large corporations. How about looking out for low and middle income folks instead of the wealthy??	Invest in diversification.

T2N	<p>Reestablishing the carbon tax; better in Albertan hands than Ottawa's.</p> <p>Methods to make sure landowners and the government itself is repaid to look after orphan wells. They're a liability time-bomb to the health of our agriculture industry.</p> <p>Reestablishing sites for health: safe injection, the combined saving through the centralized lab.</p> <p>Investing into alternative energy: Alberta has geothermal and rare-mineral resources. We should be developing them instead of holding to coal & oil. The old slogan was "Alberta has the energy"- we need to embrace future markets/become a net exporter again.</p> <p>Transit options for Albertans, including Calgary's Green Line. If LRT won't work, maybe BRT and dedicated lanes will.</p>	<p>Getting rid of the policy war-room.</p> <p>Taxing companies at a fair rate instead of corporate welfare.</p>	<p>Investing into new technologies, leveraging our energy expertise.</p> <p>Stop giving tax dollars to companies that just abandon Alberta anyway. That would be smart.</p>
T5y	<p>Education</p> <p>Health Care</p> <p>Funding for special needs children</p>	<p>Reduce management employees, reduce management salaries</p> <p>Hold provincial and municipalities accountable for spending, unnecessary expenses like training and excess meetings.</p> <p>More front line workers, less management.</p> <p>Reform corrections. Criminals have more rights and access to care than working public.</p>	<p>Stop investing in repetitive and unnecessary research, evidence, statistics and follow through on projects pending completion.</p> <p>Reduce management and create more front line workers</p>
T8N	<p>Public health and education.</p>	<p>Get rid of the "war room". What an obscene use of money while public health and education are experiencing cuts. The oil and gas sector does not need more tax breaks either.</p>	<p>Investing in the renewable energy sector with all the skilled oil and gas workers that continue to get laid off.</p>
T3M	<p>Mental health and drug addition and rehab</p>	<p>Public sector pension reform.</p> <p>All new hires should be moved over to a Defined Contribution Pension plan. Honour all previous employees Defined Benefit Pension.</p> <p>Most companies have transitioned away from DB style pensions because they're too expensive to manage. But it still leaves employees with retirement benefits.</p>	<p>We need to attract more tech and manufacturing jobs. Offer term tax incentives to relocate to Alberta. And add stipulations that they stay and actually create jobs. I hate corporate welfare, but we do need a more diverse economy</p>
T8W	<p>Education and Health</p>	<p>Get rid of the war room</p> <p>Waste of money and has done nothing to improve things</p>	<p>Worry about the every day man and less on corporations</p> <p>Corporations can afford to pay more and this idea PC preach has never been positive. I voted UCP and your failing badly Kenney</p>

T4B	Health care, education & infrastructure	<p>Stop giving tax breaks to corporations. If they actually paid their share instead of expecting to keep getting rich off the backs of the working, we wouldn't need so many cuts.</p> <p>Stop wasting \$ on "war Rooms"</p> <p>Stop hiding where you are spending money</p> <p>Eliminate the Minister of Red Tape (complete and utter nonsense)</p> <p>Minimize staff in Ministerial offices. You need a minister, a scheduling person, an EA for issues management and a general admin support employee. You do not need chiefs of staff & press secretaries. You have a Communications department with experts for each Ministry- much like the model Ralph Klein had.</p> <p>ASK PUBLIC SERVICE EMPLOYEES WHERE THEY CAN SAVE MONEY! This includes GOA staff as well as Education & Health. BYPASS THEIR MANAGEMENT. They know things that they cannot share without worrying their jobs will be eliminated. Make it confidential & safe for them to report. You will of course get some nonsense but I guarantee you will get way more truth than whatever you find from audits that only involve the leadership teams that are the problem in the first place!</p>	Ask your in house experts and actually listen to them
T6C	Energy transition, climate change adaptation and education.	Through renewables, eliminating corporate handouts and shutting down the war room.	Investing in renewables and the green job sector. Helping fund re-training for oil and gas workers to transition and have a stable and sustainable livelihood.
T7Z	Health care, education, social programs that support marginalized and most vulnerable segments of our population	Eliminate some of the cabinet ministers; take some of your own "advice" and restrict travel and hosting other dignitaries	Diversity resource development in Alberta to end the rollercoaster ride of relying on one dying industry to keep all of our province running
T0c	Education and health care. Stop trying to cut wages and focus on building new industries in Alberta that will offset the low oil prices.	Stop bailing out big corporations and giving them tax breaks. Stop redoing studies and previously completed work t like the curriculum redesign.	My support for schools and vocational training, tuition caps and loan forgiveness - get people skills to work the jobs that are out there.
T1S	Education, Health care and emergency services... everyone needs all of these services to be at their best.	I'm sure there are ways for all areas to reduce costs but cutting services that affect the most vulnerable populations is not the best way.	Who would say no to this? Of course we want growth...but corporate tax cuts aren't the only way to do this
T3M	Mental health and drug addition and rehab	<p>Public sector pension reform.</p> <p>All new hires should be moved over to a Defined Contribution Pension plan. Honour all previous employees Defined Benefit Pension.</p> <p>Most companies have transitioned away from DB style pensions because they're too expensive to manage. But it still leaves employees with retirement benefits.</p>	We need to attract more tech and manufacturing jobs. Offer term tax incentives to relocate to Alberta. And add stipulations that they stay and actually create jobs. I hate corporate welfare, but we do need a more diverse economy
T1w	Transition to low-carbon economy, education, social services	Higher income tax rate, lower business tax rate	Upskilling, educational grants
T5X	Health care and education. Diversifying our revenue streams to not be so reliant on oil.	Their own salaries and their own spending. Not cuts to social services and programs. Stop giving money to big corporations who can afford to go without.	Bringing tech and green energy back.

T3A	Diversification. Get away from Alberta's mono industry reliance on oil and gas (hydrocarbon energy). Something that should have been done decades before.	Get people back to work first. With more people working ... government revenue increases. Austerity only punishes those who are already suffering as a result of our bad economy.	Support green and tech industries ... fund education and support students ... just like the NDP tried to do.
T5B	Education and child care should be funded appropriately. It makes no sense for a parent of two to put their kid in daycare when it costs as much as a mortgage payment. Also, burdening students with more debt is a callous non-investment for the future.	A PST, look into it. Every other province has one so it doesn't rely on ridiculous boom and bust cycles.	Diversify the economy already. Putting it all on one horse is so 1980
T3E	From a social perspective, public schools, public health, ensuring safety of children, ensuring children have access to proper nutrition (public school food programs for example), mental health support, ending homelessness. Investment in diversifying the economy. Support for technology and emerging technology, start ups and education focused on computer science, data analysis, advanced mathematics	Tax cuts to major corporations.	Diversify the economy and look to support opportunities outside of the oil and gas sector. Increase educational opportunities in the technology field, starting in elementary. Get a better handle on the cost of AI and what the impact it will have on our province.
T5H	Investing in renewable resources and stop pretending that our oil supply will last forever.	I don't think finding savings should be the main objective.	By not hedging all of the province's financial bets on trickle down economics, and instead directly support the industries such as the arts that have been stolen from.
T5W	Education and health care. Anything BUT oil and gas, they are doing fine on their own. Spending in the Energy sector is important, but the focus should be on renewables.	Tax the really wealthy, corporations and CHURCHES. Add a PST - doesn't have to be much - 1% is A LOT more than 0%, but is so little people won't notice	But stopping the tax breaks for the wealthy and for Oil and Gas. Increase tax incentives for the arts, especially film and tv. If we bring more of that kind of work to the province, more people will be working and the film companies will be spending, win, win. Also the RENEWABLE energy sector: create jobs (and therefore more spending) for an industry that we need, but in a forward thinking way. The. Oil. Will. Run. Out.
T6R	Education, healthcare, infrastructure	Stop wasting money on ridiculous ideas like the "war room", Giving handouts to your private companies rather than the regular citizens of Alberta, stop wasting money stopping areas that were supported under the NDA government such as the carbon tax and curriculum updates.	By properly funding the entities that made Alberta a great place to live... such as the healthcare system and education.

T8N	Education and Healthcare - the way things are going we will have chaos, stressed teachers and practitioners, and the people who will suffer are the kids and patients.	<p>Don't re do curriculum that was already set and approved by many teachers and Alberta learning. Why spend more on it when it's already been done and done well!</p> <p>Get rid of the ENERGY war room. Not necessary and a total waste of money.</p> <p>Stop trying to find savings where it hurts so many families. And stop thinking privatized health care is a good route to go.</p> <p>Stop fighting the carbon tax - bring it back and stop spending money fighting it.</p>	Look at alternative energy options like solar and wind. Have a back up plan from oil!!! And invest in them.
T6R	<p>1. Sustainable resources and companies/prioritizing environmental policies.</p> <p>2. Healthcare, especially nurses</p> <p>3. Education, especially in ensuring there are enough teachers for students and to avoid overcrowding schools. Charging more for secondary education will not stimulate the economy when students play a big part in driving purchases of goods and services, but will not have the money to do with increased tuition and interest rates on loans.</p>	<p>1. No more subsidizing oil companies</p> <p>2. Do NOT decrease corporate income tax. America is much larger and many of their companies don't need businesses in Canada when they make a high enough profit in their own country. Trying to increase revenue through this avenue does not stimulate the economy within Alberta (supporting outsourcing from other companies outside of Canada) and could be put to better use.</p>	Investment in the lower-middle class, a bulk of which are in need of public services (accessible healthcare, education). You do not stimulate economic growth when you let the rich get richer, if they're spending more money, it is not on the local businesses that would support the economy. Invest in where students are studying so that they are more likely to stay in Alberta to work and that will generate revenue for the province. Invest in sustainable resource. There will be lots of job opportunities, provide subsidized education so that those who are afraid of losing their jobs (workers in the oil industry) will instead be well suited for the industry of sustainable resource.
T4C	Health care, education	Less tax cuts	Tax cooperations and fun health care and education
T1w	Health and education	Trickle down from the top. The painfully rich should be taxed at a higher rate than others	Move in the direction sustainable energy and locally sourced farming
T3m	Getting people back to work! Oil and gas.	They should be cutting there salaries until the province gets back on its feet	Oil and gas ! We have clean energy let's use it promote it. Get the big business back to Alberta. Offer incentives cut there taxes. Property values are going down we need to fix our economy ASAP
T8R	<p>Education</p> <p>Health care</p> <p>Economy- pipelines IN canada</p>	<p>Stop hiring consultant firms</p> <p>Roll back government wages</p> <p>Trim unnecessary supervisor/office staff. NOT front line nurses and teachers</p>	<p>Continue to stand up for Alberta natural resources. Get our resources to market.</p> <p>Don't make cuts healthcare!!!then people will work in health care!</p>
	Health care, education, and children's services.	ENDING CORPORATE WELFARE. NO MORE HANDOUTS TO COMPANIES THAT LAYOFF WORKERS.	Invest in infrastructure that is in need of replacing. Invest in trained professional staff to work in the infrastructure, (teachers, healthcare workers, etc.)

T4B	Oil & Gas and trades. Getting the current trade workers who are laid off back to work before putting incentives for high school students to get into trades. It's unfair when you have thousands of trade workers laid off and no work.	Savings!?! How about let's get out of debt first, then save.	I think cutting healthcare is not right. In any respect. I think fighting the federal government on the carbon tax, lowering taxes for middle class as the cost of living is getting out of control. The biggest thing the government can do is to find ways to produce green energy in oil and gas. Wind farms, solar panels, etc.
t6I	health care education supporting new green technology	end tax breaks for big business	stop firing nurses
T6J	Affordable housing (capital development and programs to make home ownership as well as programs for low income households that can not afford market rent)...too much households struggle with housing costs and have nothing to contribute to local businesses, or invest in various economic development initiatives Quality mental health therapy (offered by professional counsellors and not by social workers at PCNS who just refer people to online resources or pass people off to other services that don't really help)...we need to offer affordable licensed psychotherapy	Stop giving money away to corporations...support people so THEY can choose where to invest, what industries they want to support and choose where to buy things and contribute to the local economy (government should not be making these decisions for us). Healthcare bureaucracy (cut unnecessary management and duplications and oversight, not front line positions...in fact increase front line delivery)	Support people to live affordably with daily cost of living so THEY can contribute to the economy. Customers drive corporate enterprise...the government should not.
T4E	AHS. Particularly the many layers of managers. There are too many managers all out of scope. Possible bonuses that are incentives for keeping budgets in line.	Restructuring managers in AHS. Overtime is constantly paid to employees instead of hiring staff. Medical salaries should be inline with other provinces.	Lower taxes. People are struggling just to live.
T8N	Education and health care. They claim they want the province to have the best education system. Which we already have a pretty good one but instead of helping fund further progress they are pulling money which will be a detriment to our world class education. They need to find for growth and classroom sizes need to be reduced.	In the big corporate handouts they are giving. Which have only resulted in most companies leaving our province anyways. It wouldn't hurt if we also implemented a small provincial sales tax. 3-5%	by not cutting funds to education and healthcare.

T2V	Education Policing/Safety Health Care	The constitution guarantees a public education to all. This does not mean a "private/charter" school education but an education. If parents are not happy with the current public school options they should be paying the full cost to the school of their choosing (not subsidized by taxpayers). In addition, school boards should not be subsidizing busing. If parents are choosing schools outside of their designated area, parents should be paying that cost. There are several neighbourhood schools that have room for more students. Why are taxpayers paying to send students somewhere else?	Lower personal income taxes (people will spend \$ which leads to employers hiring more people or expanding businesses etc.) Support younger workers entering the workforce (ie. offer incentives to employers who hire them)
	The government should concentrate on keeping hard working civil servants employed. By laying them off you are exacerbating the situation by removing productive tax paying Albertans.	Stop the billions of dollars being GIVEN to highly profitable businesses and re-invest in lowering the deficit.	See No 1 above,
T5H	Giving a bigger yearly funding per child for homeschooled children.	The government could remove the regulation that children can only write diploma exams for 100% of the mark if they are over age 19 or have taken the course. If kids are ready to take the exam from self-study or tutoring, they should be allowed to write it at age 16 (or any age really.) That saves the government money in providing a needless course.	Encourage entrepreneurial spirit at the young age, not only the educational part of it.
T5r	Job generation in new fields Education	Curtail government jobs Cut back on money given to sports Hold universities and colleges more accountable Hire more auditors to do spot checks on people's tax filings	Focus on innovating new fields and education so Alberta has strength in human capital going forward
T4B	Crime, education, healthcare	Government excess spending, overly inflated pensions, and salaries.	Pipeline, oil and gas, solar
T2E	Public services, including but not limited to supporting transit initiatives in cities where transit is lacking, health and wellness services, including mental health and services to support and end to homelessness, all public education including universities, colleges and technical institutions, alternative energy.	Trickle down economics have been proven not to work. No pay-outs to oil and gas corporations that are going to cut and run. Keep money made in Alberta within Alberta.	Invest in the future of Alberta for all Albertans, not solely those with deep pockets. Work on reducing costs of living and creating jobs by providing necessary services the appropriate funding, so that Albertans will have income to spend within the province rather than spending their money online and supporting large corporations thereby not supporting the local economy. An incentive to shop local and keep Albertans money within Alberta. Oil and Gas royalties should have been implemented years ago.
T6M	Creating more jobs for younger people (eg. Job for New graduates, entry level jobs) ; taking care of dangerous road conditions (seems like nothing is being done to sweep/sand the roads)	Prioritizing spending so that the main economical issues are covered first (healthcare, education, job availability, housing) spend less on recreational resources or other areas that are not necessities	Support local businesses (less taxes), support education, provide funding for companies to hire new employees
T8N	Education and Health - maintaining current levels with no further cuts.	Labour and Immigration, Municipal Affairs	Cuts to education, not including universities/colleges, will result in job losses for teachers which will have a reversed effect on the desire for job creation initiatives. Furthermore, larger class sizes due to teachers being laid off will have a negative impact on those students requiring additional assistance.

T1K	Education, Health, and Social programs	Increase business tax on large "for profit" businesses (minimum 40 employees) and increase tax on high income earners (individuals making \$135,000 or more)	Support and proceed with the pipeline; this will create lots of jobs and increase potential for trade.
T5K	Transitioning our economy, public transit, housing.	Stopping unnecessary & performative legal battles with the federal gov't, addressing revenue shortfalls re: taxes.	By investing in green energy initiatives, providing incentives to tech etc. to open up shop in Alberta, invest in our cities (PUBLIC TRANSIT)
T3M	1. Education 2. Local businesses setup/ boost 3. Health care	1. Tax increase on imported goods 2. Reduction of payments to low incomers who have been getting support for more than 5 yrs without showing proof of hard work / disability inhibiting then to establish themselves. 3. Attract and give incentives to rich international investors to invest.	1. Incentives for investors to invest in local businesses. Platform for local businesses to share their ideas to serious investors. 2. Help setup and boost local businesses by providing them free funding or no taxes for 3-5yrs whose ideas have real potential and great economic benefit. 3. Open up more tourism spots to attract tourists.
T3H	Education Health Helping local oil companies with diversifying their processes into other areas	Duplicity of roles within government itself.	Investing in education, decrease taxes for new and existing companies to come to our province.
T3G	Getting rid of the debt Attracting more industry to Alberta Support initiatives that make us attractive to investors like tier 1 conference facilities and better transportation infrastructure. Board choices in education such as better funded home education.	1. review of inefficient school board spending so you can pay teachers more and thin out the top heavy management. 2. offer better funding to home education so more can take advantage of the option. They save taxpayers \$12,000-\$1670 = \$10,330 per child per year. Offering a cheque for even a quarter of what full time students cost the government is a saving and reducing numbers in the classroom. But give it freely, like the Child Tax Benefit - not every penny approved - that process is ANOTHER cost saving for the government. 3. Wildlife conservation. We have 7 well trained facilities able to take all manor of wildlife and the government has restricted their intake. On top of that there are at least 4 government officials monitoring them. There are 5 times the centers in Ontario and they need only ONE government official. Cochrane Ecological Institute costs the tax payers NOTHING and yet the current public servants providing oversight are choosing not make use of them? Open up wildlife rescue to the trained professionals, get rid of those currently managing the program and you will significantly reduce costs in parks.	1. Offer subsidize or free training for out of work professionals in high demand sectors. Like Identity management and security 2. Provide education degree fast tracking for industry professionals to bring their skills to youth and be employable. 3. Get our resources to international markets. 4. Remove tax barriers for SMBs to hire locally.
T2T	Health care and education.	The issue isn't finding savings, it's not lowering corporate taxes in yet another soon to be failure of trickle down economics. The fact that you will be running a higher deficit than the NDP with all these cuts is beyond parody. Also shut down the energy war room, it's an absolute embarrassment. Also you should preemptively find savings by not creating a provincial police force or an Alberta tax collection agency.	Stop handing out tax breaks to large corporations that are going to use the money to A) issue buybacks or B) just leave Alberta anyways. As a business owner myself, a lower corporate tax rate does not equate equal more hiring. Tax the corporations and the wealthy fairly, give the middle class a break.
T3G	education and health THEN job creation	Solicitor General - staffing under all departments can be decreased; perhaps remaining employees would work their full shifts.	Negotiate lower wages with AUPE to align with average Albertans. See Stelmach's approach to taxing big oil. Alberta has missed billions of tax revenue.

T9E	Education, Health Care, Infrastructure, and Advanced Education	Ministry of Red Tape Reduction, Reducing the red tape on advanced education institutions, axing the Canadian Energy Centre Propaganda machine, MLA salaries, stop flying all over Canada arguing with people	Give a tax cut for people, reverse the corporate tax cuts, increase funding for job training and post-secondary funding, cap tuition increases, fund the technology sector
T6X	Ensuring a healthy and safe community. Including teaching, health, programs for social assistance, and all senior care.	Stop giving tax breaks to corporations. Middle level management in many public sectors.	By supporting non oil sectors. Look to engage and grow sustainable careers. Encourage post secondary education. Local businesses over foreign business.
T6g	Health, education, and other public services, renewable energy, diversifying the economy.	Find income in corporate tax, and a pst.	Diversify the economic so we are not dependent solely in oil and gas.
T0b	Education- our future	Top heavy in education	Push for new construction, hire ONLY Albertans
t6e	Support public servants, teachers, nurses.	Cut Jason's War on the Environment machine.	Supporting public servants, teachers, nurses but not cutting their salaries or firing them.
T3L	Health care Education Social services Low income housing	Make oil companies pay their taxes! Great rid of the 'War Room'	Support industry other than oil Invest in green energy and make Alberta a leader in green technologies
T3E	This budget needs to actively support "Public" education by reinstating the total amount of grants to public school boards. Remove the cost of the "Red tape" committee.	The government could find saving by: Reducing MLA salaries, travel and admin. Support. Eliminate the role of communication directors and Chief of Staff.	Invest in technological innovation industry - be future focused. Promote diversity in the economy.
T3A	Health Care Education Energy efficiency	Large business and wealthy taxation.	Try to increase educational programs to research and develop new energy efficient technology. Stop relying on the oil industry to bail us out of a deficit
T6X	Spend more on education (kindergarten to grade 12 and also post secondary) even if it just means spending more for support staff such as educational assistants, occupational therapists, testing for learning disorders, etc. so teachers can focus more on teaching. Return minimum wage for youth to the same level (\$15) as adult minimum wage. Spend more on hiring full-time or part-time nurses so other nurses are not having to work overtime and costing us more. Provide incentives to businesses and families who renovate or innovate to reduce their carbon footprint. Spend on research and development.	Stop handouts to corporations in the form of excessive tax breaks which have not proven to add jobs. Stop wasting so much money on panels and committees. Why should these people earn such high salaries? Scrap the "war room." I don't support spending \$30 million a year for that. Introduce a small provincial sales tax with rebates for lower income families and individuals. That way tourists spending money in our province help support our province too. Force oil companies to pay for cleaning up abandoned oil wells.	Support education instead of making it more unaffordable. Support teachers so they can focus on teaching and help students be more successful in school. Subsidize childcare expenses so more people can get back to work and earn money (you get revenue from income tax, people have money so they can spend more money at local businesses...) Reduce red tape for professionals moving to Alberta, trying to transfer their credentials to Alberta equivalent credentials. For example, a qualified teacher from Ontario should be accepted instantly as qualified to teach in Alberta without so much hassle. Support services dealing with mental health issues. Provide housing for homeless people and provide counseling and support to them to get back to work and back on track.
T2G	Social services for those most in need (youth, those with disabilities who can't work, etc), health care, and education.	I think it can find efficiencies but I don't think now is the time to be cutting too much. I would support paying a little more to keep the services that we have. I am really concerned about all the cuts to services etc. that I am seeing and I don't see how they will lead to actual savings. As an example cuts to Alberta Justice - I can only see that leading to them having to hire outside counsel to do things that previously could be done internally, at a far greater cost.	Invest in / support skilled industries other than oil and gas (tech? Health research etc?). Invest in our tourism industry. Alberta is gorgeous but it's cities are not destinations as are some Canadian cities of comparable size (Vancouver, Montreal, etc)

T6H	Renewable energy. Take control of oil and use the income to fund the transition to renewable, clean energy. Keep our educators and healthcare professionals in Alberta. Our schools and hospitals are overcrowded. Recent cuts and layoffs in our existing system will be catastrophic in years to come. Invest in our future	Higher corporate taxes especially for oil companies. Mr. Kenney's tax breaks have been a complete failure. Trickle down economics do not work.	Invest in the future of Alberta. The transition from fossil fuels to renewable and clean energy will employ thousands. Let's be ahead of the curve for once while supporting strong healthcare and education systems.
T6C	Health care, education, transition to greener energy	Subsidizing billion dollar corporations	Grants for education. Retraining oil industry employees to new greener industry
t5x	Paying down the provincial debt by first balancing the budget. Getting the healthcare and education departments to real things in and stop expecting an endless stream of money when they don't seem to manage what they get now very well.	Letting special interest find their own funding for their pet projects they think everybody needs and should pay for. Give healthcare and education guidelines to stay within.	By diversifying the economy instead of relying on oil revenues that have become controversial and always left us in a boom or bust situation. Tech and Thorium Energy research and development will be ideal places to start.
T6G	- Climate mitigation - Expanding Indigenous rights - Health care - Education	The government could stop subsidizing oil and gas projects and companies.	The government should work to create more jobs in renewable energy, nuclear power, and construction of cross-laminated timber residential high rises.
t8e	school funding for supporting students that need help (educational assistants)	NOT by taking it away from the schools	by not taking away funding from schools or nurses.
T6L	Services for children requiring help with speech language therapy, occupational therapy and other services such as these more readily available for children	In their pockets!!	By supporting our province and our children! Our government is a bunch of political BS
T6C	Health, Education, Welfare	Fire the War Room	Communism
t1k	healthcare education justice	healthcare contract spending ie: contracts for medical supplies, and useable assets such as fixtures and equipment. healthcare management: number of executive staff and their roles education: number of executives and hours to teaching ratio	support regional industry that is appropriate to each area. In the south support agricultural industry, in the central regions support tech and agriculture, and in the north, support environmentally safe oil refinery and delivery, and appropriate use of natural resources.
T1k	Poverty reduction; job creation	Reverse corporate tax cuts	Invest in diversification and green energy technologies
T6E	Health care, Education and helping create a green economy for the future should be the focus.	Upper management and executive positions in all areas. Too many industries are top heavy.	Reduce executive spending and use that money to help create careers where they are needed for the future economy.

T3G	<p>Advertise to the world how well Alberta does on environmental protection as well as advertise all the good things we get from oil & gas - sell the good things we do !! Fix the schools we have -many require repairs and need cash to fix them. QE11 expansion which would benefit all Alberta. Go into partnerships with Big Business Ventures sharing expenses and profits when they succeed. This would support jobs. ie Like Alberta Energy many years ago.</p>	<p>The NDP hired 40,000 public service people. It's time to cut public service employees by 40,000. Cut spending to municipal government's. Alberta is \$85 Billion in debt. We have no money till Alberta's economic Health improves. Mr Nenshi and company continue to spend everything they get and push for more. Many of these projects can wait for economic improvement. Stop funding these ventures. Explore "Administrative Cost Savings" not front line personnel. Personal Example - I was in Calgary South Hospital waiting for my doctor appt. Across the hall were 3 doctor assistants . I waited for almost a full hour and during that period the 3 doctor assistants discussed different recipes and never left their office. How many more people in the health care system are doing that?? These people are over paid and under worked. I suspect the same in our educational system all caused by unions pushing for more people and higher salaries.</p> <p>In our hospital, I witnessed a full tray of scissors and assorted appliances opened. The only tool used were the scissors. Everything else was thrown away !! I can't imagine what that tray cost. I understand everything needs to be sterilized but there has to be a better less costly way ???</p> <p>Lower salaries/wages. The public sector has cut salaries and laid off people to control their expenses. What have we done to public service employees ??</p>	<p>Give small business a tax cut. There are thousands of small employers all hiring staff. We increase their cost by increasing the hourly wage and increase their taxes and all they do is shut down. Give them a break. Lower corporate taxes. Lower Property taxes. Continue to push for the increased royalties we are entitled too. Support jobs that would help decrease our debt.</p>
T3A	<p>Public education, Healthcare, children and senior citizens, and research into economic stimulation.</p>	<p>Increase corporate taxes, add a provincial sales tax on non-essentials, downsize the government, reduce Jason Kenney's travel allowance.</p>	<p>Research! Utilize post secondary institutions to help determine areas and industries in which Alberta could expand. Focus on investing in the cannabis industry - developing more farms and green houses, research cannabis health benefits, fibre uses, invest in engineers to develop more biodegradable products using hemp. Research alternatives to plastic that are biodegradable. Invest in post secondary education and research into industries Alberta could develop that does not involve oil and gas. Research how the arts help stimulate economy and make arts and culture a priority. Develop industries that are focused on environmental needs worldwide. We need to invest money In order to make money. The government needs to show they are here for the people and not corporations. Invest in the people.</p>

T4J	Education & Healthcare	Stop providing private schools with public funds. These schools have the ability to discriminate against students who can't afford the tuition, have different religious beliefs and have diverse learning needs. Alberta needs to fund one inclusive, public education system. Want another option? Certainly within your rights, but parents pay one hundred percent. I don't get to delegate that my tax dollars be used to pave the street in front of my house only. They fund infrastructure for everyone's benefit. The same premise needs to be applied to education. For the benefit of all.	Invest in electricity infrastructure so the gov't can reap the returns to benefit Albertans and we can have affordable transmission. When there's no option available (other than Fortis, the can charge exorbitant rates and there is no competition). Slow inflation. We're all taking wage cutbacks, meanwhile inflation continues to grow. My rural electricity bill is a perfect example. Four hundred dollars for ONE month for an essential service that should have been maintained by the government. Poor public policy from twenty years ago.
T3B	Health Care (1), Infrastructure (2), Efficient spending (3).	Do a proper efficiency analysis of each department within the provincial government to highlight areas that can be redesigned for efficient spending. Hire a contractor to do this then implement the suggestions to save money where it is being misused and mismanaged. Cut the red tape and create a more efficient business model for our government!! Also perhaps look into more private health care options with public health care. Let people who have money pay for their care, taking them out of the pool and still allow others to remain in the public realm.	Diversifying the economy. This could be done a couple of ways but some efficient ways are by creating policies that incentives companies to settle in Alberta with a one-time tax cut or a bonus tax break if relocation/or build in Alberta. Further, create a renewable fund or policy that promotes diversification of energy to attract solar/wind/other companies. Moreover, with all the empty office space in Calgary create a program or policy for tech companies to move to create a centre for innovation. Relying on one source of income is unsustainable and impractical in the long run so try and entice diversification of our economy (energy, tech, start-ups etc) to Alberta cities.
	- affordable housing - permanent supportive housing - attracting investment to innovative industries like green industries and computer software and future technology	- cutting oil and gas investments - add a provincial sales tax - increasing current taxes - cutting the "war room" out of the budget - legal fees related to the carbon tax suit against the federal government	- invest in attracting innovative industries related to green industries, computer engineering, software, startups and future technology - transition away from traditional out dated industries like oil and gas
	Universal healthcare, Public education, and public transportation. Many people can't exactly "get back to work" if they are sick, not educated in their field, or lack access to public transportation.	A provincial carbon tax or provincial sales tax, just like many other provinces have had success with. Definitely NOT tax cuts for large corporations.	Invest in diversifying the energy sector and invest in public post-secondary institutions. It may help if they understand that progress has a buffer period and acknowledge that investing in things like this are highly beneficial in the long run. Ask an economist.
T3M	Fiscal responsibility first, then job creating initiatives including resource development and tech industries	Public sector, focus on efficiency.	Help provide accessible financial support. Loans, grants etc.
	- public education - alternative energy resources - agriculture - healthcare - waste management	- not waste it on corporate handouts in the first place - cutting oil and gas spending - higher taxes for those in the top percentile - wasteful political spending	- invest in alternative energy resources - fund public education: the more educated the population, the more productive members of society and the more who go on to university to solve problems of the next generation - stop handing out corporate tax breaks. They help no one but corporations.
T8X	Job creation.	Reduce the amount of employees in government positions who have no purpose.	Encourage job creation with incentives to create jobs.
T0B	Social programs- education, health, support for disabled and disadvantaged Police and prosecutors	Stop giving the wealthy and huge business a free ride- make them pay their fair share!	Support small business. That is where most of the jobs come from anyway.

T8W	Public healthcare (NOT private) especially in northern Alberta. Education Twinning highway 40	Shut down the War Room! No public funds to private schools. No public funds to privatized healthcare services. Tax corporations higher. 2% sales tax would be welcome to support our services.	Reverse the tax break for corporations and natural gas sector. Support municipalities especially places like Grande Prairie that keep the economy going but often don't get the benefits. Our taxes are ridiculous and we need provincial support to manage the social challenges that come with economic booms. (law enforcement, drug and alcohol issues, young city etc)
T0M	Education, Healthcare, Environment, Resources to reduce crime	War Room Government red tape Useless studies	Unsure
T6w	Health, education	I think it is all important. And if the budget looked into the future to find way to save money in the long term we could save that way. Pinching pennies doesn't make anyone rich. Also, tax rates on corporations need to increase back to where they were.	investing money into new and green industries instead of always the oil industry
T1y	Transportation - LRT expansion K-12 Education	Trim non front line staff in the public sector (education, health care) Privatize support areas of the business (security, cleaning, non essential workers) Automate processes (paperwork, inventory) wherever possible even if it means spending the capital to do it. The savings in the future operation costs will pay it back.	Have the population trained to support new industries. Attracting tech start up is good but the companies won't stay if they can't find local staff/technical expertise to do the work. Make the funding for startups on the condition that they hire/mentor post secondary students.
T1P	Education	Add a small pst and stop cutting important services	Diversify our economy. We need to find other options than strictly oil and gas
T8W	Education, health care, vulnerable populations	Administration and upper levels of every branch of public services. Not front lines.	Diversify commodities, support farmers and small business not oil conglomerates
T5z	Healthcare, education and social services. The only way to cut spending is to keep people off the street, out of th ERs and out of jail.	Quit giving the rich and large companies tax breaks.	Invest in business and social services.
T7Z	Health and education	Close the war room Streamline management for real	Find a different resource other than Oil Economic growth. Don't lay people off so they can support business
T1y	Transportation - LRT expansion K-12 Education	Trim non front line staff in the public sector (education, health care) Privatize support areas of the business (security, cleaning, non essential workers) Automate processes (paperwork, inventory) wherever possible even if it means spending the capital to do it. The savings in the future operation costs will pay it back.	Have the population trained to support new industries. Attracting tech start up is good but the companies won't stay if they can't find local staff/technical expertise to do the work. Make the funding for startups on the condition that they hire/mentor post secondary students.
T2T	Healthcare and k-12 education. \$25/day daycare for working Albertans.	Cut the Canadian Energy Centre which is a waste of money and resources.	Fund infrastructure, renewable resource development. Don't give massive tax cuts when you have no revenue coming in.

T6J	Healthcare and education	Literally any other area that isn't related to the health and well being of its citizens	People who get a quality education tend to be more hireable. The population is aging, the government could support this by hiring more people to work front line healthcare and supportive care jobs.
	Education and Health Care	Their own salaries and taxing large corporations	Increasing funding to education and health care
T1K	Public Education (especially inclusive education), healthcare, social services.	Increase taxes for large corporations,	Increase funding to public education to support inclusion, build more schools, staff schools, and provide rich educational experiences for students. Education is the foundation that we need to support our future. The government needs to hire front-line nurses and public health care staff. This government needs to make decisions in the best interest of ALL Albertans, not just the wealthiest Albertans. The government should ensure that Albertans working in entry-level positions receive a living wage. The government should diversify the economy
T0M	Environmental action plan (ie. sustainable energy), Education, post-secondary education (including student summer job grants), health care.	Increasing corporate taxes again, getting rid of the War Room, possibly instituting a sales tax if it means keeping public services intact.	By investigating in job creation in industries other than the oil industry (ie. sustainable energy), because Alberta is capable of more than oil and one day that is the way Alberta is going to have to go so we might as well start now. Alberta is strong in innovation and is good at getting things done, let's use those skills and strengths, and make a plan to wean ourselves off of oil. To be innovative in sustainable energy resources and technology. Retraining those in the oil industry to do other things and not making ourselves a one trick pony.

T5W	<p>Education!!! Community based services Children services</p>	<p>larger companies pay more Carbon tax</p>	<p>By not making cuts to essential services which cause people to loose their jobs. And put resources into our low income communities to find employment. Do examples by not adding to the education budget we can sustain the costs of new coming students to the 2020-2021 school year this deficit causes school to cut essential supports in their building like counselling, school resource officers, therapy, parental support, educational assistants and other partners just so that they can provide enough teachers at a bare minimum or extreme ratio.</p> <p>Economic growth needs to happen by looking at albertas resources besides the oil industry, if we continue to always depend on oil we will always have a boom and bust economy.</p> <p>The government needs to underhand that balancing the budget does not happen all at once and seeing all these services being cut left right and centre creates a loss of hope for vulnerable communities and the people who work there. I'm hearing all this talk about "creating jobs" but all I'm seeing in my sector (human services) is the loss of jobs due to loss of contract or money to be able to afford them. If I were to loose a job it should be due to job performance not cut backs. What is the government doing to protect the jobs that are at risks due to the implementation of Alberta budget?</p>
T3L	<p>Education Health care Diversifying the economy Alternative energy</p>	<p>PST 3% Stop the corporate tax cuts</p>	<p>Diversify economy</p>
t3m	<p>Education (K-12) - schools for new communities; smaller class sizes Healthcare - accessibility; wait times</p>	<p>Healthcare - streamline middle/upper management; standardize healthcare delivery across sites (today, every hospital runs how they feel is 'best'); focus dollars on healthcare delivery - not pet projects Universities - efficiencies; remove duplication of program delivery</p>	<p>Maintain current approach to corporate taxation Pressure federal government on pipelines Focus on economic diversification (eg. tech sector; clean tech)</p>
T5T	<p>Leave AISH and SENIOR , Nurses Doctors alone!! Quit giving money away in Equalization Payments until we have our pipelines and oil & Gas industry going in AB</p>	<p>Quit giving money away to Other countries and non Canadians until we have a full economic growth in AB Start sending AB grads to University instead of the training and education leaving AB.</p>	<p>Invest in IT and Teck and better Educate our children who want to stay and work here instead of students who educate and leave with the knowledge and skills that we don't benefit from. Invest in Albertans First!! Stop the refugee gravy train while seniors disable and homeless Albertans suffer!</p>

T8A	Regain the Alberta Advantage by ensuring Alberta remains a destination for people to come to. Not the lowest taxes, but competitive taxes. More importantly, strong public services that add to our competitive advantage. Most notably health care and education (elementary, secondary, and, most importantly, post-secondary). Alberta is a cold place and far from virtually all of the centres of the world. People need a reason to come here and it is not simply to make money.	Internal government operations. Look inside for bureaucrats who do nothing but generate work for other bureaucrats. HR departments, communications departments, ARTS, policy coordination, strategic integration, etc. All these areas are very heavily over populated and would have absolutely no impact on services to Albertans nor the effective workings of government.	Encourage diversification away from oil and gas (still very important, but too risky to be our only card). And, most importantly, while I fully agree that our spending must more closely align with other provinces, but so too must our revenue through taxation. And, the most efficient tax on earth (other than no tax at all) is a consumption tax. Be it carbon, sales, or a combination thereof. It is inevitable and supported by a majority of Albertans.
	education, infrastructure, social services, care for the vulnerable (rather than cutting back funding to AISH recipients) diversifying our economy away from tunnel vision focus only on oil.	oil war room, government travel, eliminate separate school systems and roll them all into the public system.	increased taxation of businesses, increase taxes on the wealthy, barring that or even in addition, suck it up like other provinces and institute a PST/HST and bring back health care premiums. Use money from these taxes to invest in and support research, support diversification of our economy such as investment in AI, biotech, pharmaceuticals, the arts and other industries apart from oil in Alberta that don't seem to get the government's attention even though those businesses exist here, are hiring Albertans and helping to add to the wealth of this province. Particularly with regard to education, research infrastructure, and funding for university facilities, opportunities for Alberta to lead the economy of the future are likely going to be lost if not being lost already for lack of adequate investment in university facilities, maintenance, research, etc. Investment in public infrastructure rather than paying a premium to private entities will get more people working and also provide more lasting benefits; private businesses are only in business for profit, not for the good of our province.
T9W	Social supports, education, health care, diversifying economy.	Lowering government salaries to the average salary of the province, creating a sale tax, getting rid of corporate benefits from the government (obviously not working, just admit it), taxing corporations, taxing the extremely wealthy. Guys, tax is not the enemy.	Supporting job creation doesn't mean paying corporations billions. It means investing in diverse options for our province. Energy, technology, tactiles, new small businesses...these are the things that diversify our economy and make Alberta strong and give REAL Albertan people jobs. Not all of us work in the oil and gas sector. We also need to make education accessible (That means low cost-no cost) with small class sizes and capable teachers to make sure that we have citizens who CAN diversify this economy instead of focusing JUST on oil and gas. We're getting left out in the cold here because you're so worried about ONE sector.
T3K	Education, Health Care, Infrastructure	Stop wasting money on panels, energy war room and other partisan activities.	Providing assistance to industries committed to diversifying the economy and the transition to a low or net-zero carbon economies. Provide funding for advanced education and job retraining programs.

T0B	People. The aged, young, homeless. Services for people - education, health care, social services.	Stop giving so much money to huge multi-national corporations that leave at a whim.	Education. A sales tax so corporate tax rates needn't rise and we could still fund apprenticeships, scholarships, universities. Pull funding from education and you end up with American education - students who can barely read when they graduate.
T5Y	Stop privatization of lab services (It will cost us more. I work in the profession and I know from experience) Increase Healthcare Increase Education Decrease Tuitions Green Energy	Increase corporate taxes Increase income taxes on the top % Eliminate tax breaks/grants to companies Implement Carbon Tax	Stop cutting positions and wages of healthcare workers and educators. These dedicated workers are cutting back on our spending which is hurting the economy. Invest in green energy. This is the wave of the future. Times are changing. We need to be taking advantage of this and not be left behind.
T3A	Health care and education	Duplicate management positions, supply services	Infrastructure
T5K	Spending on health, education and social services needs to keep up with inflation and take into account Alberta's growing population, Freezing spending in any of these areas is the same as a cut.	Tax the rich and large corporations.	Beef up job programs, including youth summer employment programs, along with internships. Diversity the economy beyond oil & gas -- they are important, but we cannot keep putting all eggs in that basket. We should be investing now to be world leaders in renewable energy and technology tomorrow. Oil & gas are losing a lot of jobs to automation, so let's think more broadly.
T6J	Public services such as healthcare, education, mental health, safe injection sites, etc.	The War Room, corporate handouts, less evergreening in provincial government offices. Fewer allowances - ie. deputy ministers do not need leased cars for private use. Should also be basic, economical cars if necessary - not high end luxury models. Responsible travel - not chartering flights and flying family members around.	Diversify. Don't cease funding to oil and gas, but start investing in other areas. Continue to invest in the public sector - those are jobs and those people spending money will assist the economy as well. No more trickle-down economics.
	The ones that create jobs. You should not cut budgets that end up laying off people.	We don't have a spending problem. There is no need to find saving. You need to increase your revenues.	By not cutting jobs that are working right now.
T8N	Diversification of the economy because news flash the oilfield will never be back to what it was, and supporting public sector workers who already don't have enough resources. Also why the fuck did you take the cap off utility and insurance fees? To make it harder for all the unemployed people you say you care about to heat their home?	Scrap the "war room" Stop giving major companies tax breaks	Stop cancelling provincial projects... How many people lost jobs over cancelling the super lab
t2e	Health, education, pipeline	Less pay and stop buy outs for top admin. staff.	more money for education and re training of adults, more incentives for those choosing to enrol in the trades.

T7A	<p>Sustainable funding for municipalities to ensure the areas where people live and work are able to support their residents and businesses with quality infrastructure and services.</p> <p>Investment and opportunities that support diversifying the economy to complement the oil and gas industry and fostering ways in which the skills and knowledge of the oil and gas sector can be applied to other sources of energy as well.</p>	Divert funds away from public information campaigns that are ineffective with the target audience and redirect those funds back into other ministries or grant programs where there will be tangible results.	<p>On a large scale, continue to promote Alberta's opportunities in all facets of the economy, including traditional industry, renewables, entertainment, tech and innovation globally and back that up with streamlined processes to allow outside investment along with tax incentives or granting opportunities.</p> <p>On a smaller scale, supporting the municipalities in the province with sustainable funding, a variety of granting opportunities and assistance (financial or resource support) to implement unique municipal-led initiatives that will make individual municipalities attractive to business and appealing to the families who will make up the workforce. Municipalities are ideally positioned to promote the benefits and opportunities of their areas, but it's impossible to entice businesses or workers when they don't have the funding support to maintain existing infrastructure, or invest in new capital projects.</p>
T6V	Creating employment and diversification of the economy.	Eliminate the "War Room" . Reduce duplication of service in area such as public and separate school bus routes where possible.	Public service staff reductions only through attrition. I don't see how reducing the public service by firings or forced retirements do anything other than add to unemployment. They may be paid more than some other provinces but I'm sure less than others.
T3R	EDUCATION AND HEALTHCARE	<ul style="list-style-type: none"> - the money given to corporations -- i.e. the 4.7 billion given away - their own salaries -- they have increased many salaries compared to the NDP government - money provided to fund private schools could go to public education 	<p>investing in technology and alternative energy production</p> <p>invest in new schools and education</p> <p>invest in health care</p>
T3H	Healthcare and education	<p>Get rid of the energy war room.</p> <p>Implement a provincial sales tax.</p>	<p>Invest in both k-12 and post secondary education.</p> <p>Lead by engaging in a transparent and collaborative approach to governing rather than a polarizing approach.</p>
T1R	Drought prevention and flood mitigation on the Bow River. Eyremore dam	Health care and Education. Administration cost in Healthcare. Utilize school infrastructure better . Schools sit empty for 17 % of the year . Why can't teachers work full time like the rest of the working class.	Support Agriculture by attracting value added industries to Southern Alberta
T7V	Education and child care. By helping students and children, we can help create a better Alberta of the future!	Limit spending on government officials from other provinces (i.e. don't fly them out to Stampede). Maintain taxation on major companies.	By supporting education and small businesses! By improving the education system and access to social services, more people will be inclined to Alberta. By making it easier for small businesses to operate, we will get more local businesses opening in the province, hiring local workers.

T7X	Education Economic diversification	Spending money on defending your position (Oil & Gas War Room) and sanitizing social media. I may not agree with your ideology or many of your decisions but you won the election. The rest of the province wanted you. Don't waste our money by trying to make it appear as if the entire province agrees with you because we don't. You've got the mandate, use it.	Help Oil & Gas be responsive and current in their practices. The writing is on the wall that the Oil & Gas industry is going to be (is already) being disrupted by environmental, political and social factors far beyond the Alberta industry's or government's control. The fact that you are hanging on to an outmoded approach will be even more detrimental to the Alberta economy in the long run. We still need oil and gas, but not in the same way that they have been operating. They need to focus on the area of their operations that are less controversial (petrochemicals perhaps) and show the world their inherent value in our current society as we all shift toward alternative ways of consumption. AND DIVERSIFY!! Alberta has been too energy industry dependent for generations!!
T3L	Healthcare and Education	Upper management, duplicates within departments. Create a sales tax	Retraining for new industry, focusing less on pipelines and more on new innovations.
T6E	- Affordability in post-secondary education, specifically student financial aid given the greatly increasing tuition rates. - Deferred maintenance in publicly-controlled spaces, including hospitals and post-secondaries. If they are not addressed now, it is only putting higher bills on the backs of future generations.	Examining the possibility of a 1-2% provincial sales tax. Cutting administration red tape in the performance funding model.	Support emerging markets and industries, specifically technology/artificial intelligence and renewable resource development.
T8A	Healthcare & Education.	Wage caps & cuts for upper level management & govt officials.	Support local industry.
T5J	Education and healthcare. Reverse the cuts made to Education, stop the funding of private/Catholic schools. Reverse the cuts made to healthcare. Stop plans for "for pay/two tier healthcare".	Reverse the insane tax cuts to large corporations. Clearly they did not work, as corporations immediately cut jobs and moved headquarters. You have been played for a fool. Scrap the "war room", we are not a dictatorship as much as you are trying to turn us into one. Scrap the absolutely disgusting "UnAlbertan Activities List". Also, the "department of red tape reduction" is just absolutely insane and asinine.	Stop blindly focusing on Oil and Gas. That era is gone. Oil is not coming back and it is time to accept that. Many companies has stated they won't come and invest in Alberta because the government is openly hostile to any industry that is Not O&G. We need to be investing in green technology. We need to diversify if we hope to survive. We have the potential for a thriving technology sector.
T2C	1. Education- not private 2. Health care- not private	Bring back school fees and Alberta health care fee	Support oil and gas
T3H	Education - keeping class sizes low by hiring/keeping teachers, supporting with dollars for educational assistants, fund growth within school boards, recognizing the need for an updated curriculum, making sure the classrooms have the necessary tools/technology to properly learn and health care.	infrastructure, government pay checks, stop making mini-committees to determine programs are viable/not viable - save money for other important projects, "War room" for Oil and gas is not needed.	keep taxes low, support education - education breeds knowledge,

T4N	helping people in poverty,maintaining seniors health care benefits and providing services for those with addictions.Specifically AISH should be indexed to inflation,seniors benefits should be maintained for dependents and homeless shelters with treatment programs should be available in all major centres in Alberta.	revenue should be increased through higher taxes for the wealthy and a sales tax should be considered.	Diversification especially through green energy initiatives and tourism.
T7X	Health and elderly care, care facilities, municipalities, job creation, not handing money to rich oil companies in free tax credits for them to pull pin and pay off 1000's of workers diversified and economy, education spending increasing wealthy taxation, cheap child care so more people can get out and work	Pay politicians for actual days sitting in legislature and contributing to the solution, cutting back amount of aids, and burecrats not giving multiple millions to failed party members in the form of working for divisions of government	Investing in education, diversification of the economy, stop buying oil from the Middle East build refineries here and sell to those who we buy from
T2W	Education, health and the welfare of the poor should be up front and center. Help with start ups and the tech industry....use grants and other incentives to have them move to Alberta or develop in Alberta.	Implement a provincial sales tax to help with the debt...even if it is a sales tax that could be droppped when the debt is manageable.	Support those that are already working by not making deep cuts that would mean layoffs. Keep public sector workers working and paying taxes. Many public sector workers such as those working in schools, universities and in the health care system, are partners of those in the oil sector...cuts to public sectors will affect many families and will be a financial draw rather than adding to the tax base.
T5W	The government should spend more on health, education and new technologies that are not strictly all about the oil patch	Cutting the war room out - huge waste of money. Instead of Albertans asking the question what should the government of Canada be doing for Albertans it should be what should the government of Alberta be doing for its poorest Albertans.	For one thing reinstate a higher corporate tax and look at growth in tech industries as opposed to relying strictly on oil and gas.
T8n	Health care and schools	by cutting corporate tax breaks.	Supporting families not corporations
T2V	Education	Government	...
T8N	1. Health care 2. Education 3. Police services 4. Transportation and infrastructure	Implement a PST just like all other provinces so we are on a level playing field. How can we expect other provinces or Canadians to sympathize with us and our economic situation when they are expected to pay more via their PSTs. Maybe with a PST our revenue and spending problem won't be as difficult to manage.	Diversification of industry. We can't rely soley on oil and gas anymore. Invest in new industry so we can decrease our reliance on a sector that is likely on a decline with the advancement of new energy and ongoing environmental issues.
T6B	Getting the province back to work. Cut unemployment rates	The Government should assess the savings it has already found.	Grants, project, invest in Tech. Do not put more people out of work
T7Y	I would like to see some budget funds devoted to fixing up the poor state of our roads and highways. They have deteriorated significantly in the past 10-15 years to the point where many major roads are extremely poor. Would also like to see the maintenance come back under the government umbrella vs. private contractors. The decline of the state of our roads ironically coincided with the move to use private contractors for their maintenance.	Serious cuts to bureaucracy and bloated administrations in all government departments - especially in health and education without cutting front-line staff.	I would like to see Alberta become a world leader in the development of safe nuclear energy. In particular molten salt reactors fueled with thorium. If anyone is truly concerned about finding sustainable, cost-effective, safe zero-emission sources of energy, we should be looking strongly at this technology. Alberta could become a world leader in it's research and development.
T8n	Education, health care and social services	Their salaries, war room, manger positions in public sectors	Not cutting jobs in the public sector to provide opportunities for private operations. Invest in infrastructure

T5K	Humans that live in Alberta, not mega corps fisting our province. Welfare programs, healthcare for all people, education, social programs to eradicate bigotry and hate.	Not sure if you remember the \$4.3 B corporate giveaway, stop fucking doing that.	By creating careers and developing industries that benefit all people (social programs, literally the one things government do that benefit us all).
	Education and Health Care	Taxing big corporations, pay cuts and freezes for elected officials, wage freeze for teachers and health care. Reduce holiday/sick/days off paid to government employees as they have WAY more then other workers.	Get the pipeline moving
T6W	Education...including funding enrollment growth Health Social programs	Elimination of the "war Room," elimination of blue ribbon panels, increased taxation of large companies, consider implementing a provincial sales tax	?
T4T	Health, Education, Public services	Increasing company taxes, monitor and audit public services for a better use of the funding.	boosting and investing in other sector (IT, Technology, ..) than oil sector.
T5M	Healthcare Education	Creating a PST Taxing higher incomes Taxing large businesses Cutting politicians salaries	Taxing the oil companies Creating more for the tech sector and green projects
T8N	Health and education are absolute priorities! I am dismayed when talking to teachers at how bad the classroom situation is going to be for them - huge numbers of students in each classroom, no support to help deal with special needs children, etc. Health is also a non-negotiable. It needs to be supported.	I think the government should spend less on travel, 5-star hotels, war rooms, and panels that travel around the province.	Not by cutting thousands of teachers and nurses! I think we need to support the oil and gas industry, but we also need to support diversification of our industries - alternate energy sources, tech companies, etc. I feel very discouraged by the number of job losses in our province since the UCP has come into power.
T1S	I think more RCMP should be patrolling neighborhoods I also think more should be done to protect the victims. I believe in spending more on health care but I also agree it's too heavy	Get rid of all these safe injection sites, stop spending money on "art"	You know when we get crazy snow falls? Why aren't all those ppl on welfare given a shovel and maybe give em an extra couple hundred bucks and put em to work.
T6K	We should be funding programs that will help diversify our economy, and help train/retrain our workforce to adjust to the changing global economy. In addition, we should be helping those most in need.	Rather than attempting to find savings in the short term, we should be focusing on making our economy stronger in the long term. Cutting programs and initiatives now to save a little now could mean fewer jobs, a weaker economic output, and a lower quality of life for the average Albertan later.	By diversifying our economy, and not relying on increasingly obsolete fossil fuels.
T6E	Education, both at the primary and secondary level. As well as healthcare, frontline workers need more support to provide adequate care for all Albertans.	Tax cuts for massive companies. Taxing pollutions and companies that create large amounts of waste or deforestation.	Invest in tech companies and support technical schools and universities as we need workers in all industries, and especially ones that will become more important in the future such as IT, data science and computing.
T3H	Education and healthcare should be an unequivocal priority. Previous levels of funding should be restored and increased. Decisions should be put back in the hands of experts and not those whose sole intent is to privatize services for profit.	Perhaps no longer providing multi billion dollar tax breaks and bailouts to corporations.	Diversifying investment in alternative energy ventures rather than ignoring the inevitable collapse of oil and gas.

T0G	Get rid of the war room and stop lobbying for rich oil companies that don't care about Albertans. Mean while children are not getting funding for supports and preschool. Our young Adults, the future of our province, are moving elsewhere cause higher education in not being supported by this government. Spend money on diversifying our economy. Oil and gas is out, time to move on. Just like the East Coast had to do when the fisheries collapsed.	Get rid of the war room that is 30 million dollars you can be focusing the people of this province instead of lobbying for the rich oil companies.	Invest in education instead of taking away from it. Right now you are creating a "brain drain" all our highly qualified people are leaving for greener pastures because this government wants to invest in welders and pipe fitters for an industry which is failing. Quit throwing good money at an industry that does not care about the environment or any other stake holders. They will just take our money and run leaving us with the clean up just like the thousands of dead oil and gas wells we have now. Innovation, tech, and green energy is what will help create jobs. You will get way more support from the rest of the world and this country if behave in a ethical and environmentally responsible way. This will promote more investment than will <u>oil and gas</u>
T3M	Education	Increase corporate taxes, lower personal taxes and have a PST.	By diversifying the economy. Oil and gas has proven to be unsustainable. Time to move on from depending on this income.
T2E	Social services (includes health care and education), regulation of industry/marketplace. What we need to have a safe, healthy environment to live and work.	Stop spending money on preaching to the converted(ads extolling the virtues of the UCP and the "fabulous" job they are doing) stop looking for someone to blame for the collapse of the oil industry (it's everybody's fault, and we will all pay the price) and fighting endless losing battles with the federal government (only the lawyers get rich). And stop hiring people to study this that and everything else? I guess you could call that job creation, but really?	A fair and equal deal for everyone. Support business and industry by getting out of the way. Previous conservative governments failed to make serious efforts at diversifying the economy. It will take longer than an election cycle to make a difference.
T5e	Actual jobs instead of stealing them...ie teachers and healthcare. Maybe fulfillment of the promise to create jobs. Stealing jobs from other industries does NOT equate creating jobs in other industries. Maybe not force Albertians to go uninsured due to insurance rates,	Actually tax the people who can afford tax hikes, ie corporations, the top 10% of earners. Wouldnt it be nice if we forced oil and gas to pay land tax....	Get the conservatives out of power is really the only answer. Let's face it, they have no intention of assisting Alberta's economic diversity. They havent even helped the one industry they said they wanted to, and they have cut jobs in other areas.
T2J	Postsecondary Education, Social Services, Health Services	Not finding saving but generating more revenue - implement a sales tax and reduce the tax breaks given to large corporations.	Fund post-secondary education, elementary education, re-instate the education tax credit . Also diversify the economy beyond oil and gas - encourage other growing industries or provide funding for new entrepreneurship or new industries.
T6j	People Fund society - stop the cuts to education and health care	Trips that are waste of time for government	Stop the cuts so people have jobs
T3M	Indigenous consultation, Healthcare, Education	Government salaries and positions, increase taxes on corporations	subsidies and tax breaks for solar, wind, and technology

T5W	<ul style="list-style-type: none"> - education (K-12) as this is so vital to our most vulnerable citizens and the future of our country - advanced education, across trades to research intensive universities, so that we have a robust workforce with a broad range of skills - healthcare - as it impacts everyone! - economic diversification and job creation 	<p>I think caution with public dollars is always prudent, but we need to think of ways to diversify and grow revenue rather than how to cut back. Alberta appears very stagnant and 'old school' with constant cut backs. These cuts can have lasting negative impacts for generations. To generate more revenue, we are simply at the point where we need a sales tax and more diversity in our economy. We live in a world class province (I think the best!), in the best country in the world, let's not erode our public services by doing things the way we always have - clearly that is no longer working. The Alberta Advantage means supporting all Albertans, and the only way to do that is to think about growth, not slow, steady decline.</p>	<p>The only way to secure long-term job creation is to diversify our economy. Alberta should be a leader in technology and AI, environmental stewardship, construction, alternative energy, agriculture, and many other industries. As more jobs are automated through AI, it will be important to have an educated workforce that can think strategically and approach problems creatively. We need to focus on how the energy sector needs to respond to today's environmental and economic expectations, but we also need to invest in other areas.</p> <p>In addition, because of and despite the worldwide downturn in oil prices, Alberta needs to bring in more revenue by introducing a small provincial sales tax in the order of 2-5%. This is critical and would bring more revenue for healthcare, k-12 and advanced education, job creation, investment and more. There is no reason that Albertans should be exempt a small tax. That is myopic, dangerous thinking in our modern world.</p>
t2g	Education, diversifying our economy beyond oil & gas	corporate tax rate, tax rates on all earners over 100k (myself included), royalty structure matching profit margins, etc.	Investing in industries not tied to the global oil market, most specifically technology. This question ("How should government support job creation and economic growth?") should probably include a reference to the vast amounts of data showing that there is ZERO correlation between lowering taxes and job creation.
T6B	Education, Healthcare and Family Needs. This includes teachers, educational assistants, nurses, LPN's and more. Education and Healthcare should be publicly funded. Making sure that daycare is affordable for families should be a priority as you can't get Albertans back to work when it's too expensive for them in terms of childcare costs. Our teachers and nurses are INTEGRAL to our society.	In the corporate world and taxing higher incomes. Large corporations do not need tax breaks and benefits and those in the highest earning professions do not need tax breaks. Cut out large administrative positions that hinder rather than help. We do not need a War Room - use this money to better support our education and healthcare system.	They should focus on what matters to people. Renewable Energy, having stable careers, having publicly funded healthcare and education and knowing that you can provide for your family is what matters to people. When people are given the best opportunities at home, they can flourish and increase productivity at work. By taking away essential services, you simply create an environment of stress and fear which will not lead to productivity or growth. Focus on local startups and businesses instead of looking elsewhere. Explore renewable resource industries - there are many out there and they are the future. There is huge job potential in this and Alberta could become a leader in the fight against climate change.
T6C	Taking care of Albertans, especially the most vulnerable: children, elderly, those with health care needs (both physical and mental); homeless. That means investing in PUBLIC education, PUBLIC health care. The environment should also be a priority, as the repercussions have real life physical impacts on Albertans.	By cancelling the WAR room and the red tape committee. I cannot fathom how adding more red tape by creating another committee is going to resolve the bureaucratic processes in place. In addition, the government could look at increasing revenue! By taxing corporations and wealthy individuals fairly.	Diversify, diversify, diversify. Albertans are capable of much more than working in oil and gas. That is not to say that we should abandon our natural resources - there is still a need but as the world needs to reduce their reliance on fossil fuels, we need to reduce our dependency on the income generated by those fossil fuels. We are not going to encourage companies to invest here by cancelling incentives in teh tech sector and others.
T5T	Schools, healthcare and social services.	2% provincial sales tax ??	Keep interest rates low, reduce the stress test for buying houses and give consumers confidence that it's a great time to spend money. Let the pipelines happen.
T4C	Health, Education, First Responders	Within process	Through Policy

T1W	<p>No new spending priorities other than all new steps taken towards separation.</p> <p>Fundamentally, while we remain a part of Canada, it's more a question of what should be de-emphasized.</p> <p>Otherwise, Education and re-training of workers would be my highest priority.</p> <p>Anything to continue to encourage support innovation but without massive government administration.</p>	<p>Healthcare spending balanced with the rights of individuals to buy private health insurance.</p> <p>Mass reduction in government worker salaries (20% cut across the board)</p>	<p>The absolute key is full separation from Federal government policy. We cannot continue to let the clowns in the east have any control over economic policy in Alberta. The only way to achieve this is through full separation from Canada conducted in steps:</p> <ol style="list-style-type: none"> 1. Pension plan, policing and income tax all run provincially; 2. Hard ball negotiation on cancelling equalization; 3. Full separation to become an independent republic. <p>If we don't go this route, we are teaching our children/citizens that we are sheep. There is no other way to ensure the ability of our people to set the course of our collective futures.</p> <p>There are NO benefits to staying in Canada; political and economic uncertainty will be guaranteed if we stay. I do not want my children to be sheep slaughtered at the altar of eastern Canada.</p>
T6R	Funding education, sciences & the arts.	I think the government could correctly tax corporations.	Correctly taxing corporations while funding the sciences, the arts & education while also tackling the fact that climate change is due to fossil fuels & looking into ways to expand Alberta's economic growth while not supporting a dying industry that is harming our planet.
t4s	supporting students, classrooms. T5x	Teachers and education	Reduce politicians salary.	Stop cutting education
T1K	Health care Post-Secondary Education and not favouring the private institutions Primary Education Other Government Services	Stop handing out corporate dollars that are not staying in this province! UCP gave all these tax breaks and slowly, but surely these business are leaving this province with more money in their pockets at ordinary Albertans expense.	Invest in areas that you know are growing - renewable energy, Health Care, Post-Secondary Education (all not just the trades where there are no jobs, but the UCP continue to say there are), Primary Education, etc.

T5A	Maintaining, not cutting services (Education, Healthcare)	<p>A procedure or system to track the use of funds among services (e.g. Education, Healthcare), particularly grant money. Keep the organizations more accountable for spending money on improvements at the front lines. Money spent should be of tangible benefit to students and teachers, or to patients, nurses and doctors. Encourage the limitation of management and bureaucratic positions.</p> <p>No money to private sector corporations without serious strings attached.</p> <p>Fix the cannabis supply problem to reap taxes there.</p> <p>Loosely related: Move away from income tax. ONLY ONCE INCOME TAX IS REDUCED, move toward a Provincial Sales Tax or value-added tax.</p>	<p>Keep taxes low. Continue advocating for export options using legal means (e.g. pipelines).</p> <p>Give temporary tax breaks for small businesses and/or job creation in all private sector operations.</p> <p>Loosely related: Move away from income tax. ONLY ONCE INCOME TAX IS REDUCED, move toward a Provincial Sales Tax or value-added tax.</p>
T7A	With an aging population, medical is a priority. As a retired teacher, having Alberta students being able to compete in the job market is also important. Finally, diversifying the economy from oil & gas should be a priority.	Savings could be justified by cutting the salaries of upper management in the medical & oil government bodies. Front line employees on the street can remain in their roles.	The government can support new jobs by encouraging investment in new industries such as computer and dealing with the federal government on problems in international trade.
	<p>Spending in side the house! Members of Parliament have to much bonus. Bring bagged lunches people. Health... Re look at budget for that.</p> <p>Bring back a partial payment to Alberta Heath care! Our health we should all have to support the bill. Decrease dentist and specialist wage.cist for these expenses to the average citizens cannot afford to have there teeth fixed.</p> <p>Decrease childcare cost so more people can work bringing in more money to one household. Bring back a modest(like 200.00) school fee to the budget. Currently I pay no school fees in my county. Implement a busing fee for rural areas.</p> <p>This should be in place to help offset transportation fees paid by school boards, allowing more money in the pocket of the school district.</p> <p>Homeless! Afordable housing!</p>	Lose some if the top dogs that are not needed. To many generals. Cut back spending for our MLA, premiers, councilors. No more paid lunches, dinners. No more paid cell phone bills. I work for government... Have to pay for mine. No more personal flying on tax payers dollars. Further Wage decrease for members of Parliament.	Decrease tuition cost! Have equal pay grid for male and female working same job. More instentive for mothers to return to work(decreased childcare, funding for school, more school options available to include rural areas) suppor local food industry.
t5Y	Infrastructure, fighting special interest groups stopping the flow of Alberta energy to foreign markets, Education. Specific health care items -reducing waiting times. Not general administration bloat	Stupid special interest funding, indigenous freebees, health care admin, revised banking rules and profit reductions.	Thorium nuclear research using carbon tax funds. Less red tape for small business, more tax for big business.
T6A	Health care, post secondary institutions and vulnerable individuals, such as people with disabilities. Pretty much everyone you have decided to neglect since your leadership began.	Stop putting money into the oil and gas industry. It is a dying market. Stop driving people into solely trades jobs with incentives through NAIT. Every student, regardless of the field, should be supported. Also, support health care. Having people stay I hospital is costing us so much more money than hiring staff to care for them in the community.	More jobs assisting our vulnerable individuals, because getting them out of hospital will save us money.

T1L	Family Education Children services Public Libraries	Useless self-promotions like "cutting red tape". Stop giving billions of tax dollars to oil and gas companies who then abandon wells and jobs.	Diversify energy spending and infrastructure Cut down on idiotic promotion of things like "wexit" Stop pretending cuts to family programming is "reducing duplication" and focus on actually reducing duplication of services (e.g. scrapping the RCMP for a provincial police force:
	Those programs for at risk individuals. This includes those with mental and physical disabilities, those with addictions, those who have less opportunities due to socioeconomic factors, etc.	Eliminating corporate payouts for oil and gas companies.	Support diversification of the economy by offering grants to companies wishing to come to Alberta if they would offer diversity to the economic environment. I also believe that jobs in health care and education should be supported and should be increased proportionately to patient/ student increases.
T5Z	I really think the Alberta gov't needs to focus on industries outside oil extraction. Our province is too dependent on oil and more frustrating is that we don't even refine it in large amounts which I feel is selling ourselves short. Other oil countries like Dubai understand that they need to invest in other areas (e.g. infrastructure) to continue growth in a possible future without oil (when oil runs out).	I don't understand the Alberta's governments insistence on balancing the budget when many other province don't. What's the benefit for Albertians if there are other provinces have been in debt for years?! For one it doesn't give us more say at the Federal level. It's even worst now because the current Alberta gov't has artificially induced a recession through cuts. Cuts means ppl lose jobs. This leads to risking the possibility of a new job (which is usually temporary positions in the short run and very bad for older workers) or increased welfare support. To be brutally honest, I feel these cuts are political; they were pushed as a guise to blame the Federal Liberals since they stayed in power. Personally, I feel the cuts would come even if the Federal PCs won because the provincial PC focuses on balancing the budget way too much. The war room also feels like a waste of tax payer's money. It's continuing to push oil, yet market demand is controlled by many economic factors that are out of our control. There are many places besides Alberta that are capable of producing oil. Also, extracting oil from sand is always going to be more resource intensive then areas where you can pump it out of the ground directly. No amount of educating others will change that.	Stop further cuts as government should be using saved up funds during rainy days to help their population instead. Provincial gov't should be investing into new industries on a more permanent basis that can be grown in Alberta outside of oil. Support current working force so they can still pay taxes and spend to keep economy going. Fund new industries for economic growth.
	Creating new jobs by supporting innovation into new sustainable industries Education - make the workforce of tomorrow into critically thinkers, innovators and problem solvers Healthy living and habits to prevent disease rather than treat it at enormous costs.	Bureaucracy, too much middle management,	Support innovation into sustainable industries; sustainable agriculture, alternative energy, converting orphan gas wells to geothermic energy lines, hemp processing and manufacturing, etc. provide tax incentives, loans, grants, etc
T1S	Homeschoolers	Public schools/city budgets	Help homeschoolers
t3b	Education and healthcare	Oil & gas war room - completely unnecessary	By funding growing sectors, like healthcare and education. By pouring into our IT and tech industries to draw investors to the city

T4L	<p>Job Creation - not through corporate tax breaks - but by providing funds for small business.</p> <p>Health Care - getting more Family Doctors</p> <p>STEP Grant - creates jobs and assists students in getting valuable work experience. This program should not have been cancelled. It benefits many people in Alberta.</p>	<p>Charge high income taxes to the rich</p> <p>Quit giving tax breaks to corporations who only leave when there is no more tax breaks.</p> <p>Charge PST if we have too to maintain public service pay increases; increases to teacher and ensure we keep our nurses in Alberta instead of cutting their positions.</p> <p>Albertans who are working and contributing to the economy by purchasing vehicles, putting their children through post secondary, buying necessities keeps our Alberta Economy going.</p>	<p>Reinstate government grants for retraining people who are unemployed or underemployed.</p> <p>Provide incentives for small businesses to expand and hire more people.</p> <p>STEP Grant and the Gaming Fund should have remained in place for struggling Not for Profits in Alberta.</p> <p>Would like to see the more tax credits for businesses and people who donate to Not for Profits charities in Alberta. There use to be a matching provincial grant for cash donations for Not for Profits that were eliminated.</p>
T6L	Education, health and adoption of emerging technology.	Inefficiencies in existing services, ministries, bureaucracy.	Employing people to work within education, health and technology initiatives that support efficiency and lean execution.
T6W	<p>1) secular public education</p> <p>2) renewable energy</p> <p>3) healthcare</p> <p>4) technology, excluding fossil fuel extraction</p>	Re-instating the provincial carbon tax	Diversify, invest in everything except more oil and gas dependence so we can weather another oil price crash
T6W	Infrastructure, job creation, economic growth, more money in the tax payers' pockets, getting the oil sector back up and running	Increased taxes on cigarettes/alcohol/weed, save on government personnel spending on travel/meetings etc..., try to decrease operational costs, reduce spending on supporting the Natives and the immigrants, eliminate inefficiencies and redundancies in processes/personnel etc...	Lower taxes for corporations, lower minimum wage, build oil refineries, ease regulations so corporations can run easily and more efficient, incentives for employers, lower interest rates to get people spending, bring back the 5% down for first time home buyers to kick start real estate again, diversify our contributions to the economy
	Health, education, post secondary education and safe consumption sites.	Get rid of the war room.	Diversification. Oil and gas is important but we cannot be a one trick pony.
t8w	Health Care, there is a desperate need for doctors in my area. I have been without for several years which I am quite sure will cause more problems in the long run. This includes mental health as well, to try to prevent the addiction problems we are seeing lately.	Quit funding safe injection sites or anything to do with providing illegal drugs to addicts/criminals. Make more severe consequences for petty crimes that now seem almost acceptable; only costing the hard workers time and money. It is a waste of policing and court time to allow these people back on the street to commit the exact same crimes, with only a slap on the wrist. Take some control of our finances back from the federal government instead of allowing our hard earned money to fund other countries. Stop paying government workers more than the average worker. Cut back on pensions for government workers and politicians; as well as reducing the amount of benefits and perks they are entitled to. Obviously, get rid of Justin Trudeau before he bankrupts Canada.	Start allowing us to take advantage of our natural resources. Quit taxing the crap out of people so they actually have money to spend.

T7x	Health care Education Infrastructure	Investing in better schedulers and systems for health care. If there are less scheduling errors, that would save a lot of money in overtime pay and less employee turnover. Actually only cutting some of the top wage earners in health and education. Not the front line workers! Replace some of the RN positions with LPNs	I'm not sure about this one
T0B	Heath care!!!! Education and oil and gas	Welfare, drug test people. Cut prisoners costs rather than elderly!!	Create more jobs, people are hard out for work right now!! People aren't looking for amazing wages but rather just a job in itself
T2w	Cutting the war room, cutting cabinet size and salaries, increase AISH, increase health spendings, and increase education spending.	Reduce size and cost of cabinet. Get rid of war room. Collect taxes from oil companies	Quit and get a good government back in.
T6J	First of all I think your second priority, Making life better for Albertans, is the antithesis to what this government has done since they took office. How is cutting K-12 and Post-secondary education making life better for Alberta students? How is changing eligibility requirements for the Seniors Drug Benefit Program which could leave some 46,000 Albertans without coverage, making life better? The budget for kindergarten to Grade 12 education is \$8.2 billion, the same amount that was spent last year, but you have abolished three grants: Class Size Funding, Classroom Improvement and School Fee Reduction, which totalled \$428 million and only partially replaced those cuts with a one-time transition grant of \$153 million. You did not account for the fact the number of new students in K-12, so in fact this will be a decrease to budgets for school boards. The government's spending priorities should be on education, healthcare, tax benefits to assist lower to middle income individuals/families, investing in industries other than oil and gas.	The corporate tax cut translates into a net \$2.4-billion revenue reduction for the government over four years. I have yet to hear an explanation for this and how it will support job creation and economic growth in this province. So maybe the answer to your third question on this survey would be to cancel those corporate tax cuts and get that \$2.4 billion revenue. cutting Child care subsidies make zero sense. If you can get parents with kids working, they are paying taxes and not accessing social services. You give both the parents and the children a brighter future. It honestly seems like the government is focused on finding savings at the expense of the less fortunate Albertans. When did our provincial government decide that oil and gas was more important than its citizens?	The Capital Investment Tax Credit, the Community Economic Development Corporation Tax Credit, the Capital Investment Tax Credit, the Interactive Digital Media Tax Credit and the Scientific Research and Experimental Development Tax Credit are all being cancelled. These support both job creation and economic growth. How about you look at investing in industries other than Oil and Gas? Many people in Alberta's tech sector say the Investor Tax Credit in particular — which had approved \$28.1 million in tax credits by the end of 2018 and leveraged \$94 million in investment for small and mid-sized businesses — helped get much-needed venture capital into the hands of new industries in a province where investment dollars have typically gone to oil and gas.
T3G	Critical services. Police, education, healthcare	Increase Business Taxes	Capital projects, encourage diversification of the economy, and attract tech sector investment.
T3M	Education, Health Care, Infrastructure	Bureaucracy - clean up top end of government, education, health care	Tax breaks, education, local business supports
T5k	Health education - you know, stuff that's important to non conservatives	Get rid of the useless war room	Stop corporate welfare. Your tax cuts are not working. The rest of the world has moved on from trickle down economics
T4X	Healthcare, Education, Technical innovation, Climate change commitments, Affordable childcare	Oil company tax breaks and subsidies, Government Officials travelling	Not laying off so many essential and skilled staff within the APS. Support innovation and transition technology. Attract tech businesses into the province and help support small business. Do not invest all our "eggs into one basket" into the oil industry.

T1J	Education and health are always a priority for our kids but there is a lot of waste in both areas. Don't punish the vulnerable children and adults. Don't cut PDD or AISH or Seniors benefits. The government should look at all of their upper level people with made up positions. I have seen it but it is the "good ol boys club!"	I feel very strongly that instead of cutting the important front line nurses that Alberta Health Services should look upward and start eliminating some of the hierarchy at the top who make inflated wages and will have huge pensions. We are so top heavy!!! Do they have courage to do it. I doubt it! The government should bring back health premiums to those who can afford it. That would bring in a lot of money. I am not opposed to charging a small fee per dr visit. Ask the front line health care workers ways to save money. They are there 24 hours a day!!!	Not my area of expertise. Sorry
T1B	Reducing classroom sizes, more supports for teachers Healthcare, to disease and disability prevention programs and services	Tax big corporations	Yes but not to the detriment of everything else
T6L	Health care, alternative energy sources, education.	Stop pissing our money away on stupid stuff like your "War room". How ridiculous can you get? Stop handing out tax cuts to corporations and start using our money to help the people. Trickle down economics doesn't work. Get up-to-date!	By diversification and transition to alternative energies. Quit being single minded with the economy.
T3H	Health and Education. Homeless problem in Calgary is also an issue that needs attention.	The salaries of everyone Jason Kenny has hired should be cut by 20% immediately. Close the money sucking "War Room" and stop providing cushy high paid jobs for cronies and friends. Stop all flights/trips to England and elsewhere that are done in secret and include luxury hotels/flights.	Diversify and support emerging industries such as tech and green energy. Move away from giving handouts to rich oil companies. Also it may be time to consider a sales tax in Alberta but since the scope of this survey is so limited and targeted to what the government wants to hear I gather that does not fit with the survey.

T2Y	<p>I know Calgary is building a new youth centre for mental health. Unfortunately, the way we conceptualize mental health and the healing process is usually wrong. The individuals we hire to help these kids are usually broken and lead the kids to make worse decisions.</p> <p>Personally I think the model developed in church with youth groups is the best. Unfortunately we live in a secular world that lacks values, and the lack of values is what causes the mental health problems. I don't understand why nobody can see this.</p> <p>17(1)</p> <p>A HUGE ISSUE with our youth is pornography addiction. Its massive and completely swept under the rug. 17(1)</p> <p>pps like Instagram, and TikTok perpetuate the sort of addictions especially in young men. They cause our young women to act morally corrupt. Yes we have sexual liberation but it's not the answer. Responsibility is.</p> <p>Once our kids are able to understand sexual health in a RESPONSIBLE manner, I think that will make a HUGE difference. Sexual health and mental health are indefinitely linked. Sexual energy is the driving force for all creation. As it is the force that creates human beings in the first place.</p> <p>But how can these kids use their sexual energy when they</p>	<p>We don't need savings. We need individuals to create value. We're simply not producing enough. 20% of our males under 25 are unemployed, not because there aren't jobs. But because we're not equipping them with valuable skills. If we give them skills, teach them how to add value, encourage an entrepreneurial spirit. Then we will find a way for them to make money.</p>	<p>Loosen regulations all across the board. Promote entrepreneurial markets. Get rid of junk corporations that don't care about the people. Encourage small business and lower taxes for them. Grants for people who want to start businesses instead of tax cuts for wealthy corporations. They don't need your money, they can find investors. The government is for the people, not for corporations.</p>
t6l	Education and health care Tech	many places. This is not our job but the taxes from oil and gas, wage freezes	you haven't created any jobs but I would say firing EA's and teachers isn't the answer. My kids deserve good education
T0M	Healthcare, Education, Social Programs, Universal Income	Taxing large corporations and increasing marginal tax rates for those making >1 million a year	Investing in education and realizing that either raising minimum wage (15 is still low to live on) or creating a base income for people will actually help economically. When people can't afford to live, they do not spend money in your society.
T8N	More funding for home education is needed! We save taxpayers \$12,000-\$1670 = \$10,330 per child PER YEAR by investing our time and own money in our children and taking responsibility for their education. \$830 doesn't cover the true costs in home education and this methodology of education should be available for everyone.	The government could remove the regulation that children can only write diploma exams for 100% of the mark if they are over age 19 or have taken the course. If kids are ready to take the exam from self-study or tutoring, they should be allowed to write it at age 16 (or any age really.) That saves the government money in providing a needless course.	Allow income splitting again so families have more net income to drive the economy forward

	Invest in new business and technology. Education, education, education. Make education a public service and priority and legislate against education "businesses" (so all current post secondary "schools"). No business should profit from education, the profit is the benefit to the community.	Stop all corporate subsidies and tax breaks for oil and gas. Support the lowest 1% not the highest. Increase tax for anyone that makes over the mean Canadian salary. There are more higher salary earners than any other province.	Reinstate all subsidies put in place for the technology sector by the previous government. Offer further subsidies taken from oil to encourage further diversification to technology. Invest heavily in education. Especially STEM.
t6l	Why are we taking money out of the schools. Fees have doubled and class sizes are going to be larger? We have more then oil and gas to focus on	the war room? Get the taxes from the oil companies	by not firing teachers
T8H	Health Care and Education	Currently, the Gov't is top-heavy with Management. There are managers who have the title and the pay but do not have any staff to manage. They "manage" work...but we all manage a workload! Do we really need directors and executive directors? Eliminate the executive directors and make the directors work. Top-heavy! this also cuts red tape.	Promote Alberta, but it's a little difficult to sell how great Alberta is to people outside the province, or country when the Media keep focussing on the NDP's opinion of how bad we are. Promote hiring local, grant money to new businesses with criteria of hiring local Albertans. The unemployed could retrain for other jobs, or trades if they has support from the gov't. Retrain to get people back to work, people with families can't afford to retrain.
T5W	Adults and Children with disabilities Health care Education	Government positions and human resource positions at government facilities that are not necessary could be decreased, make drug testing mandatory (monthly, spontaneous) for anyone on welfare and if they are using drugs remove the benefit, no more giving financial aid to foreign countries or agencies until our debt is repaid.	Provide more affordable + available high school + college education for adults trying to better themselves, have firmer laws on refugee status, and immigration.
T8a	Education, health care.	Big business. Reducing red tape.	Support alternative energy projects, not cut education and health care.
	Healthcare and education	Stop funding private education. Increase oil royalties. Increase corporate taxes. Bring back the provincial carbon tax so the money stays here instead of going to the federal government.	Job creation stimulates growth because with more people making money, more people are spending money. So giving small businesses tax breaks and retaining the jobs we already have will help the economy.
t6h	Education/Healthcare	Cut back on military, and that stupid energy council you put together.	Subsidies for new and emerging industries. Make it a benefit to grow marijuana, create solar farms, and for god's sake open that super lab. Oh, And stop giving the rich tax breaks. They have done the studies. Trickle down economics doesn't work.
T8N	Our economy	End equalization payments, defund the CBC, more efficiency in infrastructure projects, and more efficiency in many bureaucratic areas, that can be done by slashing red tape. But more important than saving is stimulating the economy out of a recession so that we can earn tax revenue.	Slash red tape, slash regulations, scrap the carbon tax, stop cutting public sector jobs and salaries.
	Education, health, economic diversification, infrastructure projects	higher corporate tax rates, add a provincial sales tax	Silly question- Economic development should be done wisely and not at the cost of destroying the provincial economy leading to recession and wide spread job losses. Stop investing in old economies(gas, oil, coal, corporate tax cuts offs). We need infrastructure development and economic diversification-read Keynesian economics. Have foresight and plan for the future.
T6L	I think this government is too focused on expenditures and not enough focus on the revenue lines and obtaining a diversified revenue profile.	I think this government is too focused on expenditures and not enough focus on the revenue lines and obtaining a diversified revenue profile.	Provide tech companies and other industries the same tax breaks and accounts payable to gov't forgiveness as oil and gas.

T2Z	Infrastructure, property rights and responsible land use.	Eliminating redundant bureaucratic positions in the Legislature.	Invest in youth, subsidize continuing education, and provide supports for families.
T8A	Well for one, maybe not giving almost 5 billion dollars to corporations. Load of good that's doing us all thus far. Spend it on your constituents perhaps? Also stop cutting our health/care/meds. That's a priority to so many, as is education (not just religious education institutions thanks). Your government is making life much harder for the average Albertan, of which I am, NOT easier like you promised to so many.	Oh how about 5 billion in savings that you just handed to corporations, of which many have moved their central operations OUT of Alberta, despite the handout. That's almost 5 billion dollars that could have gone into our province. You could have also saved millions on this godforsaken oil war room that will last what, two-three years? Load of good that's doing us all. Finally, your trips around the globe to entice business to come to Alberta. First and foremost, Jason Kenney is the world's WORST spokesperson. If you really think he is the man to send to get people to want to move their business into Alberta you are so far wrong it's hilarious. He's slimy, conniving and wouldn't know how to conduct real business if it hit him in the face. If I was an investor or a businessperson with money to spend, it definitely would not be on something Jason Kenney recommended, considering he still lives in his mother's basement. It's sickening to see the UCP do what they think is "right". Finally, institute a freaking PST. No one will bat an eye at 2 or 3 %. That is huge revenue right there and you wouldn't be killing people's way of life like you are with taking the caps off of insurance, natural gas and the like. I don't need my life's necessities being crazily priced and outlandish. Idiotic.	Well for one, by actually understanding that diversification NEEDS to occur. Oil and gas is NEVER going to be like it once was, sorry to all the haters, but it ain't. Get that through your heads. Support education, support the trades, support something, anything but JUST oil and gas. I understand that it needs to be a part of Albert's economy, but so do other things and by not embracing change, you are causing a huge chasm in this province, financially and socially.
	Education, employment, senior support, and healthcare.	<ul style="list-style-type: none"> - Stop "legislating"/ forcing people to use "govt approved" firms to do things like renovating buildings etc. - Provide incentives for agencies that operates below budget (because they spend time finding the best appropriate deals) and do not increase budget for those who spend every penny or over budget. - Stop compensating (with bonus etc) govt official for just doing their job. - Recognize there are working poor and support them as best we can: increase individual tax credit?) 	<ul style="list-style-type: none"> - decrease legislative barriers for companies, but also enforcing their social and tax responsibilities -
T2P	focus on diversification of the economy. Focus on the environment and most importantly stop giving farm, oil and gas tax breaks	start by implementing a prov tax and stop giving farm, oil and gas tax breaks	<p>since 1980 the GoA has talked about the need to diversify the economy away from oil. Get on with it.</p> <p>Start supporting businesses such as IT and the environment.</p> <p>make the oil industry clean up their abandoned oil wells and those oil companies that have gone out of business should be covered 100% by the oil and gas industry</p>
T9A	Cops, health, jobs, education, transport, help centers for homeless or low income families	Lower your own income	Our oil fields

T6E	*public education (not private) *public health care (not private) *stimulate our economy through diversification	no more giant corporate giveaways.	A healthy public sector stimulates the economy. I know that since all these cut backs, my families spending has gone way down and our personal savings up incase we need money for things our current government is cutting.
	Education Health care Infrastructure	Bureaucracy Upper management Administration Duplication of services	Economic diversity Tax incentives to promote new businesses and retain existing ones Continue to promote and advocate for the energy sector
T7X	Family support, education and fostering future generations.	I am not privy to every area the government spends. However, certainly those with power over, and knowledge of such information can utilize common sense and prioritize appropriately.	By encouraging our youth and families through support networks and education programs.
T1A	Education- cap tuition so the average Albertan can afford to go. Also funding for kids with disabilities that require and EA in school Cap insurance so people can afford to drive	Cut some high level jobs, especially AHS. Too top heavy. You are fighting with AUPE frontline and support staff to not give a raise or possible pay cut and to make other cuts. We are average people who work hard and for me have to re-certify each year. Minimum wage went up, cost of living went up but my wage hasn't. Too many people at AHS are making more than \$150,000 a year. Hard to feel sorry for them when I am making 17(1) a year and supporting a family	Build the pipeline! I know that is one of your key objectives and part of the reason I voted UCP. Create jobs, cap expenses ie: tuition, insurance, utility bills (mine was \$450 this month)
T0J	Medical, education, social services	Stop letting Jason Kenney spend money	Tax the corporations and the rich
T6J	Needs to start attracting tech and other environmentally friendly companies to the province. Push to get our oil to market but also need to start to look towards the long term future - its going to be tech and environment over oil and gas in the very long term. Need to benefit from oil now, to grow into more diversified industries in the future.	No more tax breaks for corporations, get some of that money back. Rather then cutting front line service workers, maybe focus on the abundance of middle managers and paper pushers.	Work with other provinces and the feds, rather than being antagonistic.
t6a	Focus on public services (transit), healthcare, education (teachers), libraries.	Implement a progressive tax system.	Continue to fund public service-type jobs in health care, education, etc. Eg. libraries are essential for effective community development and employ numerous people. Funding libraries has been demonstrated to positively effect job creation!
t4t	Education, more teachers, teacher raises.	PST taxes would reduce our transfer payments and generate needed revenue.	Funding education to give our youth a future.
T3L	The governments focus should be on growing our economy. Education also needs to be a primary focus, how can we reduce the deficit under the presumption that we don't want future generations to have to pay off that debt while not focusing on the education of those future generations. We cannot go back and educate our children once they are grown and if they have an underfunded education system they are being put at a disadvantage.	The government needs to focus on decreasing the budget deficit by growing our economy, not excessive budget cuts that are putting more people out of work. While I support balanced budgets there are times when investment in future growth is more important, and with interest rates low a different strategy from fast and furious budget cuts needs to be implemented.	Alberta needs a vision for a new future, one that will incentivise large corporations to move here and small business to startup and grow. This isn't done by lowering the large corp tax rate to excessive lows, but by encouraging investment opportunities through gov't programs and tax credits. Tax is only one part of the picture when is comes to corporations, they are also looking for progressive governments and economies where there employees can prosper. Industries, including E&P and Agriculture need to be able to innovate and credits related to R&D are important to encourage development.

T1X	Education and Health Care - make them more accountable, especially CBE	Top heavy education - look at the CBE	Support small businesses. Encourage apprenticeships working with high schools. Look at having students leave school at 16 end of Grade 10 as is done in the UK. then money would be spent on high schools where students aren't academically included. let them go to SAIT as early entry Apprenticeship.
T9E	Spending for education - public schools and reducing the amount given to private schools.	Getting money for abandoned wells owes to municipalities. Defer lowering corporate tax rates for a year. Don't plan to balance the budget in 4 years, plan for 5 Stop giving MP's and higher ranking government employees raises. Keep the money in the system	Give incentives for keeping people employed Look into bringing diversification of not only oil and gas but other industries as well to our province
T3M	Front line workers. Vulnerable Sector groups need their funding back (seniors, children, disabled Albertans, and struggling families). Ensuring Alberta remains a competitive/appealing place for good doctors to want to practice medicine. Education at all levels. Job creation. Public education needs to be supported not dismantled. Stop putting forth surveys that only present the desired outcome of Mr Kenny on subjects like privatization of education.	<p>The multiple extra levels of management need to be refined/reduced in government offices, AHS, and School Systems. Privatize the drivers test again with stricter audits. The job creation tax break needs guidelines that if a company gets the tax break and cuts jobs they have to repay the taxes at the rate before the job creation tax cut. Implement the firewall so we have say over how our tax dollars go to the federal government, stop just talking and start acting.</p> <p>As much as I hate to say this bring back the Alberta carbon tax so we get the rebates back in Alberta, not into the federal government's pockets.</p> <p>Bring back Alberta Health Care premiums, they should never have been taken out in the first place. This is what pushed me into being a Wild Rose voter over the previous Conservative government that I have voted for from the time I was 18.</p> <p>Keeping many of the AHS programs under AHS. If the labs were to be privatized it is going to screw over long term employees and cost more than it will save.</p> <p>Do independent spending audits that are transparent and focused on finding redundant costs. Have enough employees there isn't OT required to remain staffed properly.</p> <p>Better education to the public on when to go to a family doctor, vs walk-in clinic, vs, urgent care, vs ER. So many resources are wasted with people going to the ER for the sniffles. Urgent Cares are well equipped to to handle pneumonia cases and determine if there is a need to access higher levels of care other than antibiotics</p>	Invest in more than just oil and gas. The tech industry is huge. Give a tax break to companies that actually use the money to create jobs. If they cannot prove extra jobs created they don't get the tax break. Put back the student work program that helps students gain experience that often turns into a full-time position for them. Encourage the development of greener technologies in the oil and gas industry so Alberta can remain a world leader in the oil and gas product markets.
T2E	Education	Getting rid of the war room. What a waste of money and take back that ridiculous 4% corporate tax cut that was unnecessary.	Fund education and diversify the economy away from oil.
T5A	Healthcare , Education, helping young families and getting Alberta to work	Look at budgets for the higher up in politics ..trim some of the unnecessary trips and expenses	Finding ways to get the economy going

T1K	Emergency services should be a priority	By elimination safe injection sites that are used as hangout and drug sales areas. Reducing the amount of chairmen executive positions and personal assistances/ secretaries in public health and school s.	By seperation from the East or independence like Quebec.
T9m	Put oil field workers back to work. Start up Alberta pension plan, Do not allow any more gun bans. Cancel the carbon tax.	Ei, we fired a worker for stealing then he went on Ei. Totally unacceptable. Management of most social programs think they are deserving of so much money.	Follow the Ralph Klein system of government!
T3M	Education and healthcare	Social services- stop feeding the system. It's broken. We are not empowering these people but supporting them constantly. Families should not receive Child tax credit (I have children so I'm not discriminating). I chose to have a family. I should be able to support my family. Education- NOT frontline staff (teachers). There are hundreds of consultants and far too many administration positions that could easily be cut. A school with 3 secretaries could do with 1 or 2. A school with a principal, vice principal and assistant principal could go without the 3rd principal. Schools have 3 diverse learning teacher- totally unnecessary. However these types of cuts will NEVER happen if you let the school decide on how to allocate the funds. Look at each school. Cut the dead weight. Teachers have not received a raise in almost 10 years! That is not where the money needs to come from. Healthcare- same situation. Too many supervisors however when cuts come it's the frontline staff that are impacted. This should not happen. Someone needs to go in and make these decisions that isn't worried about covering their own job/ salary.	Oil and gas but also diversify to tech companies.
T3b	Education and health care There is not enough schools for the middle class families it is a real struggle also the schools the children do attend the class sizes are too big they are not getting quality education. Healthcare the wait times for minor things that could become major things is out of control the doctors and nurses are stressed beyond belief trying to keep up	1. Collecting taxes due from corporations. 2. The income support system where albertans can stay on income supports for years on end without the expectation of getting a job. 17(1) and it is more beneficial for people to stay on income support then to get a job this system needs to be fixed we are paying way too much for other people to sit home and not work 2. The amount of child tax that low-income families get is outrageous in some cases it is enough to pay their entire rent it seems like they do not have to work that along with income support and they don't have to work at all. 3. The assured income for the severely handicapped assistance is too easy to qualify for. 17(1) on AISH because they have mild depression. 17(1)	Growth comes from small businesses stop taxing them so much. There are a lot of jobs people just aren't taking them because they would rather get on assistance . I see help wanted posters everywhere around my community it's not worth people getting jobs they aren't paid enough and they get more on social assistance. Also income taxes I know this is the federal system, but it is noteworthy, that income taxes for hard-working double parent Working Families are extremely high we are barely making it .

T5M	Education and Health Care. Those are two of the most important things that make Alberta the best province to live in.	Decrease spending overseas and concentrate on helping Albertans.	Decrease minimum wage so more small/family run companies can reopen and afford to hire staff required to maintain business.
T1G	Renewable resources/research, social services, health services, education	Find efficiency (time & money) within the various government systems/offices. Taking a fair look at the salaries/pensions of government officials. A strict and accountable measure of frivolous spending (ie. travel) at all levels.	Tax incentives/support for "green" companies; businesses involved in renewable resources or sustainable technology. Perhaps new trades could be formed in one or more areas of these job fields, creating incentive for those in the workforce to make the switch from the oilfield industry or other areas. Less government outsourcing to non-local businesses.
T6W	<p>1) Education - providing sufficient grants to students to cover increasing tuition costs and reverse decisions to remove tax credits for students. We should not be burdening future Albertan workers with insurmountable loads of debt. Specialized workers with post-secondary education will be just as important (if not more important) than trades jobs (which seem to be the province's current priority for some reason).</p> <p>2) Healthcare - hiring more nurses and doctors to decrease wait times and making sure there are sufficient hospital beds and spaces that are needed by patients. Current budget constraints have impeded these outcomes immensely (removing hundreds of nursing jobs) and need to be changed.</p> <p>3) Infrastructure - Municipalities' resources are heavily strained by the recent budget cuts and will require more funds to be financially successful in an already uncertain financial future.</p>	<p>Limit the salaries of all MLAs to no more than \$60,000/year and the Premier's salary to \$80,000/year. There is no viable reason as to why they should be making more than these figures.</p> <p>Defund the Canadian Energy Centre (ie. War Room) which is currently wasting \$30 million/year pumping out conservative propaganda, stealing other companies logos, and giving Albertans a bad reputation</p>	<p>DIVERSIFY ALBERTA'S ENERGY MARKET! Here's some ideas:</p> <p>1) Begin constructing mines to harvest the Lithium needed to make Li-ion batteries. As the world shifts toward a de-carbonized economy, Li-ion batteries will be very useful in new emerging technologies such as electric vehicles. There is currently a world-wide market for these batteries and demand will only continue to grow. Source: https://www.cbc.ca/news/canada/calgary/lithium-alberta-oilsands-1.5424527</p> <p>2) Investigate ways to sell hydrogen gas, a very marketable form of energy that will only grow in demand. Source: https://www.bloomberg.com/news/articles/2020-01-14/green-hydrogen-could-price-gas-out-of-power-markets-by-2050</p> <p>3) If pipelines must be built, pursue LNG pipeline projects instead of oil. They are much less catastrophic to the environment and natural gas has a huge market as well.</p>
T1p	Maintaining healthcare and education spending, as well as vital infrastructure	Stop relying on trickle-down economics. They have never worked. Ever. Stop cutting taxes at the top.	Public sector work is a stabilizing factor in recessions, stop trying to cut public sector workers simply because "it's their turn to feel pain". The desire to inflict pain or suffering on others simply because you have had to deal with it is a monstrous mentality.
T4T	health and education	MLA and executive travel costs	invest in small business continue to fight for Alberta's pipelines continue to the fight to make sure Ottawa listens to the West

T6R	Its a Revenue Problem not a spending problem. Govt should protect operating expense and not try to balance the Budget on the backs of the civil service? Cutting billions in govt spending will result in billions removed from the economy - not only will govt jobs be lost but private sector jobs will be cut as no money in economy to support - \$5B in savings = 50,000 jobs - do the math. Fix the revenue or devastate AB!	Hold off on less critical infrastructure projects, Reduce ABC funding in-line with direct department cuts. Cut wages via Union contracts (stop cutting jobs)! Cut grants by equal amount you cut wages; cut s/s by same percent.	Stop misleading and telling everyone its a spending problem. Admit we lost billions in revenue and need to find ways to fix that? Stop reducing business/corporate taxes; introduce a Savings Tax (temporary Deficit elimination tax), increase Federal transfer payments for SUCH sector; increase federal contributions to pay proper share of programs - Indigenous programs; legal aid; Victims of Crime; etc. Cutting government jobs and services and reducing govt spending by billions will create major issues for overall job market when billions removed from economy. Govts that function effectively and economically when they save in good times and spend in bad.... to support the economy. If economy and jobs in private sector are struggling, adding govt cuts will only exacerbate the problem.
T5x	Daycare subsidies for the average middle class family	Raise corporate taxes enough to offset costs	Diversification, investing in renewable, maybe looking into terra form technologies for nuclear power.
T1M	Education Health Care Small business Childcare Grants for small municipalities Agriculture Renewal energy development	Investigate Government officials' spending habits Stop tax cuts for businesses	Invest in post secondary education to ensure that the work force is trained adequately for the future Funding and initiatives for small businesses
T5N	Vocational training for displaced energy sector workers (to address the challenge of unemployment and poor economic diversification). Advanced education across all sectors (to address higher demand for post-secondary during the economic downturn, and to promote economic diversification). Infrastructure investments (to spur employment and as a long-term investment in AB's future). Economic diversification (we MUST reduce our dependency on the fossil fuel industry for our economic well-being).	Health-care (through tough but necessary labor negotiations). Review of middle and upper management in the provincial public sector. But this is really only part of the question. We have a substantial REVENUE problem in Alberta. Until we acknowledge that stable and high-level services rely on a steady revenue stream, we will continue to face short-term budgetary crises in the future. I will vote for ANY political party that has the courage to implement a provincial sales tax in order stabilize our fiscal situation. At that point, resource royalty revenue can be directed to debt reduction or a long-term endowment.	Government should acknowledge that economic diversification requires training and education across the spectrum (from liberal arts to basic science to pure vocational learning). Supporting education, particularly during periods of high unemployment, is thus key to sustainable economic diversification. The provincial government's full-throated support for the AB oil/gas sector plays well politically at home but it ultimately counter-productive when it comes to relations internationally and with the rest of Canada. Infrastructure investments require debt but are much stronger engines for job creation and economic growth, especially when compared to the laughable trickle-down economics of tax cuts.
t2n	Health, Education, housing, social supports.	Stop all funding to oil/gas/pipelines. End all support to carbon industries.	End oil subsidies, encourage unions, raise minimum wage, close oil/gas "war room"
T7Z	Education, infrastructure, health care costs	Cut equalization payouts by 65% Health care is eating up forty plus % of prov budget. Cut twenty million per year from war room budget. Far to many people living off the government, or being needlessly subsidized (Wealthy seniors living in subsidised housing) Pay down Prov. debt, use interest saved for capital projects	Encourage innovation through education, technology, value added products and diversification of economy

	Healthcare Healthcare staffing and salaries, particularly nursing Creating positions for nurse practitioners in primary care	Physician salaries Physician expenditure allowance Increase back the corporate tax	Implement the pipeline project
T5L	Focus on front line working staff not big corporations. We need more jobs for the trades and keep education and health care priorities.	Cut high paid ceo jobs or reduce their income. Don't take roll backs on every day hard working front line people. Curb highly expensive government program like the war room that cost massive amounts and produce nothing.	Continue with new projects that will employ all trades . Invest in education for our children, not cutting everything back.
t3k	The government should prioritize advanced education as a means to diversify the Alberta economy	The government should reconsider tax cuts, as they have significantly offset the savings found in other cuts made to date	promote education and the development of high-tech industries in Alberta
T0C	Education funding. We need well funded schools and staff.	Tax the large companies again. No more free handouts.	By incentivizing post secondary studies in technical fields and universities. If we need more workers in certain fields make it more palatable.
t2w	Social Services Public Health Invigorating the economy (through innovative new technologies and energy)	Through aligning funding to outcomes and ensure that expenditures are aligned with best practices in spending and budgeting.	Through providing ways for Alberta to expand it economy into different areas (technology, health etc..) and providing stimulus for Alberta to engage in exploring alternative forms of energy (wind, solar, etc..) We need to wean ourselves from oil revenues as the economic engine of our province.
T8A	The Climate and Pollution. Everything else is secondary. It doesn't help if we make 2% more if we have to spend 5%-10% on disaster relief and emergency services.	Eliminate the ridiculous energy council you jhat introduced and are blowing our money on.	Diversify more. Initial economic debt into strong infrastructure for a more diversified and strong private sector in the future is the surest way to improve growth and dampen economic loss as fossil fuels will be declining globally.
T2y	Education, front line medical staff	Upper management in education and hospitals . Such organizations appear very "top heavy."	By taking the same budget cuts that they are proposing for other sectors . That would be really great to see
T6M	Schools and nurses, smaller class sizes so children who need it get more help and have the ability to succeed, and support for nurses as they give round the clock care to their patients and deal with heartbreaking situations on a daily basis	Leadership's paychecks and big business tax breaks	Better transit for getting to jobs, support of higher wages so people can afford to live and to spend extra and circulate money in the economy
T6E	Education Health care Retain public sector employees	Cutting MP salaries Reversing the \$4.7 billion tax cut for businesses Raising provincial tax rates Instituting a provincial sales tax Stop funding catholic and private school boards. Remove tax exemptions for churches. Leaving CPP alone. We don't need to spend millions to <u>poorly duplicate a system that is already in place.</u>	The first step should be to make sure we don't lose further jobs. Cuts to health care, education, and public services will only lead to further job loss. And it's harder to create jobs than it is to retain them. Reinstate the grant programs for small business, tech sector, and others that have been cut by the UPC. Not all business needs to be corporate.
T6A	Post-secondary Education Industry Development in the TECH SECTOR Mental Health	It needs to offer a fair consumer and business tax. It can save money by reducing MLA + Premier salaries. Reduce travel and hosting by Premier and staff of the Alberta Government.	Increasing employee security. Increasing education and training to improve skills. International and cross provincial trade

T6P	<p>Government should be focused on services for the vulnerable, like mental health funding so people can get back to work or go to school to contribute back to society & lower the unemployment rate, maybe even implement stages for people to get off assistance. Mental health support is not included in AB works support. It is very expensive to get good treatment. Get people addiction counselling, so they can get off drugs.</p> <p>Health care & education should be the first priority of the government. Decreasing health care wait times & building schools so class rooms are appropriate sizes & so more teachers can be hired.</p> <p>It can be almost 2 years for a referral for autism? Why we know there is an increase in cases, more nurses & doctors could be hired.</p> <p>Why don't we have the Remand open for the homeless to get them off the streets & clean up the area for more business development downtown to create more jobs. There should be added services such as hygiene, clothing, to get people employed & off assistance</p>	<p>Taxing corporations & rich people obviously</p> <p>Ditching private health care, if people can afford it they can go somewhere else & get it.</p> <p>Maybe cutting some city staff considering every time you see people working for the city or EPCOR there is 30 people around a project & only 4 are actually working.</p>	<p>Funding projects for innovative technology, research & development & services like education & health care.</p> <p>Promoting & prompting education requirements.</p>
t4s	education, health care,	stop funding day programs - they have 0 outcomes, invest in innovation	investing in our kids education, reducing the number of GOA employee's in redundant positions, and stop doing the same things every other government have done.
T5C	I believe the UCP needs to keep status quo. They don't need to cut jobs from people, but they don't need to be hiring more either. Ex- education and health care. I feel that the UCP shouldn't be cutting from the 2 most important areas in Alberta.	They could reduce hiring in areas that don't really need more people, and could freeze wages.	The UCP needs to stop borrowing and spending money we don't have. They could add a PST, use it properly, and help our economy grow.
T5K	Climate change mitigation and adaptation. Social services including but not exclusively public housing, transit, health care, and education.	Increase the corporate tax rate. Increase the royalty rate. Implement a stronger progressive taxation system. Eliminate fossil fuel subsidies.	Invest in industries with a future, stop clinging to those which very obviously will not rebound such as oil and gas. Lead the transition to the clean energy economy rather than digging heels in and resisting change to try and please it's top donors. Invest in renewable energy and energy efficiency projects, create tax incentives for tech and clean energy industries. Honestly, this is not hard.
T5Y	Health and Education	<p>Large corporations who are getting tax cuts without the promise of investing back into Alberta</p> <p>Trickle down economics isn't working.</p>	<p>Invest in your province - you can create jobs by increasing public services, there is a basic fundamental need for it - whether that's infrastructure or even social services.</p> <p>It works from the bottom up, if you create jobs and venues of opportunity for the lower and middle class, it will result in an in our own economy.</p>
T2M	Healthcare and education, Alternative energy options, Not by cutting into already lower "priority"	Higher taxes on the wealthy, NOT the poor and needy	By not cutting funding to already underfunded job sectors.

T6H	Education, healthcare (with a focus on preventative measures), climate change initiatives, post-secondary institutions and the research these institutions do, help for families (like childcare subsidies), spend money to make people happier and healthier, these people cost less!--look to other countries for examples :)	Investing in long term projects rather than short term. A "war room" (brutal name by the way) is unnecessary and insulting when the most recent budget is all about trimming excess. Taking away things that matter to the average person and diverting funds to oil and gas is short sighted in my opinion. On top of that, pissing off teachers, nurses and doctors-- the current government seems to have no respect for the average person if they aren't associated with oil and gas-- and even then, those people seem to be used as a means to an end (to make higher ups wealthy). The fossil fuel industry benefits us all now, yes, but that will not always be the case-- prioritizing oil and gas in a time of change seems like a wasted opportunity for growth. Subsidies to large companies is not appropriate, there are bound to be some savings there if rich, environment exploiting companies start taking on the burden instead of shifting it to everyday people. A PST doesn't seem like a bad idea, and I would happily pay more taxes if I (and all Albertans) could continue to receive things like universal healthcare.	Get with the times! The world is changing around Alberta! Stop driving away creative people and innovators. Be preventative-- again, continuing to rely on the oil and gas industry is not sustainable. Take the opportunity to change the rhetoric. This means investing in young people, in post-secondary institutions and education. Research, innovation, incentives for people to stay and work in Alberta that aren't oil and gas related- I want to see changes in the energy sector which would provide jobs. And I would love to not hear about how 'economic growth' is necessary and the be all end all, since (again, times are changing) measuring things in terms of GDP/economic growth is really no longer appropriate for this day and age. Let's be brave and diversify! More of a rant than a legit suggestion--my apologies, it's frustrating times, I feel like Alberta is moving backwards and it makes me sad!
TOM	Ensure education and health are adequately funded WITHOUT wastage at the top - which is what we generally see. There needs to be stewardship of the money and accountability to ensure it gets to the front line: classrooms/hospitals functioning.	Get rid of some of the top managers: there are too many people in management and not enough on the front lines. Get rid of middle managers. 17(1) that needs EXERCISE MACHINES for the office staff. Clearly they are not working hard enough while the TEACHERS and EAs are getting cut back. That makes NO SENSE!!!	Get rid of the carbon tax (keep fighting it), cut business tax, actively court big business to come to Alberta.
	Improving healthcare and healthcare worker satisfaction	Their own wages , and stop supporting a dying oil and gas industry	Re introduce credits that were making it more realistic for tech companies to come to Cal
T4T	Class sizes, special needs and enhanced reading programs. I think in our area, we need to see why public school enrollment is declining and Catholic school is increasing? Look into this and help support or mentor School divisions to make public more appealing and increase enrollment	Each student should provide their own technical device, ipad, chrome book etc, as alot of damage and no accountability for keeping it in good shape. Utilizing schools for after school functions, the power and utilities are going, have other organizations use it , gymnasium, etc, like in big cities, for banquets gatherings, etc.	Def oil and gas industry is a huge factor, if people move away, enrollment goes down. Small towns are struggling, encourage growth to schools .

T6L	<p>Healthcare Education Public infrastructure projects (Irt) Green infrastructure (renewable energy) Social services The things that keep Canada what Canada is . Not another version of the United States</p>	<p>First and foremost don't waste 30 million dollars and a oil "war room" to talk about strategies. A criminal waste of money.</p> <p>We live in a debt-based economy, I don't see any way of possibly getting our province or country out of debt. You would need a complete change in monetary policy, where Canada can create its own money supply again. The bank of Canada should be supplying interest free loans from infrastructure and health care projects. Cutting services and current projects to "save money" goes nowhere. Our country will always be in debt while we take loans from foreign banks and keep trying to increase our gdp, an indicator that does not reflect the health of a Country anymore.</p> <p>If you have to find savings , do not take it from Canadians in the form of social service cuts and halting the Irt. That is only hurting the most disenfranchised people while the rich don't feel any effect.</p> <p>Find savings in taxing the billionaires.</p>	<p>Public infrastructure projects Green infrastructure projects Please stay away from trickle down economics, such as subsidies to oil companies . It does. Not. Work.</p> <p>Research and development in science and medicine. Diversify our economy like the previous government was trying to do . Reliance on non renewable resources is going to hurt us 10 years down the road .</p>
	<p>Providing more front line health care workers instead of cutting them!</p>	<p>I think instead of cutting front line health care workers, the government can look into people working higher up in AHS such as management or administrative to find places to save. It's not fair to be cutting nurses and other front line workers when there already isn't enough of us! We are already working to our max, many are starting to burn out, and it's unfortunate because the soon there will be more elderly in the hospital who require care. Soon it'll be our grandparents or parents in the hospital and it'll be sad if we are unable to provide for them because of things such as not enough nurses.</p>	<p>They should be creating more job opportunities for health care providers such as nurses.</p>
T6C	<p>Climate change mitigation, adaptation, renewable energy, energy efficiency, artificial intelligence, technology, lithium extraction for batteries and energy storage. All of these initiatives will lead to long-term prosperity in a low-carbon world. Foster growth now for significant returns in the future as Alberta remains an energy leader of the world.</p>	<p>Focus on increasing long-term, stable revenue as compared to drastic cuts to spending.</p>	<p>Invest in the new energy economy (energy efficiency, renewables, and energy storage) which studies show provide a greater number of jobs and more job security as compared to oil and gas jobs.</p>

T3H	Money for the people - programs like child care coverage, safe injection sites, education, health care etc. Not on wealthy organizations like oil and gas companies - so far this approach has not been helpful.	Instead of savings, increase taxes especially on high-grossing companies and high-earning people. Close down the war room (what a colossal waste of money and such poor mismanagement of time and resources. The reason it can't be FOIPed is so we can't prove how inefficient it is). A Carbon Tax is also a great way to create jobs and increase investment into the province. If external audiences see that we are progressive, we are more attractive. The old way just doesn't cut it anymore and I hope that the current government will eventually accept that. We are so much more than an oil state - the constant focus on one industry is really getting tiring. Diversify!	Stop cutting funding for social programs and important industries like health care and education. More funding = more employment. A Carbon Tax also helps support job creation and growth and attracts progressive companies. Create opportunity to diversify our economy by showcasing how progressive we can be. The war room is such a poor investment - their mandate should be focused on diversification rather than just a suffering industry. Other industries are losing out in favour of oil and gas - support the other. I don't support the current mandate of this government and did not vote for them. Is a balanced budget truly helpful if no one is thriving?
T3M	Education and job creation	Public sector workers are the highest paid in the country and the largest chunk of the budget. There needs to be cuts to align wages with the rest of Canada. Efficiencies can be found in the Health Care budget without affecting services and wait times	Continue fighting Federal red tape and the carbon tax. Make Alberta less expensive for businesses to operate will drive investment
T7a	Healthcare, our system is very broken	Upper level management in every sector instead of frontline staff	By continuing to employ front line staff instead of cutting jobs
T8L	Hospital care and nurses	By taxing the rich more	Construction and incentives
T0A	Health Care	Child care	Support the oil field
T9M	Health care and education. Mental health	Upper management. Decreasing administrative positions.	Decreasing requirements for foreign workers, opening up front line food service staff foreign worker streams. Decreasing business tax, WCB fee structure.
T6V	1. Public healthcare - frontline workers 2. Investing in renewable energy.	Stop giving oil companies tax breaks.	Invest in renewable energy. There is evidence to support that the amount of work to be created could be significant - much more significant than the state of oil right now, unfortunately.
T7Y	Healthcare and education. Current plans for massive cuts in healthcare will end up costing the system more in the long run, we are shooting ourselves in the foot and doing Albertans a disservice with the current plans for the healthcare system. The better we support education the more those people will contribute to the economy in the future.	Trimming the salary of upper level employees, being more efficient on government projects (ie accountability and less wastage of taxpayer dollars), increasing corporate tax rates to previous levels.	Through promoting our oil and gas industry as an ethical and responsible choice compared to countries we are importing oil from. By not making cutbacks to the most vulnerable in our society such as handicapped /people on fixed income, and supporting families who are already struggling. Also by trying to support diversity in our economy.
	Public education and healthcare	Raising corporate taxes	By supporting tech and renewables industries
T5H	-Healthcare -Education -Climate Action Plan -Infrastructure	-Dissolution of CEC -Receiving payment of backlogged corporate tax from oil and gas companies -Cheaper flights/lodging for ministers, civil servants	-Bringing back the tax-credits for homeowners to retrofit their homes with renewable energy sources -Investing in renewable energy industry -Investing in the student body with a revising of current post-grad employment programs to reflect the diverse economy of Alberta outside of trades -Eliminate or rescind the corporate tax hand out of 4.7 billion that has not resulted in job creation
T3m	Stop cutting health care!	Cut your salary (and all govt salaries) if you're serious and quit to running govt officials all over this country (and the world). Use telecommunications to hold meetings.	Get the pipelines built. Quit privatization. Stop tax cuts for big business and the rich! We need that money!

T3m	Education, healthcare, child tax benefits/rebates	Make oil and gas companies pay their taxes, slight increase to corporate tax, cut government spending on its own employees	Provide incentives to new companies, help students complete higher education in various fields
T4X	Education, health care, public works. Do NOT invest in oil and gas. It is a dying industry, so a bad long term investment. I would personally never invest in oil, so why would the government? Terrible financial losses will result long term to continue this course.	Waste management policies. Force corporations to be responsible for the waste they produce. Other provinces do this, look into it. Stop P3 schools!!! This is proven to be a detrimental long term solution. It is short sighted to build 1 school and have a balanced budget this year, rather than the ability to save money over thirty years and build the two or three schools paid publicly only with the same cost.	Continue to support education and public works projects.
T3M	Bring jobs back. Get Oil & Gas going again.	Funding projects at aren't essential items. We don't need art and fancy new buildings. We need people working and investing back into our own economy.	Lower taxes for small businesses and increase them for large corporations. Build the pipeline and get people working again.
	You've already decided so why are you having a survey?	You "already know best" so why are you having a survey?	Actually create a plan to stimulate the economy (infrastructure plans, tax cuts for SMALL businesses, stop laying off health care, public sector and university workers, because as it stands we're heading into a government induced recession. This survey is a joke.
T4x	Schooling, finding jobs, home schooling needs more funding. It already saves taxpayers a lot of money, but more money should go to the moms and dads who are doing it.	Encourage home schooling to those who find themselves without work	Encourage out of the box thinking for people who are committed to the oilfield. There is life after oil.
T0B	Human Services, assisting people who have been hurt by cuts already including seniors and the vulnerable. Rural Crime, but do not download cost onto Municipalities Assisting the Poor and Middle class Front line workers in health and education	cut the War Room charge Agriculture producers a fair amount (e.g.--registration is \$100 for agriculture producers for their big trucks and they pound out our roads, commercial haulers are paying up to \$3500, spread the pain) Health, cut out the middle managers cut out big payments to Board members of provincial organizations cut out large payments to managers in school districts	take the tax roll back from the companies and invest it in training Albertans in new things, not just oil and gas but technology, visual reality, computer apps, etc.
	Health care, education, tech sector	Increasing taxes to support stronger public services - implementation of PST.	Increase investment and support into the tech sector. Reduce dependency on oil & gas by diversifying into renewable energy sources.
T6E	Healthcare and education	Cutting back wages of upper management, reducing waste within government organizations (eg. waste of supplies)	Do NOT cut frontline healthcare positions
T0C	Health care, education, environmental conservation and promoting a sustainable, diversified economy.	Stop giving money to oil and gas industries!	Promotion of alternative energy projects, sustainable eco-friendly tourism, high speed rail projects, supporting local and small businesses instead of huge corporations who treat their employees poorly. Diversify our economy away from oil and gas.
T7z	Seniors health job creations	CEOs pockets	Find ways to present incentives maybe of taxes like reusable reducing stuff
T0C	Mental Health - especially in rural Alberta Low Income - AISH, Income Support, Low Income Housing, etc.	Management in both Health and Education - we have way too many managers, making way too much money. Also, pay cuts for all upper management and people making over 100,000 a year can afford a pay cut while those on the bottom end of the scale cannot. This would be a good start.	The focus on training in trades/apprentice should help and also assist older students in receiving education/training. Keep corporate taxes low in order to attract business and hold the federal government's feet to the fire on their policies re: pipelines. Cut more red tape!!

T3L	Supports for AISH; Supports for early childhood learning and childcare for parents; support for subsidized housing units; supports for low-income and working-class families; supports to reduce child poverty	Stop spending money on the Energy War-room;	Maintain public sectors jobs so that more people are not faced with unemployment in this province; diversify the economy and stop relying only on the energy sector to build Alberta's economy. Implement tax incentives for growing industries like the Tech sector, gaming, retail/service economy, film and arts;
T6L	I think that all government programs/services are important and were created for a reason. I don't really see one service that supports one demographic more important than another service which supports a different demographic. I do think there has been a lot of money wasted on studies to determine the fiscal status of the province.	It's not about savings and cutting and more about revenue. We should never have taken away the health care premiums. Having "free" health care makes some people more willing to abuse the system. We should have to pay something for public health care. I was fine with paying the premiums. Bring them back. I would also support instituting a sales tax. We are the only province in the country without one and we are in a financial crisis... It makes sense, and it's guaranteed revenue. People will grumble to start, but it will be just like when GST was introduced. No one complains about it now.	Re-institute health care premiums and put in a sales tax... if less people are losing their jobs because public services and programs are being cut, there will be more economic growth. Everyone I know is scaling back their normal spending because the situation keeps getting worse instead of better. When there is job security people spend their money as usual and in turn businesses make money which will create more jobs. You have to spend money to make money! It's a basic business rule.
T3M	Health and education	A PST	Support new industries. Let's be ahead of the wave instead of drowned by it.
T2K	Social safety nets (AISH, childcare subsidies, health care)	Revoking billion-dollar tax cuts to oil companies	Reinstate the Alberta Investor Tax Credit. Support green energy projects. Invest in municipal infrastructure.
T2K	Social safety nets (AISH, childcare subsidies, health care)	Revoking billion-dollar tax cuts to oil companies	Reinstate the Alberta Investor Tax Credit. Support green energy projects. Invest in municipal infrastructure.
T3C	Government should prioritize tax money for those things that benefit all Albertans and protect the economy of Alberta.	Focus on putting money to things that benefit Alberta but hold those who receive money accountable so there is a little waste as possible.	Encourage the economy and job support by lessening the tax burden, allowing businesses and individuals to keep more money to support initiatives in society.
	Healthcare, education and child care. Everyone and every business benefits from strong public health, education and childcare systems.	Reverse the reduction of the corporate tax rate. Eliminate all hospitality expenses for MLAs and Ministers unless they are public events. Shut down the Canadian Energy Centre and re-profile those funds.	Continue programs to incentivize petro-chemical investment in AB. Encourage greater investment in wind and solar power generation, which Alberta is geographically optimal for.
T2J	Fully funding healthcare and education Retraining oil field workers Expanding mental health services	They could reduce spending by: - not funding wasteful research panels - not bailing out large corporations and the dying oil industry - treating the underlying issues of drug use to reduce healthcare spending - stop funding private schools at all levels	- Invest in new green technology - Give tax breaks to low/middle-class people and small businesses/corporations
	Ensuring Teacher Salaries adjust and catch up with inflation.	Upper administration of School District Central Offices, as well as Health Care administration and overtime. GET RID OF ENERGY WAR ROOM!!!! STOP USING TAX PAYER MONEY TO SUPPORT PRIVATE OIL?GAS COMPANIES	Diversify our economy and promote business other than oil/gas.
T6W	Education, health care, funding for families(ie continue with \$25 a day childcare)	Starting at the top, higher taxes for big corporations, stop spending on stupid things like a War Room.	Continue with pipelines.
t1y	job production, stoney trail road construction and Calgary events awareness	efficiency on programs that aren't doing very well	focus on areas in the province and cities that would benefit from a little touch up and gentrification

T9M	Public health care and public schools.	Look at administrative redundancies. Reevaluate civil servants expense accounts and allowances. Work more collaboratively with our federal government instead of spending money and valuable time pitting provinces against each other. Stop investing in private schooling who are not so heavily regulated and can find alternate revenue streams.	Support affordable childcare and diversification in our economy. Make us not so dependent on one industry to make our province financially stable by researching alternatives.
T1A	Diversification and education (the two are awfully related) Providing services to those in need (Daycare; counselling) Arts/culture	- oil and gas subsidies - the Energy Centre/War Room - panels	Diversity (energy and beyond) Hemp - paper, etc Recycling industry
T2J	Job creation and economic diversification in the areas of energy efficient and renewable / clean tech deployment. Relatively small investments in energy efficiency initiatives drive significant benefits in job creation, emissions reduction, cost savings and productivity.	With a 2-3 year plan to integrate energy efficiency program funding into the utility system through regulated ability for utilities to recover program costs, government funding of efficiency projects and programs could come off of the government budget completely.	Job creation and economic diversification in the areas of energy efficient and renewable / clean tech deployment. Relatively small investments in energy efficiency initiatives drive significant benefits in job creation, emissions reduction, cost savings and productivity. This is particularly true in the industrial and commercial sectors not under the TIER structure, which can deliver on a large proportion of the remaining 45% of emissions in the province. Small investments on a broad basis in energy efficiency projects creates new jobs and boosts industry competitiveness and productivity in a time when it's sorely needed.
T8B	Getting our energy industry back on track. Cut excessive spending	Rollbacks for all public workers	Cut corporate taxes, no more minimum wage hikes
T3M	having investment increase should be the top priority. to make sure that our energy sector can improve .	- As a former employee of AHS, I saw a lot of redundant positions that could be adjusted in order to save a lot of money. There are too many managers in some cases. Also Overtime was not being scrutinized as it should be as some employees were billing unnecessary overtime.	- make it easier for investors to bring in capital to Calgary.
T5T	Health care - nurses wages. Beds for hospitals. Laboratory medicine. Healthcare is of prime importance.	Corporation taxes - specifically oil and gas companies	Tax corporations.
T5L	Healthcare(aging population, increase in population of province,)education (student growth, 15,000 new students per year), social services(aish recipients, affordable housing) preventative investment in housing would save the province in healthcare, policing, and many other areas. Post secondary needs investment, UOFA is world class because we invested in students and programs that make smart people want to come to alberta...smart people start companies that in turn create jobs and tax dollars.	Stop giving profitable oil and gas companies tax breaks when all they are just going to do stock buy backs and investor dividends. Or maybe have	Give tax incentives to companies that aren't just oil and gas. Media, AI, renewable energy(wind, solar), DIVERSIFY THE ECONOMY! Oil and gas are slowly dying and in 20-30 years they will be a dead industry. Be pragmatic like half the industrialized world. Public perception of oil and gas is rapidly turning sour, stop wasting 30 million on a WAR ROOM run by dinosaurs
T2h	Plant based agriculture	Stop subsidizing animal exploitation industries	By helping animal ag farmers transition to plant based agriculture

T6H	<p>Education - particularly public education. My tax dollars should not be going to private education. Not that I am opposed to private education. But if someone wants private education, they should pay for it themselves 100%.</p> <p>Healthcare - making sure EVERY Albertan has the same access to good health care. More support services for mental health and addiction would be good too.</p> <p>Affordable childcare so that people can work and pay taxes. If they can't work, then they will need subsidiary which I know your government does not support (well unless it is giving our money away to big businesses, then you are all over that...)</p> <p>Creating jobs. That was a promise of this government...</p>	<p>Stop spending on unnecessary projects like the war room. It is a waste of money and the people who are running it are incompetent. And have wasted money on the logo problem, etc.</p> <p>Up the tax rate on big businesses.</p>	<p>Support other industries beside oil and gas. Alternative energy is what most Albertans really want.</p>
T8L	<p>Diversifying economy Investing in alternative energy Health care Education</p>	<p>End the Oil War Room Don't fight carbon tax</p>	<p>Diversify industries Support alternative energy like solar Projects like the medical super lab</p>
T3E	<p>Health Care, Schooling, both pre and post-secondary, social programs, not giving large sums of money to the oil and gas industry. Expand our market to different types of job creations.</p>	<p>Reduce salaries to top-level execs in government, reduce payments to government officials leaving their offices, make financial plans (where are they spending their money) for medical care, schools, post-secondary, etc. crystal clear so they are accountable to their constituents, reduce red-tape wherever possible, cut out programs that are duplicates of each other, don't support big corporations too much, instead support health care, schools, and social programs. I feel health care, schools, and social programs are not as important to the government as funding large corporations. It is time to expand our job creations instead of trying to keep the oil industry going. Most oil industries have lots of money and don't need government money to keep them here. Eventually the oil and gas industry will not be viable. We need to protect ourselves by expanding other industries instead and supporting our social sectors.</p>	<p>Support entrepreneurial sectors, make post-secondary more fiscally viable for students.</p>
T4X	<p>Healthcare Education</p>	<p>Government positions</p>	<p>Not eliminate current jobs</p>
T1K	<p>Education, Researching sustainable energy, other forms of social services.</p>	<p>Decrease spending in Oil and Gas. We must remain aware of forms of resource depletion that will inevitably occur within Oil and Gas production. There will, at some point, no longer be an Oil and Gas industry.</p>	<p>Invest in sustainable future.</p>
T1K	<p>Education, Researching sustainable energy, other forms of social services.</p>	<p>Decrease spending in Oil and Gas. We must remain aware of forms of resource depletion that will inevitably occur within Oil and Gas production. There will, at some point, no longer be an Oil and Gas industry.</p>	<p>Invest in sustainable future.</p>
T3m	<p>Healthcare, frontline services</p>	<p>Management</p>	<p>By providing the necessary services needed by your constituents and not cutting out frontline staff</p>
T1s	<p>Education and Health</p>	<p>Increased taxes.</p>	<p>I don't know</p>

T6M	Education, specifically music and arts, physical outdoor education. Justice reforms and access to mental health services for low income and marginalized communities	Cut back on management expenses, cut all management bonuses, cut travel allowances for management, reductions in paper notices by encouraging better use of tech	By cutting tax breaks for oil companies and increasing tax incentives for small businesses and sustainable energy businesses
T2R	Health and Education are important priorities. Wage freezes in both sectors for many years now represent a major setback which is a big chunk of the "Alberta advantage" melting away essentially. I am personally getting ready to move to the US because if this. Spend to diversify the economy, attract new energy sectors like renewables, tech, we have so many engineers i.e. brain power available for hire around here!	Corporate taxes were amongst the lowest in Canada, roll those back to what they were, 12%. And get us back to a flat income tax already! Maybe bump it to 11% or 12% instead of 10% for additional revenue. Cut funding to religious health care facilities already! This is a duplication of our public sector. Cut rural communities hospitals, folks from Black Diamond can go to the South Health Campus in Calgary! I agree with a slight cutback on physicians remuneration given that they make more in Alberta compared to other provinces, but keep in mind that we are short on specialists, so most of this money should be redirected to hiring more specialists probably. Cut back on management, keep frontline staff. Cut on the amount of paperwork "red tape" in health care, this will result in needing less managers, directors, etc	Reinstate the tax credits for the film industry (and the art industry), this is a great industry for revenue and growth in Alberta. Hello, have you seen the scenery around here?! Promote tourism. Diversify the economy, look to the future and a mix of energy like wind and solar, we have so much sun and wind in Alberta! Support let Cal farmers, we have so much unique ingredients here... think duck from Brine Lake, it's the best duck there is. We have bison here and so much more amazing food! Keep the alcohol and marijuana industry strong and private. Support health and education, those are not for profit and foundation for future growth.
T3M	Healthcare Education Natural resource development	No idea	By continuing to support and help develop the oil and gas industry
T0E	Social programs, education, health care	Stop giving out tax cuts to people who already are financially stable and corporations	Add more social programs (not only will people get in a place where they are able to participate in our economy by using these programs, you will create jobs in the programs) , increase grant opportunities, tax cuts for small businesses
T8S	Prevention based services, early childhood, Inclusive Addictions and Mental Health supports (our clinic has no indigenous representation, Friendship Centres, an inclusive school curriculum that involves input from teachers, enhance the one put together by the NPD they did a lot of work on it and it deserves to be kept and added to, not thrown out with the bathwater.	Bringing back Parent Link Centres and Family Visitation Programs so that families are supported in their early years and don't fall through the cracks and end up costing us more in social services later in life. Or at least provide them with the same amount of funding as before so that the new Family Resource Networks can function effectively. Fund homelessness and prevention in rural communities so that we can keep our most vulnerable in programs rather than costing us so much in intervention services.	Invest in new new/greener technology and train those that are out of work from the oil industry in those new technologies, increase capacity for us to refine our own resources and not have to rely on the US as much. Invest in nursing instead of cutting their services, they are a valuable resource and we're going to end up with a critical shortage of those wanting to enter into nursing if we don't invest in them. Provide subsidies to those entering university programs in the areas where we have staff shortages. Peace Officers for example, nurses, doctors, veterinarians, mental health therapists. We are short of all of these specialists in the North.
t6r	health and education	it's own salary excessive frivolous spending on letterhead, pens, papers etc. flights for the premier	I don't know

T1P	Economic stimulation (agriculture, oil & gas, resources) Structured autonomy from federal government but NOT separation Mental health/addiction & physical health front line services	Middle management Culture & multi-culturalism (nice to have but not during austerity budget conditions)	Diversification in agriculture Oil & gas sector support Trades initiatives
T0h	Health and education.	In upper management all over, too many upper management in AHS for sure. Stop going at frontline staff and look at the guys sitting around not being helpful.	Education. Stop cutting education, make it more accessible. Put the oil field workers out of jobs into school and grow things like sustainable energy. Actually make it possible to not work and goto school and support a family at the same time through grants, unemployment, etc.
T6A	Healthcare, education, helping lower income families	Higher taxes on corporations	Stop laying off teachers and nurses
T3L	Focusing on diversifying the energy sector, not only focusing on the oil and Gas. Why does creation of the Energy War Room , was a good idea? to spend millions of dollars on something that the ministry of Energy should be able to produce for you.. waste of money and i cant believe how many people are being laid off from these initiatives.	Maybe lay off people that are bad at their jobs, and dont do anything at their works place, like watch videos and play video games. and not lay off hard working people who bring value to the organization. I cant believe that this is still impossible to fire anyone within the organization, even if someone has made really bad decisions, at a cost to the taxpayers. everyone should be completing to do the best work, and that how the AB government will advance, not by a bunch of admins sitting on their asses.	Diversify, and not just focus on oil and gas. we all know that all oil companies are diversifying and exploring sustainable energy sources. the province should support that and not punish them for this.
T2V	Education Health Care	The rich getting richer and the poor getting poorer.	Support education
	Education and health care	In this time of fiscal restraint, it doesn't make sense for Alberta to provide more public funding to private schools than any other province. We should cut per-student funding to private schools from 70% down to 50% or less. Rural hospitals should be replaced with less expensive emergency care centres - clinics open 24 hours with physicians and nurses, capable of treating minor issues and stabilizing more serious cases until patients can be transferred to a more efficient urban hospital. Physician pay should be changed from a fee-for-Service model to a pay-for-performance model.	Provide stable, predictable funding for education and health care. Replace corporate taxes with a provincial sales tax.
T4P	Scaling back on rollbacks to support Education & Healthcare. This behaviour is kicking Albertans while we are already down. Would love to see some creativity in addressing income streams rather than the divisive rhetoric, increased user fees and arbitrary cutbacks that affect hurting Albertans.	I think I am tired of hearing that you need to save money. As per your own MacKinnon report, you need to address income as much as earnings and cutting \$5 billion in corporate taxes to companies in hope that the trickle down effect will kick in is archaic. Why do the lower class and middle class need to pay for the rich to get richer? Is that what Alberta is?	Education - focus on K-12 public education being strong, so that Alberta minds and home grown intellect can inspire diversification of the economy for tomorrow. Make post-sec education accessible for Albertans so demographics like males (18-25) can find work. Stop giving free passes to the wealthy - they need to do their part too.

T6T	-Education -Healthcare -Lowering child care costs -Economic diversification	The government does not have a spending problem, trying to find savings during an economic downturn can quickly change a recession to a depression. The government must increase its revenue stream with heavier taxation. Large increase in corporate taxes to put it more in line with rest of Canada. If this does not increase funds enough Alberta should re-introduce a small provincial sales tax.	-Increase subsidies to growth industries to better diversify from oil and gas. Such as tech and healthcare innovation. Lower corporate taxes have little impact in attracting these up and coming industries as they will be running at a loss for many years -Decreasing child care cost to decrease risk in beginning new entrepreneurial ventures which could lead to more job creation. -Prioritizing education can also support entrepreneurial efforts and help attract companies that require a highly-educated workforce.
T1K	Education. The education system is too top-heavy, and not enough is being spent on the front-line workers, specifically teachers and educational assistants. Class sizes are too large and there is simply no way some of these teacher should be expected to educate and manage that many children without classroom assistants. Education is about the kids— why are we not putting the money where it matters most?	Do an audit on the education system. Find out where the dollars are really being spent, and put more money into the front-line workers. That's what's really needed in our schools. The money is being spent so unwisely. There needs to be accountability from the school districts on where the spending is going.	As a small business owner, there is far too much red tape. Make it easier for businesses to grow, without so much government involvement. We spend thousands of dollars and hundreds of hours trying to keep on top of all the government red tape. We could be using that time and money to focus on growing our business, thereby creating jobs.
T2w	Diversifying our economy - we are far too reliant on Oil	Their own in house processes and procedures. Don't cut the programs and public sectors that make this province as great as it is.	Innovation! Infrastructure spending! Green Energy!
T0B	Supporting Education, health, mental health vulnerable populations, children and families, urban Indigenous people.	Stop giving money to friends tax big business stop giving tax breaks to oil and gas end the war room	support post secondary and education support green initiatives - there are tons of jobs there support small businesses stop giving money to oil and gas friends - they don't care about us, they are laughing at you!
T5A	Healthcare, education, social service, providing predictable funding to municipalities.	increase the corporate tax rate, set a small sales tax, stop subsidizing oil and gas	Student temporary employment program, alberta innovates, investments in renewable resources, grants for film/software companies
T9G	Healthcare, Education, Seniors	Stop cutting taxes for corporations. Introduce a 3% provincial sales tax!	look at diversifying our economy. Oil and gas are great but not sustainable.
T2A	roads repair pot holes all over city the vulnerable increase income supplent rents	dont give anymore money to the corporations dont spend on panels	hire people for other jobs outside of gas and oil
t0j	Healthcare and Education should be priorities.	Get rid of panels to scrutinize all issues. Stop focussing on corporate taxes and help the people.	Get the pipelines built. Start to look at aleternate industries for Alberta.
T6r	Health care. Specifically Primary Care Networks who focus on seniors and geriatric services	Stop giving tax breaks and bail outs to big businesses and oil companies. Tax oil companies at a rate comparable to the rest of the world and we will generate billions in extra revenue	Stop diverting costs to the average Albertan. Put a cap back on insurance, don't let schools start charging again for bussing and make childcare affordable if you want middle class people to keep having children.
T3m	Health care	Cut doctors and people higher up in these organizations instead of the people already making less.	By taking more from those who can afford it and have more equality in our province. A doctor making 300k a year working 3 days a week while nurses slave 40 50 a week to have their wages cut isnt right
T0B	Education, health, children, mental health	stop giving money to oil and gas, increase taxes to companies, cancel war room.	support education, post secondary, climate and green initiatives
	Staying committed to an independent judicial system.	Capital gains tax / tax high income earners	Economic diversification
t5k	Health Care, Education	Corporate tax cuts are a waste	Protect industries like health care, education, and other that's help citizens when other industries are failing.

T4V	<p>Making sure our Indigenous populations on reserves have access to clean water.</p> <p>Making sure all Albertans have access to timely, NON PRIVATIZED healthcare.</p> <p>Put funding into social services, especially for those who are: POC, disabled, disenfranchized, queer, students.</p> <p>Stop benefiting those who have access to surplus resources and privileges and take care of Albertans who do not look, worship, live, love, etc. like you!</p>	<p>Stop giving oil and gas, multinationals, and large corporations tax cuts. Give those tax cuts, instead, to small, independent businesses who would greatly benefit from them to continue thriving. Tax large corporations appropriately for being in and conducting business in Alberta.</p> <p>Implement a PST. Use that money to fund health care, road construction, social services. Stop believing that Alberta in 2020 is the Alberta of pre-2008. The reality is that implementing a PST would help cover what this province needs the most.</p>	<p>Invest in green energy. Start transitioning our oil and gas industry into green technology so that there is minimal job loss. That oil and gas companies are already leaving Alberta shows that they too recognize their industry is on the decline. Alberta could be a leader in green energy if they begin to invest NOW and start exploring their options.</p> <p>Invest in partnerships with companies such as NEWO (Camrose, AB), which gives those who are labelled "high risk" and "unemployable" job skills while also helping the environment. Promote those types of businesses, which are able to do two very important things at once: employing the least employable and helping the environment/investing in green technology.</p> <p>Re-implement the STEP program. That program gave university students work related to their field, it gave non-profits summer students, it gave parents/guardians accessible, affordable <u>summer programming</u></p>
T0E	education, healthcare	government	funding education
T6M	Healthcare and education	PST!	<p>As an edmontonian, supporting the growing cannabis industry. I know so many people working in it and the regulations are stalling growth.</p> <p><u>Supporting government and healthcare jobs.</u></p>
T6E	Stop cutting public sector jobs, stop giving handouts to greedy oil companies, and start investing in clean energy technology	Stop cutting public sector jobs, stop giving handouts to greedy oil companies, and start investing in clean energy technology	Stop cutting public sector jobs, stop giving handouts to greedy oil companies, and start investing in clean energy technology
	- public education, healthcare, diversification of economy and transition to green energy. Increasing tax credits for green energy initiatives, as well as reinstating previous green energy initiatives. Providing a fertile ground for attracting tech, as well as increasing quality of life in Alberta.	Eliminating the Canadian Energy Center, and all associated programs that are saturated in government's political agenda.	<p>-By promoting the diversification of the economy and embracing industry's move to green energy.</p> <p>-putting more money back in the pockets of everyday working Albertans by reinstating caps to fees (insurance premiums, tuition, energy rates)</p> <p>-reinstating the Alberta Carbon Tax</p>
T6G	Libraries, Education, healthcare, wages for healthcare workers, social programs, renewable energy.	provincial sales tax, cut subsidies to oil, close tax loopholes	Invest in education and healthcare. Be a leader in renewable energy.
T6H	Infrastructure, education, bringing in investment	Cut the fat in public sector employment. Continue to push for a new deal in regards to equalization payments.	Continue to pursue pipeline expansion projects. Cut small business tax.
T4P	Education Healthcare Public sector jobs	Personal spending Oil and gas spending	<p>Increase corporate tax</p> <p>Create 1-2% PST</p> <p>Increase spending in public sector - make jobs here, not cut them</p>
T6H	Education, health, economic diversity	Government spending, corporate handouts	Invest in new technology
T3M	Health care and education; social services	management roles in health care and education need to be trimmed. There is a lot of bureaucracy and redundancy in education and healthcare. Consider bringing in PST (at a lower percentage like 5%).	Look into non fossil fuel based energy sources in addition to maintaining oil and gas support for the trans Canada's pipelines. We need to diversify otherwise we will become obsolete
T3M	Research and education	City government	Diversify from oil and gas. Alberta has so much potential. Don't be a puppet for just the oil and gas

T8h	Road repair / transportation related issues (Edmonton to Calgary), health care wait time's, aesthetics of city.	Reparations payments, equalization payments, treaty payments.	Subsidize education further like Quebec, lower taxes
	Education of course. Our youth are our future and we want them to stay in Alberta. Health however more programs available to educate and to be proactive vs reactive.	Check the procurement process for general contractors on major capital projects a lot of money is lost when a general contractor is only hired because their bid came in the lowest. Alberta health services management. Should not be getting bonuses. They are public sector workers.	By not laying off public sector workers.
T2Y	<ul style="list-style-type: none"> - children in care (assisting them beyond 18 years of age if necessary) - seniors subsidized accommodations - public education - negotiating contracts with unionized employees 	<ul style="list-style-type: none"> - Stop the dependency on paper and printing every email, etc. - Cut subsidized parking for senior management. - Cut management positions. They are costing more than bargaining unit personnel. - Centralize all government's surplus office furniture and equipment (e.g. if a ministry needs a conference table, it might be available from the central repository). This is similar to what is being done with computer equipment. - Do not fund independent schools. - Cut travel for cabinet ministers, MLAs, top management. - Cut MLA allowances and remuneration. - Cut subsidies to oil & gas. 	<ul style="list-style-type: none"> - Encourage a hemp industry. - Offer incentives to technology companies to move to Alberta. - Encourage bison farming, more economical & healthier than cows. - Offer incentives to movie producers to film in the province. - Take a look at what you are doing by refusing to honour contracts with your unionized employees. Does not look good to global markets. - Actively seek out companies who develop alternate methods to fossil fuel consumption.
T3B	Healthcare Education Diversification of Alberta business	<p>Reduce salaries of highest paid staff across the board</p> <p>Get rid of the "WAR ROOM"</p> <p>Ensure every department is scrutinized for appropriate spending and staff optimization and eliminate redundancy</p> <p>Streamline departments</p> <p>Hold management and staff fully accountable for their budgets</p> <p>Cut handouts to industry/big business</p> <p>Implement a sales tax</p>	Encourage and support entrepreneurs and small businesses Diversify the economy
T1C	1. Education 2. Healthcare 3. Infrastructure Way, way at the bottom: tax breaks for oil and gas companies and BIG business.	<p>Cut MANAGEMENT at all levels of government agencies, AHS, Educational Institutions. There is no direct value for Albertans in bloated management structures. Management is virus-like. They just hire more like themselves. Costs mount, operations become unfocused, and value provided declines!</p> <p>Cut all funding to Supervised Consumption sites. That isn't healthcare, it's sanctioned criminal behaviour! And it encourages other related and similar activities.</p>	<p>Encourage small business growth by creating a positive environment for small business and job creation. Big corporations, like "big" money are fluid, and predisposed to move quickly and easily when it suits them.</p> <p>Maintain your tax base by not cutting wages and non-managerial jobs. BTW oil and gas workers are not the only sources of positive human capital. Don't lose sight of the fact that government employees have families, spend money, and pay taxes. Cutting or capping provincial employee salaries is short-sighted and biased FOR non-governmental workers.</p>

t5a	education classroom/teacher funding	District assistant superintendents and superintendent salaries in education, too many administration positions reduce to increase teachers	tax incentives
T0C	Healthcare on the frontline (AHS management needs to be slashed). Education funding to public and Catholic school divisions Do not cut Government of Alberta frontline positions. They actually do the work.	Stop subsidizing Government of Alberta management parking. Cut Government of Alberta management (especially upper management) positions. Do not fund independent schools. No out-of-country travel for Cabinet, MLAs and top bureaucrats. Shut down the Energy war room. Cut MLA allowances and remuneration. Cut subsidies to the Energy sector.	Offer tax rebates to tech start-up companies to locate in Alberta. Offer tax rebates to environmentally-sustainable start-up companies to locate in Alberta. Offer tax rebates to movies and "television" to film here. Not only does it pay in production jobs, but also in tourism jobs (look at Georgia's model).
T0B	Education health and transportation	Cuts to MLA staffing. And in general cuts to government staff.	Cutting of government red tape.
T2W	Education and health - especially supporting public/provincial education and health programs and the people that provide those programs	Cut the Public inquiry into anti-Alberta energy campaigns and cut the Canadian Energy Centre - a waste of money based on international trends in oil production. The glory days of Alberta oil are over.	Invest in renewable energy, energy efficient/ zero energy construction technologies and training. This is the future and uses the natural renewable resources that Alberta enjoys. the Alberta Government needs to recognize that technology has replaced many oil-related jobs and there is no more investment in oil production in Alberta.
T9K	Helping Albertans with condos and insurance. Proper lighting on Hwy 63 through Fort McMurray. Affordable daycare options. Increased funding to the Homeless programs.	I think every branch and department can look closely at what's a need vs want.	Support the oil sands.
T4B	School, health care, and first responders.	Tax breaks and handouts to large Corporations.	By branching out from oil and gas. There will never be another oil and gas boom and if we want to have jobs in the future we need to branch out.
T3H	Healthcare Alberta Parks	17(1) Mount Royal University and the school has two offices of "Campus Equity & Meaningful Inclusion" that list "peer social justice education" as one of their roles. In my opinion, these offices are far left grievance factories and these offices are a waste of taxpayer money and student tuition dollars. Second, the provincially operated Fort McMurray Oil Sands Discovery Centre closes every Monday, but remains fully staffed for "research day". Couldn't the staff do this "research" during the many other days of none to minimal visitors during the middle of the week?	Streamline and facilitate fast business approvals. Crack down on excessive municipal regulation that strangles business growth. Put municipal regulations under audit for excesses (I expect we'd find a ton here)
T2x	Health care , education	Instead of cutting front line workers , management in healthcare can be looked at for cuts	Care about the people here instead of business
T2T	Free health care, free child care, affordable housing (as a human right), green infrastructure, good quality public education for all, free post secondary tuition, free transit, rail link from Calgary to Edmonton, provincial bus service, reclamation of orphaned wells, reparations to indigenous people,	Disband the Canadian Energy Centre, abandon taking the federal carbon tax case to court	Introduce a provincial sales tax with rebates for low and middle income earners, invest in transit and inter-city bus service, fund reclamation of former resource extraction sites, build affordable housing, provide free child care, provide free health and dental care, raise the minimum wage, invest in green infrastructure.

T0J	Infrastructure, roads, healthcare for people who are actually sick, education, job creation, making it easier for companies to do business in this province by lowering useless taxes	Forget about supervised consumption sites for drug addicts, quit wasting money on ridiculous “social issues” such as rainbow sidewalks and fifteen different types of public bathrooms, scrap equalization payments. Why are we supporting provinces that don’t support us, especially now that we’re in trouble ourselves?	I’m afraid I don’t have a good answer for this one... Make Alberta more attractive to businesses by lowering their cost of doing business, unfortunately there’s nothing you can do about the rate of inflation now. The minimum wage hike raised the cost of living, effectively negating any raise in pay. But you can’t explain that to a socialist. People need to have money in order to spend it, and most of us just don’t.
T0J	Infrastructure, roads, healthcare for people who are actually sick, education, job creation, making it easier for companies to do business in this province by lowering useless taxes	Forget about supervised consumption sites for drug addicts, quit wasting money on ridiculous “social issues” such as rainbow sidewalks and fifteen different types of public bathrooms, scrap equalization payments. Why are we supporting provinces that don’t support us, especially now that we’re in trouble ourselves?	I’m afraid I don’t have a good answer for this one... Make Alberta more attractive to businesses by lowering their cost of doing business, unfortunately there’s nothing you can do about the rate of inflation now. The minimum wage hike raised the cost of living, effectively negating any raise in pay. But you can’t explain that to a socialist. People need to have money in order to spend it, and most of us just don’t.
T3R	<ul style="list-style-type: none"> - health care - education - infrastructure - social welfare (support for seniors/children) 	<ul style="list-style-type: none"> - reduce salary/pension of MLAs - reduce/eliminate funding of programs for those who make poor life choices (rehab, safe injection sites) 	to support growth, people need disposable income, this is difficult to do when fees are increased for services (registries, etc) and caps for services are removed (auto insurance)
T4X	Education. Health care. Jobs. Helping middle class and below. Crime. Cost of living. Cracking down on cell companies.	Companies. Taxes since we pay lot.	Support local businesses. Be open and attract new opportunities and stop cutting everything: education.
T6A	<ul style="list-style-type: none"> - Essential Services (healthcare, education, police dept, corrections, etc) - Infrastructure (roads, hospitals, water/sewage lines) - Assistants programs for first responders, military, elderly - Resource development (pipeline/product to market) - Next Generation technology 	<ul style="list-style-type: none"> - Government representative spending - Safe Injection Sites - Welfare/Community Programs that enable unproductive behaviours 	<ul style="list-style-type: none"> - Utilize a percentage of profits (from resources) to develop next generation technologies and developing training programs geared towards those technologies. - Give reductions (taxes) to companies that hire only Canadian employees, develop their product in Canada, and have their factories/labs/head offices in Canada
T0L	Retaining good teachers and classroom resources	Eliminate a few levels of school board management - or - reduce salaries of school boards. Audits of board funding every 3 years would also help to keep costs down - force boards to be accountable so that they don’t fire teachers and keep the money for themselves.	Retain the good public teachers by having parents do report cards on teacher performance. The questionnaires that the students do in classrooms about their teachers are quite light in substance and are biased in favour of unions.

	<p>Diversify the economy, by maintaining things like grants to encourage things like tech sector to come and set up shop in Alberta. This will help create jobs, help with diversifying what is happening here, as for too long, the primary driver of this economy has been in oil and gas. Realize and emphasize that industries other than oil and gas will need support and opportunities to thrive to help grow our economy. Too much emphasis has been placed on one single industry, and now, we have some problems moving forward.</p> <p>Help make Alberta an appealing place for corporations, families and individuals to want to come here to contribute to the economy in diverse ways. Putting resources into better quality health care and education will be a draw to others looking to come to this province. Making cuts to education, health, post-secondary education, minimum wage, social programs, etc, etc makes this province less appealing to those who value community, resources for their families, emphasizing education and opportunities for our future generations, simple things like and being looked after when you get ill (the population is aging by the way... health needs will be increasing).</p> <p>Put more money and investment in upstream health care. These are areas that promote health, prevent illness and later reduce highly expensive use of the health care system. Think early intervention. For example- The recent announcement of this government to support and add resources to mental health crisis services, and mental health resources in post secondary institutions, seems reactive. A pro-active measure for this, would be to ensure healthy levels of funding, lower class sizes in schools, and more resources available to primary education, early child</p>	<p>Stop the very expensive war room and all of the money that is going to that project-- what a mistake.</p> <p>Re-instate corporate tax breaks for industries who have typically shown huge industry profits.</p> <p>Reduce funding to those students using the private school system. Those who access this, have a lot of resources in the first place. By making their expenses a little lighter, there is a mismanagement of funds that could and should be going towards the majority of students who would benefit from more resources in a public education system.</p>	<p>Diversify.</p> <p>Realize that oil and gas is not the only thing we should have going for us.</p> <p>Numerous other examples shared above.</p>
T0J	Education and healthcare	Fewer tax breaks for big companies	Make it easier for locally owned businesses to grow/hire people from surrounding areas.

T3C	<p>1) Education - Funding should include room for growth in student numbers. Funding is needed in order to address class size, special needs students, and support for mental health support. A focus on funding in the early years is needed in order to help students have the basic building blocks and skills for learning in later years. Please reconsider performance based funding for any level of education. Learners are people who all have specific stories and needs. Performance based funding brings the possibilities of teaching to the measuring stick rather than the needs of the learners.</p> <p>2) Health - Hospitals and medical staff need the funds and the time to meet the needs of the patients.</p> <p>3) Supporting urban and rural areas with funds to develop and strengthen the supports and programs in their areas.</p>	<p>While I'm not thrilled to say this, it might be worth seriously considering a sales tax in Alberta. As well, I think the premiums for Health Care should be reintroduced. I thought it was a mistake to take it away in the first place. I realize that some people cannot afford that, but exceptions can be put in place to help with that.</p>	<p>Diversification is key to this. Supporting smaller business as well as big business is vital.</p> <p>Improving education and health funding will help us have an educated and healthy labour force.</p>
T6B	Public Education, healthcare, transportation	Increase corporate taxes, income taxes on the highest brackets. Eliminate all public funding for private & religious schools.	Reduce small business taxes and increase incentives for innovation. offset by an increase in corporate tax
	Healthcare and education	Cutbacks on Corporate handouts	Not by relying on the oil and gas sector as heavily as they are. There should be more interest and focus on fostering sustainable resource development and realistic approaches to climate/environmental sustainability. This should be at the forefront of the government's focus in job creation.
T8N	<p>EDUCATION, HEALTH CARE should always be priority.</p> <p>Supports to make childcare more affordable.</p>	Tax large corporations and the wealthiest populations.	Tax larger cooperations and give smaller businesses a break. So far the tax cuts in oil and gas have not made us more desirable or resulted in trickle down so what is the point.
T3H	Education and health care!	Their own pockets. Maybe they can take a pay cut so the rest of us scraping by can still put food on the table.	By EDUCATING PEOPLE! Educated people breed educated people!
T6R	Healthcare, public & post secondary schools, and infrastructure.	Stop giving handouts to oil companies. This money goes directly into their pockets. We need to invest this money in public services. Not cut public services to give handouts to oil executives.	Lower taxes for small businesses. Government incentives towards post secondary education.
T4P	<p>Investing in infrastructure.</p> <p>Reducing daycare costs for families.</p> <p>Investing in education and healthcare.</p>	<p>Within themselves. Less government spending. Wage cuts for government officials.</p> <p>Less tax breaks for large corporations.</p>	<p>Investing in infrastructure.</p> <p>Investing in healthcare and education.</p>
T7X	I think health and education and other essential services need to be a priority. However, without our public sector there will not be enough money to support those services. I believe that once the money is coming in, it should be used to support those essential services by increasing their funding. I believe in fiscal responsibility above all, but once you have money, it should be "spread around like manure, encouraging young things to grow."	Ensure that the services you are paying for are what is most important: front-line workers in health and education. More teachers, more aides, more nurses. Check that upper management and middle management are being paid proportionate to the jobs they do. Do not give tax breaks to big businesses, but support small business start-up instead.	Encourage small business, encourage buying local where possible, and taxing any individual or company appropriately based on income, those who have more should pay more as it won't affect their ability to purchase necessities of life.

T5X	Job creation in the form of oil & gas diversification and retraining. We have the highest unemployment rate of 18-24 year old men in the country. Why?	Ending the 'war room' and travel 'junkets' for select government employees and appointees. Instead, support and support industry at established trade shows and events. ie. Vegas Tech Show. Tax corporate Alberta at the 11% National average. Insist through fines, that Oil & Gas companies pay their municipal taxes which indirectly will result in savings for the province because municipalities would not have to 'beg' for their share of provincial dollars. Invest in Education and Health Care because every dollar invested there ensures a strong future tax base and saves money on the social welfare side of government.	DIVERSIFY. Promote POST Secondary education and job training. If we lose 40,000 jobs in one month due to oil industry then it's up to us to have the vision to promote other training and industry that fills the void low gas/oil prices causes. Smart industry is the answer ie. computer vision, connected retail, eco industry.
T3M	We need to spend on infrastructure, to make sure alberta is still a good place to live, work and start businesses. We should also maintain essential services like health care and education. Cuts to non essential areas, like government policy analysts or researchers or administrators should be cut.	We need smaller government. There are so many inefficiencies in the government bureaucracy, by shrinking some of the ministries and ensuring there are not too many public servants, we'd save a ton of money. Run the gvt like a private company. Public servant salaries and pensions, including MLAs, are way too high. We can save there. The high level ATA and AHS needs to be reviewed and overhauled. Everyone who works in education or health care knows that there are too many useless people being paid way too much at the top. Force them to fix that without cutting front line jobs. All of Alberta knows we need teachers and nurses, but we don't need bureaucrats. In a private company, people do more with less. They should too, but we can do it without service levels suffering. That is what Conservative Albertans truly want.	Continue investing in oil and gas. Then start divesting the money to help create new sectors and new jobs.
T0B	Job creation	Redundant positions. Positions within healthcare and education such as "the principal of principals" in Clearview School Division	Reduction of red tape for oil and gas development
T0J	Front line Health care workers. Resources and infrastructure updates for the older rural hospitals. Intercede only the elimination of front line staff in all positions. It's making it harder for us to provide adequate care to our citizens.	Consider lightening the budget by thinning health care manage to positions. It's getting ridiculous. 1 manager to every 3-5 front line employees? Is that necessary?	Provide incentives and tax breaks to small business and entrepreneurs. Maybe higher education, both trades and uni, more affordable.

	<p>Health care - holding AHS to account with their spending. Why are there often 2-3 managers doing the work of 1? Why on earth does the heads of AHS make over \$600,000? It blows my mind.</p> <p>Education - Our teachers are the backbone of our province. They are almost entirely responsible for the next generation of our amazing province. They deserve better support, funding and pay. We also have an increasing number of children with physical and mental disabilities and we NEED to help support the teachers as well as the children. Also holding school boards to account. Cutting back on excess spending where it's unnecessary.</p> <p>Disabilities - 17(1) Alberta and our amazing Insulin Pump Therapy Program. 17(1)</p> <p>But when there are multiple insulin pumps available nationwide, should we not be able to have our pick from all of them instead of the two covered by the program? Better and newer technologies will help enable healthier and happier citizens. I'm a firm believer in preventative measures. If we are able to provide people with ways to prevent life threatening situations or complications later in life, would our health system not be better off?</p> <p>I understand we are one family and you can't change your entire budget to meet our needs, and for the most part we're very happy to live in this amazing part of Canada. But we should strive to put Albertans first. Which I also understand is tricky considering our diverse needs and equalization payments</p>	<p>Scraping the MELT program! 17(1)</p> <p>I firmly believe more class 5 training is needed. The amount of unskilled drivers out there is shocking and down right scary!</p> <p>Do "something" about the equalization. I agree with helping out have-not provinces but something has to give.</p>	<p>I feel that doing what is necessary to invite investors back into our province is essential. Lowering corporate business (if it hasn't been already) tax to make Alberta more appealing. I will admit I'm not up to date with the current budget, but I know when the corporate world flourishes it does affect everything else.</p>
T3E	<p>Health, education, infrastructure. No health care privatization, as that costs more! We cannot afford ANY job losses, so please stop attacking nurses, teachers, government, and construction workers! Build the Green line and cancer centre faster, not slower! Any delays kill jobs, and constant project direction changes and funding uncertainty add unnecessary costs! Borrow if you have to and put money into the Heritage Fund; next time there is a stock market crash pounce and buy equities. If we can get the fund to \$200B over 15 years we can start taking out 4% (\$8B) each year. That would get rid of the deficit and keep growing the fund.</p>	<p>Cancel the immoral, unnecessary, and ineffective corporate tax cuts. Raise taxes on rich to generate more revenue. Cut health costs by investing in elderly hospices, and affordable housing and treatment for drug addicts. Make it easier for old people to die with dignity, assisted by a doctor, instead of spending huge sums to torture them in hospitals in the last few months of life. Tax junk food and give people Fitbits and rewards if they get active. Provide nutrition and educational assistance for fat oriole to lose weight. Ban or severely tax vaping products. Tax urban sprawl to save on infrastructure (make builders pay full cost of setting up new communities). We are currently subsidizing sprawl and wasting billions on infrastructure to far-flung neighborhoods.</p>	<p>Build any legitimate infrastructure needs now while economy is struggling. Give government workers job certainty quickly so that they will continue to spend and sustain the economy. Prolonged labour disputes will devastate our already weak economy; any paltry savings on that are NOT worth it. Give tax breaks for NET NEW investment in Alberta; for example, call up Elon Musk and tell him you will give him free land and retrain laid off oil/coal workers if he brings a car factory to Alberta. Give tech companies breaks for setting up here. Even oil companies can get breaks if they spend more, for example to diversify their business into clean tech. Research hydrogen, geothermal, and using captured CO2 to make building materials. Current across the board tax cuts are a waste of money.</p>
T2V	Funding growth in education	Anywhere but education	Fund growth in education

T6J	Education (INCLUDING postsecondary), PUBLIC Health care DIVERSIFYING the economy and not only oil and gas	Not giving tax breaks to oil and gas You need to find NEW revenue - e.g. bringing in a modest provincial sales tax	DIVERSIFICATION - support new energy alternatives as well as oil and gas. Find new revenue - e.g. a modest provincial sales tax
T1H	Industries that are not destroying the planet and making it uninhabitable. Industries that have a future like anything in the tech sector for instance, healthcare, entertainment, media, education etc.	By giving up on the ridiculous notion that trickle down economics works when it never has and never will. The rich are rich enough. You can also find savings by getting rid of that ludicrous war room which costs the taxpayers an incredible amount of money and for what? So you can sit in a dark room with a bunch of political hacks and come up with ways to make the Albertan's who aren't in agriculture or oil and gas lives miserable? Or so you can "own the libs?" It's absolutely pathetic and embarrassing.	By DIVERSIFYING. Our current trajectory of going all in on oil and gas is not only dangerous as it's inevitable collapse will leave us in an untenable position, but it's this type of backwards thinking that keeps us from being able to compete in any other sector. When oil and gas collapses, and it will, Alberta will be in a hole we may never be able to climb out of. (At least with you morons in charge)
T3J	We need to invest in our healthcare, education, police services and social services/public services. Don't take away. When these systems aren't working properly due to cut backs everyone suffers! This has been proven time and time again! How many more times do we need to go down this road?!	Government does not need to be making hundreds of thousands of dollars! It's public service work, you were put in there by the people not to make your pockets heavy but to help our province! Live on a salary that is reasonable!	Give tax breaks for for small business owners. Incentives for small business owners. Big corporations do not need the tax breaks! Do you think those people are going to bed at night wondering if they'll have enough money to feed their families, to buy medication, for a bus ticket?
T2J	education, health-care, climate action and economic diversification incentives.	There is a revenue problem, not a spending problem. Better increase the sales tax from 5% to 10%. Don't reduce the corporate income tax - that is just a give away to rich Albertans.	Negotiate re-investment in Alberta of the carbon tax paid by Albertans to invest in renewable energy and energy efficiency measures. This will create jobs in short term, and lower utility costs for consumers and businesses in the long term. It will also improve Alberta's international image as environmentally responsible which is vital for re-investment in core industries.
	Healthcare and maintaining appropriate staffing levels in all areas of care.	Company CEOs and managers taking pay cuts. Higher taxes for the wealthy.	By not encouraging employers like AHS and the school boards to eliminate front line staff.
T6r	Education, Heath Care, helping low income, people on AISH, the homeless,	War room for oil industry	Promoting new developing industries like tech
T6H	EDUCATION & HEALTHCARE	within government. there are so many inefficiencies at higher levels NOT FRONT LINE WORKERS	Childcare funding; small business tax incentives
T4A	Put a reasonable provincial sales tax in place. Green the oil patch and plant trees. Provide faster and more thorough health care and solid education. Offer counselling to oil patch workers to see how the skills they know could be transferred to another industry or the green oil patch industry. Shut down coal fires plants in Alberta. And remember Alberta isn't just the oil patch! Make good decisions for all Albertans!	The government could choose to put a provincial sales tax in place. And leave the heath care workers, and teachers alone. And leave the health care workers pension fund alone too!	Give tax breaks to movie industry when they hire locals to encourage this industry. Re-train oil field workers to other industries. Help oil field workers see how their skills can be transferred to another industry. Help the oil patch be greener!! Encourage it! Use the great minds we have in this province to make it greener. Plant trees! Encourage the tech industry to come to Alberta! Continue to support good agriculture practices. And greener agricultural practices. Find great markets for agriculture products. Encourage the arts! Set up business of planting trees to offset carbon emissions. Charge other provinces/ counties money for this service.
T4H	Education Health Care	MLA Salaries NOT cutting corporate taxes NOT taking private jet flights for the premier	Diversify the economy Stop relying soley on oil and gas revenue Get with the times

t4x	Affordable child care. Improved healthcare. Technology.	No more handouts to Oil companies Increase taxes on high incomes Implement a 2% PST Increase tax on alcohol, cigarettes and cannabis	Invest in incentives to encourage growth in alternative energy and tech. Incentives for small businesses.
t5h	Leave spending alone	Get rid of the new corporate tax reduction	I think the government should initiate all promises made in the Provincial Election as those promises were the basis of their being elected.
T2g	Diversification of the economy as planned in the 2019 budget was farsighted and necessary.	Administrative and bureaucratic costs of services-health Ed etc could be regulated better to ensure we are not paying for redundant admin costs instead of hiring more actual nurses teachers etc	Deregulation/red tape reduction, and continue to fight for Alberta's resource economy federally and internationally.
T8L	Social programs Victim services Police	Corporate tax cuts to oil War room? Red tape nonsense	Provide social programming to help people Invest in new industry Make childcare affordable so people can get back to work
T3M	Supporting our Energy Industry & getting pipelines approved	Their own pockets. The gov't salaries and perks are way above those working in industry. This is not referring to Health care or Teachers (front line workers) but to the management of those groups as well as the main gov't offices, politicians etc.	Supporting our Energy Industry & getting pipelines approved
T5y	Health, education	No corporate tax bail outs for oil companies	By supporting alternate energy producers OTHER than the oil and gas industry in order to make Alberta become a world leading energy producer again. This means SOLAR AND WIND ENERGY.
T3G	Continuing health coverage for seniors and their dependents.	Cut politicians' pensions. They are beyond ridiculous.	Continue to cut red tape. Increase support for small business.
T1W	Education - we need to create new economic opportunities in alberta and stifling intellectual development in an attempt to usher in privatization is dishonest and self serving for political means and does nothing to ensure our development as a province	Stop giving tax breaks to corporations that could care less about the people of Alberta. Get rid of your stupid war room and actually work for Albertans and not for 5 big oil companies. Stimulate economic growth which does not mean more oil and gas - it means develop or help develop new opportunities. And stop laying people off - you are cutting your own throat by reducing opportunities for people to pay taxes.	Stimulate creation of new industries via technology incubation and support new associated educational opportunities. Build upon work NDP did to stimulate economic diversification and new energy exploration - by tearing that down you've not only crippled future investment but YOU directly wasted all the investment in at that point. Make decisions for Albertans not for your political career.
T3B	This government should focus their spending on growing the public health sector, transportation, education, housing, and environmental regulation, as well as diversifying the economy.	This government can find savings by reextracting tax breaks given to oil and gas companies who objectively do not need them, shutting down redundant or frivolous programs such as the ministry for red tape, reduced minimum wages for teenagers performing the same jobs, and the energy war room company.	The government needs to invest in their citizens to see and experience economic growth. Only investment in public sectors, increased wages, investing in diverse energy sources such as solar and wind, and forcing businesses to pay their taxes.
T3m	Fiscal management. Need to align spending to current revenue and manage to a budget. Continue to push big coat centres for reductions (health care, education, government services)	Overhead costs and align salary with other provinces. Previously public sector had to compete with private based but the private sector has reduced salaries so there should be a realignment.	Align province job sectors to future needs. Talk to energy companies about how to energy companies for the future and capitalize on new opportunities in alternative energy for other provinces. How do we become the engineering, management and supply chain hub for green projects across the country

	economic growth	start with elected officials and their staff plus government departments and provincial boards - either have an independent external review of the efficacy of the organization structure and the services provided or a straight 10% cut across to start with deeper cuts later. The province is not growing, stop adding more infrastructure spending.	Create a stable regulatory environment with clear rules. Tout the benefits of Alberta, i.e. stable and transparent regulatory environment, low income tax rates, NO PROVINCIAL SALES TAX. A provincial sales tax negatively affects everybody including low income individuals, whom you are supposed to help and protect. Bringing in a sales tax is equivalent to increasing the income tax rate for the first trench of taxable income - everybody has to pay more. Low income families will see even less disposable income.
	Public health care and education	If there are proposed rollbacks, it should be across the board for all of the public sector workers, not just nurses and teachers. Include city workers, police, RCMP, firefighters etc. Make a 1% cut across the board, then everyone shares the responsibility equally.	As stated above
T3M	Healthcare, education and infrastructure- without proper funding the neglect of these areas will only lead to further downfall for our province even in times of economic growth. Poor people/unemployed people need quality healthcare and education opportunities even more so than their thriving counterparts- so the need will continue to rise whether you fund or not but by cutting back you are only creating a vicious cycle of more damage/bandaid fixed like mandatory overtime and this will have the reverse effect on the budget.	Stop tax bailouts to the corporations, fight against carbon tax, introducing a minimal PST, and capping bureaucratic salaries (CEOs, high ranking management and administrative positions in government industries)	Invest in infrastructure and diversify agriculture to meet the global trends in agriculture demands (less meat, more plant based diets); invest in greener technology development, more specifically science and engineers that may be able to develop innovative ways to recycle and reuse plastic and waste to create new material and products; continue working with the federal government and oil and gas to responsibly use our provinces natural resources But without becoming a one trick pony.
T3M	Maintaining supports and services for Education, Healthcare, and the vulnerable in our society. Without strong public education, public and comprehensive health care, and support for those who need it, our society will be weaker in the long term. Yes, that means that money needs to be invested but it is invested in the people, health, education, and well-being of our province.	What about cancelling the 4.7 billion dollar corporate tax cut??? You have cut education, healthcare, AISH, tuition credits, etc etc etc etc. Is there anything left to cut? Everything is more expensive for "everyday Albertans" as you regularly refer to us. School bus fees.. more expensive because you underfunded education. Insurance... more expensive because the rate cap is gone. Post secondary...more expensive because tuition is now increased and tax credits are gone. It is really ridiculous how much you are increasing all these costs for Albertans while cutting corporate taxes. Corporate taxes were already the lowest in Canada. And you are doing all this by off-loading the responsibility onto the school board, health board, municipalities, etc. (so you can "say" that "you" didn't increase taxes)	How about stop cutting jobs in the education and healthcare sectors???? How about stop cutting diversification programs that help Alberta diversify into the film and tech sectors?? How about stop underfunding everything so that all the fees have to be increased to cover the basics and removing rate caps on insurance/electricity/etc. How about stop this nonsense of Wexit, an Albertan CPP or police force, etc?? It is causing huge uncertainty for businesses and investment in this province which is slowing economic growth.
T3m	Paying down debt, not paying one red cent in transfer payments.	Cutting bureaucracies in health care, getting rid of useless programs. (Where evidence shows they don't work) eliminate BIRTH TOURISM THAT CLOGS UP OUR NEONATAL UNITS!!!!	Reduce or eliminate taxes to small and large businesses.
T4V	Healthcare and education.	Taxation of higher income brackets.	Continue to create jobs in many fields and to reduce cuts as much as possible, even at the risk of a deficit.
T8E	Healthcare & education	Taxing big corporations appropriately	Start by not cutting jobs of hardworking Albertans, just to have to "support job creation" for them...
T6L	Education and health care.	Maybe a cap on government salaries as well as government spending on travel. It's a hard thing to figure out for sure.	We need to figure out our oil. Oil is the only thing that makes this province function. So we need to use it to our advantage.

T9S	Healthcare, Education including Higher Education Making Alberta's economy independent of oil and gas by developing alternative sectors of the economy (e.g. forestry, tourism, organic agriculture, green technologies, solar energy)	end direct and indirect subsidies for oil and gas	The public sector should be expanded. All non-traditional businesses (such as startups in new and emerging technologies) should be subsidized (directly or through tax relief). Alberta needs a long-term vision for a new economic policy. China could be role model for Alberta, with its long term plans spanning decades rather than until the next election.
T2S	Education, healthcare	Government employee pensions	Diversity, continue trying to attract film and tech sector.
T5J	Social services. Keeping people who are employed, employed. Focus on the people and not corporations moving towards more casual and part time work in order to avoid paying benefits and increasing their own bottom line.	Cutting the tax cuts handed out to large corporations. Investing money in all of our futures instead of helping short term profits of the few. If you spend money to increase the people you represent's quality of life then money will be saved en masse over the next 10 years. Oh and do not spend 30 million dollars on an opaque propaganda group to spread misinformation about oil and gas.	Diversity. Show that Alberta is open to business to all industries, not just outdated and corrupt ones. The technology sector sounds like a pretty good idea to me, maybe show some support to them so companies stop up and leaving to other provinces who give a damn about them. Invest money in infrastructure and social programs that will create jobs for people instead of championing cuts that hurts not only jobs, but the community as a whole.
T3m	Education and health care	Taxes and superfluous spending	Ensure they are investing in companies that are staying with in Alberta
T3A	Health care Education Hertiage fund	Useless government programs	Partner with companies to offer incentives like training funding and tax cuts prorated to number of jobs created
	-Education -Healthcare	We don't need to find savings. A government is not a business and shouldn't be run as such. We shouldn't be looking for a 0 balance or running a surplus unless this government then want to put that money back into the different public sectors, which doesn't seem like a goal. This question in this survey shows citizens the priorities of the government.	Diversify from oil and gas. Don't drop the industry but look to others. This government ended the Interactive Digital Media Tax Credit and the Scientific Research and Experimental Development Tax Credit which actually led to companies deciding not to expand or worse, leaving Alberta in favour of a tech friendly province. Cutting public spending means that many public industries will have to find ways to balance budgets. The quickest way to balance a budget is by using layoffs. A direct result of reduced spending will mean less people employed in the public sector. Stop cutting public spending because it leads to classrooms with 40+ students and longer hospital wait times.

T3M	<p>Focus on essentials - healthcare, education and infrastructure.</p> <p>Nobody likes public sector unions except for its members - firm resistance to ever increasing demands is fair and required.</p> <p>With that said, this government should stop playing games. It's mandate is to provide healthcare and education in a reasonable and cost effective way. It is not to dismantle the whole system (ie. move to a voucher system, increase funding to non catholic religious schools/private schools/homeschooling, privatize healthcare or make ineffective/unreasonable consolidations.</p>	<p>Government cannot and should not be all things to all people. Focus on the big things - education, healthcare, infrastructure. Less focus on meeting the endless needs of every special interest group - let those people either come up with their own funding or come up with ways to improve their own circumstances. When there is little to go around, focus only on the essentials - we should not be funding livelihoods for every low income person</p>	<p>Bring back the Alberta advantage - reduce personal income taxes. Continue tax credits for niche industries like tech and movie to encourage them to set up shop in Alberta.</p>
A1A	<ol style="list-style-type: none"> 1.Health care:Nurses,Doctors,elderly care in out of institutions 2.Education:class size,Tuition for post secondary needs to come down.We need to compete with Global economy,highly skilled workforce is needed. 3.Maintenance of INFRASTRUCTURE{take care of what we have} 4.Economy :move away from oil based economies.Promoting Farming industry 5.Lower crime in general cities and rural 	<ol style="list-style-type: none"> 1.Health care cut fat from top [ADMIN] money should be spent on patience wellness.Hire more health care works part time,so you do not have to pay overtime.Look at BRITAIN'S.FRANCE health care systems.Every Albertains has the right to a good healthcare,at whatever the cost. 2.Education :money should be flowing to school principal and teachers and aids and students education.Top ADMIN salaries {superintendents,assistants sup,consultants why so many?}cut programs that are not necessary , Calm for example can be integrated in to the core courses.Post secondary institution ,lots of FAT in Upper Admin.VPs wages and expense? Again systemic change is needed in Post secondary.Money should be flowing down to future workforce students 3.Buildings ,roads,bridge,hospitals and schools should have schedule maintenance repairs.No unexpected repairs that cost a lot of \$\$\$ 4.Generally everyone needs to tighten up.Starting from provincial government to small business 	<p>Create jobs in areas mentioned above.PUT restrictions or ties to loans or on business tax cuts.Stop spending money on things that are not going to help our economy. Arts/music buildings,Sporting events ? Invest only if return is going to make the province money.Government needs to tighten it belt.No Tax increases to citizens.REAGANOMICS AND KEYNESIAN ECONOMICS pros and cons</p>
	<p>Investment in renewable energy which will create jobs.</p>	<p>re-introduce the effective carbon tax created by the previous government that provided jobs and funding for energy efficiency programs and infrastructure for cities. the governement could save money by immediately stop funding the carbon war room and instead use the communications dollars and money from TIER on what it is intended to do, which is to support carbon reduction programs and technologies. The governement can also save money by stopping any funding and staff time that is dedicated to "standing up for Albertans" and put it towards something productive. Like nurses or teachers. the government can also stop wasting money on fighting the carbon tax.</p>	<p>the government needs to stop fueling the divisive campaign of isolating us from the rest of the country which is driving away investment. job and economic growth can come from a shift to renewable forms of energy and developing refining capability within alberta.</p>

T3A	Public Health Care (including mental health), Public Education, Social Services & support, Public Infrastructure & Innovation/Diversification.	Spending: expanded use of Nurse Practitioners, use of smaller publicly owned and funded Community Health Centers, eliminate universal standardized testing (adopt random sample smaller scale testing to ensure high standards in schooling). *Revenue*: Provincial Sales Tax (~4%)	Invest in innovation and diversification. "Energy" (in all its forms) should be a focus, not just oil & gas. Reduce dependence on a single volatile, globally declining, non-renewable resource.
T6T	Move oil subsidiaries to farming subsidiaries. Focus on making food affordable for Albertans, invest in multi-culture fields, specifically Hemp. Invest in retraining oil-field workers to transfer to renewables and clean energy. Re-hiring the investigator into Kenney's election fraud, criminal conspiracy, and mismanagement of government funding.	Oil investments. The industry *needs* to die. Stop sending our money to Aimco. Don't deploy troops to, once more, suppress the native population.	Funding a hemp industry. If we can truly invest into hemp plastics and biofuel, then we can become the first titan of the industry. Investing in sustainable food culture to make living affordable (which will boost the dollar strength). Community housing programs.
T2Z	Oil and gas Parking for public transportation! Train Bike paths	Better management of \$ in health and education! Supporting separate home and private education. (Check figures with parents for Choice in education)	Oil and Gas. single people are the only people that have less income and no breaks. If we had more disposable income we could boost the economy and young people could actually move out of their parents homes and buy their own.
T2E	Economic diversity, and a reduction of our dependence on the oil and gas sector as a panacea for all our provincial woes.	Introduce a sales tax, like all the other provinces, and use those funds to support our civil servants and infrastructure. Get rid of the 'war room' and invest in Albertans.	Raise the corporate tax rate instead of giving large oil and gas companies breaks that they don't deserve, and invest those funds in other burgeoning sectors.
T9S	Schools and Hospitals	Corporate taxes	Pipe lines
T3m	Education. It truly is the only thing that has ever improved quality of life by allowing people to be financially independent and more worldly.	Cut management in health care, not front line staff and their wages/benefits. When oil and gas workers were laid off, who do you think supported the household? The wives. Nurses and teachers.	Diversification.
T0B	frontline healthcare education	Every government seems to be bloated with overpaid executives. The number of school boards immediately come to mind.	I would like to see orphan wells abandoned on a fairly aggressive time timetable. Enable legislation to oil and gas companies who refuse to pay taxes. Perhaps some government assistance for individuals looking to transition from the oilpatch
t5p	corporate taxes	return money to education, healthcare, elderly	put money back into students jobs
T5T	Education(K-12 especially), Healthcare, Infrastructure	Administration	Fight to Drop carbon tax (helps business and individuals), small business incentives

T5t	<p>Keeping front line nurses on the job! Past 5 years nearly everything has been temporaries. How is that consistent care for Albertans? There is too much upper management and middle management They should go first ! Why does Steven Mandel have a cushy position created for him ! What does he have to offer to the position ? Don't cut teachers or hike education. How can our children go to school? Everyone should be able to get a secondary education for a chance to get a good job prospect in the future ! You still have to spend money to make money Keep projects going like the LRT in Edmonton. Need job creation ! Build recreation centers so people can pay to go in and be healthy and exercise !</p>	<p>Create full time jobs. Stop letting temporary jobs be put up on job boards in ahs. No consistency of staff. There are too many middle managers and upper management they should be trimmed.</p>	<p>Don't let companies keep the tax break unless they keep currently jobs and no pay offs. Stimulate the economy by letting nurses, teachers and support staff keep their jobs. There have been vacant / temp jobs avail for the past 5 years !!!! Permanent jobs = healthy work environment and consistency that albertans deserve. You are making the LPN's in Alberta move to full scope. How long do you think they will work without getting pay raises. Registered nurses are accountable, we have always been the choice of albertans !</p>
T7Y	<p>The core areas of government responsibility still need to be looked after, but at a sustainable rate.</p> <p>i.e. health care, education, infrastructure</p>	<p>Management within government agencies and corporations. I do not have first hand knowledge, but do have second hand, and am blown away at the inefficiencies and hierarchy within certain groups. Would love to see multiple reviews similar to the AHS review, to find cost savings.</p>	<p>I agree with the lower tax rates for business, to encourage investment. I also like the idea of the war room that has been implemented to put a positive spin on our world class energy source.</p> <p>It seems to be a total anomaly, but having an opposition that is willing to work on issues, with the government, would be a momentous occasion. Rather than spreading derogatory messages and telling everyone how bad the government is doing, it would be nice to see any opposition simply work with the government in power to advance our province.</p>
T7N	<p>Public Programs (Wildfire, healthcare, education)</p>	<p>They found room for the 4.8 billion dollar tax cut for Oil companies didn't they?</p>	<p>By not cutting programs that provide public safety and prevent wildfires from reaching forest surrounded cities and towns.</p>
T6L	<p>Health, education, infrastructure, Justice</p>	<p>There are too many panels and consultants. Send this money to the front line workers</p>	<p>The government needs to invest in attracting new business to Alberta. We are too reliant on oil and gas. We need to make Alberta an attractive not just for business, but for employees. If you have a healthy and happy employees you will have a better company. If you have employees concerned about their children's education, family health, etc., it will effect their abilities at work. Make this a place people want to come too to live and work.</p>

T0C	<p>1. Environment: well/o&g plant clean up, increased carbon emission limits, water protection.</p> <p>2. Public Services: restore grants taken from our schools, restore University maintenance funding and increase, not decrease direct funding without monthly reports (RED TAPE) or an additional set of evaluative criteria to be monitored.</p> <p>3. Add to our coffers by closing both the Canadian Energy Center and the Anti-Albertan Inquiry. Save their operating costs and save us sure to be up-coming legal challenges against these unnecessary and embarrassing UCP entities.</p> <p>4. Reviewing the curriculum and teaching standards at all our private and charter schools; specifically to ensure that they are meeting our legal and moral responsibility to be engaged in the reconciliation process with our First Nations neighbours.</p>	<p>1. From the closure of the Canadian Energy Center and the Inquiry.</p> <p>2. From raising the corporate tax rate, by taxing the wealthy more, by taxing luxury goods.</p> <p>3. You doubled the size of our government, were elected with a plan yet have governed by non-elected panel after panel after panel. You are willing to engage in court challenges in which we have no hope of winning. You can travel as a group to Ottawa for what, Christmas Parties but professors at research Universities are forbidden from traveling or hosting visitors. Stop you overly expensive governance and you will find savings.</p>	<p>1. Whatever you have been doing, stop immediately. you have an abysmal record regarding job creation. Take the CEOs hands out of your pockets for starters.</p> <p>2. Restore public services to the citizens of this province.</p> <p>3. Incentive and otherwise support renewable energy projects as much as possible.</p> <p>4. Put an immediate stop to the separatist/fair deal talk. You are flaming the fires that will discourage any one from setting up shop here: poorly educated workers, poorly maintained infrastructure and transportation systems, unsettled and divisive social climate, lack of public health services, etc, etc, etc. My son, 17(1) is already planning his exit from Alberta, a 6th generation Albertan fleeing for his future from you his government.</p>
T1H	They need to focus on getting Albertans back to work, not just part time jobs, no one can survive on a part time minimum wage job.	They could stop giving the rich tax breaks. Help the middle class a little more!	Think about creating our own refineries and we would be much better off getting our oil to market. But invest in all areas not just the energy sector.
T1K	Get the Pipeline built	<p>1. Cut funding to supervised consumption sites. Or move it to the reserve.</p> <p>2. Review AISH & welfare system....The government is making it way too easy for people not to want to work. people are abusing these programs & it needs to stop. Help these people for the short term but then get them back to work.</p> <p>3. Stop paying people to have babies especially new immigrants...it's not a job</p> <p>4. Stop sending equalization payments to the east</p> <p>5. Review education system & health care system cause I believe there is a lot of waste</p>	Get the Pipeline built
T8b	Health care, education	Oil and gas	Renewable energy
T2K	Anything that gets people working and contributing. Different levels of work for different abilities. Take care of people here and not hire from elsewhere.	Redistribute the "fat". Layoffs are not solving anything, put these people to work where it's needed.	See above
T6B	Primary and secondary Education. The importance must be placed on funding actually reaching the schools, NOT going to administration!	At the top. There are far to many high paid, "executives" making decisions that adversely affect the lower paid working class. This applies to all levels of government operations.	We need to focus on how to work within a greener framework that supports our oil industry. Ideas like carbon capturing and making use of carbon fibre nanomolecules. Ideas like these can be brought in as "contests" which will create growth in ideas and economics.
T5z	Government services, health care, education and diversification of our economy. Oil and Gas can't be our main economy.	Get rid of the war room!!! What a bloody waste of money! Combating misinformation is the job of cabinet and government communications.	Invest in diversification.

T5X	Education & Health Care. Listen to the needs and concerns of the people in your province. Stop taking notes and mimicking models coming from the United States, it is a broken and deeply flawed system. We are better and we should hold ourselves to a higher standard. Shame on you for pushing your short term agenda at the cost of your voters. You work for the people of this province, stop treating us like sheep.	Look to the private sector and non-essential expenditures and tax benefits being provided to them.	The oil and gas sector are not a sustainable market and won't be around in the next few decades. This needs to be slowly grandfathered out and in the meantime start looking towards alternative sources of energy. We need to be forward thinking and start establishing ourselves in emerging technology that will be in demand once the shift has moved away from oil and gas. Stop thinking only within the limits of your term in office, we need to plan ahead. Economic growth will follow technology and demand for that which we have become an expert. The world can look to us as a leader in emerging technology and not simply as a has-been province living on the coat-tails of our once booming oil and gas.
t8h	Education and healthcare	That's not really my job to determine. I don't have insight into your financials.	By actually creating jobs and not hemorrhaging them like you currently are. Bring back the green energy credits that supported the renewable industry.
	Diversifying the economy to reduce dependence on oil and gas (providing grants and supports to other industries including tourism, film production, the tech sector, entrepreneurs) Maintaining the quality of K-12 education Maintaining infrastructure	Reducing costs of government turnover by not scrapping projects that were implemented by the previous government just because they were an "NDP idea" (ex. the superlab and the curriculum review) Initiating a provincial sales tax	Use funding from specific taxes (ex. carbon tax) to provide grant funding to growing (future focused) industries Continue to support the oil and gas sector by supporting pipeline projects Support cities in attracting new industries (especially in the tech sector) to support employment of laid-off skilled oil and gas workers (ex. engineers) Promote Alberta tourism across Canada and internationally
T4X	Healthcare and education. These are the biggest investments for our future! Everyone will benefit from this, not just the wealthy	Big payouts for large companies. The wealthy DO NOT need a tax cut. Unit clerk positions with the new connect care system could be cut but invest that money into healthcare not other nonsense jobs. Also if you expect everyone else to take a pay cut maybe you could consider the same...it would set some form of precedent	Stop discussing Alberta being so upset with the equalization payments, yes it's unfortunate but it was part of Kenny's decision....whining about it publicly makes us seem pathetic and who wants to live in a sad pathetic province. So in short positive talk about our province will hopefully encourage others to move here.
T4X	Healthcare and education. These are the biggest investments for our future! Everyone will benefit from this, not just the wealthy	Big payouts for large companies. The wealthy DO NOT need a tax cut. Unit clerk positions with the new connect care system could be cut but invest that money into healthcare not other nonsense jobs. Also if you expect everyone else to take a pay cut maybe you could consider the same...it would set some form of precedent	Stop discussing Alberta being so upset with the equalization payments, yes it's unfortunate but it was part of Kenny's decision....whining about it publicly makes us seem pathetic and who wants to live in a sad pathetic province. So in short positive talk about our province will hopefully encourage others to move here.
T3E	Improving life for poverty stricken people; introducing a consumption tax to provide a stable revenue stream; create a roadmap for transition to alternate energy (look at Shell's 1960 - 2100 projected energy sources for inspiration) call CEO Michael Crothers in Calgary, a Chemical Engineer from University of Alberta	Stop wasting \$\$\$ on the "olden days dream" and lead us into the future. Shell has developed a Roadmap that sees the continuation of oil & gas as we transition to the alternatives We are retired from the oil patch & can see the future of transition	Continue supporting oil & gas as well as putting your foot solidly into being leaders in alternative energy including looking at the work Bill Gates is doing in a new closed system nuclear reactor that uses spent fuel rods as fuel. Please show great leadership!
T4C	Education and Health care. Reverse the cuts and fund the growth.	Reverse the tax cuts to oil and Gas They need to pay their share of the tax bill for Provincial revenue Bring in a sales tax to stabilize the Provincial revenue.	Don't cut so many jobs in the public sector. Re-instate grants for jobs in alternative energy creation.

T5k	Not oil companies. Stop taking from public healthcare. Stop taking from education.	Literally create a sales tax. Also, not relevant but stop being so corrupt. If you support the leader of the UCP party then you are just as corrupt as cheating Kenney. Shame.	Renewable energy and not cancelling projects that would supply ppl with jobs.
T2L	Diversifying the economy. The current budget and priorities feel like they're pandering to a nostalgia more than a realistic future.	Continue to look for efficiencies everywhere but *respectfully* not antagonistically, and with an understanding that the bureaucracy is made up of individuals who have dedicated their careers to those roles and know something the politicians might not. Don't hype up conflict for cheap political points. Also, stop comparing tax-payer funded salaries to other provinces as the only data point needed to prove they're too high. They had to rise to compete with the O&G boom times, cost of living was going up because of all the high oilfield salaries... prices come down slower. Finally, please don't just focus on savings, think about income in the short term. There are still very high average salaries in AB and we need some sort of consumption tax to do proper budgeting.	By considering more than one industry. Tech was really growing, then you cut the AB SR&ED, the AITC, etc. The future depends on nurturing new industries that are providing jobs now but are still far away from benefitting from the corporate tax bonus you gave that is still not going to make extracting our land locked heavy oil more economically attractive.
T0B	Health care and education, carbon reduction, subsidized child care, supporting new technology jobs and industries, rural crime, mental health support, support for retraining oil industry workers, promote a medium term move to nuclear energy and support training opportunities for oil industry workers to work in nuclear energy	Increase personal and corporate taxes, implement sales tax	Assist new technology startups with tax relief incentives. Green energy transition incentives. Develop a nuclear energy plan Subsidize child care allowing parents to contribute to the economy and the tax base.
T5X	Education and health	Taxes	Being more flexible with requirements for immigrants
T5Y	Education and Healthcare. We are giving away money to oil companies on the backs of our most vulnerable.	By not giving money away to oil companies and a provincial sales tax. Oh and stop sending our premiere around the world for no reason.	Do the exact opposite of whatever you are doing now. So stop defunding public services in an attempt to introduce private ones. Stop giving away money to oil companies that have no loyalty to us whatsoever.
T4R	Funing healthcare and education.	Quit handing free money to billion dollar international companies.	Offer benefits for High Tech industries, this keeps our grads local and their salary's paying taxes locally. Stop the brain drain.
t2t	Preventive health care and more efficient health care. We noticed a huge difference moving from BC, facilities are nicer, new here, easier to find a doctor (hard in bc), more facilities. You can see the budgets are bigger. Big industry (pharma, food) have taken over the health conversations and are just leading us to worse health. The government should take more efforts to combat these interests by educating and promoting preventive health problems.	Encouraging alternate forms of education by supporting financially these alternate forms in a way that encourages more take up (increase funding for homeschooling, encouraging higher uptake but in the long run saving the government).	Help small businesses and encourage innovation. Invest in young people and encourage entrepreneurship for young people.
T5R	Education, health care, and the environment	Corporate tax rates and eliminate 4.7 billion giveaway to corporations.	By increasing minimum wage and by making education more affordable and attainable. Also by making quality daycare more affordable.
T6K	infrastructure, health care, primary education, senior supports and services, subsidize public transportation for municipalities and for transit users to help fight climate change	reduce spending in tourism, reduce MLA and government worker wages to match the private sector, reduce postsecondary education funding (but maintain grants for lower income students), increase tax on tobacco products	lower taxes for both individuals and corporations, reduce spending on tourism marketing/promotion, lower minimum wage (small businesses cannot keep up with \$15/hr), DO NOT introduce a PST, reduce taxes on gas and alcohol

T6T	Seniors care, education, healthcare, municipality upgrades	We can find savings by no longer subsidizing oil and gas, they have made a mint off this province they don't need to be subsidized.	We need a PST of at least 3% that will bring more money into our coffers and allow the repayment of debt which will increase the money we can spend. Support green power it is the way everyone is heading and we need to be able to provide both the oil the world needs and the green tech.
T6X	Healthcare, education, daycare, infrastructure.	LRT line... Cuts to higher-ups & the elimination of bonuses to those in such positions rather than cutting the wages & shift differentials or hard-working Albertans sacrificing their own health & well-being to care for others (you know I'm talking about nurses, paramedics, teachers).	Focus on a healthy Alberta- healthcare, education.
T4G	Homeschoolers should receive more funding. We save the government just over \$10,000 per student that isn't in the public care system. We receive just over \$800 in funding every year which has to cover curriculum, activities and any school-related things. Not to mention kids with special needs, who would normally get extra supports in school still require those supports outside of school and we don't get any additional funding to cover things like counsellors, OT, psych, learning assessments, etc. Most the schools are tapped out of resources, which is half the reason we started homeschooling in the first place. We pay out of pocket for all these things.	Control how much upper management makes or at least gets in funding.	.
T5K	-Addressing climate change and making Alberta a leader in environmental sustainability -Expand public transit -Education, including reducing tuition for post secondary students -Healthcare -Implement a minimum income	-Dissolving Alberta's separate schools to create one public school system. According to the Blue Ribbon Panel Report, this would save hundreds of millions of dollars annually without firing staff. -By investing in public transit, fewer expansions to transportation infrastructure would be required and less maintenance work would be needed. -Shut down the war room for immediate savings of \$30 million annually. -Cancel the corporate handout of \$4.7 billion dollars.	-Support the tech sector. In particular, help develop Alberta's world class artificial intelligence hub. -Prepare for the inevitable transition away from fossil fuels. -Don't lay off large numbers of public sector workers. -Develop Alberta's renewable energy potential and require industry to speed up its reclamation of projects that have been exhausted and/or abandoned. -Implement a minimum income.
T0M	Education k-12, Post Secondary Education (Fund them properly) Health Care, Seniors benefits, Biologic medicines, highways and other infrastructure such as hospitals, schools etc... I would lik	I would like to see the elimination of all of the unnecessary panels. Forget about savings, worry about revenue first, bring in a PST, bring in a carbon tax we control (dummies), tax system needs to be changed. Avoid Trickle down disasterous ideological failed economic systems (Even the IMF says they are a failure). Cut out the warroom, reduce the communication staffers that the government employs for the ministries. I know there are areas to trim in administration in education, If you are looking at education there is a lot of money spent on inclusive education, maybe a rethink on the delivery of the system.	Infrastructure spending is the number one area, also give people confidence in the government and the economic program and people will spend money again. Lets get back on investment into the tech sector as well. There is a significant lack of confidence in my work place and nobody is spending right now. My family doesn't eat out anymore, we don't spend money in Alberta as we don't feel confident in the government.
T5E	Education and Health Care	Cutting upper management in the Government. Not providing free taxes to multimillion dollar companies.	Not cut education or healthcare

T3K	Education and health care. A healthy and informed population will put less burden on social service programs in the long run. This will result in "savings" for the government and allow investment spending in other areas.	There are very few places to find "savings" anymore. Most social programs have been pared down to basic levels. The only area may be a look at the grant programs and increasing corporate taxes.	The only way to increase economic growth is to have consumers spend money on more than necessities of basic living. Consumers must have more disposable income or the cycle of cutting household budgets will continue to spiral downwards. This perpetuates a negative economy.
	Health care, education, creation of jobs in new areas not just oil and gas	Cutting the fat...i.e cutting executives rather than the front line staff. With a growing and aging population our future is in a lot of trouble as you cut education spending and health care front line staff. We all know the goal is to make our health care system so terrible that you can justify a private system....hopefully you want be in power long enough to see that plan through. You have definitely lost a vote here.	Diversify
T3G	More funds for homeschoolers per year.	Each homeschooler receives up to \$830 per year. It saves more than \$10000 per child who aren't going to school - that is where the savings are, from those homeschoolers who should receive more funds.	Diversify the types of activities in the province. Support entrepreneurs with more trainings.
T1k	Education health care diversifying economy to technology and service sectors	Cancel war room increase tax on oil companies	Investing in education and diversification into technology sectors
T8N	Give money back to education, and public health services. #BetterOffWithRachel	Taxing the rich, and the big corporations.	There is more to Alberta than Oil and Gas. Focus on jobs in technology, and sustainable energy sources other than oil and gas. Support the arts, education and public health services.
T5W	How about not hurting the most vulnerable in our society. Taking money from education and healthcare shows that this government doesn't care one bit about real live people. So for priorities: healthcare, education, non-oil related industries.	How about implementing a PST? It makes so much more sense. Or investing in the development of alternative energy.	Realize that the oil industry isn't the only option! Diversify. Invest in alternative energy. We live in a great province that is also a bit stuck in the past when it comes to energy. When we cut healthcare and education budgets, we are CUTTING JOBS. Do you know who doesn't spend money to help grow the economy? The UNEMPLOYED.
T1A	Maintaining front line services in health care and education.	There are multiple layers of management through out both the health care and education departments and provider organizations, at astronomical levels of pay and perks. This is also true of deputy minister and assistant deputy ministers and aides to assistant deputy ministers ad nauseum within the provincial government itself. Cut these positions and you'll not only reduce costs substantially, you will decrease the administrative burden for the average worker who is actually trying to get something done.	It seems to me that the recently announced plans for measuring and funding post secondary education are a step in the right direction.

T8A	Increase corporate taxes; increase healthcare spending; maintain education funding; freeze post-secondary tuition increases, maintain \$25/day childcare, direct funds to green energy initiatives rather than fossil fuel industry.	Decrease governmental salaries for ministers and premier as well as their expenses for meals, travel, meetings, etc. Freeze travel for governmental officials. Bring back provincial carbon tax and use these funds to support climate change initiatives such as installing renewable energy sources (solar, wind, geothermal) for all existing provincial and educational buildings as a start. Close UCP "War Room" NO MORE CORPORATE HANDOUTS!!!!!!!!!!!!!!!!!!!!!!	Small business start-up grants. Promote small business, Alberta film industry, IT, renewable energy.
T6K	Healthcare, education, infrastructure.	Stop forming boards and committees to figure things out that people already know. Stop concerning yourselves with just ALberta, we belong to a country. Please stop giving our money to large corporations.	Education, help people develop professionally.
T9H	Education, Medical, Emergency services	remove none needed positions instead of reducing/removing programs.	Diversify the economy to not rely so heavily on the oil and gas jobs. Invest in new alternative energy's like geo thermal or solar. Increase funding to post secondary schools to create a better work force.
T8L	Increase funding for home educators because we save the government money! We deserve to have an increase in funding, so we can provide the best education we can to our children. More teachers in brick and mortar schools, lower the classroom size and give more funding to schools in general yo help schools hire teachers and help. Not all students learn the same way and the ones who struggle are falling through the gaps left by lack of funding. Increase spending for healthcare. Wait times for procedures are atrocious. People are going to die before they even get the diagnosis they need let alone the care. Private healthcare is NOT the way to go, we need to spend more on healthcare so everyone has access.	By not giving out a tax break to multi-million dollar corporations. They don't need the money. The rich do not need the rich helping them out. They're already rich!	By investing in healthcare, social programs and education you'll spur job and economic growth. You cut so much funding to all those areas which cost Albertans thousands of jobs. That said, you won't listen to anyone with these surveys, you have your own agenda to put money back into the pockets of the rich with your corporate handouts. You hoped they'd use that money to invest in Alberta but they used that money to increase the pay out to their shareholders. Something that we all knew would happen.
T2p	Health, education, infrastructure	Shut down Canadian energy center. Reduce number of paid panels, make voluntary instead	Increase investment in diversification
T1a	Education is how a society moves forward. Invest in diversifying our economy.	Uncertain. Perhaps float the oil sector less	Education
T6L	Child care!	Carbon tax, eliminate 25/day daycare	Diversify economy and invest in technology, support child care funding

	Socially responsible ones, not just the ones that will make you look good to people who dislike Trudeau.	While I think looking over spending is important, and 'fiscal responsibility' is also important, creating an undue panic over our relatively small provincial debt and using that to justify making changes that benefit a select few and harm many is probably not ideal.	Seeing protesters as people and not as some imaginary enemy might be good. Actually caring about the people that your decisions are impacting and analyzing things from the perspective of those less fortunate than you would be an even better start. I know making these massive decisions is hard, but being callous, vindictive and fear- and hate-mongering sets a dangerous tone for everyone and is not conducive to growth in any setting.
T3A	Health Education infrastructure	Electricity/ by solar panels	Diversifying the economy Tourism IT manufacturing
T8A	Education.	Nurses salaries.	There appears to be inflation of credentials in a lot of job postings. People are asking for education which is not actually required to do the job. This likely limits a lot of good candidates -they are not applying or receiving jobs that they are capable to doing (i.e. low-mid level administrative jobs which ask for a masters degree). Also, higher the retirement age=less jobs for our youth. Maybe if our youth could afford to move out, our senior wouldn't have to work so long. If the kids could afford to should support the parents, they wouldn't need to work. Balance is off.
T6M	Education, health care.	Cutting front line staff in hospitals, schools or care facilities is not the answer. Teachers, nurses and support staff are the heart and soul of our province. If you aren't focusing on the greater good, families will pay the price. Savings should come from cutting administration costs, and the focus should be on running these ministries more effectively. I think about the number of consultants and senior managers out there that haven't been in a classroom or a hospital or care facility in years, or ever. If things were more efficiently run, we would save money and be able to invest those funds in the future of our province.	Refocus our priorities outside of oil and gas. Alberta needs to diversify its interests and find new ways - sustainable energy, tech sector - to make our economy strong again.
T0K	Smaller classroom numbers, ratios are out of control. Better calendar of grade 12 exams, everyone has to account for the last day of school happening on a Monday, June 29. No extra curricular tournaments province wide for 3 days (Thursday, Friday, Saturday). Province wide ban on this.	Become self insured, every government building should be self insured. Your making local school divisions pay money to insurance company's that can set the price for coverage. With the money you save you could build new schools.	Government should help smaller communities with economic growth by providing infrastructure funding to help place school in new locations. Providing funding for sewer and water would help small communities grow there tax base without huge costs to the municipalities. Rebuilding on existing sites in some cases doesn't address parking, safe cross walks, and enough green space for kids to play outside.
T3K	More money for homeschoolers	Not using plastic and therefore saving on recycling	Give Canadians born and raised here priority.
T6N	Priorities of spending should be focused on areas which creates profit, accelerate and stimulate business, economic activities, the areas of business activities that will produce synergetic effects in terms of fostering jobs and economic growth.	Reduce all unnecessary bureaucratic - administrative jobs that do not have direct, explicit impact on job cration.	Government should financially support, inject the funds into business which have good prospective and provide, prove they have tangible ideas and projects that will generate income and financial growth.

T9S	Reversing the Corporate tax breaks and keeping money in the pockets of working Albertans. Essential Services and Education.	Reversing Corporate tax breaks. Upper level management rollbacks/cuts. Cutting federal equalization payments, especially to the provinces that don't support our industries. Take money from wealthy corporations instead of cutting jobs and wages.	Lift the hiring freeze for public sectors. Don't touch our wages. Take money from wealthy corporations instead of cutting jobs and wages.
T0H	Health & Education	Why not a salary wage freeze for government officials. Less travel expenses- what did Canada receive for travel to India-Sweden-	More incentives for business to hire people.
T6L	The government should have its spending priorities be public healthcare and education. Our education system shapes the future of our province, as our teachers are training the kids today that will be the adults tomorrow, that will be the leaders of tomorrow. Cutting back public education funding does everyone a disservice. Public healthcare is crucial as well; proper staffing levels provides safe care to sick patients. Cutting funding and nursing staff creates a less safe workplace and increases staff burnout.	Government could find savings in cutting back how much government officials are paid. They could also cut back in healthcare management and wages specifically for healthcare management and administrators.	Help push the pipeline through, and don't sell off to foreign investment.
T4R	Core spending, health and education,	Less government	Continuing to creat an environment that is attractive to investment.
T2E	green energy, public transit, cleaning the environment	get rid of the 'war room' cut government salaries (of the premier and others at that level)	promote the green energy sector, lower tuition to all secondary educational institutions, hire more health care workers (nurses and all), encourage more education in trades, support teachers - hire more, lower class sizes
T5r	Health care and education	Stop giving oil companies tax breaks, and perhaps tax them properly. Also increase the tax on the ultra rich	Look to diversify the economy instead of focusing on the dying oilfield.
T3K	Education (at all levels), healthcare and infrastructure. Schools should be properly funded without the worry of whether they can afford the teaching staff or supplies after the release of the budget. Ensure that this province is a leader in all sectors. Proper funding is the way, not cutting and then wondering why performances were poor.	The War Room needs to go. It's a colossal waste of money. Don't provide corporate handouts to private business. Stop suggesting a referendum on equalization is needed. It's not and would cost tax payers a stupid amount of money, which could be better spent elsewhere. Stop cutting essential services. You should be questioning how to improve our quality of life rather than hacking and slashing things Albertans need.	Build a North Calgary hospital and other important infrastructure projects. Increase subsidies for other forms of energy production, like solar. Consider building a nuclear power plant in the province to expand grid capacity and give coal workers a new industry to transition into. Become a province that cares about industries beyond oil and gas. Diversity is key. Stop giving money to companies who aren't assisting in the vision of keeping Albertans employed.
t1w	Health, Education, tech futures and infrastructure.	The war room. It is not necessary and is a waste of money. Also stop taking control of public sector pensions.	Through investment in new technology, green jobs, and infrastructure. Stop pumping money into
T3M	Health, Education, Social Services	Taxes and Royalties from Oil companies, get rid of war room.	Diversification of oil industry to building our own refineries. Agriculture
T6K	EDUCATION, HEALTH CARE INCLUDING MENTAL HEALTH, RENEWABLE ENERGIES	Increasing taxes. Increase the sale tax by 1% ffs	BY NOT CUTTING EDUCATION FUNDING LIKE A BUNCH OF SKEEZEBAGS
T6T	SCHOOL AND HEALTHCARE. It's a no-brainer guys...	Collecting taxes from billionaires and millionaires. Collecting owed taxes from oil and gas.	Support growing new industries. Bring in tech, renewables, film. Stop propping up a dying oil and gas and accelerating climate change.

	Focusing on the social wellbeing of Albertans - Education, health care, early childhood, family supports etc. Investing in early childhood is protective throughout the lifespan. It's hard to measure what you prevented by investing in family supports and early childhood, ensuring that a young child's developing brain is nurtured. Supporting broken adults from the age of 18 to death is incredibly costly and there are many children whose lives would change course with even minor supports in place for a family. There is plenty of research that has found that the presence of even just one caring adult is more important than the absence of adverse childhood experiences (ACEs). So if a young child is experiencing adversity, support from a caring early childhood teacher or social worker, nurse or support worker of any kind can and has changed the trajectory of that person's life.	The Government chose to lower taxes for the largest corporations in Alberta. My family owns a small, family business and was not affected. We weren't hoping for a corporate tax cut either. Raising corporate taxes, especially taxes for the companies that make the most profit annually, is a great way to find savings which could then be invested in supporting ALL citizens. I know this is not a very traditional 'Albertan' view, but it's valid, nonetheless. I was born in Alberta, raised in Alberta and am now raising my children in Alberta. I know plenty of people who echo these sentiments. But in oil country, it's not always safe to speak up.	Humans that are thriving have the capacity to dream, take on challenges and accomplish things. Families that are just getting by don't have time or energy to do much more than that. For example, my husband and I are average, middle class, working Albertans. We would not be utilizing many of the benefits the government has in place for lower income families. That said, we're not swimming in money. We represent a lot of Albertans. When the government trialled the \$25/day daycare in our area, it changed our lives. The difference amounted to about \$1000 per month which we were budgeting to spend and then didn't need to. This financial change is what allowed us to start a small business. We would not have been able to make it work without the \$25/day daycare grant. Just getting through each month would have been tight financially. We thought about one of us staying home instead of working to get through that time period. Instead, we started a small business which created jobs in our small town and now, 17(1) , it's a successful small company that provides meaningful work for a few residents. We credit the government's ELCC grant with having given us the little bit of financial wiggle room to be able to think beyond basic needs and take on the risk associated with launching a new venture. We will forever be grateful.
T3E	Education (K-12 and post-secondary institutions), Healthcare, carbon emission reduction and saving the environment.	Eliminate the Canadian Energy Centre and stop wasting time fighting the carbon tax.	More aggressive taxes for large businesses and those making over \$150k a year. Stop believing the myth of trickle-down economics.
T8L	Spending priorities should be spent on retraining oil field workers to new positions, money should be spent on tech and renewables to put Alberta at a real advantage to the world. We should be a leader in new energy. We have the talent, workforce and commitment to do better as Albertans.	The government should save in stopping bailout money to oil companies, who have already decided it was time to leave due to the economy and world pressure on renewables.	Retraining o&g workers, capping tuition, investing in technology.
T7S	Health, education and paying down the deficit	lower wages for government workers, especially management and higher. Fight the equalization payments.	fight for our natural resource sectors.
T3k	Public services, healthcare, environmental protection, public transportation, safe injection sites, natural disasters relief, economy diversification!!!	Stop paying oil billionaires. Stop wasting money on cronyism nonsense. Build local jobs and invest our money with a BIT of forethought.	DIVERSIFY. Oil is not going to save us. Neither will the "Trickle Down Economics" scam cons have been peddling. Stop rich tax breaks and actually help workers
T8N	Health care and education	Get our cooperate tax back to where it was	By investing in Education and Health care. Lets stop pretending that the government can control the economy with the price of oil where it is.
T5R	Education - fund enrollment growth. Fund for inclusion. Health Care - more GP's are needed.	Increase taxes to those who make over \$200 000/year.	Fund innovative projects for alternative forms of energy.
T5A	All services! They are the heartbeat of our Country!	Wage freezing and cuts are not the answer when cost of living continues to increase! Service Professionals are now the working poor! Please stop!	Hire more homeless to clean up our streets and our city!
T2W	Mental health, jobs, affordable housing, diversifying economy, affordable post secondary education for all -	Public service sick days, don't stay at Chateau Lake Louise - find a more economical hotel, government expense accounts, government 'entitlements'	Diversify economy invest in alternative energy, refine the oil here, have a well educated population

T1P	Homeschooling funding rise.	Make the current divisions accountable for every dollar.	Maybe realize that parents who homeschool should get a large tax break or split the income coming into the home between the 2 parents.
T3L	Maintaining access to ESSENTIAL services including health care, education, social assistance, and disability services. Prioritize funding to companies working on research and development projects that will bring Alberta to the forefront of other industries (including local AB energy companies working on things like carbon capture, safe bitumen transport other than pipelines, alternative extraction, alternative energy).	You need to look closely at the middle-management level of government-- ADMO offices, DM offices, etc. Cutting back your front line hurts Albertans and does nothing to save (when you terminate a \$40,000/year position, it does much less than terminating a redundant \$100,000/year position). There are managers without teams beneath them collecting salaries for duplicating the work of front line. These offices are inefficient, cumbersome, and problematic to the function of government-- eating up valuable financial resources better spent on maintaining services Albertans need. As our own Premier said-- you can't get blood from a stone, so milking the poor for budgetary savings makes little fiscal sense.	Stop promoting trades as a viable career path when there are no jobs for those graduating from programs (welding, oilfield services, etc). Promote educational programming and monetary supports for those wanting to re-train in IT, Research and Development, etc. Focus on promoting industries working to provide alternative economic options for this province (R&D, technology, renewable energy).
T5T	Healthcare and Education	Higher tax rate for corporations, and higher tax rates for the wealthy.	By investing in green energy, diverting away from a limited source. Investing in infrastructures in cities/towns. As well as if there is increased spending on healthcare and education more jobs could be filled in those areas.
T0a	More funding for homeschool families. More funding for midwives	If there is more incentive for homeschooling more families would do it. Homeschooling saves the government thousands of dollars but costs the families so much more than they receive. Midwifery is way more cost effective than hospital stays for low risk pregnancy ¹⁷⁽¹⁾ There are so many women who wish they could have a midwife and a birth centre birth but the wait list is too long. With more money put towards midwifery more people would utilize it saving the government thousands of dollars and put the doctors trained for high risks birth to better use and free up more of their time.	I think more jobs that support mothers would significantly help. When mothers feel their pay check is making more money than the cost of childcare then more mothers would return to work. This would mean Canadian citizens being able to work. Which means more money going back into Canadian economy. Heavily taxing is also not beneficial to Canadian economy, it takes money away from people being able to afford to support local companies. I often shop outside of Canada because Canadian pricing is too high for handmade and local items. Where I can find similar items in other countries. Encouraging people to shop local would help increase jobs and the economy. But when majority of people are living pay check to pay check they will not be investing in smaller more expensive business.
T5Y	Education and health care.	Government salaries.	Stop relying on the revival of O&G and attract other/new industries into Alberta.

	Support for those who need it, such as AISH should really be maintained and at a level that actually makes a difference and accounts for inflation. Continued support for post secondary education and research institutions is essential for helping to continue our growth and progress as a society. Public education should always be an actual priority and not just buzzwords without any meaning behind them. Teachers do an incredible amount of hard work and this government, currently, is doing its best to show how little they are appreciated and how stupid it thinks its followers are.	Not paying for a war room or offering corporate tax cuts or bailing on the carbon tax... good options. Offering to take some salary cuts at the very top might not make a huge difference, but it would at least make everything else feel less like a sham. And, y'know, raising taxes on the wealthy might be something to not just dismiss outright because that's where campaign funds come from.	Listening to economists about how ridiculous a trickle-down economy is might be a solid start. Support research and start ups in alternative energy so that our economy is not so tied to a boom and bust cycle that seems to be in a constant bust and all reasonable voices indicate it is really unlikely to boom again. Let the public service sector do its job without the cuts. Maybe support diversity in all parts of society.
T4V	Public services. PUBLIC healthcare and education, as well as affordable childcare and supports for families and elderly.	The "war room" which has not made any jobs. And raising taxes for large corporations.	Diversify our economy and give incentives to start small businesses
T3e	Debt reduction, healthcare wait times, health care surgery wait times, seniors health care.	Government office jobs, government wages.	Small business incentives, new business incentives.
	<p>Social programming. The cuts to programs that assist vulnerable Albertans are unethical.</p> <p>Alberta Justice and the Courts are heavily impacted, at the expense of victims and hardworking staff (ie: Prosecutors, Court Clerks, legal assistants, etc). The overall impact on the administration of justice has already been identified, matters are being stayed or withdrawn due to lack of resources.</p> <p>Post Secondary Education. The cuts are at the expense of students who are working so they can contribute meaningfully to the Alberta economy. Let go of the emphasis on oil workers and look at alternatives that can support the economy</p>	<p>CORPORATE. TAX. BREAKS.</p> <p>Get rid of the "war room".</p>	Support post secondary students who are getting ready to enter the work force.
t6j	Education and renewable energy	Instead of saving, invest more for the future.	Support nuclear energy and mining for thorium.
T8N	Health, education, public services, and public transit.	Not giving away billions to corporations. Close down your 30 mil energy propaganda machine.	Support green jobs, invest in education, not trickle-down economics.
T5T	Education funding, affordable housing, prescription coverage for low income adults without having to 'have ongoing cost' to get it	their salaries, higher taxes for large corporations	If people are health and educated they will create the jobs and growth themselves
T2E	Education, Health Care, AISH, Infrastructure (especially city transit systems), Post-Secondary Education, funding for the arts (film industry tax rebates).	Decrease funding for the Canadian Energy Centre, increase corporate tax rate, implement a 3% provincial sales tax.	Grants for diversification of economy (NOT OIL/GAS), increase minimum wages to give more purchasing power to least wealthy
T3h	Environment and public sector	Public service management and top heavy governance. Too many bosses / supervisors	Ensure an even playing field so everyone and every company has to follow the established rules and procedures. Too many are trying to find loop holes and cracks to gain an advantage over their competition. Unfairly
T0B	Health Care, Education and putting people to work.	Look at the Alberta Health Services Sunshine list. Why is there so many VP's, and management positions. Instead of cutting services, programs and frontline staff, look at eliminating some of the 'management' positions.	Get the pipelines built. There is no faster way to employ people than to get boots on the ground in the oil sector.

T8A	Healthcare, seniors and education	The government could reduce the number of provincially run parks but the issue is revenue, not spending. Increase corporate taxes, introduce a sales tax, bring back health care premiums - any or all of those would help.	Diversify! Stop relying on oil. Support innovation in other forms of technology such as solar and wind.
T3B	Educational and healthcare	Their salaries	By joy cutting frontline workers jobs
T5A	Health care and education are the prime areas to focus spending. You need a healthy and educated work force to allow Alberta to have a future. Cutting today will hurt in 2 years, when you need to be reelected.	The governments own spending, trips for no benefit to us immediately, why should they occur. If they should occur then, there should be upfront media discussions on how they can benefit us now or in the future with measurable results. A good example is the WAR room which employs people for no measurable results. There are too many upper management layers for effective department function.	The future growth direction is in tourism, organic farming and green friendly resources. The oil industry which has been our backbone industry is suffering publicly, the view can shift to positive public image if the green friendly sided can be sold world wide to other oil and gas companies. Do to lower costs of engineering and management found outside of Canada (Asia, South America, etc.), there will be no job future there unless we can show the world a better way.
T4E	Diversifying our economy....alternate energy....technology...agriculture	Lose the War Room. Cut back government pensions and perks..... stop paying energy companies to leave our province?	I think the government needs to immediately stop the ridiculous and close minded view that oil and gas is KING and start taking a serious look at diversification.
T5L	Taking care of those who are most vulnerable. This means health care, social services, and education.	Subsidies to businesses, especially large ones.	Invest in a healthy and well educated population.
T6R	Healthcare	Corporate spending	Less reliance on oil & gas, create new industry job with clean energy, become industry leaders
T9S	Education, Healthcare, Social Programs, The Arts, Law Enforcement, Saving our environment, Pensions	Tax churches, increase taxes on the wealthy and ultra-wealthy, make politicians accountable for reckless spending, don't give huge tax cuts to corporations	Invest in renewable energy resources, stop privatization of health and education, reduce military budget
T4P	Education - an educated work force is a long term investment that is proven to pay off.	Get rid of the useless war room, reduce healthcare overtime by hiring more workers, institute a 2% provincial sales tax.	Explore possibilities beyond oil and gas, cut taxes for small businesses, give incentives to tech startups and game studios
t6t	The government should focus on providing quality public services to the taxpayers. Investing in healthcare: geriatric care, increased facilities for elderly, increased healthcare access and incentives for working in rural communities, preventative measures for community disease screens Diversify the economy by shifting focus AWAY from oil into other industries such as Tech and renewable energy. AB should make itself a diverse province with incentives for small businesses and start-ups. <u>Tackling climate control and our carbon footprint</u>	The government can stop providing hand-outs to corporations and invest in the working class.	Invest in new ideas: technology and renewable energy Provide incentives for companies to be based out of Alberta through tax breaks for small corporations Provide incentives for projects and research working on renewable energy sources
T2T	education & health care	making sure that the tax payer money is well managed by the public sector	diversify our economy (more than just the oil & gas sector)
T5L	Education, health, homeless population, and seniors. Supporting small and medium sized businesses.	Taxing businesses and people with large incomes & reserves.	Support education, fund innovation, and stop leaning on trickle-down economic theories.
T8A	Healthcare and helping the disadvantaged	We need to increase taxes to match the rest of the country, Alberta's tax system is unsustainable for growth and the protections we want in healthcare for when we get older.	Use innovation and move us away the oil and gas dinosaur model, I have lost two jobs because of this industry and had to move to something else.

T6w	Health care and education (all levels including university)	Stop giving tax cuts to big industry. Cut the salaries and pensions of The MLA's. Shut down the war room. Stop challenging the carbon tax in court and wasting money on court battles	Focus on green energy and technology innovation. Stop trying to bring back dead industries like oil and gas.
	Health care Diversification of economy Public education	Cut energy war room Increase revenue by adding sales tax	Grants for startup companies Investment in technology companies and renewable energy Stop cutting health care and public sector jobs
T2E	1. Education, from early childhood care facilities to post-secondary institutions 2. Health care 3. Infrastructure, specifically public transit	1. By overturning tax cuts to large corporations, especially ones not headquartered in Alberta, whose manufacturing occurs outside Canada, or whose products are delivered mainly to destinations outside Canada 2. By dismantling the "war room"	Yes, by 1. Increasing spending in education in order to build up a tech sector (funding post-secondary education programs in computer science, industrial and mechanical engineering and design, and related fields; funding hi-tech research programs; funding STEM programs in primary and secondary education) 2. Fuelling the tourism industry by increasing public transit options to Banff, Jasper, and other tourist destinations and from Calgary and Edmonton airports, and by expanding highways leading to the mountains
T5s	Public education rather than spending it on private and charter schools. Public health care and keeping nurses on the front line. Fire fighters and police. Firing thousands of teachers, nurses, services isn't making life better for Albertans or our future. How is that creating jobs in Alberta if your letting go thousands upon thousands of people?	Stop giving money to bigger business and corporations. Perhaps look into your own government and how much everyone gets paid/spends. Maybe we should have kept carbon tax in our own backyard rather than give it to the federal government	Look into other ways of us making money other than oil. We shut down coal mines, are we able to bring that back? Introduce a small provincial sales tax to help. I would be willing to pay if that meant we could use the money to help build our economy.
T6E	Sustainable, long term investments. Education, health care, "green" technologies, diversifying the economy, public transit. Also anything that helps those who have the least, which includes all of the above as well as social care programs.	This is the wrong question, instead ask where the government could find revenue. Increasing taxation on unsustainable industry as well as increasing the amount of tax paid by large corporations and wealthy individuals. Scrapping the "war room" would also do a lot of good.	Through education and encouraging sustainable industries.
	We need money for education, healthcare, and the arts:	Actually taxing corporate Alberta!	Diversifying albertas economy beyond the energy sector.
T2S	Diversifying industry.	Attempt to use more facilities / buildings as mixed use spaces. Have government organizations/positions that try to make a profit.	Tax breaks for companies that help diversify our economy. The tax breaks are only given if they provide quality positions over multiple years. i.e., if a job can provide 50 jobs that pay \$85,000 over a period of 5 years they can have tax breaks.
T1k	Health for seniors and children/Education / Economic and Environment	Minister's salary should be capped (retirement pay be limited to a max of five years verses life) Stop giving gas companies tax breaks ,force them to pay what they owe	Start looking at increased supports to seniors(residential, independence and overall health). Research environmental sustainability . Increase in addiction services/ tighten criminal justice get the addicts off the streets. Increase attention to dental health of all Albertans
T9E	Education, healthcare	Increase taxes, or add a provincial sales tax	Provide programs for retraining, grants for businesses who actually hire new staff

TOM	Healthcare, hire more Registered nurses to increase safety, help reduce burnout, fatigue, and the huge expense of paying overtime. Education, reduce class sizes, hire more teachers, invest in our future generations.	Look at healthcare overtime spending, it's a chronic daily occurrence. Our current system is stressed to the max and running on thin resources. Staff are burnt out and working short handed all the time. Hire more nurses, increase the staffing levels on the frontline. Reduce the layers and levels of management and the time they spend in meetings.	Get the pipeline going! Hire more nurses and teachers, invest in healthcare and education to take care of our population.
	Education, we cannot freeze the current budget amount for Education when we know we have an influx of new students each year. The government needs to account for growth. We need to put the needs of our younger generation first. They are the future leaders of our province and we need to ensure that they learn how to be critical thinkers and lead. We need to provide early intervention from K-3 and provide SLP, OT, PT, Ed Behaviour, Psychology in the early years to help mitigate their struggles to assist them with reaching their potential. If there was a standard of service for K-3 then the students would not require as much intervention/service as they age. Research shows that intensive early intervention makes a difference.	By taxing businesses, not providing tax breaks to large corporations. The government needs to lead by example and cut some of their middle management and stop the legal challenges to the Carbon Tax act. We know that other provinces were not successful, why are we wasting taxpayer dollars on this?	Set priorities and provide incentives for the IT sector, small businesses. We need to diversify the economy, but not at the expense of public services.
t5t	frontline health and frontline education	reducing top heavy administration, and huge salaries of those high up in administration for health and education	get the pipeline built
T9K	Health care, Education and infrastructure spending All 3 get people back to work and generate a good ROI for the province.	End funding to all the partisan foolishness. No more War rooms, no more blue ribbon panels, no more funding private/religious schools, no more cancelled contracts that have to be paid out or fought in court.	The same way jobs are created by any government, build infrastructure, invest in secondary and post secondary schools, clean up orphan wells, pull tax credits from oil companies and give them to new companies to diversify the economy.
t5m	Healthcare, create the jobs we need instead of cutting jobs and hobbling the system with cuts. Keeping the safe injection sites to stop countless deaths and hospital resources.	Stop giving tax breaks to the wealthy and make political salaries responsible	Regulate insurance companies, land lords, child care and DO NOT privatize healthcare or the lab.
	More money to schools and health care (hospitals). This money should be given to the front line workers (teachers, EA's, OT's, PT's, SLP's, Nurses) to allow for smaller classrooms and more support for children.	The government can still save money within the school districts and health care systems by cutting positions at the top. For example, there is no need to have so many managers in one unit at the hospitals.	Yes
t8n	Maintaining per-citizen health funding and per-student education funding, accounting for inflation. Reversing public sector layoffs. \$25/day daycare province-wide. Adding more fully-staffed safe injection sites. Enforcing payment of tax and reclamation liabilities on oil companies.	Tax the rich. Increase corporate taxes and recoup the \$4.7 billion+ of revenue that you gave away in a tax cut. Eliminate the war room.	Eliminate all subsidies and tax breaks to fossil fuel companies. Adopt Green New Deal principles. Invest in green technology and re-training in green technology fields. Invest in K-12 and post-secondary students so that they will be armed with the tools to thrive in the economy going forward. Bring back \$25/day daycare and expand it province-wide so that vast numbers of women can (re-)join the workforce and start companies - this will also increase income tax revenue.

T5R	The government needs to focus on fully funding public education, including supports for diverse and inclusive class rooms and growth in student numbers.	The government could save the good taxpayers of Alberta \$30 million by cancelling the ill-conceived and poorly executed Canadian Energy Centre.	The government should consider not only the benefits of oil & gas job creation, but also the negative economic consequences of significant reductions to the public sector workforce. Public sector workers pay taxes and spend money in the economy, also.
T9A	Spend what it takes to get oil and gas industry back on its feet, wherever that spending needs to be	Too many of our systems, meaning health care etc. Are too top heavy. The government could get rid of a lot of useless and unnecessary management positions. That would enable them to maintain front line workers.	Possibly by subsidies, or by low interest loans to oil and gas companies in particular to get this province back to work. Our oil and gas industry is the backbone of our provincial economy and needs support from our government.
T0C	Maintaining/improving front line staff. Do not reduce budgets to health and education causing nursing and teacher cuts.	Middle management	Support green energy programs as they support the oil industry.
T4C	Health care and education. Two main necessities in this province which do not need cutbacks.	High cost management positions.	No job cuts. Have a health care premium minimal cost to individuals and families.
	Definitely ensuring people are properly supported during the hard times while being fiscally responsible for the money we currently have.	Government should start exploring other methods of funding such as paying for results and outcomes instead of paying for good intentions. A lot of money seems to be thrown away and there is no or little accountability. In addition government should not be afraid of complaints. It is expected. Another way to find savings is to start weeding out from the public service. There are individuals in the public service who do the bare minimum and frustrate those who are more willing to do more work without demanding more. Some are so bad they cannot write to save their lives or understand how the government works. It demoralizes the good people and they leave. You should also look into those who are always on some sort of work leave.	First off the government needs innovation and investors to come. The government right now has been portraying itself as a mess and in desperate need of people to come to Alberta... Attitude needs to change to make us seem more desirable by focusing on positives why people should invest instead of being angry at the federal government.
T2V	Healthcare and innovation for new business and industry	Cutting back on city funding of transit. City of Calgary budget for transit is 243,000,000 dollars and there are many inefficiencies in the system. Buses run empty all day in many neighborhood, high frequency of routes in communities with minimal ridership, large buses run empty while smaller more efficient buses would save money. Many areas of waste within city transit.	Innovation and new industry. Technology.
T3B	Health & Education Public Transport between major cities	Give less to oil companies	Give us a provincial sales tax already! Alcohol tax

T3B	Continue funding for the feasibility study for Bow Basin Water Management Options, the only viable way to prevent flooding in Calgary and the Bow Basin (upstream mitigation). Ensure the renegotiation of the TransAlta modified operating agreement during flood season for the Ghost Reservoir since mismanagement of this infrastructure was a major contributing factor in both the 2005 and 2013 floods.	Dismantle the welfare system and provide a minimum income to all citizens of Alberta, thus providing the disadvantaged with real opportunity and independence and reducing the civil service in this space. Allow private health care services that cannot use the public infrastructure, allowing those who can pay to free up space in the public system - a win/win for everyone.	Consider a separation referendum immediately in order to put maximum pressure on the rest of the Federation to act in the countries best interest regarding Energy resources. Maximize incentives to SME (small to medium size enterprise), particularly in the Tech space, but overall, which will open up job opportunity, provide economic diversity and allow the government to reduce public service jobs.
T2Y	Education, health care, diversifying economy.	Not handing out obscene corporate tax cuts to large companies. PST.	Focus on sustainability, not growth.
T2K	Stop financial assault on the poor, disadvantaged, disabled - no righteous society chooses to victimize its most vulnerable. Housing subsidies. Eliminating long medical procedure wait times. Smaller classrooms.	Superfluous government bureaucracy and top end staff earning way too much. Monitor and decrease government spending on personal allowances, payouts, and continued salary/pension after a few years of service.	Diversify. Bring industries unrelated to oil and gas such as manufacturing. Livable salary for all at a shorter workweek such as 30 hours, making more opportunities available.
T6E	Homelessness and low income seems to be a problem in Edmonton at the moment	Taxing large corporations	Diversify our economy, move away from oil production. The oil industry has collapsed we need to move on from that. Alternative forms of energy
	Education and Health	Business taxes	Health and Education sector employment
T0A	Post Secondarys - it's the future of our economy! Stimulate learning, growth and professional development.	Salaries of top CEO's, ministers, hosting expenses.	Absolutely - rebates, economic programs, pipelines, diversification
t2m	-Energy Efficiency and sustainability -Diversifying Alberta's economy -Health care -Education (Primary, secondary and post-secondary)	-No longer providing tax breaks and subsidies to large oil and gas companies	-To invest in diversifying the economy beyond traditional oil and gas. This includes renewable energies, technologies and innovation
T3H	Film and television industry. This is a huge job creator in our province. Public schools and health care. Especially safe consumption sites.	Within government itself. Construction redundancy. New market for recycling. Carbon tax.	Look to a sustainable future for our environment. The future is new industry
	PEOPLE, NOT PROFITS! public services education healthcare eldercare Infrastructure	dismantle the "war room" install a sales tax	Stop eliminating Public Service jobs. Stop following a failed economic platform: trickle down doesn't work!
T2S	- Post secondary education - Funding for school boards	- Cancel the fair deal panel - Cancel the war room on Oil And Gas promotion	- support tech companies coming to Alberta - Support the creative industries - Retrain Albertans out of work
T3K	Education Healthcare	Increase corporate taxes, not decrease them	Increase funding and support for the tech sector and AI development to draw companies back to Alberta. We need to be known for more than just oil and gas.

T5I	Now that we got the pipe in progress in BC the next important thing is the idiotic tanker ban.... and also this stupid carbon tax.	From what I read I see that 96 percent of the new migration from 4 years ago is still sitting on welfare. Make a time cut like ei. If you can't get a job after TWO years then you got a problem. 17(1) don't understand what is happening to this country.	Tax cuts. I know you guys are already doing it and I love you guys for this already. But it makes sense. less taxes so you hire more helpers who all pay taxes too. So you collect less from the individual but the volume is raising so you get more in the long run.
T6H	Health care, education, supporting high needs and vulnerable individuals.	First of all, we have a REVENUE problem more than a spending problem, and if the government continues to deny that, they will be on the wrong side of history. Their corporate tax cut has been an absolute disaster. Do not assume that your citizens are so stupid that they don't understand the different between studying the economy vs. only studying where cuts can be made.	DIVERSIFY THIS ECONOMY. Why have you taken away all incentives to support growth in the industries that are the future? Efficient home renovations, solar installations, all of that is gone thanks to this short sighted government. Again, the UCP seems happy to sail along in ignorance, knowing that oil and gas is in the past. Economic diversification is the key. Support people to retrain.
T9S	Healthcare and education. Privatization of healthcare and education may save government money but it is at the expense of direct services to citizens. It is a terrible idea. The main role of the government is to provide services for the people. Healthcare is the most fundamental right and we should strive to protect it. The government should look at increasing revenue from investments rather than cutting services.	freezing wages for politicians (just like they are doing to everyone else), discontinuing tax credits for large corporations. Less meetings and more action. Stop re-branding.	Continue the \$25/day daycare. Families cannot go to work if they cannot afford quality care for their children. Construction projects can create more jobs. Investment in existing energy markers and expanding into alternate energy markets.
	The government needs to focus on public services. Education to look after our next generation and health for all. We cannot make cuts to front line services.	I think the government could find savings by taxing businesses, and also by looking into Alberta Health Services which has too much middle management (without a direct front line benefit). Within AHS there are Team Leads who often don't perform any front line work, managers, directors, etc. Are all these layers really required? We need to think outside the box. Perhaps school boards don't each need a superintendent (can one superintendent look after all Edmonton schools?). Also, many positions within schools don't touch students directly, such as curriculum consultants, etc. There are also many small elementary schools, and each have a Principal and Assistant Principal. Could 1 Principal oversee multiple sites and only have APs on site? This would be a huge cost savings.	The government needs to support the IT sector, and other sectors that are not dependent on the oil and gas sector. The oil and gas sector also needs to be held accountable and pay their share of taxes. We need to diversify the economy.
T4N	Healthcare and healthcare workers Drug coverage for seniors	Increase taxes on big businesses stop giving huge amounts of money to those same businesses.	I can tell what doesn't work, cutting salaries of public employees and stealing their pensions. This was a disgusting and cowardly act on the part of the UCP. You will not have my vote again.
T3E	Infrastructure, students, social services for seniors and low-income earners.	Reducing economic disparity gaps in public service wages, by reducing top end wages and allowances. Remove or reduce the million-dollar severance packages for public service workers. Reduce ei benefits for those who made \$50,000 or more in income, in a single year.	We have jobs, please support nanotech, animation studios, renewable energy and profitable use for recycling and landfill (Sweden energy)
T2Y	More for Health Care, Education and job creation.	In government offices. Axe middle management in government. Corporations have done this successfully over the years.	Put money into education programs, specifically trades. Focus on STEAM and give companies incentives for hiring new employees.

T2A	Education	MLA salaries	When it is feasible, govt should support/assist
	Public services: education, health care, programs.	Ending corporate tax cut/handouts.	Policies that support economic diversification.
T4C	Social supports to communities and families. Strong supports reduce future costs and keep people functioning.	provincial sales tax. Higher sin taxes.	Increase infrastructure spending to stimulate growth. Focus on growing areas other than just oil. Take a step back from sinking money into a dying business for now.
T8h	Health and education	Less tax cuts to large corporations	Diversify in the economy, invest in green technology companies as well as oil and gas, don't put all your eggs in one basket.
T6J	K-12 education, advanced education and health care.	The provincial government itself has grown too big over the years and has experienced significant program creep.	The whole concept of providing corporate tax reductions is one that does not necessarily provide the results that were intended. This government must be very careful in how it structures that.
T3G	Diversifying the economy. Alberta has leaned on its one-trick pony status for too long, and the world is changing faster than us. We are being left behind.	Shutting down the War Room.	Again, diversifying the economy. Courting future development in forward-thinking industries. Places like Houston are able to weather the fluctuations in commodities because they have strong healthcare and insurance industries. There is no reason why Alberta can't be strong in multiple areas.
T5X	Education	By cutting their own expenditures	By stopping the cuts
T2G	Stop subsidizing big oil with our tax money at the expense of critical public services. The tax bracket creep is extremely cynical and hypocritical of a government that prides itself on low taxes - reverse it!!! shut down the disastrous waste of 30M/year called the Energy War Room. HANDS OFF PENSIONS	index Jason Kenney's and the rest of the Conservative party salaries to jobs creation performance. stop wasting tax payer money on trips to London and Mexico	index Jason Kenney's and the rest of the Conservative party salaries to jobs creation performance. invest in infrastructure. fund things like the X-games that bring a clear overall economic benefit. bring back NDP economic diversification initiatives
T2K	Public transit	By raising corporate taxes to what they were in 2018. Also cut the "war room"	By financing green energy infrastructure projects like nuclear power, public transit expansion and inter city passenger rail
T5A	Education and health care. Seniors and special needs. Infrastructure	Not giving breaks to corporations and cutting others in need to fund it.	Yes
T2J	education of all levels & health care	Their pockets	The more people that are working the less they rely on government funding for support.
T8A	Affordable childcare, stabilization of funding to education and healthcare	Eliminate the "energy war room", drop legal challenge against federal carbon tax Stabilize revenues through the introduction of a GST.	Stop pitting industries against one another. Eg. Nurses and oilfield workers are both valuable to the province and firing nurses will not bring back oil jobs. If anything you will drive entire families out of the province who now will have two unemployed adults in the household. Focus on value-add economic opportunities rather than raw natural resource sectors. Eg. refinery capacity, bio-products, agri-processing Work with the federal government in gaining more access to new markets for Alberta goods and products apart from the US. Work with other provinces to reduce internal trade barriers and promote economic growth across Canada.
T2N	Health and education. Put money in but streamline for efficiency.	Salaries of MLAs and other top executives.	Diversify Alberta's economy. Support the growing tech and fintech sectors. Also the environmental sector.

T6G	Health care and education front line workers (doctors, nurses, teachers). Also we should invest in alternative energy because we need to diversify and not be so dependent on oil (and the boom bust cycle)	It's not so much about cutting but finding ways to make money outside of oil.	Diversify our economy
t4l	need to have balance across all ministries.	reduction in management positions - not front line workers.	identify and address gaps that would support job creation and growth. this will vary with sectors. government should take responsibility for the policies, processes and mechanism that will support job creation and growth.
T0E	To improve on highway maintenance. Increase the budget.	Cut the canibis. Get people back to work.	Increase income for house hold. Increase budget for highway maintenance.
T3A	Supporting ALL vulnerable Albertans and stop stomping on them. Fund education (not freezing it when Alberta continually gets new students), fund health care, fund AISH, fund women's initiatives, fund mental health, fund elder care, look at real prevention programs instead of bandaid solutions	Implement a sales tax now; stop subsidizing private companies	Stop cutting public sector jobs; ACTUALLY diversify the economy.
T3B	Health care and education - both of which need an appropriate response to managing funding. Not the usual slash funding and then trying to go back and fix the problems that have occurred after funding cuts. Continued funding for the feasibility study for Bow Basin Water Management Options and renegotiation of the TransAlta modified operating agreement during flood season for the Ghost Reservoir. This will help protect communities down stream from requiring government funding for clean ups.	In the health care system, why is there never audits of the highest billing services? Why does the health care system not cover some basic costs which would help prevent use of health care services at a later date at a much larger cost. Example #1 - ophthalmologists - Southern Alberta Eye Centre - the amount of patients that are put through this clinic is astonishing. The doctors who work here are also on call for the hospital (Rocky View for example). When you go to emergency with an eye issue, you are seen by an ER doctor who will consult with the on call ophthalmologist, who is being paid by AHS to be on call. But they do not come to the hospital (Rocky View, where you are told to go as this is where the hospital eye clinic is located), you have to go to their clinic. Where they are now being paid for the on call, they are being paid for the consult and they are still running through over 100 patients a day (which makes one wonder what care you receive). So how many billing opportunities are they given? 2. Why would there not be free diabetic medications, supplies? The amount of diabetics that need treatment in the hospital because they cannot afford supplies is astonishing. The cost savings of supplying diabetic supplies rather than the hospital visits and stays would be well worth the change.	The process of keep spending money on committees to study job creation and growth is not the way. Perhaps supporting education, so we have an educated population would help.
T0L	Making redundancy cuts where needed. Home education families save the government huge amounts of money per year, yet are only allotted \$830 per year, per student. An average curriculum package costs upwards of \$1000/year per student, as well as extracurricular costs, like field trips, PE classes, art/language classes, etc.	In its own walls - less staff, etc.	By supporting businesses, and the oil and gas sector

T5Y	Education and healthcare are 2 of the most important considerations not just here but world wide. We need to sustain and improve these areas instead of hacking and cutting away at their budgets. focusing on these creates a future to look forward to.	Cutting political perks such as private transportation. The government themselves taking a lower wage. Get the oilfield back to making a ton of money	once again, get the oil fields pumping.
t0g	Education and Health	Reduce their own ridiculously high salaries and pensions	Diversification and invest in alternate energy sources
	Education and Health	No need for savings-oil revenue would improve with time and make the economy diversified.	Invest more in the education, health, and bring corporate taxes in line with other provinces.
T3m	Education	Finding and eliminating redundancies in government organizations	Focus on education to make sure our next generations have the skills and opportunities to succeed
T9S	Senior citizens- increased health care coverage & increase benefits (funding). Provide adequate coverage of prescriptions. Cost of living has increased dramatically - need to provide appropriate COLA increases to Salaries.	Need to complete a major position review within all levels of the public sector. Review non-essential benefits received by public sector employees. Need to deal with "non-performer" employees protected by the unions.	Diversify. Get the pipeline built!
T5E	Education and healthcare! Stop expecting these teachers, aides, doctors, nurses and auxiliary staff to do more with less! Our population is exploding and our system is not prepared to handle living arrangements for the seniors that built this province! All public services and EMS are at risk, daily of relentless workload increase are at higher risk of disease and suicide when not given a few minutes to breathe!	Taxes must be paid by ALL companies using land and resources! Churches, mosques, temples and building of worship should not be excluded! All oil and gas should be responsible for maintaining roads and infrastructure they use! More support staff to better streamline patients waiting for services to improve communication within health care. More public education about prevention of disease and disorders! Tax junk food! Alberta only lottery. Higher fines and penalties for impaired drivers. Higher fines for commercial vehicle and driver infractions. Mandatory winter, night and highway driving exams for new drivers (class 1 and all others). Mandatory city exam for rural drivers. Encourage more lotteries for hospitals and schools.	More refinery and processing plants throughout the province. There is no need for our resources to leave this province without obtaining top dollar for our products. Promote tourism internationally! Promote and fund technology awards/prizes for innovation
T0j	Economic. Job creation. Seniors and Aish clients having more access to services and better care as well as income. Family incentives to remain in this province. School funding, especially towards children struggling to read and making sure the schools can afford to test and help them properly. Nursing and doctors. Infrastructure and highway maintenance. Reinstating the big country pcn programs that have been cut.	Salaries of our premier and office could be scaled back to be more proportionate to our economic situation. Implementing a small pst would be acceptable to me as well (like 2 or 3%) Corporate tax hikes.	Spending in the right places, like large scale projects they employ many people. Incentives for employers to hire locally and pay fair wages. No more hikes on minimum wage as that just raises everyones cost of living without raising wages. Putting money into important industries like health care and education which will create more jobs.

T1B	-Decrease medical wait times (emergency rooms, MRIs, Pain clinic consults) -job opportunities -infrastructure	-higher provincial taxes on household incomes greater than \$150,000.00 -travel expenses and meal coverage for any government travel	-decreased tax incentives for new promising local businesses that employ 20 or more permanent staff -promotion of local businesses -develop local laws that promote full-time employment (we all know those hiring part-time and temps don't pay benefits) -decrease unnecessary govt spending (individual 'allowances')
	Climate Action (just transition - support for those who are losing their jobs, diversified economy, energy efficiency / renewable energy)	Ask an expert. Economists seem to agree that a carbon levy is a great way to support the decrease of emissions and generate income to support those most affected by the transition. Sales tax on non-essential items also seems to be a decent way to have those who can afford to contribute to the uplifting of society as a whole, which means we are all better off in the end.	Attract ingenuity. Provide strong public education. Provide strong public health care. Provide excellent post-secondary education. And the bright, forward-thinking problem solvers and entrepreneurs might want to be in Alberta! A strong society is a great incentive.
T3N	1. Education 2. Health 3. Roads and community building	Tax big corporations	Training programs
	Healthcare, public education, clean resource technologies and innovation	disband the Canadian Energy Centre. reduce the amount of money government officials can charge for travel. stop sending Kenney to Texas.	invest in renewable resources, creating more wind and solar tech will create jobs. stop propping up the oil and gas industry. times are changing and this government is poised to leave Alberta in the 1990s rather than join the 2020s.
T3E	Diversifying our economy	Health Care. Bring back the small monthly premium we used to have for AHC. I see too much abuse in the health care system. It only clogs the system but it runs the costs way up.	This is a difficult one. I work in the high tech sector and it is booming. The challenge is that in high tech your product is the result of your developers and developers are in short supply. They are in demand and want to live in trendy millennial type cities like Vancouver or Seattle. I would suggest the answer here may be to explore investing in more tech educational programs. Industries may consider setting up shop where the supply of resources are.
	Education and health care	Oil, other corporate entities	Support public sector
T2T	Education and supporting tech startups (particular those focussing on the energy industry)	Not sure	Stimulating the creation of startups and supporting growth companies
T2Z	Health, education, and other social services.	Implement a provincial sales tax, force O&G companies to pay their property taxes, and drop the retirement age to 60.	Invest in innovation, greener energy options, and tech. Stop forcing Alberta to continue living in the dark ages - the rest of the world is already moving on without us. Incenitising small business owners and promoting buying local would also help to stimulate the economy. Dropping the retirement age to 60 would also greatly improve the employment rate.
T6H	Due to the urgent nature of climate change, we should be investing in renewable, sustainable and green energy.	Subsidies extended to oil corporations.	Provide incentives for sustainable and renewable energy companies to start up in ALberta.
T4C	Public healthcare and public education. These are so important for a healthy, informed, and prosperous future.	Within upper management and within government wages.	Not cut healthcare and education.... those are peoples jobs. Not cut major corporations taxes. Help invest in alberta based companies.
T6M	Health care, education.	Rescind recent corporate tax cuts.	Support all efforts to diversify economy away from heavy dependence on oil and gas.

T2Z	Health, education, and security.	Apply a provincial sales tax , even just 1% would give the province a huge regular revenue. We shouldn't just rely on oil and gaz, which is too volatile. The time of \$100 a barrel is gone.	Providing financial support to universities to promote research in new technologies, climate change , environment.
T6J	Health, education, seniors, post-secondary education, working families, job diversification beyond oil & gas.	Bloated government expenditure (i.e. war rooms, panels) ministerial expense claims, corporate payouts.	Stop paying upfront for job creation schemes with large corporations that cannot commit to what those dollars will be used for. Support small businesses and entrepreneurs over large corporations. Encourage economic diversification and innovation to attract new industries such as technology and manufacturing.
T8E	Our government should focus on innovation to streamline services!	Cutting administration in all departments: Healthcare Education Government Public Service	Attract investment Separate from Canada
T3R	\$25/ day daycare, public healthcare and public education, and job creation.	Eliminating the "war room" and cutting tax breaks to the wealthy. Also renegotiating the federal equalization payments for more money.	Focus on diversifying the economy and bringing new industry while keeping the existing.
T9K	<p>Thanks for the opportunity to share my thoughts and concerns about the Alberta budget.</p> <p>First of all the "fair deal panel" and the "red tape reduction" and the "energy war room" are complete wastes of Govt time and tax payers money.</p> <p>They are blatant attempts to silence opinions and studies that question the supremacy and so called perfection of the energy industry, and other policies of the current Alberta Govt.</p> <p>This Govt should be spending less time and tax payers money on all of the above and more time in things that truly matter to Albertans such as treating veterans, seniors, the sick, the young, students, and Immigrants better, as well as respecting the environment and indigenous people while still profiting economically!</p> <p>Also this whole meeting and online comment system is not actually geared toward hearing all options with its short sessions in so few places and online portal. Many don't have good access to or don't know how to comment online especially among rural communities and the elderly.</p> <p>If you really wanted to hear what all Albertans have to say, you would have a lot more sessions in a lot more places, especially within indigenous communities.</p> <p>Also why doesn't this Govt spend less time and money whining about that current and last federal govts are supposedly not doing right or at all and actually do things to help albertans!!</p>	<p>Abolish the useless AER and ACO that do nothing to provide protection for the environment or indigenous rights and do not actually provide certainty for oil companies.</p> <p>Abolish the waste of money energy war room and red tap dept!</p>	Listen to indigenous people and environmentalists!
T0j	Healthcare	Bloated beauracracy	Business incentives to stay in alberta, and tax breaks for small business

T6E	Education, subsidized child care, AISH, health care	Stop giving big businesses tax breaks, raise taxes for higher earners	Stop cutting crucial jobs in the public sector
T0J	Health care Education Childcare	Implementing a provincial sales tax	Tax breaks for business who keep their head quarters in Alberta
T2K	Renewable energy, affordable daycare, health care	Higher taxes for large companies, pay cuts to Alberta cabinet ministers	Incentives for industries in renewable energy sectors
t3m	K-12 Education	Rather than giving oil and gas corporations hand outs you could increase tax rates on top earners	Reduce low and middle class income tax rates while fully funding public services
	Healthcare, education and justice. Children are experiencing increased anxiety and depression. The environmental impacts of stressed home lives and large over burdened classrooms are adding up. Our children are our future. They need access to timely effective mental health support as well as reasonable education environments. The slashing of resources and threats to these public services made by this government is short sighted and dangerous.	Internally. Get rid of the war room, use regular flights, cut out unnecessary staff (reception, janitors, marketing) at the legislature. Lead by example. I would love to see the operational best practice reports from an outside agency on the internal work of the government. Attacking vulnerable people by cutting disability support is not a good look. You are creating a siloed environment instead of focusing on collaboration.	Stop dividing people. Help people to work together. Diversify. Spend war room money on education initiatives for greener jobs. Stop putting your eggs in one petroleum based basket. Stop complaining about how we are treated unfairly and focus on solutions. Listen to the kids. They are worried about the world they will inherit.
T1j	Education, health, diversification of the energy sector	Not give a 4.6 billion dollar hand out to oil companies that just leave... premier take a pay cut.... should have kept the provincial carbon tax.... 2% PST for 5 years	Diversify the energy sector, not lay off public employees, have Grant's for companies hiring apprentices
T5H	Municipal transfers. Diversifying the economy. Clean energy programs. Wage increases for the public sector to keep pace with cost of living in Alberta. Balanced budget through tax increases.	Increase income tax for higher income brackets, and corporate taxes.	Programs that encourage new sectors, like technology, clean energy, and programs that support new start ups and expansions of existing companies.
T0C	Health. Education. Job creation. Infastructure	Find efficiencies in all departments. Have all vacant positions filled to prevent need for extra overtime.	Assist with staffing costs to those that create significant amount of new jobs. Reduce unnecessary red tape.
T3L	Health Care and Education.	Not allowing nurses who work part time hours to get Over Time for anything over their small amount of hours. I would also think closing the Calgary or Edmonton Young Offenders Centre where they only have 30-40 Youth would save the province alot. Re-instate the Alberta Health Care Premium.	Please start by not cutting peoples wages. It is not right and effects their families and the economy at large. Treat your people well and that will support your desired outcome.
t6r	Health and education!	Car registries, Why do cars need to be registrated every year. Make it like trailers, register it once or when it changes ownership.	Education, If you want new business with fresh ideas, education will allow people to gain the skills needed to start businesses and to create new ventures.
T3C	Public education. Alberta Health Services.	Don't implement the "voucher system" in Alberta schools. Eliminate the "war room"!	Support and provide grants for new industries such as tech, and new energy. Oil and gas should not be this provinces sole bread winner.
T3G	Health Education at all levels (including post-secondary)	Trim the fat at the top of all levels	yes to a certain degree get innovative get into infastructure for e.g. wind power

T1k	<p>Public services. Health care and education! Those are two undeniably important sectors, that are currently being overlooked, just to “cut costs”. Our future relies on successful and wholesome health care with the retention of nurses and and hospital and clinic staff. If the funding is not appropriate, and nurses are overworked and underpaid, there will be less of a desire for young people to enter this field. How do we function without them? Children are also our future, and we are currently doing a disservice to them with the grant cuts and projected budget next year (and this for that matter) that does not take into account the increase in students the system has each year at this rate. The number of educational assistants available to help teachers is decreasing, and with this, students will slip through the cracks and lack the appropriate support to aid in their success. This fosters resentment for the education system and it will be through no fault other than the government for lack of funding. Our education system is one of the best in the world, and funding is required to keep it that way. The scores for PISA reflect this.</p>	<p>By not giving the incredible amount of corporate tax cuts. Some is maybe acceptable, however, the amount for this year that was announced is astonishing. With the number of jobs that have been lost since September in Alberta in all areas, I do not agree with this decision on such a tax break. If we think that a tax break of this nature will trickle down into job opportunities at the lower levels, people don't understand the wealthy very well. This is exactly how the rich get richer and the poor get poorer. Also look at the salaries of those in legislature, and cut or freeze them.</p>	<p>By funding opportunities and public sector, and give a significantly smaller corporate tax cut.</p>
T8A	<p>Focus on providing supports to the folks supporting your outcomes, and let's make sure they are not just there because of who you know. Support local and not high priced services from other provinces. I use to work in government and made significant contributions, I spend a lot of time doing work for low cost to improve the system. Bring back true partnerships and collaboration</p>	<p>I can help identify ineffective inefficient process and people and help implement change. I have a contract as a coach at the lowest cost and the team has never once used me, yet will pay high priced consultancy fees. And no that's not about quality, it's about old systems not wanting to change</p>	<p>I am working to reshape minds, and provide temporary career and employment navigation. I appreciate all the revisions and working with folks. It's the staff that are making it look like they are busy, engaged and retired in place. 17(1) and what you have left needs a shake up. Start internal and make the unions work with their membership reinvent process. Keep the pressure up to create change. We are at a critical point and have the best opportunities available, work with partnering with businesses. I can help you see the systems.</p>
T5x	<p>Healthcare and education. We need to be healthy to work.</p>	<p>Increase efficiency in government programs. Reduce printing forms. have forms online with the ability to load ID, electronically sign and submit. Cut duplication of services where Albertans can get funding to support dependents caring for minor children of family members and then claim them on Income support as dependents.</p>	<p>Look at subsidy for training new workers to help new businesses. Cutting public servants does not support job creation or economic growth.</p>
T2N	<p>job creation health care education institute a 5% sales tax, tied to a firm determinant of provincial economic welfare (ie prov GDP) with an upper cap and no tax on staples (milk, bread, books...)</p>	<p>reduce/eliminate govt travel given ability to communicate electronically reduce overtime - I realize this is a contract issue</p>	<p>faciliate post secondary retraining - partner with corporations to fund</p>
T3K	<p>Education, healthcare, arts, diversifying economy to sustainable energy</p>	<p>The war room, corporate give aways, carbon tax, sales tax</p>	<p>—don't cut jobs in stop gap sectors like Education and Health care. Don't cut jobs period. -incentivie economy with industries who want to be here but can't (sustainable, tech, film, etc)</p>

T6W	Pipeline, oil & gas, and the education system for k-12.	With Jason Kenny's own spending. Do not get rid of front line health care workers, but the middle of the system where there are too many hoops to jump through. There are many government systems like this as well. Really reconsider raises of people who work in the government, if my job is not able to provide me with a raise, then I do not think someone in the government should get one.	Unless the federal government gets things figured out and as a country we stop getting our oil from other countries we won't have job creation or economic growth. We need a federal government who supports Alberta and what we can do for the country, not shipping in oil from the middle east.
T8L	Focus on helping people instead of harming the most vulnerable. Put funding back into AISH and Alberta Health Services.	Stop giving subsidies to dairy farmers! Transition them to plant based jobs. It'll be best for the environment and the animals.	start paying groups that provide the service of exposing animal abuse and drop bill 27.
T8A	Stop cutting in areas that effect women and children! Education and childcare. Also go back and look at all of the amazing things the NDP did for our province that helped out the average citizen \$25 a day child care, holding insurance premiums!	Getting rid of all of the ENERGY WAR ROOM and the RED TAPE REDUCTION area. Also get rid of all of the other boards and councils created for every tiny problem. Stop giving money to Oil and Gas. They just take our money and head south.	Making it affordable for women to go back to work! \$25/day daycare allows parents to go back to work and not spend at least 50% of their salary on child care. Bring back the carbon tax. Start focusing on any other industry outside oil and gas! We need to get out of the hope for another boom and start moving our province into a tech leader
T0G	Education. Health care. Getting oil back on its feet.	Stop lowering taxes for the rich. Implement a higher royalty rate. Oil is low now and probably a good time to let them know it's going up. If they want to be in Alberta, they'll stay -- if they don't, they don't.	First of all, lower tuition rates for students attending universities and colleges. They want to contribute to society and we're knocking them down. Doesn't seem fair! Alberta is a wonderful province, full of opportunities and we should be promoting it as such. Perhaps provide more incentives to small businesses and entrepreneurs.
	Healthcare, education, and economic diversification. Oil and gas has had it's day. It can still be a part of the Alberta economy but it can't continue to be the dominate part.	Get rid of the "war" room. What a joke. Face the music and bring in a sales tax and give indexing back to the most vulnerable members of our society that rely on AISH and social services.	Support education, encourage investment in other sectors; not just oil and gas.
t0j	healthcare,not for profit contracting out. Rehab of of all oil and gas wells abandoned and make companies liable with new laws, not less laws. More title and security deposits for rehabs. SAME as for reclaiming mines and forest stripping making sure they kept up with time limits to reclaim properly.less laws make bigger and costlier messes in future.	Alway cut at the top and stop for profit contracting out, it adds more than double the costs, no such thing as a free lunch , it will bite you in the butt.	only with job creation tax credits and user pay system for companys actual costs for environment damages. REHAB CAN PROVIDE 100000 JOBS AND FIX BAD PR FOR alberta carbon war
T5H	Health care and infrastructure.	Taxing big companies	Putting money into Post Secondary Education and looking into different renewable energy sources to create jobs in Ab.
T5E	Health care	Look into removing excess or unnecessary management positions	Diversifying the Alberta market, we need more than just oil to sell
T4C	social services/assistance programs, education, job creation.	Give less money for foreign aid, more taxes for large corporations.	Stop buying resources from other countries if they can be purchased here (oil)
T6H	Health and education and people with disabilities	Large corporation tax cuts	Introduce a sales tax
T9S	Investment in healthcare staff, research and infrastructure; support for those less advantaged; renew aging infrastructure with local companies and suppliers; stop chipping away at public service jobs because capitalism doesn't work if no one is employed and cannot afford anything but rent and food.	Tax corporations fairly and don't put the burden of taxes on the middle class; hold oil companies accountable for cleaning up abandoned well sites and for paying the rent on their leases. Cut government spending (jobs and advertising) which is earmarked for propaganda; you won the election; why do you need to keep trashing the opposition? Close the War Room.	Invest in alternative energies and industries; look to the future, at a time past fossil fuels, and plan for it. Invest in job opportunities for students for their work experience and income for post-secondary study. They too are the future. Invest in research for new industries and jobs to keep us viable and employed.

T6X	More money given to education. The cuts are affecting class sizes, the students are not able to get as much one on one time with teachers because of this.	Stop putting so much money into the oil industry which is dying. Invest in the future, such as wind turbines or solar energy	Same as above, invest in the future and stop putting money into a dying industry
T5A	Education and Healthcare	The \$4.7 Billion dollar tax breaks you gave to business. Take it back.	Listen to the people.
T6H	Health care needs to be a focus for our aging demographic.	Fewer dollars spent on promoting growth of the hydrocarbon industry.	Support post secondary institutions in finding connections between education and future green economy based jobs.
T0A	School, healthcare, infrastructure, and public services.	Cutting at the top down. If the government deems in necessary to go into healthcare, it should look at the admin staffing not nurses. Same with with schools. As well in regards to health care, many emergency room visits don't need to be at the emergency room, perhaps more clinics, or adding additional doctors to the existing ones would lighten that load.	Infrastructure. Government owned and operated energy sector jobs, whether solar plants or oil refineries. Keeping the jobs owned and operated are important.
T1b	<ul style="list-style-type: none"> - social program -fcss -education - diversifying the economy - affordable child care - health 	<p>There are absolutely some savings that could happen in health care with all the upper management positions. When the Government moved from Health care regions to a centralizes model the vision was probably to decrease spending. However, this simply has not worked for rural areas and the red tape is atrocious costing piles of money.</p> <p>That said , from the standpoint of working in the industry, so much money is paid out to people who could and should be getting back to work. We still have a lot of people who live off of income support who simply refuse to get a job and have many excuses. I know that things can be difficult but it would be nice to see more measures in place to force people back to work.</p> <p>In addition the I think money could also be saved in red tape. So much paperwork in new funding structures it's laughable and clearly not written by anyone who works front line at all.</p>	<p>Look at all industries and not just the social programming and education industries. Some of us who Do work in these fields , have degrees , and have outcomes for our work don't have a clue what job we will magically fall into once social programs are cut. Realize that the opioid crisis is not the only crisis that is happening across Alberta (I would wager a guess , just from the work I do that many of the homeless population are a direct result of young men who worked on the rigs and made a lot of money and had no idea how to budget that or has any life skills- could there not be a need for oil field companies to force employees who make big dollars to not only be drug tested, which I know they are , but also to require they budget properly and teach them some life skills)</p>
T0c	Rural policing	City infrastructure	Create more government jobs
T5r	Health care And other systems set to help the people.	Cutting out higher level government workers. Either by paying them less or minimizing the people doing the jobs.	Looking to the future. Oil and gas can only take us so far. We need to be looking at other options to be a leader within.
T6J	Education Health Care Diversifying the economy	Get rid of the oil&l & gas war room Raise corporate taxes	Diversify into renewable energy

T0G	<p>Alberta needs to focus its spending on both education and health care. We cannot afford to cut costs in these areas as it will only lead to problems down the road. We need to pay the professionals in these fields well as they are experts and we want to attract the very best to our province. Yes, we need to find efficiencies in the system and be wise with how we spend our money, but cutting education and healthcare will hurt every Albertan.</p> <p>Secondly, as a province, it is of the utmost importance that we support our public education system. Private schools have caused major issues in other countries and create a greater divide between those who have and those who do not.</p>	<p>Savings will be tough to find. I feel as though looking at Post Secondary funding is a small step, yet a performance-based system is a slippery slope that may take years to recover from. I also believe that contracting out cleaning/laundry services in Healthcare can save some money. The biggest way that I believe the government can save money is not to cut things, but to rather promote Licenced Practical Nurses (LPN's). Let LPN's be managers and provided them with proper training so that they can widen their scope and take on more roles. LPN's cost far less than RN's, and you could promote it as a positive by empowering LPN's.</p> <p>Finally, I believe that if we want consistent income as a province we need to look at implementing a PST (even just 2%). This will be wildly unpopular yet it would help create financial stability in the province.</p>	<p>We first need to provide a quality public education to drive economic and job growth. Secondly, we need to support not only Oil and Gas, and all of our industries. Third, we need to look to the future and use what we have to help us diversify into the technology sector. Finally, I want to say that economic growth is a complex chain, you cannot build a province by simply supporting industries, or by simply supporting Education and Healthcare, you need to support and grow both together.</p>
T6X	Child care, healthcare and education. Most importantly education and family programs	Taxing those with more income. Especially larger businesses with more income	Green energy. Look into becoming a leader in green energy development, it's the way of the future and will create a significant number of jobs.
T4B	Creating an equal emphasis on the importance on jobs outside of the oil and gas industry. Using other industries to raise up and support the oil and gas sector to help move the province forward.	Stop giving free money to the oil and gas sector while cutting other services. How do we run a deficit similar to the previous government without the same services?	Support industries outside of oil and gas. Invest in education, healthcare and other important industries.
t0j	Cuts to bloated management office including contracts. most offices have more 3 times managers in last 12 years compared to boots on ground doing the real work. Everything is micromanaged and delegated work back down. One board has 2 to 3 times supervisors to workers and 3 times office space compare to ten years. same has happened ,down to municipal levels.	Mostly upper management cuts, prime example was all managers sent firefighting overseas, i have fought many fires and you need boots and firechiefs on the ground get the job done.	CUT upper staff first and workers last,dont give corporations money ,without job guarantees only tax credits per jobs created ,tax liability for job cuts. Money given without strings to companies is stupid bordering on corruption.
T5R	Diversifying the government's economy by looking at things other than oil.	I don't know.	Diversifying the government's economy. Create work in non-oil industry.
T8T	Education, because education is the future of our children. Healthcare, because healthcare is a human right Infrastructure, to keep Alberta in the 21st. Oil and Gas, because that is important to our province	The government does not need to find savings. All they need to do is institute a 4% sales tax and then they can avoid harming vulnerable people and children.	The government should support the O&G industry, but they should diversify. The writing is on the wall and the government would be foolish to avoid the need to diversify. It is clearly to many of us that the government is taking money from the people to give to the O&G industry, and that the government does not have an economic plan for this province, other than rob from the poor and give to the rich.
T2J	Education, Healthcare and social services	Create a provincial sales tax and carbon tax. Shut down the war room and spend less money on private jets and personal gain. Also be less corrupt so money doesn't need to be spent investigating your campaigns.	Actually invest in Alberta - so far your policies have led to layoffs in many sectors, provide adequate resources to education so youth have bright futures with less debt.
T4J	Health services School class sizes Job creation.	Gov't salaries. Unnecessary spending	Continue to help small businesses.

T0j	Human services, addiction and mental health, healthcare, education and ensuring those on aish continue to receive adequate benefits to have a quality of life.	No tax breaks to be corporations, cutting management bonuses and pay increases, cutting middle management in alberta health services.	Increasing funding to addiction and mental health workers at AHS, working with foreign markets and canadian govt to fund pipeline work and oil and gas economy
T2W	Public education and public health care. Climate Change and environmental protection.	Get rid of public subsidy of private corporations and private education. Merge all public education in to one system. Get rid of fully funded religious education. Get rid of the stupid war room.	Fund green energy development. Actually catch up with the infrastructure deficit. Use corporate taxes and royalties to actually build the future.
T3B	Social programs, education, infrastructure.	Unnecessary government spending like flying your buddies around the country on the taxpayers dime. Cut government employee wages. You want everyone else to live on less, why don't you try it? Scrap the energy war room!	Invest in alternate resources. Alberta was aimed to produce energy through renewable resources and the UCP killed that. Oil & gas is a dying industry and Albert's is being taken down with it. If you insist on continuing to invest in oil & gas then do so! Why are there energy projects still waiting on approved you said would be priority?!
T8H	Education and healthcare need to be funded! Freezing funds won't support increases in enrolment in Alberta schools, and the Health of the people in our province is so important!	Less money given to large corporations as tax breaks. Less money spent and wasted on our 'War Room'!	By putting money into education and healthcare, and by continuing to get pipeline completed.
T4C	Education, healthcare. Children are the backbone of a successful society. Investments in good, strong education will carry Alberta into the future. Supporting our healthcare workers means better care for all Albertans.	If lowering taxes creates more business in Alberta, therefore increasing revenue, the plan should not included both deep cuts and corporate tax rate cuts. I understand the basis behind the capital conservatism (lower taxes = increased investment = increased or stable revenue). Following through with deep cuts to education and healthcare is the UPC admitting that their plan will not work to improve the economy in Alberta, and therefore taxes <u>should be higher to maintain services.</u>	The government should focus on diversifying our economy to increase growth. Alberta has the potential to maintain its status as a global energy leader. Investments should be made in research, green energy and sustainability . Oil and Gas revenue and investments in the short term should be used to fund a sustainable future for Alberta. We can not keep riding the oil and gas train. It has proven to be an unstable source of revenue, as well as creating a boom/bust economy.
T0M	Education Heath care	Stop the pay out to large oil companies. Get rid of the 'war room'	Diversify the economy. Invest in post secondary education
T0M	Education Heath care	Stop the pay out to large oil companies. Get rid of the 'war room'	Diversify the economy. Invest in post secondary education
T0A	Canadians only get the illegal immigrants out we cannt afford them...Trudeau has put us in debt for generations so all illegals out	cut the government wages and get the immigrants out	get the illegal immigrants out so we have work for the Canadians again
	Smart spending in health and education. Talk to the people at the bottom and you will find out where money is wasted. The lowest paid people are already used to budgeting - they are experts on it.	When corporations are showing huge profits, stop rewarding them with more money in the form of tax breaks! They have profit because the rest of us paid more than we should have in the first place!	Diversify! Support/fund research and development. Ease the growing pains for small businesses with new employee subsidies.
T5t	Increasing education and health funding to proper levels	War room elimination and proper taxation of corporations as trickledown economics does not work	Create incentives to diversify the economy, do not cut wages as these are also costumers and need to spend. As most Albertans they spend money within Alberta

T3E	Health care, education and oversight of energy development (ensure no more cuts and stable funding for the Alberta Energy Regulator and Alberta Environment and Parks).	<p>A bold move - why are there both Public and Separate (Catholic) school boards and systems? Merge these into one. I doubt this government has the courage to make such a move. It would represent a significant savings (this government is way too cowardly to do such a change).</p> <p>However, I don't appreciate this leading question. What is needed is more stable revenue. There should be a sales tax and the corporate tax cuts need to be revisited as the cutting tax rates to stimulate jobs (in an already low cost jurisdiction) is not working.</p>	<p>Increased responsibility of government and cabinet. Quit blaming other levels of government (comments about Calgary's Mayor Nenshi being "Trudeau's mayor" and unwarranted attacks on the Calgary Board of Education being two examples).</p> <p>Watch the 'effectiveness' of the Canadian Energy Centre and the attacks on other levels of government and flirting with Wexit. All these do is foster more uncertainty.</p> <p>Reinstate incentives for technology firms and film production - often these endeavours are such that the firms pay minimal taxes and don't benefit from the tax cuts.</p> <p>Show some accountability and limit the number of 'panels' and committees. Many of these appear to have inherent bias to them (this survey is one of them as there was no question about, for example, where could the government find more revenue.</p>
T6w	Education!!!! Investing in our children, teens, and young adults from elementary schools through universities creates potential for future innovators and talented workers AND it promotes the wellbeing of these members of society at an early age. Should also focus on other public services like home visitation, health care, housing, etc etc	I think the government needs to worry less about lowering taxes until the budget is balanced. We can't succeed as a province until we grow economically and to do that we need to invest in different areas and industries which isn't supported by lower taxes. While some people may be frustrated at losing some of their earnings, we can all grow our earnings if we place that money correctly.	Investing in education and technology. We need to invest in the future. Technology is a growing industry that Alberta needs to be a part of by creating innovation. I also think that finding new ways to sell and transport our oil, such as through the pipelines, is important but oil can be an unstable source of income so we need to begin investing in other industries. If we start with education now we can create talented innovators while opening up jobs for people now (teachers, educational assistants, construction workers for new schools, school psychologists, etc) and if we start with technology now we can get in the game before we miss the boat.
T6L	Fixing roads, finishing the LRT from TransCanada.	<p>Allowing Albertan parents to homeschool their children more in turn saves the government about 10,000 dollars per child per year.</p> <p>Setting up cameras to catch people making illegal right hand turns on a blind hill (yellow head hwy to Victoria trail on ramp).</p> <p>If you can't be everywhere at once, at least have a few cameras to help out and make money.</p>	Encourage oilfield, oilsands, pipelines, to flourish without setbacks.
	Health care! It's horrible how you're forcing Albertans to switch from the drug prescribed by their doctor to a biosimilar instead of cutting down the inflated salaries of executives/managers across the government. Education! Moving to a performance-based model for post-secondary is insane. How about we set that up for MLAs???	There are two boards for public + Catholic schools, and health care + Catholic health care. It's a bloated, inefficient system - and getting rid of the Catholic boards would save so much money, it's ridiculous this continues. Catholic + private education should be paid out of pocket. You could also stop spending money on suing the government about the carbon tax - it's a losing battle. Also, dismantle your war room that targets journalists. So much for free speech!	Well, diversifying is how you'll save the economy, not digging for coal or trying to bring back the oil boom days - it's not going to happen. Neither is your ridiculous battle against the carbon tax.

T9h	Healthcare! Education! Paying teachers! Assistance for people with disabilities!	Not giving giant payouts to oil companies?	Encourage small business & renewable resources
T7E	Public education, health care.	Stop giving tax breaks to large corporations.	Invest in green energy
T8X	Funding sustainable, renewable energy sources. Retraining displaces workers into new fields to compensate for the loss of Oil and Gas jobs. The people who shape our children's minds, and the people who help keep us alive, Teachers and Nurses.	By not giving tax brakes to multi billion dollar oil companies, and then cutting out services to compensate because we couldn't afford it in the first place	By diversifying our economy beyond oil and gas.
T5N	On all areas that have affected people's basic needs: education, health, transportation.	By removing the tax breaks given to corporations.	By allowing people to have jobs and income to participate in spending and being able to afford personal investment
t6e	Seving vulnerable Albertans	Reduce corporate tax cuts, get rid of war room	Fund health, education, renewable energy and not for profit sector to create jobs.
T5e	Education and health care	Stop over paying for oil and gas subsidies	Invest money in wages, benefits and pension
T5l	Gas and oil. Political bonus and wadges	Cutting policians wadges. . Politicians car pooling or flying on a regular flight. Reducing bonuses	Reduce min wadges. Reduce inflation
T8S	Education - Home Education Health Care Economy	Home Education. When homeschooling, we save approximately \$10000+ as people are only funded \$1800+/- Allow people to challenge diploma exams at age 16. This will allow those who are ready to take the exams to not have to take unnecessary courses, which costs money. Give more of the funding that homeschoolers are saving tax payers to the homeschool family, as it costs a lot more than \$1800+/- a year to homeschool. Allow more tax incentives for sports/art programs for people under 18, it keeps kids from issues such as drug use, depression. So it saves money in the future. Invest more into kids programs such as Casa House in Sherwood Park. Fund more beds/mental health staff for kids with mental health issues. It would save much more down the road when these youth are not using the system because of drug/alcohol use.	I do not have ideas for this at this time.
T0L	1) Budget balancing and paying down accumulated debt 2) making everyday life more affordable for all Albertans 3) reduce tax bills for all Albertans	1) smaller government 2) do not cave into unions, its their turn to not have raises like the private sector 3) trim the public sector, les government jobs and public jobs	Continue to promote the province with facts Stay tough with Ottawa in demanding a fair deal for Alberta
T0j	Education, hospitals	Tourism funds	Help with education. Can't afford to go to school but can't get a job without school.
T8a	Get oil and gas money back. Also support public services such as education.	Healthcare workers are overpaid. Nurses are INSANELY overpaid for what they do.	Don't really know

T2Z	Education, health care, economic diversification	Cut the war room, decrease unnecessary government travel spending (paying for other premiers to fly, trips to England with no transparency, etc.), stop funding private/religious schools and universities	Encourage tech investment, invest in infrastructure growth, fund the green line in Calgary
T8A	I believe the government should be putting more money into the education system. For public and home schoolers. Home schooling family only receive \$830/year to educate the child. This is supposed to pay for book work and physical education. My daughters swim club is \$50/month \$600/year. That eats up basically the whole budget. And that only covers one subject. We need more funding to provide better education to the next generation.	The government employees could live on a little less. My husband and I make it (barely) on about \$115,000. Government employees should not be making more then the average Alberta worker.	Invest in Alberta owned and operated business big and small. Fight for a tax on overseas oil and gas.
T1A	Supports for the disadvantaged, senior citizens, health and education.	There is strong and pressing need for a stable revenue source. Show some courage and true leadership by implementing a provincial sales tax.	Offer incentives for the new wave of companies such as technology to prepare us for the future. Quit giving tax breaks to oil and gas to only see them leave the province. There has been a significant loss of revenue and a decrease in jobs due to this archaic policy based on economic assumptions that are no longer true or relevant.
T0B	Child care Police forces for rural areas Pipelines Health Care	Immigration	Support child care so that both parents can work outside the home Build the pipelines
T3E	Education Healthcare Infrastructure New energy transition initiatives	Eliminate the war room - 30 million Government - mid level management	Tax incentives for the digital economy Be competitive with neighbouring provinces for set up and attraction of technology companies Recognize businesses are comprised differently that they were 10 years ago Post secondary education support - support our students not layer extra financial burden on them Support commercialization of research and science - this does not mean a rewarding IP alone. Who cares if a university has many patents, reward the next level which is to commercialize.
T2r	Supporting homeschool families by increasing their funding	N/a	Supporting families who choose to homeschool
T2s	It is important to prioritize Albertans by injecting funding back into the frontlines of healthcare and education. Grants to limit class size and increasing teachers salaries inline with inflation are crucial.	Savings are evident through large corporate tax cuts. Swift removal and closure of the oil and gas war room.	Government support for job growth needs to focus on supporting small businesses and frontline healthcare and education employees.
T0J	Education and health care- these 2 services are crucial and without them, we are screwed! Stop cutting these!	Cutting to wealthy corporations & possibly following through on making sure that people on EI need to be on it- I know people who ride the system and don't need it (are capable of working) and that could be a lot of money saved	Possibly small business incentives; working towards alternative energies while still supporting oil and gas
T2S	Not being imperious assholes.	Cutting improper petrochemical and oil & gas subsidies.	Proper corporate taxes stable reasonable levels. Proper funding of government; sales tax.

T2Y	<p>I know Calgary is building a new youth centre for mental health. Unfortunately, the way we conceptualize mental health and the healing process is usually wrong. The individuals we hire to help these kids are usually broken and lead the kids to make worse decisions.</p> <p>Personally I think the model developed in church with youth groups is the best. Unfortunately we live in a secular world that lacks values, and the lack of values is what causes the mental health problems. I don't understand why nobody can see this.</p> <p>17(1)</p> <p>A HUGE ISSUE with our youth is pornography addiction. Its massive and completely swept under the rug. 17(1)</p> <p>Apps like Instagram, and TikTok perpetuate the sort of addictions especially in young men. They cause our young women to act morally corrupt. Yes we have sexual liberation but it's not the answer. Responsibility is.</p> <p>Once our kids are able to understand sexual health in a RESPONSIBLE manner, I think that will make a HUGE difference. Sexual health and mental health are indefinitely linked. Sexual energy is the driving force for all creation. As it is the force that creates human beings in the first place.</p> <p>But how can these kids use their sexual energy when they</p>	<p>We don't need savings. We need individuals to create value. We're simply not producing enough. 20% of our males under 25 are unemployed, not because there aren't jobs. But because we're not equipping them with valuable skills. If we give them skills, teach them how to add value, encourage an entrepreneurial spirit. Then we will find a way for them to make money.</p>	<p>Loosen regulations all across the board. Promote entrepreneurial markets. Get rid of junk corporations that don't care about the people. Encourage small business and lower taxes for them. Grants for people who want to start businesses instead of tax cuts for wealthy corporations. They don't need your money, they can find investors. The government is for the people, not for corporations.</p>
t8n	Medical care.	Corporate tax benefits.	by paying people to work.
T2R	Economic stability (not necessarily growth), education and health care.	Tricky way of posing a question. I'm not going to recommend program cuts. Bring back carbon tax and you'll find more revenue.	Provide tax breaks for companies diversifying their energy projects, consider expanding manufacturing sector (since apparently Ontario's not going to do it.)
	Hospitals, schools, public programs and structure upkeep.	The government could find savings if the one percent and corporations payed higher taxes	Slowly moving away from oil and into other means of clean energy
T4G	Spending money on education and healthcare. Ensuring that our youth can grow up, intelligent enough to not make the same mistakes of this current sitting government.	Increasing taxation rates on large oil corporations. Taking some further gov't intervention in the oil and gas industry (ie Norway's example).	Support job creation by incentivizing clean energy sector and transition from oil and gas. Job creation could also be stirred by adding jobs in the health and education sectors instead of cutting funding and employment.
T4I	Education Health care Rural crime	War room Oil company handouts	Training and diversifying the energy sector

T6J	Need only. As in, fixing the streets etc. No travel on taxpayer's dime.	I think our politicians and higher paid citizens should be getting their pay either frozen or cut. Someone making \$100K + annually is not going to become homeless if their wages are reduced, don't get bonuses, or their pay is capped. Whereas someone like me, who makes \$42K annually, and who may get laid off or have my wages reduced is looking at potentially losing my home. I already can barely afford food each month.	If I lose my job or my wages are cut, that means that less of my money, or none of my money, will be going back into the economy. Cap ridiculous, non-essential spending for one.
T2W	Education, health care, pipelines, diversify economy	Government offices, all levels, clean up health care and education systems, starting from top not bottom. When left to these boards to do they always cut from the top not the bottom, to many insufficiencies that can be tackled. Government should be able to restructure, not left to internal restructuring.	On the right track with pipeline and oil. More diversity- IT, research, etc.
T4X	Healthcare Education	AHS upper management	Build Pipeline!
T2m	-Renewable energy funding - not cutting education for post secondary schools as now students have an even harder chance of going to university	From the tax cuts you're giving to corporations when you don't need to be	Start funding tech start ups and renewable energy sources as its a good way to bring new jobs and diversify the Province
T2m	-Renewable energy funding - not cutting education for post secondary schools as now students have an even harder chance of going to university	From the tax cuts you're giving to corporations when you don't need to be	Start funding tech start ups and renewable energy sources as its a good way to bring new jobs and diversify the Province
T7A	Healthcare, education, homeschool!!	CEO's. Managers. They get paid way too much.	I don't believe people need to have 6 figure salaries as CEO or management, quit cutting front line staff. Also, more money for stay at home parents, parents who choose to raise their own kids, educate their own children. We should be supported!
T7E	Healthcare, education, infrastructure	Taxing large oil companies. Taxing the ultra rich people. The highest paid in the government could take a pay cut and pay more taxes.	diversify with green energy, tourism. Create jobs by building healthcare buildings, new schools & working on the infrastructure

T6R	<p>1. Nuclear power plants for the major urban centres</p> <p>2. Health Care: four priorities should be decreasing waits times for surgery, decreasing wait times for imaging (CT/MRI), mental health and opening more long term care facilities for seniors</p> <p>3. Economic Diversification</p>	<p>1. Health care:</p> <p>A. merge Covenant Health (and any other similar authorities) into AHS</p> <p>B. Stop using AHS facilities for doctors to have patient visits that could/should be happening out in the community</p> <p>C. For patients undergoing cosmetic procedures (ex. Breast augmentation), stop covering the costs of complications or implant removal.</p> <p>D. Cut 25% of all AHS admin</p> <p>E. Freeze the value of individual fee codes in the physician schedule of benefits (SOMB) for the next 2-5 years. Ask the Alberta Medical Association to find additional savings</p> <p>F. For patients undergoing in vitro fertilization, refuse to cover the costs of complications if they elect to implant more than one embryo</p> <p>G. Stop covering the costs of infertility treatments: Fallopian tube recanalization, hysterosalpingograms, reversal of tubal ligation, etc.</p> <p>2. Merge school boards into one common entity (ex. No more separate Catholic school board).</p> <p>3. Stop ALL public funding to EVERY charter or PRIVATE school. Make a clear distinction between public and private schools. But also, allow private schools to operate for profit (not just cost recovery).</p> <p>4. All parents should cover the cost of busing their own kids to school. How did this become the governments job?</p> <p>5. Do not fund daycare programs. How is daycare a government job?</p>	<p>1. Re-institute the Alberta flat tax rate (rate as needed to be revenue neutral) and significantly increase the personal exemption limit (ex. to \$30,000). Make it cost effective to work rather than be on welfare</p> <p>2. Cut the provincial small business tax rate to 0% on the first \$50,000 earned by any small business.</p> <p>3. Develop nuclear power in Alberta</p>
T1S	Front line health care, not admin jobs; classroom teachers, not admin positions; emergency service providers of all sectors, post secondary training, agriculture	Cut funding for socialist minded teachers and professors that are indoctrinating our children and over saturated admin jobs in all sectors. Promote competence, not entitlement.	Small businesses are not sustainable with an increased higher minimum wage. Lower it or fund the entry level employee through business incentives and tax breaks.
T0B	Health care and education.	Homeschooling. Homeschool families save the government over \$10,000 each year, PER CHILD. I do feel that the base funding per child should be higher, however, for parents who homeschool their children.	Keep pushing the pipelines
	Education healthcare infrastructure	Stop the ridiculous war room. Stop overspending on travel and accommodations. ALL UCP staffers take a 5 -10% wage reduction. 50% transportation allowance reduction.	Diversification!!! Invest in technology and infrastructure. Alternatives to oil and gas. The "boom" is NEVER coming back
T8S	Family values. Choices of schools.. homeschooling funding etc.	There are so many families who homeschool and thay alone saved you so much already..support that! And support natural health and actually healing people. The costs of appointments and regular well visits is ridiculous! Natural health and healing would save so much!	Not sure. But supporting local is always good!

	Health care & Education, small businesses	Taxes (sales tax, corporate tax)	Stop believing that trickle down economics works...invest in education and the public sector, promote larger middle class
T5z	Health care, education, and first responders	Eliminate upper & middle management positions that are not necessary. Stop giving politicians pensions if they haven't served at least 10 Years.	Stop putting all your eggs in one basket (oil), try to diversify. Cheap day cares gets more mother's back working, which puts more tax money in the government pocket.
T4L	Repayment of debt Infrastructure Basic healthcare Basic education	Stop giving money to accident victims' families who should have had life insurance. Give more to homeschooling families for easing the financial strain on the education system.	Lower taxes on small businesses.
T2B	The human beings of this province	Not giving tax cuts to huge corporations...duh	Tax the corporations
	Grade school education.	Their own salaries	Give grants for people taking educational programs to advance their career or be hireable for a job
T5z	Education and health care. Invest into peoples futures because they are the future.	Their wages are way too high!!!!!!	Invest into canada and not into other countries
T6b	Bolstering social supports, education, and health care.	Taxing large corporations more. Possibly a provincial sales tax.	By not cutting civil servant positions; by investing education.
T4S	- Education - Mental Health services - Childcare	- stop paying Federal Equalization payments - MLA salaries and expense budget lines - MLA staffers and their salaries - MLA pension adjustments - Decrease funding to private schools and separate schools. All government funded schools should fall under "Public Schools" - Disband Catholic School divisions and place all schools under "Public Schools" (savings in administration would be justification alone)	- Truly advocate for Alberta's needs federally or separate from Canada
T6R	Stop giving tax breaks to corporations, it's obvious they don't know how to use the money. We need to invest in our future by ensuring quality daycare and education, so stop cutting the services that affect these. Stop tinkering with our Pension Plans...keep your hands off. Start being honest with the public. Stop smearing your political enemies and find ways to work with each other. Get oil and gas companies to pay their taxes.	Fire the top 10% of highest paid government officials and higher new ones at half the price. There are many qualified people that will do a better job for half the price. I'm not joking about this. Stop changing ministries every time there is a election. It's a waste of time. Just create a plug and play architecture. You don't need the war room. Why would you "go to war" so that you can continue to put all your eggs in one basket? Our dependency on oil and gas is what put us in this situation. 40 years of it is not healthy.	Again, STOP giving tax breaks to corporations. NO handouts to corporations. Help the working class. Ensure money gets to their pockets and stays there. The future is entrepreneurial and it's the working class that will create it. Start believing in Science. When you do, you'll realize climate change is real. Then you'll have foresight to invest in other opportunities.

T2J	We need more funding for home education. We save taxpayers \$12,000-\$1670 = \$10,330 per child per year by investing our time and own money in our children and taking responsibility for their education. \$830 doesn't cover the true costs in home education and this methodology of education should be available for everyone, eg Choice in Education. Parents with children in Kindergarten, with Special Needs and in High School especially need more funding. If the funding doubled giving home education \$3340 in funding, it would help more school authorities cover costs of supervision and portfolio review at high school level and help parents purchase tutoring and resources needed, rather than have it come from their own pockets.	The government could remove the regulation that children can only write diploma exams for 100% of the mark if they are over age 19 or have taken the course. If kids are ready to take the exam from self-study or tutoring, they should be allowed to write it at age 16 (or any age really.) That saves the government money in providing a needless course.	Increasing funding for home education allows caregivers to purchase more tutoring services and supplies. This creates jobs in the private sector.
T0A	Education, no more bias teachers, take care of all the students. Take care of Health care Growing our own Alberta Economy to be very self serving Figure out how to lower all aspect of my cost of living	Cough cough equalization payments.	Listen to Albertans, not Eastern Canadians. Build Pipelines, explore new industries, but lets not forget what we got going for us right now.
T2y	Education and health care.	Cuts to Upper Management in public sector. Take away their bonuses. Charge premiums for healthcare.	Put money into small businesses. Encourage tourism and sustainable industry.
T4m	Our goal should not be spending, but saving and paying off debt.	Encourage and incentivize home education. Home school families save tax payers money and do a better job educating on average.	Laissez faire economics. Jason's got the right idea already.
T5E	Medicine Create tax credit for families who homeschool, we save the tax payers thousands of dollars and we should see more of that not leaving our own pockets	Government administration Public Education Subsidies	Stop crony capitalism and let the free market flourish
T2T	Education and creating jobs that aren't just reliant on the oil and gas industry.	We need to stop sending so much oil out of province. While it's an excellent source of income for Alberta we need to stop buying outside oil for ourselves. We have a right to it as well.	Start looking into investing in local and smaller businesses and provide grants and funding to things like the arts, start-ups, other opportunities that could flourish with Alberta talent and employees. Perhaps it's creating funding opportunities for new companies or grants to a diverse range of Alberta projects (arts, technology, research).
T2A	Education	Quit giving tax breaks to billion dollar oil companies. Make them pay their taxes.	Initiatives to get laid off oil workers to transfer their skills to renewables. Make it easier for renewable energy companies to startup, function and sell their products.
T5A	Giving our children the proper education they need to succeed. Rebuilding our economy and getting jobs for our people. Focus on renewable resources in case continual protest of our oil.	On their own salaries. Do some studies on the most economical way to manage health care - cuts first will not be the option and firing people. There are usually more efficient ways to do things. Consult with the specialist and work with them to get things more efficient in education, health care, and the public section. We spend a lot of money on upper management who are not the front line people.	By first of all not laying off the front line workers. Do research into new resources and new economic plans.

T8n	Supporting front line workers in health, education and social svcs. Building infrastructure while borrowing is less expensive and to help decrease the infrastructure debt.	Eliminate "war room", eliminate corporate give aways and big Corp tax breakers. Subsidize growing, renewable energies and small businesses.	Stop being idiots.
T4V	Health Care Education	Quit giving tax breaks to big companies. Implement a provincial sales tax.	DON'T lower minimum wage!
T4v	Increasing health spending and education spending and diversifying our economy	Scrap non essential committees, teams, boards such as the Alberta war room committee/team Speak with frontline staff in hospitals and listen directly to their suggestions to optimize health care	Supporting allllll industries private and public - more money in pockets of all albertans
T3e	Education Health care	Politicians salary Tax cigarettes,booze and vaping products	Environmental incentives to become more green in many areas of our life. Creative job solutions for growing more local products and supporting green energy initiatives
T4B	Reducing debt. This is going to be hard. There are allot of people on the public take that are going to fight for their golden goose. Keep it up. Many will come on here and complain. But I like what the government is doing.	Casual Nurses 17(1)	Continue what your doing.
T4B	Reducing debt. This is going to be hard. There are allot of people on the public take that are going to fight for their golden goose. Keep it up. Many will come on here and complain. But I like what the government is doing.	Casual Nurses 17(1)	Continue what your doing.
T6r	Healthcare and education	Increases taxes for the big corporations	Invest in more than just oil. Invest in something more sustainable
T2B	Health and rduca	cutting wage for under 21, stop art funding from cities, fight federal govt on sending Quebec payments they don't need	Create oil and gas jobs,we need investors. Create nursing jobs its desperate we need them
T5H	Health and Education	The Oil war room	Bring back tax incentives for the tech sector and the film industry.
T4n	Health care, teachers, and support services for the most vulnerable in our province.	The salaries of CEOs and top government officials. Lower your own wages! Lead by example!	Diversify the economy! Put more investment in lumbar, agriculture, and executive jobs. Dont be so reliant on oil and gas. God knows we are not a huge exporter on the world scale!
T1G	education and health care	letting most of the upper management from education, and health care go, also take highway contracts away from the contractors and turn them over to counties and municipalities	with cost savings from reducing management costs in education and healthcare and letting counties do highways you could hire more frontline staff and lower taxes bringing more business to alberta
T6t	Health Education Employment Low taxes	Roads Infrastructure Beauty of city	Have tech companies pay less taxes. The more tech companies we have here, better it is for Alberta economy as next coming time is AI. May be make contacts with google, Microsoft, Adobe to establish even call centers here.
t5t	Protecting the quality of Health Care and Education we already have and making the oil companies use their portion of the 4.5 billion dollar corporate give away to pay the back taxes they owe to the rural municipalities instead of writing them off.	Cancel the War Room. Do not get involved in P3s. It has been proven many times that they do don't reduce expense but increase it. Stop creating ideologically based blue ribbon panels. Stop the court battle against a federal carbon tax. You're not going to win it.	Diversify the economy. Continue support the growth of AI, the film industry, and green technology. All small business should have been first in line for their share of the 4.5 billion dollar tax give away.
t1y	health and education	businessmen and money cartel	creating new connections with neighboring provinces

T8S	The government should be investing in health care and the education system.	By taxing those who make the most money instead of giving them tax breaks.	By putting funding into non profit programs and grants you are creating more jobs.
	Making Alberta a protector of the environment. Health care (seniors, the handicapped & addiction treatment)	Management, fancy dinners, and travel by the Provincial Government. Stop changing everything the last government did. I think that if you expect all Provincial employees to “tighten the belt”, the MLA’s should lead by example. 17(1) r.	Support the University’s and Institutions (SAIT & NAIT) who are into R & D and entrepreneurial pursuits. Invest in recycling and uses for the recycled materials. Invest in R & D regarding green products (better packaging etc.).
T5k	Justice system, health care, education	Undoing corporate bailouts. Duh. Fire yourself.	Stop slashing jobs from already depleted and demoralized gov sectors. Promote tech innovation. Fire yourself.
T3A	Education Healthcare Economic diversification	Ending tax cuts to big business Implementing sales tax	Supporting diversification; ending cuts to big business
T0J	Restore funding for public health and public education.	Stop looking for savings and increase revenue via increased taxes on high revenue corporations. Increase oil and gas resource royalties	Invest in education and health, institute a mandatory minimum monthly universal income. Supports for small business and minimum wage increases. Worker protection is paramount.
T7X	Education, health and entertainment	From taxes	More jobs
T5X	Healthcare, Education, First Responders	Enough with the war room. No ones mind had ever been changed because someone told them to. It is such a gigantic waste of money. Regardless if oil money is clean or not, it’s not here forever, and we should not be defending it like we do	Raise minimum wage and introduce a Provincial Sales Tax. Albertans on average have the largest salaries of any province and we also have the lowest taxes.
T0j	Health!!!	Salaries! Y’all are paid too much!	No carbon tax, make it easier for businesses to stay in Alberta
T6C	Economic Innovation	Reduce police, construction, and social services.	Encourage small and new business starting up. Support industries other than oil and gas. Support technology use in businesses. Leverage money from Alberta based businesses.
T2e	Diversity of our economy.	Re establish old corporate tax rate. We need net revenue not cutting one department to fund another.	Diversify and subsidize Alberta infrastructure during down turns. Pure austerity does not work. Go into debt short term but build the province.

T8V	The government needs to focus on adequately funding health care, education, and seniors' programs. This move towards only the rich being able to afford adequate access to health care and education is absolutely criminal!	<p>It's NOT about finding savings... if this government was interested in 'saving' money, it would not have made its first priority handing over billions of tax dollar funding to huge oil-rich corporations with absolutely no stipulation that they reinvest that money into the province. This government simply gave away a massive amount of money, then turned around and said, "We're now short of cash, so we're going to rob it from all essential services". What in God's name are these idiots thinking!</p> <p>Here's how other provinces fund themselves... it's not rocket science: 1) Tax large corporations fairly... if you're not sure what those numbers are, look to other provinces for examples! 2) Charge adequate royalties for our natural resources! Again... if you're not sure what those numbers should be... look to other areas, including the US to see what they're charging!! 3) Incorporate a provincial sales tax! EVERY OTHER PROVINCE IN CANADA bolsters its revenue by charging a provincial sales tax... if Alberta can't afford to adequately fund the basic necessities like education and health care... RAISE MORE MONEY!! Why on earth does Alberta NOT have a provincial sales tax???</p>	This government has NO interest in job creation or economic growth. Its primary agenda is to try to destroy public infrastructure and move to a completely capitalistic society of private enterprise. It is only interested in making massive money for the the well off... the general public or their needs had absolutely no bearing on the decisions of the current government. If they would have diverted the money they released those huge corporations from having to pay, we would have had BILLIONS of dollars that could have been put towards bolstering the economy and creating some job and economic growth! Cutbacks, layoffs, budget slashing... NONE of those things have EVER bolstered an economy in HISTORY. Unless this government smartens up, we will be headed for the worst economic recession in Alberta that we have ever seen! You can't just keep making people become unemployed and think that's going to spur economic growth! I'm completely boggled at the stupidity of this government, and I don't see how driving the province into the ground is going to help ANYONE economically down the road! I'm disgusted with this government!
T6A	Healthcare, public education, childcare subsidies, 25\$ a day daycare, affordable post secondary education.	Taxing the rich and big businesses & corporations	By taxing big businesses and corporations, and maintaining jobs in the public sector, the health care industry and education. Keeping people employed helps them have money to spend which in turn helps the economy.
T1A	Health care, social services, education, diversifying industry.	Introduce a Provincial Sales Tax to increase revenue. We are the only province without one. Rather than cutting services to save money, instead introduce a PST. If you truly want to bring Alberta in line compared to other provinces as outlined in the McKinnon report, instead of reducing services and making our province less desirable to live in, add a PST to still bring us in line with comparable provinces, while maintaining a high level of amenities and services. This would be equal to all Albertans - no specific group would be singled out. For those with low incomes, this may be difficult to handle at first but if they don't make many purchases that accumulate tax, then they will not be hit as hard (example: groceries are mostly exempt and are a necessity of life.) In contrast, the wealthy who make more purchases will in turn pay more PST.	Diversify and stop putting all of our eggs in one basket. Focusing solely on oil and gas in the land-locked province of Alberta will not influence the global market and prices. Cut our losses and explore other avenues of industry.

	<p>Spend on public healthcare, building schools, lower class sizes, educational assistants, teacher and nurses pay increase, school curriculum updates.</p> <p>People are dying due to wait times and lack of healthcare resources. Our young and vulnerable are not receiving the supports they need to have the best start in life through educational development, experiences, and support.</p> <p>Art and culture is dying in the city. This is what makes life worth living.</p>	Tax multi-million dollar corporations appropriately. Tax the rich.	<p>Investing in our future and safety by building schools, creating grants for daycare workers, keeping programs that help people going.</p> <p>Thank you for reading.</p>
	Education, health care and advanced education.	Don't spend 30 million on an energy "war room". We need to start supporting ourselves. I fully support the energy industry, but they won't see \$80 or \$100 per barrel oil again. Implement a 1% sales tax to create the revenue needed to maintain Alberta's spot as a great place to live and work.	Diversify the economy and attract industries other than oil and gas. Stop cutting public service. Invest in major infrastructure projects.
T6A	Education. Health care.	Stop corporate handouts. Tax top 1%.	Pay attention to the tech sector and small business since that's a significant contributing factor to our economy. Bolster these industries instead of giving corporate tax cuts and handouts. Read studies that prove corporate handouts don't work and that investing locally keeps the money in the community.
	Health and education	Closing that silly "war room" would save 30 million. Also it's important to realize that we can't rely on revenue from the oil patch anymore. Implement a 1% sales tax.	Invest in major infrastructure projects. Diversify the economy away from oil and gas and stop cutting public service.
T2E	Education Health care	Stop giving corporate hand outs Increase taxes Sales tax	Stop cancelling infrastructure projects Invest in education Stop defunding public service jobs
T5Z	Supporting families through publicly funded healthcare and education. Helping to support affordable, accessible, quality child care.	By not wasting time, resources and energy reinventing/changing everything that the previous government brought into effect.	By not cutting 1000's of public sector jobs.
T4C	Education for grade school . Autistic children need a school .. the numbers are there. Presently, there aren't enough aides and it isn't helping the kids. Funding for them goes to general funds. They need more!!!	All the middle management in hospitals. If one unit has 4 wings, there is a manager for each wing and those managers have a manager. Get the psych patients out of the hospitals and put them elsewhere. Every one that is never going home will remain there taking up room and costing millions per patient annually. I'm talking about the ones that are transferred back and forth from hospital to hospital! Their families won't take them!	Seniors like myself, are getting back into the workforce because we cannot afford to live on CPP and OAS. Taxation on Seniors that make 14,000 annual is ridiculous. Somehow, our pension amounts need to be enlarged or we will be on welfare, heaven forbid!
T0M	Hiring frontline workers in healthcare to reduce wait times (nurses and doctors). Infrastructure improvements. No more cuts to education; teachers and EA's shouldn't be fired.	Reducing the size of upper management in healthcare. Keeping our energy costs inside Alberta (ie: coal plants back online and not buying it from the USA). Less wind turbines. Less red tape = less government employees to enforce it.	Promote Alberta made/ Alberta proud industry, products and people. Infrastructure projects. Pride in our oil on a global stage. Build pipelines. Lower minimum wage. Reduce taxes and red tape that make it harder for small business entrepreneurs to stay in business.
T4V	Education, health care, mental health & addictions support, diversifying energy sources/sector.	Shut down the "War Room" and avoid tax breaks for huge companies.	By supporting projects that create and diversify jobs. Support public sector workers instead of cutting their pay or jobs. These people will spend money in your economy but will be unable to if unemployed. They key is diversify!

T3M	Social services are the only priority that matter. People first.	There are no savings... only a revenue problem. The government does not need to save money, they need to create money. That is easy.	Yes, by utilizing Keynesian economics, increase government spending to raise aggregate demand and increases consumption, leading to increased production and faster recovery from recession.
T0J	Education, health, job creation.	Upper management in both Alberta Health Services and Education. Also not sure if we really need all of those public services hires by Notley. Should review this	Education in trades, entrepreneurs, explore world wide markets for products (eg. oil & gas, agriculture). Support new ventures that help Alberta to remain a clean province. Eg. garbage, recycling, things that will make a difference for the good, not wind which is useless.
T8R	Education, healthcare and public services. Quit ruining our province with your reckless cuts and complete disregard for evidence.	Fire Matt Wolfe. He is an overpaid twitter troll. Get rid of the Canadian Energy Centre. They are an embarrassment and a waste of money. Quit flying the premier and his buddy to London on secret trips that amount to nothing. Quit make taxpayers pay for corporate handouts I now have to pay 800 dollars in retroactive bussing, my kids class sizes have grown, my taxes have gone up, insurance has gone up, dental fees have gone up and my daycare fees have gone up. I'd rather pay the Notley Trudeau carbon tax any day. We are way worse off with your government and keep having to shell out more.	Quit wasting taxpayer money. Raise taxes to B.C. levels. I'd be paying less with that than all the fees I am paying now thanks to your government. I'd rather pay more tax or a sales tax and have the public services my family relies on than corporate giveaways and paying more for everything like I am with the UCP.
T3G	Education! Our schools are ridiculously under funded this year! My kid's teacher asked for pencils as a Christmas gift. I want my child to have the opportunity, in her public school, to still have access to an EA to help with with extra reading support. I want her to learn music and french from specialists who actually know about those things. I want her to be in a class of 20, not 30 or 40. Please do a better job funding schools in the 2020 budget. Our kids are important and are the future of Alberta. I will never vote UCP again if my child's education is impacted any further.	No more corporate give always. Increase corporate taxes. Increase taxes on people earning over 120k a year. Cut the "Canadian Energy Centre". Reduce trips out of Alberta - for example, campaigning in Ontario with Scheer was unnecessary.	Create tax incentives for diverse industries to come here. As long as Alberta is dependant on Oil and Gas, we will always be stuck in a boom and bust cycle. The only way to end that is by getting different types of business into our province. Increase taxes on oil and gas in order to invest in green energy, technology, manufacturing. We can't be dependant on oil and gas as the world is only going to continue moving away from using non-renewable energy sources. Also - Education. If we don't fund schools properly, we won't have the type of work force required by business. People can't all work on the rigs if there are no jobs up there...
	Education and healthcare. Support needs to be increased to the most vulnerable Albertans. If this government was truly in support of this they wouldn't release a budget cutting funding halfway through the school year. Stop increasing inequality. Don't touch the pension.	This government does not have a spending problem, it has a revenue problem. Increase the corporate tax back to where it was. Stop with the rhetoric. We know the UCP is full of shit.	By actively encouraging diversification. We can't keep our heads in the sand. We need to develop new industries so when fossil fuels are used less Alberta doesn't become like New Brunswick.
T4L	services to Albertans example's Healthcare Education	stop corporate welfare	diversify the goods we produce not just interest in oil
T0B	Health and Education then moving away from fossil fuel economy	Stop giving corporations and rich individuals massive tax breaks. Collect all the royalties owing. End the "energy war room"	Focus on green energy, agriculture, innovation in health and sciences.
T5y	Health care, seniors, middle class	Making big corporations pay more	Stop giving money to the oil field. We are never going to be what we where so why keep trying

T1J	Increase spending on education (K-12 and post-sec) and health care	Introduce PST	Fund post-secondary education. Support diversification of industry beyond oil and gas. While these have been key components of Alberta's success historically, their usage and value will only continue to decrease globally.
T6W	Education Health Care	Diversify energy sector Charge wealthy people more Charge businesses more	Stop putting oil and gas industry first. So few of us are really in that industry yet we all suffer when they're put first. DIVERSIFY ENERGY SECTOR
T7X	Healthcare and education!!	In the upper management at AHS. Cut their salaries by half at least. Cut some billing fees for specialists.	Get Bill C-48 quashed and then continue with pipelines and expansion. C-48 has to be dealt with. No one is talking about that at all and it has to be quashed or all the pipelines aren't going to do a thing for us.
	Making the oil companies pay taxes.	They could use the taxes from oil and gas to pay for services for Albertans.	Tax the oils and gas companies and use the money to fund public services
T8A	Public services - education, health care, seniors services	PST	Education, supporting the tech industry
T0K	Health, education, research & innovation	Reckless spending for government officials	Maintain an advantage of living in Alberta - don't punish and alienate public sector workers
T1K	Healthcare Education, all levels Diversifying economy Environment and green initiatives	Upper management and beaurocrats salaries	Diversification of economy no longer bolstering oil and gas Technology and innovation Education grants, reduced tuition, accessibility for all
T5a	Schools, healthcare and infrastructure. Not more social assistance programs.	Cut off welfare recipients. They are the burden.	Produce oil and other projects to get Albertans working.
T5r	Education and healthcare	Breaks for big businesses. Small businesses need tax breaks but large ones are already profitable and established.	Benefits for new and small companies. Encourage businesses to employ more permanent employees for stability.
T9k	Education and health	Stop giving tax breaks to oil companies. Can the \$30,000,000 "war room." Consult with experts on investment and economics, not your MLA's who do not appear to well educated.	Restart infrastructure projects that you stopped. Invest in education and health.
T8N	I think maintaining healthcare and education where it is currently at is a HUGE priority. You don't need to spend more, you just can't cut. 17(1) I feel the same for teachers. I know it seems like easy revenue, to take away this and take away a little of that, but it is going to make HUGE IMPACTS on ALL ALBERTANS. and not good ones.	From paying high level executives atrocious salaries in all industries, especially AHS. Cutting revenue from large corporations to only balance it by cuts in the public sector is NOT ok.	Continue to press the oil and gas pipeline endeavours. Continue to explore new green ways of energy.
T2M	Education, and health.	Create a sale tax to cover basic healt and education needs.	Promote green energy and new technologys.
T3k	Healthcare and educatio.	Getting rid of upper and middle managment redundancies.	Incentives for film industry. Need to expand our need for being on oil and gas. Should implement a pst.
T5b	Education, child care, the most vulnerable, renewable energy, economic diversification, transitioning away from fossil fuels	Reverse corporate tax cuts, provincial sales tax	Support economic diversification (grants), green energy (rebates, incentives), build much needed infrastructure

T3M	Education Childcare Healthcare Climate change/energy efficiency/waste reduction	Cancelling the “energy war room” Reducing government spending on advertising and travel	Promote diversification of Alberta industries (tax cuts, grants, etc. for renewable/alternative industries/high tech/agriculture/etc)
T8W	Building the economy (encouraging growth in oil and gas) while keeping healthcare and public education at the forefront.	There are many savings to be had by looking at healthcare but NOT at the front line. So many suggestions to make within government... so many layers upon layers upon layers NOT needed.	Encourage oil and gas development, support small and large business.
T2Y	Public education and healthcare and supporting our vulnerable populations (kids, elderly, those living in poverty).	They could stop giving our hard earned provincial dollars to rich corporations and oil and gas which is not supporting the diversification we desperately need.	Diversify the economy.
T6L	Health Care and education	Reducing their own income	I'm not sure
T6J	Social programs, post-secondary school funding for all disciplines, teachers salaries, nurses and doctors, renewable energy	Taxing large corporations (especially those operating strictly in oil and gas), a province run carbon tax, getting rid of the war room, decreasing funding for MLA's especially as it pertains to private transport	More opportunities for students to gain work experience, investment in other sectors
T5p	eliminate the deficit	Provincial workforce	Stop giving our money to corporation
T5p	Healthcare, seniors, education	Services to support children with special needs--so much inefficiency	Invest in green energy
T0j	Debt reduction, school, infrastructure, hospitals	Useless assistance programs	First, take control of everything possible within the province. Provincial police, collect all our own taxes, provincial pension plan, etc. That will create jobs on its own. But then you have the power to force the federal government to accept pipelines and Alberta oil. Job creation
T8A	Education Healthcare Sustainable energies Diversifying the workforce	The War Room Cabinet expenses Subsidies for large corporations Taxing the top 1%	Diversification Green energies
	Healthcare and education. Paying for health is expensive but given our aging and ailing population, soon Alberta will be in a state of crisis. If investment is not placed now then Alberta (particularly lower income Albertans) will suffer the consequences. Education is also imperative for ensuring that Alberta can remain economically effective. People with education are more likely to seek stable, higher quality employment and bring an economic boost in Alberta's future.	Stopping the tax cuts for corporations (particularly international companies who will not sustain Alberta long term!) no longer funding trips and dinners for policy makers at the taxpayers expense, nor paying for large scale networking events like the “prayer breakfast.” These serve to benefit politicians and not the Albertans they claim to be helping. Private early and secondary education should no longer be funded either. The individuals attending these schools are advantaged enough that they can pay their own way if a private route it what they see fit for themselves.	Invest in long term growth industries and diversification of Alberta's economy to allow for better stability in the event of an economic downturn of a bust in the cost of oil. In an attempt to make these industries appear and flourish, offer grants to these industries (tourism, alternative energy, competitive higher education, small business and entrepreneur supports etc.)
T8N	Education, health care, the vulnerable people in our communities	The war room, firing Matt Wolf	Being more progressive in their policies. Cuts to public education and health care and top down economics does not spur job creation.

T6m	Infrastructure Healthcare K-12 and Post Secondary Education	Top-heavy management structures in government and public organizations. Having solid contracts and holding contractors accountable to deliver on time and on budget. Removing ridiculous spending requirements like the art requirement on capital projects. Ensure government spending is economical. Set a policy of stringent spending for all government officials and hold people accountable.	Continue to fight for AB Energy Invest in post-secondary education and research to educate the next generation. Invest in infrastructure projects that will provide long term benefit.
T6H	1. Maintain current Healthcare & Education services and funding levels. 2. Catch or eliminate coyotes from communities to protect children and pets from attacks.	Defer major highway upgrades, such as widening Highway 2 and 63, and Yellowhead Freeway until budget is balanced.	Continue to work with other provinces, US, and markets overseas to promote our Oil & Gas exports.
T6H	1. Maintain current Healthcare & Education services and funding levels. 2. Catch or eliminate coyotes from communities to protect children and pets from attacks.	Defer major highway upgrades, such as widening Highway 2 and 63, and Yellowhead Freeway until budget is balanced.	Continue to work with other provinces, US, and markets overseas to promote our Oil & Gas exports.
T7X	Education and health care	Corporate tax breaks, MLA, cabinet minister's salaries, premier's salary	Hire more nurses and teachers to better support the health care and cut down on overtime costs
T5R	health/education	extra like sports arts	get oilfield back
T2R	Health Economy Education	Reduce pensions for politicians & public servants Make physician specialists provide continuity of care (& not charge the excessive fee for new referral within 2 years of seeing a patient) Bring back health care premiums	Support small business Diversify so that the economy is not so reliant on oil & gas. Support an Olympic bid to boost the economy
t1h	EDUCATION AND HEALTH CARE SHOULD BE TOP PRIORITIES FOR THE GOVERNMENT AND SHOULD NOT EXPERIENCE ANY CUT BACKS TO FRONT LINE WORKERS. The government should also focus on maintaining infrastructure. Maintaining infrastructure also provides people with jobs and saves money in the long run.	I honestly feel that balancing the budget is not necessary, especially at the expense of key government services. However, I also feel that some areas of government services are fairly bureaucratic and top-heavy. It is the people at the top who make a lot of money, so perhaps amalgamating some upper management positions could save some money.	Don't cut jobs in the public sector - people in the public sector contribute to the economy and support local businesses. You can also support other industries besides oil and gas, for example tech industries.
T0B	AHS- Bring the money down from upper management and apply it to the nurses, aids, homecare etc. where the shortage of workers are which affects local hearhcare especially rural areas (having to commute over one hour and sit in a waiting room for longer when someone's health is at stake is unacceptable) Education- keep your rural schools open so you do not have to bus students a ridiculous distance and time , It is a lot more cost effective than building a new schools	Again utilize your schools out in your rule areas instead of shutting them down and bossing everybody to larger centres. More brick and mortar and boots to the ground and less money poured into surveys and studies	Decentralize large corporations and encourage them to move out into the rural areas where cost of business is much cheaper
T5J	Invest in Alberta	Politicians salaries	Invest in the blue collar workers and entrepreneurs
T1J	Education	Taxes, government wages.	Thinking of new ways to support our economy rather than just trying to fixed the ones that are no longer working (oil and gas). You can't change the world prices and stop other countries from producing it.

T1X	Focus on social spending to ensure social programs and healthcare are not the areas receiving cuts.	Reducing tax breaks to large corporations.	Support sustainable jobs, and a sustainable future for Alberta. This may include creating new jobs in environmental sectors which will continue to grow in the future. Economic growth should focus on sustainability, whether it be sustainable ways to incorporate the oil sector (while ensuring we are doing so with concern/regard for the environment) or finding alternative/sustainable areas that Alberta can profit
T5s	Education	Big corporations	Not cutting public sector
T3k	Infrastructure	Increase corporate taxes	Tax benefits for technology startups
	Homelessness	When the ones in power take a pay cut.	Stop cutting important jobs, like nurses
T6j	Healthcare, education. Invest in our children and youth by providing services to support their wellbeing and growth- this supports our present jobs and our future.	More cost effective ways to work within government using technology, being creative and thinking out of the box to make work more efficient, not by just cutting jobs. Relook at corporate contracts that may be only charging large amounts but is not the most effective and fiscally responsible - i.e. local, sustainable solutions	Realize there is long term investments and planning needed, not just quick fixes that rely on non-sustainable resources and trends. If you want young people to stay, spend money in Alberta, and raise families here you should think why they will stay... Stable jobs in all areas (the oil field or engineer is married to a nurse or teacher), affordable and quality child care so both parents can work, communities that are safe and have enough of interesting events and products that they spend in Alberta, reasons to bring or keep their parents/aging relatives close.
T0L	Infrastructure which creates jobs and returns to public	Control spending on schools and hospitals. All those extra millions do not give returns. Eliminate positions in hospitals and schools that don't do anything. Research is not a good thing to eliminate.	Privatize a lot of health care so we don't have to go to the US OR MEXICO and hire staff who are willing to work. Support irrigation so that all the money spent on infrastructure doesn't fall apart like in some of the US
T4x	Spend more on education and health	Tax big corporations more!!!	Tax cuts to individuals and small businesses.
T1B	Reversing cuts implemented under the austerity budget of 2019	Disband or discontinue the Canadian Energy Centre Raise revenue by reinstating the tax rate prior to 2019. Introduce a PST/HST. Collect unpaid taxes from corporations	Support basic services that build a platform for individuals to improve and integrate into the workforce.
T6T	Health Care and Education	Reduce Government spending on expensive trips, spending allowances. Watch the cuts that you are giving to huge businesses!	Make Alberta a place where people want to live. Acknowledge that cost of living is high and money isn't enough for many people. Invest in great education and health care. Businesses will want to build in Alberta!

t4b	Job creating activities ,	Directors to Manage Managers to manage Junior managers to Manage Tam leads , Cut the Upper management . Other Example : University have 40- 50 Finance partners to do data entry of Budgets for Department heads which a department head can easily do them self , Same with Nurses being used for data entry for projects like EPIC etc . Top pay of Mayors and Politicians to be tied to average of employed workforce and Unemployed ratio (not EI as that's temporary indicator)	Creating Jobs , Construction is so 1929 when those jobs would need too many hands to work but now its with machines it give jobs to one company and 2 people for the same thing . Focus on IT , Software etc jobs for lower price many qualified people will be ready to do that . Already done tax rebates ,
T6C	Education and Health Care. Reducing class sizes. Increasing student supports. Reducing wait times in health care. Increasing support for dental coverage.	By not handing money to corporations. By increasing taxes for large corporations. Introducing a sales tax.	Supporting small and local businesses with tax breaks and ... you guessed it... not handing money to large corporations.
T5R	Reinstate education funding. Fund per student increases in budget.	Introduce 2 or 3% provincial sales tax. We need one as can no longer rely on Oil and Gas to pull the budget through.	Continue to Invest in /support alternate energy programs.
T4G	Healthcare and teachers.	Not giving out tax welfare to huge corporations.	Raise the basic tax exemption amount. Allow larger deductions for college tuitions.
T8A	Heath Care Teachers Senior citizens Job creation	Stop putting money in to oil and gas...nobody wants it! Close the war room Stop giving cuts to corporations they are all leaving! Enough with the cuts	Diversity. Our current government is only looking at oil and gas. New technology would be a good start
T5T	Education, Health care, child care subsidies	taxing the rich lowering the tax on the poor. stopping the corporate tax breaks, taxing corporations instead of giving them a pass.	increase minimum wage, Expand the energy market to include solar power and wind stop relying on one source of income for a province
T8R	Education, health care and old age care	increase tax revenues by making corporations pay their share	Funding infrastructure upgrades, new schools, new health care facilities
T0M	Libraries, Healthcare and Emergency Services	-War room -Wage cuts from the top down not the reverse	-Other forms of sustainable enery. Not Wind/solar -push for the pipeline -invest in technology sector
T1J	Universal health Care, affordable housing, Aish, education, universal child Care subsidies	Tax the rich and big businesses	Tax the rich and big business. 18\$ min wage regardless of age or ability. Increase Aish and PDD. Increase the cap on what is able to be earned after Aish.
	Roads Health care Teaching First responders	Not giving as much money away to people who don't work and not bringing as many immigrants in this year. Prioritizing	Not cutting nurses and teachers they are already overworked and underplayed it is going to create a lot of stress.
T6c	Social welfare Climate change Alternative energy Creative professions Social innovation	Corporate taxes - tax breaks and hand outs are idiotic- so don't do it. Carbon tax Tax the wealthy Close the war room Don't spend so much on government travel	Pay a higher living wage... long term funding and core funding for the nonprofit sector Support small businesses with tax breaks Bring back the step program and create more programs like it
T5h	Roads	Walfare reductions and raising corporate tax's	Stop sending money to federal gov't and reinvest in alberta
T0K	Front line workers in Health,children and education	Administration in health, children services and education	Tax breaks for high tech startups
T6G	Health, education and climate change. Stop cutting municipal funding.	Not investing in dying industries like oil and gas.	Invest in renewables and keep educated people employed (nurses, doctors, teachers) as a priority.

T8a	Wages for the public sector workers!!!!	Department of Justice justices should not have the free dry cleaning, a server to make them food when they want with two chefs for the higher level court. Cell phones for employees that use them for personal use.	Stop with the cut backs of wages!!!! I don't see parking going down in the downtown core. My bills I can't keep up
T5N	Cutting management and waste	In every top heavy Organization cut out excessive management and supervisory teams. When trained properly, frontline workers are self sufficient	Support frontline workers so that they maintain their health and well being, pay them their value, keep up with inflation so that less require financial assistance and supports
	Put money into education and healthcare. The cuts are hurting people and quality of life in this province.	Tax cuts to big business is no longer the way to go to stimulate the economy. That money should go,back into peoples pockets. Not big business. Work towards a	Work towards a balance in oil and gas and clean energy development in Alberta.
T2A	Healthcare, Education, higher minimum wage, higher taxes for corporations and less taxes for people, supporting people on AISH, farm worker safety, infrastructure such as the green line in Calgary, subsidies for green tech companies, subsidies for movie industry, subsidies for tech companies and increasing the collection rate on royalties.	Not giving massive tax breaks to corporations that created a loss of jobs, invest in bringing other industries to Alberta to create jobs and increase economic diversity.	Investing in green technology industry, movie industry, tech industry, improve relations with other countries to move our agricultural products better. Investment in post secondary to improve outcomes for youth and the future of this province
T5Z	Public Education, Health, Diversification of Resources	Cancel the 4.7B tax cut to wealthy businesses, Eliminate the "War Room", Eliminate the "Alberta Oil & Gas Centre".	Restore the programs that were eliminated by this government. Start diversifying the resources and economy and stop focusing on only Oil & Gas!!
T8X	Education (inclusion and class size) Health Care	Mobile consumption sites	Energy resources

T0K	Decrease health care and union spending.	<p>Do not pay for abortions, gender reassignments, invitro pregnancies-especially not for lesbians.</p> <p>Many savings could be made at AHS. The front line staff are targeted when money is tight even though UNA and ATA members have very expensive and too many benefits. If there were less highly paid chiefs in the organization they would not be missed. When front line staff are cut, they are missed. If the people above the director level took a small percentage pay cut there would not have to be front line job losses. There is a huge list of AHS employees that make over \$200,000. There is a large list of employees that make close to \$500,000, including the CEO. There are many employees above the VP level that who knows what they do. They create make work projects to justify their job. The work for the projects gets downloaded to directors, managers and frontline staff. Nothing changes as a result of these projects.</p> <p>There are too many provincial teams whose members belong to a union but get paid more than the top front line RNS and more than some managers. There too many meetings and provincial representatives at the meetings so nothing gets done.</p> <p>Rather than have everything centralized to the big centers, it makes more sense to have some local authority. It is more cost effective to hire a local mover to move a desk rather than have a "contracted mover" come from Calgary. The AHS department pays the mover's time, lunch, etc. Their moving rates are higher than the local movers. We are also not allowed to buy from a local vendor. We have to buy through a "contracted vendor". Their costs are higher and their delivery costs are also higher because most of the time the item needs to be delivered from Calgary. Usually the item can be bought for less cost from Staples and delivered for free.</p> <p>We cannot move a desk, etc. without having someone drive</p>	Remove some of the barriers for farmers and small business owners. Keep insurance premiums in balance.
T5R	Education, healthcare, child tax and roads	Handing out income support to people who are capable of getting work	.
	Social services, green energy, healthcare and education.	In all your oil and gas corporate bailouts or your atrocious war room where you're hemorrhaging our hard working taxpaying dollars.	Through green energy, social services, education and healthcare.
T6W	Infrastructure. Build that pipe.	Reduce their pensions.	Build that pipe.
T5g	Transition support for oil and gas workers, green energy sector, education, healthcare, social services-- stimulating the economy through investment and supporting Albertans with job creation during this economic downturn. Supports for people with disabilities not de-indexed, and supports for mental health around the increasing suicide rate.	Stop the oil and gas/corporate bailouts, tax corporations and the rich, invest in energy efficiency Alberta that was returning \$3.20 for every dollar invested. Closing that warroom joke that's bleeding money and lies.	Investment in social services and green energy sector, healthcare, education, and green infrastructure projects. Investment in energy efficiency Alberta and training to transition oil and gas sector workers.
	Affordable child care. So parents can choose to go back to work.	Offer union staff voluntary severance. This would shrink the GoA with less fear and stress from current union staff.	Diversify economy. Bring back funding programs such as tech credit and SR&ED

	Maintaining publicly funded and public access health care. Queue jumping by wealthy Albertans accessing private services creates a two tier system that we did not vote for. The government should come up with a responsible climate change action plan that includes building up resources other than oil and gas. Prioritizing affordable child care initiatives, particularly for lower income Albertans	Increase corporate taxes Increase taxes on incomes above 100,000 \$ or higher. Actually increase educational supports and public education funding to invest in enrollment growth. Why does the debt have to be paid off in 4 years? Isn't certain debt considered "good"(like a mortgage?). Perhaps a plastic tax would help generate revenue and encourage more environmentally sustainable choices by companies and consumers? Perhaps a clothing tax on fast fashion?	Spend money on education and health promotion to decrease the burden & cost of chronic disease Innovative ideas such as seniors and college students sharing housing to decrease burden of loneliness in seniors.
T8N	You need to go back and fix your mistakes in a lack of funding in education and health care.	- Get rid of the war room - Increase corporate tax slightly - Institute a PST - We all love Alberta Oil & Gas, however these companies are taking from our land they need to pay the price. They have been ignoring paying municipality tax. Step up Alberta government.	Invest in all of Alberta and Albertans. Diversify... We were tech leaders and now it has been washed away since UCP has gained power. As a business owner and (once) proud UCP supporter this needs to be fixed. The deficit has grown. My kids are miserable at school because of cuts to education (which you refuse to admit). My father has received declining health care. My profits continue to drop. My taxes have increased, insurance increased Get it together or lose my vote
	Education and healthcare.	Tax. The. Rich.	Making education more affordable could help with this immensely.
T1M	Public services such as education, health, mental health and addictions, senior care and AISH.	Reduce Energy Centre budget, cut/reduce expert panels, cut travel expenses and hiring in government offices, do not bring in privatization of public services	Support small businesses, support other industries beyond oil and gas such as film, arts, technologies, do not privatize education and healthcare, stop funding private schools and businesses, bring in a sales tax, bring back the tax credit indexing so people can afford necessities and luxuries
T2W	Health Care access. Midwifery care replacing GPs for prenatal care. Uncapping midwifery care in the budget. Including Doula care in the budget. Public Education Safe consumption sites need to be funded and expanded.	Politicians expenses and salaries in upper level	Train for solar panel installation. Train for electrical conversion in the vehicle sector. Train for any viable green sector to transition away from traditional oil consumption. Use the products being trained for.

T5T	<p>-The people of Alberta should be the priority, and not just the UCP members/voters/supporters. Not everyone voted for the UCP, but we are still residents of this great province and deserve to have a government that will do what is best for us as Albertans too.</p> <p>-Education, health care and economic diversity should be top priorities so we do not have to rely solely on the oil industry.</p> <p>-The public education system, while highly regarded by Albertans and consistently ranked top in Canada, is seeing a freeze on spending, which is actually a cut as the numbers of students we have each year continues to grow. These new students deserve a high quality public education as well, and deserve to be funded so they will have a teacher and a classroom. Our teachers are dedicated, trained professionals and should have all the tools needed to ensure each child can learn and be successful. This will ensure we are raising a generation of capable, contributing members of society. Cutting funding to public education in any form will severely damage our province. Quality public education is key. 95% of Albertan students attend public schools, so this where our money should be directed.</p> <p>-Our health care system is full of many highly skilled and professional health care workers, including doctors, nurses, EMS workers, etc. Cutting these vital positions is ludicrous. We need to be able to provide top quality health care for all Albertans, regardless of their economic status. Every single Albertan needs and deserves access to quality, timely medical care in their time of need. Our health care system already has places where it is stretched thin, and cutting jobs is not a way to improve our health care system.</p> <p>-We need to find ways to diversify our economy. We can't rely on the oil industry forever. While we do need a pipeline to an ocean to get our valuable oil to a port, this isn't</p>	<p>-Stop giving billions of dollars to your rich friends and big businesses. When you give our billions of dollars to them, but then cut public sector jobs it does not show support for the public sector jobs that help run our province each day of the year.</p> <p>-Stop cutting front line workers in public sector jobs, who will not be able to support the economy if they are unemployed.</p> <p>-Cut back on government expenses in travel (you can fly economy class like the rest of the people in Alberta) and hospitality (potluck dinners or meetings, perhaps? We have to do that in the education field).</p> <p>-Implement a modest sales tax (say 3%) to help bring in revenue to help cut down on our debt</p> <p>-Look at your government expenses first. Where can savings be found?</p>	<p>-Don't cut jobs in education, health care and other public industries. That will just cause our unemployment numbers to rise. Protect public sector jobs.</p> <p>-Work WITH the government of Canada, not against it to try and advance the priorities of Alberta.</p> <p>-Implement a modest sales tax (say 3%) to bring in revenue to help cut down on our debt</p> <p>-Encourage economic diversity. Read this article: https://thetyee.ca/News/2019/07/31/Alberta-Strong-Economy-Transition/?utm_source=facebook&utm_medium=social&utm_content=011820-1&utm_campaign=weekend_read&fbclid=IwAR3CPufEgZA8Mij09FUTWuAMUbtWGcLVSaEITgov9oIni3cODSC5FfC8Wc</p>
T5B	Roads, public education, healthcare.	Try not giving handouts to massive corporations and maybe look at broadening the energy portfolio to green energies.	Try not giving handouts to massive corporations and maybe look at broadening the energy portfolio to green energies. Also... More trades.
T0M	Education, health care, services for people with disabilities	Scrap the \$30 M War Room.	Invest in infrastructure

T3Z	<p>Healthcare, Education, Job Creation, Infrastructure, Welfare (AISH). Creative incentives for new businesses.</p>	<p>The government is the biggest employer. When in power the NDP continued to give public service union employee raises when the private sector bled jobs and took wage cuts. The unions don't care. They just want more and more. There has to be a pull back in wages or staff cuts.</p> <p>In the AHS, cut the management positions and put them back on the front lines. If they don't want to or are unable, move on and replace them with front line staff.</p> <p>The public service unions will loose their minds. What about the rest of the Albertans that have been out of work for 4 years?</p>	<p>Continue to build infrastructure and support job creators. Support the oil and gas sector. Continue to try to bring in new industries like new technologies, computer software, movies, etc.</p>
T1J	<p>Healthcare and education majorly. The two sections they seem to be taking away from. These are areas that will not ever go away and will always be necessary, why limit them?</p>	<p>Benefits given out like candy (such as AISH) to people who just take advantage and buy things covered for them just to sell them back through kijiji. Limiting the people who can get onto that coverage based on which can actually work and participate in society.</p>	<p>Job creation through both healthcare and education. These are two major factors that are always abundant and necessary, why not feed off of them?</p>
T5B	<p>Public Education, post secondary education, healthcare (including mental health programs and care for people with disabilities), public transportation, early childhood education, low-income housing, energy diversification</p>	<p>social programs such as early childhood education, supports for parents and preventative healthcare will save money in the long term and also create jobs (poverty is very expensive for government). Mainly it would make sense to stop giving large subsidies to already wealthy corporations. You could definitely find savings that way. The war room seems pretty unnecessary in a world where burning fossil fuels is one of the main causes of climate change, so if you stopped funding that project you could find savings. Oh, and it makes a lot of sense to bring in a PST so that we could avoid all these massive cuts to critical services. I bet if all the Albertans losing their jobs lately were able to keep them, those people could afford to buy stuff and thus pay sales tax. That would be a place where government could find some money to roll back into job creation and critical services. I know that I, for one, would happily pay higher tax. I bet the amount it would cost me would still be far lower than the extra \$750/month I will soon be paying for childcare. Sounds like savings for everyone.</p>	<p>See above answer</p>
t3e	<p>Mental health that is based on evidence not efficiency. Long term services are needed both in non profit and through the health system. Single session and short term services is a numbers game with no basis in actual outcomes of health. "People served, or people in people out" mentality does not equate to people being served well- and will have no preventative impact long term.</p> <p>Safe consumption sites need to be a part of Alberta. A movement away from this initiative would be a gross misuse of power, a denial of evidence of its outcomes.</p>	<p>Increase corporate taxes, sales tax, efficiency in aspects of the budget that are based in numbers and not peoples lives.</p>	<p>Diversification of economy, mental health.</p>

T0H	-Frontline Health and frontline Education. -	-Public executive positions in health and education. -pull public funds from private and charter schools and distribute to public education. -religious based education could be amalgamated with public	-Invest in infrastructure, however we need capital first. Once the economy is stimulated, its time to save to invest in albertas future recessions. We need to focus on the major industries that are leaving Alberta and examine the root causes. -make post secondary feasible for Alberta students. Any form of post secondary is going to positively impact the becoming. We need an accessible higher education incentive.
T3C	The government should be focusing on spending money in areas that directly support Albertans - education, health care, social services, technology and innovation grants, and post-secondary education.	The government can save money by not giving massive corporate tax cuts to oil and gas companies that go on to lay off thousands of Albertans, and by closing the energy war room.	By supporting and funding research grants in technological fields to help diversify the Alberta economy, providing more support to small businesses, put more funding into education.
	1)more frontline workers 2)a green-energy plan that is feasible, not just the flavour-of-the-month go-to energy plan! 3)creating more jobs	1)stop funding abortions 2)do not fund sex-change surgeries (other non-emergent plastic surgeries are not covered, so why should this be? 3)cut back on public-sector management positions (enough of the assistant-to-the-assistant-to-the-manager positions!)	1)infrastructure 2)reinstate fee-for-service for ER room use 3)increase access to private MRIs/CTs/Ultrasounds, etc
T8A	Schools. At all levels. Our kids deserve the best education we can provide. Healthcare.	Eliminate the war room. Don't provide tax cuts to big business, or perhaps increase their tax rate.	Diversify the economy. We can't depend on oil forever. Create solutions within the province instead of blaming the federal government.
T6x	Public education!!!! Public services. Stop making decisions that cost families like no insurance cap or daycare grants or school fees. Since UCP took over, our family's monthly bills have gone up a few hundred dollars!!!	Stop giving massive tax breaks to corporations who aren't creating jobs. Corporate tax breaks should be conditional. Work top down, cut the fat in government positions and salaries. Stop funding private education!!! That is a parent's choice so why are my tax dollars paying for it???	By making education for ALL youth a priority rather than focusing on the elite few who will go to private school.
T6b	Debt	Management there way too any in many departments	Offer skill training
	Jobs for younger people, bridging programs from university to work (internships, co-op programs etc). Health care jobs! Funding for early childhood education and education assistants to help teachers with large class sizes. Infrastructure for the city and creating jobs that are not solely oil based. We want to create Edmonton into a prosperous and exciting city with opportunity for growth not just a place that's mooching off oil.	Tax corporations. Trickle down economics obviously does not work.	Create bridging programs from university students to the workforce. Help marginalized or vulnerable populations get jobs by creating opportunities for people with little or no English.
T3H	Public education fully funded including new students to the province. As promised in election campaign and then reneged once in power. Adequate funding for health care.	Stop giving corporations tax cuts eg Encana which moves its headquarters to Denver despite receiving tax cuts. 4.7 billion saved there	Diversify economy. Jobs not in oil and gas to be developed. Especially technology. Subsidize the arts and research.
	-hospitals/public health care -public services, particularly emergency management (wildfire, police, ems, fire)	Scrap the war room	Support the pipeline growth

	Job creation and infrastructure build. Maintaining public service funding	Not reducing taxes for corporations. They have been laying people off and the income the government would receive from their taxes will then shift to the taxpayer	Grants and incentives to bring on people rather than laying them off
T4X	The government should focus on opening schools and hospitals, funding mental health programs and finding homelessness solutions. They should be looking for ways for Alberta to become less reliant on fossil fuels and how to fight climate change.	We need to tax large corporations based here, specifically oil and gas companies. Government should be focused on helping citizens, not corporations.	Incentivize the development of environmentally friendly energy corporations here in Alberta before fossil fuels kill the planet. We are an energy superpower, but we need to find a sustainable solution. For jobs being lost in oil and gas, more should be made in sustainable energy. Give better tax breaks to small businesses and students. Most people are too bound up in debt to participate fully in the economy.
T1s	Stop cuts to services for health and education	Mla salaries	Provide economic incentives to green energy..... stop funding oil and gas industries
T2P	Transit improvements, healthcare, university fees	Bring back the carbon tax, increase corporate tax rates again	Increase minimum wage, improve public transit while reducing the fares, invest in universities to make them more accessible, reduce funding to support oil and gas so we can quit relying on oil and gas as the province's only income
T0K	Agriculture research	Buracrecy	Research and development
T0E	Restore seniors drug benefits Don't take away day care funding	Increase corporate taxes Institute a modest sales tax	Keep up with diversification of the economy- restore funding for green initiatives
T0M	Education Health care Prevention measures	Cut politicians' pensions Red tape	Funding universities Funding schools Fund the STEP program Lower taxes for small and medium businesses
T1K	The government should prioritize spending on k to 12 and post-secondary education systems as well as on environmental matters related to global warming. Young Albertans need to have access to high-quality educational systems in order to have meaningful careers and make robust contributions to Alberta's economy. Global warming is a significant concern that requires immediate action by many, including the Alberta Government.	Invest less in the oil and gas industry and introduce a provincial sales tax, which is long overdue.	By investing in our educational systems, innovation, research, alternative forms of energy, and environmental matters.

T8N	<p>1. Albertans that are disabled and cannot work need AISH. That means they need to have yearly raises to keep with the cost of living. Not cutting back.</p> <p>2. Hospitals have needed repairs or updating etc for more than 30 years. Why is this so behind?</p> <p>3. Hospitals need staff to run properly. Why are they cutting back? Is our population decreasing?</p> <p>4. Every elected politician makes too much money. Why would a politician make more than an occupation where they put their lives at risk? Examples: firefighters, police, ambulance, etc. Cut backs for all politicians!</p> <p>5. Schools will keep bursting at the seams if our "LEADER" doesn't plan for our provinces population growth for the next 30 or more years.</p> <p>6. Homelessness needs to be addressed ASAP. WHY hasn't or isn't there a plan in place?</p> <p>7. This list could be endless so I'll just stop now.</p>	<p>1. Politicians wages should be just slightly higher than the minimum wage. No bonuses of any kind. No expenses allowed. No travel allowed. No benefits of any kind. NO PENSIÓN PLANS ALLOWED! Welcome to 2020.</p> <p>2. Stop depending on OIL & GAS! Why did Alberta become dependant in the first place?</p> <p>3. Allow a citizen or several to every budget meeting to put reality into "perspective". Actually any meeting of any kind.</p> <p>4. Volunteer. Yes, politicians that care would actually do some things as a volunteer and not expect a huge paycheck or a pat on their back.</p> <p>5. Stop taxing the average Albertan and stop giving the tax breaks to businesses and wealthy people.</p>	<p>By looking into the future for population growth and roads and hospitals and schools to name a few. Common sense would create growth in the areas that we need.</p>
T6R	<p>Education .health care .small business Invest in people healthy people healthy society then less crime less sick peoples</p>	<p>From Every Tex dollar saving.10 c and spending .90c</p>	<p>Yes and help small businesses to create more jobs</p>
T3E	<p>Education Health Care Social Assistance programs Moving towards a new economy based on clean energy and renewables Sticking to the mandate provided by Albertans Not overstepping boundaries of democracy and acting as elected representatives of the people and not self interests or those of wealthy interest groups Actually listening to Albertans</p>	<p>E-services Reducing subsidies towards oil industry Repurposing 'war room' funds towards public interests</p>	<p>Turn Alberta into a leader in green technology Invest in public infrastructure Renew and renovate decades old recreation infrastructure</p>
	<p>Health care, senior care and education</p>	<p>They could cut their wages</p>	<p>Provide jobs to Canadian citizens rather than people that are here illegally</p>
T8A	<p>Healthcare and education</p>	<p>Charge parents for school fees again that will help with school budgets and bring in more revenue. Stop the subsidized like was done with transportation. Put it back in the hands of the parents as it was before</p>	<p>Not sure on this one</p>

T3E	The poor The homeless The elderly The sick Education of our children	Maybe the government could learn to view and speak about the citizens of our province as people, citizens with real lives and relationships and hardships who thrive when they have a sense of community, rather than JUST speaking about our citizens as taxpayers and economic concerns. Is it possible to create initiatives that honor people and the work they do and promote community building. Create initiatives and set up rewards for those they invest in better lives for self and others. If pp have businesses in Alberta, then they should also be expected to invest in Alberta as a place to live...jobs yes, but also contributing to the lives of others who are less able Keeping gst	Support Small business Encourage oil and gas companies to be forth coming (open and transparent to the public) about risks and benefits that we face & enjoy/need Support alternate energy initiatives Keep corporate taxes minimal around 10% would seem fair
T8H	In no particular order: 1. Full education funding including the 15000 students expected in addition to current enrolment. 2. Health care must be maintained as a priority including increasing hospital beds and increasing nurses at hospitals. 3. Climate/diversify energy sector away from fossil fuels. 4. Transportation/Edmonton LRT	- Full review of salaries of high executives including any bonuses. This means a reduction in salaries/benefits of the premiere, ministers, MLAs, superintendents and trustees in Alberta. This also means very strict guidelines and oversight on travel expenses etc... - Mandated Transparency of Oil and gas bailout in the amount of 1.6 billion. Expectation of companies to show the public how this benefitted the economy in \$\$ and how this was allocated. How is this being reinvested in Alberta with very specific report with numbers and not a broad statement. - Elimination of the "war room" that has no transparency. Without transparency it is publicly funded ucp propaganda room.	- Support small business through grants, tax credits. - Expect full transparency with emphasis on job creation to any corporation who is benefiting from tax rebates/credits - Expect full transparency with emphasis on job creation for oil and gas that received 1.6 billion bailout.
	Education and Health care should be a priority...not an area to cut.	Not giving handouts to oil companies. Look at a sales tax. Bring back modest healthcare premiums.	Keep clean energy incentives for start up businesses. Not by cutting public sector jobs and singlemindedly supporting oil at the expense of all other sectors.
	Public services. Stop cutting stuff people need. Healthcare is needed. Having our own carbon tax was WAY better than giving the feds the money to NOT invest back into alberta. Stupid decision.	Raise taxes on the richer.	Maybe you should diversify instead of being so fixated on oil and gas only. Otherwise, we will become like Saskatchewan. Is that what Kenney wants? Apparently.
T3C	-Public education -Healthcare -Supporting jobs and new economic growth in the tech industry -Affordable day care	a low provincial sales tax	The government could support job creation by realizing that people also work outside of the oil and gas industry. Jason Kenney cutting public sector jobs and then standing around in an "I love oil and gas" sweatshirt at events truly shows he only cares about some of the Albertan population. Rather than subsidizing oil and gas, billions could go towards diversifying our economy and promoting the assets and skills of all workers of the province.
T9w	Education, health	No tax breaks to wealthy corporations	Quit making Alberta look like we are unstable by siding with Wexit ideas.

T8N	Healthcare and post secondary education	get rid of the war room. cancel the recent corporate tax breaks. money from tax breaks is leaving the province - not making jobs. Shameful to hear that Husky is using tax break win fall for operations in U.S, and another province. Adopt Keynesian economics.	Give more tax breaks to local smaller businesses. Stop subsidizing oil and gas and re-direct that money to green technology.
T3E	Fund public education. Fund post-secondary education. Fund health care. Fund public services. Fund AISH.	Get rid of that ridiculous "Canadian Energy Centre." Oh, look, \$30M a year freed up. Also walk back your big fat giveaway to oil and gas companies, please. Demand these companies pay to clean up their orphan wells. For fiscal conservatives you guys are sure leaving a lot of money on the table.	Support innovation outside of oil and gas. Look at the rest of the world. We have a burgeoning tech sector here that current government policies are killing. Support it. Support renewables and alternative energy. Look towards the future. Stop trying to recreate the past and accept that the O&G industry needs to become super sustainable in order to stay competitive. Transfer some of brain power to the new energy sector (ie renewables).
T6j	Health education economic diversity environment	War room	Diversification Supporting education to improve society and reduce dependence on social support.
T2X	Education and health care.	Tax cuts to large corporations are frivolous spending when companies have shown that they care for profits and not people.	I'm not educated enough on the subject to comment on job creation. But divesting into green energy would be a good start with a potential for lots of jobs.
T0J	<p>Public education and public health care should be a priority for a healthy and strong province. People can then contribute as working Albertans and we will have a stronger Canadian economy. Starting with our young to be active physically and a balance with getting outdoors. It is not about big team sports that are good but only reachable for the upper classes.</p> <p>Much more is required in supporting Mental health. 17 (1) ental health occurs overtime and is usually at a crisis level when it is required. Why have people enter a hospital for care which is much more costly than if care could have been provided earlier in the community.</p> <p>More invested in seniors care. Most facilities have limited staffing in place (hands on care HCA). We are warehousing our seniors. The facilities require more space and recreational opportunities....socialization, exercise and physiotherapy support to improve quality of life for residents.</p> <p>There are many children entering school who have high needs. Teachers are torn in spending more time with behaviour needs children, instead of having more support staff and so are not able to spend more time teaching.</p> <p>I do not wish my CPP to be disturbed and I do not support leaving Canada. The governments efforts need to be on making our country stronger.</p>	<p>Middle management in health care can be cut.</p> <p>Less pay to our politicians. It is one thing to get a wage but there are many other expenses also provided on top of wages to our MLAs and MPs. Better management of the pension funds for MLAs and MPs. Too many are getting large pensions that have not worked a life time for the government. The general public has to work for years to obtain a full pension for the limited companies that offer private pensions. The majority of Albertans do not get extra perks for health coverage at retirement other than Seniors Blue cross.</p>	<p>Better direction/ guidance for our youth in Colleges and Universities on career opportunities. Support post secondary schools in new innovations and research that will help make Canada independent of other countries. Thus putting Albertans ahead of other countries and becoming world leaders. Create new jobs to support a cleaner environment and support stewardship of our resources and environment. We are a throw away society.</p>

T6V	Public education Health care	Corporations	Build more schools
T3E	Healthcare, education, public sector jobs. Reinvesting in diversifying our economy so as to stop chasing away investors.	Tax corporations.	Public sector jobs, funding for education and health services, youth employment programs, retraining for oil and gas workers in renewable energy resources.
T9K	Education, child tax disability credit and health care	Less money for high ranking politicians and business people	Keep and create incentives to stay here. (i.e. northern living allowance, child tax breaks).
T2V	Teachers and public education	Eliminating the energy war room would be a good start.....	By diversifying the economy and allow teachers to teach for the 21st century not the 18th century.
T2Z	Public healthcare Public education Diversifying the economy	By stopping corporate financial hand outs.	Diversify the economy outside of strictly relying on oil and gas. Stop cutting positions in health care and education. They are the workers that are highly educated and can contribute financially to keep the economy going by spending their earned money in other areas of the economy.
T2B	Health care, education, universal child care subsidies	Tax the rich and big businesses	Tax the rich and big businesses, increase AISH and PDD
T5C	Education Health Care Support for the most vulnerable Albertans	Large corporations that are getting a cut in taxes while the rest of us pay. We would have money from the carbon tax if the UCP would have kept it in place instead of giving it to the federal government. We also need to look at the huge retirement packages that our politicians get. Those should be cut considerably.	Diversification like the NDP did. Instead of cutting jobs in the public sector protect those jobs. Quit trying to privatize everything.
T3m	Education, health care and diversifying Alberta's economy	Stop giving billion dollar tax cuts to corporations	Diversify Alberta's economy. I'm curious if anyone is actually reading this.
T7v	Health, child care 7 days a week, tourism sector and oil industry.	I really dont think the government should save money in things we need, as hospitals, child care and tourism resources.	By investing in the hospitality industry or tourism. The investment done in the oil is enough right now, maybe create a new hydro dam for benefit of many communities.
	Health care and education	Stopping equalization payments to other provinces Increase revenue through: Reintroducing health care premium payments Provincial sales tax	Keep corporate tax cuts so they can hire people
T5T	Health care and social service. Albertans are struggling right now and they need these services more than ever!	Looking at redundancies in positions, and focusing on strengthening front line service delivery. A lot of government sector ¹⁷⁽¹⁾ are management heavy and have layers of authority that are truly not needed. Strong front line supports reduce recidivism, and help maybe Albertans actually get back on their feet as productive members of society. Communications and branding - seem to regularly go through rebranding that seems unnecessary - ensuring evidence and fact based legislation is put forward to not waste money on laws that show little outcomes	Spending money in social supports to support individuals to be healthy, as well as education - could also look at alternative energy sources to invest in, encouraging companies to look at non traditional ventures in Alberta. - support tourism
	Increasing funding to health and education, post secondary study and supporting daycare costs.	Reduce taxpayer dollars supporting private companies and corporations of any kind. Stop building war rooms. Freeze MPP wages.	Fund small businesses. Reduce daycare, insurance and health costs for families. Invest in green technologies.

T0C	Public Education	Make cuts to politicians salaries and pensions	Funding of Public Education through Kindergarten to Post Secondary
V2C	Getting off of oil	Quit spending money on propaganda	Sales tax
T1W	Education and Health care.	Top heavy admin. Increase corporate tax	EDUCATION!!!!!!
T6B	Class size and complexity. (Complexity being the priority.)	School management?	?
T4s	<p>Healthcare — find ways to get doctors to open family clinics again — the drop-in clinics are awful for patient care and lead to more and more people seeing health care as a drop in. When these offices take 8 hours to see you people just end up in a emergency room.</p> <p>Education — rural education needs your help! People are burning out! Costs are being downloaded to those small communities that can afford it the least!</p> <p>Infrastructure — how about investing in Alberta parks and campgrounds who really haven't seen upgrades since privatization.</p> <p>Seniors and those on AISH — these people have either spent their lives supporting is already or they have needs that mean they can't support themselves. Poverty is not the way to lice their lives. It's sad to see our aging population and those who can afford it the least to suffer.</p> <p>Environment — let's clean up those abandoned wells!</p>	<p>Tax credits and tax breaks for the big businesses where the money and savings do not stay in Alberta.</p> <p>I believe Alberta has a revenue problem and not just a spending problem. This question implies that the only way to look things is cutting back. It implies that many government agencies haven't been doing more with less for years!</p>	<p>They should support businesses and opportunities that are outside the oil industry. If we were more diverse we wouldn't feel the pain such as we do when the oil industry dips. And the oil industry will continue to dip since other cheaper forms of oil extraction keep being discovered in areas such as the United States.</p> <p>If we keep only supporting one industry we will become Detroit and Flint where the cities and regions have floundered with the change of the economic model.</p> <p>Money invested with more local companies would keep investment money in Alberta. A focus on supporting more local businesses would be beneficial.</p>
T3k	Public education, public health care and creating/ maintaining jobs in alberta.	Taxing large corporations. Taxation should be on a income based and not make the middle class and lower class suffer as a result of a disproved "trickle down" economics.	Providing incentive for technology advancements in alberta. Looking for and researching new ways to produce efficient and sustainable energy. Taking care of all classes of citizens and our city by funding projects.
T6J	Literally anything but Oil & Gas industry.	Certainly not in any of the public services they are already destroying with cuts. Do we need to focus on savings? Here's a novel idea: implement a provincial sales tax like the rest of Canada. If you want to constantly compare Alberta to other provinces and how we spend more than them on various things, why can't we compare this aspect of finances. The "Alberta Advantage" is total bullshit.	Oh, is this something the government is interested in? It's hard to tell by all the jobs being lost thanks to their widespread cuts. You know where there was room for economic growth? Through diversification. We could have done that with the tech industry, but you killed that one too by revoking benefits for them in favor of the dying O&G industry. How well has that worked out for growth And job creation? Pathetic.
T1A	veterans. Affordable drug addiction facilities. seniors.	Scrutinize and restructure AHS Management. Stay away from the frontline little people like nurses and laundry personnel.	Oil and gas. US is advertising for foreign countries to buy from them. We are being lost in the dust. Stop paying Quebec!!!!!! In our government office we are counting the plastic cups we use, ceased buying water for staff and begging to order pens. Wonder how bad Quebec is doing?
	They should continue to fund education, health care, 2ndary education, foster care and minors agingvout of the system, seniors, vulnerable albertans.	Closing down the energy war room. Getting rid od the red tape dept. Freezing, rolling back mla wage increases.	Put money in the tech sector to encourage innovation co. Money into renewable resources.. solar panels, wind turbines, grants to homes to upgrade efficiency.
	Addictions, homeless disabled healthcare and education hi	Stop give away to oil and gas	Take all money going to oil and gas and spend it on other industries

T5T	Education and health care.	Introduce a PST of 2%, bring back the provincial carbon tax.	Bring back the AHS super lab. Fund more money to education = more schools = more contractors, labourers, and tradespeople in work. Not to mention the increased stability of school systems and education, leading to more students graduating due to better experiences in schools and learning opportunities.
T8N	Health and education	Hey rid of the "war room". Lower MLA salaries and budgets. Spend less on infrastructure. Raise taxes. Less oil lobbying.	Lower the deficit so we can have more money for things that actually matter.
	Public Education Public Health Care - specifically providing more mental health care for adults, improving the quality of inpatient units, numbers of beds, and provision of proper therapy	By not giving tax breaks to large corporations Decreasing salaries and payouts of MLAs	By increasing minimum wage.
T0C	Education Health care Public services	Oil and gas industry	By putting money into good education for our upcoming generations
	Health care and education	Stopping equalization payments to other provinces Increase revenue through: Reintroducing health care premium payments Provincial sales tax	Keep corporate tax cuts so they can hire people
T4C	-Health Care and Mental Health (instead of all your current cuts!!!) -Education (instead of all your current cuts!) - Increased tax's, no insurance caps, energy hikes, child care and all the other things you've been doing to make it harder for the middle class to make ends meet!!!!) Stop privatizing health care and stop touching pensions!	Oil and Gas (and instead transition to sustainable energy!) Corporate tax breaks (stop funding the 1%!) The wages of senior government leadership! (And here's an Idea, Stop taking private charter flights to Texas with your pals Kenny!)	Make decisions for the MAJORITY of Alberta's population (Hard working, educated professionals, families, students, public sector workers, etc), and not the rich white Privileged minority. Thus far the Kenny government is coming off as a hypocritical fascist government: DO BETTER, Alberta and the planet NEED better.
T3C	Education and Health - these are the things that make Canada and Alberta strong. Yes jobs matter but we need a future for our children and young adults. If my grandchildren cannot get that, then their future is lost.	Instead please think of a sales tax - I know that is almost sacrilege but the deficit can be addressed that way	Invest not destroy
T0m	Public services that Albertans Depend on, innovation & technology, both related to oil and gas and also exploring other options.	Management in public service. Way too many people in the chain of command that don't do any actual work for Albertans bring melas and their staff reimbursement in-line with other provinces.	Innovation and technology. We need to expand our focus from just oil and gas.
T5k	Health care, including a focus on mental health needs, and education.	Oil and gas companies, and other big businesses, should not be getting tax breaks. Our citizens need those dollars to properly fund health and education.	Instead of making cuts and forcing rollbacks, allow people to continue earning money in line with inflation, therefore that money will be reinvested back into our economy. The government should invest in small, local businesses.
T0K	Healthcare - specifically long-term goals such as improved infrastructure and more long-term care beds	Implement a sales tax. Stop funding private and catholic schools. And eliminate the new "energy war room"	By investing in clean energy such as wind and solar power. And by subsidizing childcare so that women can afford to get back into the workforce.

T5N	Healthcare and education. Both improve quality of life and provide opportunities for Albertans to reach their potential and contribute to society.	Ask organizations (unions, groups) for ideas in their area. Groups know where the \$ could be better spent (eg PT nurses collecting overtime when they work >20 hr per week)	Reinstitute Alberta Health Care fees. Support innovation in Energy Sector beyond oil and gas. Support on the job training and education that leads to jobs. Add a sales tax (invest 1/2 for the future).
T6C	Public education, public health care	Increasing corporate taxes, cutting wages to politicians and members of Parliament	The Government should be increasing spending into the public sector and not eliminating or cutting jobs. The firefighters who had their funding cut - reinstate it. Education - increase funding to match with increased enrollment. Health care - increase funding so that jobs aren't cut.
T5R	Education, Health Care, 25\$ a Day Day Care	War room...30 Million Unpaid taxes from oil/gas companies	Invest in renewable....EV cars are a thing... Less dependancy on Oil and gas
	Health care, education, and social services	Higher taxes for big wealthy companies and individuals	That's your job to figure out
T0L	Education and Health Care	Tax incentives given to businesses	Funding education and health care. A healthy, educated population thrives.
T1J	In-tox, de-tox, rehab, social housing. Let's fix the opioid crisis!	Post secondary inefficiency and the inefficient use of funds given to NFP's. These two things could totally fix the above.	30% of the GDP is coming from entrepreneurs making less than \$1m/year. Give them tax savings and incentives to hire employees while they scale their businesses.
T2v	Healthcare and education	End all corporate subsidies	Investing in infrastructure, healthcare, and education
T8T	Education and preventative healthcare	funding for corporations who already make a high profit	educate the children
T6L	Public education, public health care/services, fighting poverty and homelessness.	By enforcing higher taxes on larger corporations. Specifically corporations that are in the oil and gas field.	Increasing budgets on public services like health care and education in order to higher more qualified professionals and focusing on hiring individuals new into the field.
t8v	support health care and education No cuts to health and education	government staff	diversify
T0B	Fully fund healthcare and public education. No voucher system.	Eliminate war room! Stop giving money to corporations.	Grants to small rural businesses.
T9E	Healthcare and education. Knowledge is power! we shouldn't be left behind other countries in education.	Too many "dead weights" in upper management, carefully monitor people that abuse the healthcare system (ie. living in US and coming to Canada for healthcare), AISH benefits. Far too many people abuse this system. If you are capable of living on your own, looking after children, you CAN work. AISH could subsidize but too many get on it and never leave it. Indigenous benefits? Just a few, but it all helps. " Watch your pennies and the dollars look after themselves!"	We are a province that has relied heavily on oil and gas with very high earning income. Many things are made from the oil and gas industry, maybe start the facilities to manufacture. With a greener society in our future, we have to expand on what we have. Turn more crown land into reasonably priced entertainment ie. camping, fishing, zip lines, rock climbing. Things people can afford here and not leave the province for vacations.
T2T	Maintaining reasonable and sustainable funding for public sector areas (health care, education). Not tying funding in postsecondary to 'performance measures'	Stop putting money into an abyss like the war room. Oil and gas are on the clock - let's start to find ways other than oil and gas to employ people please.	Tax breaks for new technology and clean energy.
T8N	Education and Healthcare	Combine catholic and public schools. We don't need two boards in every district.	Targeted investment in technology programs in high school and post secondary.
T1M	Education, health care funding. Quit giving money to businesses that are heading out of Alberta.	Pension packages for all elected officials. You can put into your pension just like working Albertans. Quit paying MP's to attend meetings, its part of their job! They should not be paid extra.	Bring back funding for high school students studying trades. Quit giving money to oil companies who will take it and leave. Support small business, support child care funding, support education.

	Education and health.	Kill the worthless "war room." Stop giving tax cuts to corporations. They only use them on share buybacks and CEO salaries.	By spending on infrastructure. Roads, schools and medical facilities. Restore the tax credit for tech startups that you cut. An educated, technical work force is the future, not fossil fuels. No matter how much you cut the corporate tax rate, Encana still would have left and the developed world will still shift to green alternatives. Wake up!
T2E	Healthcare and education.	Scrap the WAR ROOM!!!!	Stop cutting social programs, Medicare and education these are important Canadian values
T5A	Health care and education	Infrastructure, politician wages	Don't cut social programs, support post secondary students and increase support to low income.
	Healthcare, Education, and Seniors, and improve the economy by devirsing it. Where are the jobs??	Quit wasting taxpayers dollars on your panels and war rooms. The government could save millions of dollars by eliminating this unless commities which aren't improving the economy. Where are the jobs????	Diverse the economy. Bring in new manufacturing companies to do business in Alberta. Don't rely on Oil and Gas which eventually disappear. Nothing but broken promises from the UCP;where are the jobs??
T5T	Health and education	Hiring more casual staff in heath care to eliminate overtime. Decrease levels of upper management and unnecessary project staff. Focus more on front line care of patients.	Focus on necessary projects (repairing hospital building issues) so hospitals can function efficiently. Create more jobs in the oil sands instead of paying big companies to create jobs that are not being created.
T5t	Health care, infrastructure and funding natural resources like oil and who is stopping our production	Health care putting nurses on 8 hour shifts save on over time Reduce management in healthcare and put more people on the front lines serving the patient	Fund infrastructure, reduce taxes , support large projects oil sands, natural gas Put coal fire power plants back to work because we have the cleanest coal in the world and plants that produce the cleans emission in th world
T3J	Healthcare, Education.	War room is a waste of money, as are many of the new panels you have formed.	DIVERISIFY ECONOMY. wr need to stop relying solely on our oil. Find a way to attract technology jobs to the province. Oops the last government had started that and you went and undid it. Create some new incentive to replace what you undid.
T1B	Twinning Highway 3 between Taber and Medicine Hat, Reducing taxes for corporation that employ 50 or more people in Alberta	Start with the Reducing all the perk you get for being an elected member	Lower taxes for corporations and employees
T3J	Healthcare, Education.	War room is a waste of money, as are many of the new panels you have formed.	DIVERISIFY ECONOMY. wr need to stop relying solely on our oil. Find a way to attract technology jobs to the province. Oops the last government had started that and you went and undid it. Create some new incentive to replace what you undid.
T5T	Helping the economy	More efficient use of money, not job cuts	Again, more efficient and effective use of money
T1V	Get the oil and gas sector back to where we were 5 years ago. Stop giving agriculture a subsidies for every time they feel they think they haven't got the the price they think they should for their commodity. Lower taxes!	Government employees pensions. Stop giving immigrants everything for no return, stop them from sending money back to homeland and not investing in Alta.	Support young people for education. Less government more private sector.
T2X	Education, health care, public transit, social services, making lives livable!	No "war room", no tax breaks for foreign companies, stop fighting with federal government	Keep post-secondary education affordable. Invest in a diverse economy. Hire summer students. Listen to Indigenous ways of knowing.

T1S	Ensuring that education and health care are being prioritized, fully funded, and NOT privatized.	In the \$4.7 billion tax cut that corporations received	By educating their youth, ensuring that their population is being cared for health-wise, and diversifying the economy. You cannot employ people who have not received adequate health care or education and by cutting these areas, you are putting future generations at a severe disadvantage. You also cannot expect oil to be trading at over \$100/barrel, as in previous years, and need to identify areas that Alberta is able to grow rather than trying to re-live the "glory days"
T4L	Health care, education and other government provided services	Corporate tax breaks	Not making cuts during a recession.
T6x	Education Mental health Renewables	Corporate tax breaks End war room One public school system instead of catholic and public	Infrastructure
T4N	Social programs, recreation an small business, NOT big oil!	The premier's salary, disbanding ridiculous committees like red tape reduction and fair deal.	Innovation & tech sectors, small business supports, forget shallow gas tax cuts which just download costs to municipalities, who in turn raise taxes to cover their operating budgets.
T4M	Ensuring services are available to those Albertans that need them. This means ensuring there are enough frontline staff to operate and support the programs and services provided to Albertans.	Give more decision making power to lower management and supervisory positions which would decrease the need for so many higher paying upper management positions, streamlining processes, get rid of the corporate tax cuts.	Invest in education, support trades including the oil and gas industry
T1y	Education, health care, diversification of industry	Cutting or reducing the use of paid board to solve government policy issues, redistribution of tax cuts to increase development in industry.	Diversification and supports for industries that find new and innovative ways to encourage development in and out of the oil sector
T2Y	Public education and healthcare and wellness for all citizens	Corporate buyouts	Public education and healthcare and wellness for all citizens
T6R	How about not letting people go from their jobs. Lifting the hiring freeze would be nice because we are suffering here. Cutbacks are not working, people are suffering so much now.	Maybe they can investigate the native funding, they take a lot of money and for what? So they can drink and do drugs? How about giving them incentives instead? Yes I agree the Government did them wrong a long time ago but don't throw money at them for doing nothing! How about you say "If you finish high school you get this amount. And when you finish College you get a bigger amount. University an even bigger amount! This way at least they'll be educated and they're working towards a great goal and not getting money for nothing.	Well the more money people have the more they spend, so people need to keep their jobs and get raises again. Inflation is killing us. As for creation, have a contest for jobs created or encourage people to be entrepreneurs!
T4P	Public Education - to support inclusion in the classroom, to decrease class sizes, to support that teachers don't get a wage freeze or decrease, to lower transportation and school fees that parents pay. Healthcare - more ambulances on shift, to support nurses so they don't take a wage freeze or cut.	Decrease the number of upper management positions in the public sector of government. There are many supervisors and managers that delicate workload and take a big wage. Not funding choice programming in Education.	By investing in infrastructure. By building pipelines. By spending government money, and not giving tax-breaks to corporations.

T0B	Infrastructure to grow business. le) pipelines an roads. Rural schools. Rural healthcare.	Reduce red tape in the public sector. le) grant programs, healthcare, education. So money can be spent on valuable ground level staff, not on administration.	Reduce environmental restrictions. For example, this would allow coal plants and oil sands to pick up again.
T4R	Health, education, seniors, job creation/retention Addiction/homelessness/crime prevention	Making government departments fiscally responsible for their budgets starting with wages/benefits/bonuses of upper/senior management (non union) Stopping running task/focus groups on agenda items over and over because they don't like the answer - hoping for a different outcome	No more tax cuts for large corporations as that had not succeeded to keep them in province Help small businesses by fighting crime and addiction in communities so they can remain open Help business draw/keep customers by assessing rent and taxes accordingly
T4L	-Health care and education - improve quality. -Increasing Provincial camping areas. (The online fees alone are a cash cow. People will pay to go to un-serviced areas, so charge for them. It is very difficult to find weekend camping in the summer, if you haven't booked months ahead.	-Making oil and gas companies pay their taxes to municipalities so government isn't having to make up the shortfall. -implement a tax similar to other provinces so our people aren't dying stupid because you have cut education and health care so badly that it's inaccessible. -Figure out how to capitalize on the inventions being made and sold at universities. -Reduce mileage allowances for government workers. -Supply government workers (MLA's) included with modest, but safe vehicles to cut costs. (Not \$80,000 blue Fords.)	-Put money into the film industry. AB should be a "go to" for Hollywood because of the diverse geographical regions here. -Don't create situations where you are causing mass layoffs. Even the intellectually-challenged creator(s) of these surveys should know that the less people working, the less taxes being paid and the less people are spending in the community. Also, companies aren't going to move here when you are eliminating education, early child care services and health care. Check out how many small businesses have closed in Lacombe since you were elected.
T2j	Education, health care, job creation	In house, stop spending money on changing what previous governments put in place just to spite them.	Get the pipeline built!
T2Z	Expenditures: Healthcare and Education. Tax credits: More for Film and Tech. We need to grow and diversify our economy	As per the MacKinnon report: transfer more health services from doctors to Nurse Practitioners. Also get rid of your idiotic Energy War Room. Its a massive waste of money and has so far been a total embarrassment. Also you might fix your revenue problem with a 2% PST. We'd still have the lowest tax rates in Canada.	Well you couldgive back tax credits to the film industry that you cut in the last budget. Your cuts of the last credit did serious harm to a blossoming industry for literally no benefit. I would also invite you to consider an increase to grants for tech start ups such as Jobber which now employs over 150 people in Edmonton and growing.
T8N	Education and Healthcare, Investing in Diversifying the Alberta economy	The War Room, not giving massive corporate tax breaks, not misusing taxpayer dollars for personal gain.	Investing in alternative energy sources and technology to attract companies to Alberta
T5S	Stop cutting education and health care. Stop the corporate welfare and stat charging proper taxes to multi billion dollar corporations. Trickle down economics doesn't work. You aren't working for Albertans you are working for corporations. STOP	By taxing corporations properly	By seeking a more diverse economy. Stop putting all our eggs in one basket
T2J	Health care, PUBLIC education	Removing certain grants, publicly funded celebrations of holidays (Canada day, fireworks, etc).	Pipelines
T0K	Public education and public healthcare.	Taxing rich companies. Get someone leading our province who isn't a jackass.	Invest in green energy, create a war room to combat the premiers lies and corrupt ways. This would provide for endless jobs.

t2j	<p>Health - let's treat our healthcare workers and those that require human services with dignity.</p> <p>Economic diversification away from fossil fuels - investing in the hydrogen economy - you can still use the resource in resourceful ways.</p> <p>Innovation as economic development - agriculture and tourism are two pathways to diversification.</p>	<p>Cut subsidies to fossil fuels - conventional and mid-sized firms</p> <p>Offer incentives for early retirement from the civil service - encourage job openings for younger Albertans - offer them a chance to work for Alberta.</p>	<p>Support knowledge workers in a skills transition - innovation in agriculture - tourism development such as high speed train between Drumheller-Calgary-Cochrane-Morely-Canmore-Banff-Lake Louise. Update the Calgary-Reddeer-Edmonton corridor - train, hyperloop - let's truly look at mobility as a catalyst for economic prosperity.</p>
T4R	Education and healthcare	Government officials' salaries.	Diversify. Don't put all our efforts into oil and gas.
T6W	<p>Education</p> <p>Mental Health</p> <p>Healthcare</p> <p>Sustainable jobs and industry (ie: not reliant on a "boom or bust" industry and economy)</p>	<p>Bureaucracy and spending on senior executives</p> <p>Salary freezes for higher up executives</p> <p>Hire in house rather than contract for as many services as possible</p> <p>Invest in proactive rather than reactive solutions (ex: spending is currently frozen for safe injection sites but studies show for every 1USD spent on safe injection sites, there is a savings of approximately 2.3USD on other services such as first responders, emergency room visits etc) (Irwin & Jozaghi et al., 2016). Same concept applies to accessible education, health care, mental health care.</p> <p>Irwin, A., Jozaghi, E., Bluthenthal, R.N., & Kral, A.H. (2017). A cost-benefit analysis of a potential supervised injection facility in San Francisco, California, USA. Journal of Drug Issues, 47(2), 164-184. https://doi-org.aupac.lib.athabasca.ca/10/1177/0022042616679829</p>	<p>Make tuition affordable</p> <p>More provincial grants for education, retraining for people with injury or illness, childcare for stay at home parents who wish to start/return to work</p> <p>Tax the wealthy and corporations</p> <p>Support the interests of women & minorities, not just the interests of upper class white men</p>
T2E	Spend less, balance the budget and deal with the deficit.	Privatization of services, decrease bureaucracy and reign in the public sector unions.	Reduce taxes and regulation. Get a fair deal in Canada or be prepared to separate. Talking and listening is nothing. Actions now!
T0g	Reliable, efficient, spending-conscious, union-free health care and education, and paying down the debt.	Everywhere a bureaucracy exists. Please cut the fat. Offer small monetary incentives to employees within all areas of government employment if their ideas are implemented. They know best where inefficiencies and waste exist.	Cut taxes and regulations

T2T	<p>Improving access for patients who require urgent interventions-surgery, radiology-for cancer patients.</p> <p>Improving access to long term care facilities, well supported, which will reduce the burden on acute care facilities.</p> <p>If tax payer dollars support charter and private schools who can be selective about which students are accepted, make them more accountable for tuition and direct money to public schools whose mandate is to accept all students, regardless of challenges and are often unsupported. Class sizes are also becoming unacceptable in the public system. Work to address this problem by opening more classrooms, hiring more teachers.</p>	<p>Limiting uncontrolled billing by physicians who do no acute care, have no responsibility for in-patients, don't do procedures. Acknowledging primary care physicians financially whose interventions may prevent unscheduled interactions with the health care system. Hire nursing to appropriate positions (full-time)to eliminate the constant search for casual, high cost staff who will be paid overtime. Incentivize delivery of health care. More efficient equals bonus.</p>	<p>Diversification will inevitably flow from a healthy, well educated population</p>
T5G	<p>Health Education Child services</p>	<p>Fossil fuel subsidies Revenue could be raised with a carbon tax. Stop handing out tax breaks to corporations.</p>	<p>By investing in health care, education, and child services.</p> <p>Investing in public transportation.</p> <p>Investing in renewable resources and energy.</p> <p>Diversifying the economy away from fossil fuels.</p>
T2T	<p>Health Care Education</p>	<p>Get rid of the Canadian Energy Centre Saving of say \$30 million</p>	<p>UCP stop the corporate tax break</p>
T2J	<p>Education, health, public service and important infrastructure (like the green line), FCSS, innovation and green jobs, climate change</p>	<p>Corporate giveaways that don't create jobs. The war room. High cost trips and expenses that have no benefit to taxpayers. Not cutting public services, especially cuts that impact our communities most vulnerable.</p>	<p>Creating jobs by investing in green energy, tech and public services. Education should have funding restored. Continue to invest in FCSS and indexing AISH. Solving the issue of lack of access and affordability of childcare.</p>
T6J	<p>Oil and gas development is essential. Also, any kind of resource development. Creation of oil refineries and perhaps a paper mill (given that we have a pulp mill).</p>	<p>You could definitely find savings in Edmonton. The mayor and the city council just love to spend on nonsense, inconsequential kinds of development. The LRT expansion could be saved for another day, the gondola across the river is absolutely ridiculous and the millions of dollars spent in city artwork is unbelievable. In addition, high level administration could be cutback as could the people who work in the development centre (who think up ludicrous ideas for the city to spend money on). There is soooo much monetary waste here, and yet at the same time, they keep raising our city taxes. It would be helpful if the Edmonton city administration could be controlled by the province (without the city retaliating by taking it out on the taxpayers.)</p>	<p>We are a province that is reliant on natural resources. We have to keep oil and gas going.</p>
t6t	<p>health care and education</p>	<p>"the war room"</p>	<p>focus on diversifying the energy sector</p>

T3R	Public education - decreasing class sizes, hiring teachings and assistants, focus on inclusion, and building More schools and school additions. Heritage spending - museums, tourism, agriculture societies Increasing revenue from wealthy corporations	Government ministries and departments, Canadian Energy Centre, Premier travel, unnecessary court challenges to federal laws	Providing students with more opportunities for teacher support to have students more prepared for post secondary education which results in higher paying jobs
T5T	The government should focus on health care, education and climate change initiative. We need to get up to speed with the rest of the world because they are leaving us behind. No-one is saying oil and gas should be gone immediately. That's impossible. But if we don't at least start to diversify and invest in other areas, one day in the near future, Alberta is going to be frantically catching up with those who had a forward thinking vision.	Stop spending money on childish "war rooms". What are you so afraid of that you need a play room to fight imaginary enemies? What a waste of time, effort and money to argue with rock solid science.	Green jobs. There is so much opportunity in renewable energy, green initiatives, abandoned well restoration etc.
T8N	Healthcare and education	Outside of healthcare, education and vulnerable populations.	Greater support secondary education especially for those of lower economic status. If oil and gas is no longer sustainable we need to focus on creating a skilled workforce. These are the members of society that will create jobs and earn an independent income.
T0E	I feel the Government of Alberta should prioritize it's spending on public education, front line healthcare (i.e cutting down management of AHS and returning nurses and frontline workers back to the jobs they recently lost), transferring to green energy as oil is doing absolutely nothing for us.	In the 4.8 billion you gave away to non job creating oil companies and other corporations, some of which have now left Alberta. Force them to pay the property taxes to the municipalities and other areas of government that they still have not yet paid. You could also abolish the "war room" which is consuming a large amount of money and doing absolutely nothing.	Through proper education, primarily making post secondary school more affordable, i.e lowering student loans and not turning your post secondary funding into an outcomes based system. Making post secondary and adult learning more accessible and less costly can only benefit. The two best things for a society are and educated and healthy society. I would also make it easier for addicts and convicts to educate them selves and put programs in place to reintegrate them into society. Not treat them as pariah's.
T3E	public education, health care	Do not give subsidies or tax breaks to big corporations	Universal child care will put more parents back to work. Encourage alternative energy companies and tech sector companies.
	Money should be spent on the seniors, homeless, the vulnerable, and transit systems	Cut the wages of politicians and any one who makes more than \$100,000 per year. Cut the jobs of those who are just there to 'milk' the system instead of doing their job, it's not hard to do some internal investigating to know who those people are.	How can the govt create jobs when they are doing it on the backs of those who lost their jobs? They for one should get rid of all the top salaried people out there and instead hire more people for the same price. Instead of 1 person not doing their job, you can hire 5 who can for less than that one.
T6w	Public services, seniors, education and Healthcare.	Stop giving tax breaks to large corporations.	First priority should be on working towards not be so reliant on oil and non renewable resources. Focusing on Hemp which can basically make oil obsolete.
	Education and Health. Strengthen the public do not give them to private.	Wealth tax.	Continuing the fight to eliminate child poverty.

T2E	Jobs Healthcare Police	Find ways for more efficiency in sectors Stop funding drug injection sites Spend less while on official government trips	Keep working on getting oil and gas back on track. Promote Alberta in general. Don't pass anything that hits lower income as then they have no spending money.
T0K	Teachers and healthcare. And youth are centres.	Not giving big corporations money, losing the "war room", bigger taxes to the wealthy, investing in green energy would save everyone money.	By not laying people off for one. Embrace renewable energy and create more full time jobs within the renewable energy field. Oil is good but there are better resources we can focus on for the future.
T5z	Education and health care (money for our most vulnerable populations)	Oil investment	Alternative energy
T6M	Health Education Social support services	Taxing large companies more. Taxing oil companies more. Ensuring oil companies pay their property taxes. Getting rid of the war room. Institute a PST.	Support diverse energy sectors. Support and encourage industry outside of oil and gas. Hire more nurses and teachers.
T5S	Restructuring municipalities to be more self sufficient and reduce size of their bureaucracy. Don't line services are suffering as they pursue socialist agendas.	Turn ambulance service back to municipalities. Costs have sky rocketed under AHS while service levels have decreased.	Allow small farms more freedom to sell directly to consumers. Allow on farm slaughter for small farms like Sask does.
T1S	Paying down debt, boosting the economy	Provincial art fund, subsidising useless research projects, supervised injection clinics. Healthcare and Education have redundancies, especially in administration, cut the funding for that specifically. Pay freeze for city and government workers until the economy hits a specific target.	Corporate tax breaks to incentivise large companies, subsidize small business for new entrepreneurs, especially hospitality. It makes almost to sense to open a restaurant, make it easier. Albertans throw a great party, bring in tourists by creating more attractions. Get the pipeline built and get the oil and gas sector back. Charge BC a duty on their freight trucks using our roads and polluting our air.
	Public healthcare and public education (primary, secondary, and post-secondary).	Initiatives such as the "Energy War Room"/Canadian Energy Centre.	Reconstruct tax incentives for smaller businesses that reinvest all profits in order to grow, and therefore do not benefit from a lower overall business tax. Ensure incentives for the ICT industry remain competitive with other major Canadian markets so as to attract and retain companies in this flourishing sector. Encourage diversification of the economy to avoid reliance on a few select industries.

T5T	Government services must be maintained. No more layoffs. Spend in a recession. Save when the province is booming. Stop the disgusting rhetoric, this helps no one. Spend on large projects. Building more pipelines are not going to work, how about new technology to ship more through the existing pipelines. How about the feasibility of building new power plants along with some carbon capture running of renewables. Moving electricity is easy compared to oil. How about investment in fusion reactors. A lot of the North is polluted from the oil sands how about use the land for new age nuclear reactors. Think outside the box. The world is changing and as Albertans we have no control over the world oil price. The Middle East is building massive solar arrays. They see the future, hopefully as Albertans we can also.	Don't worry about savings. Spend to get the economy moving. Stop acting like the deficit matters at this point in time. Dept will grow. Create new opportunities. Invest heavy in green tech. Let's maintain a future Alberta advantage. High tech Jobs will require a highly educated work force. Stop cutting educators, health care, government jobs. Stop all cuts. Cuts are damaging the economy right now more than anything. People worried about security don't spend money.	Government should be supporting all job creation. Think of the future, not the past. As above new green tech. Doesn't matter on your position on climate change. Not relevant anymore. You can see how much more environmentally conscious people are becoming. Whole countries are banning the internal combustion engine. Green tech is growing. Sell what oil we can but think of new products. Glass for solar panels? Battery production? Electricity generation?
T8x	Lifting low income Albertans out of poverty. Seniors and families, including access to dental and health benefits.	Tax the wealthy. Tax industry- stop subsidizing Oil and Gas! Stop the War-Room propaganda. Tax online purchases more than in stores. Penalize companies who dont reduce their carbon footprint. Albertans use 13% of electricity for residential- bring back the cap for residential. The cold snap costs Albertans too much and we have to reduce spending on food and economy to keep warm.	Invest in transition to greener energy solutions. Help Ft. Mac residents going bankrupt and losing their homes by reducing insurance costs through legislation. Encourage re education and learning by giving grants to return to school.
T6W	Health Care Education Infrastructure	Eliminating legislative Assembly research groups Eliminating legislative Assembly "War Room" Tax corporations	Infrastructure spending Alternative energy sources research Increase corporate taxation
T5J	Return funding to public entities, education, healthcare, and arts. Fair corporate taxes - given that AB already had the lowest corporate taxes in Canada. We can't compete with the US for taxes (they have 10 times the tax base).	Put effort in finding real top-heavy spending, and find and slim down redundancies. Actually audit and understand spending. Dont undo decisions and programs just because the NDP put it in place. Bring in a very low provincial tax AND ACTUALLY USE IT TO REDUCE THE COUNTRY'S LOWEST PROVINCIAL DEBT! Don't create war rooms to spend millions of dollars and make jobs for cronies.	Stop cutting jobs in public service...how can you provide necessary services to a growing population when you reduce the size of staff providing those services? Invest in technology, create a thin for technology development, and change the path of Alberta's dependence on just oil. Make us a power house for many resources. Diversify!
	The government should make education and health top priorities. Making these top priorities will help draw in companies to Alberta, which will help create more jobs.	The government could find savings in decreasing the percentage they fund to private schools. The public school system should be made a priority over private. If parents want to send their kids to private schools, then they should have to pay for that choice. The government should also fold the "war room", which would free up some money for this useless organization.	They could start by stopping the cuts to public services, which in turn is causing a lot of job losses. They could also implement a small PST to stimulate economic growth. This is badly needed in Alberta. Another good option is to stop cutting services, which is causing job losses.
T2N	Public education, public health care, and services for marginalized populations, such as those who are homeless. Indexing AISH	Reduce subsidies for big corporations.	Diversify the economy. Make post-secondary education more accessible and affordable. Promote education and training programs for industries with skills gaps.

T3G	<p>Public Education-reducing class size and having sufficient teaching assistants in the classroom to support students of special needs in the inclusive classroom system model. This would help teachers to be able to focus their attention on all children as they would have support with Students on individual program plans that often require one to one assistance to complete work, support with using additive technology etc. Teachers are working hard. I wish government could see the challenges teachers have in the classroom. Teachers go above and beyond their duties on paper. Kids are our future. For our province to be successful we need to have kids that are resilient, have good mental health, and are able to be successful in the classroom because class conditions support learning. They have up to date textbooks, access to resource teachers, rich arts programs, a proper gym teacher that isn't the classroom teacher but a someone specialized in the area like there used to be before all the cuts over the last 10 years). Schools need funds. Richest investment is in our kids.</p>	<p>Removing the War Room. I don't understand how these millions of dollars are used. Advertising? I understand that our oil is cleaner than most in the world. I find it hard to justify a team of people sitting in a room and thinking of slogans or planning trips to talk about oil. Phone calls can happen. Internet is big. Perhaps public education on how this money is used?</p>	<p>People will spend when they know they don't have to save. Economic growth is halted when cuts are so much that nobody feels safe spending. Rebates for making homes ecologically friendly with home improvements are positive. Energy rebates of some sort? Job creation can happen when small businesses are set up to succeed. If the little guy can make it. It encourages others to participate and expand business or start them up. Innovation and technology, medicine are areas in our province that need to be tapped into here. We have hospitals with world class doctors, world class researchers in areas of medicine. We also have very smart technological people who can contribute to bring innovation to renewable energy and find other efficiencies for other area besides energy. It's a matter of looking at Alberta and seeing our advantage. We are not limited to oil and gas. We are rich in diversity and thinking. We have incredible engineers and education. I would love to see government think out of the box and find solutions that bring together and involve all sectors so it's not just one sector that benefits. Maybe not everyone wants to work in oil and gas. How else can they bring in money? What other sectors might people want to work in that brings job stability that you can also focus on?</p>
T2t	<p>Social services (sexual violence services and AISH specifically) Education Health care Investment in the renewable sector</p>	<p>Decrease Investment in on oil and gas Implement a wealth tax Increase revenue through provincial sales tax</p>	<p>Diversifying industry. Leaving behind the dying oil and gas industry and supporting the development of renewable energy jobs. Support local businesses Prioritize community economic development</p>
T2t	<p>Social services (sexual violence services and AISH specifically) Education Health care Investment in the renewable sector</p>	<p>Decrease Investment in on oil and gas Implement a wealth tax Increase revenue through provincial sales tax</p>	<p>Diversifying industry. Leaving behind the dying oil and gas industry and supporting the development of renewable energy jobs. Support local businesses Prioritize community economic development</p>
T4R	<p>Health care, education, opioid crisis, homelessness.</p>	<p>End your pricey trips, your war room, your propaganda machine, you incredibly stupid Fair Deal town halls! I was silly enough to attend the one in Red Deer. Why on earth do you pay the panel to travel around and sit at these if they won't say a word and you're filming what the public is saying anyway? Why did you need to appoint someone else to the AHS board? Not quite enough bureaucracy yet? Quit trying to reinvent the wheel with endless panels investigating what's already been investigated. Quit giving handouts to big businesses.</p>	<p>Spend money on public wellbeing. Make jobs there. Believe it or not, Alberta is more than oil and gas. Yes, that industry is going through a hard time, but why does that equate with laying off health care workers? I can guarantee you, when the industry was booming I didn't once hear that health care could spend a bit more.... we were being re-orged ad nauseum to 'save money'. With millions spent on new letterhead and business cards and policies each time. How about you quit threatening the public service employees. Maybe if we weren't afraid we are about to lose our jobs we might spend a little more; maybe our spouses might be willing to take the plunge and hire a new employee at their small business when they're not afraid I'm going to lose my job and they'll need to pull more out of the small business to support the family. Borrowing to invest in the growth of our province isn't always a bad idea.</p>

T1b	Na	Red tape administration Redundant systems	Red tape reduction Reducing private sector restrictions Reducing govt paperwork
T3M	Education and Health Care	Infrastructure... it's great that the province is focused on putting an overpass anywhere possible but maybe we could hold off until the economy turns around	Don't allow for cuts in public sector jobs. If jobs are cut no one is paying taxes back to the government and we are all applying for EI
T6x	Front line nursing care	Get rid of management positions that are useless such as patient care managers, shift unit managers, bed management. They do not help staff or patients and are a hindrance.	Cutting front line staff is not the answer
T4R	Healthcare, childcare, education of all levels.	In AHS-it is very "top heavy" with way too many levels of management making too much money while front line workers take cuts and do the work. Savings could be found in deleting the war room.	By acknowledging that while fossil fuels have been the backbone of our province-we need to stop cowering away from finding cleaner, renewable energy sources. Stop saying it's oil and gas or nothing. Charge us a PST. Just do it.
T6H	Health care- specifically not taking away nursing jobs this will hugely impact patient care. Education-more teachers with smaller class sizes.	Paying politicians less and eliminating corporate handouts.	Investing in post secondary education and supporting lower and middle class citizens so they can contribute more to the economy.
T5t	Education and health care.	Unpopular opinion but there was no need for the money given to the oilfield for "jobs" when there were no jobs created that I've been able to tell as I get these out of work guys trying to apply at my retail store as a part time associate just so they can have A job. And make sure giant projects that they are helping fund stay on track timeline wise. Everything in this city falls behind 6 months or more. Huge costly mistakes that should/could have been avoided caught before they happen	Give tax breaks to the middle class-upper lower class rather than the wealthy. They have deeper pockets. Kind of like they do in Europe where for example speeding tickets are based on your income.
T1k	Public education for ALL	Literally anywhere except education	By funding a strong public education system
T2E	Saving public sector jobs, increasing healthcare spending	Get rid of the war room. Stop giving huge corporations tax breaks	Stop forcing layoffs in the public sector, it isn't good for the economy
T2X	Health and education. Tax breaks for lower and middle income families. Not giving a 4.5 billion dollar tax break to profitable corporations. Corporations are not inherently ethical so the government giving them tax breaks does not guarantee that they will hire Albertans.	Give back the 4.5 billion dollars stolen from tax payers and given to profitable corporations.	Invest in health care, education, and social services so people can be healthy enough to work in and participate in an economy.
T5Y	Well no doubt creating jobs,however we should not use cuts to our core service in the way of job cuts to achievethis	Look at the abusers of the medical systems and social programs.	Apparently giving tax cuts to profitable businesses has yet to provide any economic benefit as yet. The laying off of Government workers is not the way to increase economic growth.
T5S	1. Education. These people are the future and they need to be prepared for whatever life is going to throw at them. 2. Diversification. We need to diversify our economy. Full stop.	Get rid of the war room, I'd rather see those funds go towards encouraging new business.	Diversification! Why are we not a front runner for major new infrastructure in tech start ups, and why don't we take advantage of the amazing trades we have and work on moving to solar fields and geothermal energy? Or the creation of Biodiesel plants? Or small scale nuclear? Green/clean energy industry = job creation. Also, create a program of studies in schools that support the foundations of this new diversity.

T8H	Health care, education, and childcare.	I think politicians should take a roll back in salary and expenses, as well as a raise freeze. No more silly government committees. Politicians should receive the same wage as nurses and teachers (I am neither a nurse nor teacher, nor married to one, but I consider politicians no more valuable than them. In fact, politicians are far less valuable).	Invest in diversifying Albertan industries. Oil and gas is dead.
T2Z	Increasing transit, Seniors, vulnerable Albertans	Cut senior management not administrative staff.	Stop laying off gov workers in low positions to start. Invest in wind energy. The world wants more green energy so let's make that stuff and then sell it.
T5E	Health care. Supporting homeless people. Infrastructure maintenance. Public transportation.	Reduce tax breaks for big corporations. Get rid of the flat tax and introduce a progressive tax rate where high income earners pay more tax.	Increase minimum wage. Studies show that this is a very effective way to stimulate the economy.
T4v	Health care and education as priorities. Social programs and child development as well.	Cut government and management salaries. Current cuts in frontline nursing and healthcare practitioners is unacceptable. If funding has to be cut from healthcare more instructions need to be provided to cut from healthcare management salaries.	Support youth and child development.
T8h	Public education , social programs and aish	Tax breaks for major corporations	By supporting public education .
	Oil Field, Education, Health Care	I don't have an answer	Spending money on more projects that encourage jobs and work. Big projects
T3e	Education Health care Environment	Tax breaks for cooperations	By reducing cuts to education and healthcare
T3B	Highest priority: continued funding for the feasibility study for Bow Basin Water Management Options and renegotiation of the TransAlta modified operating agreement during flood season for the Ghost Reservoir	Having already made significant reduction in fundings etc. by the UCP ove the past few month I can only think of reducing the number people employed by the Provincial Government !!	Job training in areas with potential employment ! By reducing Government Red Tape business will take note !!
T6H	Increase for Education, Health care and services for vulnerable individuals.	Increase revenues rather than cost savings:Corporate tax increase, implement a Provincial sales tax Reduce funding for private and charter schools.	Stop slashing jobs in education and healthcare. Diversify the economy. Sustainable power, technology, research investment. Reduce post secondary fees so we produce top employees.
T6X	Healthcare and education absolutely should NOT be cut! The fact that elderly people who have worked their entire live and contributed to CPP and EI all their lives and worked to contribute to the overall development of our country, are being cut off as dependents from spousal benefits is disgusting. As Canadians we pride ourselves on our universal healthcare system, and yet we can't take care of our citizens at a time in their lives when they need it the most. Similarly, there are 60,000+ students entering school in September 2020 and yet there has been no increase in the budget. So teachers are meant to "make do" with the meagre resources they have, and drastically increasing class sizes and student needs diversity	Anywhere but education and healthcare.	Support big industries in Alberta like Oil and Gas, get the economy back on track.

T7E	Education (support for families with children with disabilities), health care (frontline workers, the ones that actually do the work, not management). Maintaining or increase level of service in public sector that support public directly, (agriculture & forestry, environment and parks, family services).	Upper government salaries!!!!!!	They can start within, laying of your own employees does not support job creation or growth in this province! Our oil and gas is very important but so are the people working the front lines for YOU.
T0L	Education. Our young citizens need to be prioritized and deserve a well funded public education system. School nutrition programs have proven to make a difference in students everyday life, including their ability to learn and function in a classroom. Teachers have worked tirelessly year after year to provide students with the best instruction and opportunities to learn. Classrooms should be properly funded with not only teachers in manageable sized classes but with support staff to assist with students needing extra support. Cutting funding in any area of education ultimately hurts our future generations ability to succeed in life and contribute to society. Public education, the voice of teachers and our students needs to be taken into account. Moving funding to private and charter schools will only make these issues worse. All kids have the right to quality education and our government should be supporting them through adequate funds. Alberta has proven time and time again to be a leader across the world in Education. It would be great if our provincial leaders started to have some faith in the hard work we do.		
T3H	Education and healthcare	The War Room and Red Deer Pickleball	Diversify the economy to rely on more than just primary resources
T3R	Fund public education fully. Save money by cutting money that goes to private schools. Fund healthcare properly (no cuts to nursing or doctors)	Cut funding to PRIVATE schools. Stop giving away money to oil and gas companies who are taking cash, but cutting jobs.	Invest in small and medium size Alberta companies. Invest in our entrepreneurs. Support the tech industry and film industry.
T8L	Getting people bsck to work! Employment rate	All the layers in government agencies, AHS, etc. Why so many senior managers.	Reduce red tape to approve projects, remove some of the policies NDP put in so business wants to stay in Alberta
T0J	Health care	Government spending, period. Redundant positions, especially in 'management ' should be cut immediately	Fight to get out natural resources to market
T2E	The environment. Respecting workers rights. Actually creating jobs.	The Kenney government created war room. Cut this crazy concept loose.	Diversity the economy into renewables and tech.

T5W	Spending should be on public services. Our healthcare and education are top priorities, closely followed by budgetary allowances for policing (both in grants to cities for urban, and for rural policing).	The government can find savings by getting rid of the ridiculous 4.5 billion dollar tax cut to the oil and gas companies - they are rich enough without my tax dollars helping them out and not me. It's not like any of those at the top live here or invest in OUR local economy. Savings can also be found by getting rid of ridiculous and superfluous "ministries" like the ministry of red tape reduction and the "energy war room". It can also find savings by not paying a ridiculous amount of panellists to conduct studies on things that have already been studied and just accept the findings might not be what you want them to be, but are what they are. If you must cut jobs to find savings, instead of cutting front line staff, directly cut the amount of directors, board chairs, and middle men administrative staff there are working at major institutions or cut their wages instead of overworked front line staff. Find efficiencies by saving money on branding (ie: stop changing department names forcing rebranding), cut down on the amount of money the government spends on paper and ink and use more online based forums and document saving. Instead of sending our politicians all over the world on an all-expense-paid trip, they are more than capable of video conferencing. That should not be considered a "perk of the job" and only something that is used when absolutely necessary.	By DIVERSIFYING OUR ECONOMY. If you want to create jobs and support economic growth, bring back grants for small businesses, bring back grants for the AI and technology sectors as they are a major sector that contributes billions to economies.
T9C	Education (at all levels), Health Care, Seniors	Large corporation taxes	By valuing Education, and giving recent post secondary graduates of all levels (college, trades, degrees, ...)incentive to work in their own province, Keeping our small towns and rural areas safe by supporting an increased police presence, Respecting our Seniors and giving them a break on health care and dental coverage, Hiring more doctors, Keeping our natural resources intact. Looking to the people to hear their needs. In short, these directives would allow confidence in our province once again by thinking as the common folk and looking in your own "backyard" first.
T8h	Education and healthcare	Politicians salaries and expenses. Corporations should pay more taxes and not get huge subsidies from the government. Cancel the ridiculous "war room"	Invest in education (k-12, post secondary), diversify the energy sector by investing in other energy projects(wind, hydro, etc)

T0C	public and separate education healthcare seniors getting our energy sector back on track	Administrators, central office staff in schools AHS management stopping duplication of services eg my friend has 2 different busses come to pick up her children because the public and separate school division in her area do not share services no public funding should be given to the top elite schools eg Webber Academy, Strathcona Tweddsmuir Academy. If the parents of the children who go there can afford in excess of \$18000/year in tuition, the school does not need to receive government funding. That money needs to go to public and separate schools!!!	Keep the war room running, perhaps change the name to something less adversarial. I know there has been glitches with it, but I think it is key to getting the word out about how ethical and safe our energy sector is. We need out men and women working again.
T3G	public services - health care, education, social services, psychological and addiction services Job re-training for oil and gas workers Supporting post secondary students and student work opportunities Conservation of Alberta's natural areas	reduce corporate tax cuts graduated provincial taxation rather than flat tax institute a provincial sales tax	diversifying the economy, supporting new environmentally friendly opportunities expanding clean energy industries,
T5n	Healthcare, education, recycling	Top executives, not front line workers, less bonuses	Fund recycling projects in Alberta, build facilities and use Albertans to build and work in it. Maybe First Nations?
T3J	Education, healthcare, social services, the welfare of the people who live here	The "war room"/energy centre - you could get rid of it, it's frivolous, and clearly can't undo what science has proven time and again. Denying climate change is like denying that water is wet. Regardless of whether or not you want to believe that right now, if your current goal is to cut spending and shrink budgets, I think 30 million on a group whose work will only benefit perhaps one or two O&G companies is frivolous. Care for the workers in every industry.	Invest in helping people who lost their job in oil and gas get retrained for new jobs/similar work/whatever in other sectors or whatever clean energy companies are looking for a foothold. Cut a deal with a clean energy company that you'll build a solar farm if they hire on x amount of workers from O&G. Create and diversify the economy by moving into the future instead of clinging to the past.
T0G	Education and Healthcare	Incorporate a PST.	Bring back education tax credits so more people will get educated to start businesses and create jobs.
T0J	Health and education mental health diversification of our economy. Post secondary for the young	Bloated and overpaid oversight board. Luxurious government travel. Stop funding oil industry and re write corporate laws to stop oil companies from selling of bad wells and bankrupting them	Diversification and education subsidies for all age groups support for local arts and cultural organizations
	Education, health care, and economic diversification	If cuts are needed, I would look to delaying infrastructure projects	By incentivizing developing markets and small businesses through grants and tax incentives.
T2E	Education and Healthcare (including mental health programming, safe consumption sites, sex education, Social programs for homeless individuals and addiction recovery), childcare programming.	Instead of cutting spending, let's first try to generate tax revenue by properly increasing tax on high wealth earners and large businesses. Fix provincial tax loopholes that encourage high earner tax avoidance.	Diversify the economy by investing in alternative energy production, Small businesses. Monetary incentives for companies that ACTIVELY support the environment and limiting carbon gas output. Additionally fund research into fossil fuel derivative manufacturing. Oil is the most valuable manufacturing resource on the planet as an organic precursor to a huge variety of materials. It is too valuable to literally burn.
T6X	Healthcare, public services like fire, policing, ambulatory services, schools.	Reduce giveaways and tax breaks for individuals that do not contribute to society.	Invest in sustainable renewable energy

T2J	<p>1. Education - postsecondary and k-12. Do not roll back teachers wages. Restructuring is fine but not cutting wages or per student money.</p> <p>2. Health care. Why is a hospital half empty in Calgary and there are wait lists for different type of health care workers in Alberta like anesthesiologists? Wait times need to be reduce and so does 'middle managers' that observe or manage programs in this field.</p> <p>3. Promoting new energy sources like green or solar - or encouraging tech sector (innovation)</p>	<p>Cut the Canadian Energy Centre. This a huge waste of money.</p> <p>Stop focusing on bringing back a 'dying' industry of oil and gas and instead, focus on promoting future innovation and transition to a new industry.</p> <p>Cut lifetime pensions of MLAs, cut MLA wages by 5%. Cut subsidies to the energy sector.</p> <p>Cut severance packages for Alberta government 'managers' Instead of focusing on just savings, focus on where to raise money - eliminate tax cuts to wealthy corporations, revise tax code to eliminate tax loopholes for big businesses, and consider bringing in a 1% sales tax.</p>	<p>Keep the film and tax credit.</p> <p>Focus on green energy or tech sector - encourage innovation and bringing/transitioning to new sector.</p> <p>Don't cut public sector employees. They are workers and voters too.</p> <p>Collaborate with postsecondary institutions to encourage new industries and innovation. Create incentives for this transition.</p>
T0j	Challenge interest rates and why is the money not come from the bank of Canada , keep oil supply tight, store it till lines are built produce less get more	Charge new Albertans a charge for inferstructure that needs improvement do to overload revamp government and find a light switch when leaving a room	Nothing people bitch but 10 years ago ten wells ten rigs now one rig ten holes same pad stop the bus and catch up
T5y	Paying nurses.		
T1h	Detox programs Education Healthcare Climate change	Make corporations pay fair taxes (increase the taxes for corporations) Implement Provincial sales tax Cut out Government bureaucracy	Solar power jobs and infrastructure Trickle up economics
T6w	Education, healthcare, infrastructure	Stop giving huge tax breaks to oil companies, get rid of the war room, and stop wasting money on fighting the federal carbon tax.	Stop cutting front line workers and giving money to big companies that then leave our province.
T8n	Staff- to support learning for all students. Special needs funding that can be used to promote inclusion and testing.	Add a provincial tax, open the market for alternative energy sources, reduce corporate tax incentives	Find education to develop new markets and support technological creativity and innovations.
T2Y	Health care Education	Corporate tax cuts	More funding to universities and public schools as this is our future
T3K	Education and health care should not be cut. How many studies need to be conducted for this government to realize, that investment on these two key services will save significant money in the long run. At the moment, all of these cuts are hurting Alberta and causing professionals to leave this province, which leaves Albertans at a disadvantage. Putting people to work, includes civil service workers, not just big business employees.	Stop giving huge tax breaks to large companies. Spend the money we have wisely - do we really need a "War Room"? Isn't about time for a PST? Even a small percent of a sales tax can go a long way to ensure the people of this province have proper health care, education and other essential services.	Companies will move businesses here if their workforce has access to quality education, healthcare and an infrastructure that promotes family and well being. Make this province a place where people want to live and lay down roots. Diversify the economy - why put all of your resources into something that is dying (look what happened to Detroit and other industry specific locations)? Make Alberta a place where all businesses can thrive, not just oil and gas (learn from the past and move away from boom/bust industries)!
T5j	Prioritizing primary health care over expensive hospital care	Utilizing Nurse Practitioners practicing independently, reducing the amount spent on family physicians.	Allow independent nurse practitioners to open and operate their own clinics
	Reverse cuts to advanced education and education. Our children are our future and deserve a good education	War room seems useless Provincial sales tax Staffers making over 100k Bring back corporate tax ad it hasnt resulted in any new jobs only cuts	Reinstate programs for software developers and film makers.

T6A	education and health care- we need to take care of people	less managers in your legislative buildings less \$\$ on travel restrict travel to ONLY where it is necessary no more wage increases to legislative employees	look at other sustainable energy sources; talk to the U of A Engineering dept on this as they seem to have a lot of ideas on how to make fuel other than the oil sands look at new, innovative ways of recycling (research/U of A) and create more recycling plants which would create more jobs in all areas
T5Z	Healthcare (front-line staffing, Albertans deserve quality timely care) Education (increased funding, students are the future)	Don't give corporations huge tax cuts. They don't care about Albertans, they only care about their bottom line.	Focus on education. An educated population is always a benefit, they will be able to work, start businesses, design and create new products, and strive to support themselves.
T0E	Education Health care	Increase corporation tax Nix the War Room	Opposite of what you're doing now.
	Quality early years care. It is proven that spending money on early years programs is one of the best investments a Govt can make. Education. Social programs- I.e Parentlink centers. We need to look out for those in our society who are vulnerable. Cutting back social spending harms so many people.	Oil and gas "war room" seems unnecessary. Tax breaks for large corporations.	Please focus on other industries- not just oil & gas. I understand the importance of this industry but to prioritize this over 10000s of other peoples jobs is shortsighted. We need to diversify our economy and bring in new sectors such as the tech industry.
T5W	Green energy, LGBTQIA+ rights/protections, abortion clinic protection, education, health care.	Tax the rich instead of giving them handouts.	See above.
T2T	Health care	Reduce "expense account" spending, no more public art funding (not right now), reduce MP travel costs - no more boondoggles where many people go to an event, quit "studying stuff to death"	Transfer payment renegotiation - Alberta keeps more of what we earn and other provinces need to share in the negatives as well as the money we funnel to them. Support O&G projects Canada wide or opt out of transfer payments.
T6M	Health care. Social services, social safety net, innovation, climate, education.	Streamline processes in all government services. Updating old health care facilities and equipment. Using old equipment in dilapidated facilities actually costs us money.	Innovation. As long as the world price of oil is low all talk about the difference a pipeline will make is just old worn out rhetoric and demonstrates short term thinking for political capital. Like it or not the glory days of oil are a thing of the past.
t4c	universal child day care. a 3%pst	under the couch? stupid question. how about finding new revenue?	tax incentives, diversification.
T3E	Quality public education K-12 and post-secondary Access to public health care	Larger taxes to the largest companies Disassemble the "war room"	Diversification across sectors Support innovation into alternative fuel sources, technology sector, medical engineering, and business
T7v	Healthcare and education. Affordable housing and tax breaks for families.	I think health care and education is too heavy. The people that make things happen are the frontline staff. Instead of going after the frontline staff, we could stand to lose some management.	Tax and financial incentives for new business and additional incentives for longevity. Keeping our energy resources local and investing more money to keep it here (ie: refineries and pipelines).
T0M	Education, healthcare,	Government offices/positions	grants for training in specific trades, including the tech industry.
T8n	Health care and Education	Cooperate companies make more pay more!	Create jobs in the Oil field like they promised getting Albertans back to work.

T5t	Less handouts to big corporations and putting it back into healthcare and our future with Education	Stop lining pockets of rich corporate CEOs	Science and innovation
T0E	Healthcare, nurses, decreasing ER wait times and teachers. CT scanner for Westview health centre, spending thousands transferring patients to the Misericordia for tests More ER nurses, the workloads are enormous	Increase services at hospitals so we dont needlessly spend thousands of dollars transferring pts to other hospitals for tests. Then they have to re register in the ER and be seen again by a doctor to get their result, so this means double billing for each visit. Charge a minimal fee for hospital ER unnecessary visits and this would deter the public from using ERs as a clinic.	Start supporting our Oil and Gas industry again, market our Oil. Why are depending on Oil markets from the Middle East. Build more long term care facilities, which produces constructions jobs, more long term care beds equal taking the loads off the ERs. Our Emergency departments are full of LTC patients waiting for beds which increase our wait times. Make the physician's who look after the long term patients accountable for their patients and have to come in and examine their patients instead of just sending to the ERs. More services at suburban rural hospitals increase jobs and growth, and take the loads off the city hospitals.
T5W	Education and environment	avoid over payment through unnecessary OT. Why does a nurse with a 30 hr contract get paid OT after 30 hours if the standard is 8hrs/day or 33/week? Why do public employees get paid regular time and then OT for snow removal on weekends - no other person gets that. In general make public services more efficient.	Diversify the economy. It doesn't matter when oil will end, let's prepare for the future now and become less independent from oil
T7A	Health care, education, social programs. Your job is to keep us healthy and educated so we can build a healthier economy. Provide affordable childcare, seniors care, actually support people so they can do better. I'd rather pay higher taxes and actually get these quality services then pay for shoddy everything.	Cutting politicians wages and pensions. But honestly screw savings. When you cut the way you have been you demoralize you're society. Who cares if we have some debt. Savings for what? A rainy day fund? To do what? Bail out companies hoping for trickle down economics?! Invest in people. Support prevention programs so we don't have as many people with chronic illnesses, mental health concerns, abused children, substance abusers etc... prevention is more cost effective in the long run and will prevent high acuity and unnecessary use of public programs.	Social economic development is extremely promising. Build small business, support local investment and empower people who live in Alberta. Invest in the hemp industry. Diversify the economy. I want off the oil and gas boom bust cycle. I appreciate oil and gas but we are too dependent on it.
T6X	Health care and education	Unsure - consider taxing businesses at the same level as other provinces.	Support infrastructure spending.
T4R	Education Health Care Technology We need to become a knowledge economy instead of a one trick pony.	By not giving a 4.7 billion dollar tax break to corporations. All of that money could be spent on many alternatives that would make our province successful.	Diversification. While oil and gas are important to AB, they won't be forever. It's naive to think that putting all of our eggs in one basket will fix Alberta's economic woes. Allowing other industries and ideas the opportunity to flourish. Work with, instead of against our great country to be successful.
T2T	Health, education	Cutting subsidies to corporations, stop \$ going to oil and gas	Health is the first pillar that needs to be supported. Unhealthy Albertans will stop working and not paying Taxes Invest in sustainable energy

T2W	On Education as it has been on a decline for sometime now. Specifically into giving educators a deserved raise as 7 out of the past 8 there has not been any increase to keep inline with inflation even. Also to help in the expenditures with class sizes and more teachers to evenly space out students amongst all the neighbouring schools.	Middle management of the Healthcare sector but more so increase Carbon taxes. Taxes breaks on those using renewable resources. Make solar more readily available.	Create jobs that are off of some of the commodity price ups and downs.
T6J	PUBLIC K-12 EDUCATION FOR ALL. You're not doing the next generation any services by stripping education grants to fund public education. It's world renown, and you suddenly think doing more with less is going to solve all problems you associate with it. Dream on. PUBLIC HEALTHCARE FOR ALL. Supporting and bolstering a universal single payer healthcare is what is needed. Antagonizing the work of teachers and nurses isn't doing your government any favours.	Disbanding the "war room" with two plagiarized logos. Seriously. You're creating more red tape. Not renaming weeks to be about getting rid of "red tape" by including more red tape. Not hoping for some version of trickle down economics to work to fund public services? It isn't working.	Invest in public education. Not require outcomes based funding for post-secondary, which will dismantle the already outstanding education program we have in Alberta.
V1w	Environment, and animal rights	Stop giving subsidies to animal agriculture farmers	redirect subsidies to plant based farming and other environmentally friendly careers
	Education, Childcare, Healthcare	Scrap the war room. Repeal \$4B+ Corporate Tax Cut 4% PST (lowest in Canada)	\$25/day daycare Transition to Green Energy.
T7X	Education, health care, preventative health initiatives, and social services	How about not giving enough money to solve all of the education deficits to oil companies. And stop pretending that it's creating jobs out of a non-sustainable resource.	Diversify the economy. Focus on offering grants to the gaming, film, and entertainment industries to set up shop in our urban centres.
T2e	Seniors Homeless Infrastructure	Cut back to Gov.pensions Cut back to Gov.wages Cut backs to higher ups	Encourage investment
T5R	Education Health	Shut down the \$30 million "War Room". Reduce politician pay. Tax cigarettes, alcohol, pop more. Tax oil companies more	New green economy. Get on board right now. Time is running out.
	Teachers and Education!	Cut funding to private schools	Give more funding to public education so schools can provide the necessary support needed to help the complex needs in the classroom
T4N	Go back to grassroots education systems. I have to spend \$450/month on private reading lessons for my 17(1) because teachers can't fail students or tell the parents that their child is behind. School is not a publicly funded daycare, teach first and second, then pass or fail. Then play.	Eliminate all of these redundant management rolls and special boards. If your paying someone \$150k/yr of public funds, they had better be earning it.	Time to increase incentives to bring back the oil and gas companies. Alberta is going into the shitter and the Federal government has zero desire to help us out.
T3C	Education	Not sure	Not sure
	Improving, and improving access to, public health care, senior's care, education, and infrastructure.	Increase taxes of corporations and wealthy individuals. Increase oil royalties.	Invest in green industries, by using carbon taxes to fund them. Improve public health care and education. Invest in tech and AI.

T0E	Healthcare, education, seniors, infrastructure. Basically everything you are attempting to slash.	Doing away with court challenges over the carbon tax, stop your 'war room' that is costing taxpayers \$30 million per year, stop corporate handouts in the billions because they have produced no new jobs for Albertans. Basically every new initiative you are spending taxpayer money on.	Diversify. Don't put all your eggs in one basket: oil and gas. It's a dying industry and to think we have any power over its fluctuations is short-sighted arrogance. Support diversifying & innovation in industry and universities, and don't try to tie their academic worth to specific performance measures. There is value in a variety of academic pursuits. Finally, prepare for climate change because the science behind it is correct, even if you don't like what it's saying. Invest in alternative energy technology and projects. They can become our next energy and economic boom when the oil Either runs out or becomes the albatross around our provinces neck.
T3g	Education & Healthcare	By not giving colossal tax breaks to oil/gas corporations. Have a sales tax to stabilize budgets	Diversify the economy
T1J	Stabilizing the economy. Supporting seniors and individuals who choose palliative care rather than assisted suicide. Making sure there are programs to support women who choose to give birth rather than to abort their pre-born child. Supporting adoption and foster care programs, simplifying the processes, removing the financial obstacles. Support healthy families, recognizing that the family unit is the backbone of society.	If the government would cease to fund elective medical procedures, such as abortion, MAID, cosmetic surgeries.	Support small businesses, enabling them to have access to markets.
T6H	Public education Public health Affordable Transportation	MLA salaries and creating new government office jobs.	Let people choose how thy spend and I beat their monies and pensions.
T0J	Education and policing	Cut their pay checks, benefits, and pensions	Support the oil and gas patch and get the pipelines built and find a way to scrap the carbon tax
T1k	Health care Education	Cannabis tax	Reduce taxes on small businesses
T6v	Healthcare Education	Do not give tax breaks to big corporations. They are making money, let them pay their taxes	Do not lay off people especially in public sector. Invite investors to out province
T5T	Balancing the budget/ paying down debt. Investing in cost saving is public services and infrastructure.	Privatize support services that can be done cheaper at the same quality.	Tax breaks/incentives for renewable and carbon capture companies in the province. This will be the new boom in the energy industry.
T4L	Health and education Support renewable energy and other options besides oil and gas	Higher taxes for people making oodles of money Stop giving corporate tax cuts to oil and gas companies	Support \$25 day care so women can afford to work!
	Education and Health Care	Stop traveling all over the country	Stop advertising jobs and having eastern Canadians come to AB. Take care of us first
T0K	debt, medical, education	government employees. sub contract some projects.	subcontract some jobs out... this helps business growth the solar and energy sector did quite well with hiring people when it was in place

T4C	-Education -Vulnerable populations - ie. low income, people with disabilities -arts and culture	-swollen government departments -government inefficiencies	-invest MORE in education, encourage a diverse, innovative and educated population -invest in green sector technologies and tech companies -encourage small businesses and entrepreneurship
T4P	Teachers (Education) Nurses (Healthcare) and Roads and highways (Infrastructure)	Tax corporations, churches, and other rich people	Re-education of out of work oilfield workers in sustainable energy fields
T6H	Healthcare and education. Affordable child care. Infrastructure.	Get rid of the "war room". Don't implement you post secondary education plan for outcome based funding. This will cost you money and will increase your "red tape" exponentially. Scrap your plan for increased standardized testing for elementary schools. Stop finding private schools. Stop paying for a Catholic school board and covenant health, these are redundant services.	Find affordable child care so women can enter the work force. Hire more nurses (employs more people and cuts your overtime costs).
T2B	Education - smaller class sizes, supports for students with special needs, adequate compensation for teachers (give them a wage increase that reflects inflation over the last 8 year!) Health care - more front line staff, improve living conditions for seniors, fund research to reduce reliance on pharmaceuticals. Climate change - sustainable resources, invest in the future and alternative sources of energy, less dependence on oil and gas And above all else...not turning this province into the 53 state because we are Canadian NOT American and all the crap the UCP is pushing is based on American theories and rhetoric..it doesn't work there and it won't here.	Tax the rich, give to the poor. Stop favouring oil and gas companies. Stop trying to bribe them to stay in Alberta and invest in local businesses.	Focus on local farmers and businesses instead of trying to get all cushy with Texas. Invest in education, health care and a sustainable future to create jobs not take them away. The UCP are Useless Conservative Principles who do not represent a democracy I believe in. They are to represent ALL Albertans and they sure as hell don't represent me.
T5Y	Public sector	Higher tax brackets for big corporations	Implement various energy sources, lower tuitions, create more programs where people are able to access coop schools, focus on different commodities
T7P	Schools, new business, our image.	First off, no new taxes, no sales tax, no increase in taxes. There are lots of requests for our money, ensure the money you give out enhances Alberta and moves us forward. You may find savings if you ask how this expense/donation helps the average Albertan. Pay off the debt, spending millions on interest is crazy.	Mom and pop shops are great for Alberta and the oil and gas industries aren't going anywhere soon but we need to diversify and bring in new big businesses to keep us vibrant and forward looking. Government will need to travel to other cities, other provinces, other countries and sell not only our products but our desire. Lower corporate taxes for new business, whatever it takes to entice business to move here.
T0H	Education Health Care Advanced Education	I really don't think this is an issue.	By investing in AI, economic diversification, film production Not reducing the public sector workforce that ultimately increases unemployment
T9N	Education, smaller class sizes. More help with Public schools that have no help for children with special needs.	Take a look at who is running the public sectors. Stop cutting the front line workers.	Build the oil industry.

T6L	SUSTAINABLE solutions to disproportionate primary care physician distribution across the province that primarily harms rural communities. Forcing people to work where they don't want to has proven ineffective and serves more as a band-aid and political tool than as an effective way for all Albertans to have sufficient access to care.	Increasing large business taxes, getting the pipeline project moving, and laying the foundation for more renewable energy sources such that our province and its value does not rely so much on our coal and oil.	focus less on political gain and more on growing a sustainable future for the province
	Schools and Education Cities	Government provincial staff -	Fostering diversity and supporting initiatives that help diversify our economy. Support and help young people
T2K	Health re: biologic meds being changed without doc.consults. Very dangerous.	Top admin.salaries are too high in almost all ministries.	Small business tax lowered. More Canadian businesses encouraged.
T4S	Lower personal taxes and increase corporate taxes. Get people working again.	Increase corporate income tax.	Look at ways to get industry to stay in Alberta and get people working.
	Education Reinstating services you've already cut from our most vulnerable citizens	Their vastly overinflated salaries.	Obviously not what you've done so, as evidenced by the mass migration of business and rapidly increasing unemployment rates.
	Education	In oil and gas	By not taking away grants or funding from those who are currently working in public sector jobs.
	Healthcare and not cutting nurses. Stop blaming the nursing profession for a province wide problem that wasn't caused by us	CEO's of major companies, directors of boards.	Charge a PST. This was every single member of society is helping to wards the deficit pro le S.
T3G	Increase spending/funding on K-12 PUBLIC education in order to address classroom complexities (special needs, learning disabilities, behaviour supports), reduce class sizes, increase mental health support for children. These are investments in the future of our province. DO NOT add more testing and decrease testing before grade 9. Testing is an enormous waste of provincial tax payer dollars. Implement the new K-3 curriculum that was already created during the previous government. Increase funding for non-religious post secondary education schools in ALL areas even if the government doesn't think there is a monetary return. Interest areas are diverse and all kinds of people and skills are needed for a broad and successful society. INCREASE funding to the most vulnerable (AISH, chronically ill, homeless, affordable housing, STEP programs, elderly). STOP messing with the health of Albertans and dictating what medications they can have covered for good health care and quality of life. Health care should be left in the hands of the person with an illness and their medical care team, not a government trying to reduce spending on the backs of the most vulnerable.	STOP giving large corporations tax credits. STOP expecting tax credits to corporations to produce jobs - this economic strategy fails time after time. INCREASE corporate tax rate for large corporations. INCREASE personal tax rates for those making more than \$150 000 per year. Add a provincial CARBON TAX and invest funds into diversifying our RENEWABLE energy sector (wind, solar and thermal) and transportation sector (transit, passenger trains, LRT). Add a modest sales tax of 2 percent and give rebates to families for retrofitting homes to be more energy efficient - windows, toilets, solar panels. Continue to fund \$25/day childcare as more people (mostly women) will be able to work more, make higher incomes and ultimately pay more taxes.	Give tax breaks to innovative technology companies, the film industry and small businesses. Fund post secondary education with bursaries and grants to students of all income levels and backgrounds. Invest in infrastructure and health care research. Give rebates to families for home renovation and retrofitting homes to make them more energy efficient. Invest and support renewable energy companies to move away from the reliance on a one resource based boom and bust economy.

T6C	Health services Education The arts Climate change Making living affordable Tuition freezes Finishing and expanding public transit	Charging more taxes Stop giving tax cuts to the wealthy Not taking government paid vacations Charging pst	Keeping minimum wage where it is at. Making secondary education affordable so we can get the training so jobs requirements can be met. Finding sustainable ways to produce energy so tradesmen can continue to work instead of being unemployed. Keep government funded programs alive so ppl can still have jobs.
T0E	Education, social services, infrastructure	Reducing subsidies and bailouts for oil companies	Upgrading infrastructure creates jobs. Tourism and technology are other growing industries that when utilized could support job creation. Stable jobs will promote economic growth.
T2J	Public Health care and not privatization. I think it's sad that the Government wants to get Alberta back to work but has no issues of cutting front line staff....what about those Albertan's?????	Stop giving corporations tax cuts!!! Put in a PST. Many ways but quit doing it off the poor!!!	Start with your own staff... front line workers. Quit not hiring, and expecting them to take a roll back then You expect them to do the job of 2 or 3 people....but yet will give a corporate tax break and watch them leave as they take Albertans money!
T2L	Diversifying the economy Reducing greenhouse gas emissions and global warming	Instead of reducing spending, I think the gov't should focus on increasing revenue. I haven't seen any studies that suggest the province of AB is overspending in any area. But there is plenty of evidence that the province of AB is not collecting enough revenue: we have the lowest provincial taxes in Canada! I think we should increase corporate tax rates (except for those companies that would help support diversifying our economy or work towards reducing our greenhouse gas emissions) and increase taxes for those that can afford it the most. (Adding a higher income tax bracket? Adding sales tax?)	1. Link tax breaks to corporations directly with job creation. (So tax breaks are not funneled to share holders.) 2. Invest in infrastructure needs in Alberta. (Isn't is, overall, less expensive to do infrastructure when gov't is not competing with industry for workers!) 3. Undo cuts to education and health care until a more careful budget analysis can be done to improve financial efficiency without losing jobs. (It seemed that the current cuts were to rushed and audits were initiated AFTER cuts were made. This sees backwards. The audit should be done before any cuts are made.)
T8n	Healthcare and education. Bring new tech business to Alberta.	Increasing corporate taxes would help off set education and healthcare costs.	By investing in education. Making post secondary more accessible. Encouraging new businesses to come to Alberta. Making it easier for people to work by bringing back affordable daycare. Providing education funding so people can start working and paying taxes
T2Z	PUBLIC EDUCATION (NOT charter or private)	Government salaries, give fewer tax breaks to big business and the wealthy, stop funding private and charter schools,	Invest in clean energy, find innovative solutions to environmental issues, support public education
	Health care, education, innovation/technology and child care	Stop giving tax breaks to large corporations, especially oil and gas companies. They are taking advantage of our province and using every possible loophole to avoid paying their fair share. Also, the government should stop sinking money into unnecessary task forces and initiatives like the Red Tape Reduction and Canadian Energy Centre.	Look to diversify the economy and stop relying so much on oil and gas revenue. Support innovation, technology and education.
T0M	Healthcare and education	a pay cut in Premier and other Cabinet members salaries, cut out tax breaks to big businesses because it is failing to keep them here in Alberta.	by putting out this survey, someone will come up with a good idea about job creation & economic growth and be heard!

T3B	Certainly it is paramount to protect the City of Calgary from flooding and the only way to do that is endorse and fund the continuing study and building of upstream mitigation on the Bow river providing protection and water storage. Berms in the city of Calgary won't protect. It must be an upstream Dam expansion. Also need to negotiate a long term TransAlta agreement. The Dam project could be the most important southern Alberta infrastructure project for the next 50 years.	Certainly cuts in the bureaucracies in provincial government departments and making the business processes in education and health more accountable and efficient--good luck dealing with the unions! Additionally cutting outdated programs--that isn't to say that new innovative programs shouldn't be funded.	Encourage labor migration to Alberta especially on agricultural operations as even with high unemployment nobody from urban areas can or want to work on farming operations. Reduce red tape and don't view everything through the lens of catastrophic climate change.
T4v	Job creation and economic growth outside of oil and gas.	Restucture how doctors are paid, salary not per patient seen. Privatization of mri and cat scans like labs and ultrasounds.	Infustructure projects to benefit all albertains. Nuclear power move away from coal and provide the power the province needs. Remove road blocks for small power generation ie. Fair rates paid for power generated and raise hieght restrictions for farm and acreage based wind turbines.
T8N	Education Health Care	Make oil companies pay taxes - no more subsidies Provincial sales tax Carbon tax	Diversify economy - support for alternative energy programs
T2e	Deconomic diversification, environmental sustainability.	Increase taxes on large corporations, ie oil and gas companies. REMEMBER Peter Lougheed, he did very well in negotiating a great deal for Albertans. Stop cutting short our education, health care and infrastructure. This will save us in the long run.	Look back to the NDP, they had a very good plan in place.
T2R	Education and Healthcare. If you don't have healthy and smart Albertans you have nothing.	Don't keep helping out the energy companies.	Eliminate trickle down economics. Let the people who are still working keep their jobs!
T2Y	The basics, long term job opportunities, trades training, then after that everything else.	While art projects are nice in times of plenty, they make zero sense in time of restraint. Also, capping municipal council pay and double pension plans.... it's a bit ridiculous! Stop wasting money on provincial diploma exams..... OR make all high schools run by the province with province created curriculum, thus no need for municipal boards at the high school level, also creates an even education across the province. Stop funding private schools.... completely ridiculous. If public education isn't good enough then the government should take over. And considering the provincial drop out rate, that should already be a plan.	Infrastructure and road work. How about building our own refinery fir our own oil and gas.... it's be nice to say it's 100% Alberta made.
T8N	Infrastructure, healthcare and policing.	If they're so bent on cutting salaries they should start with their own. They're making far more than low level provincial employees facing a 5% pay cut.	Through infrastructure projects. Getting around this city has become an unmitigated nightmare. Something needs to be done about the traffic congestion. My previously 25 minute drive is now over 45 minutes. Want to hit tour carbon targets? Fix the congestion and get people out of their vehicles in half the time.

T6J	Real people. Schools, health care, infrastructure. You know, the things they're supposed to be focusing on.	Stop giving it all away to corporations and blowing 30 million a year on a phony war room.	Diversify and stop relying solely on oil and gas. A lot of alternative energy companies were ready to invest in Alberta until the UCP were elected and canceled all the projects the previous government implemented.
T2T	Education, health care, social programs (Alpha House DOAP for example), renewable energies.	Oil and gas, taxing the higher income brackets, taxing corporations	Increase taxes on wealthy and corporations. Lower taxes on small businesses. Increase minimum wage.
T8A	Education, early intervention funding, health care	Tax corporations, increase tax, introduce a PST.	Avoid cutting funding in public areas including education and health care than employ millions.
T2N	Education & health spending should be maintained using current formulas or increased. 17(1) Environmental protection - it always seems to be the first thing cut when times are tough but the consequences are long lasting!	Pensions for elected officials & civil servants are to robust and should be more consistent with what people would get for the same time of service in private sector. Transfer payment structure with Gov of Canada needs to be amended to reflect actual situations in real time in each province. The so called war room. Have a hard time believing the government representatives cannot do what ever the war room is doing as part of their existing jobs. If fact I always assumed and expected that they did.	NC
T3H	Health Education Environment	Disband "war room". The oil & gas industry can best defend themselves. Government does not need to speak for them.	Implement a carbon tax provincially, so that the revenue can be used to create green initiatives/research/enterprises within Alberta. Introduce a provincial sales tax, so that the wealthy (who spend the most money) will contribute more to our economy. Do not put our fiscal problems on the backs of the poorest.
T2A	Creating an Alberta Pension Plan.	University level education - degrees that do not lead to employment. Healthcare - we currently fund sex change operations using tax dollars. Alberta Pension Plan.	Create Alberta pension plan to stimulate financial sector and lower payroll taxes. Cut taxes for the lowest income tax bracket, allow those at the bottom to spend their money at local businesses.
T4L	**** long term investment that will provide all Albertans with the tools to be innovative, diversifying the economy, and the thereby ensuring a high standard and quality of life for its citizens and with equal opportunity to participate. In order to achieve this we need to have a healthy highly educated/knowledgable workforce that can think critically. We need to proactive health care as well as reactive, we need a strong education system that is affordable to all, from preschool to post secondary. Smart people are required to tackle future problems, and we can't afford to be stuck in the past. What should we invest in? education, post secondary, healthy societies and public good research.	get rid of the propaganda arms of this government. the includes the war room, managers that are only there to layoff productive civil servants, and reduce red tape within government which is making it difficult for civil servants to provide timely services/or do their job	Invest in diversification, support innovative research that provides new opportunities to Albertans. Tap into the wealth of knowledge already in research and government and consult with them for ideas. Be respectful others in the province and outside trying to start new companies and maybe they will see a highly educated and healthy work force ready to support their companies in Alberta. Ensure this province has world class infrastructure, maybe new companies will see the advantage of being in Alberta. While tax cut to already profitable businesses does not make them hire more employees when they already have the ones they need -rather they will just take the profit.
T5W	Health care and education	stop giving tax breaks to huge corporations	clean/alternative energy start ups
T5L	Education and health care	More taxes on big business. Getting rid of some top heavy government employees	Looking at alternate energy sources and supporting these programs

	Education and healthcare.	Focus less on the rich.	Focus on providing the youth with good education so when they are older they can get good jobs, and build the new arena.
T3G	Getting people back to work and crime reduction. In education the province should have education ombudsman to help families. 17(1) Unfortunately many get written off and do not receive an adequate education. They need to have multiple ways in order to educate children.	Working with groups and charities to help the less fortunate. Instead of inefficient government employees.	Support small business and help stop the over taxation of some cities
T0L	Health care - stop cutting	Tax breaks for large corporations, politician salaries, stop increasing minimum wage	Stop cutting essential services, stop buying ugly worthless art
T5K	Education and public services like health and transport	I'm honestly not opposed to taxes, especially adequate taxing of higher income individuals and corporations	By helping to transition oil field workers into renewable resource industries by offering grants to fund training or incentives to companies that pay to transition workers
T6E	Health care; social services.	Corporations; oil and gas.	Provide more tax cuts to businesses hiring young people entering the job market. Stop cuts to health services that will help people maintain wellness and continue to work. Better support students with less cuts to universities.
T6a	Public sector: health care, education, arts	Stop giving money to oil companies	Diversify the economy
T0J	Education and healthcare	MLA and premier expense accounts, salaries, perks and pensions.	Build the pipeline.
T0E	Public Health Care, Public Education, Harm Reduction, Land Conservation	Getting rid of the 'war room'.	Stop cuts to education and health care budgets
T3K	Balancing budgets.	In the bureaucracy and administration levels.	Reduce the burdens on the private sector, which will allow business to stimulate growth.
T5h	Healthcare and supports for vulnerable citizens.	Fire Kenney's \$200k a year twitter manager, for one. Fire the "war room". Fund social services appropriately to reduce costs down the road in health, welfare, and corrections. Reduce the size of the cabinet and restrict travel to commercial options.	Stop handing money over to large corporations and give it as small business grants instead. Reduce income taxes to increase the amount citizens have available to put back in their local economies. Bring back the carbon tax to support businesses working towards the technology we'll need in the future. Stop trying to bring back "the good old days" and start addressing the reality of our current and future economy.
T1b	Seniors and disabled	In house	?
T8A	Employment, education, economic diversification.	It is not a spending problem, it is a revenue problem. Time for a sales tax.	With consistent, sustainable funding, not boom bust cycles tied to natural resource revenue.

	<p>Health spending - layers of bureaucracy are sucking from the system. Nobody makes timely decisions. Instead decisions go to 3 parallel decision makers, and the delays are crippling front line ability to get things done in a more timely and efficient manner. In HSAA, we are all governed by professional colleges. We don't need 3 or 4 layers above us to make the best decisions for patients. We were trained to do that in our profession of choice.</p> <p>Cut out the multi-layered bureaucracy. We are answering to our professional associations, to provincial director and various program Leads. We then have a full-time zone manager who has a total of 14-20 people in her portfolio. It makes us unable to do more front-line work because bureaucracy creates complex processes that discourage innovation and efficiency. AHS needs outside leadership to make the hard decisions. The fear is AHs will cut front-line workers and blame the UCP Government.</p> <p>We have to stop this craziness and dig deep into programs that are not changing anything in population health. 1/2 our time goes to AHS "stuff". If we want more services delivered, we have to hire people JuST to deliver those services, when you become an AHS employee the way it is now, your time gets eaten up by non-productive make-work projects that have nothing to do with improving things for patients. It becomes all about the internal workings of AHS. Please do a process evaluation into public health and see if what the program claims is ACTUALLY producing the perceived results. We need results at a population level, if that isn't happening, then the service belongs in the private system where you make a difference one person at a time.</p>	<p>We have to quit double dipping. In community oral health for example, public health is offering free preventive services to 75% of Alberta families that have a dental plan. Lower income families can utilize the Alberta Child/Adult Health Benefit program for dental services. Even though we build eligibility criteria into public health programs, we don't utilize it. Anyone can enter the oral health preventive programs which are province-wide, no questions asked. Yes, we make it easier for them to access, because we go to them, however we are not accountable even to the criteria that we set as a standard for who can enter our programs. Get to the bottom of this waste. We are drowning in ineffective programming that never gets evaluated or looked at to the degree that it needs to. We need an overhaul, hold every single program accountable and ask the right questions. Numbers of clients seen means nothing if we aren't reaching the population where we can make a difference. If there are programs that are not making a difference to the health of Albertans, axe the program. Simple as that....</p>	<p>Look at public health programs and assess to see if more of the same services could be more efficiently delivered in a different way. What about the ability of using public health community health centers that allows a health care professional to contract their services? End result results in more services for the public and costing less than you could get it in a totally private business.</p> <p>Encourage innovation even amidst tough times. We who work in the government front-lines have good ideas but WHO listens??? No one, there is an attitude of status quo and if we are not seen, we can go under the radar and no one will touch us.</p> <p>Be bold, be authentic and creative in healthcare and let's come out of this proud and encouraged that we are smart enough to do better in healthcare, in education and above all in our economy.</p>
T6H	Education, healthcare, public services	<p>No corporate handouts, instead spend this on social services</p> <p>Increased spending on social services and preventative strategies will save money in the long run by reducing the need for emergency services later</p>	<p>Diversify the energy sector, stop relying solely on oil and gas</p> <p>Develop other budding industries, such as the technology industry and the arts</p>
T3H	Health Education Seniors	Disband "war room" for oil industry	<p>Implement provincial sales tax of 3% (i.e. move GST rate to 8%)</p> <p>Implement carbon tax (at double the federal rate) to fund transition to clean energy throughout the province</p>

T5w	Restoring funding for education and health care that was cut in the most recent budget	Through the creation of a general sales tax, rather than through continually cutting essential services under the guise of fiscal responsibility (when it's really just corporate welfare)	Investment in retraining/ongoing/adult education programs that allow people to transition into new lines of work, diversification of industry and grants for alternative energy. If you're going to offer millions of dollars in tax breaks to corporations, find some sort of structural solution that requires those funds actually turn into job creation and wage growth, rather than a rise in unemployment.
T0J	<p>Public Education. We need to support small classroom initiatives and support for students with exceptionalities such as learning disabilities, English language learners, mental health problems, etc... We also need to bring in the draft curriculum, rather than waste more time and money on stupid panels-- of which nothing has been announced regarding their findings.</p> <p>Public health care. We should be increasing Alberta Health Service's funding so there are enough nurses and health care workers for the public. We should also be increasing coverage for medications used to treat chronic illnesses.</p> <p>Support for people with disabilities. AISH recipients should receive their benefits with raises for inflation, not a flat rate that will mean less and less for already vulnerable populations.</p> <p>Diversifying the economy. Oil and gas are important industries, but so many other industries have suffered as a result of the current budget's priorities. Why aren't we supporting areas such as tourism, film, technology, art, etc...? We need to become leaders in other areas of the economy, not just put all our eggs in the oil and gas basket.</p>	<p>Shut down that stupid war room that is costing the taxpayers a ridiculous sum of money each day. Not giving a \$4.7 billion tax cut to large businesses would also help. Half of that or a quarter of that would still have had the desired effect of making Alberta attractive to large corporations while still supporting the people who live here and still need to survive and succeed.</p> <p>We could begin taxing higher-earning incomes at a higher rate. The rich should pay their part.</p> <p>I'm in support of a provincial sales tax myself, with tax benefits for those who make a low income.</p>	<p>Support more industries than oil and gas. Offer grant initiatives to schools who are implementing policies that increase efficiencies or are seeing student growth in academic and social-emotional well-being. Offer grants to hospitals and health-care professionals who are researching and innovating.</p> <p>If the government wants to offer tax cuts to companies, it should be reliant on the proof they are hiring Albertans at comfortable wages for long periods of time-- not simply hiring and firing or temporarily employing.</p> <p>Use this time to invest in infrastructure to give work to the people who have been out of work from the oil and gas bust. Many of our roads, hospitals, schools, etc... are old and falling apart. We could be investing in building up those areas.</p>
t8v	Social infrastructure and programs	Less taxbreaks for big companies	Supporting and encouraging new industries and diversifying
T3R	Health Care Education Senior Care Infrastructure	By reversing the corporate tax give away. Bring the business tax rate back to what it was	Stop cutting essential services, give incentives to businesses that can stimulate and diversify the economy. Stop giving millions to the fossil fuel industry

T3P	<p>Spending needs to be focused in areas such as education and health care. If you look at it like a business, the commodities of these two areas are always growing. There is never a decreased number of new students entering the school system. When funding is decreased, while numbers of students continue to increase you run into classes of 37 Grade 6 students.</p> <p>Health care has a similar concern attached to it. If nurses are constantly working short staffed, that means that they cannot dedicate more than 10 - 20 minutes an hour to a patient. That means they may miss important indicators of disease or diagnosis.</p> <p>Overall the government needs to recognize that the education and health care systems are constantly growing and will never bust like the oil and gas industry.</p>	<p>The government needs to stop supporting the wealthy. If a large company is receiving a large tax break in order to boost spending in the economy, how does that ever affect social services like education and health care. We need to have those taxes being paid to the province, to re-invest in education and health care.</p> <p>I would like to see a carbon tax be reinstated for the province. With the federal carbon tax, Alberta is once again sharing it's wealth with Ontario and Quebec. If it was a provincial carbon tax, at least it is staying in the province.</p>	<p>Allow for more exposure at a younger age. Encourage companies to have outreach programs that go into schools to show students what a future could look like in Alberta. Invest in the future rather than the current working class.</p> <p>Incentivize other forms of energy.</p>
T1K	Education and health care	Upper management. Making those who make the most money take cuts	Providing basic level jobs and not cutting jobs
T0k	Education, social services, health care	Reduced salary for political officials, reduced investment in oil and gas	Invest in the growth of the renewable energy sector
T6x	Healthcare Education Welfare Community services	Decrease government managers and supervisors No more funding to native — should be federally funded only	Green technology as the NDPs did
T6E	all vulnerable persons (including seniors, AISH, other low income people)	Perhaps, Jason Kenney will 'take one for the team' and take a pay cut to his pay cheque.	by supporting people through education and training - ongoing, this will help to promote economic growth in Alberta
T0M	Health Care, Education, natural ecology preservation	Subsidies	Remove caps on film industry investment/tax credit and implement additional credits for rural projects, projects outside the "zone".
t0j	trade and tech education would be good. More towards stopping drugs from being produced and imported into Alberta which over time should decrease the need for treatment centers if there is a major reduction in available drugs. This isn't so much about spending but harsher penitentiaries for crime especially related to drugs(dealing,importing,producing,theft to acquire drugs)	well that's hard to determine as i don't know what being spent but given i have seen many in my industry take pay cuts and or job losses i think a pay cut across all public sector jobs i mean all of them including the admins because if im not mistaken did not Kenney and the mls's take a cut when we elected them in ya know lead by example so the example is set let the rest follow even if its only temporary till our economy gets back on track. Also seems people think the oil and gas industries shouldn't get tax breaks or subsidies so neither should the green energy sector no more bail outs at tax payer expense if a business cant make it its best to let it die e.g. bombardier in Quebec	decrees in the corp tax was a good start but sadly until we can get our natural resources to open market via pipeline to coast our oil is still not going to be profitable enough to promote growth so we do need to look at taking some of the manufacturing that is done in Quebec and Ontario and start our own manufacturing here at home.

	Public schools (elementary, middle/junior, secondary) and public health care (hospitals, cancer centres, clinics). Stop stealing from our future generations and health. Oh, and completely stop in your tracks what you are proposing for post-secondary "funding" based on "performance", that's completely wrong.	Reduce government waste, reduce your own wages to match average Albertans, reduce bureaucracy in general. Stop stealing from the average Albertan who works hard for what this province should provide by means of our taxes. Your jobs rely on citizen satisfaction, and so far the UCP is batting a total zero. Show some good faith for the first time ever.	Stop giving tax breaks to the big guys and get back to creating growth through home-grown and grassroots entrepreneurs. Stop focusing on petroleum and remember that this province is full of a myriad of diverse businesses, and that we need more diversification. Stop relying on petroleum revenues and add a provincial sales tax. Like yesterday. Please read up on "trickle down economics" and learn, once and for all, that it has never worked in the entire history of the world. Ever.
	Funding public education and healthcare.	Eliminate funding to private schools and combining public and Catholic school systems.	Environmental diversification energy sector
T2M	Being on the leading edge of green energy, championing renewable resources, creating strong public schools, infrastructure, public transit and public transportation systems, public health	Fewer tax cuts and loopholes for large corporations. Instead of giving them direct monetary advantages, give oil companies the opportunity to get government grant money to build wind fields, solar panels, etc. They have the resources and money to do so, and this would help all parties transition towards a sustainable future.	Again, give oil companies the opportunity to get government grant money to build wind fields, solar panels, etc. They have the resources and money to do so, and this would help all parties transition towards a sustainable future. Fund public services. Keep local jobs (teachers, bus drivers, professors, construction crews, etc.) and create incentives to be in the public sector
T2J	Helping the homeless Health care Education	Don't give our money to other countries	I don't know Sell Alberta oil.

T4X	<p>Healthcare Controlled spending Job creation/maintenance</p>	<p>- Alberta has a low tax rate and a highly professional work force with good incomes. Implement a SALES tax already. - a 4 or 5% sales tax would go a long way to sustain services and jobs. Get one with it.</p> <p>Healthcare- reduce waste and inefficiency. : contract elective surgeries : Have clients pay subsidized rates for home care wound supplies- do not provide for free. What a waste. : increase cost share exemption for families with AADL. This hasn't been updated in years : allow work from home/ mobile case management for home care services Reduce mileage and space requirements . This service has the capacity to be mobile/work from home maximize it. : hold contracted agencies accountable for quality home care services and missed services, particularly in scheduled weekend visits. : minimize evening/ night shifts for homecare. Are they needed? : look at management structure across the public agencies top heavy??</p> <p>: schools- The amount of PD days is ridiculous. Address this. - free upgrading till 21? How about young adults/ families take responsibility for not meeting the requirements in the 1st 12 years of school</p>	<p>? The million dollar question</p> <p>Sales tax. Promote investment through regulatory standards and minimize interference</p>
-----	------------------------------------------------------------------------	---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	--------------------------------------------------------------------------------------------------------------------------------------

T4R	<p>Making the province the best in the world for all its residents. Continuing to provide an outstanding public healthcare system which benefits all the residents. I expect that the province will acknowledge the expertise and training of our medical staff and allow the medical staff to make the best decision for the people of this province. Children are the future of this province and they deserve to be educated to the best standard possible. Continuing to provide an outstanding public school system, available to all children, and not dependent on what their parents can afford is important. The public services should include not only what the wealthy can buy, but apply to all residents.</p> <p>We deserve first class services for all. The future of our wonderful province is due to the work and dedication of the past generations, the present generation and the future. We need to work together.</p>	<p>Develops a plan over a period of time. Yes there is money to be saved but recognize that there is a human cost of these cuts. What supports are in place to deal with the human suffering? When cuts are announced, the spokesperson should not be laughing and smirking. Show some compassion for the people of this province!</p>	<p>Thoughtfully and well thought out. Government programs should not be announced on social media. MLA's owe their constituents respect and open dialogue.</p>
T1K	Reduce private school funding	<p>Court Circuit Vehicles Courier Services Executive directors throughout the JSG, have Directors do their job and place a layer between Directors and Managers Online education Conduct job analysis to determine if offices are staffed according or over staffed and if deemed over staffed cut positions</p>	<p>Not focus on trades - oil and gas Focus on making education affordable for everyone</p>
T6J	Definitely Education & Health Care	Cut back on unwanted staff in areas of management - too many on the reporting list. Hire and keep staff that is required and necessary.	<p>Where the needs are especially in Education and Health Care! We need education to allow residents and citizens to be employable and self-sufficient as well as contributing to the welfare of the country. Health Care is important for all including dental care - from babies to 120 years old.</p>
	Social programming and disbursements aimed at diminishing poverty levels. Affordable housing for those in need. Decreasing tuition costs and student loan debt.	Appropriate and proper taxation of the wealthiest. David Thompson should not be worth 41.9 billion dollars when people are sleeping on the streets in -40 degree weather.	Creating and establishing more social programs will create jobs. Providing individuals with a minimum income will encourage higher spending rates, and more money flowing through all together.
T5A	Education and Health care	Put the corporate tax rate near where it was. Doesn't have to be exactly where it was, but close.	Get the pipelines built. Encourage more refining locally. Energy East as well.
	<ol style="list-style-type: none"> 1. Public healthcare 2. Public education 3. Protecting our environment and ecosystems 	<ol style="list-style-type: none"> 1. Provincial sales tax 2. Tax increases on the extremely rich corporations <p>(NOT out of the salaries of middle class healthcare workers or middle class teachers)</p>	<ol style="list-style-type: none"> 1. Starting to research and utilize renewable sources of energy. 2. Using existing developed non-renewable resources in the meantime during an eventual inevitable transition

T5Y	Children are our future. Child care subsidies needs to be increased as parents are struggling to meet all their financial commitments when they need to have quality care and quite often settles for affordable centers as opposed to quality. Children are our future and it is easier to build stronger children than to repair broken men. Frederick Douglas	holding government worker accountable for their spending use of materials and ensuring that they are accountable.	Ensuring that parents have quality child care and not have to work such long hrs to provide for their families.
T0J	Healthcare and education	Increase corporate taxes and royalties from oil and gas	Fund developing fields like renewable energy
	Education and health care	Tax businesses and carbon tax	By not cutting the budget of education and health care since that causes people to lose jobs, not gain them.
t6w	Job creation investments. I.e investments that create longterm jobs	Look for various Avenue to cut/reduce waste. There may be a need for a study on how government can reduce wastes wherever there is waste of resources (if such exists). Reuse, and recycle where possible	Take proactive steps to attract and retain manufacturing industries. Improve in agriculture. Encourage renewable energy development
T2L	Health care and education	Stop corporate tax breaks brining in more money, eliminate the "war room". Give public sector employees a designated day off ie every third Friday or Monday, there is no pay for that day but Increased quality of life.	Try to diversify the economy, look at tech based companies, medical technology, go to tech fairs to promote Alberta (unlike the recent one with no government representation). Let's not focus all efforts in oil and gas, yes oil and gas is important but let's not put all our eggs in one basket. Spend money on infrastructure, sometimes you have to spend money to make money and jobs.
T2L	Health care and education	Stop corporate tax breaks brining in more money, eliminate the "war room". Give public sector employees a designated day off ie every third Friday or Monday, there is no pay for that day but Increased quality of life.	Try to diversify the economy, look at tech based companies, medical technology, go to tech fairs to promote Alberta (unlike the recent one with no government representation). Let's not focus all efforts in oil and gas, yes oil and gas is important but let's not put all our eggs in one basket. Spend money on infrastructure, sometimes you have to spend money to make money and jobs.
T6R	Front line education and health care.	Management and administration of health care.	Education directly correlates to employ-ability. The education must, however, match the needs of employers. Long-term economic growth cannot come from any other direction. Short term growth is dependent on finding ways to get our primary products (both petroleum and agricultural) to international markets.
T4r	New hospital (expansion) for Red Deer Smaller class sizes Reduction of school fees (including transportation) for families Better access to family doctors outside of large centres (we haven't had a family doc for 8 years!)	Duplication of school boards (why can't one board support "public" and Catholic schools? Many "public" boards already support other faith-based schools.	Diversify the economy to better prepare use of a less oil-reliant future (not asking to get rid of oil and gas industry - we NEED it! But we need to diversify!). Offer grants to attract non-polluting industry.
T4P	Education and Healthcare	Rise taxes on corporations/companies that make the most money.	Incentives to those who look at different alternative power sources. Move towards a greener province and less reliance on oil and gas.

T2L	Focusing on diversifying the economy and reducing Alberta's dependence on the oil and gas industry. Making responsible decisions about spending or cuts based on the long-term effects that supporting or cutting a program will cause. Stop further slashing funding to Alberta's major universities and colleges, as that makes them less competitive.	Reduce the amount MLAs are paid. Reduce the number and amount given with payouts to the oil and gas industry.	Stop slashing university budgets. Support students and recent graduates to find employment, which may mean reinstating STEP. Support other industries besides oil and gas, such as technology.
T3A	Health care and education. You have an obligation to Albertans to maintain these essential services. Nothing is more important.	The insanity of this war room nonsense. This is not the government I voted for. You should be ashamed of yourselves.	Incentivizing new industries to come to Alberta and take advantage of a highly-skilled labour force. Stop tripling down on the resource sector.
T5B	<p>Growing infrastructure for public education so that all children have ready access to a high level of education. Support for parents and families to get their kids to school (e.g. bussing, childcare with bussing).</p> <p>Before and after care for children with staff members who are paid a fair wage for the invaluable services they provide in caring for our children.</p> <p>Diversification of our energy sector so that we are a LEADER in alternate forms of energy. This would pave the way for a long-term and planned transition from one form to another. Collaboration between energy sectors, rather than "us vs. them".</p> <p>Healthcare that is accessible</p>	<p>Focusing on taxation of corporations, rather than inequitable tax breaks. Fewer "war room"esque endeavours.</p> <p>I would not be opposed to paying for Alberta Health Care coverage under similar cost to what was in place before. I also would definitely not be opposed to a Provincial Sales tax. Rather than cutting necessary positions/programs/people, we could afford to grow into a province that would be leaders again, and there would be an Alberta advantage again. I feel like the previous government was addressing changes while supporting people whereas I am scared for children and people in general when it comes to education and health care specifically.</p>	<p>build relationships with the "big" corporations that invest in our province. have incentives for them to invest and hire within our province.</p> <p>Build bridges between corporations and NGO's so that the vulnerable people of our province are not left behind.</p> <p>Grow programs rather than cutting them. responsibly, of course. the big tag line of UCP is "fiscal responsibility". there HAS to be social responsibility right now. With the way things are going, I would not be surprised to see businesses and people leaving the province, which would further stunt the economy. YOU are responsible for your people, and not just the bank book.</p>
T5Y	Getting Albertans back to work. This will minimize GoA supporting the unemployed.	Get people working.	When newcomers arrive to Alberta we offer them too many incentives. Instead we need to create more job opportunities. Promote small business, make it mandatory in every company to keep one spot for new comers and students. Have this opportunity through out the year. This will give newcomers the opportunity to engage creating a positive environment. And the students are able to enter the workforce and save for the future. We need to create a community where all newcomers strengths are celebrated and opportunities are developed to showcase them. Better to create a diverse group and not separate. As separation creates lasting division. Communities builds confidence. For an examples see the layout of the organization "Candora" in Edmonton. They are a true example of how newcomers, moms, woman and families can be built themselves to achieve success. Create hubs to help people looking for jobs, hold Job fairs. When newcomers come to Canada share the information. 17(1)

T1G	Work with BC to establish a per barrel checkoff on TM Pipeline to establish a fund to guarantee cleanup of a spill disaster whether on land or in the ocean. This would probably reassure all citizens including the indigenous peoples and lead to less court-challenges.	Establishing our own police force. National Pharmacare Plan.	Establish a program similar to the Federal SRTC Plan of the 80s to provide incentives for research and innovative technical businesses which could then be spun off to private industry. Shared cost programs like medical/pharmaceutical research programs at the universities and subsidies for new/hi tech small businesses.
T5K	Education funding, healthcare, social programs, affordable housing	Oil & gas subsidies, increase corporate taxes, cancel the war room, introduce PST	Invest in the tech sector, in AI, in green energy and renewable energy, in hemp research and development
T1K	Ensuring that Healthcare, Teaching, Post Secondary, and social services have adequate funding to continue providing high levels of service.	By leaving corporate taxes the same (or even increasing)	Focusing on diversifying our economy and enticing industries besides oil & gas to setup shop in Alberta. The oil & gas underneath Alberta isn't going anywhere so we can just sit on it if companies don't want to play by our rules and eventually they'll want it bad enough. Until that time lets focus on other industries and make the Alberta more than a "one-trick pony".
T2M	Education Health Care	Extraneous spending by the Alberta Government itself	add tourist based industries and create jobs in this industry. Show off what Alberta has as opposed to what we don't have.
T3b	Education and healthcare	Stop giving bailouts to oil companies. Pay cuts for bureaucracy	Stop cutting teacher, nursing and doctor positions. Support city's capital projects which will create jobs such as Calgary's green line
T3B	Health Care, Education, Climate and Energy conservation	They can first take back the billions that they gave to their cronies, and they can all take a major salary cut, and get rid of their 'golden' payouts when they are done "serving" our Province.	By NOT Eliminating Jobs, by NOT cutting the Minimum wage that people need to live on, by NOT Giving money to big corporations that are pulling out of Alberta anyway!
	HEALTH AND EDUCATION	LIMIT BUILDING NEW LIBRARY AND NEW REC CENTERS	Stop layoffs, create jobs
T3B	(1) continued funding for the feasibility study for Bow Basin Water Management Options (2) renegotiation of the TransAlta modified operating agreement during flood season for the Ghost Reservoir	Doing away with the ridiculous Bowness berm proposal	x
T3K	Improve education through better compensation for teachers to ensure we don't lose teachers to better opportunities (I personally saw professional teachers in public education who were Professional Engineers leave teaching in Alberta to make more money teaching elsewhere --- i.e. we've already lost some extraordinary teachers due to bad teacher compensation or bad government support of teacher compensation).	Stop wasting money on bad initiatives, e.g. stop putting money into funding duplicate administration costs incurred through private schools. Find savings by forcing competition between investment managers, rather than forcing ATRF and LAPP from sole sourcing from AIMCo, let them compete on the fair open market.	Support jobs and economy by spending on diversifying into more software technology companies. Stop wasting money on propping up old dying oil and gas companies. This is a purely business decision. Oil and gas is great but that's not where the money is anymore. Software is eating up everything and the current government policies on education and business incentives does not support the software industry in Alberta at all, and are in fact hostile to software tech businesses.
T3H	Teacher's salaries before we lose them. After 8 years of virtually no increase, everyone is feeling the pinch.	Cut the overheads in schoolboards. There are millions sitting in these positions. Director level.	Start with education. Generate cultures of excellence with leadership for innovation. The learners will take this ideology into post-secondary or industry. Support Educational Leadership for innovation (see 2011 Inspiring Ed. and 2019 Leadership document). Visionary Leadership alone is self-limiting.
T2Y	Health and Education	Upper management and new initiatives could be scrapped in efforts to maintain high standards of current education for a growing population.	By providing social programs for the disadvantaged segments of the population so that they may participate as effective members of society.

T5E	Pipelines, infrastructure to speed up transportation of oil and gas products.	Reduce social programs, make education funding performance-based. Allow a two-tier health care system.	Reduce taxes.
T8N	Government should be spending money on education, health and public welfare. Ex. Transportation. Should also spend money on diversifying the economy and not fight tooth and nail for an industry that is changing (energy) invest in renewable energy	By taxing corporations instead of giving them tax cuts and trying to steal money from students and the educated middle class. Stop subsidizing the trades schools as there aren't enough jobs for them. Instead encourage to go into other sectors.	Should invest in renewable energy as that would create more jobs. It's already created more jobs than the oil industry has. It's time to adapt to the changing times. Subsidize education for these industries. Help current oil workers retain to join renewable energy sectors.
t6c	Education, health and the most vulnerable in our society	Corporate subsidies	Diversify our economy
T6T	Education, health care, social programs. Focus on creating a sense of security in the province. Currently, so many people are afraid of losing their jobs as well as constant price increases for so many every day items that they are not spending; therefore, the average person is not participating in stimulating the economy.	Eliminate the war room and the budget items that correspond to it.	Increase funding for education, social programs, training programs. Incentives for businesses to hire students and co-ops. Provide grants for more diverse fields (eg: arts, alternate energy, tech). Provide more supports for small businesses. (grants, etc) Stimulate the economy by providing a sense of job and financial security for the average person.
T2M	Finding ways of releasing Albertans from the tireless pursuit of corporate employment by promoting and supporting entrepreneurs. Create, build and support an education system that promotes entrepreneurs and independent thinkers. Support communities endeavouring to sustain our city and our province with inclusivity, diversity and freedom from a government trying to convince us all to hate our own country.	Any financial support going towards professional sports and entities there in. Misinformed permanent public art. Financial support of any kind towards religious communities and entities there in. Any and all government vacations, travel, entertainment, gatherings, conventions. Support of poorly informed committees, task forces, consultants, advisory groups and any and all related projects. And a \$30M "war room".	Please see above.
T5H	Diversifying the economy. Focusing on social determinants of health and prevention, not just on providing care after people are ill. Most of the major chronic illnesses can be prevented with a bigger focus on prevention but instead they are a big drain on our health system.	Think more like a business. Find a way to link data between ministries so that for clients who are accessing different programs/services, you know the cumulative amounts they are receiving. Of course privacy/anonymity should be taken into account. Consumer analysis on the users of programs/services is the best way to ensure programs are being used effectively.	Add parts to the curriculum to encourage students to be entrepreneurs and to teach them about current leading industries in the world. Students should be aware of the industries with opportunity to innovate. Focus on Alberta a leader in the world scale, not just in Canada. Don't just compare with what other jurisdictions within Canada are doing. Find ways to get oil to other markets, but don't focus only on oil. The world is changing rapidly in the tech sector/manufacturing and Alberta is behind.
T5B	Education, climate change, health care	By not giving so much money away in tax cuts for the rich and big corporations.	Investing in needed infrastructure and repairs, by funding education and healthcare properly, by training people for and investing in carbon-neutral energy such as wind and solar.
T8A	Healthcare (universal) avoiding any privatization. Making it an easy process for everyone to access free healthcare Education. Arts education in Universities, approve the new Grade 4-6 curriculum that the NDP was working on. Getting children and adults a well rounded education. Easy access to post secondary.	Charge the oil companies more to harvest our resources, So they know it's a privilege to rip up our sacred land. Raise my taxes	Invest in renewable energy industries Add more public service jobs.

	<p>Stop focusing on the legacy oil & gas sector. The days of the boom times are long gone and will never come back like they were in the mid-2000s. The mechanism of getting the oil product to market should have been considered 15 years ago when the permits were being handed out to build the facilities that have since come on-line. Why didn't you think of it then? I blame this on 40 years of Conservative government rule in this province.</p> <p>So instead of doubling down and wasting money championing an industry that is so clearly in decline, Alberta should be investing in getting other industries going that don't rely on an out-dated energy model. These industries could include green energy, high technology, service sector, call centers etc.</p>	<p>Stop the waste of money on the energy "war room." That 30 million would of been better spent putting that money in teacher, nurses, and first responders pockets. Increase the tax on the wealthy and give back to the lower and middle class people. Increase corporate tax rates and give back to small business, they are the real driver of job growth. When Kenny gave the big corporate tax rate cut, they just bought back shares. None of them hired more people as is evident by the fact that we have higher unemployment now than before the tax cuts. The idea of trickle down economics is a myth propagated by the wealthy.</p>	<p>Stop wasting money on trying to get the oil & gas jobs back. They will never come back as long as we live next door to the worlds largest Oil and gas producer. You can support job growth with getting the youth employed again. They do drive local economies. Also stop trying to roll back wages for teachers and nurses and the like. They too drive the local economies. IN fact, stop any wage rollback because reducing families spending power does *NOT* increase economic growth. One would think that Kenny's government would know this already but so far it has only been a bunch of buffoon decisions made by a group of clowns.</p>
T2T	<p>Keeping the people who are currently employed by AHS, EMPLOYED. Rather than laying off people from programs that are seen as morally deficit or creating even more shortages in departments.</p>	<p>Not giving corporate tax cuts to big corporations.</p>	<p>Beginning to diversify the energy economy.</p>
T6R	<p>Infrastructure and economy but in balance with maintaining social programs that the province requires.</p>	<p>Make government process more streamlined. Get rid of the multi-levels of government management and overburdened red tape. Stop giving corporations tax breaks just so they can lay off more employees. Find a balance between taxation and letting corporations thrive in our province.</p>	<p>Diversify the economy, help those who are stuck int eh cyclical nature of oil and gas find alternative and lucrative career opportunities. Work to bring in tech and new industries.</p>
T4B	<p>Health and education. Honor the promises made by Kenney. Do not cut budgets in these areas.</p>	<p>Close the war room. Reduce the salary of MLAs. Less government travel. Do not cut corporate taxes.</p>	<p>Stop doing what you are doing. It's done nothing but cost us jobs.</p>
T4B	<p>Health and education. Honor the promises made by Kenney. Do not cut budgets in these areas.</p>	<p>Close the war room. Reduce the salary of MLAs. Less government travel. Do not cut corporate taxes.</p>	<p>Stop doing what you are doing. It's done nothing but cost us jobs.</p>

T5K	<p>Social spending to address the social determinants of health which will change the risk distribution for the entire population. Since this government is outcome driven, spending on social services will improve overall outcomes. Spending on social services is favourably associated with health outcomes such as life expectancy, infant mortality, and mental health days off work. The more social services Albertans have the less they need to focus on achieving the basics of life. Earning a living wage, having access to and support for education, supporting early childhood development, and addressing issues of inequality will ensure each Albertan is a contributing member of society. It is widely proven that increased investment in education (primary, secondary, and post-secondary) accelerates economic growth. Educated workers can more efficiently carry out tasks that require literacy and critical thinking. Investment in families (via social services) helps to support child development. Research suggests that costs associated with offering a living wage tended to be less than one-tenth of 1% of the overall municipal budget and the overall cost of contracts does not rise significantly. Most living wage workers tend to be in households that are struggling to meet their basic needs. Living wages will increase productivity and decrease turnover. Research also suggests offering a living wage does not result in major job losses. Focusing on and investing in renewable/clean energy diversifies Alberta's economy while creating economic development and jobs in manufacturing, installation, and more. Since the government is so focused on trades, which is great, diversifying our economy and investing in clean energy will create jobs for tradespeople. Renewable energy will also help our rural communities and communities/areas of the province that have little or unreliable access to electricity.</p>	<p>Stop giving so many corporate tax cuts to oil and gas companies in a vain attempt to try to create jobs. Trickle-down economics does not work. Increasing taxes on the highest earning Albertans will increase income for the province. The government could implement a minimal sales tax as well as reinstate the provincial carbon tax. Both suggestions will ensure money could go straight back into Alberta and help Albertans directly. Stop spending taxpayer money on frivolous legal issues like fighting the carbon tax.</p>	<p>It is widely proven that increased investment in education (primary, secondary, and post-secondary) accelerates economic growth. Focusing on and investing in renewable/clean energy diversifies Alberta's economy while creating economic development and jobs in manufacturing, installation, and more. Since the government is so focused on trades, which is great, diversifying our economy and investing in clean energy will create jobs for tradespeople. Renewable energy will also help our rural communities and communities/areas of the province that have little or unreliable access to electricity.</p>
T6r	Healthcare and education	Stop providing tax breaks to large oil companies	Continue pressure on the federal government and the province of BC to get the pipelines built
T6w	Health, education, infrastructure	In big corporations	Looking into and investing in renewable resources such as wind and solar.
T5c	Diversifying industries. Finding ways to get away from reliance on fossil fuels.	Not giving huge amounts of money in tax breaks to corporations. That a) do not need it, b) don't reciprocate	Again diversify industry, provide breaks for new jobs creation projects, not oil based pipe dreams
	Healthcare Education Arts	Stop giving money to wealthy corporations. Tax the rich	Realise there's more to Alberta than oil and gas. Support other industries.
	Education, health care and climate change	Tax corporations, increase royalties for oil and gas companies. Bitumen is a resource that belongs to Alberta, foreign companies should have to pay more to the province to extract our resource.	Promote Alberta companies and reduce the focus on oil and gas as our only source of income. We are laying all of our eggs in one basket (oil sands), causing our economy to be at the mercy of this one resource. Think future forward, diversify, promote renewable energy such as solar and wind. Allow other resource sectors to thrive.

	Healthcare Education Arts	Stop giving money to wealthy corporations, tax the rich.	Realise theres more to Alberta than oil and gas. Support other industries
T8A	- education. Schools should have an increase in the budget to match their growth. Also post-secondary and the trade schools need more funding. - health care. The province is growing and so should the budget for our health care systems -	Stop subsidizing oil and gas companies. They don't need it and they're running away from us anyway.	Focus on educating and re-educating people. Our future depends on our investments now. It doesn't pay off now but it pays off in the future.
t6h	Education, renewable energy / technology advancements, small businesses.	More tax to large businesses.	Encourage education
T2V	Education, arts, public transit!!	Investing in local artists, not hiring out of towners	Invest in the arts and education
T0J	Education, healthcare	Reducing unnecessary spending at top government levels (ex. Spouse flights for politicians, salaries, non-business related spending)	Diversify economy through various industries. Be on the forefront for green energy practices
T7E	Police and Fire services, road maintenance, Healthcare.	Beautification projects, engineering and consultant fees for large projects. Re-introduce monthly fees for Alberta Healthcare to help offset the huge costs of Healthcare.	By fighting for the oil & gas industry, coal mining, and the forestry industry. When these industries thrive, all industries thrive. The money has to come from our natural resources, the people need to realize this point...if we don't have exports we do not receive money!
T2t	Focus on diversifying the economy and stop pandering to oil companies. There are other industries in this province, but when the premier only talks (and wears pro oil and gas hoodies), it gives the appearance that only oil workers are important.	Stop giving corporate welfare to oil and gas. Don't focus solely on cutting, instead invest in diversifying the economy, and in education. The budget will not be balanced overnight, and by cutting services, education, and jobs, you are being dangerously short sighted.	Again, by diversifying and stop relying on oil and gas. The boom days are over, and it is time to change. We, as a province, have a lot of engineers and scientists. Invest in attracting new tech industries, instead of always relying on o & g.
t5x	Education Seniors Health	Cutting government employees allowance. Some people take advantage ...	create an incentive for companies not to leave and support small businesses
T6H	Ensuring provision of public services; education, healthcare and programs which assist the disadvantaged and disabled. Diversifying the economy especially considering the impact of climate change; opportunities to lead globally as well as areas to phase out of.	The Alberta government is pretty lean as it is. I notice you didn't ask how to balance the budget, but asked only about cuts. Progressive income tax would decrease the need for cuts which tend to hurt the more disadvantaged in society.	Diversification is the key. Support the diversification of businesses in Alberta. Do more to help incubate and support emerging industries. Quit putting money into oil and gas.
T5Y	Health Care Education Climate Change Diversifying the Alberta Economy outside of Oil and gas	Getting rid of the 30 million dollar "war room"	By promoting the diversification of the Alberta economy outside of the oil and gas industry.
T6W	Supporting our public Health Care system, and our educations system. Not privatized options.	Removing the War Room. No longer supporting tax breaks for large corporations, especially in the Oil Gas sector.	Focus on emerging industries - technology. We have two or three top end schools in the world producing top tech grads. It has been the biggest part of job creation in Toronto and Ontario, and we should be capitalizing on this opportunity. It would support the post-secondary sector and the new technologies sector.
T3R	Health and education	Please institute a provincial sales tax as seen in every other province. 5% minimum	By ensuring women have access to affordable daycare.

T5K	Healthcare, education, industry regulation and RE-invest in renewables so this this province doesn't burn to the ground while Kenney and his cronies clutch their last dollars as the clean air vanishes forever.	Reinstate corporate taxes, wealth tax on the rich, estate tax, and nationalize the fucking oil industry already. There's your fucking budget.	Instead of "cost-cutting" and Deregulation; fucking INVEST in alberta tech sector, renewables, pay to transition workers from oil and gas, health and education (economies do better when people are healthy and educated), support the arts, create safety nets for people who need them without any ridiculous disclaimers (like drug testing), home the homeless, fund safe injection sites, free post secondary education, and free pharma, dental, and health care for EVERYONE.
T3B	Education, health care, green energy infrastructure and jobs	Somewhere in the 4 billion pay outs to oil and gas	Green energy, focusing on education of our children
T1B	Healthcare, infrastructure, training programs to get people on worker's compensation and welfare back to work	How about cutting salaries for government employees? Everyone else in every field has had to endure cutbacks over the last 20 years while the government keeps giving themselves "cost of living" or pay increases.	As I said invest in people to investigate those drawing welfare or worker's compensation as I see way too many people sucking of the governments tit when they could be doing one type of job or another.
T3B	Education, health, saving the environment, community and social development.	Cut all salaries and benefits paid to politicians and their staffs by an amount equal to at least 150% of cuts to social supports. Reduce the subsidies given to the oil patch to ZERO. Set the tax rates on this industry at economically useful levels (useful to the citizens of Alberta, not the oil companies) and actually go out and collect the taxes owed. Stop burdensome red tape on educational institutions that serves only to promote the reduction of secondary education in this province.	Support alternative and experimental options for energy development, support education for secondary and post-secondary students, support day care so people can afford to work, support health care so that people are well enough to work, support housing so homeless and under-housed people can have stability in their lives (then they can get jobs, and building houses supports the trades).
T3B	Increase social program and education priorities, decrease oil & gas priorities.	Oil & gas subsidies. And move them over to renewable subsidies.	Renewable energy (think green new deal)

T2L	<p>-Education I think if you have an educated population they can work, (and your favorite...pay taxes), take care of themselves for the most part and be less of a burden on society. An investment.</p> <p>-Health Care</p>	<p>-get rid of the Dumb Oil and Gas war room which has a mandate of challenging "true facts" as your CEO put it.</p> <p>-stop spending money on ridiculous things. Kenney flying out other premiers and their families for a little pow wow on my dime. Paying an American company for plagiarized logos for the "war room" when you could have had an in house designer not plagiarize for cheaper</p> <p>-stop paying for audits (ie. CBE) that were already done a few years ago</p> <p>-MLA take a wage rollback to a similar pay grid to nurses and teachers...so sub \$100 000</p> <p>-why are some positions under Kenney making more money than the same positions under the NDP? Especially when everything was about finding efficiencies. This makes no sense to me. There is some savings right there</p>	<p>-well I'm not sure the war room is helping, unless you are a friend of Kenney's or a son of someone under Kenney then it seems there is lots of money and a relatively decent job for you</p> <p>-support Albertan's in getting Law degrees...Kenney likes lawyers so if more Albertans get law degrees I think there will be jobs for them with all the challenges he is planning against the federal government and with challenges he will have by labour unions. He likes going to court.</p> <p>-not sure if getting rid of front line staff like teachers and nurses is really helping the economy. Hey we are all about job creation and economic growth...if you are in oil and gas... but we are going to give you teachers and nurses more years of wage freeze on top of the 6 you have already had and/or cut your position completely so you can go on EI and sell your house. For sure this is going to stimulate the economy. (just in case you don't get it...this is sarcasm)</p> <p>-I've got it! How about you support diversification of the economy here..OH wait! You cut funding and support for film and animation and tech here. I guess that doesn't make any sense to you. It's all about oil and gas and nothing else. That is only thing that makes money. Well I think that is the thinking that got us into this mess. Thank you 44 years of conservatives! So maybe diversify your thinking about the economy and support diversifying the economy.</p>
T6R	Education and healthcare	Tax incentives to oil and gas companies could be reduced.	Focus on diversifying the economy away from oil and gas.
T3C	<p>- Supporting the social programs that are most used by citizens, such as healthcare and education.</p> <p>- Realize people are more interested in being supported by their government than the flawed ideology of government debt being the single worst issue facing citizens. Fix the real problems of government waste, not cutting needed social problems just to check a box.</p>	<p>- Eliminate corporate handouts to large companies (e.g. Husky).</p> <p>- Eliminate the endless string of panels and committees struck and filled with the government's financial backers.</p>	Support all job creators, including small business and the public sector, not just cozying up to influential corporations.

	<p>Daycare affordable housing Education and Schools Information services Promotion of the Province and new opportunities Agriculture Energy Diversification Build a high-speed train between Calgary and Edmonton.</p>	<p>Cut all the countless Government committees formed to find savings. Red Tape and War room sounds so negative and communistic. Stop the negativity and promote the positive. People are afraid of the government. I would be afraid to move to Alberta with all this talk of separation and having our pensions taken away. Perception is everything.</p>	<p>It may not be the government's job to create jobs and stimulate economic growth especially in the oil and gas business. Maybe a plan to diversify the economy that could bring other sectors to set up business in our Communities. We have a surplus of empty office buildings in the larger cities. What a great opportunity to provide space for new business. The Government could start a campaign, "We are open for business" Tell them what is great about living and working in Alberta. Stop blaming and start doing. There are so many opportunities out there. Bring the brightest people to Alberta and utilize the brightest people that are here and give them a chance to start something great. Listen to the people that care. Work together to create change. Emphasize the positive and the rest will fall into place. People in Alberta have the perception of being angry including the government. Look at Energy Diversification, technology opportunities. How can the Energy Sector work together to form these partnerships to bring positive outcomes? Look at the opportunities and possibilities. Alberta has the resources (Brains; Ideas and skills) in the world to build a sustainable future.</p>
T0E	Education, healthcare and infrastructure	Stop with the corporate welfare. Decrease the premier's salary along with all representatives. Try living on our budget!	Eliminate layoffs in the public sector. Fix the roads and hire people
t2x	Education and economic diversification. These two spending priorities go hand in hand.	Government should be looking at education management positions and "consultant" positions. If these people are not in front of students everyday, they should not be considered teaching staff.	Diversify the economy. This doesn't mean abandon oil and gas, but rather support new industry research and development. A blanket corporate tax cut does not achieve this objective.
t2x	Education and economic diversification. These two spending priorities go hand in hand.	Government should be looking at education management positions and "consultant" positions. If these people are not in front of students everyday, they should not be considered teaching staff.	Diversify the economy. This doesn't mean abandon oil and gas, but rather support new industry research and development. A blanket corporate tax cut does not achieve this objective.
T3h	New greener industries.	Pst	Support IT industries.
T5X	Post Secondary Education and Health Care	<p>The government gives away much to the lower income individuals. They subsidize people who have children. I don't like the \$25 a day child care program. People should pay for their own children's child care. If you cannot afford them don't have them.</p> <p>Furthermore, senior citizens have had decades of working to save money for their retirement. The government should not constantly be subsidizing one of the most privileged generations of our time, because they were too lazy to save or invest any money for their futures.</p>	<p>Increases to taxes on small businesses does not support job creation or economic growth.</p> <p>Slashing budgets for government jobs and busting unions does nothing to support job creation and economic growth. It does the opposite as people are made vulnerable to losing their jobs. What UCP is doing is a tragedy - gutting government services and workers - and the way UCP is representing government workers and institutions is a travesty. Shame on you for your lies.</p>

T2P	this UCP government is cutting medical supports to people married to pensioners? Really? Perhaps you should spend more money for the prosperity and health of the people instead of giving tax cuts to oil and gas corporations. Spend money on climate change and new ideas that promote healthy lifestyle. Remove our province from the necessity of fossil fuels. Now is a good time to do it as most Albertans do not work in and don't want to work in such a dirty industry	increase taxes to oil and gas.	how about diversifying the economy. With \$2.4Billion in tax cuts to oil and gas we can attract new businesses and emerging industries instead of keeping our head in the sand.
T6K	Put more money towards education and community programs. This includes proper funding for education growth, early education, full day kindergarten, child care subsidies, family programs. The hospital in Edmonton should be started sooner as it is desperately needed.	Canadian Energy Centre, Billion dollar buyouts, twitter trolls, ministry of red tape reduction and all the 'committees' the UCP have implemented.	Don't put all the enery and focus on just oil and gas sector jobs. Much of the middle class and public service industries are seeing cuts and their work needs to be validated. Put more investment into alternative energy and forward thinking industries.
T8h	Education, healthcare	Government salaries	Co-op support programs, Sam business and startup support programs
	Healthcare, education and long term infrastructure.	Tax incentives for large corporations and businesses. Middle management	Healthcare and education... the better educated someone is and in good health, the more they are able to contribute to society and the economy.
T8X	Eliminating wasteful spending for MLA's trips around the world. Streamline government spending where needed. Be aggressive with bids on infrastructure get the best value, regardless of who's buddy would benefit from the tender. Taking money from basic services like police, healthcare and education is not the answer.	Eliminating the oil and gas war room. Increase taxes on the wealthy. Stop giving tax breaks to corporations. Corporations don't vote people do. Take care of people, it's your only job.	By putting more money back in the pockets of the middle and lower classes by lowering income taxes, aggressively fight carbon tax. Regulate insurance premiums and energy costs for albertans. Regulate cell phone plans. If I have more money, I'll spend more money. Will that not increase the economy?
T5K	Education Health Climate change/environment Green economy Early childhood education/support systems for parents	Reduce subsidization of oil companies/oil industry Tax people who make over 200,000 a year at higher rates Increase taxes on luxury commodities and goods Increase taxes on behaviours/practices that exacerbate climate change, like airplane travel. Increase taxes on large inheritances.	Invest in tech Invest in a transition to a green economy Invest in retraining oil industry workers Invest (not divest) in education at every level
T4p	Young families! The middle class.	Red tape bs Fraud in the government Better money management	Lower business taxes Decrease regulations Support the oilfield
V3H	Economic growth outside of oil and gas (diversification).	Reducing funding or subsidies to wealthy industries and services operating at an above-average level.	Diversifying the economy to prepare for a potential decline in O&G demand. Some ideas: -Tourism -Construction -Mining
T4p	Young families! The middle class.	Red tape bs Fraud in the government Better money management	Lower business taxes Decrease regulations Support the oilfield

T0e	Need to spend in healthcare and education, NOT CUT SERVICES	Maybe not hand out billions of dollars to your rich friends	Are you kidding me? How about not cutting thousands of nursing and health care support services, teachers, community services that we rely on. All you care about is money and not the people who will be out of jobs or people without adequate access to essential services. How is a single parent going to survive in this province? You are taking everything from us.
T6E	Cutting back on new hires in the government and other related agencies. Finding process improvements to save money. Investment into our resource sector to re-establish investor faith in the Alberta oil market.	Cutting salaries of government workers (nurses, teacher, admins, etc.) that are earning too much and doing too little. Admins making \$70K with excellent benefits and pension - cutting back to match industry jobs	Encourage investment in resources, create on the job training programs to give industry some tax cuts to encourage growth within their own staff and organization.
T4S	Education	Re-introduce taxes on business and consider a pst	By diversifying our economy and investing in tech and clean energy
T6R	Diversification of the economy	Government Staff are overpaid and abuse the system. Need to reduce salaries. Not staff, but salaries	Investment in infrastructure.
	Teachers Buildings/maintenance Supplies	Tax the big corporations at a higher rate	Investing And tax breaks in small Businesses
T3c	Health and education are primary. Infrastructure is important as well.	Transfer payments for starters. However, I think internally the government could shrink their departments, such as inter office staffers.	Invest in the oil sands. I would love to see this province get companies to invest in and build refineries here in Alberta. It would be far easier to sell a finished product than it is to sell dilbit. Also would reduce our dependence on Ottawa actually getting pipelines built.
T4S	Health education infrastructure	Administration beurocracy.salaries to upper mgmt. I'm still a believer I should pay a health care premium of some kind. Taxes when used wisely and for what's important. There is so much waste on bureaucracy.	Fund research and development in both local universities and colleges and in private sector.
T2M	Prioritize spending on health, education, and diversifying Alberta's economy away from its dependancy on fossil fuels.	By shutting down Kenny's ridiculous "war room", and by no longer providing millions in tax breaks to corporations under the guise of "making more jobs". These corporations use those tax cuts for stock buy-backs, not to create more positions.	The government should support job creation and economic growth by reversing their gutting of the public education system (quality, accessible education allows the population to contribute to economic growth), re-instating equal pay for equal work for working minors, and by ceasing to cut health care and social programs.
T7X	Healthcare and job creation/retention	No subsidies for corporations. Less money spent on management for public companies. Look into curbing healthcare costs by making physicians accountable for all the tests and consults ordered for their patients(a lot of money is wasted on unnecessary tests ordered every day, we cann't compare best practice for patient care to the United States since most of their healthcare is profit driven and will want them to order as many tests and procedures and medications as possible) Look at bringing back healthcare premiums or adding PST	Not cutting funding from frontline staff to healthcare, education etc. make sure that money saved from those portfolios comes from management positions. Continue to invest in new hospitals and schools to creat jobs during construction and then during their use.
T6W	I believe that post secondary education should be a top priority. We need to build a future proof economy. The investment will paid out in spades.	The government may consider cutting out school board administration and giving more autonomy to individual elementary and secondary schools. Compliance could be achieved through standardized testing.	Invest it all in post secondary education. Jobs will then be created by the private sector. An educated Alberta will translate to growth.

T3G	PUBLIC Education and Public Health Care.	<p>Stop unnecessary building and infrastructure. IE. Work with the buildings and roads we have. Hold off on this work until we have more money again.</p> <p>Stop re-doing work that was already started or done. We do not need to re-invent the wheel. For example, the curriculum review that was started should be finished and implemented.</p>	Fund Public Education and Public Health so we can hire more teachers, nurses, aids, front-line workers.
T3P	Education and health care. It is absolutely ridiculous that cuts are made to these ministries.	If the government plans to make any cuts to education, lay offs should occur with redundant positions in board offices not in schools. Rewriting the funding model for post-secondary education as was presented on January 20th is a wolf in sheep's clothing. All the government has to do is make impossible targets for universities that they cannot meet and claim cuts need to happen. I hate to even say it but maybe the government should look at a provincial sales tax.	Education is where it should begin. Cuts to health care and education mean that the province could potentially lose positions to other provinces or the States. Supporting small businesses by cutting their taxes is a start. Investing in trades.
T0J	Health care and education	Less tax breaks to big corporations who then lay people off anyway	Train people in green initiatives such as solar and wind power. We cannot stick our heads in the sand and rely solely on the fossil fuel industry anymore. We have to change and people will need help to do so.
T6K	Public education and health care.	Shut down the ridiculous "War Room" focus that money on creating employment for Albertans. Do not give tax cuts to large corporations, only to small companies.	Reinstate support for IT companies, a growing industry in Alberta. Provide support for small start-up companies not large corporations.
T2Y	Education Healthcare	Stop spending money on the War Room logo Stop sending private jets for the travel of Premiers across the country	Diversify the economy Provide incentives for industries other than oil to come to Alberta (i.e Film, tech, computer science related fields). Move away from incentives for Oil and Gas
T2Z	Healthcare and education	Increasing taxes. Stop corporate giveaways. Lower small business taxes.	Lower small business taxes.
T0B	Spend our tax money on funding social programs. Provide sufficient funding to non profit organizations and those programs offered directly by the government (AISH, Childcare rebates \$25 a day programs and Education at ALL LEVELS). By supporting these programs you ensure that further jobs are not lost and that your people are educated and supported.	You can find much revenue in a 2% Alberta sales tax, use this revenue to support social programming. STOP GIVING CORPORATE TAX CUTS TO OIL COMPANIES, IT ENDS UP IN THEIR SHAREHOLDERS POCKETS AND NOT IN JOBS. CUT THE 'WAR ROOM', this is wasteful spending.	<p>Spend our tax money on funding social programs. Provide sufficient funding to non profit organizations and those programs offered directly by the government (AISH, Childcare rebates \$25 a day programs and Education at ALL LEVELS). By supporting these programs you ensure that further jobs are not lost and that your people are educated and supported.</p> <p>It is never wasteful to invest in social programs and education. This lifts up the whole people. It is also good debt.</p>
T5J	Education, Health Care, Public Transportation, Climate Change	Government salaries, multi million dollar company tax breaks. Tax the rich properly.	Look to future-oriented projects, green energy, and stop investing in the oil sands, which is a dying industry.
T4C	Getting the economy boosted Health care quality and access Education quality	Salaries of government employees Roll back huge tax cuts for the mega rich	Tax cuts and incentives for small business Promote/attract business ie. High tech, alternative energy, etc

T6L	Prepping for oil Exports of the millions of barrels of oil held in stock pile	In the Oil Barrels held in stock pile	Build the pipeline (around the Indian reservation as opposed to through it)
	In education, I think we should keep our focus on wisely spending for elementary school literacy and ESL supports, beyond the classroom teacher. The additional supports for ESL and low literacy students impacts so much of their lives beyond Gr.3, therefore we should invest in early intervention Gr. 1-3 with additional supports and save money and other resources in the long run. Dr.Georgiou's study and training for Gr. 1 teachers in best practices over 3 years has proved this. He is now internationally renown for it.	I think students in junior high and high school students could be given education credits for volunteering in education, health care and seniors' facilities - so they would have greater life experience and contribute more in our society. They are too isolated on social media and watching their various screens in any case. This may cut costs and would provide invaluable experiences for young people who are trying to get jobs as well as references. They would better develop social skills as well and be more respectful of people older than themselves.	Economic growth happens when salaries rise. We've seen salary stagnation for many years in Alberta and need to pay teachers and nurses appropriately and the rise keeping pace with the cost of living. Micro loans have been demonstrated to grow parts of the economy in the poorest nations and allows people to be independent financially, and keep money moving in the local economy. See the book from the winners of the Nobel Peace Prize in economics: Good Economics for Hard Times. Financial support for retraining helps, but only if the training is in long term growth jobs. We need to support some businesses in technology.
T8L	Healthcare, Education	Utilize technology to find efficiencies for once. its 2020	support developing sectors such as technology that you pulled money away from. DIVERSIFY FROM OIL AND GAS
T6M	Education, Health Care, Renewable Energy, Public Transit	Oil and Gas subsidies, don't cut corporate tax	Focus on long-term careers, the oil industry is dying and Albertans need help transitioning to jobs in greener areas.
T3G	Education, Health Care	tax breaks for large corporations	Build refineries in alberta that operate to a high environmental and energy efficiency standard instead of building a pipeline. Invest in renewable and energy efficiency research. Encourage the growth of other industries.
T8B	Affordable childcare and subsidizing rural healthcare especially around Midwives.	Seriously audit AHS, reduce redudant management and ensure the bulk of budget is going to operations, equipment, and front line staff, not cushy executives and managers salaries.	Have incentives for people to train in STEM careers and trades. Seriously push for equalization restructuring.
	Education, health, and diversifying the economy. Education: give money to school boards so they can reduce class sizes and expand support programs. It makes a huge difference. Health: do not privatize our healthcare system. Invest more into the healthcare system so we can have more care for all Economy: oil profits will be gone in at most 30 years. We need to start diversifying the economy now into other energy sectors so that our newborn babies can have a future. We are a very sunny and windy province - if we start investing in the development of solar and wind energy now these technologies will be affordable in a few years and we will become leaders in renewable energy, able to export the technology around the world while being able to rely on oil and gas power to see us through the transition safely. If we don't diversify, Alberta will become the Blockbuster of economies - obsolete and dead.	For starters, taxing multimillion dollar corporations properly instead of giving them 4.5 billion in handouts while they leave the province would be good. I don't think the savings should be found on the backs of the civil workers or small businesses. These are the people you want to have money to spend to spawn economic growth. Things like pay freezes or rollbacks are extremely unhelpful.	By taxing our big multimillion dollar corporations properly and investing that money into diversifying the economy and public sector jobs. As one of the biggest employers in Alberta, the government should not be rolling back wages. Especially when the esteemed MPs are not rolling back their own in any significant or impactful way.

T5T	Essential services to Alberta: Health care, education, social services, infrastructure and environment	Premier's salary, not giving tax breaks and not giving tax rebates for political donations. You aren't asking about tax increases which you should. A budget looks at what is coming in and what is coming out. Restricting yourself to only one side of the equation is a disservice to yourself and to Albertans. Your questions are deliberately slanted. You should be taxing more, especially the high income earners.	Not cutting essential jobs in health care, education and government services. Those are jobs too. Give incentives into new research and industries, especially renewable energy. We are an energy economy so it makes sense to invest in new energy sources (especially renewable) rather than doubling down on a resource that is declining. That is throwing good money after bad. Help coal/oilfield workers to transition with training and support rather than prop up an industry with our money and they take as profit while only providing marginal benefit.
T5T	Essential services to Alberta: Health care, education, social services, infrastructure and environment	Premier's salary, not giving tax breaks and not giving tax rebates for political donations. You aren't asking about tax increases which you should. A budget looks at what is coming in and what is coming out. Restricting yourself to only one side of the equation is a disservice to yourself and to Albertans. Your questions are deliberately slanted. You should be taxing more, especially the high income earners.	Not cutting essential jobs in health care, education and government services. Those are jobs too. Give incentives into new research and industries, especially renewable energy. We are an energy economy so it makes sense to invest in new energy sources (especially renewable) rather than doubling down on a resource that is declining. That is throwing good money after bad. Help coal/oilfield workers to transition with training and support rather than prop up an industry with our money and they take as profit while only providing marginal benefit.
T0C	Look at available transportation for meetings. Doesn't need to be first class.	Serving more affordable food at meetings and venues. Not caviar type food.	Less taxes and incentives for small businesses.
t2k	Healthcare and education	corporate tax cuts and subsidies	By supporting our more vulnerable and middle class. Public services like low cost childcare and equal opportunity education allow parents to become dual income families rather than having to choose between working and paying for childcare.
T4s	Health care & education	Elected officials salaries, hospital personnel that receive highers rthtan minimum wage & pensions for positions not requiring post secondary education (i.e. porters, cafeteria staff) Cut from them to avoid cutting amount of essential personnel (i.e. nurses!) Stop non essential spending on premier travel, & “ war room”	Focus on diversifying instead of putting all time money resources and research into a dying sector (oil & gas)
	Make a priority to have smaller class sizes in school. These have been creeping steadily upwards. Reduce waiting time for medical concerns.	End the \$30 million War Room which seems to be designed to fight your fellow Albertans who hold a different opinion.	Stronger negotiation with Quebec over Energy East.
T6R	Education Healthcare Affordable housing Seniors Food security Youth in care/ aging out of the government programs Homelessness, especially in the LBGTQ and indigenous youth demographics Infrastructure and upgrade of essential services	Salaries for top government officials can be cut. The “war room” should never have happened and should be scrapped immediately. Slight increase in sales tax. Higher corporate taxes. Less money spent in new panels and committees to advise on changing programs that were working well in the first place. No more corporate hand outs.	Invest in programs to diversify the economy. Invest in the tech sector. Reinstate funding for arts and gaming industries.

T9E	Education, health care, seniors, low income support for those that need it.	Stop handing money over to large corporations!!!! And get rid of that stupid war room. What a waste of my tax dollars. Plus, do a provincial sales tax. At least everyone will be taxed equally.	Create small business opportunities.
T0J	Health care, education and educational services (libraries, family resource groups), encouraging investment in our province,	Reducing internal costs of government (government employees, efficiencies in process), efficiencies in all government funded agencies	Make it easier for people to want to live and work in Alberta but also encourage trade within our own country. Businesses both large and small need an incentive but the people who work there also have to be able to live here
	<p>1. Getting Albertans back to work. This does NOT mean cutting essential jobs in the public sector, but instead, by generating NEW employment by DIVERSIFYING Alberta's industry. How about investing in new CLEAN & GREEN industries? Amazon-like business? A variety of IT industries? Research? Medical technology? Manufacturing? Research into CLEAN energy? Oil and gas are on the way out. Let's be prepared to be leaders in finding alternative energies! Until we do this, we will NOT have more jobs.</p> <p>Please! Look forwards to what might be, instead of back to what has been.</p> <p>2. Making life better for Albertans. This means supporting strong education, and strong healthcare that is provided equally to ALL Albertans, regardless of income. This means ensuring our indigenous peoples are not living in sub-standard circumstances. This means finding alternative means of dealing with people in jail whose fundamental and primary problems are related to mental illness or drug and alcohol addictions. This means respecting EVERY Albertan's human right to dignity.</p> <p>3. We do NOT need to stand up for Alberta. The rest of the country and the entire world will stand up to applaud us if we get over Alberta's oil and gas problems by looking ahead to finding viable, innovative alternatives that can be an example to others AND strengthen our economy.</p>	<p>Having a War Room is a nasty, antagonistic idea. Dump it. Mediate! Don't pick fights. The present government's pugilistic attitude is unwarranted in a civilized society and makes me embarrassed and ashamed to call myself Albertans.</p> <p>As always, savings can be found in excessively costly administration everywhere. Experts in this area, not politicians, should be advising us on where to make efficiencies.</p>	See above.
T0A	Health Care Education	Start at the top. Too many high paid politicians.	Support New Businesses and educating young people.
T2E	Increasing money to education (both primary and post secondary) and healthcare.	Cut government (premier and MLA) salaries. Cut current MLA and premier pensions. Cut money for focus groups. Cut government handouts for oil and gas companies.	Diversify the economy by supporting smaller industries like green energy, Film, and technologies not related to oil and gas.

	Health care and education	Raising taxes for large companies (including oil!!!!)	Look to renewable resources over oil. Use the potential to make Calgary the Hollywood of Canada!
T6I	Alberta supports, homeless shelters and food banks that help our community.	Charge the bigger corporations pay more and make the average to low income people pay less.	Have more involvement in the community learn from the people and learn how they live and you can help them with there problems.
T2A	Health care and education	Their own salaries and expense accounts	Make doing business in Alberta more attractive - incentives for hiring local, reduced taxes
T5Y	Economic diversification Education PostSec Education	Axe the War Room Legitimate RFP contract evaluations Eliminate O&G subsidies Collect on corporate taxes that are owed and outstanding	Reinstate the NDPs Carbon Tax program that helped fund diversification in devloping sustainable conomic industries Stop alienating any person, group, or industry that isn't O&G centric
	Education and health care	Reverse tax cuts	Infrastructure projects
T2N	The biggest issue in our high schools is class sizes. Teachers are expected to provide individualized instruction to each student in a class of 40+ students with increasingly complex needs (learning disabilities, mental health challenges). There is simply not enough time in a day to address every child's needs in the way that they deserve. Schools need the budget to hire more teachers so that class size can be capped off at 30. It would make such a big difference. Education is a long-term investment -the better educated our children are, the better Alberta will be positioned for long-term economic prosperity.	I don't believe that the government should be increasing funds to private schools where the student-teacher ratio is already low enough at 20:1 or 15:1. Furthermore, those schools receive a tremendous amount of support from donors and community partners. Private school students often have tons of support in the home as well. Private schools don't need more help. Public schools need more help. Students who immigrate to Canada without virtually no previous education need more help. Students whose parents are never home because they work 2-3 jobs to make ends meet need help. The government should be focusing their support on schools where the student-teacher ratio is often 40:1.	Education is a long-term investment. If we focus on properly educating all Alberta students, we are equipping them with the transferable skills (innovation, problem-solving, critical-thinking, collaboration, etc.) necessary to help Alberta move into the future. If Alberta children received the best education possible, they could become adults who create and innovate for Alberta's technological, agricultural, and energy sectors. Alberta could once again become prosperous. There is so much potential in our young people. This potential will never be seen if children are in schools where teachers do not have enough resources to create optimal learning environments. Please help teachers do their jobs so that we give each child a chance to learn and become contributing citizens.
T1K	Healthcare, homelessness, mental health, addictions, secondary schools, road maintenance, Municipalities, benefits for seniors, public transit, subsidized housing, research and development towards diversification of exports	Reduce MLA wages/retirement packages, no redundant commitees, no expensive trips for government officials (skype is cheap), electric government vehicles, look for money within MLA offices reduce extra staff possibly, don't scrap a oil to rail program that was paid for, less provincial parks (people/organizations can lease that property), stop spending so much on oil let corporations pay for that just reduce red tape make it easier for them to set up shop, give less to elections (make the campaign period shorter), lower minimum wages significantly and make sure stores lower their prices accordingly this will lessen the cost of subsidized housing	Reduce barriers to entry for corporations, increase spending in public sector jobs where there is a need (mental health, addictions, housing), encourage trade schools, increase spending towards diversification of exports (offer incentives for corps or people who come forward with good ideas, Alberta could be the leader in automation, it's happening and the time is right to get in)
T0K	Health care education and infrastructure such as roads and bridges	Increase tax on middle class and corporations	Invest into the tech sector to ensure we are not solely relying on oil and gas
T2T	Education and health care	Scrap the war room. Stop giving big oil companies tax breaks. Bring back the carbon tax to keep the money in Alberta vs federally.	Give tax incentives to diverse enterprises (tech and alternative energy). Stop with the oil and gas cheerleading. We all know where it comes from and how this province was built. Stop living in the past and start planning for the future.
T5J	Public sector jobs.	Tax breaks to the rich.	Funding the public sector, and not giving tax breaks to large companies.

T1C	Healthcare, Education, Twinning # 3 highway	Get rid of the war room, Wages for MLA's, Increase taxes for high end corporations.	Corporate tax cuts are not keeping companies in Alberta. We need to make our province attractive to outside investors. Taxing the crap out of the middle and lower classes is not helping Albertans invest in Alberta either. Allowing insurance companies and dentist to increase prices for services is not in our best interests either. We have no extra \$ to spend.
T6x	Healthcare and education.	Spending on government itself, like the incredibly unnecessary things that politicians get such as the towels in the legislature.	Lower small business taxes, provide incentives for more job creation through subsidies or grants, etc. (especially for small businesses).
T6R	Education Healthcare Environment	Eliminate the massive tax credits to Oil and Gas industry, get rid of the war room and eliminate all the unnecessary panels this government has created	By giving tax credits to alternative energy industries, tech tax credits, film industry credits, infrastructure needs to be built: children's mental health centre, super lab in Edmonton , SW hospital in Edmonton LRT extension. Government needs to create jobs, not wait for oil and gas. By building the infrastructure in this province, numerous spun off jobs are created which puts \$ back into our communities which in turn supports businesses!
T3A	Education	Finding cheaper alternatives rather than being so dependent on the oil fields solely	Increase minimum wage
T1A	Quality public education and public health care. Kincare reinstated	Cut diplomas and PATs (the savings on diploma and PAT marking would be substantial) and cut Ministry of Education jobs (bureaucrats). Remove the "War Room" 3% PST	3% PST
T2n	Education and healthcare and keeping teachers and nurses working!!!	Corporate tax cuts	Don't cut education!!!
T0G	Health Care, Post-secondary education, economic diversification	instead of savings, they could raise revenue three ways reasonably: 1) raise corporate taxes 2) carbon tax 3) Sales tax	more green-energy investment. Tourism investment Invest in something other than doomed petro-fuel-industry.
	Healthcare and non-religious education.	The War Room, Executive Director of Issues Management, the entire Ministry of Red Tape, and all these panels looking into issues created by the UCP such as why car insurance rates have gone up.	Stop cutting funding to healthcare, education, and the arts, which will make our province a more appealing place to live and work.
T4X	Public healthcare and public education. The government needs to focus it time, effort and policies for the people of Alberta.	Quit lowering corporate tax rates for large corporations. Further, the Alberta government should look at starting a provincial sales tax to generate revenue.	Diversify the economy away from upstream oil and gas development, unfortunately the oil and gas industry is a "sunset industry". Never again will oil and gas companies be drilling 18,000 wells a year--those days are done and not every coming back. Rather, the government needs to diversify the Alberta economy and invest in policies that promote renewable energy (wind, solar, etc). Lastly, please increase funding for public infrastructure projects which will generate jobs for Alberta citizens.
T1S	Healthcare and education. Teachers and Doctors are the backbone to any successful community.	Reduce spending on projects that are non beneficial to every citizen.	RAISE MINIMUM WAGE.
t2n	Funding for student psychological assessments and in school resources to support student needs.	Taxes?	Through education. We want to better educate our children and youth as they are per say the future of our economy.
T8A	Education, Healthcare, & the Courts	Taxes	By not thinking in the short term

T1Y	Education and health care.	Anywhere other than education and health care.	Supporting new/more economically and environmentally viable energy industries in AB such as solar or wind or whatever.
T6c	Public healthcare Public education Affordable childcare options Homelessness and Social programs Economic diversification and job creating strategies outside of oil and gas	Government bonuses Disassembling then war room	Supporting Universities in innovation Supporting tech innovation Diversification of energy production
t3A	Health care and education.	Tax those who are in a high to earning bracket.	Aid to small businesses
T4P	Finding a way to recycle carbon into a feasible entity like oxygen inexpensively and keep our oil workers, and oil flowing. I feel we will always require oil and or an oil derivative.	I feel our society is becoming drug addicted (medicinal drugs) which for the most part offer a band-aid approach to healing. If we could approach health in a more healthy way such as using mind, body and spirit to help heal. Also offer immigrants to come over (especially in the health areas) and if they are a doctor in another country offer an apprenticeship program to integrate into our system. The cost to run governments is to me is astronomical as I party may integrate a policy, the next government may squash it. The moral of the story is doing something even if is wrong is better than doing nothing. Put a lid on internal political spending. Put a lid on spending for indigenoius people, for drug addicts, for homeless, and immigrants. Instead look for people to get back to work especially here in Alberta.	Offer incentives in areas of the economy that require a boost with tax incentives, subsidies for kick-starting new and innovative businesses.
T6R	Reduce the size of Alberta Health Services IT through volunteer vacancy and don't back fill positions. Even with 1.5 mo/ year packages, max 12 mo, saves big amounts right around the corner.	Reduce the size of Alberta Health Services IT through volunteer vacancy and don't back fill positions. Even with 1.5 mo/ year packages, max 12 mo, saves big amounts right around the corner.	By reducing the number of non-critical staff in AHS such as IT.
T2Z	Job creation. Education. Senior citizens services.	STOP EQUALIZATION PAYMENTS! Cap executive salaries to prevent more lay-offs. In our economy, CEOs should NOT be giving themselves millions of dollars in bonuses like some do. Cut unnecessary trinkets like public bicycles or boards and spend more money on education.	Make permit applications and Consultation processes less time consuming and obscure. Many foreign investors go elsewhere because they don't understand the difficulties of getting a permit in AB. Because of the lack of jobs, First Nations are charging astronomical amounts of money to consult. 17(1) consultation with 10 Indigenous groups. The average fee was between \$250,000 and \$700,000; and the site visits were all identical. Now, THAT is a waste of money and a deterrent to any company wanting to invest in our province. And the ACO want to remain uninformed about these fees. How convenient!
T5K	Drop the warfare against activists, including Bill 27.	Stop subsidizing the dairy and meat industry.	Transition dairy and meat farmers into sustainable plant farmers.
T9E	health and education	eliminate the tax break to corporations and tax them appropriately	support the public service workers so they can afford at least the cost of living
T3K	Education, climate action, and a shift to a green economy	Stop subsidizing pipelines and coal	Support green jobs and education and research for the renewables sector

T0L	To maintain the schools and road. To have a high standard of Alberta Healthcare.	Cutting a lot of administrative jobs in the health care field. Re-introduce the healthcare premium. Do not pay for abortions. Do not pay for sex changes. Do not give away naloxone kits. Put a lot of tax on marijuana products.	Focus on easier access for companies to start in Alberta with some good incentives. Work hard on the oil production. Stimulate the ag industry as much as possible with diversion of crops.
t6m	Health care, education, services to the public	I don't think it is essential to find savings, it is more important to properly fund services provided by government.	Not fire government employees/ restrict funding to schools such that they have to lay off staff.
T2P	Healthcare, education, diversifying the economy.	STOP giving corporate hand outs. There are many other industries besides Oil & Gas. I work in the industry and whether you like it or not, the world is starting to transition off of it. Doubling down and tax breaks to corporations is hilariously stupid. All we are doing is paying them to move away.	Diversify. The UCP Government is not about "Jobs". It is about Oil & Gas jobs. Stop cutting Healthcare where jobs will be lost. Actually do something no Alberta Government has been smart or brave enough to do and start diversifying. Get rid of all church tax exemptions. They contribute nothing to society. Alberta also needs a sales tax. This boom and bust cycle can be managed.
T5K	Where the pressures are. Health, K-12 Education, Post Secondary Education and Transportation and infrastructure projects. Also support Government offices that do the work on behalf of the Citizens of Alberta.	<p>Quit being narrow minded about finding savings. How about looking for opportunities to GENERATE REVENUE!!!! There are opportunities for the GoA to make more Revenue from the sales of goods and services. Courts, Transportation, Environment and Parks, Tourism, sale of laws and official materials the list can go on and on.</p> <p>You should STOP giving away free print resources. They can be "free" on-line. You have channels such as Alberta Queen's Printer that can sell print resources and official materials for the Government of Alberta. Example ALIS materials are given for free to their clients, Prevention of Family Violence materials etc. These same resources can be distributed at a charge and would bring in \$500,000+ in additional revenue.</p> <p>You are also missing a big opportunity to generate revenue for the sales of official materials such as Drivers Handbooks for Alberta Transportation. Budgets are SO RESTRICTED so funds are not spent to print the materials recognizing that the return on investment would be there and that this is an item that citizens of Alberta are asking for. Having to "beg" to spend money in the GoA when the return will be there is RED TAPE AT ITS FINEST!!!!!! I thought the Government of the Day was looking to cut red tape. Should that not apply to the red tape policies you make government employees go through too?</p>	<p>Support civil workers and don't look to lay them off.</p> <p>Question - why is it the Government's job to ensure economic growth? The global and Canadian economy are stand alone entities. Why do politicians think they need to drive the economy? Doesn't the economy have it's own driver and own agenda? The Government gets in the way with their policies and political agendas.</p> <p>The Government has lost hundreds of thousands of dollars by giving the business tax credit to their "buddies" and business owners.</p>

t8b	children, health & workforce	Monitoring how funds are used.	There are too wide a gap between a \$15 job and some skilled & semi skilled job. Don't raise the minimum wage but reduce some wages or salaries. If do have one less holiday a year it will not matter to them.
T0E	Increasing AISH, increase funding to healthcare and education, reverses the cuts	Reduce top heavy government, red tape reduction	Increase taxes for the wealthy, implementation of a sales tax on luxury items, grants or tax reduction for business that diversifies the economy
T2M	education and healthcare	provincial sales tax	stop giving breaks to big businesses
T2N	Public Healthcare Services, Environmental Conservation, and Public Education.	Tax the wealthy, and tax corporations taking advantage of our resources and labour.	Increased and improved public transportation: more train lines, more buses. Increase healthcare and education budgets. Invest in green energy industries.
T3G	Education, Health Care, Oil jobs	Politician travel and a wage freeze or cut for the politicians	get some of these oil workers back to work by pushing through with the pipeline and oil sales
T6L	-	- Reduce the number of MLAs and the size of cabinet - a legislative assembly of 60 to 70 MLAs and a cabinet of no more than 12 to 16 should be more than sufficient for a province of this size. - Be more discerning when providing AISH and similar programs - some current recipients are sufficiently able-bodied to volunteer, participate in recreational sports and do countless other activities commensurate with those of the working population, and they should be expected to work and earn their living like the rest of us. Crack down on program abuse and the shyster doctors who so willingly vouch for their patients being on these programs. - Crack down on general abuse of government programs and services and all the buddy-boy BS that goes on in government - and this includes your wasteful contracting and procurement.	-
T8n	Education and health care. (yes, everything UCP is cutting) Education and Health care is what sets us apart from the rest if the country. Our public education is top notch, our health care as well. If we don't find them, take care if them, they will deteriorate to the point of too costly to repair. It will be like the States.	In municipalities	Reducing Corp tax rate is great.
T2G	Get rid of Kenny and the UCO. focus on vulnerable person programs, affordable and reliable public transit and access, quality education from K to Uni.	Get rid of Kenny and the UCP. Stop the prov. government giving itself raises. Levy taxes on corporations and wealthy individuals that every one else is required to pay. No need to 'save' money, just need to collect it fairly.	Get rid of Kenny and UCP. Economics 101 - spend to stimulate the economy. Reduce taxes on middle and lower class workers. Free and accessible health care for all. Living wage as a minimum wage, and update labour laws so that the employee isn't taken advantage of. Diversification of Alberta industries, which includes subsidies/investments and grants for startups and programs which are diversifying from oil and gas.
T6L	Government should focus on reducing benefits to low income family. Which way government can cut down the burden and invest those money in business so that people with low family income can get a job and they can work.	Government should invest more on tourism so that they can find savings.	Low business tax and allocate some land to big businesses like Amazon, big logistic or production company.

T6K	Health and Education are by far the most important. Those making cuts are obviously not in need of them at the moment.	Much less travel and spending by the Premier and Ministers. NO hosting of other premiers or guests. Cancel the \$3 million "save the oil industry" initiative - that's not where the world is right now.	- remove red tape and regulatory barriers - support green projects - more internships and apprenticeships in key areas
T3B	Healthcare, education (kinder to uni), diverse job infrastructure, childcare, equality, racism and other prevalent bigotry	Stop giving money to corporations, they lay off/ leave & take the money. Increase taxes on wealthy.	Diversify the economy, invest in education, invest on the Tech sector. Protect small business.
	Education and healthcare should always be a priority. Ensure teachers and students are well supported academically and financially so that their families can focus on their own jobs and henceforth contribute to a growing economy. Healthcare must be well supported as it the basis of a civilization. If you want a strong economy, you need strong people; and that starts with health and education.	The War Room is a huge expense that is not reaping any monetary benefits. It acts more like propoganda and does not actually improve the economy. It is money wasted and needs to end immediately. Furthermore, the number of panels is an added expense that is also not seeing any monetary gain. Gaining input from citizens is vital and integral to government success; which can be attained through town hall meetings hosted by MLAs and the respected minister.	The government needs to encourage citizens to spend to support businesses and the economy. The trickle down theory does not work in any way whatsoever. What does work is protecting jobs, which will then translate to citizens being able to spend money. Privatization is not the way to go in any society and it will only increase inequality and destroy our social structure. The government is responsible for the public jobs and just as the Honorable Mr. Kenney thought giving a tax break to private corporations was justified, so too is protecting the public sector.
T6V	Healthcare and Education	Eliminate corporate tax breaks.	Work on pipelines
T0K	Infrastructure. Capital projects in the arts & culture sector.	eliminate War Room PST	encourage diversification of economy by grants, tax breaks, etc. Showing Alberta is "open for business" is simply not enough if there's nothing for people to do once they move here. Big Investors want to ensure that their employees' quality life is excellent, including access to outdoor pursuits, museums, sporting activities, professional sports, concerts, opera, galleries, a symphony orchestra, etc.
T7Y	Government is elected by the people for the people. Public services should be upheld at all costs. It is public money paying for the services they need.	Cut positions and salaries from the top of every public service. Cut out all private sector in public service. It's a fact that tax dollars pay for these services but money goes into the private purse (usually not kept in Alberta) ?? Really look at high paying positions and see if they can do more than they do now. I know for a fact there is positions where sitting at your desk on Facebook for most of the day is your 100K\$ job.	Start looking at diversification. Bring in other industries. Create more "clean" environmental industry. When our oil starts flowing again it can be used for debt and savings. Oil is used for so many products that it will never be invaluable.
T3G	Maintaining current infrastructure, balancing the budget and working towards paying down debt.	Take out many unneeded admin layers in the CBE. Work in the problem of over staffed government industries such as nurses, and general government workers. Reign in city councils on there in nessasary spending such as Calgary with the new hockey Arena . Now is not the time for in needed spending like this.	Offer small business incentives to hire employees, help City council such as Calgary to lower business taxes thus souring on growth
T6X	Health, education, family needs	Corporate Tax Breaks, War Room, Politician spending (flying, events, etc)	Diversification - tech, green energy, etc Well clean up

T8A	<p>Health, education and infrastructure. These three areas have people who also work and pay provincial taxes. Create and maintain good jobs that diversifies our economy.</p> <p>A decrease in corporate taxes has not created jobs. People have to make a profit first before they pay taxes. Suncor, made a good profit, and used it to buy back shares. How did that benefit Albertans. Their investment in the next year is flat.</p>	<p>Getting rid of the Oil war room. Running around the province surveying the public on issues that the NDP have already done, Such as Agricultural research, farm safety,</p>	<p>Again the UCP has thrown all their eggs in the oil basket. How many jobs has the UCP created. They have canceled good programs and jobs in alternative energy, entrepreneurship in technology, etc. Not all the NDP initiatives were bad, Not everything in Alberta is about Oil. Invest in Agriculture, Agrifood, technology, health. Diversify our economy, hard for a conservative to do, you only had 50 years to try.</p>
T2L	<p>PUBLIC education - no vouchers that drain funds from public education into private schools.</p> <p>Helping low income families...tax breaks. Support for addiction centers, single mothers, lower public transit costs.</p>	<p>Make oil companies pay their overdue property taxes.</p> <p>Sales tax - just like every other province and state in North America. We cannot rely on oil/gas revenues to support our standard of living.</p>	<p>Cuts for tech companies - diversify the economy instead of making it all about oil and gas.</p>
	<p>Green Energy</p>	<p>Swollen government. Break up the government run anti oil lobbyist</p>	<p>By retraining people in new fields such as green energy. The green energy sector could surpass traditional very quickly if supported as much</p>
T5K	<p>Increased spending on government employees and service delivery. This talk of belt-tightening is short-sighted and disingenuous. At a time of increasing unemployment, the onus is on the government to increase spending and hiring as a way to maintain economic activity until the market correction has settled.</p>	<p>This is a loaded question, presuming my answer to the first question would be to cut instead of spend. Savings are for individuals, to weather the storms of a market-driven economy. Governments must spend the money they gain through taxation on providing services and salaries.</p>	<p>Stop being so acerbic with the rhetoric, and stop punishing government employees for trying to live their lives. Start investing in make-work jobs for unemployed people until they are back in proper private sector jobs. Reward companies who pay proper salaries with hiring incentives, and tell the ghoulish fairweather employers to get lost and never come back.</p>
t3g	<p>alternative transportation strategies and implementation Responsible development control to sustain and improve the economy and environment (one does not come at the cost of the other) Resourcing non-profit/Charities who fill the gaps when GOA spending decreases Support of those who need it most (homeless, sick etc)</p>	<p>Restricting new development that requires new infrastructure built and paid for by taxpayers. Find efficiencies for using what is already available. Or new developments pay for all infrastructure and resources needed. Work collaboratively with arms length organizations to engage citizens on upcoming work or plans while using consultants less. Continue to research and investigate options to reduce admin cost to education and health care. Allow those who chose to live in risk prone areas to cover their risks on their own. e.g. Those that live in flood prone areas should be informed (flood risk mapping) and then provided opportunities to move or cover their own risk through insurance or other means. Taxpayers should not be insuring those risks that are known and currently ignored or passed on to other by those who live in risk prone areas.</p>	<p>Re-introduce small business and entrepreneurial incentives especially in the tech sector to build resilience to fluctuating energy markets. Allowing for smaller businesses to hire new talent for their projects is good thing. Create incentives that organizations can use to adapt to climate change realities. This has been shown in other jurisdictions to be a job creation activity.</p>

	<p>Protection of Alberta's most vulnerable but only critical services</p> <p>Mental Health/Addictions</p> <p>Education</p> <p>Policing</p>	<p>Parents of children accessing children's programs should be responsible for more and government for less. There is too much of a sense of entitlement, a sense of "Government will provide". Stop providing what people can provide for themselves. People have stopped being resilient, and providing for themselves as they believe government will (because government has). Focus on programs that enable people to provide and earn for themselves.</p> <p>Reduce paper/increase electronic storage - way too much duplication of storage of information.</p> <p>More web based training, less in person/travel for training.</p> <p>Why are we spending money on community access in the PDD Program, when this obtains the worst outcomes for people.</p> <p>More procurement for services, and less sole sourcing.</p> <p>Providers who are sole sourced have GOA over a barrel for costs and there are more cost effective ways of providing/delivering the services.</p>	<p>Develop/increase opportunities in rural communities; attract new businesses to the province. Challenge the Federal Government. Maintain fossil fuels but also move to greener alternatives, and greener ways of extracting/processing fossil fuels.</p>
T0g	Education, Healthcare, increase old age pensions.	Quit giving tax breaks to the rich corporations.	Increasing pensions and invest in middle and low income.
T1R	Not themselves that's for sure. People on AISH, the elderly and children's programs	By cutting their pay and stop giving big tax breaks to companies that leave. People don't need to be making more 150,000/yr - make them pay a bit more taxes.	Not sure.
T5K	Health, Post-secondary, Infrastructure.	Limiting Healthcare spending to a maximum % of revenue(i.e. 45%) and finding alternate delivery methods to make access better.	Diversifying the economy and encouraging other sectors to come to Alberta with incentives for Tech and AI. We need the pipeline built, and better oil prices, but right now there doesn't seem to be any imagination or willingness to think about anything other than the oil and gas sector. Seems short sighted when other provinces are moving towards other sectors. We are going to be left behind unless the AB government has a vision outside of oil and gas.
T9A	Seniors - Health Care, Long Term Care Facilities and Protection Education Rural Crime Health Care - Upper Management Goes (Top Heavy) and more front line staff	<p>MLA's Wages</p> <p>Flowers - on the grounds and in the building - rather see an extra EA in a classroom than pretty flowers.</p> <p>Travel - MLA's and Premiras fly second class or stay less expensive hotels</p> <p>Increase Teleconferencing</p> <p>Phone/Internet/Cell phones - shop around for best deals on monthly bills</p>	Diversify - don't just focus on oil and gas
T4x	Health care and Education	Tax breaks to corporations	Invest in Technology
T6E	Health, education, post secondary.	Cut wages to elected officials.	Provide grants to industries in need to help seed development. Including small industries, not just oil and gas

T3B	Education and health care but to do this we need to build the economy. Hence funding economic growth is key. However, communication needs to be directed towards understanding that our economy directly impacts funding for education, health care and social service. We have created an us versus them scenerio between business and public systems. We need to understand one feeds the other and stop claiming one is more important than the other	<p>We need higher taxes on high income earners as well as a provincial tax system to fund the economy. You have to spend money to make money.</p> <p>Kill the war room! What a waste of money. Gather people in the community to think and quit wasting money</p> <p>Upper management levels of education and health care. The system needs to be streamlined. Also return to community based programs.</p> <p>Anything not essential should be cut and put on hold until the economy stablizes and grows</p>	Diversify the economy beyond oil and gas! Tourism, the arts, ect should be grown. We can not be dependent on one resource. Again, gather community and brainstorm ideasT
T3R	Education - Class sizes	Higher management / bussing / let the school board charge fees	By reducing class sizes
T5y	Healthcare	Lesser benefits for refugees who do not work and yet getting more money from the govt!	Focus on our main resource. Oil and gas
T6E	Public health care!! Preventative care, education (especially elementary and high school), and public infrastructure focusing on sustainable options including public transportation (including inner city LRT and a high speed train between Edmonton and Calgary)	Upper management in healthcare, prioritizing use of non specialists for low risk patients (family medicine doctors over routine referrals to peditricians) (family medicine doctors and midwives over routine referrals to obstetricians) etc.	Investing in public infrastructure and public health, diversifying the economy and moving towards investment in sustainable energy
	Education, reeducation, green energy, health, economic diversification and public transport.	This should be a secondary concern. Maybe not giving tax breaks to corporations would have been a good start.	Direct programming; funds for education and retaining and support for later life learners. Coal and oil are dead. Move on, move forward.
T5s	<p>Stop supporting injection sites</p> <p>Stop supporting and participating in CPP, development of our own pension fund is critical</p> <p>Stop using the rcmp as the provincial police force</p> <p>Fire the cfo and hire one who reports to the province</p> <p>Control immigration like Quebec</p> <p>Hold a referendum on equalization calling for a constitutional amendment</p> <p>Ban foreign monies from politics, environmental groups, Declare China an enemy state</p>	<p>R3move the rcmp</p> <p>Stop funding safe injection sites</p> <p>Control immigration like Quebec</p> <p>Referendum on equalization and remaining in Canada</p>	Build pipelines to provincial boundaries toward Saskatchewan, NWT and Yukon thereby bypassing bc @nd the federal government
T2E	Diversify the economy, get on board with climate change initiatives and stop being so partisan.	kill the war room. Bring in a sales tax.	Stop the focus on a single industry. Bring back NDP subsidies for alternative energy. Fund the Green line in Calgary
	Healthcare, Education, Economic diversification	Salary rollbacks on the top paid in public office.	Diversify the economy- provide training and investment in new technologies
T8h	Education, healthcare	Anything other than education and healthcare that the UCP fund. Their ideas are 1940s steps backwards	The pipeline shouldn't happen at the cost of education and healthcare
	Spend money on putting nurses and teachers back to work.	Salary cuts to the upper echelons of the public sector jobs - premier, ministers. No more tax cuts for the rich.	Stop cutting jobs in health and education.
T4B	Education and health care	Fewer school boards to reduce overhead and cancel the wasteful Canadian Energy Centre	Invest in diversifying our energy sources and economy such as high tech sector

T5N	Supporting new business in Alberta Reinforcing our leadership in education, health care, and technology.	How are we feeling about oil corporations taking their tax incentives and withdrawing investment from Alberta? Start there. We don't need savings - we need investments in new industries. Also, the energy war room is hilarious.	Invest in people, support new industries, diversify.
T1C	Healthcare, education, social services, pipeline	High ranking government employee salaries.	Stopping the cuts on front line workers such as nurses, teachers, childcare, elderly care givers and go further up the ladder to make the cuts. Public education and Heather are. Not private education and healthcare.
T2E	Health care, education, infrastructure, diversifying the economy.	Corporate tax revenue.	Incentive programs for investment, energy efficiency rebates, developing Alberta as a world class destination for infrastructure, education and health care.
T5T	bring in a sales tax. bring in tolls on highways. demand oil companies to deposit adequate clean up funds before they drill any wells. stop providing benefits to government friends in exchange for funding support. Invest money in alternate energy to put people to work outside of oil and gas like geothermal energy plants as in Saskatchewan, solar energy fields. Invest money to diversify our economy into the digital economy favoring intellectual capital like nanotechnology, artificial intelligence software, fintech. ensure access to Justice by having the correct ration of prosecutors and court staff to provide timely justice to all. Integrate provincial and queens' bench into a unified family court	stop outsourcing legal work to expensive law firms charging \$400 an hour. Keep in house legal counsel on an annual salary. Stop wasting \$30 million of tax payers money on energy propaganda centres, money which could have been much better spent. Stop providing any rebates, tax relief, subsidies any any sort to oil companies that are not paying their municipal taxes or polluting our environment or selling off abandoned oil wells to shell companies to off load clean up liabilities.	fund geothermal energy plants. invest in the growth of the digital economy. encourage innovation in all fields with tax relief or start up funding.
T2E	Mental health, the poor & the vulnerable. We have a campaign in this province declaring "Enough for All." It is inhumane and immoral to watch a neighbour struggle with life's basics like food and shelter while many live opulently. There also needs to be a focus on rapid transit between Edmonton and Calgary.	Raise corporate taxes. The recent cut is not working and is NOT creating jobs but it IS leaving the social web of programs threadbare.	Industry-specific incentives instead of an across the board tax cut. The recent tax cut is lazy and inefficient.
T4X	Education Child care subsidies Personal tax cuts over corporate	Changing the corporate tax rate to 10% rather than 8%	Corporate tax of 10% Subsidies to fledgling industries (solar energy, nanotech, etc) Grants for companies to train employees, provided employees are full time residents of Alberta
T0m	Canadians, healthcare	Stop sending it to other countries or terrorists	Support our oil workers
T2M	Education	Private industry	Distribute money where it is needed such as education system.
T6X	Health care, education, environment, jobs (including public sector ones)	More maintenance instead of capital projects for infrastructure, and also reducing overly generous provisions in union contracts with nurses especially (e.g. overtime, part time hours, lump sum payments). Also, AUPE union members that are ineffective at their jobs and just are warm butts in seats need to be removed. You can find savings just from getting rid of ineffective people and improving overall efficiency.	Support industries that diversify the economy instead of fighting against global headwinds against fossil fuel industries, support retraining, and don't cut public jobs to an extent that you push Edmonton into a recession, because that doesn't help anybody.

T3r	Education (PUBLIC) and health care. These are essential services that are necessary for the general betterment of society.	More taxes for big businesses and not tax cuts as they are doing now.	By not reducing funding in the public sector. There have been far too many layoffs since they have announced their budget.
T0L	They have cut spending to much. Specifically for boards like the AER (Alberta Energy Regulator).	Do attrition to reduce staff levels instead of all the layoffs.	You don't create jobs by laying off all the gov employees. Do staffing reductions next year by attrition instead of layoffs. This includes non-union boards.
T4V	Health Care, Education, social programs that help people trying to get out of the oil and gas industry	Tax the rich, stop spending on the oil and gas "war room"	Diversify the economy, by investing in green technology, and technology in general
T5Y	Medical and Retirement benefits and Education funds	From Big businesses and Oil Money	Focus in Canadian worker's and Abilities
T5K	Education, predictable, long term municipal funding agreements, environmental protection, affordable housing, health care, and topping up the Heritage Fund	<p>1) Dismantle the Canadian Energy Centre. The energy industry does not need a provincially funded media centre to advertise on their behalf. They already have lobby groups like CAPP to do this, and if they aren't doing an effective job, then that's their fault, not the province's. Many Albertans, including myself, do not agree that we should supporting and spreading industry views that are not aligned with sound, vetted, research. If the energy industry truly believes that they are doing everything they reasonably can to reduce their carbon footprint and invest in making the lives of Albertans better, then you shouldn't need the Canadian Energy Centre anyways.</p> <p>2) Merge the Catholic and Public School Systems and stop stop provincially finding private schools. Why does Alberta need to duplicative school providers? Merging the Catholic schools into the public system would save money by:</p> <p>a) Reducing the amount of land required for new schools. You would no longer have to provide land for both a new public and catholic school in each new neighbourhood, minimizing the amount of municipal reserve that has to be taken and reducing urban sprawl.</p> <p>b) Reducing the costs of new building construction. Building one, larger public school building is more energy efficient than two smaller, individual schools. You also have to build less municipal servicing and pay for less yard maintenance.</p> <p>c) Cutting redundant services: having two school boards service the same area of the a municipality makes no sense, as they provide so many of the same supports. Merging boards would also reduce the amount of administration required, allowing funds to be out towards the people on direct contact with students such as principals, teachers, and educational assistants.</p> <p>The Public School system can easily provide Catholic services if they so desire, much like they do with other</p>	<p>1) By properly funding the schools so that young Albertans have the educational tools that they need to pursue a successful career (in whatever field that is)</p> <p>2) By funding economic diversification initiatives. Alberta has a highly skilled workforce that is highly adaptable, so let's kick start industries that are sustainable in the long term and make us less reliant on revenue from the most financially volatile resource on the planet. How could the provincial government not see the value in sending a delegation to support Alberta's technology sector at the worlds largest electronics convention (CES)? Why is the government against creating a series of protected parks and recreation areas in the Bighorn region so that we can ensure future generations get to enjoy it, and so that we can continue to expand Alberta's environmental and adventure tourism economy?</p> <p>3) By providing consistent, predictable, long term funding agreements to our municipalities. How are Calgary and Edmonton supposed to provide effective services that attract new residents and retain existing ones if they don't know what their provincial funding is going to look like year over year? The provincial government lied to our two largest cities when they said they were not going to change the City Charters, creating a massive amount of uncertainty and causing cities to re-open their already approved budget cycles. What savings did breaking that promise actually provide? I am 100% for a sales tax if it means that both rural and urban municipalities are provided with a consistent, long term funding model for big ticket capital and operating items like affordable housing, public transportation, and irecreation/wellness.</p>
T6X	Education & health	<p>Reduce unnecessary spending - travel etc</p> <p>Wage reduction for politicians</p> <p>Combine some school board operations to reduce costs.</p> <p>No bonuses</p> <p>Junk food tax</p>	I don't know
T8N	Education and Healthcare	Upper management leave the everyday workers alone	Support students

T2A	- Transition animal farmers into lines of work that don't devastate our environment and torture animals. - Set up a fund to support (rather than criminalize) independent investigation of operations that exploit animals.	Federal money being used to subsidize big dairy needs to be freed up and sent to AB to help with a program to transition animal farmers to ethical lines of work. We can also get rid of the special prosecution task force sucking tax money to intimidate animal abuse whistleblowers. (It's not working anyway).	Our top priority in Alberta needs to be our environmental footprint and revolutionizing the way we treat animals. Provincially-funded investigation would create a lot of jobs, and a focus on plant-based farming for human (not livestock) consumption would ensure our land is sustainable for centuries to come. This is by far the best thing you guys could do for our economy.
T6W	Strengthening education and healthcare not cutting it.	Cut back on unnecessary and overinflated government jobs.	Fight to make an end to equalization payments so we can invest that money in paying off provincial debt and invest in the economy.
	Health care Education Environmental sustainability Social welfare	Oil and gas Industrial animal agriculture	By investing in the wellbeing of it's citizens - ensuring more nurses and doctors have jobs rather than cutting funding - ensuring more teachers have jobs and students have a more thorough education rather than cutting funding - taking funds from corrupt oil and gas and transferring it to the development of clean, renewable energy - taking funds from corrupt industrial animal/plant agriculture and investing in smaller scale farms, organic farms (which may encourage more citizens to become farmers)
T0B	Post secondary education and families abilities to pay for the high tuitions. Helping every family with there day to day expenses	Equalization payment. The east doesn't need it as Quebec has said they have 2.2 million excess and we do need it	In Alberta we are still waiting to see growth. Any step forward is progress
T6X	Environment, health, education	Cut oil and gas out completely.	Provide training in environmental cleanup, solar industry.
T1K	Health care and education.	Reduce corporate discounts.	Diversification of our economy. Support local business initiatives.
t6a	debt reduction and deficit elimination	all the overpaid executives at AHS could take a 50% pay cut	get out of the way of business
T0J	Education Post Secondary Education	Alberta Supports Safe sites for drug users AISH	Giving business breaks, tax credits
T6I	Basic shelter, drug plans, environment	Disband the war room	By funding projects like the superlab
T1h	Education, dental benefits, senior care, health care	Increasing taxes on the wealthy	Provide tuition credits and bursaries so people can get an education and Alberta will have more educated and skilled workers
T0m	Education Heath	Government spending on studies that are useless	Pipelines
T0C	Education, health care, seniors and those in need.	Only hiring for gov't positions where needed.	Get out of the business of doing business with private companies. If they can't make it let them die.
T0J	Health care Child care Housing Education	Less middle man position	Reward the employers who are hiring within the province instead of out of province
T8N	EDUCATION HEALTHCARE POLICE SERVICES	GST raised to 7%	INCREASE EDUCATION FUNDING/ TRADES
T8a	Health and education	Cap government employee salaries. Reinstigate healthcare contributions.	Support private sector small businesses more.

T6V	Health, education, housing for low income, income for disabled and handicapped, seniors health and medications, mental health/wellness and access.	Taxes on big corporations. You've given huge cuts in hopes to stimulate the economy and create jobs - this which has not come to fruition. How about meet in the middle. Give corps a slight tax break and create a PST- this would put money back into essential services.	Invest in new technology and renewable energy. Not saying oil must go but at some point we have to learn to use our resources better.
T8H	Healthcare, education, green technology/nuclear investments	Decrease corporate tax breaks	Invest in new green technology, and provide training for O&G workers to transition into
T0K	I don't think we need to increase but I think education and health care should have clear support from government spending.	I think it's reasonable to expect that savings in health care (which in reality could be the same budget without increases for inflation). My big concern is the seemingly careless way the government is going about this process. I suspect money will be saved but people will receive worse health care.	I've become skeptical of the common hope that a healthy oil and gas industry is going to resolve all our economic concerns. I have concerns that government support of oil and gas is benefiting executives but not the rest of the province and may perpetuate an unhealthy job status (where many of these workers are seasonal or get laid off regularly). Though I haven't seen any great successes yet I hope that enabling small businesses in general by removing 'red tape' would be great and perhaps some programs that do target smaller businesses and then emerging areas - technology and other energy sources
T3h	The government of Alberta should focus on prioritizing the welfare of low income human beings (such as those with disabilities) and animal welfare.	The government of Alberta can save money by revoking their new rural police task force. A privatized police force is a complete abuse of power.	The government of Alberta can support job creation by investing in progressive trades, specifically in new forms of energy.
T6A	I think the government should establish funding to reduce the costs of textbooks, specifically in the form of grants for creation and adoption of open educational resources - a program the previous PC government had, but the NDP cancelled. Given rising tuition, a modest investment in open textbooks would greatly reduce the burden on students and their families.	Sales tax.	Recognize that the public sector cuts will result in dampened spending overall, so not cut the public sector wages.
T8N	Health, Education Senior services.	Political pensions, redundant levels of management in public corporations.	Give people on social assistance more opportunity to get off assistance.
T8N	arts and culture	firing Jason Kenney and hiring someone who cares about the people	bring Rachel back
T2W	Education and healthcare. The fact that these two essential services have been undercut so extensively is heartbreaking and has hurt many families, individuals, and programs. Removing coverage for essential medications and offering coverage for another treatment that is "close enough" is outrageous.	The large cuts that have been given to corporations have proven to be ineffective. It is not bringing jobs to the province. The War Room - is this really necessary? Unnecessary travel and extraneous expenses for government members.	Educate our young people. Stop cutting jobs (eliminating jobs does not equate to job creation).
T6h	Education - elementary and secondary.	Enforce taxation on oil companies.	Keynesian economics.
T5A	Education and health care	Within their own salaries to start with!	Support our oil and gas industry.
T0J	The elderly, more long term care, more choices. Education, K-12, tech schools. Health care, need more beds opened up in rural Alberta!! Build more hospitals,	Cut the ones at the top! To many of the big bosses take home the pay, especially in health care.	Encourage the youth to go to tech schools. Start drilling more oil and gas wells. Build or reopen existing coal mines!! Invest in any opportunities outside of the big cities!!

T6X	Health and education are extremely important, as are many of the social supports and services offered by the public sector.	Raising taxes, especially on the higher personal tax brackets and larger corporations. The carbon tax was actually pretty good at keeping money in our province.	By not slashing the public sector so much, by not paying for a ridiculous 'war room' (who are we at war with exactly, what sort of message are you even hoping this presents?), offering incentives for alternative energy companies to come here/developing programs to help all levels of oil and gas workers to find jobs in industries that aren't failing on a global level, maybe consider the needs of everyone, not just big oil companies.
T6H	Education and health care	Cancel the corporate tax cuts. We already have the lowest corporate taxes in Canada, and there is no evidence that lowering corporate taxes creates jobs.	Support a VARIETY of industries and fields. Don't cancel the Energy Efficiency Alberta Program. Invest in education and healthcare.
T4A	Education, health care, and social services.	Don't cut the corporate tax rate. Don't go back to a flat tax. Stop picking fights with unions. Also stop the handouts to corporations.	Diversify the economy (beyond oil). Stop attacking existing jobs (such as don't slash film/TV tax credits, don't cut tech company tax incentives, stop cutting funding to teachers/nurses).
T1S	Public education, health, and infrastructure, in that order	Politician's salaries and mid-level management in public sectors	By returning incentives to industries trying to grow. Film could use some proper incentives. Forward thinking energy sector ideas. Show an Alberta interested in moving into the future instead of fighting for the "good old days".
T7S	Education and Health care	Cutting wages for top AHS executives instead of laying off nurses	Continue fighting to gain access to ports for oil and gas
	Education funding and curriculum that isn't decided by people that are not in the field of education.	Not giving hand outs for oil and gas companies that lay off Albertans.	Looking outside of oil and gas because we will never go back to the oil boom we saw in the past.
T5Y	Improving public transit and getting around the province. We are really lacking compared to other provinces.	The government shouldnt need to find any additional savings. Too much has been cut already!	Investing in transit is job creation. Every \$1 invested in transit has a \$4 economic return. (Source: CUTA)
	Healthcare and education. Social services take care of everyone!	Tax people who make more money- they should help those who can't. Government people / managers should make less	Oil supports and also social services. It cannot be one or the other
T2R	Health, Seniors, Education, renewable energy grants	Get rid of the ridiculous war room. Stop allowing O&G companies to avoid taxes, stop offering tax breaks to multi million (billion) dollar companies.	Bring back renewable support, offer incentives for non-oil and gas companies to set up shop in Canada. Remove Engineers and any other oil and gas focused visa's to Alberta. We have enough skilled professionals workers without work.
T5y	Education funding	Unsure	Funding to private and public sectors
T5Y	Health care, education and the environment	With big businesses	Support the middle class.
T0H	jobs	Arts & Culture, Parks & Rec, Community and Housing. Let the communities look after their own parks and rec. Arts & Culture falling off the main stream due to high tech - social media/info tech	Cut back on full time gov't employee salaries, they already get paid vacation and sick leave. Cut back on administrative jobs, there are too many admin
T8X	Education, health and infrastructure. Quit investing in billion dollar companies that give zero ROI while systematically trying to make Albertans dumber by implementing your for profit school models.	No more war room, no more inflated salaries of government officials, No more review panels of the premiers friends and donors, no more trips for the premier to London with no feedback to the tax paying people about what he was doing there.	By investing in up and coming technologies and realizing that although we should still support O&G, it is a dying resource. Hence non-renewable, but keep cutting education so that kids coming through school don't know what that means.
T4R	Improving mental health for all constituents. Focusing on PSI's to be the lead in systemically approaching this so that employers, employees, students and fellow citizens are engaged, aware and supportive.	Obliterate the transferring of equalization payments to the east.	Offer and support the development of increased higher education granting for post secondary institutions so the students choose to stay in AB cities once they graduate.

T5S	Health care, schools and education, maintaining and improving infrastructure	<p>Decreasing the number of “higher ups” in the public sector that have huge salaries and receive large bonuses and increase front line workers- teachers and nurses for example- who are actually the backbone of our society</p> <p>I actually would not be opposed to the government implementing a small provincial sales tax if it meant there would be no loss of jobs or major cutbacks to vital services.</p>	<p>Work with small business owners to find ways to make it easier for them to prosper in these difficult times. They cannot hire people if they cannot keep their businesses open and profitable</p> <p>Continue to find ways to make Alberta look like a great place to live and invest- tv ads, tourism videos, educating the public on how much we actually care about the environment despite what a few celebrities want the world to believe.</p> <p>Continue to collaborate with the rest of Canada and try to mend relationships with fellow Canadians and provinces. I feel this is the only way the pipelines will be built. Education and communication is key</p>
T2Y	Diversifying the economy! Quit counting on oil and gas in this province and start looking at creating a strong, stable economy across sectors.	In tax breaks to big businesses, especially oil and gas who are not doing their part. Just ask the rural municipalities that are struggling to get them to pay their property taxes. We need to stop trying to find all of these cost cutting measures on the backs of those most vulnerabke and those that can least afford it. If it really is important to the government to cut costs, quit playing favourites with oil and gas.	By encouraging all types of businesses in this province and not playing favourites with oil and gas. Also by supporting oil and gas workers as they transition to other sectors.
T1m	<p>Making child care accessible and affordable for all. Increase subsidy threshold but scrap the 25/day child care</p> <p>Make a pay scale for those early childhood educators that work in licensed centers and day home agencies and day home providers who have ECE qualifications</p> <p>Revamp licensing regulations for child care centers and day homes</p> <p>Have a better way to monitor private day homes</p> <p>Make it easier for first time home owners to purchase their first home</p>	Government workers make less, get rid of funding for programs and grants not utilized.	Apprenticeship programs for more programs like ECE
T7A	Education and Health Care	<p>Do not spend taxpayer money on an Oil and Gas War Room Not on the backs of many vulnerable Albertans...seniors, children, sick...</p> <p>Be careful where you are heading with tax dollars going to the rich and elite in Education (Privatization of Schools...Performance Based Funding...) the rich get richer and the disadvantaged never see the light. It is all more complex than that but delving deeper into details for all of the above, would take a dissertation length survey answer. I am sure that the message is quite clear though.</p>	Quit messing up and people will want to spend money...I have very little faith, considering the direction this government is heading...so I am not spending. How many other Albertans are doing the same...hmmmm?
T0J	Health care and Alberta's oil	Immigration	Oil and gas

T6J	Providing proper Health and Education systems with a focus on updating and maintain our facilities.	I think we should focus on proper revenue streams. Perhaps we could focus on savings if we didn't give 4.7 BILLION dollars to corporations and instead spent that money on providing Albertans proper services. This question is incredible misleading and frankly, a load of bullshit by only asking for ways to "find savings."	DON'T GIVE ALL OUR REVENUES TO MULTI-NATIONAL CORPORATIONS SO THEY CAN USE THAT MONEY TO MOVE OUT OF ALBERTA!
T3m	Education and health care	Big business Pay for your own expenses	Look at spending and cut wisely
T6R	Leaving the nurses, teachers and other front line workers alone. Decreasing our pay is only adding pennies to the bucket- we really dont make that much money at all. Focus on the big offenders, that being the physicians for the cuts.	The physicians!! They are so sneaky in their charging and money hungry. They live in mansions and many have lamborghinis and other expensive possessions. Someone needs to investigate how they bill for their services. For example, in the OR at the UAH some anesthesiologists, will double bill for liver transplants. In the Endoscopy departments, if a GI doctor removes a polyp greater than 0.6cm in size, they get more money. As do the anesthesiologists who are present during the procedure. Meanwhile, the nurse who is actually the one snaring and removing the polyp, does not get any extra pay. And believe me, the physicians are charging for alot of polyps that are less than 0.6cm in size. A third example, are anesthesiologists who make \$10,000 per shift on a labor and delivery ward. If a women has an epidural running, these doctors bill every 15 minutes. Now times that by 10-20 mothers on any given shift. This adds up and can be very lucrative for them. Its examples like this that upset me. And the examples are endless. I just provided you will three that I see all of the time.	The cost of living in Alberta is too high. Pay those accordingly (nurses, teachers, etc) or people will not want to work in this province.
t2G	- Education - Health care - Social Sector	The War Room. It isn't at all what we were expecting and I'm horrified to know that my tax dollars are going towards something that is not only making Alberta look bad, but isn't doing what it was set out to do. You've let us, your supporters, down.	- Invest in diverse sectors - Bring back incentives for the tech and renewable sectors
	Essential services Hire more nurses to cover all hours instead of burning out the ones you have. Overtime is extremely costly and so is burn out.	Top heavy salaries and administration. Scale back on the amount of government pensions handed out like candy. If you only serve a 4 year term I don't think you deserve a pension forever. MLA's who don't spend any time in the offices and are spread out don't need new furniture, fancy offices and high rents. Find something small and economical. Instead of paying to store old furniture dispose of it. Too much silly waste. Think more like a business On a budget instead of raising taxes to pay for all the waste.	Tax reduction strategies for small business.
T5G	Health Care Debt Reduction	Smaller Government, cutting the fat at the top instead of the front line	Get pipelines built

T8C	Healthcare and education.	Taxing corporations	Continuing to advocate for pipeline development and creation. Advocate for better policy for oil.
	Government has to focus on public health, education and infrastructure for growth.	Government can find savings in all places with increasing financial management and proper use of funding for relevant needs and audits. Track funding usage relevance and increase financial management. All organisations are using loopholes for fund usage.	Building necessity infrastructure like long distance railways and an efficient public transportation system will directly promote job growth.
T8a	Education, health care and pipeline	Government salaries and expenses	By not cutting health care and education budgets so people lose jobs. Continuing to support building a pipeline to bring in jobs.
T5E	Healthcare and education	Wasteful projects such as the additions to the new North Edmonton bus depot	Sell our natural resources for a higher price. Build more pipelines to move oil.
T1K	Healthcare, needs to be improved. Don't cut back employment when as it is it is not top. It should be patient focused and they deserve quality care, making cutbacks will take away from the quality patient care.	Cutting salaries of corporations that keep getting the benefits.	Not cutting back jobs like in the healthcare industry. Create more jobs to help the population like with soup kitchens and shelters. Build up and take care of our people before we take care of others.
T2J	Education Health	There is a whole raft of inefficiencies in any organization. These are usually obvious to the people just below the level of where the power to change them exists. Ask them!!!	Firing people does not seem like a good way to do it. Perhaps you should stop doing that - which you are doing by cutting budgets; sure you are not directly firing people but you are effectively firing people.
T6E	Education. The number one complaint I've heard since the budget release is that there's not enough funding to do x, y, z in schools.	Reduce any funding that prioritizes non-ethical energy production and unnecessary corporate discounts or privilege.	Invest in new energy, renewable energy, and innovative research projects.
T8n	Education, child care and helping keep women in the work force.	War room is a huge waste of money.	Fund daycare for families so all parents can afford to work.
T4A	Adding services for those less fortunate: health, education, training, child care	Tax the rich	Increase the minimum wage, incentivize green industry
	Accessible health care, quality education, affordable housing	Stop forming panels to research issues that have already been studied for the last 50 years (if not longer). Stop traveling the world to prove that Alberta is a good place to invest. Try Skype or web conferences. Set up more supervised consumption sites to save money on corrections and health care costs. Invest in supportive housing for the same reasons. Pay now for educational assistants, speech therapists, and sports programs in schools, so you don't have to pay later for therapy, surgery, and legal aid for those who aren't being well-served now.	Make plans that are long-term rather than only as far as the next election. If we want companies to invest in Alberta, your government needs to invest in Albertans. We have hard-working, educated people here. Give them a chance by investing in their businesses as opposed to global entities. That way, money stays (and is spent) here.
T0C	Environment Public education and post secondary education Health care, particularly rural	Trying to save money on working Albertans (govt, teachers, health care workers) will simply lead to more unemployed. Rescind the tax bailout to big corporations. Trickle-down economics has never been show to be effective.	Many oil workers and equipment could return to work in oilfield reclamation work funded by proper adherence by the AER to the rules already in place to deal with the increasing numbers of bankruptcies in the sunset years of Alberta's conventional oil and gas. You need to consider the brilliant work of Regan Boychuk regarding this.

T7Z	<p>Get the oil and gas industry going again without giving them tax breaks. Diversify and look into renewable resources though.</p> <p>LEAVE HEALTHCARE AND EDUCATION ALONE!! Stop with the cuts. If anything, they need more money. EMS and the hospitals are always stretched with resources because idiots use the hospitals like fucking Medicentres and take up beds away from people who need them. That, in turn, causes EMS to be stuck with patients which then causes Code Reds in the city.</p> <p>Maybe you should tax big corporations....even 0.5% would help the economy A LOT and if 0.5% affects their bottom THAT bad, they need to look at what they need to do differently.</p> <p>Loved that the government hid in their secure chamber while first responders took care of the scene where the gentleman shot himself at the Legislature. Dont worry, you guys hide. Everyone else can handle it.</p>	<p>Look at yourselves first and stop dicking around with our benefits.</p> <p>Shouldn't cost \$16,000 to have a couple other premiers come visit us in Alberta.</p>	<p>Start building the infrastructure the city needs. Cancelling schools, and hospitals just caused local companies to lose their contracts and those companies have had to lay off people... I dont see how that helps the economy. Essentially, what you've done is stressed an already stressed system, added more people to the unemployed list and those people end up taking EI, they're not buying or spending money and that slows the economy down.</p> <p>I understand that the intentions is to get AB back to a better, financially secure province and I appreciate that, but I seriously think it's being done the wrong way.</p> <p>Add a temporary (2 year) 2% HST tax.</p> <p>Add a provincial small carbon tax...provincial carbon tax means that money stays in AB. Federal carbon tax means that AB gets nothing from it and Albertans are still paying for it. Why not do it in such a way that we get to reap the benefits?!</p> <p>If possible, cut back on our equalization payments. 17(1) I know it's)</p> <p>Important for country but if you're having financial issues, you are not supposed to be helping others out with their debts. Basic rule of wealth management.</p> <p>How can you help others when you cant even help yourselves?</p>
T5C	Education, Infrastructure, Healthcare	<p>By not giving billions in bailouts to corporations who have taken the money and ran.</p> <p>Not having excessive spending accounts, going on trips, treating the budget like their own personal money and not free handouts they seem to think it is.</p>	<p>Make training/education more affordable; stop cutting! Research grants</p>
T4C	Health Care Education Public Service jobs	By eliminating the idiotic war room and the Canadian Energy Centre. Total waste of money saving companies which are more than able to lobby and promote themselves.	Force oil and gas companies to pay their municipal property taxes. This only pushes the financial burden further on to the rural land owners who will have to pay more taxes to make up what the oil and gas companies have not paid. Start forcing them to clean up old wells. This will create jobs, and solve a growing problem in Alberta. One that will not ever go away.
T0K	Education and health care	Higher level positions within large companies	Put money into smaller business and stop wage freezes. Have proper negotiations with unions
T4x	<p>Diversify our economy, less reliance on our and gas.</p> <p>Support Albertans. Properly funded education and health care.</p> <p>Less tax breaks for big business</p>	Get money from royalties from business	<p>Maintaining and enhancing services</p> <p>Fewer jobs losses as a result</p> <p>Focus on other industries means more jobs</p>

T0A	Getting Albertans back to work. Seriously study the possibility of separation from confederation.	Get a better deal on equalization payments.	Support small business because that is the sector that creates the most jobs.
T3M	Health and Education	Bring all salaries in government and bureaucracy back in line with reality. Government jobs should offer job security and pensions at the expense of wages. While private jobs are higher paying but with risks.	0% small business tax rate on CCPC with taxable income under \$500,000 Personal Investment tax credits for people to invest into CCPC with taxable income under \$500,000 Grants for CCPC's with taxable income under \$500,000 to make new hires PST where all Albertan residents get a refund so the only people paying it are visitors and reinvest it back into Alberta capital projects.
T0J	Education, health and seniors.	I look at Alberta Online Auction surplus and the wasted money that has been spent on items. They should maybe have to follow the same system as the University. Budget is on performance. The waste in some Alberta departments is really sad.	Yes, But not by cutting corporate tax. ¹⁷⁽¹⁾ I would rather pay my share of taxes, providing in would help post secondary schools, public schools and stop taking from seniors.
T0M	Public Education, universal health care, environmental protection, public services (libraries, social services, family support services)	Stop giving big oil companies tax cuts, disband the energy 'war room' and the 'fair deal' panels.	Forward thinking careers and fields - environmental science, alternative energy sources, IT fields
T8N	1. Seniors - they helped to build this province and we owe it to them to not cut or reduce essential services to them (eg. prescription drug plan) 2. Health care - We need to honour our citizens and retain expertise in in the field by ensuring an excellent level of service with appropriate funding. 3. Education - children are our future and public education is for everyone.	1. Reduce tax incentives to 'big business' 2. Sales tax implementation 3. Actively research for alternative revenue streams so that we are not so reliant on the petroleum industry. 4. Provinces who will not support us in our time of need should not be rewarded by any kind of transfer payment program.	This government could support job creation and economic growth by supporting small business and entrepreneurial applications. Show some faith in the hard working citizens of this province. Demonstrate confidence in the ability of regular citizens to help turn this economy around. Stop dividing us by the 'rain of fiscal terror' that never seems to stop. At this point who would invest in our province or our people? We are oil and gas and so much more! Let's remember the more part.
T2H	War room, pipelines, pushing back on Federal govt and Quebec, bring investors back to Alberta.	Cut the fat in Upper management positions in AHS, school board. Stop raising cigarette tax and start taxing junk food! Fat tax!	Fight the Feds and Greta and push back on phoney climate alarmism hoax!
T1k	Schools, hospitals, and green energy initiatives.	You already stripped anything worth taking.	Tax corporations fairly, and reinvest it inn local projects and diversification.
T0L	Health care.	They should find saving by giving less money to oil fields.	Hire more skilled workers such as nurses.
T5H	Education, health and infrastructure	Cancel the 300 million dollar/year propaganda agency and the illegal committee attaching free speach	roll back tax giveaway to large companies that are just taking the money out of the province. Restore grants and tax incentives to startups and tech companies
T5T	Healthcare and education	Stop massive tax cut giveaways to wealthy corporations	Strong education programs and infrastructure funding
T6M	education, healthcare (including mental health), energy diversification with a focus on renewable energy, fixing the massive infrastructure deficit, particularly in rural areas (hospitals, schools, roads), public transit in cities, a high-speed rail link between Calgary and Ft. Mac.	taxing the super-rich, taxing corporations at a rate that is actually comparable to the rest of Canada, going after corporations who received massive tax breaks only to pack up and leave Alberta	invest into sectors beyond Oil and Gas to support the creation of a sustainable and diverse economy, wage increases to low and lower middle class jobs, end the caps and freezes on public sector wages. Improving the lives of working people would increase disposable income, thus increasing consumer spending and stimulate growth from below rather than by taking away resources from those who need it most.

t6h	Innovation and Technology, Education, Justice, Culture and Health. An overall focus on the social safety net and strong public services.	Tax breaks to corporations. Tax breaks and subsidies to oil sands companies. Eliminating the War Room and other propaganda devices. Savings is just one aspect. We also need more revenue. I believe we need a provincial sales tax.	Boost the video game, AI and innovation tech industry. This is the way of the future. U of A is doing great! Keep public services strong Look at new industries around green technology, cannabis, AI, and invest in those. Give up on oil - it's going down. Why are we subsidizing billionaires? Let's move to the next industry.
T9X	The budget cuts to schools, day care grants and public service jobs should not be the focus. Causing an increase of cost to services pull on families to remove more females from the work force as these services become too expensive. Make it easier for citizens to get to work and enjoy the fruit of that labor and contribute to the economy.	Trickle down economics time and again are shown to not work. Stop cutting taxes to everyone pays their fair share. Pinching institutions to find savings again just tightens the wallet of everyday people. Make the rich pay their fair share.	Make it easier for people to work...restore daycare grants, support school funding...stop gutting spending.
T4X	1. Quality public healthcare for all 2. Quality public education for all	Eliminating no-strings-attached corporate welfare handouts to oil industry billionaires, who stash the money in tax-free offshore accounts and keep right on slashing jobs. Trickle-down economics has never worked and will never work; support the working class directly instead, because they actually spend money instead of hoarding it. Frame it as a punitive tax-doubling if you want, payback for the CEOs acting in bad faith after the initial tax cut. Your more bloodthirsty voters will like that.	1. Industry diversification. It has always been stupid to put all our eggs in one basket. Even if you took the Saudis and their flexing off the table (which you can't, they can dismember their critics alive on camera and face no consequences at all), at this point the oil market is only going to get smaller every year; there will never be another boom, pipeline or no pipeline. It's time to break up with oil's binge-and-bust cycle, and build resiliency into our economy by developing green energy projects like solar and wind power, geothermal heating from abandoned oil wells, and electric vehicles - and all the supporting infrastructure this new paradigm is going to need. 2. Keeping the population healthy and educated with quality public healthcare and education for all.
T4C	Healthcare and education	Management positions No bailouts to the oil industry Government wage freeze	Promote education, create sustainable energy sources that aren't reliant on out of country sales
T6X	Healthcare and education	Handouts to corporations	Encourage and support entrepreneurs
T6R	I think it is important to plan for the future of our healthcare so that it can take care of our growing population. The current flu season has our hospitals strained, running at full capacity. Children are being admitted into playrooms at the hospital because there are no beds available. Children with different viruses are being admitted into the same room with risk of contracting each others' illnesses. We need to plan for the future now by building infrastructure and keeping the staff who we have already invested in.	Create more front line staff positions (eg: nurses, respiratory therapists, health care aids) and the amount of overtime will immediately plummet.	Find ways to encourage people/businesses to start new projects with things like subsidies. Finding a way to offer affordable childcare will encourage more parents to go back to work, earning and spending more money.
T5H	Infrastructure and public services. Education and health care should not face the cuts that they have received. Infrastructure projects provide training and jobs to low skill workers. Education and health care are essential to a growing population.	Eliminating the so called "war room", increasing corporate tax rate instead of gifting over \$4 billion to corporations that have yet to provide any jobs.	By not giving tax breaks to large corporations as incentive to remain in Alberta. The government should support local industries such as technology and film, that provide revenue, support job growth, and economic growth. Diversification is key to a strong economy, not putting all the proverbial eggs into one basket.

T0B	balancing the budget and paying off the debt	I see farm plates on everything from Mercedes benz to bmws on suv being pulled by motorhomes to kids vehicles at school. farmers are by far the richest people in our community and it is high time they shared the tax burden like the rest of us. no more untaxed fuel every other business pays and so should they. cut the huge subsidises to agriculture.	lower taxes, give rural business people the same access to funds you give to farmers
T3L	Education should be the government's main priority.	Stop spending money on the war room and all the panels. I bet these alone would make up the shortfall in education funding.	I think it is time to invest in diversification of the economy.
	Focus on Front line services and getting people to work. Do not cut front line positions and do an in-depth review before you eliminate programs. Your first round of cuts was not well coordinated and hit youth and employment in the city of Edmonton disproportionately. If you are going to continue to give tax breaks to corporations then they should have to show investment not just pass the breaks to shareholders. Reconsider investment incentives for those who diversify the economy. Be forward thinking the oil boom is not coming back.	Consider additional revenue streams. The world would not end if there was a small pst. Keep raises for workers flat but don't have layoffs because that makes unemployment worse.	If you are going to continue to give tax breaks to corporations then they should have to show investment not just pass the breaks to shareholders. Reconsider investment incentives for those who diversify the economy. Be forward thinking the oil boom is not coming back. Think forward. Reconsider your post secondary strategy. You seem to be just focused on apprenticeship with no business case on where the jobs for these people will come from. A post secondary educated workforce will be ready for the technical jobs of the future.

T9H	<p>Investment in public services and infrastructure. Investing in health care, K-12 education, post-secondary education and childcare.</p> <p>The \$25 a day daycare is highly important to Albertans, especially in my community where the cost of living is so high. It shouldn't cost more to put your child in day care than it does the money you bring in working. This sets women back 50 years - back to the time when they were expected to stay home and mind the children and tend the house. The \$25 a day daycare should be expanded and funded, not eliminated.</p> <p>Reducing the cost of living for Albertans is paramount. There have been a lot of increases under your government, including insurance, tuition fees, bus fees for students, vehicle registration fees, property tax, income tax, and the reduction of the seniors health benefits and drug coverage. 17(1)</p>	<p>Well let's get rid of the embarrassment of that "war room". That's 30 million dollars that can be invested into the province instead of lining the pockets of more elitist bureaucrats.</p> <p>Stop cutting corporate taxes - it's not creating jobs. It's actually working in the other direction. It's just hurting more and more. It's nonsensical to think that big oil companies and corporations are going to increase production, increase workers and hire more people, when they could just line theirs and their stakeholders pockets instead, or use the savings to move out of Alberta.</p> <p>Privatization is costly and costs more. It would be a good idea to look at privatization that has happened, especially in health care, and assess how the costs have been affected. If they're not reducing costs (and they're not, it's not rocket science), then they should be brought back as public services.</p>	<p>Again, cancel the corporate tax break. Provide incentives and tax credits for new investments and new jobs instead of a blanket tax break that has yet to produce a single new job.</p> <p>Increase and expand \$25 a day childcare. This will allow caretakers to go to work and be able to afford to.</p> <p>Put the cap back on insurance and utilities.</p> <p>Unfreeze the basic personal credit on taxes.</p> <p>Support home buyers, all of them not just first time home buyers through a provincial plan to help the construction industry.</p> <p>Help Albertans who struggle with the high cost of living, especially in Fort McMurray, and expand the Cost of Living allowance to all workers in Fort McMurray to help keep people living in the city/area and working here.</p> <p>Affordable housing needs to be a priority, instead of cancelling new applications to rent supplement and closing the doors of a homeless shelter and transitional housing in Fort McMurray.</p> <p>Increase the funding of addiction and rehabilitation centres so that our Albertans who struggle can get the help they need when they need it without waiting.</p> <p>Increase the mental health network in Alberta and ensure that all Albertans have access to mental health resources without waiting, or having to pay for private services from professionals.</p> <p>We need our roads and public infrastructure taken care of -</p>
	Economy and less federal government control	Stop bilingualism economically it makes no sense spending money on every sign ,packaging, instructions etc.	Independance
t9k	Education and healthcare	Stop giving corporations tax breaks, stop with the outrageous paychecks for political leaders - close the war room	Pipeline
T9H	Health care and education/schools	Creation of PST or further to liquor/tobacco/marajuana sales.	Continue to support oil industry.
	Health care and education.	Government officials pay rate could be dropped, a lot of money could be 'saved' instead of so many Albertans loosing their jobs.	Diversify, look at other renewable resources besides oil. Look at the technical sector to raise jobs.
T0J	Fire protection services emergency first responders training for volunteer departments. Improving police response and reduce rural crime.	The top level government employees who in reality do very little to improve the province	By spending tax payer dollars on Alberta businesses rather than outsourcing

T2H	Health care - with an aging population, more people need health care. People will always get sick. Jason Kenney will too - and inevitably will need a hospital bed - and if he keeps cutting health care, he'll be lucky to get a hallway bed when he needs it and a nurse to respond to his needs on time. Is that how you want to die Jason? Because it's what you're asking of millions of Albertans.	That stupid war room! Who paid for that copied logo anyway?! Oh, and the tax loop holes for rich people and corporations - lots of money to be saved there!	Invest in the working class, not in companies. Trickle down economics don't work. Oh and that financial report you keep citing - get a second opinion. Invest in health care, invest in education, diversify the economy and allow Albertans to actually trust in their government - but it may be a bit too late for the trust building now, you've already created a lot of damage.
T3M	- Education - Health Care - Social Services	- getting rid of the UCP "War Room" - Adding a provincial sales tax	- support youth employment agencies - performance-based/incentivized business hiring strategies NOT based on number of employees hired/retained but on size of company vs percentage hired/retained (so doesn't impact/negatively impact small business)
T2p	Health care and education	Getting rid of the propaganda machine that is the energy war room	By taxing the ultra rich and large transnational companies.
T5M	Health care, education, the arts, diversifying our economy so we are less reliant on oil, green energy and technologies. Bringing back the tax credits to attract different businesses into Alberta, retraining/ educating oil workers so they can move into different fields of work, retaining government lawyers so excess money is not wasted on private firms.	The government should immediately shut down the 'war room' it is not a sufficient use of funds. As well stop giving large sums to big companies that then shut down and never offer any employment to Albertans. Stop taking big trips to Ottawa with 8 cabinet members. Introducing a small HST tax would also create a lot of funds so there wouldn't need to be any cuts. By focusing on cutting funds you are creating a lot of harm to Albertans, instead of focusing on savings how about you focus on efficient spending and creating funds with and HST tax.	Diversify the economy with other industries, work to attract tech companies, green energy, have tax credits to attract companies to us, invest in health care, education, the arts, keep the government lawyers (their cheaper anyway). All the cuts that are happening are creating mass unemployment, so if you want to create jobs stop cutting and slashing health care, the arts, education, etc. By introducing an HST tax you could create a lot of funds and the cuts wouldn't be necessary.
T0E	holding energy companies to account for unpaid county taxes, unpaid lease payments and clean up of abandoned and contaminated sites; insurance premiums are unreal; energy costs just went up due to deregulation - what are you doing to transition from oil and gas?	war room should be abolished; unqualified hangers on should be fired; quit spending advertising money on propaganda; if oil and gas are so great let those companies spend their own money promoting their destructive, short sighted, agendas	support agriculture, support alternative energy, support education but not stupid private and religious bullshit spreading in primary and college
T6J	Education, healthcare. Front line staff need to be looked after and NOT cut. Kids need a great education, teachers and TAs should NOT be cut	Taking many layers of top executives incomes and pensions. AND DO NOT give money to oil companies who just pocket it and give it away outside of the province! Most stupid thing I have ever heard. Oil companies conned you Kenny, they created no jobs and are laughing all the way to the bank.	Diversification! BRING In other sectors, encourage tech growth. Putting your eggs in one basket is a sure sign of failure. WHAT HAPPENS when oil and gas run out and we are all onto other forms of energy? Alberta will be left in the dark, the the dust, tumbleweed province. I can't wait to get out of here when I can!
T3G	Health care and education	Internal spending and travel Lottery money	Support public sector and maintain front end workers
T6X	Increase spending on healthcare and education. The recent cuts were not beneficial to the economy or to citizens. Also on environment and climate change.	Unsure.	Not cutting jobs to the public sector. Increasing privatization makes finding jobs more difficult. The more public sector jobs that are available can snowball and create more jobs or assist in people finding jobs.

T2R	creating jobs; making it easier for people to find and keep work; providing services for people who are unable to support themselves because oil and gas companies are only interested in short-term profit-making; quit harassing and penalizing people who have points of view that are not in line with conservatives. Learn something about how Alberta oil and Gas has contributed to climate change and take positive action to mitigate future greenhouse gas missions from industry in Alberta. Give a shit about people instead of profits.	reduce government waste (i.e. inefficient bureaucracies); quit pandering to the oil and gas industry and start making smarter choices about the economy. Stop driving with your eyes on the rear-view mirror ... the past glory of oil and gas is over with ... pull your head out of the sand and start taking a look around at the mess oil and gas has made even here in Alberta.	diversify the economy ... get out of the business of providing benefits for wealthy oil and gas executives and companies; support the PEOPLE of Alberta ... industry has the wealth and resources to look after itself.
T0J	Education and health care	Stop giving out millions to oil CEOs	Social services and grants for small business! Make it more accessible for people to find resources especially in rural communities.
T1J	Education and health care. We need more front line staff (teachers, educational assistants)	Cutting wages of higher paid MLA's, CEO's in the government.	More job opportunities in education and healthcare.
T6E	Adult Education, especially foundational.	Social programs	Through English classes, diploma programs, and supporting co-ops and internships
T8L	Health and Education. Making cuts but disguising it as "not cutting, spending the same" is deceitful. We're still behind the times and need facilities built, students educated, patients cared for. Stop overcharging those trying to get an education. Stop fighting those educators and health care / public service workers by trying to cut their wages and benefits. They became that educated for job security, fair incomes and pensions. They didn't just finish grade 10 and live on hopes and dreams that they'd continue to make 200,000\$ a year on a dying industry.	In their own backyard. Cut your own wages, stop wasting money on the war room that costs an educator's or paramedic's yearly income to run each day...	Putting our eggs into one basket is not working, oil and gas is never going to flourish the way it used to be... invest in new technologies and industries.
T2N	Restoring harmful cuts from the 2019 budget to education, health care, post-secondary education, the non-profit sector, and arts and culture. Supporting small businesses. Diversifying economies so that oil and gas does not employ the majority of Albertans.	Use tax money to fund infrastructure and services, such as education, health care, post-secondary education, emergency services, and social supports. If you need more money, raise taxes. Why would a government concern itself with savings?	Support social infrastructures necessary for a civil society (such as employing teachers, nurses, firefighters, police, and funding post-secondary institutions). Support the diversification of the economies in major centres away from just oil and gas. Support the expansion of alternate, sustainable energy sources.
T3H	Competitively priced Health Care is always required taking into account the cost of living in Alberta's cities. Essential uniformed services are a must. Services for vulnerable groups must be maintained	Government should not cut services too deeply in order to balance the budget within the first four years. There is a lot of duplication and micro managing of the non profit sector. Bringing down the cost of wages for government employees is a great initiative, particularly when there is no equity for similar roles. Many govt employees receive benefits and pensions from tax payers that others have to save for.	New sector employers are needed to support diversification, with grants or low interest loans for start-ups. At the same time the oil and gas must be supported as it is our main economic driver. We can't just turn off the taps. If we need a particular type of employee then they receive subsidized housing for a few years or assistance to more to province.

T6h	Education and healthcare	Administrative roles within the Government being that MLA advisors having reduced pay or reduced numbers. Removing layers of middle management in all the bureaucracy in the GOA.	They should increase spending for front line staff such as nurses, teachers and other front line necessary people. Also, to increase revenues would be to add a PST. Reduces consumption and increases savings among the higher middle class which then also leads to higher revenues. Increase corporate tax and reduce personal tax. Build up the middle and lower middle class through other incentives. This will lead to more jobs and new businesses starting up.
T4r	education,health,senior care,special needs children,addiction issues	By eliminating the War Room and the corporate tax giveaway	Continue to support oil and gas but at the same time support other Industries Lake Tech look at where the world is going and support those Industries
T0G	Infrastructure to make Albertan cities globally appealing Investment in non-energy sectors (Tech, Nano, Bioindustry) that Alberta is dominant in to diversify from a resource economy Strong public health care not compromised by big business.	Committees and war rooms dedicated to giving career politicians and lobbyists jobs are a waste of money when we aren't making Alberta an environment for innovation and relying on stale or failing industries. Corporate tax cuts are a race to the bottom to compete with third world countries more willing to suck up to fickle international companies.	Invest in local research, small business development, and emerging industries with the same emphasis as the multinationals that you're trying to court - if Alberta is seen as a developed place with strong economic ties and market access (which I believe it could) be, then the business will come of its own accord. If Alberta is stricken with austerity like other provinces that have gone down this road (Saskatchewan), then we will be abandoned no matter how much we compromise ourselves.
T6M	Improving healthcare by lowering wait times and hiring more nurses, decreasing class sizes and building more schools, improving infrastructure by planning for the future so roads etc. Flow in such a way that actually makes sense. Increasing funding for entrepreneurs and small businesses. Funding initiatives for decreasing plastics usage	High level positions could receive pay cuts and smaller pensions, infrastructure can be properly planned out so roads are only built once rather than being redone every 2-3 years for expansion. No more free bussing for schools, bring back the Alberta Health Care fees that used to be deducted via employer deductions, hire more nurses and pay more wages at REGULAR wage rates instead of paying overtime	Small business initiatives, investing in education
T9S	Education (tuition costs for low income and students working to cover their own tuition) 17(1) These children are our future!!!	Staffing, review of the staff we have to the staff that are needed. Programs, strict guidelines on who qualifies for supports, eg: homeless/drug addicts receiving AISH and Income Support, using cheques for more drugs so we are just enabling them and not helping them. Do not get me wrong, we need to help but handing out cash is not the right way.	Support small businesses with lower taxes, larger businesses pull out of province/country if they don't like the rules but small businesses are usually family businesses so they either stay in an area or have to close their doors if they cannot afford to operate.
T8N	Families	Oil companies- taking higher taxes from them as opposed to only royalties to put back into other economic development in Alberta	Stop making cuts to health care and social services- there are jobs within this sector that are being lost as many programs are non-for-profit and can not afford for cuts to occur. Invest in child care, making it easier for families to get back to work without the stress of finding affordable, quality care for Alberta's future society.
T0J	Healthcare Education	In their own offices	Putting money into infrastructure
T5M	Education, health services, research	business sector	Provide resources to where it is needed, at the base of the economy, not at the tip where most of the money currently is! Fund and support people getting good education, staying healthy, and public sector so that we filter UP and around, not just providing incentives for the private sector. We are going backwards, and things NEED to change!

	Diversifying the economy. It should be obvious to everyone that the world is moving away from fossil fuels. A government that ignores this is either monumentally stupid or willfully ignorant. Either is unforgivable. You were elected to represent the whole of Alberta, not just the interests of the oil and gas industry.	Stop going on 3 day trips to Texas and London that cost the taxpayers ridiculous amounts of money. Raise the corporate tax back to 12%, still lower than under Ralph Klein during the boom years. Bring in a sales tax. Get rid of the war room. Spending that amount of taxpayer money with no transparency or accountability is disgusting. You should be ashamed.	Bring back tax incentives for industries other than oil and gas. Tech, film and renewable energy are also industries that create jobs.
T0K	Helping those in need, the children, the future. Reinstate STEP. Deal fairly with public workers. STOP CUTTING funding for essential workers like paramedics and cops and teachers.	Stop flying off to pretend that you are fighting for Albertans. Stop giving a dying industry more money to take out of the province and stop paying for a propaganda arm that has no oversight and is completely ineffectual.	Support small business, provide support like child care for working parents, encourage alternative energy sources and provide incentives for municipalities to become more energy efficient. Bring back the carbon tax so the money can stay in Alberta and be used for transit and all the other projects that were on the books before it was stupidly shut down.
T0A	Health care and education	Stop funding oil fields and their own cabinets	Putting money back into public workers
T3N	They should increase wage top ups for staff and also increase subsidy which has been there from last many years same. they should provide some help to daycares so they can spend amount on resources and centre quality enhancement, which can further help small businesses	they should shut down the pilot program which is \$25 a day, which is not helping the families in need or low income families, highly paid families are getting this advantage as there is no criterion for low income can only qualify.	they should spend money wherever needed and not wasted. They should be helping more small businesses so more jobs are created
T6A	Increasing health care and education spending. Stop wasting millions of dollars on a "war room" against non-specific media campaigns	Increasing corporate tax rates to increase provincial income.	Public works projects.
T2T	Health & K-12 Education	Remove corporate tax loopholes and limit corporate tax deductions	Support a strong public sector
T6C	Healthcare, + education	Stop giving tax cuts to corporations and the wealthy = new revenue and no need to make cuts and find small savings	Supporting small businesses. Grants for entrepreneurs and new grads.
T0C	Maintaining jobs for Alberta employees, including public servants.	Management levels, not front line staff.	Stop cutting wages.
T3H	Diversifying the economic landscape in Alberta. Stop focusing only on oil and gas and support other businesses and innovation	ALL OF THE LEADERSHIP POSITIONS' SALARIES. OIL AND GAS SUBSIDIES.	Invest back in the tax credit programs that bring economic revenue to the province, like film credits and scientific research grants for technology companies.
T6W	Education and Health Care	Stop giving tax breaks or incentives to large corporations, trickle down economics do not work, this has been proven. Big corporations are only worried about making the shareholders happy.	Have jobs in infrastructure, education, health care. These all lead to people working and money being put back into the economy. We need to come up with jobs that are not dependent on the price of oil. Looking for industry in clean energy and technology would be beneficial as well.
T6C	Economy (job creation and diversification) Education Healthcare Environment Heritage Fund	I do not have the knowledge to say where or how we can find savings, but I do know that in addition to reducing spending we need to consider increasing revenue.	1. Providing general tax breaks and credits to small businesses based on location, size, and revenue instead of by industry. Avoid relying on simply lowering business tax rates because it can take years for a business to get to a point where it can generate enough revenue that it can take advantage of them. 2. Encourage diversification and reduce dependency on energy.

T4N	Health Care, Education, Infrastructure, Crown prosecutors	1. ADD a provincial SALES TAX. 2. Stop ALL subsidies to Oil and Gas industry, 3. cancel "war room" (which uses public money for UCP political propaganda). 4. Raise corporate tax rate to national average.	1. Legislate that petro industry CLEAN UP abandoned well sites and mines, (without using public money.) 2. Restore funding and incentives to solar, wind and other alternate energy fields. 3. Move quickly and decisively to promote diversification of Alberta's economy. 4. Reduce our dependency on oil and gas.
t1j	Health, education, municipalities.	Repeal the corporate tax cuts.	Invest in education and future growth industries (e.g. tech) as well as renewable energy.
T6B	Healthcare (maintaining/increasing spending in public healthcare), infrastructure	Increase the number of long term care facilities in Alberta so that patients waiting for long term care beds aren't taking up expensive acute care beds. The government can find savings by investing in healthcare and upstream programs to save money in the long run. Trying to "save money fast" by cutting wages and services is an ignorant approach which will cost more money in the long run.	Support job creation and economic growth by paying public servants a fair wage rather than insulting them by suggesting wage cuts
T5Z	Spending more on healthcare and education, and less on giving tax breaks to major corporations.	How about not giving money to your cronies?	Put money into renewable energy.
T3H	Healthy life style for Albertans, that is one of the primary reasons we live in this great province. This includes both economic and physical wellness. While the energy sector still warrants significant input, healthy communities (economic and physical) will help us all get through this time of change and diversification. Investment in healthy lifestyles include supporting Sports and Community Development. Invest not only in large corporations but encourage small entrepreneurial development and investment (i.e. single /family owned businesses over large corporate box stores. This is supported by multiple policies - ranging from the United Nations, WHO, Federal and Provincial directions (See the Common Vision... https://www.canada.ca/en/public-health/services/publications/healthy-living/lets-get-moving.html) Sometimes our bottom corporate numbers need to include our bottom supporters...The people of Alberta..You get them healthy, they help get the province healthy	By investing in healthy people the government can find significant savings in the following sectors to name a few: health care, social services and family services, justice, education, "chronic diseases and other illnesses cost the Canadian economy \$190 BILLION annually, with \$122 BILLION in direct income and productivity losses, and \$68 BILLION in direct healthy care costs" (Chronic Disease Prevention Alliance of Canada, 2018) This can be done by ensuring sport and community initiatives remain at the forefront (Common Vision, Canada 2018). A budget's bottom line can no longer only be a double line, it needs to be a triple bottom line and this includes the social investment.	Invest in the people of Alberta, we generate the revenue. While work on the large corporate investment continues, deliver the message that the people of Alberta are also worthy of investment. Currently, Alberta is economically chronically ill. We continue look at empty store fronts and buildings...and we see more each day. Closing out sales are a norm. Encourage community level growth, encourage small businesses and entrepreneurial growth. As a large corporation looking to invest in AB, if the face of the community is empty, why would you want to come here?? and as an Albertan, why would I want to stay here..brain and economic drain are real.
T0H	Education and Health	Introduce a 3 % sales tax.	Tax breaks for small to medium businesses rather than large corporations.
	Education, cleaning up oil wells, healthcare	Disband the war room	Diversify the economy
T2Z	Economic diversification. Industries that are not oil and gas companies. Money should be put towards renewable resources (solar, wind, hydro), tourism, health care, education, technology, small businesses.	No tax cuts nor handouts to oil and gas companies. Higher taxes for the rich. No "war room".	Support other industries. Don't cut spending on social programs. Don't cut spending on education and health care. Keep minimum wage at \$15. Even look at increasing it with inflation.

T5G	Healthcare and education.	<p>1.All members of the government should have a total income of no greater then 150k/year.</p> <p>2.Reduce the number of middle management in the public sector.</p> <p>3.Revoke spending accounts/tax write off from government officials.</p> <p>4.Decrease or remove any living allowances, vehicle allowances, and charging for travel.</p> <p>5.Apologize to Albertans</p>	<p>Support new technology and inventions. Support health care workers, teachers and other educated public workers.</p> <p>17(1) fort McMurray I learnt that people can easily make 200k a year working in the oilfield (boom or no boom). These individuals recieve bonuses, overtime, and incentives while making 60-80 dollars an hour (straight time). These are the same corporations that make billions of dollars and layoff hundreds and hundreds of employees. So thank you for creating an economy that doesn't value education or healthcare. But caters to our oil and gas industry who don't blink an eye firing your brother, cousins, daughter cause the price of oil sucks.</p>
T0L	Government should stay out of the spending business as much as possible. Where necessary, try to focus on choice in education.	If we consider the cry that healthcare is underfunded, we should take particular notice that savings could be found if we stay focused on the basics in healthcare; we should not be getting distracted by spending money on unnecessary abortions or sex-changing surgeries and hormone treatments.	Support pipelines and free market principles
T5G	Healthcare, Education, Diversify Economy(develop industries other than oil&gas)	Reduce tax breaks for the top 5%.	Encourage Education, Research unrelated to Oil & Gas. Be an active participant in creating opportunity for the lower & middle class.
T2P	Climate change. Let's get real folks - it is the largest issue facing humanity and this government chose to reduce taxes to oil and gas companies. Sticking your head in the sand is not the answer.	Cut the war room, I hear that it costs \$30M - and haven't produced any results to be taken seriously. Increase taxes to corporations, specifically oil and gas. That should net another \$2.4Billion. They took that tax cut and gave it directly to the shareholders, of which are not the people of Alberta.	<p>Well, if you believe Mr. Kenney, the huge tax cut given to oil and gas should have created jobs. Where are they?</p> <p>How about supporting the small businesses that earn and spend their money in this province. Supporting infrastructure projects in locations where unemployment is the highest.</p>

<p>T5T</p>	<p>Making life better: early childhood services and supports for vulnerable families child care for low income and working poor families in order for them to receive training to enter workforce or obtain better employment which will make life better for their family members accessible and inclusive social housing for adults with disabilities in order to live in safe and healthy housing Focus on core business to ensure a healthy and safe environment for Albertans. This includes health, education</p>	<p>Make life better by focusing on priorities and finding savings. reduce political staff hired to support UCP government including ministers' offices, executive council including machinery & and cabinet coordination Eliminate all funding for private schools - elementary, high school and post secondary. This ensures a level playing field in education and common sharing of resources, people, infrastructure, builds stronger communities. Education budget then can be focused on a single system and not eaten away by private interests. Leave religion and wacky science out of schools. If parents want children to attend a private or religious school, pay full ride themselves.</p> <p>Reduce and set limits on special committees established to 'review' things like the McKinnon panel. These special committees are costly. Govt employees many excellent policy managers and directors who have expertise to research and provide appropriate advice. Stop fooling with health system. With each new govt, they announce improvements, cost savings etc but it turns out to be a fiasco, cause disruptions, destructive to staff morale, lack of confidence with Albertans. Stick to a plan that is publicly funded but a system that integrates public and private participants.</p> <p>Cancel Energy Centre, aka War Room, and transfer all funding back into priority areas as per listed above. This centre was an embarrassment from day one with its amateur efforts and lack of professionalism. It has tarnished Alberta's reputation on so many levels.</p>	<p>Getting Albertans back to work in businesses and industries that have a future- Growing support technology and innovative industries across the board, not just O&G. Sending an Alberta rep to the Las Vegas technology show could have been funded by firing War Room's Tom Olsen. There is no ROI on his \$200,000/yr salary. The press secretary issued statement basically said it wasn't important to send someone. Fire press secretary.</p> <p>Govt needs to cooperate with large cities, open dialogue and working relationships with chambers of commerce and other regional economic development initiatives. UCP does not have all answers and seem to fail in two way communications. Next action would be to shut down the WarRoom bringing all those tax dollars back into govt coffers. Use some funds as 'industry seeds' based on work with cities and local economic dev groups. Determine where future is and focus on a few things. Become centres of excellence.</p>
------------	---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

T3C	<p>Social welfare and protecting vulnerable Albertans. Ensuring that everyone has access to opportunities including public education and health care, affordable housing, good public transit options. Promoting jobs through investing in diversifying the economy- science and technology, sustainable energy, heritage and tourism, film and creative arts. Put Alberta at the forefront of new technologies and environmental responsibility- let us be a leader on the world stage, improving oil and gas, but being leaders in new tech! Stop making cuts to public services. So many cuts can also hurt the economy- less people making money (including nurses and teachers!) is less people spending money. Cutting education budgets has mean those costs passed on to parents- which means less money for them to spend.</p> <p>So, stop prioritizing what you've been doing, and do the opposite, really.</p> <p>Prioritize people.</p>	<p>Get rid of the war room. Seriously!?- Talk about red tape and propaganda! Kenney staying in the province and not going to Texas or Ontario. Find cost savings in red tape- lower government expense budgets for travel, etc.</p> <p>Stop trying to promote oil and gas like it is air. Stop trying to promote wexit/separation/like we're better than the rest of Canada just because we happen to live where the oil is. We're one country, together.</p> <p>Instead of just finding savings, figure out how to invest our money for the long term. Don't pull a Ralph Klein and hand out minimal cheques to everyone- save it. Invest. Why do all of the other oil economies have more money than us?</p>	<p>Diversification, promotion of new technologies and forms of energy, providing opportunities for Albertans to be world leaders, ensuring Alberta is a place people want to come to live and attracting top talent (tourism, art, museums, heritage, nature, public spaces, good transit)</p>
T6V	Education, heathcare, services for marginalized individuals.	Stop giving tax breaks to the corporations. Increase corporate taxes and tax the oil and gas companies for depleting resources that belong to all Albertans.	By diversifying our economy and supporting sustainable energy choices.
T8N	Healthcare and education.	<ul style="list-style-type: none"> -Decrease Corporate handouts to non Canadian companies -Generate more revenue from taxes on corporations, wealthy, PUBLIC healthcare premiums, Provincial sales tax, etc -in healthcare: BY adding more positions for nurses, service workers, unit clerks, etc, this would cut down on overtime costs, sick time/disability leaves from burnout, etc 	By investing in the public sector.
T5E	Public services and education.	Cutting salary/positions from the already top-heavy government admin.	Invest in our province's growth and education, rather than cutting it.
T1J	Education. Who's going to make jobs without the educated around? The OECD has shown that people with post-secondary education are more likely to be employed, have a higher income, and work to an older age (https://www.oecd.org/berlin/42244848.pdf).	The government's "energy war room" is basically a marketing campaign for a commercial industry. Why are my taxes paying for an industries marketing?	Make education more accessible, this empowers entrepreneurship and the ability to get good jobs.
T5W	Post Secondary Education, Education, Childcare, Climate Leadership, Reconciliation with indigenous peoples, Support the big city charter	Senior management levels of government. Implement a sales tax - lower than other provinces to maintain the alberta advantage.	Diversify the economy by Working with industries other than oil/gas to encourage growth. Work with small business to support entrepreneurs.
t6v	Education, health care and diversifying the economy	tax the oil companies / sue the companies that took your tax cut and ran.	diversify economy by giving tax credits to smaller businesses in other industries that are not oil based or farm based. Such as the tech industry, manufacturing industries (non-oil), and scientific industries (research)

T4C	Education, Health Care, and diversifying the economy beyond oil & gas.	Corporate tax cuts. Trickle-down economics is a model that has proven to increase wealth to the top 1% and not increase jobs.	Grants for economic diversification, small business, and re-education. Let's tap Alberta's pioneer potential to create innovation. Trying to force the economy to behave as it did in the 1980's is foolhardy, short-sighted, and uncreative.
T2W	Public education needs to be a priority. A voucher system has not proven to be effective or efficient in other jurisdictions, why would we do it in Alberta? This is especially true when you consider how well Alberta students fare in international standings.	Why is the government funding 70% of private education. If people want to send their children to a private institution, they should pay the cost. This should not be subsidized.	Austerity measures do not appear to be working. Cutting education and post-secondary funding seems counter intuitive to promoting jobs and growth.
T7E	In my mind the provincial government is responsible for two key things: healthcare and education. Everything else is secondary. Other than that, growing new employment opportunities and diversifying industry should be the other focus.	Well I don't think massive oil and gas corporations need handouts, so you can probably cut there. I also think the oil and gas war room is a big money pit that is unnecessary.	I think diversification is key. The boom and bust system Alberta has isn't good for economic stability and we need to look at growing different industries through educational and business startup grants/incentives.
T6W	<p>I think its time to invest in organizational excellence opportunities.</p> <p>Take a hiatus from building anything new (other than critical things) and shift the focus to evaluating and better managing the programs, services and assets that we have in place.</p> <p>The province's programs and services have evolved over time but its time to evaluate and rationalize their relevance to Alberta's strategic priorities.</p> <p>This requires the development of consistent service definitions, performance measures/outcomes, service levels and cost of service information across all programs.</p> <p>This information will allow us to evaluate whether services are driving the outcomes we desire and to effectively benchmark against other provinces.</p> <p>To support the shift from this current state analysis (service definitions outlined above) to a rationalized, continuous improvement driven future state, another key investment is evaluating management capabilities. Its critical for government at all levels to put training programs in place to shift from technical to performance management.</p> <p>This includes the knowledge and tools to continuously improve the effectiveness and efficiency of services to meet desired strategic outcomes, establishing performance measures and performance management accountability, evaluating service levels and the cost of services, and improving the maintenance of our current assets.</p>	<p>Begin the process of implementing a sales tax to reduce our reliance on changing oil and gas demand.</p> <p>I think that the short term investment in analyzing services (described above), rationalizing the programs and services that are offered and concurrently building management capabilities, will result in long term savings over time. There's no magic bullet to better management. You have to build the tools and culture through training. Teach them to fish instead of doing it for them.</p>	<p>Its time to play the long game. There are no magic bullets here either.</p> <p>Identify and actively pursue a long term economic diversification direction while leveraging the economic benefits of current oil, gas and petrochemical investments.</p> <p>Its time to be realistic about how our economy will prosper in the future given changing world views on carbon emissions. Regardless of whether its fair that these perceptions are negative for Alberta, its silly to think we can turn them around given the media and the turning tide.</p> <p>Its also critical to realize that we need to leverage and collaborate with the Universities as a key source of new technologies and commercialization opportunities to support diversification. The performance based approach that was rolled out should help to build this focus.</p>

T1V	Healthcare, Family Resources to support children and their families, More resources on Adoption for those looking to adopt a child, Quality Senior care, Domestic Violence Prevention & More support for Emergency Shelters around the province. It would be great to see a positive change for our Aboriginal people who live on reserves, what has been happening is not working, people are perishing for lack of vision.	Cut back on spending at the top levels and disperse that money for more important things like listed above. If need be, create a small provincial tax in order support these programs. Instead of a Carbon Tax levy-(where is this money even going? I have seen no change from the Liberal gov't, it doesn't make any sense at all!) Lets create a fund/tax that will help these important programs stay in place, increase care and create more jobs for residents, we need to help people now, people are loosing their jobs left and right!	By not cutting funds to the important programs for families and getting the pipelines built, getting oil flowing again, it's an absolute shame that we have these resources and they are laying in waste. Also, please make rental units cheaper for local residents that would like to support themselves by starting their own business. In High River, 17(1) there are only a few owners of retail property and the rent is ridiculous! We need to make it easier for local residents to start their own businesses!
T4C	Infrastructure is always important. Two lane highways such as Highway 22 South of Olds to south of Calgary is dangerous. Front line services such as Children's Services, AB Health-nurses, accessible doctors (we severely lack walk in clinics in the communities surrounding Calgary). Education-my kids need accessible teachers. They need smaller classes in order to approach teachers for help!! Appropriate Justice -Everyday people are breaking into our cars, and sometimes our homes. We have to have appropriate deterrents, and consequences. Of course, we need resources to deal with the criminals, in order to support the rest of our livelihood! This should be number one but crime does not affect each of us daily so I have put it last. It should always be considered though. So we need the police, but we also need the other piece which is the entire criminal justice system.	I am not sure I have that answer but so many projects have been delayed even when there was money. For example, the ring road for Calgary, that project should have been done years ago. Glenmore trail is a nightmare! Our education system has to have more changes so our children can get into smaller classes.	We do have to continue building our worlds! Technology and green environments are important these days, and I would continue to support oil and gas. Gas is not going to totally go away, we need certain things that are a result of oil and gas.
T1Y	Spending priorities should be for the people of Alberta, not tax cuts for corporations that are leaving the province, cutting employment and/or spending in Alberta. Tax credits for businesses that bring diversification to the province eg. Technology. Spend more on programs for low income Albertans, schools, health and seniors.	STOP THE TAX CUTS TO OIL AND GAS COMPANIES THAT ARE LEAVING THE PROVINCE, CUTTING JOBS AND DECREASING SPENDING IN ALBERTA. LOOK FOR SAVINGS WITHOUT CUTTING JOBS AND PROGRAMS. STOP CUTTING JOBS, YOU ARE CREATING A WELFARE STATE, NOT ONE WILL HAVE A JOB.	Diversify, look for companies that want to come to Alberta, although why anyone would want to come here now with all of these cuts is beyond me. Build not cut. NO, I AM NOT AN NDP SUPPORTER!!!! BUT I AM NO LONGER AN UCP SUPPORTER EITHER
T9X	Child care grants, parents on maternity leave	carbon tax	Helping Albertans in the Oil Field, as that is the main growth in Alberta
T6E	Public services for the disabled, lower income, seniors, ill, and education.	Increase taxation of the weathy, and large corporations including oil.	Diversify the economy. Invest in alternative energy.

T6T	Spending on building new industries in the province and creating jobs for the next energy era. We are leaving the era of Oil Power and heading into something different. We need to build industries that can create power for us with our unique weather conditions. Hydrogen power would be a good place to start as we can make it out of oil keeping all the jobs we currently have. An example would be finding a way for Alberta to become the premier place to dispose of Solar Panels and where we can recycle them.	Stop giving companies money in exchange for nothing. Use AIMCo when the province provides a company with money directly that company is required to give AIMCo shares to be held for the province to be sold at a later date or to receive dividends on. This will increase our investment in Alberta business and increase our long term revenues while saving the taxpayers money by not giving the cow away for magic beans.	By creating fiscally responsible incentives, allow new companies to write off their expenses in the first year of business. Fund and create growth centres where entrepreneurs can get more assistance in creating new businesses. Allow dilapidated buildings to be confiscated by the government if the owner does not do something with them. A great way to use old warehouses is to support greenhouses inside them. You increase economic growth in the area and better food supply while decreasing our dependence on external resources, which leads to the taxpayer saving money. Add in an insurance increase cap, insurance alone will likely lead to companies close
t8n	Public healthcare, public education, and public services focused on displaced/disenfranchised peoples.	Our family would be willing to increase our taxes to provide funds for public services	Public education for our youngest. Focus on the early years - those future adults will bring forth new ideas, optimism and economic growth.
T4x	Job creation, healthcare, education	Reform the transfer payment formula so that Albertans are treated fairly within Canada! Create a user tax like New Zealand where all visitors to Canada are forced to pay for using our infrastructure. Share this revenue amongst the provinces based on # of visitors. This will increase our infrastructure budget, the excess can be put to health care or job creation	Reduce government departments that are not needed or vital to the key priorities stated. Promote Alberta energy by fighting back.... get the message out to the public that we have been targeted. Fight the federal government so that Albertan's best interests are first, federal interests second
T0b	Stop sending money to other countries and help Canadians	Get immigrants (especially illegals) refugees off welfare, and stop bringing aged relatives of immigrants who can not work into Canada. Stop spending money on trying to rehabilitate terrorists, deport them instead	Build pipelines, support our energy sector
	Healthcare, education	Maybe they should cut there own salaries, and increase taxes to the large corporations they enjoy giving our money too.	By supporting the people that live here and investing in Alberta tech and new business
T1K	Education - return to actually fully funding education. Don't just maintain base funding but maintain all of the grants that were in place. Hire enough teachers to reduce class sizes and fund inclusive education. It's not right to include kids with significant learning and behaviour problems in classrooms without them being accompanied by an educational support person. Health Care - fund the system properly and eliminate the privatization of health care. A 2 tiered system only benefits the rich who can afford it and penalizes the poor by removing the top quality medical personnel from the Public system	We have a revenue shortfall issue in Alberta. We need to increase business and corporate taxes and ask those who can afford it to pay more. If you want to find savings reduce the salaries of government officials who earn over \$200,000 per year - not those who can barely afford to live on their wages.	Support job creation by reinstating all the grant programs and restoring funding in the many places that you have cut and created job losses. Hire more teachers, nurses, social workers, firefighters, forestry workers, daycare workers, etc - all of those who support the human infrastructure of our province.
T4C	Facility building for education. New schools to keep up with growth, these are the children of taxpaying citizens of Alberta, and they should not be in schools that are over 100% utilization, at any point, ever.	I suspect there are a lot of ways to save. Political travel, office space, wage cuts at a high level (don't freeze teacher wages if MLAs and the Premier do not ALSO take a cut, a real one). Sell off provincial assets that are in excess. Same as we'd do at home in a time of lower income, reduce spending a little bit in every area, except those that are essential. Education is essential.	Get infrastructure projects moving. Not the planning, the actual boots on the ground, equipment moving. Specifically, in high growth areas such as Cochrane. There's no labour shortage, employed locals are good for the economy.
T6X	Environmental and social	Stop bailing out corporations for billions and spending 80k a day on a war room	Encourage local companies, build a pipeline

T6W	-Education -Healthcare -Diversifying our economy to provide for a greater range of employment opportunities	-Joining the school boards for each area instead of having public and separate. We could still have Catholic schools but they would be under the umbrella of the local school system. For instance, in Edmonton, we already have Christian schools that are part of the Edmonton Public School Board. By doing this, it would eliminate a lot of overhead costs and allow for savings in many areas such as transportation, building maintenance, contract services, <u>resource sharing, etc.</u>	-The government of Alberta should be looking to support innovative ideas to diversify our economy. Too much reliance on oil and gas industry has made our province too susceptible to the ups and downs of the world market for those products and too dependent on decisions for pipeline development, for instance. In other words, we have all our eggs in one basket and that is not working.
	Education, higher education, healthcare. Government services are good for the economy.	We don't need to focus on savings. We need to focus on appropriate revenue, in line with the rest of the country.	The government should adequately promote and support public services. Cutting salaries and positions in education, higher education, and healthcare is exactly the wrong strategy. It's affecting the local economy.
T5K	Getting the province back to work .. we don't need to increase the jobless rate in the province it is high enough	The government should hold tight to see how quickly the people get back to work. They should not contribute to the increase in the unemployment rate at this current time. Alberta is high above the national average for <u>unemployment.</u>	No more lay offs. Support grants and programs to get people back to work.
T3c	Education and healthcare.	Sales tax.	Diversify and offer tax credits, grants for innovation and climate friendly ideas.
T4B	The government needs to reinstate the services it cut in the 2019 Budget and focus on the needs of the people of Alberta and especially of the needs of the vulnerable and the elderly. Suddenly taking away health benefits from seniors' spouses is callous and borders on dictatorship. Scrap the expensive "War Room" in only fosters division and alienation. Stop giving money and credits to rich Corporations. Be a <u>democracy.</u>	A provincial sales tax (harmonized with the GST) would provide millions in revenue. But let's not stop there. How about a Fast Food tax (restaurants that have a drive through). How about taxing lottery winnings over \$100,000. Get rid of the \$82,000 a day "War Room". Stop spending our tax dollars on trying to defeat the Carbon Tax. Stop being so arrogant and work with <u>the opposition.</u>	Diversity. Our dependance on oil and gas is akin to an addiction. Support green technologies. Give back rebate incentives for solar panels and energy efficiency. Let's find a way to really recycle everything that's collected. In this decade electrical vehicles will outnumber gas vehicles. Will we have the infrastructure in place or will we still be trying to build the pipeline? Let's be forward thinkers instead of being stuck in the <u>past.</u>
	Health care, education, industry growth that isn't focused solely on oil and gas. The dumbing down of our province and gutting of the health care system in an attempt to steer it towards privatization is unacceptable	Eliminate the embarrassment called the "war room", eliminate jobs within the government that weren't there when the NDP was in power, and revert MLA salaries to what the NDP had in place	Balance support for industries outside of oil and gas, reinstate assistance to the tech sector, follow through with promises to the film and television industry by changing the cap on the tax credit. It's a proven winner with a high ROI, and why it was kneecapped in the budget while being presented to the industry as a positive change from NDP policy is ridiculous
T7X	Climate, education, health care.	Oil subsidies.	Fund alternative energy sector, start up companies, new research. <u>Education, bring international talent to Alberta.</u>
T4P	1) Health care that is adequate and safe for our population--the present cuts planned only erode our health system and present serious harm to our population! 2)Education--same comments as #1. 3)Essential services--in today's society is NOT the time to make those cuts!	1) The world has changed. We have a revenue problem that is not going to be solved with the severe cuts proposed. Don't you learn from the mistakes of past governments--it will cost MORE down the road! 2)Unfortunately it is time for Alberta to join the rest of the country and bring in a sales tax!!	Get rid of ridiculously expensive, useless things like the "war room"(complete waste of money). Establish and promote programs that actually get the middle class workers the opportunity to find jobs--such as the subsidized day care program!
T4P	1) Health care that is adequate and safe for our population--the present cuts planned only erode our health system and present serious harm to our population! 2)Education--same comments as #1. 3)Essential services--in today's society is NOT the time to make those cuts!	1) The world has changed. We have a revenue problem that is not going to be solved with the severe cuts proposed. Don't you learn from the mistakes of past governments--it will cost MORE down the road! 2)Unfortunately it is time for Alberta to join the rest of the country and bring in a sales tax!!	Get rid of ridiculously expensive, useless things like the "war room"(complete waste of money). Establish and promote programs that actually get the middle class workers the opportunity to find jobs--such as the subsidized day care program!

T0A	Health care Education	Kill the "War Room". Stop giving corporate welfare to multimillion businesses that do not pass their tax savings on to keeping jobs in Alberta	Go back to supporting new industries/non-oilfield-industiries; support economic diversification rather than hack and slash austerity policies that put more people out of work!!!! And cost people more money (school fees, bus fees, post secondary tuitiin)
t3c	Restoring funding and supports to healthcare, education, post-secondary, social services, and clean/green tech jobs.	Immediately dismantle the Canadian Energy Centre ("War Room") and do not provide subsidies to oil and gas companies.	By supporting other industries and economic diversification, not just non-renewable resource extraction. (i.e. clean/green technology, public sector, renewable energy, film industry, healthcare, and tech research and development)
T4L	Please leave the pensions alone, unfortunately we can not manage money very well this is not something that should be attempted right now. Looking at the other provinces we have privatized too much, so please stop that. Keep research for public good that has such a small investment for government but such a huge gains for farmers. The more money you can put in the pockets of the people the safer the province will be.	I feel the government has no choice but to have the courage to tax the top earners an extra 1%. The majority of the tax base can not afford all the tax hikes caused directly or indirectly by this government. If a sales tax has to accompany it then that's what will have to happen. We are headed straight back into the 80's economy which is terrifying for our province, so please be careful, we will lose even more companies and suffer a huge brain drain. I remember when we could not encourage doctors, nurses, or brilliant researchers to stay in the province.	I can see that comparing the province of Alberta to other provinces it may have been a mistake privatizing the insurance/registration, liquor boards, gas and phone, etc possibly another reason why the province is hemorrhaging financially. Please stop with the privatization, its damaging the public good. At current I feel this government with the past budget and suggestion of the up coming budget is encouraging people and companies to abandon this sinking ship.
t5m	Education and Health care.	Tax cuts to businesses. We haven't encouraged any big businesses to stay or invest in Alberta since making these changes.	Support for smaller businesses who operate within Alberta and employ albertans. Tying tax cuts to businesses having to operate in Alberta
T6A	Provincial sales tax, #1. Greater provincial income tax at the top brackets.. no more flat tax, #2. Investment in more efficient public services, not less budget for services, #3. Re: #3, Alberta has a high private sector labour cost as well, reflected in the cost of living and the cost of government services. Spending on services needs to be properly indexed to population and inflation. Efficiencies in areas like bad contracts by AHS or the number of managers and management training programs in the GOA could definately save a lot of \$ without impacting services.	Stop handing out tax cuts to big businesses. They are leaving anyway. Eventually, workers will follow if you the Government keeps cutting back government services. This will be even worse once the economy seizes when budget cuts result in reduced consumer spending on things like home renovations and consumer goods and services.	Proper investment in the economy, especially the green economy. Our petroleum industry only accounts for a small number of jobs and is unstable. Find ways to diversify the economy with other energy sources (wind, solar, etc.) or biochemical production before our oil birthright is all but depleted or no longer in demand.
T8N	Education. Post secondary. Health care. Affordable housing.	No more 16-thousand dollar flights, no trips to London for the Premier and advisors without detail and benefits. No 30 million dollar war room. stop with the working groups and panels. Stop cutting essential services. By changing to biosimilar drugs...that could increase healthcare costs and hospital visits...costing more. Same with the slashes to the senior's drug plan. They will end up in hospital...costing more. We need to look for different revenue sources. PST.	Stop catering to oil and gas. you are creating a divide between oil and gas and everyone else. There are other industries we need to look at. Invest in innovation. Tech. AI. the corporate tax cut didn't work...bite the bullet and admit it was a mistake and resume taxing the big companies.

T8H	It is important that services delivered by Community Service Providers are on the radar. Supporting persons with disabilities, affordable housing and a strong workforce are all key requirements to support our persons with disabilities. Subsidized housing MUST be a priority for those who cannot afford to live in our expensive province. Housing is a human need that leads to good physical and mental health, taking the pressure off those systems.	How about our MLA salaries, which are higher than any other province? Get rid of the War Room, which is a high cost budget line for no perceivable benefit.	Put more money into services for developmental disabilities so the agencies can afford to pay and attract the staff needed to support these vulnerable Albertans.
T1J	Health care and education	Everywhere!	Job training
T8A	Child care - as this is often seen as something that is not important. However, all of the research points to how the early years are the most important in terms of success in their later years. Investing in high quality early education helps to prevent more money needing to be spent on supporting adults who fall into crime, need supports, end up homeless, etc.	Stop lowering corporate taxes so much and give money back to education, health care and child care. Those are the three main pillars of humanity. Society will suffer as you continue to draw funds away from these services.	Continue the Alberta Job Grant, increase the threshold for child care subsidy instead of offering the \$25 per day program. Give the money to those who actually need it, not rich people who seem to be qualifying for a subsidy with the way it is run. Increase the existing subsidy approval threshold to say, \$100,000 per year per family. Those that earn more than this can pay their own way. I have heard that the subsidy approval amounts have not changed in 10+ years, yet daycare fees keep rising, as well as most other costs of living.
T2M	Education at all levels and diversification of the economy	Through higher taxation, especially larger companies	It should stop trying to focus on just oil and gas and should help provide incentives for companies that are more diverse, perhaps even try to convince companies to come to Alberta given the amount of empty real estate currently. For example Moving Picture Company just shut it's studio in Vancouver, stating that it was too expensive, government could try to encourage companies like that to move to Alberta.
T3R	Public funding. Education, police, health care.	Given corporate bail outs to oil companies to line the pockets of the wealthy as those at the bottom still get laid off. Audit the oil companies you gave 4.5 billion dollars too and re coup some of the money that was not spent wisely, get the money back from the oil companies leaving Alberta	Diversify our energy sector. Look to new resources so we don't solely depending on the oil industry as it is a dying industry.
T6T	1. early learning and care i.e. affordable child care, more pre-school programs 2. lower tuition fees for post-secondary education 3. raise the minimum wage to a living wage 4. invest in sustainable energy	Abolish the "energy war room" or the Canadian Energy Centre! It is a waste of taxpayers money (\$30M) to support pro-gas and oil propaganda, fake science and fake information.	Diversification of the Alberta economy beyond oil and gas. The future of work will not be in this sector. Alberta is behind the times. Please read the research on this - countries whose economic and environmental policies are grounded on the adverse impacts of climate change and embraced clean energy have advanced more than those who have not. Alberta's future will not be determined by the oil and gas industry but by the progressive directions it takes to ensure a sustainable and <u>prosperous economy</u> .
T2L	Priorities need to be on diversification of our economy to get us off our one industry reliance. This includes funding education as diversely educated students are necessary to attract new diversified businesses.	Return corporate tax levels to the already low rates before the change of government. There has been no return on this gift. Stop spending money on wasted efforts like the war room or panel studies that are set up to make findings that only agree with government actions.	Look for effective incentives to attract diverse businesses and employers to Alberta. Invest in renewable resource industries. Yes, we need our oil industry but the narrow minded pursuit of it being our only hope will sink us further in dept.

T3A	Health care and education.	Health care and education.	Continue to encourage economic growth in the private sector. Move public employees to the private sector as positions become available. As positions with like qualifications become available, people in the public sector are laid off.
T5y	Health and infrastructure	MLA and premier's wages should not be luxurious	Stop giving tax breaks to companies leaving the province anyways and tax the people working less. Stop taking more and more money out of the regular peoples pockeylt, ie auto insurance.
T6V	Healthcare, education and increasing international market access and exports from Alberta.	Find savings but reducing redundancies in Education and Health	I haven't seen any jobs created in the last 9 months. Rather than cutting government jobs, ask the workers/experts for recommendations.
T4C	Support job creation and economic growth.	Lesson the bureaucracy of Government. Rachel Notley was supposed to have swelled the government ranks a bunch while she was in office, so start there. I haven't seen any improvements happen with the added staffing levels, so lets go back to 2016 levels or even earlier. I like a lot of the cuts you have started, but dont stop! Make every government agency have to account for their budget. Keep pushing back on the wasteful spending!	Keep lowering taxes, fight the carbon tax, and support our oil industry. Keep the coal industry and power plants going until we have another source of cheap electricity. Renewable's are not reliable enough and are far too expensive.
T4R	Diversification of our economy, because our access to education and maintain our health care. No private health care	Tax corporations. The tax taxes havent helped anything so reverse them. Afterall this government doesnt keep promises to it's people so why keep them to corporations. Also tax online sales more. People buying online destroy local economies and quite often it isnt even cheaper just more convenient.	More SMALL business tax credits. And again tax online sales like amazon so people would support local business more.
T2P	Invest in education. Government should focus on education in new and emerging technologies, more STEM in schools, coding, AI. We need to build more high schools in Calgary.	There are too many directors in many departments. Please take a closer look at Government of Alberta employees with salaries or severance greater than the annual threshold. Stop spending on roads and transportation that aren't essential (i.e. the ring road in Calgary) This money could be better used on education and health.	Focus on innovation in new technology such as AI artificial intelligence, Electric vehicle manufacturing, and other emerging technologies. Build the pipeline.
T0E	Environmental protection, mitigation against climate change, and moving Alberta to being a large producer of carbon neutral or carbon negative energy	End oil and gas subsidies, andend tax credits to large corporations as they do not result in jobs anywhere near equal the dollar amount given,	Grants and zero interest loans for workers looking to re-train in green economy fields such as solar panel installation, tax breaks for single family homes that invest in green energy production and energy reduction, and programs that support small scale, sustainable, regenerative farming practices
T2Y	Health care and education	Tax cuts for large corporations	Supporting its workers, investing in what we already have, tourism
T3P	The government needs to put money into looking into what class sizes are in schools and realizing that the high numbers are affecting student learning. By gathering data and not just hearing our concerns, my hopes is that the evidence is presented and a realization that it is a systemic effect that we teachers have been voicing for many years. We are losing good teachers due to stress and frustrations.	Focusing on essential public services and long term planning, verses quick fixes. Looking at redundancies that are not necessary to re-evaluating infrastructure to keep up with community growth. Selling off schools or government buildings that are no longer providing full classrooms or usage.	There needs to be pressure on the provincial government to look at reducing class sizes by hiring more teachers. By opening more schools and rezoning school boundaries. My own kids currently take a bus for 45 mins to attend a high school one way that is their designated school. Plus we are now paying 100% of this bus passes to attend school which equates to approx. \$800 a year. High schools in Calgary are playing catch up and not keeping up with the growth of the city.

T2Z	Green infrastructure like funding the LRT Green Line Free public transit Free public education and free post-secondary education Public health care Universal basic income for all	No more fossil fuel handouts, tax breaks, or subsidies No taxpayer funding for private schools Implement universal basic income to bring everyone out of poverty and get rid of the need for expensive taxpayer funded social services Defund the Canadian Energy Centre	Stop propping up the dying fossil fuel sector with public funds Use the carbon levy to build the green economy and create good, local jobs Support entrepreneurs and innovation
T3m	Healthcare	Abolish the AHS board	Tax reduction
T8a	Healthcare, education.	Health care in particular has many areas to save money without compromising frontline staff. 17(1) Fewer 'levels' of management Reduce physician double billing. Example: a nurse practitioner assesses, diagnoses and treats a patient. Then a DR sees the Same patient Just prior to Discharge. Just so they can bill for it. Allow RNS to practice at full scope, including using protocols for simple diagnosis and treatment. As they are hourly and not fee for service. Abolish the catholic school system. Having 2 separate publicly funded school systems is an astronomical cost that is unnecessary	I am no economist. So I am not sure. But it is off putting to have billions in tax savings to corporate entities while basic services are not being provided.
T0J	Put more money into education, health, and economic diversification	Get rid of the war room. Increase corporate taxes	Give tax credits to emerging industries and credits tied to investment and workforce hiring
T1K	- Preventative medicine for kids and adults - mental health - front line staff in hospitals - universal child care system	- taxes (Could include a PST) since we are the only province without it. - include the increase taxes to go towards healthcare, preventative medicine, mental health support, and universal child care. If both parents are required to work in this day and age, support the families with more resources of child care and education. This can also reduce mental health and improve quality of life. This can create a domino effect to decrease the costs on healthcare.	Stop increasing tuition fees for education. Support Albertans to continue education and make it feasible. This makes people more willing to stay and work in Alberta if the government supports/encourages economic growth.
T6E	Education, healthcare, social supports	STOP giving out tax cuts to corporations and big businesses, instead RAISE their taxes	Give tax cuts to SMALL businesses, fund education including post-secondary institutions, invest in sustainable energies and technology
T6L	Education and early childhood	\$25/day care is big waste of tax payer's money	please stop laying off people in the public sector.
T3J	a balanced approach	getting rid of all the excessive layers of management in government, AHS, and the public sector. Front line staff are NOT the issue, the multiple layers of managers are.	by NOT giving tax breaks to large companies, they rarely use the profits to hire

T5T	Education and Health care. Especially in the areas of support for mental illness. The education system and health care system need to work hand-in-hand to support all of the kids on our schools, from kindergarten to post-secondary. The mental health of our youth needs to be taken seriously!!	NOT by comparing Alberta to BC and Ontario/Toronto in our health care systems, or anything else for that matter. That is absolutely ridiculous. 17(1) Don't you dare start cutting these positions or nit picking everything that they are doing to make sure that they are "being productive enough". Peoples LIVES are at stake here! We need more mental health workers now more than ever because the stigma is finally starting to be erased. We need this help and these supports for the youth of our province, for everyone in our province. Because when one family member is dealing with mental illness, the ENTIRE family is dealing with mental illness!	I have no comment
T1X	Providing quality healthcare. We need more doctors and better doctors, including specialists 17(1) Unless you are dying or have a simple infection that only needs antibiotics, our healthcare is useless. I'm considering leaving Canada for this reason.	Social program funding	Incentives for companies to move in?
	Healthcare and education	Energy war room - waste of funds	Reinstate the tech credits. Support industry beyond oil and gas - be future focused
T3B	Healthcare and Education	War room.	By not axing Tec incentives. Stop cutting taxes to the 0.1%.
T9A	Education, health and job creation	Cutting their own salaries	Stop shutting Every thing down but making cuts that impact jobs and faith new companies will succeed here
T0B	Health, education and diversification of the economy	Look at exorbitant salaries of upper management within AHS as well as the number of positions in that upper management bracket. Look at combining school boards of public and Catholic schools to save on duplication of administration and salaries. In upcoming negotiations with unions of nursing, teachers and other allied health professionals, continue the wage freeze and look at other cost saving measures. BUT DO NOT CUT FRONT LINE POSITIONS!!! We are already short staffed in hospitals, clinics and our schools classroom sizes are already unacceptable. We need to look at upper management first and where costs can be cut. Don't punish everyday Albertans by cutting the front lines.	Encourage oil sands and upgrader development within the province and push for the pipelines to be built both east and west. We need to develop our own resources at home and refine our own oil for distribution. Canada needs to decrease its reliance on overseas oil.
	Health care, AISH, education	Stream lining services and talking the front line services where savings can me met. Stop subsidizing oil and gas, the war room and corporate subsidies.	Investing in small businesses, education, technology and diversification of our economies, training opportunities for people

T1J	Education, childcare, healthcare.	By collecting property taxes from oil companies who are in arrears; by eliminating tax cuts for the most wealthy;	Universal daycare- puts more women in a position to work, and therefore spend; healthcare- ensures people have their base health needs met, and are therefore able to spend; abandoning the oft-debunked "trickle down" economic theory; stop cutting jobs; invest in alternate energy resources- which could create lots of jobs.
T8N	I would like to see current growth accounted for in both health and education. They are our two biggest expenses provincially but the proposed budget for these portfolios are going to have detrimental effects. Please look at other ways you can balance budgets (maybe a slight increase in the corporate tax rate to cover some of these costs, to meet in the middle).	Each ministry should be tasked with getting to the bottom of how money is being spent. For example, in health care, the best people to ask about how to reduce spending are those that see those wastes day in and day out. This means asking the lowest people on the totem pole - not just the executives and managers. They won't see the day to day wastes like the workers will. This would be a great to handle some of the issues in health and education, without cutting the budgets in massive ways that end with teachers, nurses and others losing their jobs.	Don't start laying off teachers, nurses and public sector workers. There is tons of waste in each department without those layoffs. Plus those layoffs (or threats of layoffs) create further economic anxiety, which is bad for the economy. Many public sector workers would be happy with no increase in wages (despite what our unions say) but don't threaten peoples jobs. Think outside the box to get to your targets. And those in executive/higher positions won't think outside of the box either. Ask the "little guy".
t8h	Healthcare, education, universal childcare subsidies!	Tax the rich and big businesses more	Diversification of our economy and public sector job growth during economic slow times
T3B	Health Care and Education should remain the foundation of Provincial Spending and remains the fiduciary responsibility of the provincial government. As funds are available, the provincial government should be investing in large scale infrastructure projects that will provide economic return in the next century where global warming will provide economic opportunities to expand agriculture across much of the province. Expanding the irrigation system and providing flood and drought mitigation will provide long term value in a changing climate. The floods in 2013 cost this city over \$5B. Droughts in the early 2000's had a similar cost to the agriculture industry. The province needs to work with the private sector to reduce CO2 emissions. Expanding the Electric network and driving increased fuel switching from Oil/Diesel/Gasoline to natural gas is an intermediate step that will have profound environmental impact and value to our gas industry which needs increased markets. Expansion and electrification of the rail system to displace air travel and Long haul trucking emissions will generate long term value for the province and drive high employment and innovation here.	The implementation of the "WAR ROOM" will not influence the people that are adverse to hydrocarbons. This requirement should be put onto the ERCB and the Industry to promote. The government should be driving this within their mandate and not taking this on with taxpayer money. They can create objective public education materials that the government can use to promote a balanced view of oil and gas production. The RED TAPE REDUCTION program should also not be a separate organization. This should be included within the role of the auditor general. If the government is wasting money and loosing value due to internal processes, the auditor general should be able to report back and departments should be accountable and empowered to make appropriate changes. The government should temper it's agenda to look entirely to the Health Care and Education sectors for cost savings. These areaa have been continually worked and we should not expect huge opportunities here. Perhaps one area that the province can look to is reducing the number of school boards. A study to evaluate unification of the Catholic and Public School boards and merging of school boards might demonstrate savings. Increasing Hotel Taxes, particularly on Foriegn Visitors could provide increased revenue and I don't believe it will impact tourism significantly. The reduction in Corporate tax should be done through tax credits that Alberta companies can earn through driving innovation, job creation and greenhouse gas reduction, rather than an across the board reduction from 12% ot 8%. This is consistent with the GOA plan to link secondary education funding to performance measure	As discussed above this should be done through long term infrastructure investment as government where the payback is very long term, and as possible and appropriate working with the private sector where the return period will attract interest through shorter term payback. I think that tying corporate tax rates to job creation and economic growth delivery should be something the government considers

T3E	1. Healthcare: make healthcare accessible for everyone by reducing/eliminating the waiting period for necessary but non emergency surgery. 2. Road repair and construction.	Eliminate bureaucracy by eliminating double or triple position within the government.	Build the so desired pipelines. Build refineries. Build the pipelines that bring money and workers.
T3H	1. Education - I don't know of any government that has put money into education and later discovered that it was all for nothing. 2. Health Care - Especially in sickness prevention. When people are sick, they cannot be productive members of society. 3. Innovation - Alberta has historically been prosperous with oil but that makes us a one trick pony. We need to find other ways to earn money such as technology companies, film, and tourism. Alberta could be the next big place for films since we have virtually every type of setting here.	Stop giving tax cuts to wealthy corporations who are already making large profits. Also, consider the other side of the equation and raise taxes - you need to pay for what you get and simply getting less all the time is not going to work.	By investing in something other than the oil industry. Yes, oil is important and its not going away but we could create a HUGE film industry, bring more money in from tourism, etc. Build a high speed rail line from Lethbridge to Calgary to Red Deer to Edmonton. This would allow mobility of workers and facilitate the movement of commodities.
	Being fiscally responsible.	Retracting the tax break to oil and gas.	Building infrastructure in Alberta.
	Education, Healthcare, affordable childcare	Elimination of the War Room, canceling carbon tax lawsuit, reduced salaries for gov't staffers, increased corporate taxes, collecting on taxes owed by O&G companies, ensuring province is properly compensated from abandoned/orphaned wells.	Give tax incentives to actual growing industries (ie. tech, green energy), subsidized childcare (see Quebec model), increase minimum wage and reduce taxes on lower income earners
T4g	Health care.... Stop trying to privatize, most of us can not afford it anyway. Bankrupting someone because if an illness or injury is not the way to go	Quit giving money away to big coporations..... Also stop with the tax cuts to these same companies, middle income people are getting taxed to tge breaking point	Actually do it !!! Stop pretending to tiny tgings you do are actually helping us cause it only makes people angry and frustrated.
T5N	Health care and education	Corporate taxation and taxing the wealthy	Diversify the energy portfolio. Solar and wind are some options that could use provincial support, not just oil and gas.
T3E	healthcare, education, infrastructure, seniors and programs for addictions and at risk youth. I don't mean cut spending. I mean find a way to deliver the services without cuts. De-insuring medical services should never be considered.	top heavy government department cuts, not front line workers. The government should practice what they are preaching and find cost cutting in their own ranks. What does an MLA's pension look like and how much a year is that costing the tax payer?	Get the energy industry back on its feet. Attract new industries to Alberta. Support retraining for workers in collapsed industries.
T6C	Infrastructure, social programs, and healthcare.	Increase taxes, especially on businesses, the marginal tax rates of those making \$200,000+, and maybe a sales tax this time?	Public works, government projects, and diversification.
t5x	Education, heathcare, and diversifying industries.	No more tax breaks to oil companies. Reducing government wages.	By providing tax incentives to NEW industries who find potential in Alberta. Industries like tech and new energy industries.
T0M	Healthcare, I do not agree with Cutting back Dr. Patient time together, I already feel rushed in the Dr. Office now. Law enforcement, Crime and punishment, we need drastic increases in punishment for offenders.	.	.

	<p>1. Support for child care. Subsidy, continued support for front line staff, funding to create and maintain spaces in affordable ways (ie. partnerships for day care space with schools, investments in family day home, etc.) Working parents need dependable, affordable, quality care for their children. Good child care options support strong economies.</p> <p>2. Continue prioritizing ways of attracting business back to Alberta, creating new and long-term jobs.</p> <p>3. Prioritizing health care, access for all, continued local health programs for seniors and children.</p>	<p>There seems to be a lot of duplication and "reinventing the wheel". For instance, Parent Link Centres were meant to be (in the beginning) a "hub" for family services - a place that parents could go and find resources they need. That funding is discontinued, with a call for a "hub and spoke" system to replace it. People are put out of work, only to have to reapply for a similar position. Why spend the money to restart something that is already in place, rather than going to the service providers to see how the current system can be made more efficient?</p>	<p>I support what this government is doing to attract business back to Alberta 100%. Consult with Chamber of Commerce agencies across Alberta for local ideas to stimulate business and job growth.</p> <p>Again, most importantly, invest in going to the people doing the work - they will have the most thorough information of what works and what doesn't. Ask what the suggestion is, how it should be implemented and how and when it would be reviewed for success.</p>
	<p>Education and Post Secondary, health services, and programs for vulnerable Albertans, taxing corporations appropriately, supporting municipalities to collect overdue taxes from industry</p>	<p>remove Ministerial press secretaries and issues managers, shut down CEC and Red tape reduction ministry, Panels for separation and inquiries into "non-Albertan" activities</p>	<p>provide tax credit instead of cuts, reinstitute the STEP program for youth, support the public service so someone actually has money to spend.</p>
T2A	<p>Priority should be on our most vulnerable and that is our youth, elderly, and the disabled. It is a shame that disability checks are not enough even for rent. We need to focus on our children as they are the future of Alberta. Better education, smaller classes, special needs educators, improving family structure for their social and emotional health, and better daycare and school age programs. I think government has been ignoring Child Care workers for far too long. We have a reputation of being 'glorified babysitters' which is the farthest from the truth. We are the most under paid and under appreciated people in the field, and that is the reason why we struggle to find good staff which is detrimental to our children. We have not had government support and it hurts our youth as well as our own families. We need incentives to bring in more good qualified staff and encourage ELCC education. The Child Care Assistant program needs to be upgraded and evaluated, also. A better quality of education and better income can help improve our image as well as government support. It should not come out of the parents' pocket.</p>	<p>I believe that the government cut the budget in all the wrong places. Education and health care budgets should never be decreased. I think the government should have focused on the things that were not really a priority and Alberta could get by without. For example, upgrading Deerfoot Trail could have been postponed and work on the green line. Also, overall pay cuts instead of layoffs would have helped. All high paid employees got pay cuts, and higher taxes for big companies.</p>	<p>For certain these are what the government needs to support. They should also encourage small businesses and advertise local support in your city/town.</p>
T0J	<p>Schools, Job creation</p>	<p>Unions, Pensions, oil sands</p>	<p>Invest in other areas besides oil (movie industry!!, tourism, incentives for companies to come to Alberta besides Oil industry)</p>

T9X	Childcare is used by many Albertans. I am from a rural town, if you take away the Benefit Grant Contribution for childcare programs that are accredited it will mean for us a loss of \$1900 per month for our programs. This means we will have to increase fees for families to recover this. I can't imagine what this will look like for families to have to pay even more for childcare. Alberta has worked so hard to improve childcare and has put us on the map with our priority for quality, education and decent compensation for staff and programs. Please consider the consequences of your actions for families, it will cause immediate cash flow problems for Albertans, over night.	Privatization....it really works, look at the Klein years. Take business out of the hand of government, it's not what they do well. A business owner will care more about efficiencies in finance and delivery than the government could ever hope to. Some examples are EMS, why should we be paying for the ambulance ride and the cost to run the company? Never mind how you are cutting those EMS workers pockets. They work long hours, are not thanked or noticed publicly, see horrific things you cannot even imagine, struggle with PTSD, and have very little support. Cut their wages and look out. Quality will go out the window, what a shame.	Continue to make business owners a priority. A balanced economy is a welcome sign for business moving here or starting in Alberta. If all we have are harsh cuts, you will create an atmosphere of disgruntled Albertans. What will you do to create a better place to live? It isn't always about money, but money is on everyone's minds.
t5z	Health promotion initiatives to reduce treatment costs in future generations	Cut funding to support unnecessary municipal spending. Example, Edmonton has bike lanes for no reason, which are cleared and prioritized over arterial roadways	Support our oil and gas workers and industries to get back on their feet, cap the housing market
T5g	Education, and health care. Considering that good health care systems save lives, and Edmonton public alone is having a surge of enrolment, and class sizes at most schools are already close to thirty. Which is too much. Also tax breaks for local/small businesses. They are extremely valuable to the economy, and all the profits stay within the province.	Reduce wasteful spending. Change funding for alternate/ semi-private/private schools back to being 50% government, 50% from the parents. Increase taxes. We are the only province that does not have pst. No one likes taxes, but this would give the government much needed capitol to invest in the economy, and support local businesses	Build more schools in the areas that they are needed. Provide incentives to home owners for doing renovations. Including rebates for switching to more efficient/ environmentally friendly options. as well as family's who are building, or doing an infill. Particularly infills, since infills revitalize older neighbourhoods, provide the same amount of work as new builds, but cause urban sprawl. This would provide much needed work to a struggling construction industry, and help gentrify older, rundown neighbourhoods. Diversify the economy, and reduce our economic dependence on oil. I am not saying do not support oil, but we need to get to a point where our economy does not live or die based on the success or failure of the oil industry. Provide support agriculture, and farmers, as they are Alberta's second largest industry.
T1M	Health care and education	Implementing a provincial tax like other provinces	Through more accessible education
T7V	Education, Healthcare and childcare	Less travel for MLA's!!!! With Skype and other ways of communicating should eliminate the need for in person meetings all the time	reduce the cost of living so people can actually live a decent life in this province
T4B	Affordable health care, promotion of healthy lifestyle, encouragement of diverse economy.	End tax breaks for wealthy. No More corporate welfare to oil and gas industry.	Encourage diversity. Clean energy, recycling and entrepreneurial encouragement in developing new industries that will clean up the environment and get us living sustainability. In order for Alberta to survive, we must transition away from dependency on oil and gas industries. The proposed pipeline was a bad idea from the start, it will not survive catastrophic weather events, fire season, -40, etc... we need to move into realistic projects that address needs of today.

T0L	Healthcare and education	<p>I think big savings could be found by investigating individuals on AISH. While there are individuals who do require this financial support I totally dont understand a woman receiving benefits who doesnt seem to have any issues and can spend 6 months or more down in Arizona. I am sure there are lots of cases where some folks could do some level of work to support themselves partially.</p> <p>As well there needs to be better review system in place to approve government expenses for travel/living. Being an elected official is not a ticket to have every expense in your life reimbursed.</p>	I think grants to employers who bring on staff from different education programs to cover a portion of the cost of adding an employee; however there does need to be strict guidelines that must be adhered to so that this doesn't turn a hand out.
T0j	Health care and education.	Stop funding abortions!!	Investing in our companies. Prioritizing our residents over others.
	Schooling and healthcare	Add PST or stop giving tax breaks to oil corporations.	Invest in healthcare and education. That is the foundation of our economy.
T1Y	Education and health care	not sure	not sure
T6B	Health and education	Taxing the corporations	Keep pumping money into infrastructure projects. Keep a focus on the environment and job creation from that. Don't cut government jobs. Teachers and health care workers being laid off isn't going to support economic growth.
T2V	Health care and education. In health care, wait lists, access and other service metrics for the province are unacceptably high. This is a population facing industry and optimal function resonates to other sectors (i.e., a healthy population has greater readiness and ability to take advantage of other initiatives, including those in business). Education is an investment in the people and future of the province. Short term savings may have long term detrimental effect.	<p>Canadian Energy Centre. This is a poorly conceived and poorly executed project.</p> <p>Calgary Cancer Centre. The development of a new cancer centre is not unreasonable and likely needed; however, a greater degree of scrutiny of Alberta Health Services is required to understand if the administrative and infrastructure cost (including duplicated equipment) is necessary and whether appropriate operational funding is allocated to make these investment worthwhile.</p> <p>More active effort to transfer traditionally publicly funded services to the private sector (e.g., health institutions and surgical centres). In this environment, it may be reasonable to look at greater leniency to what is covered with private insurance and health benefits programs.</p>	Industry diversification. A focus on oil and gas is healthy given the natural resources in the province, but dependency on this single sector makes the province vulnerable. There is too much outside our control in a commodity based economy and that is unlikely to change. Thinking otherwise is not realistic.
T0J	Pensions and seniors.	Quit sending money out of our province!!	Get the pipelines built. Stop supporting all the immigration.
t4b	Helping students rather than increasing their already growing debt.	Not giving tax breaks to those who are already making millions of dollars.	Not giving tax breaks to those who are already making millions of dollars, and funding employment projects instead
T6R	Education and healthcare. Education is what builds our future - it's not going to be all trades.	I'm their own salaries and the heads/ directors of the larger healthcare organizations / school organizations. When schools need works done they seem to have only a small list of "approved" vendors - these so called vendors charge almost double what can be found elsewhere.	Providing a wide variety of educational options for everyone. This means supporting teachers and school boards.

T5M	Health care, education and funding for advances in other sectors than oil and gas, such as tech and renewable resources.	Stop allowing government employees in management from having catered lunches. The billion dollar give away to oil and gas companies. Go after the oil and gas companies for the property taxes they owe.	With retraining in renewable resources or through other sectors like tech.
T2H	Don't do anything to bring more hardship to those on AISH or the elderly!!	Start by starting at the top, instead of punishing taxpayers by making cuts, start by making cuts to what you think you are "entitled" to such as expensive bottles of Champagne, expensive hotels.	stop talking about doing it, and start doing it!! The people of Alberta have already told you what you need to do, stop asking us what should you do and start doing it!!!
T5K	Economic diversity, healthcare, education (including arts)	Health delivery (seems so inefficient when viewed firsthand), Technology projects (especially bloated contracts)	Sales tax seems obvious and inevitable. Stimulation of alternative energy sources, there is so much sunshine and wind here. Promotion of granting and partnership funding for startups and incubators. Stimulation of arts and culture.
T0J	jobs, education cost and medical wait times	Reduce payroll to themselves, cut out pensions accordingly for short term politicians, cap salaries paid to CEO's of corporations.	Bring back all oil & gas
T4L	Public sector employment, healthcare, public services, and infrastructure.	Taxing corporations, cutting non-essential spending within the party, lowering political salary.	Put more money into the public sector (teachers, front line health care workers, emergency services) and give those just entering the workforce a living wage! Stop handing over billions to oil companies and invest in the people who work and live here doing jobs that don't ebb and flow like oil! Money should put out into making employment more accessible for all, better health benefits, better transportation opportunities, subsidizing childcare and lowering post-secondary education costs so more Albertans can actually get jobs!
T5T	The government should have the best interests of Albertans as a priority, and sometimes that means spending money, for example on healthcare. The cuts to healthcare are very concerning, and will lead to patient deaths and adverse outcomes. Cutting nurses and other healthcare providers will lead to longer wait times, decreased quality of care, more errors, etc. There is research that shows staffing mixes with higher percentages of RNs have better outcomes, and we are ignoring this and doing the opposite.	Taxing corporations, all corporations, regardless of what they are (no special exceptions for oil and gas). If everyone paid taxes proportionally, we would have a lot more money. Also taxing people in the top 1% more.	Not cutting teachers and nurses would be a good start, doesn't make sense to talk about job creation when they are decreasing jobs.
	Ensuring adequate access to healthcare for all, especially in remote locations MORE support in classrooms and educational settings for children with special needs	Taxing large corporations	STOP cuts to education, healthcare, and organizations that support homeless/poor/mental health. This is directly leading to massive job losses which further strains the social safety nets and leads to slower economic growth
T3L	Government decisions are the problem, not the solution. Cut services, spend less and cut taxes. To start with, government should have no place being involved with health care or education.	Cut services significantly. To start with, end government involvement in health care and education and allow the private sector, charitable organizations and non-profits to thrive in those service areas. Government should be very small, and only provide what citizens of a 'free' civil society cannot provide for themselves.	Government is the cause of our economic problems. Government legislation has made Alberta and Canada a non-competitive place for business. That is why corporate investors look elsewhere in the world for favourable opportunities. We would have economic growth if government were to get out of the way and allow free and open markets to thrive as they have elsewhere.
T6w	Health care and education	Decreasing middle management in AHS, increasing school fees, bring back Alberta health care premiums!	Decrease corporate tax on small businesses

T5A	investment in alternative energy sources, investment in other industries. Crucial to diversify the economy.	Cancel the war room. It is a backward venture and an embarrassment to Albertans.	Investment in education, subsidies for small companies and individuals to innovate and grow and encourage diversification. Investment in health care and other services to create a strong and healthy and supportive work force and to make Alberta a place where people want to live and invest.
	Maintaining spending per resident in healthcare and per student in education to 2018 levels, accounting for inflation. Funding public schools only (no spending on private/charter schools). Nuclear, solar, and wind power developments.	Remove all private and charter schools and school boards and merge into one public system for an annual savings of tens to hundreds of millions. Reduce ministers' staff budgets. Eliminate the "war room". Do not focus on wages for nurses and doctors but instead on process improvements (i.e. A nurse calling in sick for O.R. causing the cancellation of multiple surgeries.)	Create or reinstate incentives for creative industries (software development, film, etc.). Foster innovation hubs. Trickle up economics & universal basic income. Limit temporary workers (how send money out of province/country) and add incentives for companies that hire local residents.
T4J	Balancing budget	-Hiring more full time nurses thus cutting the overtime they are working back. -provide more incentive for people to by only partially funding maybe half amount community programs encouraging them to fundraise for the remainder.	-hiring more full time nurses / cutting back overtime -taxing small businesses that hire these workers smaller amounts. -supporting community programs -getting out in the community and spending time with the people of Alberta and getting to know them and ask them the most important issue they feel you should touch base on.
t6e	Education & Health	Decrease wage to politicians, avoid unnecessary politic travel expenses.	Diversifying industry around the province. Supporting farmers to keep growing their products and process. Partnership with more manufactures to bring their factories to Alberta, as Ontario is doing, to create more jobs. Initiative & incentive laws to small business, helping this way to create more self-employment.
T1Y	Health Education Infrastructure	Hire more nurses and reduce overtime. Eliminate school boards, or at lease have the cbe eliminate area offices.	Everyone knows the biggest cost in public services is staffing. Try to find a way to hire more front line workers and reduce middle management. Instead of a hiring freeze on front line workers, put a hiring freeze on middle and upper management.
T3L	Justice, and health.	Tourism, multiculturalism, and infrastructure.	Cut taxes, cut red tape, promote economic trade, develop infrastructure for oil and gas, diversify our economy.
T0M	Repeal the absurd corporate tax cuts so funding can be restored to the essential services like AISH, healthcare, and education.	Scrapping the war room and repealing the corporate tax cuts.	Bring back EEA and other programs for diversification.
T3B	Natural resources to market (will solve a lot of fiscal problems if we have oil revenue) Job creation Public sector over spending and top heavy management costs	As above	Are you kidding, THIS IS ONE OF THEIR PRIMARY ROLES
	Teachers and students.	Not paying the management above so much and cut their salaries.	Hire more teachers.

T0J	Healthcare Education Policing (esp in rural areas!)	Likely less tax breaks for private companies would definitely help increase monies in the province. I would say reduce their own expenses. Say something small like pay for your own lunch? In any other job you have to pay to get to work yourself, you don't get paid for your lunch break and you have to pay for your own lunch or bring it yourself.	I would say they need to concentrate on getting the pipeline built so Alberta is not held to ransom by America and it's low prices for oil.
T0j	Snow and garbage removal, recycling implementation.	They don't need to save, we pay our taxes.	That's a two sided question.
T3B	Education, Health, Social Services, The Arts.	I think we need a sales tax in Alberta. We have a revenue problem.	By supporting diverse industries: technology, film, alternative energy sources, tourism and others.
T5C	Education, Sustainable Energy, Environment, Health Care, Childcare	No tax breaks for big business. Provincial sales tax. Investing in clean energy.	Investing in education and clean energy. Small business tax cuts.
	Universities, education, science.	No savings needed. Introduce a modest sales tax to balance budget.	Invest in universities, education, science.
T6H	Education for all, not just the rich. The arts, as all civil and intelligent communities do. Technology, in the twenty first century we are in an intellectual economy (surprise to most of you).	Middle and senior management of AHS. They do little and earn too much. Keep frontline workers. Cut your invented nonsensical divisions such as so called war rooms. You're not 12.	Diversification. It's economics 101, but your ignorance is dug in. Invest in the tech and media production sectors and realize millions in revenues.
t2t	Healthcare, job creation policies.	By cutting middle management in government services, as well as cutting more education services.	Yes.
T6X	Education and Healthcare	War room, tax increase on businesses	Implement HST to get public service back on track
T6c	Equitably funded Education and healthcare for all Albertans.	Increasing royalties collected on natural resources. Diversifying economic activity. Provincial sales tax. Capping fees on mandatory services. Stop funding agencies that support partisan political agendas instead of all Albertans interests.	Put money back into businesses that diversify the economy. Create programs and projects that provide Albertans with supports to get trained and stable before moving into a new career that will provide tax revenue for the economy.
T3E	Providing education at all levels - including post secondary. Alternative energy programs which will make us competitive in the future as our dependency on fossil fuels fazes out. The film and television industry also provides millions of dollars and employs many Albertans. Something other than oil and gas, which they seem to be spending far too much on.	By not cutting the programs that the previous government put into place to save our o&g industry, like shipping by rail. The cancellation of rail contracts cost us millions!	Industries that are showing growth potential - alternative energy (solar, wind, geothermal, etc) and film and tv. Invest in the Alberta advantage where it comes to filming big productions since American producers will see their dollars stretched with no sales tax and low exchange rate.
T2M	Social Services. Education, Health care, supports, specifically for people who are facing many barriers. I'm already really sad about what we have seen with cuts to this. I hope that the government keeps in mind the people who are impacted the most by those cuts already are struggling.	Tax the wealthiest and large businesses/cooperations.	Provide funding and tax rebates for students. Put your money into people who want to support others. Oil will not last forever but people will.
T0M	Healthcare and education	Cuts to government wages	By supporting more than just oil and gas sector
T5K	Health is the most important and the government should not be taking money away from AISH, health programs from seniors, or the special medical drugs that are needed for some patients. Putting the most vulnerable in harms ways to balance a budget is disgusting. The government should not be balancing the budget on the backs of the poor and vulnerable. Also the budget does not need to be balanced in 4 years and there must be a better way to balance the debit and not endanger Albertans standard of living.	By taxing the large corporations and getting rid of the war room would save the government a considerable amount of money. Also stop the lay offs. If people are not working there is a lack of tax dollars and less spending which supports business. There would also be less dependence on gov programs.	The government needs to get some diversification going on and not relying on oil and not waiting for the oil to come back in 2023. We have been there before and it hasn't worked. We need green energy and bring back the tax credit programs that were in place before. When people are leaving the province to do business elsewhere we need to fix that as the large corporations with their tax breaks are not employing people. This government ran on the promise of work and they are consistently working at laying people off.

T8N	Lowering spending	Employee salary, benefits and pension	Reduce regulation
T5M	<p>PUBLIC Healthcare and PUBLIC education- work WITH the unions rather than against them as they will push us further down the hole and they WILL strike-you will not have enough non-union workers to keep this province afloat if there is a general strike.</p> <p>um also maybe stop attacking women and trying to make them return to the home you ass backwards losers.</p> <p>Maybe also try at least pretending you give a shit about gender equality and reduce the religious garbage that oozes out of your pores</p>	<p>3% sales tax</p> <p>war room</p> <p>idiot staffers that spend gratuitous money</p> <p>flying pals in for pancakes maybe</p> <p>Kenney could take an 8% roll back</p>	<p>um...stop cutting wages and laying people off- if no one is making money or unable to support their families, they certainly aren't stimulating the economy here</p> <p>Diversify from oil and gas as whether you lie it or not it will become an obsolete industry</p>
T0J	Education, healthcare, infrastructure, build a refinery to keep our oil here	Stop paying the big wigs so much freaking money! All politicians take a pay cut.	Build a refinery here for our oil. Instead of employing a few hundred for a short period building a pipeline you could employ them long term and keep our oil here to make all the profits instead of selling it and buying from foreign sources.
T2C	<p>Increased spending on education at all levels.</p> <p>Maintain & improve healthcare access. NO cuts to frontline services. No privatization, which has been shown to increase costs</p>	<p>Fewer paid Twitter Trolls at \$200K a pop</p> <p>Shut down unaccountable gov't propaganda agencies, like CEC.</p> <p>Restore previous higher tax levels for profitable corps and high income individuals, so they can pay their fair share from the profits they make in Alberta.</p>	<p>Improve access to retraining and education programs for the unemployed.</p> <p>Encourage diversification, Eg, film, technology, clean energy programs through grants and incentives.</p> <p>A living minimum wage for all workers.</p>
T0C	Public Services, Education, Homelessness, Veteran Benefits	Their salaries!	Cut their wages, support small businesses. Perhaps no business taxes for the first year for new business owners? Stop allowing big box stores to crush the little guys in small cities.
T5H	<p>Balance the budget</p> <p>If department heads cannot get the job done, fire them and hire someone who can.</p> <p>Ralph Klein was the most beloved Premier of our time - except for greedy union members.</p>	<p>Travel expenses. Hosting expenses. I would focus on the damage we are doing to future Albertans who will be hobbled with debt repayment.</p> <p>Negotiating union contracts.</p>	<p>What if 80% of all retail sales positions disappear by 2030 and Alberta cities are awash in empty building that formerly housed retailers? Are we ready for all the empty areas in shopping malls?</p> <p>Institute an "online sales tax".</p> <p>Charge \$3.00 for every stop made by a Fedex or UPS truck, or Canada Post driver.</p> <p>(Hev... you wanted ideas...)</p>

T5K	Healthcare, education, and social supports programs to help those out of work find a new skill/industry with job prospects.	<p>An overview of healthcare systems that involves looking program to program to reduce inefficiencies instead of targeting frontline workers.</p> <p>Increase corporate tax. Bring back tech industry support to increase tech jobs, which leads to increased hiring of new grads and increased tax pool to draw money from.</p> <p>Look at inefficient management structures within all government areas. Do we need to have as many middle/high level managers. Are their salaries in line with their productivity/effectiveness in managing our public services. Bringing the provincial lab back online now before the plans drafted and money spent creating the planning is completely gone to waste. Before the province needs to spend large sums of money replacing machinery in all lab areas instead of one combined purchase of machinery for a single lab.</p> <p>By increasing the amount of long term care beds so that patients requiring just enough care that they cannot return home are not holding beds in hospitals costing our system upwards of \$2000 a day.</p>	<p>By increasing incentives that attract diverse industries.</p> <p>By charging an automation tax as automation has resulted in loss of jobs in oil industry.</p> <p>By providing skills training in green energy and other areas that can allow workers to diversify their skill set and help them to find jobs.</p> <p>By completing the provincial lab project which will provide jobs in the construction industry.</p>
T1K	Education Infrastructure Health Care	<p>Unnecessary subsidies and handout payments</p> <p>Collecting taxes from empty properties</p> <p>Switching off/Keeping the lights to minimum at night in empty buildings</p>	<p>Encourage entrepreneurship</p> <p>Diversify the economy</p> <p>Invite companies to invest in cities</p> <p>Exploit the immense flat lands for building for excellent infrastructure and warehouse facilities</p>
T3C	Healthcare, education, post-secondary	<p>stop giving tax breaks to the wealthiest albertans, reinstate the carbon tax, reinstate tax breaks for film/television, provide better mental health care so you're not paying for it on the other end when people are hospitalized. This includes better funding and treatment for gender affirming surgery</p>	<p>invest in green energy and start seriously looking for alternatives to an oil and gas economy. Diversify! Invest in a strategy to stop the epidemic of men's violence against women, which has huge economic costs. Fund the green line.</p> <p>Do NOT tie PSE funding to outcomes that prop up technical industries at the expense of all other disciplines and that dilute and degrade the quality of education so PSEs will lower their standards to meet arbitrary graduation rates.</p>
T5K	Health Education Economical diversification Carbon emission reduction/environmental issues	<p>The stupid war room</p> <p>its own gluttony</p> <p>wasteful thing like town hall meetings where information falls on deaf ears anyway and they are all about optics of pretending to care what people of the province want</p>	<p>diversification</p> <p>understanding that economic growth will not happen by cutting jobs and pay for women in the province considering many families are now reliant on those very jobs and women to support their households since there are fewer jobs in oil and gas-it is short sighted and stupid and will push us into a recession</p>
T1h	Health care, education, the people not the government	<p>In their wages. In unnecessary development costs for art or building bike lanes</p>	<p>Try to give people job security and a decent wage. Create or maintain positions vs cutting them</p>

T2J	Spending priorities should be focused on the small and medium businesses that generate income for the province, and provide jobs for the people. Reduced red tape and fewer restrictions to help encourage people to start and maintain business.	Increased taxes on recreational drugs, vaping, and edibles. These are all items that people do not need but do enjoy and can generate significant income for the province. Spending less money out of province and focusing on Alberta.	Less restrictions and red tape for businesses. Lowering business property taxes to more affordable rates. Additional help for small business on setting up and running them properly. Improve education system on teaching people how to open and run a small business, do their taxes and stay profitable.
T1h	Health care, education, the people not the government	In their wages. In unnecessary development costs for art or building bike lanes	Try to give people job security and a decent wage. Create or maintain positions vs cutting them
T6C	Special needs education, to ensure the most vulnerable receive a chance to thrive in this society. Ensure Education is fully funded including additional money for population growth, as well as properly funding post secondary education for population growth so that we can diversify our economy away from the dying oil and gas sector. Healthcare also needs proper funding as the hospitals are in poor condition. The Royal Alex hospital had one semi-working elevator in the atrium yesterday with two other elevators out of service.	Rescind the corporate tax cuts, and increase tax relief to small businesses as they are the sector that actually increase the economy in Alberta. Cut the CEC as it is a joke and the very profitable oil industry does not need a government funded propaganda machine. Cut the unnecessary trips to places like London England, the financial center of Europe is now in Geneva, get a clue. Eliminate the Premiers and staffs travel to other provinces to interfere with their elections. Jason Kenney wanted to be an Albertan then he should stay in Alberta.	Reinstate the tax advantage to the Film industry, High tech industry, Agriculture, and any sector that will increase the diversification of our economy away from Oil and Gas. Maintain spending on our infrastructure so that new companies want to relocate here. Come out strongly against Wexit so that companies who want to relocate aren't worried about our stability. Read a few studies on Trickle down economics and the absolute failure it is. Stop giving money to the rich in hopes that some crumbs will fall down to our unemployed and support small businesses instead for a better outcome.
T0M	We know people on AISH and welfare that should be doing something to contribute for the income that they receive. Should there be a requirement that they volunteer etc.? Also one of the people on welfare has a minor criminal record that pretty much prevents her from getting a job. Could we create programs where employers get compensated for helping people with minor criminal records to work for them in some capacity. Thus we could reduce the amount of welfare that these people receive. We can't continue to give these people a free ride if they don't even try to work.	Have you considered taking over operating some of the producing abandoned and orphan wells? Perhaps there is some revenue there? We need a sales tax. Back in the day when we paid a 7% GST, it got lowered to 5%. We should pick up that 2% as a provincial sales tax. We know that people survived at the 7% so adding the 2% back in provincially should be possible and provide income for our province. There is a lot of redundancy in our medical system. For example we have to go to a doctor office to get a prescription for orthotics. Is there a mechanism where we could simply phone in and the doctor charges less than a full visit? Also when we need refills for our prescriptions, do we always need a full doctors visit or could there be a lesser rate that the doctors charge for refills.	Continue to eliminate high paid executives that don't do much. Force high paid older workers into retirement and give their jobs to younger people that are most likely paid less. For example, you might be able to get two Front line workers for the price of one executive.
T2P	Cost of living. It is getting harsher to make ends meet in this province!!	Within the government itself....start from the top down! Not cutting services cutting government positions and salary!	Corporations are already getting fair treatment with tax incentives and being supported by the conservative government. Focus should be on the middle income family, where you have the majority of the population!! Middle income families have been underserved for decades. They make too much money to get access to certain services and programs and they make too little money to take advantage of tax advantages and maxing out their savings! Salaries are NOT keeping up with inflation. By the time you retire your purchasing power is extremely diminished! We actually live in a sad world. The rich are getting richer at the expenses of the middle income families!

T4N	Public education, public health care, poverty and homeless, drugs and addiction. Look after people.	End corporate subsidies. Eliminate the "war room". Make rural municipalities who are developing urban areas surrounding cities pay for the same things as urban cities pay for, i.e. policing and recreation.	Stop forcing layoffs. A strong public sector is important for our quality of life. Public sector workers pay taxes and spend money in our communities. Support and encourage the arts, alternative energies.
T2Z	1. PEOPLE - health care and education are vital areas for this province today and tomorrow. Without a fully funded PUBLIC education system that has the capacity to meet the needs of a very diverse population, Alberta will rapidly fall behind not only the other provinces but in the world. Currently ranked #3 by PISA standards, Alberta's education system is recognized as a world leader. Shifting funding to "alternative" systems such as charter and private schools, will result in a significant decline in the ability of public education to meet the needs of students with special learning needs, English language learners, new arrivals, those with mental health concerns, and the wide range of normal learners who fill the halls. Albertans interested in private or charter education should expect to shoulder most or all of that cost in exchange for access to their preferred special interest school.	Close the "War Room" and shut down that thinly veiled propaganda machine. Roll back MP wages by 5%. Cancel the \$4.7 billion corporate tax break.	Diversify Diversify Diversify Alberta has so much more to offer than just oil and gas! We have a highly educated population with opportunities to expand into renewable energy, technology, tourism, agriculture, logistics, sciences, trades. Make oil and gas just another piece of the economic puzzle in Alberta, not the giant centre of everything.
T5K	Institute a sales tax (stop deluding the public into thinking we are still a "have" province).	"Finding savings" is the wrong approach. We have a revenue problem, not an expenditure problem.	Spend money on education (including higher education) and finance the creation of open educational resources (OER, course materials that are free to use and share) that can be adapted in future years. (Stop subsidizing bad actors in dinosaur industries.)
T0G	Health care and education (k to 12)	Stop setting up commissions to give government advice on what to do. That is what elected officials are paid to do. Get rid of Oil and gas war room.	Diversify our economy. Get pipe line built.
T3M	Education & health	"Issues Managers" (ex: Matt Wolf's \$192K/year salary) and press secretaries for every minister	Tax cuts for industries like technology, digital animation, film & TV, etc
T1H	Healthcare, education & diversifying our corporate revenues beyond oil & gas.	Stop giving bonuses to management/executives that go directly into their pockets & instead reinvest that money back into the frontline of healthcare & education. Stop the equalization payments to the federal government.	Continue to invest in educating the workforce to provide skilled laborers. Prioritize tax incentives for companies that can prove & provide sustainable renewable resources & revenue.
t2e	Education Health care	Eliminate the war room. Eliminate corporate tax cuts. Eliminate the department of red tape reduction.	Support education including post-secondary.

T8L	I think it's time to focus on new technologies to replace oil and gas. This should compliment oil and gas but the government should be looking ahead so that we are moving forward with cleaner solutions.	I think the war room and the evaluation of environmental organizations should be cut. We don't need this - let's move forward. Also leave the crude to rain contract in place and save the 1.5 billion dollar cancellation fee. I think efficiencies in government costs - let's start to spend money as if it was your own - less travel and unnecessary spending. I understand that's a small amount but it's not to a regular tax payer.	I assume the corporate tax cut is one method of hopefully creating jobs. How about a carbon tax to spearhead new environmental solutions - so that new technologies can be in place for a cleaner future. I'm worried about drastic cuts to universities half way through their budget year. Education should be a priority and it's looking like only wealthy people will be able to send their children to universities. Without a break in student loan interest rates - people will be left with huge loans. How about funding the film industry again in Alberta?
	Infrastructure, reducing spending in healthcare and education at the administrative (Board)levels versus cutting front line services	on the many large CEO and otehr senior level and administartive salaries of those on boards like AHS, school boards, other government appointed boards and otehr government bodies	Invest in infrastructure projects, education and marketing the province and our resurces and opporunities to the world. Build relationships! Stop fighting with everyone and work together. I thought you had a plan?
T6H	A well funded education and health care system!	Blind tax cuts to profitable companies where they don't have to do anything to get the cuts!	Giving tax incentives to companies that create good jobs that add to the economic growth of the province! More jobs created the better the tax break!
T6J	Education, Medical and infrastructure.	Stop handing out money to the oil and gas industry. Institute a 5% Sales Tax.	The government should support upcoming new energies to eliminate the mass need for petrol-carbons. Also the cities need more say in how the economy is run.
T1C	Healthcare & Education above all else.	Probably corporate nonsense. Advertising budgets. I'm pretty sure you can find money somewhere else than public services or jobs. Give me the spreadsheet lol	Diversify. You don't have to abandon the whole pipeline and oil stuff to support and invest in renewable energies.
T8B	Health Care. Education. Environment. Infrastructure.	Reverse tax cuts to corporations. Increase taxes on the wealthiest 10%.	Premier Kenney should resign for cheating his leadership race and he should be shunned from politics. This would help demonstrate that Alberta is actually an honest and trustworthy place to do business. Alberta should resume incentives for tech and software companies. We should invest heavily in renewable energy and renewables research. The government should stop their backroom dealings with franchisees. Increase minimum wage again, and give everyone more spending power.
T6C	Public health care. Public schools. Improving dangerously dated infrastructure. Economic diversification.	Fewer pointless committees. Less expensive propaganda. Stop giving massive tax breaks to a dying industry. Trickle down economic practices have been roundly debunked and NEVER EVER WORK.	Focus on diversification instead of oil.

T8N	Quit nickel and diming the average Albertan so they have some money to spend on supporting tourism and our economy. They don't have anything left after the income tax changes and the increase in tuition fees and the cutbacks on education that they now have to pay more for	Stop reducing the corporate tax as that program is not creating any jobs. Charge a provincial sales tax with all money going towards paying down the debt	Instead of cutting the corporate tax put that money into job creation subsidies. Give the teachers and health workers a modest increase each year so they can have some money to support our economy and the middle class. You have everyone so scared with your cutback threats that even those that are not affected have quit spending discretionary dollars killing our economy. By raising the cost of registrations on RV's you took 15-18 million dollars of discretionary spending that consumers might have used to pay for a tank of gas, a case of beer or even some groceries which all would have supported the local economy. You have people scared with all of your threats of cutbacks and layoffs. Pay professional people like teachers and health workers what they deserve.
T3K	Education Subsidized childcare	Eliminate the "War Room" Freeze corporate tax rate at 10% indefinitely	Greater investment in post-secondary institutions
T4n	Cut wages from politicians and the top of Alberta Govt employees. They are OVER PAID. Cut travel expenses. Family members are not gov't. STOP the abuse. Kenny's \$18000 flight to Sask for example. Give Alberta Gov't the same pensions and benefits as front line workers.	CUT FROM THE TOP. Compensation packages for Alberta Gov't members, cut it. Cut their bloated wages. Cut the bloated expenses.	Hire more frontline workers. Start building projects refining our own natural resources.
T5H	Social services, health and education.	Delay further cuts to corporate taxes. To date corporations are taking tax savings and leaving the province, laying off employees and/or increasing shareholders dividends.	Provide incentives to industries that are diversifying Alberta economy such as technology, energy and agricultural sectors.
T0H	Education and healthcare	Cancelling the war room	Investing in more diversity of industry and providing incentives for alternative energy and other industries in Alberta
T0G	Improving healthcare (including mental health programs) Education And developing and diversifying the Industries in Alberta	Strategic cuts need to be made at the administrative level for the healthcare industry and education sectors (both postsecondary and primary levels)	Using grants and taxbreaks to incentivise new industries to set up shop in Alberta
T6M	Education should be very important. I also believe it's important to maintain our health system and support all businesses in the province.	The AB government could find savings by paying our specialist doctors competitive fees. At this point in time I think they're overpaid compared to other provinces. The government should also consider taxing businesses smartly by taxing competitively and not undertaxing. Tax business fairly don't favour corporations.	The government should support all businesses. At this point in time the weighting is far too focused on resource business. The future is in the tech sector and being ahead of the curve. Balance your support because that will give the best business base for the province.
T1S	Education & Health Care	Stop giving tax cuts to huge corporations that can afford to pay.	Invest in Education because you need educated people to help find ways to stimulate economic growth.
T6T	Health care, public services and diversifying the economy. Further, NOT focus only in one resource such as oil.	Help small businesses and stop giving big corporation billion of dollars free money. Trickle down economics never worked or will ever work. It has been 9 months since this government was elected and we are still losing jobs. No job creation whatsoever "as promised".	Yes, however, not by firing public service employees.

T0K	Healthcare Pharmacare Education Alternative energy diversification Senior housing	Technology support so more people are working Film and Arts attraction to AB so more people are working Healthy Albertans so you don't start increasing sickness costs Education in new energy to get more people working Attracting people to Alberta through diversification Stop wasting money on propaganda PR No more panels generating interest in Alberta as a world climate technologysupporter instead of scaring everyone away with ideology. Work WITH nurses (genuinely)and teachers to find efficiencies. Make these great places to work or people want monetary rewards for the high level of stressors. Stop letting politicians travel like they are royalty	Diversifying into new energy technology Research Survival of Albertans during Climate Change Education and updating skills of O&G workers to new technolgies for climate survival Support local cottage industry instead of only large corp. In real ways. Tax incentives don't help until the business is profitable Support some smaller farming industry in ways such as new energy tech. And different tax structures (more hiher capital input tax deductions) Get more nurses into rural communities to support low doctor numbers. Helpbwith complex care within the small community instead of shipping people around.
T8G	Public education (secondary & post-secondary). In order to create a world-renowned province, we need to focus on the future. The future lies in the hands of youth - not oil and gas. Oil and gas may be something that built up Alberta and what we're proud to work for, but just listen to what the world is saying. Really listen. Globally, there's a movement to reduce the use of fossil fuels. Why are we combatting with so much resistance? Why are we throwing money into a well that will, hypothetically, dry up? In order to create something world renowned you need to listen to the rest of the world. Money needs to be put back into research initiatives. Alberta has renowned artificial intelligence and computing science laboratories. Build these up and attract global attention. Reengineer what a future Alberta should be proud of, and this province will have a sustainable future.	Funding large oil and gas corporations and "energy war rooms". The public doesn't want this, as it's not helping us. Stop it.	Through funding public health care, education, transportation and research. Trickle down economics DOES NOT WORK. It pads the pockets of the wealthy and we still lose jobs. This has already happened in Alberta since the Kenny government came in. Please do not disregard this comment because it doesn't fit your agenda. ¹⁷⁽¹⁾ and I do not see my future in oil and gas. I will leave Alberta because I don't see a sustainable future here. Many of my classmates have similar outlooks. Don't lose your highly educated potential work force by only focusing on a dying industry. Diversify now, before it's too late.
T6t	Health care, education, renewable resources, diversify the economy to attract more jobs to the province.	Get rid of the "war room" albertans need hospitals!	Diversity! Invest in tech, stop laying off public workers because our one resource isnt booming. Keeping everyone down does not lift anyone up.
T8L	Diversified Job creation.i am an oil and gas worker but feel we need to get back to diversifying agriculture, tech, health services as well as natural resources. Cut excess spending funding on projects that do not make sense in the current climate.	In their own pockets, austerity needs to happen with government as well. Cut pay, relook at perks and benefits. After all they are Albertans too. what hurts one hurts all.	Diversify.
	Increase spending for education (both K-12 and post-secondary), public healthcare, social services, and childcare.	Increase corporate tax rate instead and implement a 5% PST. Focus on increasing revenue.	Support diversification of the economy, including offering paid training and hiring grants for industries that are not in the oil and gas field.
T6k	Education and sustainable energy	Dont givectax breaks to big corporations and/or add a provincial tax	By improving on overall education and by providing support for struggling families

T2Y	Education, Health Care, Emergency Services	Corporate taxes	Support the lower and middle classes by supporting the programs that allow them to thrive. Allowing for tax breaks for the hardest working people in the province instead of the 1% of the population. Subsidy's for child care for dual and single income family's to allow more citizens to participate in the economy.
	Education, health care and the arts. They also need to put back the money they took away from early child care programs and continue with the \$25 a day day care program.	By not shelling out \$4.5 billion in corporate tax breaks. The government can also look at administrative costs in the health care system. Some of these bureaucrats don't need the salaries they're getting when front-line workers are being cut.	Alberta needs a living wage. Too many are living hand-to-mouth and are literally one pay cheque away from poverty. Providing \$25 a day day care made it possible for child care centres to employ more people and made it possible for many others to go back to work. If Albertans are working and making wages that enable them to pay their bills and have some left over, people will spend money, which grows business, creates jobs and spurs economic growth. Dumping the cost of everything onto the shoulders of people who don't have enough anyway while giving tax breaks to corporations that just took the money and left does NOTHING for this province.
T7S	Education Health care post-secondary education energy other than oil and gas	increase corporate tax implement a PST close down the war room	incentives for small business and clean energy research and development funding for education and health care to prevent layoffs and ensure people are qualified to get jobs in Alberta
	Education and Healthcare	Stop giving big corporations tax breaks, they can afford to pay taxes, middle class families are the ones who are struggling.	Diversify! Diversify! Diversify! We have to diversify our economy. We cannot blindly support oil and gas, we cannot control the world demands on oil and gas. We have to be resilient! which means we need to support many different industries.
T6E	The environment, education	Giving tax cuts to the wealthy	Creating more jobs in the public sector, education, social services etc
T7P	The government should focus on spending money on the day-to-day operations and maintenance of its communities and infrastructure, to preserve what it has and to prevent things falling into such a state of disrepair that matters can never be remedied. The approach thus far has been comparable to not changing the oil in your car and then saying you saved money on its maintenance. There have been massive amounts of money squandered on dead-end "initiatives" and there continue to be large sums of money squandered on showy projects.	The government is and almost always has been mismanaged. Management is, for the most part, ineffective and unaccountable. There is favouritism and a tolerance of shoddy work by contractors that is shocking. It seems that management's primary goal is to come up with some "innovation," be noticed and move up the ladder to achieve the highest five years of pensionable service. Viewpoints and input from frontline workers could provide a great deal of insight into the smaller savings that	By doing what it's supposed to do - provide public services second to none so communities and its members can be healthy, educated, and supported to create their own opportunities. The government is not and never should consider itself "in business." Healthcare is not a business. Education is not a business. If it is, then where is the profit in educating a six-year-old? Alberta has become a hostile environment to anyone slightly disadvantaged, and disadvantaged these days means that you don't work in the oil and gas sector. Oil and gas runs this province, not the government, as it stands right now.

T6J	Supporting vulnerable Albertans. Children. Seniors. Disabled individuals. Ensuring equal access to high quality health care, including mental health care. Don't cut education funding, or increase class sizes (but I guess that's no longer measured) or cut health services.	Government needs a revenue stream. 2-3% sales tax and take back corporate tax cuts. So far, savings have been on the backs of the people, and particularly the most vulnerable. School-aged children. People on AISH. And nothing to show as a benefit for this. No steps forward in economic growth. Edmonton's unemployment rate the highest of any Canadian metropolitan city.	Invest in education so that people have a path to success and will invest into society. Give teachers a modest increase. They deserve it and will invest back into society. Stop being reckless and changing everything simply out of a need to unravel anything associated with your predecessor. It does not inspire confidence. People don't want to invest in a place or a government that takes this approach. We need stability. We need maturity. We need measured, responsible approaches. In order to invest in Alberta, we need to believe that the government cares about its people. We do not have that now. Investments in education and especially early childhood development are tied to economic growth.
T6M	Diversification of industry, education, and healthcare. If you want a strong province, and a strong future, you need to build it through innovative industry, a well educated society, and a healthcare system that is proactive rather than reactive.	Stop spending money on useless "War Rooms" that cost money but have no real value. Adding more to the bureaucracy that is government while taking from the future seems like a huge waste of time and money!	Create a province that people want to move to, that supports it's education and healthcare, is forward thinking, and sees that there is more to the economy here than oil. This government is slowly drowning in it's dream of oil while chasing other industries away.
T2w	Front line services medical, education, infrastructure and our vulnerable citizens	They could start with their own salary which has doubled while nurses and people helping Albertans have had wage freezes Giant companies don't need giant bailouts	Get rid of red tape, grants to people actually creating jobs
	Reducing debt	Union negotiations. I just took a 10% salary cut along with all the other non-union workers at my organization. Cutting staff instead of reducing their wages hurts our economy with more unemployed and reduces our level of service.	Pipelines and union negotiations, high wages limit commercial interest and opportunity in our province. Invite and encourage investment from companies like Carbon Engineering.
T3B	Education, healthcare, and social services. With the occasional infrastructure thrown in here and there where its necessary, not the lets pave the new portion of a highway we built 2 years ago.	You could tax large profitable companies accordingly. You could also get rid of your "war room" no need for that. It's just a money laundering thing, plus its an embarrassment!	Well, you should reinstate grants that benefited this kinda thing. You could diversify the economy instead of betting all on O&G. O&G is part of Alberta, but its NOT all Alberta is! In addition, instead of giving money to companies that don't need it without job creation at all, maybe get a guarantee that you are buying jobs with that money, oh wait, but thats not how it works. So get rid of your war room, stop reducing all the staff we need here just so other provinces can hire them and we are left without any qualified staff. You are ruining this Province! Get your shit together, seriously!
	Education and healthcare. Much needed infrastructure projects that put skilled people back to work.	Forced upper management reductions in AHS, education boards rather than front line staff (nurses, teachers etc). The war room should be eliminated. MLA pay cuts.	Grants for new technology start ups. Support other business ventures in addition to oil an gas.
T5T	Education and health care.	Not bailing out the oil companies to the tune of \$4.5 billion dollars and then cutting funding to essential services across the province such as education and health care.	Invest in something other than oil.

T1K	Education, healthcare, seniors	Stop giving tax cuts to big corporations!!! Stop wasting money on the "war room".	You cannot create economic growth when you continue to cut programs (drug coverage) and remove caps on things like insurance, utilities, etc. as well as cutting jobs in the public sector. If people don't have money they CANNOT SPEND MONEY and therefore cannot contribute to the economy. Soon we will see more small businesses fail because there are less and less people that have money to spend. Tax the wealthy a little more and you will see greater revenue. Bring back student work programs.
T3E	EDUCATION AND COMMUNITY SERVICES. YOU MORONS. WHY WOULD YOU NEED TO FUCKING ASK THAT? WHY DO YOU KEEP MAKING SO MANY STUPID DECISIONS? WHY IS YOUR JUSTICE MINISTER A COMPLETE FUCKING ASSHAT? WHY WOULD YOU TAKE MONEY OUT OF THE FUCKING POCKETS OF AT-RISK PEOPLE?	THE FUCKING WAR ROOM, MAYBE? MAYBE STOP THINKING THAT OIL AND GAS ARE THE HOLY FUCKING GRAIL? MAYBE FUCKING DO SOME RESEARCH INTO WHO HAS BEEN SUCCESSFUL IN MANAGING FUCKING ASSETS SIMILAR TO FUCKING ALBERTA'S? MORONS.	BY CREATING EDUCATIONAL OPPORTUNITIES FOR EVERYONE AND NOT MEDDLING IN A SYSTEM THAT WAS WORKING FUCKING FINE. MORONS. 17(1) SO FUCK YOU, YOU BACKWARD FUCKS! FUCK OIL AND GAS AND FUCK KENNEY.
T6I	Education, healthcare	MLA spending, war room, sole source contracts.	By maintaining and supporting public services and infrastructure.
T6B	Education, healthcare, infrastructure and economic diversification.	Get rid of the idiotic "war room", fire your failed political appointees and introduce a provincial sales tax.	Stop giving incredibly profitable corporations tax breaks because as the last 50 years have shown us, trickle down economics simply do not work.
T0B	The people who elected you. And my family too.	You already have, by passing everything on to us, school fees, drugs fees, etc. Etc. Do you need to use a food bank? The people	Diversify! And quit giving handout to oil companies.
T2r	Education, health care, social services, post secondary support, mass transit within the bigger centres	Cut the energy war room, stop subsidizing oil and big corporations entirely,	Similar to how the NDP incentivized the green energy expansions within the province, to a max dollar value. Give small business grants and tax credits over the big companies. Invest in coop/intern programs for students ending their programs of study to encourage employment across fields. Maintain a high minimum wage and stop splitting this minimum for underaged, servers, etc.
T6C	Diversify the economy	Hire real professionals to teach you	Diversify the economy
T9g	I don't think there should be any freezes to our nurses. Education wasn't cut per se but with incoming student numbers I believe they deserve an increase. Low income and handicap people should receive increases, not cuts	I think that oil companies should be responsible for their own profits and clean up. They have received many handouts over the years that common folk aren't privy to and yet they continue to demand more. If there are corporate handouts, please provide them on certain contingencies such as hiring requirements, etc.	There are many industries that make a difference to our economy, not just oil and gas. Find ways to stimulate the economy with what's already here (tech, movie industry, industry not dependent on oil and gas).

T0M	Oddly the very areas it's taken away from. If we, as in Alberta and Canada want to be recognized as leaders in educated persons, then maybe quit cutting funding there. Let's keep the educators that can motivate minds to do great things. Let's keep the support to help those minds coax the brilliant from their student. I live in an area where we like to keep drug addicts alive and I'm currently having a lot issues with that. I think the whole mindset behind that needs to be re-evaluated. No money for our hospital or for an additional facility but funds went into the let's keep the repeat offenders alive.	Within themselves. We all know someone that works for the government in some capacity. When monies are given for new office furniture as an example, frequently. It doesn't really install much confidence in the masses. I knew an elected official who did not drive so she had driver, that is just BS. How about we start in those areas.	I have news for you, it takes all sorts of talents to make this world go round. We need everyone and every sector. We don't need a CEO in AHS making crazy amounts of money, work in the private sector then. An open mind with promoting our beautiful province all around. Be it a great education system to attract new students. Wonderful tourism to attract peoples from all over to see this beautiful place. How about continual travelling exhibits at our museums so the people who can't and never will travel, can see what life is and was like somewhere else? The governments job is to help its people succeed all around not run a balanced budget.
T4p	Stop taking away funding from essential services such as health care, education, mental health, seniors care. These should be the priority not an area to cut costs like you did in the 2019 budget.	On page 144 of the 2019 budget lists a 4.7 billion dollar handout and tax breaks to big cooperations. Not doing things like that would save the province, let's see, 4.7 billion dollars!	Diversify. It's 2020. The province can still support oil and gas while increasing economic growth in other areas such as technology, film, etc.
T8l	Social programs. Education.	Government management positions throughout its branches	Tech areas. Small businesses. Start ups..
T9k	Education and healthcare.	In taxing larger large corporations more instead of giving them tax cuts.	Create jobs in more sectors by providing them with more funding (health, education, environmental initiatives.)
T5T	Education and Healthcare	By adding a 4-5% provincial sales tax	Investment in diversifying our economy while still supporting the pipelines. Supporting jobs in education and healthcare, as these have a beneficial trickle down effect to local businesses. Stop threatening Wexit so that the province is a stable place for businesses to invest in.
T8B	Healthcare, education, other social services (emergency mental health, addictions, return to work counselling, etc.)	Remove corporate tax cuts. Corporations just bolster profits, they do not hire more people and they do not increase wages. Large businesses with billions in quarterly profits don't need lower taxes.... Remove bureaucratic and capitalistic culture. Government exists to keep businesses accountable and to serve the needs of people, not to babysit people and serve the needs of corporations.	Invest and diversify. Invest in innovation and education. Create (fund) an environment in which start-ups and entrepreneurs can safely open a business and have access to supports that help to avoid drowning in administrative, superfluous costs. Diversify as in encourage new technologies and business types to flourish in Alberta. Fund post secondary education and nurture relationships with those institutions!!!
T0A	Health care - to reduce wait times. Increase funding to public education so that all our children have hot and healthy lunches, this will pay off in the future with healthier population. the health affect of obesity alone would save millions in the future. Better funding for small businesses that earn and spend their money in our province.	Dump the frivolous law suits. Eliminate the War room (\$30M) they are not accurate or effective in any way. Increase taxes to corporations like oil and gas (net gain of \$2.4B). They continue to post excessive profits to shareholders that do not live or spend their money in our province.	Incentives to attract new businesses not focused on oil and gas. Invest in infrastructure in areas in the province where unemployment is at the highest level to keep Albertans working. They will spend the money they earn in this province, unlike that of Syncrude, or other oil and gas conglomerates.
T0a	Affordable child care, and incentives for new daycares to open, health care, school funding	Their own salaries!!!! And less payouts for immigrants	Support the oil sands, push to open a refinery in Alberta, we can supply Canada's oil requirements with less purchasing of foreign oil and support economic growth and jobs

T3R	Education Health Tourism Infrastructure	Stop paying to the Corporations	Increase export Decrease import Build more industrial zones Develop Tourism Develop infrastructure
T2P	Raise taxes on wealthy and big business. Keep Albertans working rather than laying off public employees and trying to cut their wages. Build clean energy industry and tech industry.	Cancel "war room". Cut subsidies to oil & gas companies.	Infrastructure spending. Transit building. Schools, hospitals. Raise minimum wage. Incentives for SMALL business and new industries moving to Alberta. Put people to work cleaning up abandoned oil wells.
T3B	Small business tax savings, infrastructure development, oil and gas development	Public art, CITY OF CALGARY!! they should be run like a business, not some city that thinks they can spend money on whatever.	O&G, pipelines, infrastructure
T8B	Health and education	Eliminate the war room. It is just a reason to give Conservative cronies a high paying job. It does nothing for Alberta	Do something to encourage new and innovative ideas
T0A	Healthcare and Education including Post Secondary	Red tape, layers of management, efficiencies	Ensure population is still spending, salary freezes should be removed or focused on certain areas that need a freeze, not a general freeze. Cost of living is increased and salary freeze is creating pressures that limits economic growth and stimulation
T5N	Doing what they said they'd do - "Getting Albertans back to work" not seeing any progress on this front, seeing regression if anything... - "Making life better for Albertans" tax breaks for corporations doesn't help us, it helps corporations.	Lower your own salaries!!! Or even better, tie it to performance like you're misguidedly doing to education... Stop looking for "savings" and instead look for opportunities for growth; this isn't a household budget with fixed income. Look for and continue funding economic diversification to grow the economy. The incessant talk of cuts and austerity are hampering growth.	Stimulating the economy through funding. Reducing cuts to healthcare, education, social programs; these cuts aren't helping people feel confident in spending money in our economy. Instead they're saving due to uncertainty.
T3L	-diversifying economy -improving education system -health care	-stop paying nurses overtime -force boards to cut administrative staff spending outside of classroom, not front-line staff -	-tax credits to companies that actually create new jobs in non-oil and gas based industries -push federal and other provincial governments to get pipelines through -credits to massive wind/solar installations
T5S	Employment opportunities. Bring back companies to Edmonton. Child care.	Projects that do not go anywhere ie: red tape. No one has heard what the government is doing with this project. Less managers/supervisor.	Bring back companies to Edmonton.
T5N	PUBLIC education. PUBLIC healthcare. Welfare for our populations vulnerable. AFFORDABLE PUBLIC post-secondary.	By not giving handouts to big corporations, taking their friends on frivolous plane rides, and looking after the environment NOW to save us destruction and cost in the future.	Certainly not by causing 50,000 jobs lost in their first few months. NOT by giving a \$4.7billion handout to the corporations. Go back to stimulating the economy from the bottom up, trickle down doesn't work and you con artists are perfectly aware of that. Bring back the provincial carbon tax so the money stays in Alberta rather than going to Ottawa. Diversify our economy, and stop ignoring the legitimate science that's been available to us for decades now.
T4B	Progressing away from our dependency on petroleum	Stop robbing Albertans to give to your rich buddies	Diversification instead of backward policies that depend on petroleum

T6V	JOB CREATION.	Social programs	Approve pipeline installation
T6J	- increase funding to schools - increase funding to healthcare - salary increase for teachers (minimum should be a cost of living increase since that has not happened in several years) - environmental initiatives	- stop giving tax breaks to corporations	- jobs should be created in areas that will benefit future generations, such as education, instead of in industries that are ravaging our environment, such as oil
T0B	Healthcare, education, and benefits	Get rid of your destructive 'war-room', pay YOUR property taxes and make corporations pay for their property taxes!!!! Seriously. You people suck so hard.	By supporting our youth, helping our unemployed, and spending on education. Provide resources and benefits for people to get back on their feet so they can actually get to work. Support homelessness so there is no more burden in our system. These are pretty simple concepts.
	Reduce the salaries of the Premier and Cabinet, to start with. Don't touch the pay of people who work every single day to pay their mortgages and buy food. We are what keeps this province moving forward.	Concentrate on building the people, and we will move the economy in the right direction. "Savings" isn't always the right move if you cripple the people so badly that we either all end up on social assistance, or we leave for other opportunities. (Have you even HEARD of "brain drain"???)	One word: diversify! Why are you pretending Alberta is only about oil and gas? That is absolutely asinine. We have so many other facets that you are ignoring. Wake up before you do so much damage that we have to spend another 25 years digging ourselves out of another Conservative-created hellhole.
T2x	Education and healthcare!!! Albertans have said this over and over again and the UCP refuses to listen. Also, I am furious that religious universities and colleges did not have their funding cut while other universities did. There is no valid reason for this except bias, as we all know Kenney is a religious fanatic and the party as a whole is infused with right wing religious bigots.	The war room!!!! It's absolutely outrageous that 30 million dollars is being spent on this and \$196,000 salary for a failed UCP candidate to run it while telling nurses and teachers they are overpaid. Also, the pensions received by politicians need to end as there is no valid reason a politician should receive a pension for life after their political career ends.	Diversify and drop the focus on oil and gas.
T2E	We need to spend more on healthcare and infrastructure for the whole province not just the cities... rural crime problems, bring back work for crime programs, more stuff would be fixed and done while commuting sentences	start cutting all the top heavy union brass instead of the frontline people, like wow what idiot came up with laying off nurses, teachers etc when you you management needs to be cut and money given toward the front line staff..	Well we will always be oil and gas, but make green affordable for the average person, make it so that everyone can get solar etc instead of relying on our utilities but sell off our oil and gas, build our own refineries and plants here instead of shipping it out...
T9E	Health. Education.	Taxes for people and companies who are not paying their fair share.	By investing in industries other than oil and gas
T6W	Education and healthcare including drugs coverage should be government priorities.	Stop giving money to big corporations. They already have enough.	Investing more money on Education and health, also It would help if more money is given to public infrastructure like building/fixing new roads/bridges etc.
T3B	The government should do the opposite of what they are doing now. Stop subsidizing large corporations and support education at all levels, health care and people in need. The current path you are on is backward thinking and will damage this province for decades to come.	This is a poorly phrased question, and reflects the government's fixed ideology in cutting rather than new revenue generation. I do believe that there are inefficiencies that could lead to savings, but this has been going on for years in this province and there is less there than you think. You could find revenue by 1) properly taxing corporations (reverse the 4.5 billion dollar tax cut), or AT LEAST see that delinquent oil and gas companies pay the property taxes they OWE and 2) introduce a modest 3% PST. The latter would give you a lot more credibility when you go to the Federal gov't hat in hand for more equalization.	You should focus on a much more diverse array of sectors than...just oil and gas. Those days are not entirely gone, but they are going fast, as anyone who takes climate change seriously knows they must. We could have been leaders, but by clinging to the "glory days" that aren't coming back, you are consigning Alberta to a future that will see us fall far behind. Support diversification, innovation (in more areas than O&G!) and education/training for young people. Your current policies will drive the best and brightest out of Alberta.

T2K	Education and health care.	The government could find savings by not reducing taxes for the wealthier members of society.	Implement a Provincial Sales Tax. If our energy market were more diversified, countless jobs would be created.
T8L	Priorities must be focused on prevention and early intervention programs, supports and services. Programs that support children, families and individuals before they have difficulties or when their challenges are small, before they become big, are the best bang for our buck as tax payers plus the right thing to do as human beings.	Increase spending on the early years and on prevention and early intervention. Every dollar spent here, can save up to \$17 later on in policing, health, children's services and other crisis supports (Irwin et al, 2007)	By ensuring that children and youth develop to their fullest potential - this means their social supports need to be strong and their education needs to be robust. Also, there are many people out of work right now and reductions in staffing at Alberta Supports has actually caused MORE red tape and hoops for people to jump through. When people are worried about basic needs, they cannot look for work or re-train to become more employable!
T8S	Health..Education..Seniors..young families.	Take away the 30 million war room. Get rid of the 4.7 million oil and gas payout.	Diversification.. Innovation Do not just rely on Oil and Gas!
T2P	Education, child safe programs, youth at risk programs.	Government wages, spending, health care overspending, spending less on corporate incentives to only one industry.	Entice other businesses other than oil and gas into Alberta so we can diversify. Don't put our eggs into one basket.
T4E	I believe being fiscally responsible very important for our government. However I do believe healthcare and education are the most important areas for governments to spend.	I think the existing management structures in a lot of the government sectors needs to be revamped.	As the environment has become such a primary focus in our society I think the Alberta government should offer grants/initiatives for environmental sustainable inventions/ideas (in particular in oil and gas). Then we can give lots of examples of how the Alberta government and our industry is leading the way in this field. People need examples. Also we need to start refining our own oil here and selling it here. At least we will be able to support our own industry.
T8S	Health..Education..Seniors..young families. Take away	Take away the 30 million war room. Get rid of the 4.7 million oil and gas payout.	Diversification.. Innovation Do not just rely on Oil and Gas!
T5g	Poverty elimination, health care, education, diversification of the economy, environment	Government should increase revenue instead. Higher taxes on corporations and PST	developing other sectors (non- oil and gas) such as technology, alternative energy, film, etc. Reinstate subsidy and incentive programs previously in place)
T6T	Investing in diversifying our economy. Re-initiate the funds that were cancelled for public education and health care.	Shut down the ridiculous, costly and pointless "war room". Stop giving huge payouts to a dead industry. Realize that oil is going the way of the dinosaurs. Again.	Diversify. Diversify. Diversify. Invest in the tech industry. Invest in the gaming industry. Invest in green energy. Alberta could be a LEADER in these areas instead of a joke on the world stage.
T6K	Getting spending under control. If we can't live on a balanced budget, we can't survive long term. It also steals from future generations if we borrow today.	Firing the AHS Board and hiring people whose salary and skill is more in line with the rest of the country, and giving a list of specific places to cut rather than just cutting a budget and letting fat cat managers cut frontline employees instead of themselves.	By getting out of the way. The more the government gets involved rather than providing a good environment for growth, the worse the economy does.
T2z	The People. Anything but putting money back into the government	Within themselves! Stop handing out corporate welfare. Stop adding more government uselessness. War room? NO. Yes to Government wage Cuts!	By putting money into Alberta, not into their pockets.
	Healthcare	Higher taxes on cigarettes, alcohol and marijuana	Lower minimum wage so small businesses can grow

T0M	Health care and education and generating economic growth. Crucial to protect the provinces interests in oil and gas	Probably shouldn't be cutting health care and education. Find savings by cutting municipal affairs - way too many staff members in municipal affairs that don't provide much economic value for the province.	By reducing taxes to small businesses and promoting incentives to hire local. Continue pushing for Alberta's interests in oil and gas
T2G	Direct service in Education, Health and Home Care proceeding in an uninterrupted way. Services to Person's with disabilities should also be uninterrupted except for caveats below i.e. finding savings.	Persons who have nothing to do with direct services i.e. Administration should be decreased in all areas of human services. Our systems are full of box tickers who provide limited benefit to those that the dollars are supposed to serve. Mitchener Centre in Red Deer (prized puppy for whatever reason, probably Union protection) is a huge pit of wasted money. Acknowledge that persons with disabilities do not miraculously recover... issue a card so continual reassessments do not need to occur. There are so many jobs that do nothing to help. Yearly meetings around people with thirteen admin. types who do not even really now the individual are ridiculous. Things are done in the name of accountability when there is no evidence that it was required; NGOs have also turned into paper before people fund-suckers and it all takes away from what person's with disabilities need and don't get.	Getting Alberta energy moving again without the huge wages the oil patch boys are used to... they do not take jobs that are available because they are used to what they had. While doing that we can also focus on new "Green" technologies which are required also. It is never all or nothing.
T3L	Health and Education	Scrap the war room	Lower education costs
T6E	Healthcare, education	Don't build a stupid gondola in Edmonton. Completely unnecessary.	Invest in renewable energy resources and stop relying on oil. Stop trying to make "oil" happen.
	I believe that health care and education should not be touched any further. There needs to be further consultation on the best ways of finding savings. Trying to balance the budget in 3 or 4 years, I think, is unrealistic. I don't believe using the US model will work. Privatizing labs and such will probably take longer to get results. We want a health care and education system that is compassionate, not scared to move for fear or being fired.	I don't believe that the "War Room" is as necessary as the government thinks. With the logo fiasco costing money, what other savings could be had without this project.	We need to diversify. I'm not sure how to go about doing that in this economy. Cutting positions is not helping the economy either as those people filling those jobs will either go to another province to work or be on government support.
T5N	Health care, tech sector, education, supporting our most vulnerable populations, not giving all of our tax payer dollars to massive corporations who have already left Alberta.	However it's done, it should be thoughtful and over time. If the budget is balanced in the next 3 years, but thousands (more) lose their jobs and quality education and health care was not provided, is that really worth it? Tighten up MLA travel and expenses. Don't go back on your promises and cut frontline health care staff. Focus on strengthening the public health care we have and not offering a privatized option. The money you've given to large oil companies who already left the province/laid off employees is gone, so figure it out.	Stop cutting tax credits for the tech sector. Small businesses and startups are suffering, and investors are taking their money elsewhere.
T7N	Ensuring support for education in rural school divisions.	Not sure... but I would not be opposed to a 2% sales tax.	Diversify the provincial economy and support/guide economic development of rural areas.
T0E	Providing social services, not decreasing services.	With politician wages, politician travel and expenses, marketing and consultation processes.	Is it really the government's job to create jobs? And possibly consider reducing the red tape for small business to hire
t1k	Teacher Raise	Less government	Relax environmental restrictions to allow construction (dock construction on reservoir properties.

T5R	Healthcare, education, arts and culture	You could try taxing the oil companies! It's not like they have any choice but to operate here, WHERE THE OIL IS. Or getting rid of your stupid war room. Or, accept that you could try to work in a deficit for a little bit in the understanding that by investing in caring for people, you eventually will make money.	Let museums and art institutes hire people. Let healthcare hire people. Stop stifling our post-secondary institutes in your myopic desire to funnel people into the trades, where there still aren't jobs. You decided to "create jobs" or whatever, and yet here I am, unemployed, because your government decided that the only jobs that matter are those in the oil sector. You know there are other industries, right?
T8W	Diversification of the economy, supporting health and education sector, collecting unpaid taxes from energy sector.	Start with getting rid of the wasteful spending on the Canadian energy center which is an embarrassment to the people of our province, and it is alienating the investment world we desperately need.	DIVERSIFICATION!!!! Quit bending over and giving away everything to the energy sector. Travis Toewes is an embarrassment, a disgrace, unqualified, and a participant in driving this province into the ground. A province desperately needing help with its finances needs more expertise than a rancher from Hythe for a finance minister.
T2M	Health care Education Social services Diversifying the economy away from our dependency on oil and gas	The government should not be trying to save money right now. Instead they should be spending money on infrastructure to mitigate a deeper effect from this recession.	Don't cut jobs. Teachers, health care workers and other government employees spend and grow the economy by being consumers and taxpayers. Invest in education to promote entrepreneurship in technology and innovation that supports a transition into a green economy.
t4x	senior citizens should be looked after	too many management positions cut from the top	pay mothers to stay home with their kids
T3N	Debt, Health, education, roads,	Cut upper management in health and go after education boards such as CBE, they've become bloated and counterproductive. Be forceful in cutting union pay, the rest of workers in Alberta have been hurt drastically and we pay their wages, so if they strike lock them out.	Fight hard against the "green" future Trudeau is pushing as it will bankrupt the country. Instead focus efforts on the economic engine of Alberta, oil and gas
T1K	The government needs to put money back into education. The removal of funds from both primary and secondary education is detrimental to early learning that is one of the defining factors for an individual's success but also put pressure on secondary students which are the province's future workers.	Finding job support for all people will increase individual agency and decrease the use of social programs such as unemployment payments. This will provide more sustainability and a more sustainable budget.	Support small entrepreneurs. Although large corporations provide lots of jobs, it forces a lack of job diversity where local businesses can provide jobs for people with diverse skills and can therefore provide a diverse market on the national scale.
T0A	Governing its people and environment so they can thrive.	Adopt - it's takes money to make money attitude and invest in all people.	Provide business with programs that encourage 'giving back' to their community.
T4N	Health care . Red deer needs new/ expanded hospital . It services a huge geographic region and population. Look at high levels of management for funding - salary - cuts not front line staff . Also seniors/ disabled / people dealing with chronic illness need more financial supports . Financial housing / medication/ med supplies and equipment is very expensive and people often aren't able to have the medical resources they need because of financial restraints .	Political salaries and perks need to be cut . That is where spending is out of control with no checks and balances . Also panels and studies created are waste of money that could be spent solving problems .	Not by big corporate tax cuts that only help the bottom line of the CEOs but doesn't help the everyday worker and family . Small local businesses would benefit more and be better for local economy .
T6J	Solar and Wind energy infrastructure.	Further flattening of government hierarchy.	I think we should focus on solar and wind energy sources. We should invite Elon Musk to open Giga Factory 5 here in Alberta.

T6J	Health and Education	Less travel by government officials	Assist in partnerships between colleges and universities and big business
T6L	Health Care, public transit, medications	Higher taxes to the rich, the ones who can afford it.	Start by letting those with jobs, keep their jobs
t8n	Healthcare, Education, Support Services and social programs to ensure our citizens are properly looked after and educated, thus putting less of a burden on our society. It's embarrassing to see how all of these have been put on the back burner and cut since our new government kicked in.	By putting a stop to investing in large companies who clearly don't have issues with generating profit.	By realizing how we are so badly in the past and falling behind many other provinces and countries in the world especially when it comes to seeking alternate ways to create renewable energy resources. So many more jobs could be created by branching out. Oil is old news and it's not going to be around forever.
T0K	Basic essential services. Debt reduction.	Reduce the number of Provincial employees. Many are unproductive and only concerned with their benefits and retirement pensions. These defined benefit pensions must be stopped. Investigate the misuse of welfare and AISH.	Streamline regulatory hurdles to working on Crown Land. Use common sense in environmental regulations.
t0e	1. Education 2. Health and Wellness 3. Job Creation	Redundant jobs and under used public service positions.	Ensure that we control our own destiny in the oil and gas sectors and stimulate growth in those areas. Take steps to gain more power in the decision making process regarding our growth within our resource sectors. Feds be damned!
T0E	Senior's facilities	Consultants	Expanding renewable resource sector, tax breaks for small businesses
T2S	Healthcare, education, diversification (funding for startups, technology etc)	Within government itself	Invest in infrastructure development, support and fund industry diversification
T2E	The handicapped, education, cancer research. Look after our disadvantaged, young minds and conquering cancer.	A 3-5% provincial sales tax would afford the government to have the money needed, rather than cutting back on services. The MP's could take a bigger pay cut as well.	Diversify , Diversify, Diversify!! Have incentives for green energy and tech companies to invest in Alberta
T5R	Healthcare, education, people in need	Healthcare supplies, ie, disposable scissors cost 10 cents, OR scissors cost 150\$.	Cut positions from above, upper management is redundant. There doesn't need to be a manager for a manager for a manager. Or cut their salaries.
T4X	HEALTHCARE - SPECIFICALLY MENTAL HEALTH EDUCATION	BY NOT THROWING MORE CASH AT CORPORATIONS	FOCUS ON SOMETHING OTHER THAN OIL SO THAT PEOPLE INCLUDING OUR CHILDREN HAVE OTHER OPTIONS AND DONT HAVE TO RELY ON A FADING RESOURCE. ALL EGGS - MANY BASKETS MAYBE??
T6J	Front line health care, education, the public service	Get rid of the "war room" - it is not helping, the physician compensation budget suffers from abuse and over payment of physicians, increase corporate tax.	Invest money in Alberta rather than taking it away. When you reduce teacher, nurse, public sector salaries you are taking money out of the economy as they have less to spend. Therefore, the economy suffers which leads to a recession.
T6a	Post secondary education. Lrt	Raise taxes.	Invest in post secondary education
T9J	Health and education and investments in green sustainable technologies. If you don't pay teachers and health care workers a competitive wage then they will go elsewhere and we'll have a brain drain crisis happening.	Maybe all you MLAs should take a pay cut since that's what you seem to want to do to everyone else who is in the public sector.	How about stop discriminating against young people and repeal that clawback in minimum wage for young people?
T3E	Social programs such as health care, education, and other supports systems that provide a social safety net for it's citizens.	Government is not a person, and should not focus on acquiring wealth. To fund their programs, they should invest in and potentially also operate within growing industries such as technology, alternative energy/sustainability, and medical research on the global market.	Create projects and growth initiatives within the province that focus on innovation and sustainable resources. Put funding into research and development of technologies that will improve our overall quality of life and foster community. In addition, focus on growth industries that require funding to start up rather than industries such as oil and gas that operate within a declining industry.

T7x	Not corporate handouts and increases of living expenses for workers, also don't lower people's damn wages.	By not giving 4.7 billion to corporations that don't need it and skip the country with our money. Firing Jason Kenney	Diversification of the job market, you know, the market that Kenney defunded everything from to pay for his gigantic handouts to the rich.
T5N	Healthcare, education, poverty, and job creation.	Alberta energy war room and corporate tax incentives that clearly didn't create jobs.	Diversifying economy and not going all in on just oil.
T2t	Clinical frontline care in health care, educators , etc. Primary care	Admins/ management in every sector. Benefits .	Invest in tech sector education/ recruitment
T5Z	Spending should focus on departments with 'people' impact Community and Social Services, Justice, Health, and Education.	Some departments are not structured efficiently. Some departments, for example, Status of Women should be dissolved with those costs being allocated to other ministries.	The time has come for a 1-2% Provincial Sales Tax which could be used to directly fund programs to employers as a subsidy for creating positions.
T3L	Health. Education.	Stop incentive's to already wealthy corporations.	By supporting industries that actually employ people and do not lay people off to increase profits for non-productive share holders.
T0h	Public entities of education and healthcare... Helping our system get better, not take away the staff it needs. Stop tax cuts to large corporations who have clearly said the will leave anyways, ie husky, and focus on small corporations who have more to gain by a partnership with the government	With a 1% PST and forced cuts in the overhead administration of the AHS...not leave it up to them to save their own jobs and cut frontline workers. Frontline workers, ie nurses, do not need their overtime or shift differentials cut....they earn that.	Help the little guy and stop helping companies who are making millions in profit each quarter and still laying people off. Small businesses, even in oilfield, have more incentive and more to gain by partnering with the government than Husky or Shell.
T0K	Health care, education, renewable energy, power grid storage	less embellishment on new government buildings, eg: no glass floors in hospitals that cost millions when concrete would work. stop using private jets when 1st class on a jumbo jet could save thousands	fund research into cleaner more efficient automotive engines to possibly develop a new and reliable vehicle that could be built in Alberta, try and change the way we depend on oil(an irreplaceable and necessary commodity) Become a leader in efficiency as the world views on climate and energy change, waste less, worst case scenario we make the world a better place and get known for and prosper from new ideas instead of always competing against oil superpowers that can easily extract and get to market.
T6G	Education (primary, secondary, postsecondary), health, economic diversification	Austerity is a sucker's game. Alberta needs a sales tax and needs to repeal the destructive corporate tax cuts.	Stop focusing on just oil and gas. Alberta's future lies in other sectors, yet they are being ignored by this government.

T8N	<p>Focus spending on programs that support healthy communities, programs that encourage partnerships and collaborations.</p> <p>Arts and cultural programs that have a positive impact in enhancing the quality of life for Albertans.</p> <p>Programs that support those in need, and invest in prevention, treatment that encourages long term healthy lifestyle and life skills.</p> <p>Integrated social and cultural programs that support collaboration, efficient use of resources by working together to create healthy creative communities.</p> <p>Investment in Reconciliation initiatives, requiring municipalities to ensure they are addressing the TRC calls to action.</p>	<p>Increase taxes for larger business and corporations.</p> <p>Reduce travel and expenses on Government travel ie business class not permitted</p> <p>Require developers to more significantly invest in the creative design of healthy communities include a variety of housing options, including housing for vulnerable populations, access to support services, and an opportunity to share services, walkability, access to services such as grocery stores within walking distance etc.</p>	<p>Investment in programs supporting growth in a more diversified economy such as the creative and cultural industries.</p> <p>Support for programs that encourage social innovation and social enterprise; empowering people to help themselves by providing supports to enable them to learn and work collaboratively to support themselves and the broader community.</p>
T8A	Education and Healthcare	Quit wasting money on your 'War Room'. Who is Alberta at war with??? Do you even know what being at war means??	Let go if the user and your delusions about getting to oil boom if the 70's, 80's and 90's back. Start supporting a move into sustainable energy resources.
T2W	Supporting essential public service jobs - hospital, fire, ambulance, school.	Cut handouts to corporations who only fund their shareholders.	Recognize that Alberta MUST support other industries with the same or more zeal than oil and gas. The arts is under recognized as a huge employer in the province.
T1K	Education and healthcare	By monitoring their AISH patients. We see it all too often that service being abused and wasted, there needs to be more accountability and more follow-up with the patients.	A happy, contributing, stable society is an educated and healthy society. By cutting/freezing findings towards education and health care you are directly opposing having a healthy and educated society capable of contributing. By making post secondary more expensive you are increasing not only the amount of student loan debt but also increasing the amount that will require the assistance plan to repay, increasing debt. Create jobs by allowing the healthcare professionals to have jobs and teachers to teach. The more educated the youth are the better we are going forward.
T1A	Universal child-care, funding public healthcare, and public education.	Continuing with changes to doctor's compensation, they're taking advantage of the system as it is now.	Fund universal child-care. Every \$1 spent on childcare results in a \$6 boost to the economy in the long-term by inviting more young parents, especially mothers, into the workforce.
T8X	Front line health care workers, teaching professionals, and pipeline development for oil & gas sector. Inflation control; household utilities and grocery prices are insane!	Wage rollback to the higher management roles. Eliminating positions/middle persons in management that have duplicate job specifics....ie: multiple positions that report/produce identical paperwork.	No lay offs. Support employment in front line positions, oil/gas production/pipeline development, refineries for our natural resources within Canada.

T1K	Education and healthcare	By monitoring their AISH patients. We see it all too often that service being abused and wasted, there needs to be more accountability and more follow-up with the patients.	A happy, contributing, stable society is an educated and healthy society. By cutting/freezing findings towards education and health care you are directly opposing having a healthy and educated society capable of contributing. By making post secondary more expensive you are increasing not only the amount of student loan debt but also increasing the amount that will require the assistance I
t6c	Health Education Environment	Axe the propaganda office and efforts to "get a better deal" from Canada. Other Canadians have no interest to support Alberta's structurally higher incomes and lower taxes. Stop fighting the carbon levy.	Effective program spending. Fix our tax system. Reduce inequality. Consider expanding the property tax to fund general revenue, not just education. This will reduce our massive collective over spend on housing which sucks productive capital to private use.
t1p	lower taxes and get people working	no war room	oil and gas
	Supports for students with needs -mental, physical, behavioral	Cancel the war room. Take tax incentives back and give the money to sectors that are underfunded.	Diversify. More public works projects. Maintain funding versus decreasing it which leads to higher unemployment.
T6J	Healthcare and education.	Cut politicians salaries and pensions.	invest in infrastructure, inventivize tech and green energy growth. And make post secondary education more affordable.
T6j	seniors and disadvantaged getting public funding and rest of society paying their way.	Bureaucracy is too large. Public funding is expected - change the expectations.	Tax credits and innovative tax programs.
T6E	PUBLIC education PUBLIC healthcare Funding to support GREAT research and researchers at our post secondary institutions Cities/municipalities	Disband the Canadian Energy Centre (War Room) Stop giving tax breaks or "handouts" to large corporations Fossil fuel subsidies Stop undoing everything the last government did. This wastes taxpayer dollars and resources. Move forward on other files. Don't waste money undoing.	Invest in grants and other incentives to help diversify Alberta's economy. Especially in tech and clean energy. Invest in grants and other incentives to retrain our talented oil and gas workforce Stop public sector layoffs. We need these people to remain employed so they can pay income tax and support their families, spending money at local businesses.

T3h	Healthcare save education	<p>Not bailing out large O&G companies who, through years of financial management, are in trouble. The industry is saturated.</p> <p>Look for ways to trim redundancies not front line workers. Why aren't we pointing upwards? For example, there's a lot of talk of cutting teachers wages, no increases for what 8 years now, decreased Prep time, because it's acceptable to take work home I guess, and we're decreasing funding for equipment and teaching materials. The students suffer but there's no talk of creating a leaner not agile hierarchical structure where management is trimmed and made efficient. When they're the ones with the high salaries.</p> <p>When it comes to nurses, start increasing full time FTE so that we're not paying so much in OT. I know as someone raised by a family of nurses that in order to make big bucks like the wages reported by the govt those nurses had to work a butload on OT and they're able to bc the staff is needed but there's no funding for ot. That's hugely inefficient.</p> <p>Stop scraping years of work to satisfy egos. The curriculum changes that were started under the consecutive govt and took years to develop but actual educators didn't need the ucp govt to rework it.</p>	Focus of getting other industries here and fostering growth of emerging industries like tech companies.
	Pipelines and health care	<p>Salaries of top earners in publicly funded industries such as health care and education should be cut, so as to preserve the jobs and rights of the front line worker as well as the quality of care received, which will decline with the current proposal. Cut management!!!!</p> <p>Also, with the current method of post secondary funding based on merit, continue that</p>	Cut management, continue to fund front line workers
T9M	Health and Education	Cut M.P salaries. Stop corporate giveaways. Kenney take a pay cut.	Reduce taxes for the middle class. If the people have no money to spend, the economy slows.
	Health care and pipelines and education	By not supporting immigration as heavily, and by keeping healthcare public.	Continue to fight for the oil industry, work to further medical research, work to discover fossil fuel alternatives
T0H	Healthcare needs to be maintained. There are cost savings that could be found in healthcare, but not frontline staff. Talk to the frontline staff and they can tell you where.	In all honesty, we probably need a sales tax. There can only be so much savings. It is revenue that is needed.	Promote shop local. Encourage movement to smaller communities.
T2L	Public Education at all levels. Most important is public education which the majority of students attend, not private, religious institutions, which pulls funds from the public system that has to accept all students. We need a highly skilled workforce in the future, they need real teachers, who are paid as the professionals they are. Focusing on standardized testing, and performance ratings for schools is pointless.	Tax cuts for wealthy corporations are the wrong thing to do. Corporations distribute the money to shareholders (who have little skin in the game compared to employees, who spend a large part of their working lives with a company. People spend money in local economies and hence create demand in Alberta.	Diversify the economy. You are scaring away diversification with your policies. Oil and gas is not the be all, end all. Don't pell-mell lay off teachers and nurses who provide part of the social safety net so important to people, especially the middle and lower income groups. Quite frankly if you don't know how to support job creation, you shouldn't form the government.

T3b	Education, infrastructure, diversifying the economy	Personal govt paycheques, increase tax to large corporations, increase tax on the wealthiest, be efficient in own operation,	Diversifying the economy, offer incentives for new industries to set up shop here, incentives for small business owners to expand
T8N	Health Care Education Seniors	Elimination of Alberta Energy War Room investment Capping Salaries and wages to 0% Organizational structure review programs and service and elimination of layers (unnecessary hierarchy)	One time investment in municipal capital projects Tax incentives to encourage investment in growing diverse industries (eg technology based)
T5W	Health and education	Large corporations!!! Government salaries	N/A
T3b	Health Care costs	Health Care: 1) speed up the connect care rollout (can go much faster if we enforce better/enhanced physician training as non optional). Another strategy to quicker roll out would be on line training - with this we can rip the bandage off and just implement across the province faster (9 waves is too long) 2) let leaders be strategic (its what they were hired to do) - and eliminate the redundancy of the "strategic clinical networks" 3) decrease the physician wages 4) eliminate special leave days and x days in the UNA nurses contracts	As above - don't cut jobs at the front line level in health care. Lots of options to save millions of dollars and yet maintain front line workers
T4r	Education Health care Services to albertans	Get rid of war room. Get rid of red tape reduction ministry	Support trade school and post secondary education. Stop scaring off oil companies with attack on environmental issues.
T8A	Put money back into healthcare and education. No one voted for you to cut these areas.	Cut back on government employee perks like attending conferences on the taxpayers dime. As a nurse I don't even get mileage to go to a meeting within the city limits. We can't even order paper clips. This is ridiculous. The disparity is unbelievable. Whatever rollbacks you do to nurses do to yourselves as well. No car allowance for my job that requires me to drive around to see patients all day?? Then no car allowance for you either. It is far cheaper to pay for mileage than keep these patients in the hospital. Use your heads people.	Invest in education and new businesses.
T0L	Keep going with the oil and gas war room. Choice in Education. Tackle the debt.	Health is a big one. Kudos for what you've done so far. But every department needs a hold on spending increase.	Pipeline construction. Get red tape out of the way of private investors.
T5X	retaining teachers, healthcare workers, and university faculty, and administrators. Build pipelines in interim but use some revenue to transition to sustainable energy.	Work with existing infrastructure including in schools, hospitals, and universities rather than spending on new buildings unless building is condemned or beyond capacity. Stop spending on new art exhibits. Put education and healthcare money into staff, students, and patients and not show pieces. Cut back on perks for MLAs and the premier such as luxury travel accommodations. Nobody needs taxpayer money spent on private jets or first class.	Have programs within post secondary and trade schools which guide students towards jobs at the end. Stop killing teaching and healthcare jobs in schools, hospitals, and universities so students can get adequate support and mentorship to be able to find work upon graduation. Have grants and mentorship to help disabled people use skills to start small businesses if limited ability to work in public sector.
T5S	Health and education	Management, tax breaks for companies.	Incentives to cost share wages. Much cheaper than tax breaks.

T6M	Returning funds to Alberta healthcare services and to the education sector.	No more corporate tax cuts for the fossil fuels industries (\$4.7B), no more energy media "war room" (\$30M)	By diversifying the economy. Green energy infrastructure will require jobs. Help coal and oil workers transition with subsidized re-training programs. Also promote migration of tech companies to Alberta.
T6w	Healthcare.	Reallocating money in Ahs so frontline staff stop being attacked and we can maintain quality of care. Realistically there evaluating upper management and examining wages. Nurses are easy to cut but if history has taught us anything in this province it is that these actions are dangerous. Secondly if nurses will have wage roll backs to mimic Ontario or any other province - we should expect the same nurse/patient ratio and scope.	There has been no job created with tax breaks thus far. I'm not an economical expert but times are hard for the "little man" and big corporations have had it made for them. Doesn't seem right.
T1K	Education and health care.	Stop giving politicians raises and tax breaks. They should only have increases based on inflation, not because they sit in an office. They do not need tax breaks. If regular citizens have to pay increasing taxes so should politicians. Those alone will save our government copious amounts of money and allow us to stop the cuts affecting our youth.	Continue to push for the pipeline so we can get our oil to market. However, do not do it to pad your accounts, rather do it to pad the futures of our youth and to provide adequate funding to our healthcare.
T5Y	Education and Healthcare.	Focus on revenue generation, increase taxes.	Education grants to retrain workforce. Attract tech & other non-traditional Alberta industries with grants and programs. Provide transition income for those leaving the workforce to start a small business. Stop austerity measures to give companies confidence in our province.
T3B	Diversifying the economy and not just focusing on oil and gas. Funding vulnerable populations. Funding public education and health care.	Get rid of the "war room" Provincial sales tax.	Diversify the economy, support small businesses, support alternative energy sources, encourage growth in the technology sector,
T2T	Education and healthcare	Payouts to Oil and Gas Companies	Support small business, local initiatives and fund education and health care
t3b	Education (k-12 and post secondary), health care, infrastructure	provincial sales tax, increased tax to wealthy Albertans	Youth employment, investment in universities- particularly sectors that educate population in areas of economic growth.
T3K	Education, Healthcare essentially the universal needs that unite us.	The government could find savings in itself. Alberta spends more per capita on politician and Red tape compared to other provinces. I'd they can cut education with this same philosophy they can find savings too	Look at progress make Alberta great by not relying on the world to keep us alive
T3H	Education, Health Care, stimulating jobs	Removing tax cuts for wealthy companies that aren't re-investing the savings? I think bringing in a provincial sales tax would be better than trying to make deep cuts. Everyone can use a little fiscal responsibility but when there are collective agreements involved, cuts just mean people will lose their job.	Investment in infrastructure and capital projects.
T0K	Education and healthcare	In the pockets of the wealthy people we cut the taxes of	Investing in technology to move us forward. Sticking to oil alone leaves us only with a dying industry to support us. Looking to the future is more likely to keep us at the front of innovation
T6M	Education and public health care	Corporate tax rates	Support the pipeline

T5g	Reducing waste of tax payers money, And overpaid executives in public sector. In many countries salaries are capped, often not more than 200k. If they think they are worth more, the private sector can hire them...and you will see what happens.	Automation, stop rehiring retired employees, over time, getting with the times in health care (eg. Look at other countries how efficient they are organized), maintenance enforcement program by hiring competent people who understand math, automation, family law by implementing equal parenting by default (as in many modern jurisdictions, research shows its best for the children) saving lots of tax payers monies...lawyers don't like it...as it is legalized mafia. Education, organize it more efficiently. Human services, make them accountable. Stop corruption , it is all over here, up to city level. Maybe look at agriculture as that has to modernize and get with the times. Look at other countries...the Netherlands is a small country and the 2nd largest agricultural exporter...	Getting with the times, diversify, stop subsidizing the oil and gas, stop corruption . Modernize banking, is about 40 years behind and expensive.
T6G	Education, healthcare, infrastructure.	Raise taxes, specifically on large corporations but I would be open to a sales tax.	Support retraining and diversify our economy.
T7Y	Education and Healthcare. It is that simple. Putting money into education is putting money into our future. Our education system is saturated with more and more trauma cases, special needs and children who have survived medical challenges that would not have been previously possible. It is POSSIBLE to support and create an educated population with the proper resources and supports for our educators. If we keep stretching teachers, admin and school boards too thin, they will break. More and more teachers are leaving the profession as the demands are unreasonable, the challenges greater and the whole do less with more has reached it's end point. Spending money on healthcare is also imperative. Our healthcare system is also stretched to it's breaking point. The reality is people get sick . . . thousands every day in our province need this service. Keeping our population healthy enough to give back and support our elderly who have given to the system for years should be the least that they can rely on.	I rely on those that have been voted in to figure that out. This is not in my area of expertise and we vote qualified people in to do the math.	Same answer as above.
T4C	Public infrastructure, healthcare front line workers	Digitizing project administration and contract administration	Innovation & technology grants, public infrastructure projects
T9c	Building refineries for our oil.	By not sending equalization payments to Quebec.	No more equalization payments to Quebec spend the money in Alberta.
T3e	Education k-12 Mental health	Stop subsidizing for profit businesses. Prevention (health)	Not sure

T9m	Education. Children are our future and without a proper education what would our world look like in a couple more decades.	I do not really see the point... the next government to come into power will just spend it.	Stop laying people off that we need and are important. Example: teachers, nurses/doctors, and oil and gas workers. we need teachers to educate our future and it is such a hard job already. We need hospital workers to help us when we are down and sick and to also keep up with our over flowed emergency rooms from free health care. Oil and gas workers keep ALL of houses and cars going in the winter. It is a big part of Alberta but we are trying to turn our backs on them and on Albertsons for living in a place where if you can't pay your heating bills, you'd freeze to death..
T4S	1. Improving front line health care by increasing beds and functional hospital space in rural areas and increasing the number of new (lower paid) nurses and support staff. 2. Improve primary education by consolidating the public and Catholic systems, increasing number of teachers and support staff. Using admin reductions to fund better programming in elementary schools so that every (including rural) school has a music program, good outdoor education program, a chemistry lab, etc.	Three areas: 1. The heavy burden of excessive administration must be curbed including doubled primary education systems, the high admin expenditures in post-secondary institutes (layers and layers of Deans, chairs, directors and on in-school "institutes" each with their own cadre of secretaries, communications staff,) and the mind-boggling number of unionized staff within the GoA itself; 2. The discredited notion that corporations that enjoy monopoly or otherwise non competition environments such as universities, boards, public utility oversight bodies or Aimco need to pay upper management competitively with private industry. For example, the presidency of the UA or UCalgary could be paid \$75,000 and still attract a new business graduate with no loss in leadership; 3. Reduce the number of publicly- supported boards. These typically have no accountability, using tax dollars to pay executive salaries that are unconscionable and operate as nepotistic old-boys clubs. For example, other provinces don't need to spend hundreds of millions on an equivalent of Alberta Innovates yet all provinces have about the same amount of in-province innovation and entrepreneurship.	Two areas: 1. tax credits, not up front payment, for the reason that it shifts the administrative burden to the companies who are the presumed beneficiaries of the innovation. Within government it takes 20% to disburse innovation funding. Think about that: for every dollar the GoA marks for innovation and job growth support a maximum of 80 cents actually goes to where it is supposed to and the remainder pays unionized staff, whereas tax credits eliminates that almost entirely. 2. Fund Ong and tax supports for alternative energy companies to transition Alberta to a no-carbon economy within the next ten years.
T2v	Education Healthcare	wrong question. Should be how to raise revenue. Introduce sales tax.	Prime the pump with some spending.
T2R	Healthcare, PUBLIC education, and infrastructure	Less subsidies for oil and gas companies.	Look for ways to diversify our economy - dependence on oil is ultimately going to lead to job loss and economic decline in the long term. We should be supporting other forms energy production. We should be welcoming tech companies!
T1H	Health care	Cutting back on social assistance programs and enforcing stronger guidelines for approval.	Consider sustainable industry. Put money into healthcare and education
T5M	Healthcare, education, civic infrastructure (particularly transit), renewable energy.	Remove the bullshit tax breaks for oil companies that have done nothing to create jobs.	Invest in the renewables industry and the tech industry. Both are growing globally while oil is declining and becoming irrelevant.
T8A	Education and infrastructure	Stop giving tax cuts to gigantic oil companies	Small business tax cuts
T3a	Public services	In the Private sector. Stop your "Alberta is Broke" spin. Stop the lies just so you can spend \$\$ on O/G	Ask the public. Have a referendum

T0P	Preventing Rural Crime, Alternative schooling efforts	Grants, Public Education,	Keep Fighting the carbon tax. Create our own firearms programs to make opening shops, gun smithing and training simpler for entrepreneurs.
T8N	Education and healthcare	Less upper management within healthcare, pay cuts to higher ups in AHS	Fund the construction of more long term care facilities
T2Y	Health Care and Education - front line workers	Corporate Tax Cuts - not necessary. Overpaid government MPs and ministers.	Rational spending priorities. Let small businesses create.
T6L	Healthcare Education	Wealthy people could pay more taxes.	Stop cutting jobs. Start investing in green projects.
	Affordable Childcare, healthcare, education, persons with disabilities, AISH, ALL services that support vulnerable Albertans	Stop giving tax breaks to rich corporations. Stop hosting events. Bring back carbon tax	Stop punishing public servants for oilfield job loss. Stop treating portions of the workforce as if they don't make significant contributions to the economy. Close the gender pay gap by ensuring affordable child care is available, fair and transparent hiring and pay practices are in place for all organizations. Work towards ensuring gender parity in leadership positions as research shows that more women in leadership roles increases GDP.
T6W	Paying down the provincial debt	Cutting funding to private and Catholic school boards. Cutting funding to post secondary education.	Corporate taxes were reduced from 12% down to 8% to increase investment. Make mandatory re-investment in Alberta of the 4% taxes. Several companies have simply taken the money and spent out of Alberta.

T5C	<p>While the government is rightly concerned about getting the provinces finances back into the black, after the years of the NDP and red Tory rule following the retirement of Ralph Klein as premier. However they need to keep in mind that the mismanagement of the former governments led by Notley, and Allison Redford threw the budget restraint to the wind, that same mismanagement has left those of us who are the most vulnerable in a very bad place. The combination of such mismanagement and the carbon taxes first put in place by Notley's NDP government and then followed by the federal liberals carbon tax forced onto us even though the provincial government removed the provincial carbon tax the federal one has left we who are on AISH struggling to make ends meet to the point that we are forced on regular monthly basis to rely on the food bank in order to make sure we're able to eat for the whole month. Thus the aish needs to go up by the same amount that this insanity of Carbon Tax has driven up the cost of everything that has to be transported to the stores from groceries to clothing and more. Thus it does need to increase by a minimum of \$300 per month. That would place us in a position that we'd be able to make ends meet and possibly be able to afford the occasional luxury like a new pair of shoes or the occasional treat like a glass of wine to celebrate our birthdays. None of which I personally can't afford at present I haven't been able to do that for over six years, since the last increase in 2012.</p>	<p>You can find savings in the public sector and it's exorbitant and out of sync with the real world salaries. The current provincial public sector salaried are so much out of sync that they have never had to feel the pain that the average private employment workers have felt for the last several years since that same year of 2012. Thus they need to be made of feel that pain including the risk of having to change careers or move into the private sector as those who pay their salaries have had to do. Add that some of these costs can be cut by finding efficiencies in the governments operations like computerization of records and the way that the bureaucrats handle their jobs. There are far to many stories of bureaucrats and other public sector workers other than the one's who actually work for a living like the maintenance workers for the department of highways and other vital functions that we tax payers pay for the infrastructure have been overridden by the inside bureacritic paper pushers who the supervisors have used to build their own private fiefdoms while ignoring the essentials that the frontline workers have to deal with. So maybe before cutting the frontlines look at how many managers and other supervisory staff are being paid just to manage the work while the frontline staff in the various departments like health, social services, seniors services, etc are facing short falls in their numbers.Q</p>	<p>Allow for training and retraining of those workers who have lost their jobs to find employment while our energy and agricultural industries get back on their feet. The most important thing to ge the economy moving again, is to get the province out from under the regulatory boot of the federal government. It's been proven over and over since the current prime minister's father was first put into the Prime Ministers office and even before in the government of Lester Pearson changed the national flag to appease the people of Quebec by creating the maple leaf symbol that only symbolizes that one province and only grows in that one province. It's time to take a leaf from that corrupt province and start taking control of taxes, pensions, and more that the federal government currently controls. By removing the control that the federal government from those areas of governance like the Quebec government has done since the nineteen eighties under the various PQ governments, as such. If the federal liberals refuse to redo the equalization formula that has been sending such a large proportion of Albertan's tax dollars and cpp contributions, and EI premiums to largely Quebec to the tune of nearly \$20billion per year that has allowed them to balance their budget and create such luxuries as the lowest post secondary tuition fees anywhere. The tool that province has used to get these advantages was the constant threat of separation, that is why we are so weak by insisting on a federalist viewpoint we are weakening our own argument against the federal liberals. Thus we as a province need to focus on the provinces and the people of this province needs not on how we can appease other provinces nor on how we can bargain with the liberals. Thus the answer is to make a strong stand with the absolute threat of separation and the corresponding loss of our petro dollars which have propped up both the federal government and thusly Quebecs government as well. That is how we win our autonomy and freedom from the federal liberals insane policies like gun control laws that do</p>
T5Y	<p>Healthcare, increasing post-secondary education incentives to help educate our students, increasing municipal funding to provide key infrastructure like LRT lines and public libraries.</p>	<p>Stop giving away millions in incentives to big corporations including in the oil and gas sector.</p>	<p>Investments in an environmental sustainable future has enormous potential for economic growth and diversification which will ultimately lead to job creation.</p>
T5B	<p>EDUCATION AND HEALTHCARE</p>	<p>Tax higher earners</p>	<p>Invest in more education</p>
T4A	<p>School-smaller class rooms sizes. To many kids in one class. Keep fighting for our oil industry Getting rid of the carbon tax completely.</p>	<p>No pay increase for politicians Stop sending so much money to Quebec. Be stricter with people on welfare-no drugs or alcohol. Should be needing the essentials if on welfare nothing else.</p>	<p>Keep pushing for our pipeline to be completed Bring back coal burning plants</p>

T0a	Health Education Infrastructure	<p>Canceling tax breaks for corporations we all work together to balance budget. Once balanced we all enjoy benefits</p> <p>Consider a PST</p> <p>A reducing tax for debt reduction. Ex Starts at 6% reduces 1.5% each year until 0%.</p>	<p>Continue efforts with pipelines.</p> <p>Tax breaks or incentives for projects started or expansions of existing projects, not broad tax cuts.</p> <p>Infrastructure projects</p> <p>Affordable day care</p> <p>Maintain funding to health/education</p>
	Post secondary	Eliminate the red tape reduction ministry	Fund health and education. I'll never vote UCP the way they are going with this.
T4r	<p>The court systems need to be repaired and getting criminals off the street</p> <p>I also believe we should be getting our province ready for the separation or independence</p>	<p>I believe there is savings on every level of government that could be cut</p> <p>There is also what I believe to be a lot of money being mismanaged in the government, healthcare and schools</p> <p>Should be adding more teachers and less big screen TVs and crap</p> <p>The government needs to stop taxing the shit out of its citizens on all levels</p> <p>Immigration needs to stop ASAP</p> <p>This is a burden on the tax system and healthcare system and tax payers should not be expected to pay</p>	<p>Here's a idea how about you make it easier for actual albertians to start business</p> <p>The government fucked up the economy and many families have suffered and lost had to claim bankruptcy due to it as well</p> <p>I find it extremely funny that all these immigrants that come here from Syria and from where ever else and have nothing yet are going in business within a year of being here</p> <p>Nothing on back from third world country now soap producers or restaurant owners</p> <p>Yet I had to build credit bank money to start my business as there are no government grants for actually albertians just to run and be successful for 7 years just to have you guys put me out and no it was not oil field but felt the trickle</p> <p>Had to claim bankruptcy and lost everything so where is my help to get back what I had where is my help to make a better life</p> <p>I tell you what Kenny I had great faith in you when I cast my vote and can tell you I have lost just about all of it</p> <p>You are right albertians are patriots</p> <p>I see now you are not</p> <p>You say you won't let Trudeau push you out of your own country. Then move back east or get behind the people of Alberta you know we want separation!</p> <p>Remember we are playing chess not checkers oh wait last time I checked we weren't playing fucking games</p> <p>I can tell you if we don't see a referendum ASAP on separation I can ensure you next time you will not have my vote or any from my family</p>
T8A	Healthcare, education and environmental issues.	Halting the province's challenge of the federal carbon tax would save millions of dollars. This challenge is a huge waste of time and money. Also abandoning the group that has been formed to investigate the alleged interference of environmental groups into the province's oil and gas industry would provide savings.	Diversifying the economy away from oil and gas would create new jobs in emerging industries. The province must rely less on oil and gas revenue and its ups and downs.
T5M	Education (K-12 and Universities, especially U of A), and healthcare.	Increased taxation on upper class and big businesses.	Increased taxation of the rich and big businesses, increase AISH and PPD.

T6L	Schools, funding alternative energy sectors jobs, hospitals, Alberta healthcare, aish, public funded labs	Stop the 'war room', stop corporate handouts, cut politician pay	Invest in alternate energy sectors to bring more work and employment, tax incentives for new industries (not handouts), invest in infrastructure, invest in education and hospitals Stop being twats and giving money away while trying to privatize everything.
T9E	Healthcare, education, infrastructure.	Eliminating unnecessary spending on things like the Canadian Energy Centre, and the many panels that are reviewing things that have already been reviewed recently (like the curriculum or the CBE spending), or the advisory groups that write reports like the McKinnon report to tell the government exactly what they want to hear because the group has been stacked with only people who share their political ideologies.	Not with the corporate tax breaks they gave out last year - those didn't create jobs or spur economic growth! But rather by spending a bit of money to create jobs (infrastructure, education, healthcare, research, etc) because more people with more money equals more spending and therefore more jobs created due to that spending. All of this puts more tax revenue in the government coffers.
T1A	Health, and education.	Throwing money at big corporations that are not creating jobs.	Look at more reusable energy sources and economic companies instead of putting money into oil. Oil is important but it will never be where it use to.
T2J	Keep front line employees working, ie nurses, police, fire, teachers,,, cut Managers and big wigs making 200,000 plus. Leave the front line people and their pensions alone!	Calgary has two EMS call dispatch centers,, one run by AHS and the other by the City of Calgary. Save millions by getting rid of all the little satellite EMS call centers like, Calgary, Red Deer etc. Either consolidate all EMS Dispatch or don't but do not do both. Rural patients suffer and money is wasted.	Encourage the hiring of front line workers and cut the excess of Managers that exist in every government and public service agency.
T5T	Health Care we need family Doctors.Make life better for the working poor, put insurance caps back, rental control.	Cut expense accounts, travel, wage freeze or cut back all senior government employees.	encourage investment with small/medium business tax incentives
T4V	Healthcare and education.	Issues management department seems like a huge waste of money. A war room spending over \$80,000 per day is absurd, when all they do is shout into an echo chamber. Eliminate the catholic education system as it redundant and archaic.	Diversification away from oil and gas dependency. Green energy and tech development are the way of the future
T1J	Health care and education.	Less middle management in govt operations, more streamlined processes. Don't add to paperwork. People are now in hospital at least 3 weeks longer because of new paperwork.	Diversify, invest in technology, and wind and solar energy. Invest in more agriculture and ranching/farming. We are not only oil and gas based anymore.
T8n	Public Education, public healthcare, aish.	Fewer subsidies for oil and gas corporations. Tax the rich. Tax corporations more.	Tax the rich. Invest in education, alternative energy and technology
T0M	The govt should focus deeply on reducing spending and streamlining our social programs. We can spend the same or less and get 10x the service of you put common sense in charge of hospitals and address runaway corruption that exists in govt on many levels	Stop contributing to the CPP, EI, create Alberta versions of both, preferably not a redistribution of wealth scheme, scrap equalization and QUIT SENDING BILLIONS TO QUEBEC	Lower personal taxes and collect our own taxes, keep the federal mismanagement of Alberta to the bare minimum. Challenge bill c48 and c69 and block hwy 1 and shut off the oil leaving Alberta until we get energy east BACK and TMX being built.
T2Z	Healthcare, Education, social programs.	Cut corporate handouts, get rid of the 'War Room'.	Probably stop laying people off paying a living minimum wage and people will start spending money they earn and creating economic growth.

T0j	None, Currently the province and it's municipal governments are drowning in red ink. How about across the board cuts and a freeze on any new spending until there is balanced budgets.	Government can find savings everywhere it's not hard. 10% to 15% reductions to departmental budgets across the board. Pass a law that requires a third party to negotiate labour contracts on behalf of the tax payers, politicians far to easily use labour to promote there agenda "Alice Redford promising teachers tax credits 5minutes before an election". Stop the corruption, \$300.000 going to Red Deers new Pickle Ball Club, trust me there is corruption everywhere. The province has been mismanaged going all the way back to the 70's, any fool could govern when it rained money but that's gone now, squandered. Do the right thing make the deep cuts required to put the province back on track.	Simply put, Stay out of the Way! Red tape and regulations are killing our country and causing investment capital to flee our province and country to go south. There are to many laws out there killing investment and causing hardship on the citizens and mostly just to collect some petty forms of more tax. Quit being in the business of being in business, your not there to make a profit off the backs of the people your there to provide certain essential services at the very best cost it can. Get out of the way and the free market will look after itself.
T8A	Education, health care, low-income housing	Try developing revenue streams in place of 'finding savings'.	Whatever you've done hasn't worked and isn't working. (Great job keeping Encana by the way) so maybe some new idea? Investing in education as a way to develop an innovative work force, investment in First Nation's ventures and diversification of the economy from resources and non-renewables.
T5L	Public healthcare, mental health, social security, affordable housing, homelessness, climate change, green public transportation, education, universal dental and pharmacare	Ending tax breaks and loopholes to corporations and high income earners. Create tax brackets for the super-rich. Long term savings will accrue through heavy investment in social programs. Work with the municipal and federal government to fund large projects. Reduce MLAs salaries to Alberta's median income. End wasteful spending on things like the war room and "western alienation" public consultations. Pilot a universal basic income project with the aim of replacing the current bureaucracy-heavy social assistance programs	Transition to a green economy, diversify the economy by ending Alberta's dependence on oil. Invest in postsecondary institutions and create more full time teaching positions. Invest in expanded healthcare creating jobs for doctors, nurses and homecare workers.
T0H	Increase aish and income support, education, healthcare, and public transit.	Tax rich people and big business. Srsly though. Shut down the silly and expensive public inquiry into foreign-funded environmentalists.	Economic growth - increase minimum wage to 18\$/hr Job creation - institute work guarantees and start building public infrastructure. Progressive tax rates for businesses: mcdonalds should pay much much much higher rate than floundering non-franchise ma and pa restaurant -for instance. Or, canfor/proctorandgamble should pay higher rates than small sawmill operators. Weve been giving rich people handouts for far too long.
T4A	I feel like whatever I say doesn't matter.	Nurses are going to strike and you will be fucked	Y'all don't listen to the working man anyway

T4B	HEALTHCARE EDUCATION DENTAL	TAX BREAKS FOR RICH DECREASING FUNDING FOR LARGE COOPERATIONS OVERSPENDING IN POLITICS	SUPPORT THE PEOPLE. SUPPORT THE PUBLIC SERVANTS FIRST. FUNDING TO EDUCATION and job training/courses/resources Reduce Money spent on middle men. Like CEOs, maybe far too much, nurses don't make enough, so why do I have so many managers doing nothing ?
T2z	Education and health care	Your salaries	By not cutting funding to education and health care
T6M	Debt reduction	A review of public sector wages. All public services have to take a cut.	By supporting private sector - reducing corporate tax. Hiring more public employees only increases costs to the tax payers.
T0e	The new government should make sure spending is on valued programs like health care, education and childcare. Without health care and social programming, employees will struggle more with their employment and if needs aren't met for vulnerable individuals, they will not be able to be productive members of the workforce.	Higher taxes for those in a higher income bracket. PST on certain items	Economic growth can be attributed to more than just job creation. When employees are valued and their voices heard they feel better about the job they are in
T4P	Health Care - Staffing with safe ratios	The upper administration in health care - AHS	By downsizing the higher ups in health care and providing salaries for front line workers
T6M	Maintain services in health, education and human services provided by the non-profit sector	Rather than focus solely on reducing cost, add a sales tax	Encourage diversification of industry in Alberta and provide support for research and emerging technologies, such as the biotech industry
T2W	Post secondary education	Eliminating corporate tax breaks and funding oil companies that just end up leaving the province anyway	Fund public health and education and take a few pointers from the ndp government that was doing a much better job than the current one is doing
T5A	Early intervention for our most vulnerable children. The dollars spent on early education far outweigh the money needed later in life to repair the gaps left by underfund early intervention. Focus on Publicly Funded education where all students are welcome! Let parents choose private education if they want to pay but public education should be protected and be properly publicly funded.	Stop sending public money to private education where the institutions don't have to accept everybody, parents can pay if they want it. How about stop giving millions away to corporations that didn't even invest here or stay like Husky Oil! Stop spending millions on a WAR room!	Stop cutting front line workers!!!
T3J	Law Enforcement.	Pensions, benefits and salaries of politicians and senior executives.	Diversify besides oil. Build pipeline and refinery. Food processing and meat processing.
T2R	Making post-secondary more affordable for students, especially those who have to cover the cost without aid from relatives. Transitioning Alberta to a green tech based economy and placing us ahead of the curve on the world stage. Province wide public transit. Bullet trains, for example.	Cutting the Canadian Energy Centre. Corporations can pay for their own advertising.	Ensuring education and career training are affordable and accessible. Grants and tax credits to make Alberta more attractive to the film industry. Penalize companies for leaving Alberta. Government owned province wide public transportation. This would provide long term jobs for its operation and make Alberta a better option for families.

T8H	Education and Healthcare	Reducing the bloated levels of management in most government organizations. At the same time having full transparency of spending and more closely monitoring spending would prevent many wasteful things that ive witnessed working as a contractor with Alberta Transportation.	Diversify the economy into renewables or tech by continuing to fund research into those fields and making Alberta desirable for something other than oil.
	Health care. I find it difficult to find a family doctor. Infrastructure spending.	Decrease MLA salary. Decrease teacher raises.	PST
T9A	Health Care; Education; Post Secondary Education; Childcare; Social Services for those in society who need a social safety net. Invest in municipalities, when people have jobs they invest in their communities, strong communities make a strong Alberta.	Eliminating the War Room, firing Matt Walsh, stop funding the useless Ministry of Red Tape, cut salaries for MLA's, stop jet setting to London etc on the tax payers dime.	Invest in diversity, infrastructure, the tech industry, support education from K-12 and into post-secondary. An educated populace is an innovative populace that creates opportunities for industry and entrepreneurs.
T3N	Education, healthcare, low income people, low income parents, seniors.... support Albertians not companies!	Stop giving out huge amounts of money to big oil companies.	Support all industries not just oil and gas! Alberta is not just oil and gas. I'm tired of hearing UCP job creations...it's not job creation when the UCP cut funding to legal aid, education and healthcare. How is that job creation?
	Healthcare and education	Maybe look into revenue instead of savings. Tax increase or bring back healthcare premiums	Fund healthcare and education
	School Healthcare Aish/ seniors Mental health Recycling	Our government wages could be cut back. Definitely no raises!! Reduce Government expense accounts, extravagant vacations, stop paying government that don't show up to meetings. Art installation that costs thousands that we don't need. Unused or less popular bursary programs. Help immigrants but don't give them more than our own poor. Just enough to get them on their feet and live decent so they can earn a living themselves. But they don't need 12000 worth of dental work. Reduce redundancy in workplace Don't bail out corrupt businesses.	Cheaper childcare so parents can go to school or get decent jobs and use their money on more things. Invest in aboriginal learning opportunities. Help stay at home moms of any age get back into the workforce. Invest in recycling plants in our own province. Invest in pipelines and solar energy. Hemp farms for paper, clothing and what not. Invest in innovation and science to create better and cheaper ways to do things. Science fairs and things like that.
T0A	1) Seniors' and low income health care combined with improved HCA performance metrics. 2) Frontline workers in Children Services, Health Care & Education. 3) Government inefficiencies and innovation 4) Reduced small business not big business taxes 5) Gang and organized crime mitigation and prosecution. 6) Rural and drug originated crime. 7) Indigenous reconciliation and trusting relationships. 8) Climate technology and emissions tax credit incentives.	1) Performance based retention and compensation of Government employees. 2) Critical review of discretionary spending such as Arts and Culture like Ukrainian Village vs. other founding cultures to invest in. 3) Forced retirement of employees eligible for full retirement. 4) 24/7 Health Center use vs. hospital emergency resources for public's' perceived emergency care. 5) Provincial Pension Plan vs. CPP but with goal of increased benefits vs. employer cost reductions.	1) Wood Buffalo region Nuclear power enabling. 2) Freeze Government and minimum wages to be at bottom of 75percentile of national avg. given have lowest personal and no PST. 3) Enable municipalities to afford tax incentives for business attraction; stay out of it Provincially! 4) Sustain competitive corporate tax regime.
T4P	Education, healthcare, social services	War room, more tax for the wealthy and large corporations, managers and high paid executives.	Make it affordable for people to get post secondary education or a trade so they have skills to enter the work force. Support small business and don't rely so much on oil and gas. Diversify.

T5L	Health care, social security, housing and reduction of homelessness, education, green industry jobs, climate change initiatives	Reduce tax breaks to high income earners and corporations, war room spending.	Transition to green economy, diversify industries, invest in the arts and culture. Increase funding to post secondary education including trade apprenticeships.
T5J	Education and healthcare	Axe the war room, axe the propaganda	Tax breaks for small businesses, increase tax on large corporations
T2V	Public education, universities, healthcare, addressing poverty, finding solutions for the climate crisis, transitioning away from fossil fuels towards sustainable energy.	Reinstate the previous corporate taxes that were cut last year, stop subsidizing the oil industry, stop wasting money on the "war room".	Move our province towards becoming a leader in green energy. Look for ways to diversify the economy. Reverse the budget cuts to education and healthcare that have resulted in the loss of hundreds of jobs.
T0J	Long term care facilities, hospice care, elderly care.	Alberta health services supply management and purchases, AHS middle management, AHS consultant fees, unnecessary tests and treatments ordered by doctors, reducing the amount of CT scans given to pts.	Diversify from energy sector, while supporting oil and gas at the same time. Provide retraining incentives and support so that families can change careers.
T0M	Healthcare, education, and public safety	Everywhere else	Hiring the number of nurses, teachers, and police officers we actually need, not just what their employers will tell you they need
	education health care	cut non essential services	gst!
	education health care police	Non essential services. No more private schools funding. No more provincial diploma exams in High School. Different salary for elementary, junior high and high school teachers...Ontario model.	3% gst
t6g	Climate Action, renewables, transitioning workers, healthcare, education, conservation	Axing the 'Canadian energy centre' & Matt Wolf, raising corporate taxes, penalizing defunct oil & gas operators, a pst	They should invest in equally in all sectors including renewables & diversified energy sectors, instead of putting all their efforts, funding, & lobbying into the FF sectors, which should have their subsidies slashed due to their negative externalities & climate change realities
T5L	Health care, education, MAID, freezing and minimizing post secondary tuitions	Increase the top 5% bracket's taxes , introduce a provincial sales tax	Raise minimum wage to \$18/h,
t5w	The government is spending too much! They need to look at ways to be more effective on what they are spending and hopefully cut what they are spending. Investing in things like Kibbutz's to give people options instead of continually being burdens to society.	Government jobs are too good! Too hard to get fired and too hard to be held accountable to do a good job. Schools are teaching kids a ton of stuff that doesn't help that live a better life. How to eat properly the importance of a good diet, How to drive, how to be better with people, how to understand other peoples perspectives, how to manage money, how to make money, kids are REALLY REALLY smart and can create things as early as high school that can be leveraged as a money source.	We need to create things that can be sold to the world market. Oil is the easiest. What would happen if we had a bunch of kids try to re create a Tesla. The Patents are open to the public. Could we not find other applications for world class designs that brings up businesses. Also having a lower minimum wage for people who don't leave there house, that are supplemented by the government and get tips (waitresses).
T1K	Health care and education	Decrease MLA and premier salaries	Tax cuts for business
T0E	Education, healthcare, environment, organic/regenerative/holistic agriculture	Ministers salaries, eliminate 'war' room	Renewable energy and technology

T4J	Health & Education	Less spending on immigrants, CEO/mgmt wage freeze or cutbacks & minimize spending accounts (start from the top earners instead of the bottom), less money put into safe injection sites & more into help for people who want it. Collecting bills for hospital services (by having departments work together with finance to help in collection). Less tax cuts for the Corporations & high income earners without harming the low income earners.	Construct a few more prisons which would employ a lot of staff & income for service companies while being able to lock up some of the derelicts that are just being allowed to return through the revolving doors. Help the medical system we have rather than trying to privatize it all as that will only hurt our economy as well as deprive the lower income people of services they need. We certainly don't want a US system where only the rich can afford health care. Work with the industries we currently have & the people first instead of giving special cuts to companies that are not supporting our province to begin with.
T3H	Health care and education.	By staffing hospitals and schools properly to prevent over time and burnout. Nurses and teachers are careers that have high rates or burnout. Paying someone 2hours to work one doesn't make sense. It leaves the workers overworked, stressed out and burn out. Same with teachers. So many are on stress leave and yet the government is increasing the stress of these workers. Put money into the future.	By not cutting teaching jobs and nursing jobs.
T5H	On child care	From employment	By providing enough job facilities for people in Canada
	Health, education and diversifying the economy.	Take back the tax cuts given to the Corporations. Trickle down theory does not work. Even IMF acknowledges that and the wealth disparity in the US shows it.	There are 2 sides of the balance sheet. Stop acting like salesmen for the oil and gas sector. Oil and gas does not have a long term future. Alberta is a beautiful province attract IT and renewable energy and service sector companies.
T9E	Health care and education along with diversified enterprises other than oil and gas	Quit spending on war room and other consultants. Use MLAs who are being paid anyways.	Reinstate corporate taxes and give tax incentives to new job creation or areas of new industry.
T5G	Education and health care. Too much cutting is going to send this Province into a downward spiral that will take years to recover from.	Political expense accounts, advertising. Businesses should be taxed appropriately.	Encourage post-secondary education. Instead of Providing huge tax breaks for corporations give them subsidies for work programs for students, seniors etc.
T2R	Health care and education	Cutting oil and gas war room funding, stop giving corporate tax breaks	Invest in tech. Sector
T4p	Public services and job creation.	Management - bloated in public services in pay and amount of management Board members pay on AHS should be capped as well as caps on college universities kept. Nursing. Hire more full time to minimize the insane overtime they pay to PT The amount of committees and boards this government has struck which all pays insane honorariums with minimal show. The war room which this Govt has taken great lengths to keep secret.	Diversifying. By no means give up on the fight for the pipeline but realize there's lots more Alberta has to offer Tech industries. Green energy. Instead of taking away their tax breaks give them better ones to drive them back to Alberta. Money into training Albertans for these new industries to get them back to work. Investing in public services instead of cutting them. Every job loss/ pay cut affects the Alberta economy. People can't spend if they aren't making money. Alberta can have both oil and diversify their industries.

T5T	Health Care Education Infrastructure	Get rid of the top heavy personalities in the Premiers Office ie Matt Wolf who is the \$200,000 Twitter Chief. This person's salary is just a slap in the face to the unemployed and under employed oil and gas workers. Get rid of the War Room. Waste of my tax dollars. Get rid of the numerous committees to study one thing after another. Can't this government make a decision without forming a committee? This costing lots and lots of my tax dollars.	Stop giving millions and millions of our tax dollars to rich oil companies. This subsidy could and should be given to technology companies which is the future of our province. Many more should be encouraged to move to our province. We are not thinking of the future and technology is where it is going.
T1m	Healthcare, (including mental health, addictions, equal access to healthcare, removing barriers, Education, eliminate child poverty, job stability for all Albertans-not just those who work in the oil field	STOP creating new groups, coalitions, boards, etc.. to dismantle everything the previous government did. This is time consuming and a huge fiscal waste. Also, dismantle the energy war room, use that money in better ways. No more tax breaks for corporate companies, this has never, ever worked.	Support small businesses. Support education, by making it accessible to all and removing barriers. Diversify commodities beyond oil & gas. Invest, support, train and educate about the use of Hemp
	Healthcare - don't attack and threaten frontline workers. Give frontline workers the resources they need and the respect they deserve	Eliminate the corporate tax cut. Eliminate the war room.	Increase oil royalties. Decrease corporate tax credit as it has not created jobs. Companies are still laying off workers.
T3L	Medical, education, disability services/funding, affordable housing access	Government administration, tax income from wealthy	Approval of new projects, less red tape, support/tax relief for small businesses, tax breaks for innovating companies
T0B	Education	Taxing increase on people/corporations who make the most money WITHOUT loopholes.	Generate jobs to transition us from fossil fuels to green energy. Employ more people in education to facilitate this transition.
t9x	Rural crime (at its roots not just more police). Young underemployed laid off oil workers need retraining for alternative employment. Making a just transition to a green economy Fund and support innovation	Get rid of the "War Room" Ask the oil companies who haven't created jobs to return their share of the \$47M in tax breaks you gave them	Innovation and technological changes. Look beyond oil and gas. Quit the cuts and get people working again. Retrain laid off workers, clean up abandoned oil sites and support Green Energy initiatives.
T4C	Education Healthcare \$25/day childcare	Scrap the "War Room" Raise corporate taxes Hold meetings via Skype rather flying around on a private jet	Alternative energy retraining programs for oil & gas workers Provide funding to industries like film & tv production Invest in education and youth
T5K	HEALTH CARE	Tax corporations that make the most \$\$	By giving corporations and companies tax breaks for hiring employees
T5W	Front line Health care and education	CEO salaries and corporate payouts and tax breaks for big corporations.	Giving tax breaks to oil companies is not working. Diversifying where income is coming from. Reduce reliance on oil prices.
T6R	Private sector growth/economy, Education, Healthcare	Middle management across entire government but especially at AHS, government workers retiring with big pensions and then consulting back to their previous jobs, overtime loopholes by nurses, doctors/dentist fees (they don't need to make \$500-\$800k on our dime),	Get the pipelines, figure out how to get foreign investment back, cut government waste and reduce business and personal taxes, remove red tape
T5K	End the attrition model and allow our public sector managers to build a workforce that works for Albertans.	Providing more freedom to our public sector workforce to reward innovation and effectiveness over tenure.	We should continue to invest in economic diversification across high growth industries. We should double down on our academic leadership in artificial intelligence.
T5R	Education, children's services, health, addictions, infrastructure, and resource development.	Get rid of middle managers. Explore pst. Properly tax the elite.	Grants and incentives for resource development and innovative ideas to diversify the economy.

T5t	Health care, education, pensions, resources for citizens in vulnerable positions.	In their own spending, excessive salaries, and pensions.	?? maybe focus a little more on stability than growth. Booms result in crashes. Over and over and over.
T8A	Education and healthcare	By bringing back the taxes that were cut for corporations...tax cuts that did nothing to get people back to work, and instead have lined the pockets of the rich.	By supporting the renewable resource industry, which would bring in a lot of new jobs that don't depend on the oil boom/bust.
T6J	Education -if this province is to have long term economic well being its citizens need an effective education from kindergarten through to trade schools and universities. This should include re-training for oilfield workers to move into new roles should projects not pull through. Currently, young men have the highest unemployment rate in Alberta. Its not as simple as just getting a job in the oilfield anymore. But there are opportunities, say in the IPL or Pembina petrochemical projects. These young men could be retrained as techologists and plant operators.	Eliminate funding for separate or religious school boards and consolidate to one well funded, well managed public school system. If citizens want their children educated in private or religious schools, it should be on their own dime. Increase taxes on the most wealthy 1%.	Support technology development and innovation, both in the oilsands industry and in new, alternative energy sources. For example, Alberta is the perfect place for nuclear energy development - geologically and politically stable, with a highly educated population. We simply need a government with the will and vision to lead Alberta to be an energy innovator - even in the eventual post oil global economy that we are likely to see in the next 50 years. The time to start this innovation is now - the Conservative government has a strong enough mandate to champion this cause. Consider development of an oil pipeline to Hudson's Bay. This would be a way to ship Alberta oil out through the north-west passage, bypassing the troubles in BC and Quebec.
T2X	Education, health care, and diversifying our economy to stop being reliant on oil and gas as a primary source of revenue. That train is ending and we cannot still be on it when it does.	Any more committees of hand-picked UCP supporters that are not returning any value to the taxpayer.	Invest in post-secondary education. An uneducated population will lead to lower level jobs, reduction in innovation, and ultimately lower taxes to be paid. Support diverse revenue streams. Get off oil and gas. Invest in creating jobs as you promised in your campaign. Stop cutting jobs.
T5H	Renewable energy to create green jobs and initiate a just transition away from fossil fuels. Post-secondary education to ensure that Alberta has a skilled workforce that is also aware of the issues facing our society.	Cutting the energy war room entirely. Clear incompetence in terms of stolen logos, an awful propaganda-style YouTube video, and simply a waste of money given that pipeline projects are already underway, and the rest of the world is working on renewable energy (so are good Canadian companies Alberta could seek out). Another way would be downsizing unnecessary regulation, which would save costs on enforcement/bureaucracy, if this is done in a non-partisan fashion.	Most importantly: green energy projects, public transportation projects. Public transportation is critical to ensure that struggling Albertans can secure and keep good jobs in all sectors of our economy, and jobs are created through such projects. Not giving tax breaks to wealthy companies that then leave the province, but instead actively supporting the middle class by spending government money strategically. Trickle-down economic thinking has not, and is not, working.
T6x	-providing an education system that creates critical thinkers -diversifying the economy, preparing for less reliance on oil and gas	-not opening "war rooms" would be a good start - keeping department names the same to avoid related overhead costs - only paying for logos you are authorized to use	- by realizing there is more opportunity outside the oil and gas sector -support our local tech industry -make Edmonton more appealing to outside tech investment -invest in education and innovation will follow -17(1) et's stop that and make Alberta a tech hub.

T6C	<p>Education - keep the money in the classrooms as much as possible</p> <p>Mental health supports - school counselors, mental health therapists</p> <p>Health care for seniors, esp those living in poverty</p> <p>support for alternative medications for patients with serious illnesses - cancer, ALS, MS, etc, and for seniors</p> <p>Diversifying the economy</p> <p>Safety and security of all citizens; clear the justice system backlog</p>	<p>Red tape committee - make sure it is not just about business savings. I don't need to see ribbon cutting ceremonies to celebrate the creation of a committee - show me the difference that has been made.</p> <p>Remove the Success in School program from Children's Services and Education. This started as a cross-ministry initiative, and has not been effective in supporting kids in care.</p> <p>Savings should definitely NOT be on the backs of teachers and health care professionals!</p> <p>Start by taking a look at the government hierarchies in all departments - trim some of the upper management positions. Flatten the organization, if it makes sense to do so.</p> <p>Get rid of your association with Rebel Media. That is an embarrassment to all citizens of this province.</p>	<p>Diversifying the economy</p> <p>Get the pipeline built</p> <p>Keep up the fight with the federal govt to ensure the needs of the west are known.</p> <p>Ensure that diverse populations are represented in hiring practices.</p>
T5r	<p>Those who are the most vulnerable in our society.</p> <p>Maintaining infrastructure.</p>	<p>Reports, commissions, studies etc.</p>	<p>Provide opportunity in non oil related fields, green energy.</p>
T0M	<p>Health Care</p>	<p>Eliminate the over crowding of middle management in AHS</p> <p>That alone could save you a lot of money</p>	<p>Keep the frontline workers in hospitals They are the ones looking after our sick and injured albertans</p>
t6g	<p>Preventative medicine- screening exams and public education of same.</p> <p>Mammography/ screening colon cancer exams/ PSA for prostate amongst them.</p>	<p>ER visits</p> <p>There is no intermediate facility for folks who are sick but not urgent to go after hours and on weekends (have an US/ CT scan etc). This crowds the ER unnecessarily, and costs exorbitant amounts of money that could be better used in health care.</p>	<p>?</p>
T5T	<p>Education and health services</p>	<p>Reverse tax benefits to large corporations</p>	<p>Diversify economic base</p>
	<p>Education and health care</p>	<p>Stop giving handouts to large corporations</p>	<p>Diversify the economy. Welcome and support other jobs and industries in addition to the oil industry</p>

Education
 Child Care
 Health
 Art
 Affordable Housing for all!
 Alternative Energy sourced like wind

1. by Investing in social supports, art and education this will benefit health savings on many levels for human well being. And produce a more positive productive population.
2. Really look at yourself and know what you actually need monetarily. How much money should top government officials be paid. Realistically.

Create, Produce and manufacture local
 Hire local
 Tech sectors
 Education
 Health
 Child care
 The Arts
 Construction of affordable housing in all communities (not segregated to one neighborhood) for every X amount new builds the contractor must build an affordable housing unit for seniors or young family. Like a 5:1 ratio.

T7X	Schools & Healthcare	Stop giving corporations huge tax breaks without securing a commitment to stay in Alberta.	Stop taking away the supports like childcare subsidies that make it affordable for people to go back to work. Stop making so my kids school fees and my car ins goes up. Then I'll have more disposable income.
T2Z	Maintaining front line services in Health & Education.	Hold the line on wages on all union negotiations. And review administration costs across all public departments, with particular focus on Health & Education	Continue to fight against the federal carbon tax, continue with tax initiatives to support small businesses. Establish some form of support for small business to encourage them to hire & train young people.
T5Y	Driving investment in the province; diversification of economy; improving healthcare	The moves currently being made for university funding are great! The approach to have all public sectors reign in their budgets and collective bargaining is also great. I think the government should use more examples from the private industry where this has happened in recent years to help in justifying these moves. NWR needs to be scrutinized and held to the same account as the rest of the public sector. Subsidizing production costs with taxpayer dollars this far in to the project is ridiculous.	Highlight our passion and need for environmental technologies to drive the tech sector! Push the travel sector harder! So much lost opportunity currently - could definitely increase tourism. Give incentives for well and environmental reclamation initiatives. Push for alberta to be a healthcare/environment/carbon and renewable fuels research hub (funded privately). Try to drive the financial sector. Push on the federal government to scrap the new mortgage rules for AB as it's made the housing sector suffer.
T8R	Health care, education, the economy and getting jobs back that have been lost. Supporting the seniors.	Cut the top heavy executives throughout. Re-introduce health care premiums to bring more money into health care. Tax the high income Canadian's so they pay their fair share and not give them tax breaks.	Support AB and the oil and gas industry. Keep larger corporations in the province who invest and keep the economy going. Not focus on cutting front line health care staff, it will even further affect job losses.
	Funding public education - funding new growth in schools.	Discretionary spending.	Invest in our economy.
	Health, education, social services. Homes for the homeless. Eliminate the need for food banks. The environment and the climate emergency. Tax the polluters and charge them for breaches: ecocide.	Business taxes for large corporations. Returning multi-billion dollar tax break donated to large/foreign corporations from my tax dollars. Funding public and post-secondary education. Eliminating waste: private, charter and religious schools. Keep Alberta secular!	Invest in an educated and healthy workforce, Diversifying the economy. Looking to the future instead of the past.
T6w	Law Enforcement and public safety	Health care, benefits to citizens and tax increase by 1%	welcome multinational companies and support small business
T6K	Education Healthcare including proactive and preventative care	I think the government should focus on revenue rather than savings.	Invest in public sector

T1K	<p>military, and seniors, Like the Christina bible says in Mathew 24 there is going to be more earthquakes, disasters, penclines, diseases. the fig tree has to grow after all. so I do know everything is going to get worse, now</p> <p>everyone is beefing up their military, all we have 2hand equipment, bad for a first grade country.</p> <p>take the people on ei, give them a choice to go in the military, but not in the military all the way. so they learn a trade. And then take the military and if there is a snowstorm etc, bring them in.</p> <p>seniors, at age 50 people cant find a job, they are passed down, so there fore help them some how.</p>	<p>It does not make sence, cutting back programs and canceling them cause of no money, then give millions to other countries. that is not a business, that is stupidly.</p> <p>The other countries got in this mess cause of not handling money right. and Canada just gives them more money to spend on thier habits. like Africa for last 20 years. waste</p> <p>Put a poor person give him a good job and he will make more of a change than someone went to university etc. cause he have life experience.</p>	<p>Take the ei, take these put them in the military for 6 months, its like a camp but not the military, its between that and learning a trade, of a complete forest fire for example. he will always be by a person to learn from. Thereby thigs be learned etc.</p> <p>also ei most people should have a place to volunteer for 8 hours every two weeks, give people positive.</p> <p>also if your on ei once every 20 years, then some people on it every summer, don't make sence.</p> <p>ask yourself in a business atmosphere what would you do? give millions to other towns and cities or make your own town better. rich people do not know how to save money at all that is why Canada is in the red.</p>
T8w	<p>Giving the public sector a well-deserved raise considering the previous government put a freeze on their wages.everything is done up at least cost of living increase would be amazing considering this carbon taxes robbing to \$3,000 out of our pockets each year</p>	<p>Go back to the private model for driver examinations. It's absolutely ridiculous now not only for the clients trying to book a road test but for the examiners as well. Asking them to do up to 50% more work with a zero incentive behind it</p>	<p>I voted for this government. I do believe we have to be fiscally responsible. I believe we have to get things in order the four companies will want to invest. I also believe we should be holding a referendum on separation. T2N	<p>Health care and education.</p> <p>Investing in developing new areas of growth so that Alberta is not so reliant on the boom/bust cycle of oil, ?green energy technologies, tech/artificial intelligence, movie industry, and creating a favourable environment for companies to consider relocating here.</p> <p>Incentives for consumers to be able to upgrade their homes to be more energy efficient (in a substantial way like rebates for solar panels, and to be able to afford electric vehicles</p> <p>City infrastructure- promote more inner city living, less urban spraw (tax builders and home owners that choose to live on outskirts of city and have to commute), promote public transport/biking lanes on the main roads</p> <p>Building codes could be upgraded so that new homes are built with more green technology like thicker wall, grey water capture, etc</p>	<p>Cut back on middle management especially in the political system, health care, and education.</p>	<p>Yes but jobs should be those that will develop and support new industries in Calgary. We can't keep relying on the same old expectation of lots of oil money and oil executives to boost spending. We also need a strong tax base. Can't have young educated people leaving Alberta, we need them to stay.</p>
T8H	<p>Maintain infrastructure maintenance & development; maintain at least CURRENT levels health care and education,support for seniors,AISH.</p> <p>Disband wasteful War Room, stop wasting money on all your "expert" panels. DIVERSIFY our economy - support tech industry and green environment industry.</p>	<p>Disband War Room, increase corporate taxes, stop funneling money to oil and gas industry. Introduce small sales tax but ONLY if you stop the cuts.</p>	<p>Diversify and put support into areas like IT and technology and green product development. Restore the higher corporate taxes. Build and maintain infrastructure instead of letting it crumble around us like your previous con govt did.</p>
T2K	<p>Health Care</p>	<p>War room Tax breaks for the wealthy and corporations</p>	<p>Tax breaks for alternative sectors such as the tech industry, film, A.I and robotics.. future booming industries</p>

T2E	Health care and education. Get rid of the war room - it's a terrible waste and a diversion away from the care of the people.	The war room. What a ridiculous way to invest the money of the people.	Look at taxation of those who earn more. There were some great programs to help stimulate the technology industry, but the funding was pulled. I think with the way that the oil industry has tanked in the last handful of years, it's time to put some weight in other industries - the technology field being one.
T3I	Higher education, education and health	Raise taxes on wealthy	Sales tax and tax credits for high tech
T6R	Schools including post secondary. Education is so essential to the well-being of our society. Healthcare spending should not be affected and the cuts that will affect nurses will be detrimental to both them and the system as a whole. By cutting nurses and giving them more patients to take care of at once, not only will they burn out quicker but patients lives will be at risk without being given the attention they need and deserve	By raising taxes for those who are making a lot of money.	By funding education, investing in green tech and by providing government jobs. Also by not making cuts to essential areas that are high employers such as schools and hospitals
T6t	Vulnerable people and children. Meaning education, healthcare including mental health and harm reduction.	The salaries of MLA's and their travel	Stop focusing on the oil sectors.
	Administration systems so businesses aren't getting a free ride on the backs of taxpayers. Education to retrain unemployed and ensure Albertans continue to be able to compete in a changing economic landscape. Health care to decrease wait times. Social support for under-employed and low wage families.	Cut patronage appointments like Canadian Energy Centre. Cancel any travel by Provincial politicians if the focus of the trip is under Federal jurisdiction. Ensure maintenance on buildings to decrease utility costs and any new facilities are as close to net-zero energy as possible. Stop public funding of Catholic school boards and any non-accredited (a.k.a. recognized) post-secondary educational institutes to decrease educational administrative costs.	Tax credits & small business loans to companies with under 20 employees excluding agriculture and franchises with over 10 locations. Fund infrastructure & environmental cleanup projects and pilot projects that diversify Alberta's economy. Reduce interprovincial tariffs.
T6J	Climate change solutions, education and health care	Taxing corporations and getting rid of the War Room.	By diversifying the economy. Oil and gas is not a sustainable way to go forward and if we do not diversify than Alberta will not have any economic opportunities in the future.
T5y	Re-funding the tech sector, supporting alternative energy, and re-focusing on Education (not just Christian education)	Ensure that the Premier and all MLA's have very similar compensation as compared to other provinces, cut the so called "war room", restate the carbon tax and use that cash to fund alternative energy projects.	Stop solely focusing on a single sector. O/G is the current money maker, but there is a glut of world oil, prices are depressed. Alberta has a vibrant entrepreneur and tech savvy culture, that needs support. Doctors, nurses, teachers are all driving factors in the province, vilifying them is counter productive.
	Improved healthcare and educational funding to limit class sizes in our wonderful public education system, improve patient outcomes in our world class public health care system. Spend Albertan's tax dollars on the needs of Albertans, not on bogus inquiries and War Rooms that benefit no one except the overpaid political hacks who run them. Stop the cutbacks to AISH and organizations helping people with disabilities. Increase social assistance funding to help people get back on their financial feet and decrease homelessness and crime.	End the War Room. Forget the numerous, meaningless forums and enquiries that appear to be looking for voices who back up what the government has already done or plans to do. NO MORE giveaways of tax decreases to big business. Stop squandering our tax money on stupid, wasteful, ideological irrelevancies.	Support public education and post-secondary institutions instead of cutting funding and undermining what they are doing to produce well educated, creative Albertans who will STAY in the province instead of fleeing to more enlightened places.
T5M	Growing industry outside of the Oil & Gas industry. Education Healthcare	Corporate funding.	Supporting new industry growth. Offering accessible education in new industry.

T6J	Education	Deleting corporate tax breaks. Taxing corporations. PST (provincial service tax)	Greater investment in renewable energy (ex. Solar power, carbon capture, hydro, etc.). Return to the Home Energy Savings Program
T0M	Grants and available infrastructure replacement programs for rural municipalities.	Stop sending equalization payments out east.	Find a way to opt out of the federal carbon tax.
T8B	Health care and education	Let teachers and doctors redesign the systems to make them more efficient. Create paid temporary consultation positions for this (ranging from a few days to several months) to be filled by practising doctors and teachers.	Lower taxes and allow small businesses to thrive. Build the pipeline.
T0E	Education - classroom sizes are too large, educational aides for students requiring extra help, rural funding model that actually meets the needs of rural schools Healthcare - keeping healthcare publicly funded and not moving to a private model Making sure vulnerable citizens of our province are looked after including seniors and early childhood citizens Investing in alternative sources of energy	Healthcare - not allowing insurance companies and corporate companies dictate the need for doctors notes (i.e. sick time, making clients see the doctor for a prescription to access their benefits for massage therapy or other health professional referrals (wasting physician time and healthcare money). Making school districts accountable for how they are spending government funding - i.e. Program Unit Funding Stop paying corporate companies millions of dollars to stay in Alberta when they are just leaving anyway. Put in a provincial sales tax on consumer goods which would help fund the important things like education and health	Invest in alternative energy sources creating a new sector for jobs Stop looking at oil as the only thing Alberta can offer - i.e. tourism, farming Hire more teachers and nurses, they are clearly needed if you have spent any time in a school or hospital lately. Invest in the people of this province not only the big corporations. A province is only as good as the people who are in it. In fear of losing my job with healthcare cuts, I have stopped spending money. Trickle down economics does not work.
T2N	Investment in green tech and technology to help our energy sector to meet our climate targets.	Add a small (1-2%) sales tax, base our public services on this pot of money and put oil royalties into the heritage fund (to weather future recessions rather than tearing apart our public services in a downturn).	Invest in green tech, sustainable energy infrastructure.
T6C	Public education: invest in our future. Invest in the kids who will be working while boomers are retired. Invest in teachers. Invest in francophone and french immersion education. Invest in postsecondary education and research. Public healthcare: keep funding it so Alberta's public healthcare is world-class. Keep it public so our most important system is accountable to the people of Alberta who use it.	Stop giving oil company subsidies. Stop giving public monies to private schools. Stop giving public monies to catholic school boards: merge them with public boards. If the provincial government cooperated better with federal funding, like on the Official languages in education program, I'm sure the federal government would be more willing to cooperate elsewhere.	Increase the minimum wage. Invest in the tech sector. Invest in the development of green energy. Diversify Alberta's economy instead of putting all of our eggs in the oil basket. Provide economic certainty to those who are most vulnerable. Stabilise the housing market: invest in affordable housing. Invest in public transportation.
T4a	Health care, education, special needs, job creation	Political overhead costs	By encouraging a living wage, which will allow people to spend, which will in turn stimulate the economy
T6X	Supporting our economy with diversification and pushing our oil to market, improving our healthcare, making more sustainable long term care for seniors and education system.	Arbitrary administrative positions, and tiers of management, regulatory bodies, etc	Diversification and getting our oil to market. Encourage entrepreneurship with incentives and tax breaks to encourage job creation and innovation.
T6B	Getting Alberta back to work in business	So many jobs created in government not doing anything. Education and Health boards overhead costs, not just front line	Job retraining of nurses and teachers and public service employees in non public sector industries
T9E	Public service-front line nurses and teachers (specifically pensions and staff), universities-such as a tuition freeze and bigger budgets for the institution as a whole, diversifying the economy-sustainable energy sources and shifting from oil to the future	Completely halting all war room operations. Taxing oil companies and not giving them a 4.6 billion dollar tax break. Implementing a carbon tax.	Diversifying the economy and investing carbon tax money into solar energy. Investing in the people by creating jobs that were taken away from the previous budget.

T6X	Education and Health Care. Most important, audit those organization. Trim the fat in the middle and at the top. Give more supports to the front line people.	Cutting out upper management.	Support small business. You won't get anywhere with big oil. But small businesses aren't going to relocate. Help those business owners.
	Education, k to 12 and post secondary	Axe the oil and gas war room. Add a sales tax. Stop trying to put everything back in the ministries, like dispersing lottery money, it was fine as it was.	By diversifying the economy. Support tech growth.
T2K	Healthcare and Education.	In the tax cuts for big businesses and the wealthy. Those taxes should be going to services for the province, not into the pockets of the people who need it the least.	Investing in renewable energy technologies. Reversing cuts to healthcare and education. Invest in our public healthcare and public schools.
	Health care and education.	Get rid of that silly "war room". Instead of incrementally increasing fees, just man-up and realize we need a 1% sales tax because we can't rely on oil royalties anymore.	Support major infrastructure projects. Stop cutting the public service. Invest in diversifying the economy.
T4g	Health and education	Art and culture CEO of AHS WAGE	Lower tax
T0C	Healthcare, stop under cutting those that hold the system up you fucking ass clowns Education, I get it you're scared that if you actually educate people they will realize the what empty headed morons the UCP really are.	Hmmm let's see maybe the politicians should take a pay cut you entitled pricks.	Step one stop letting big corporations off with tax breaks when the take their business else where anyways? Just a thought.
T5A	Education, low and mid income assistance and rural police.	The Gov't does not require such drastic savings. Small incremental savings and fiscal management over a long period of time would be more responsible.	Additional income can be taken from the taxation of corporate wealth and reinvestment in infrastructure.
	invest in social supports that reduce the burden on our healthcare system and emergency services (home care, long term care, public health and prevention, free housing for homeless individuals - which is overall vastly cheaper than provision of endless emergency services).	fewer tax cuts for large corporations which have not been shown to actually be effective at getting people "back to work"	incentives for tech, service, and green industry development to diversify alberta's economy education support and job retraining for workers out of work in the oilfield
T8N	Mental Health of the children and how we can help early on in theirs lives for less support needed when they are older.	Not sure!	Bring in a provincial tax and health care premiums. This way there will be money coming in and people more willing to spend money.
T6T	Health, education, climate change, diversifying the economy	Administration, legal fees, the "war room", reviewing the cost of expenses they pay	Diversifying the economy, not relying on oil
	Education and health care. Diversify the economy.	Shut down the energy "war room". Increase revenue by implementing a 1% sales tax.	Support major infrastructure projects and stop cutting front line public service workers. Diversify economy.
T6r	Healthcare and education	Corporate handouts!	Diversifying
	Education including post secondary. Health care. Preserving public and private sector jobs. Properly fund cities.	War room -complete waste of money. Stop corporate hand outs	Provide adequate, predictable and sustainable funding for all public services.

T4R	Public Education and public healthcare. We have world class programs in both areas of government pervue. We need to ensure that both areas need to be protected by not cutting and ensuring that growth is properly supported financially.	Cutting the 'war room' and government 'committees' or 'panels' that are spending unnecessary funds on issues that dont need changing. It seems these funds could be better used to bolster public education and public healthcare.	Support diversification of Albertas economy. Oil and gas are important today but changes are happening where it will not be the huge industry it once was (similar to coal) and we can't be caught flatfooted. Otherwise we will end up like Newfoundland was when the fisheries collapsed. We need to stay ahead of the situation that is coming. Supporting technologies such as AI and green tech, tourism, movie industries, higher education programs that envision an Alberta that is not solely reliant on oil and gas. If we can expand our economy so we have more areas to create revenue from we will be better for it.
T6A	Strengthening our school programs and health care for lower income and the middle class. More schools, more teachers, more nurses, more doctors. Focus on infrastructure and more funding for municipal light rail systems.	Less tax-breaks for corporations and the richest Albertans.	Research and develop a sustainable approach to the inevitably doomed fossil fuel industry. Promote job training and give oil-sector workers the adequate training to transition into new jobs.
T0M	Job creation, healthcare, judicial system	Wage freezes, top heavy useless positions etc., AHS, Government, Education, stop equalization payments! More care and considerations with grants.	Oil and gas! Get the pipeline built! Encourage oil companies to stay in Alberta. Get our economy back on track! We all benefit from a prosperous economy! Albertans are sick of being a brunt of Canada. Re-evaluate the shut down of clean coal.
	Spending on providing public health care and education as well as direct services to vulnerable individuals including (but not limited to): FSCD PDD AISH Aboriginal Services Homeless services Publicly available services/programs (such as libraries, community centres/leagues, etc) Health Care Education K-12, and post secondary	Less management in Gov't departments, more front line staff providing direct services. Stop funding private services for education and health.... these are not 'for profit' endeavours Start making school boards accountable/transparent on how they spend the funds received for special needs children. Direct services are NOT being provided in this regard across all boards. Significantly reduce all the panels and start directly providing the services we already know are required for: - FSCD - PDD - AISH - Aboriginal Services - Homeless services - Elder care - Health Care - Education (K-12, and post secondary)	Fund alternative industries outside of just natural resources, including (but not limited to): - technology - arts & entertainment - alternative energy - tourism
T6L	Government should fund full enrollment growth in K-12 for each of the upcoming four years including busing and infrastructure maintenance and construction. Stop playing games with post-secondary funding and fund them according to previous policy. Fund health care and stop the cuts to staff and services and infrastructure. Fund road maintenance and construction and honour previous agreements with cities and municipalities.	Government could find savings in MLA offices. Cut there like you're cutting everywhere else. Keep the Premier home instead of traveling the country like he's the de facto Prime Minister. Stop taking an entourage on junkets.	Stop firing people on the front lines. Government does create work for people. Stop the tax cuts you've announced and fund real jobs. Corporations just send the money elsewhere and Albertans get to cover the shortfall. The last thing we need is more big bonuses for some CEOs who already are over paid for what they do.

T5y	Education and healthcare specifically, but really stop cutting everywhere. Trimming fat is one thing but your budget is excessive and cruel.	Introduce a PST. A 2% pst would go a long way to paying down the debt and it would be a sustainable funding model. Do not reduce the corporate tax. It's clearly not working. Our taxes back up to 10%. It was sustainable and only on profits. It would also put 4.7billion back into the budget.	Green energy. Sustainable energy. Hire enough nurses to actually cover shifts, enough teaches and EA's. Repair roads and build Infrastructure.
T3e	Social services and infrastructure. Cut back parliamentary spending and salaries for any setbacks.	Parliamentary spending and salaries	Support the schools and curriculum and provide public sector jobs.
T3h	Spending on infrastructure projects. Education and healthcare.	Why are you asking us? We aren't privy to the books. Are you trying to figure out which programs are least popular? Stop creating boards and advisory panels with your buddies to employ them.	How about tax credit for promising industries that do not involve oil and gas; perhaps the tech sector. I hear the internet is the wave of the future
T8N	Education and Healthcare	By eliminating multiple school boards. Upper management positions in Alberta Health and Alberta Education need to be significantly reduced!	Diversify the economy. Instead of providing tax breaks for oil and gas, provide tax breaks to new innovative companies.
T8N	Education: Ensure that my child with special needs will receive supports. Government cannot abrogate its responsibilities by using creative mathematics to tell the public that total funding frozen at 2018/19 levels will work when inflation and student population continue to grow. Have you been in my child's school where one secretary handles a school of 25 staff? Government would never reduce staffing to that level! You can't cut any more than that! Health: It's not okay to suggest that people come up with money they don't have to get testing done, like MRIs and CAT scans. We will all pay when there are greater divisions between income classes. That's not the kind of Alberta I want!	We need to consider where government can keep revenues or create new revenues. Cutting essential services like education and health creates negative discourse that leads to outside investors questioning if Alberta is the best place to set up their business, hurting our economy and future potential revenues. We need to stop impediments to the oil industry while encouraging other economic development like alternate energy industries and high tech industries. We cannot rely on a cyclical industry like petroleum and gas. We know that historically, that industry busts every ten to twelve years preceding the boom cycles.	Look who gets government money: large companies, horse racing, private schools, small businesses, public schools, hospitals, etc. Decide which organizations bring benefit to the province and which ones drain money from the province's economy. Studies show that money in the hands of large corporations and high income earners usually sits in banks and often leaves the province, not contributing to the economy like money in the hands of lower income earners which almost immediately circulates in the local economy, increasing our GDP. Don't put money in the hands of high income earners.
T0A	Job creation and more help for low income earners.	Kill the war room initiative. Reduce the number of MLAs. Don't cut government jobs - we need the services and the people to provide those services.	Invest in small businesses, provide help to sustain businesses (not just oil industry)
T1K	Post-secondary education. Competitive graduate fellowships to retain young Canadian talent. An 'outcomes-based' approach is a disastrous idea that invites potentially crippling institutional bias against primarily-undergraduate and comprehensive research universities. UofA and UofC will quickly become understaffed and will be forced to become more exclusionary at the cost of potentially great Canadian students.	Cutting the UCP war-room. Brand-protection is important but shouldn't be a spending priority right now. Raise taxes on corporations.	Invest in Artificial Intelligence and Machine Learning projects. The University of Alberta has an excellent reputation and could be a revenue source for Edmonton. It all comes back to post-secondary education spending. Prevent the 'brain-drain'. I'm about to finish my PhD in chemistry and will be leaving Alberta for a post-doctoral fellowship at Princeton in the US.

T6V

17(1)

STOP FUNDING AND OVER FUNDING REFUGEES. FUND YOUR CANADIAN CITIZENS, GIVE THEM THE \$25,000.00 BALLOON PAYMENT OR ALLOW THEM THE BENEFITS YOU OFFER REFUGEES, PUT YOUR OFFICES UNDER AN UMBRELLA...HAVE YOU NOT LEARNT ANYTHING FROM THE UNITED STATES? HOLD YOUR PEOPLE ACCOUNTABLE..NOT THE CITIZENS THAT WORK THEIR ASSES OFF TO SUPPORT A BROKEN SYSTEM..211 AND 811 AND ALL THOSE LINES ARE A REASON YOUR SYSTEM DOESNT WORK..PEOPLE ARE ASKED TO JUMP THROUGH IMPOSSIBLE HOOPS..AND YOUR EMPLOYEES MOCK THE CITIZENS..AND SAY..ITS NOT MY JOB???. REALLY? EVER TRY TO APPLY FOR DISABILITY BENEFITS? AND..WHAT IF YOU NEED HELP IN YOUR HOME? WHO YOU SUPPOSED TO ASK? NOT YOUR SOCIAL WORKER? NOT THEIR BOSS? NOT..EMERGENCY SERVICES? HOW LONG TILL CANADA'S GOVERNMENT HAS TO TURN OFF ITS LIGHTS? IN ALL ITS OFFICES?..call 811 or 211..I'm sure you'll NOT GET ANY ANSWERS..BUT..GREAT DURESS..TRYING TO MANUEVER THROUGH THIS SYSTEM..TRY IT??? DO YOU NEED TRUMP TO SHOW YOU? WHY HE HAD TO DO WHAT HE DID? OR DOES?

T9k	Education: Class size	Making school 4 days a week	Lowering small business and entrepreneurs tax rates as well as making loans more available to start up business As well as get the Alberta pipeline going
T5z	Education Health care	Carbon tax	Hiring locally for jobs, using local vendors
T1H	Education Healthcare Diversifying the economy Alternative energy sources Reducing carbon emissions Building renewable energy infrastructure	introducing a PST introducing a made in alberta price on carbon. Cancelling the Canadian Energy Centre. Cancelling the Inquiry into Environmental non-profits.	With a made in alberta price on carbon. building renewable energy projects. diversifying the economy. building net zero. Incentivizing energy efficiency.
T4R	Education, Health and Disability services	Ditch the MDT requirements for specialized services through FSCD. Utilizing Technology for meetings rather than travelling for face to face meetings	By supporting education because in the long run those are the people who will drive the economy
T5S	Healthcare and primary education.	In the private corporate sector.	Focusing on healthcare and education- they are the two most budget restrained and short-staffed areas.

T9J	Outcome based funding for social impact	Arts: Nice to haves are not necessary when basic services are at risk. Department of Culture delivering front line service such as strategic planning for non profits and then turning around and funding non profits to do the same thing. Non profits should be doing it and can do it more efficiently.	Energy sector.
T2k	Increase income. Corporate taxes have to be equal to lowest (we have more to offer than just lowest!) not WAY lower. Hasn't worked for several US states so why are we different?	Increase income. Face reality that Albertans get paid more - alot more than other provinces. Both public AND private. Corporate taxes could be equal to lowest (we have more to offer than just lowest!) not WAY lower. Hasn't worked for several US states so why are we different?	Increase income. Face reality that Albertans get paid more - alot more than other provinces. Both public AND private. Corporate taxes could be equal to lowest (we have more to offer than just lowest!) not WAY lower. Hasn't worked for several US states so why are we different?
T0A	Education, health care, and investing in clean energy technologies along with training for workers transitioning from the oil and gas sector.	Shut down the Energy War Room. I also think it's time for a PST, rather than trying to create savings by making cuts on the backs of the most vulnerable in our society.	Again, by investing in clean energy technologies as well as infrastructure.
T2J	Healthcare, education, infrastructure and services for Albertans that pay the taxes and the future generations of albertans that need education.	Stop giving huge tax breaks to corporations that owe the province no loyalty or job creation despite the tax breaks. Politicians could also stop taking private jets wherever they go. A 'war room' is also a huge expense for a think tank that should be part of the job the MLA's took on when they were elected. Why are we paying more for this?	DIVERSIFICATION from the oil and gas industry that is a sunset industry. Fossil fuels will have had their day when more development of clean energy sources surges. Why aren't we getting ahead of the trends and fostering development of these technologies? Bring the developers to alberta! Give them the tax breaks!
T5E	Schools, updating and upgrading infrastructure, rural and metropolitan policing, more mental health services. Renewable energies In province refining to market to Canadian buyers.	Politicians salaries No large corporation handouts If a large company receives a handout and then moves or closes, they must pay penalty on the handout. Implement a 5% or even 3% provincial sales tax	Diversify Diversify Diversify Renewable resources. Edmonton and Calgary are the sunniest cities in Canada. Why do we not have solar farms with all this land around? How about wind farms or wind turbines on tops of buildings. Southern Alberta is the windiest area in Canada. Let it blow!! You want job creation these projects require builders and maintainers. Small startup loans to entrepreneurs
T1K	health care and education	cut politicians' salaries; increase revenues by reversing the very large and unnecessary tax cut to large corporations - the province already had the lowest corporate tax rate in the province so lowering it further does not give the province any advantage that it did not already have	support education; young adults that understand science, business, etc. are the ones that will have the skills and knowledge to become entrepreneurs and create jobs; the combination of taxing student loans and raising tuition seems designed to ensure that only the wealthy will be able to afford a post-secondary education and that does not result in job creation - that is a recipe for stagnation

T1K	Front line, school level supports for inclusive education; schools and teachers for the ever expanding student populations; front line health care. Cuts need to be made more at administrative and management positions, not front line workers.	Reducing administrative/management positions and not rehire non-required positions. Wage rollbacks, not of front line workers but administration making between \$100,000-\$200,000 a year.	Support all front line workers rather than making cuts of those vital positions and placing more demands on less people who are making less money. Not sure why there are multiple administrators and managers making decisions who hardly interact with or help the front lines, making way more money? Incentives are needed to get and keep people in a lot of service positions. Security, wages to support cost of living increases, no job overload/high demands as then people are needing more mental/physical health days off. I understand there need to be cuts, but front line health care and education makes no sense and is harmful
T8V	Education Health care	Add a 3% tax	Expand industries other than oil and gas
T3K	Green Energy	Introduce a 1%-2% Municipal Sales Tax	Oil and gas is important, but we shouldn't be dependent on it.
T5H	PUBLIC healthcare PUBLIC education AFFORDABLE daycares Infrastructure upkeep maintenance Disability and AISHA Agriculture Grant funding for Arts Post secondary funding	No war room Less corporate welfare. No more corporate handouts	Reversing cuts to public education (as teacher jobs cut) Reversing cuts to public healthcare. (As jobs have already been lost) Reversing job cuts to firefighters. Reversing cuts to arts. UCP has lost an unprecedented amount of jobs due to cuts made by the government. The most jobs lost while not in a recession. There is no reason for Alberta unemployment to be so high, in non-recession. Investing in renewable energy sector, R&D, Grant creates new engineering, manufacturing design and construction jobs.
T5T	Education Tech / innovation Small business Seniors Poverty Healthcare	War rooms	Invest in green tech Sustainable development Infrastructure investment Diversify economy Invest in education Grants for tech and startups
T4C	Health care, education, affordable child care and housing. Diversification of the energy industry to promote healthy growth of alternatives that will help to meet targets for emissions and climate change.	Stop cutting corporate taxes. It isn't just a spending problem-it's a revenue problem. Consider restricting travel and expenses for government officials. Cut salaries for those making over \$150,000. Scrap the "War Room"-I certainly don't want my tax dollars paying for this unnecessary endeavour.	Diversify the economy! The over focus on oil and gas is not sustainable. We can have a diversified economy without being "anti-oil". It isn't black and white. Invest in education and youth. Invest in alternative energy sources and IT.

T9w	Ensuring our nurses and teachers are fairly paid and compensated for the incredibly important work that they do.	Upper level AHS management, unnecessary government positions and initiatives (ie: we shouldn't be putting random research ahead of healthcare and education)	Don't rollback wages for unionized employees in the healthcare and education sectors, don't add taxes upon taxes upon already high bills - this will drive people out of our province
T9S	Health, Education, Infrastructure	Get rid of the useless "war room". Review the tax breaks being given to the big businesses who are systematically pulling out of the province. Stop wasting money on reversing policies and programs just because someone else made the decisions. (I.e. - removing the word 'Public' from school boards was a huge waste of money, just in rebranding) If you say you're cutting out superfluous positions, look within.	Invest in areas that reflect post secondary enrollment patterns - including trades. This would include arts in a domestic capacity, forward thinking technology, and alternative energy sources. Offer small business start up loans with minimal interest for qualified applicants. Every business or home owner knows that profit is not realized without reasonable investment and upgrades, and many times one needs to finance to make this happen.
T0L	Children with Special needs. education programs, speech therapy, social worker, physical therapy, Occupational Therapy. Adults with special needs. education programs, social workers, physical therapy, occupational therapy. Research grants. Seniors program helping stay in their own home. Senior program providing a daughter or son financial assistance to build appropriate accommodation onto their home for their elderly parent. Agriculture program offsetting federal government carbon tax. Doctors, nurses, caregivers. No unions.	Program encouraging adult children over 45 to build a suite onto their home for their elderly healthy parent or parents who would be Happy to live near their family. Family can help one another, care for one another, encourage respect and opportunity for great grandchildren and grandchildren and children to visit, socialize, help. Keep local produce farming affordable.	Work experience program in grade 10, 11. Teachers recognizing talent and tell parents. School programs encouraging academics, music, trades, traditional skills, agricultural skills, sports, nursing,
T1H	Education: Graduate student scholarships and basic research, improving student accommodations, student initiatives (competitions, workshops, internships) and conferences. Infrastructure: Alternative energies, long term plastic production, oil stores, number of schools in large cities. Research: Agriculture solutions (pay off: cheaper food costs, higher yields), neurodegenerative diseases (pay off: lower cost of future health care),	Regulating the cost of medical and research supplies (lower cost of health care and research), tax richer companies + individuals more (make more income), include a PST when the economy improves, claim a royalty on resource sales (water, oil, etc.) -- look to Norway as an example. Why do we give resources away? Hold business meetings over Skype instead of flying private planes abroad. Government officials in Alberta don't need so much security.	Support education, stop glorifying oil companies, give tax incentives to small businesses and those wishing to come from abroad, run deficits during slow economies and save money/ tax more during good economies.
T4R	Technology, film productions, science,	MLA staffing. MLA Budgets. MLA travel costs. Reduce tax breaks for large corporations. Trickle down is not working. You cant do what Klein did because that was 25 years ago. The world has changed way too much. Nothing is really valid before 2007 (introduction of smart phones) innovation is key.	Redefine Alberta. Quit fighting change. Automation is taking over. We need to complement it or use it to find new ideas. Invest in our youth that know technology best. Stop looking to the past for solutions that are no longer appropriate or viable options.
T6L	Health care and education.	Remove the religious school system and health care system and only fund the public secular administration.	Reintroduce the Innovation tax credit you killed. It was actually diversifying our economy.

	Education, health care, and diversifying our economy	Increase the tax rate for corporations. End tax cuts for big oil and gas companies	Economy diversification incentives. Improve roads and other public works projects. Train oil and gas employees in other trades
T0H	Education, healthcare and the public sector. ¹⁷⁽¹⁾ I am extremely discourage by this governments lack of understanding when it comes to the public sector.	Taxing corporations. Jason Kenney has cut jobs in my field of work and has given tax breaks to corporations. As we have seen previously. The “trickle down” plan for economics is non sense and has never worked. You are simply putting more money, back in the richest pockets.	You cannot tell me that cutting education and health care is good for economic growth. All you have done is encourage more people to go into a dying field. Supporting jobs does not mean giving more money to big oil. It means funding innovation at research facilities like the UofA that we can move forward to a brighter, less damaging future.
T4B	Health and education. A good government looks for ways to improve not cut. And if cuts must be made, health and education are the last place that should occur, not the first.	Fund early intervention well and less funding will be required to continue providing support to older children. The more support a child can receive at a younger age, the more substantial the gains he/she will make and will be less likely to require continued intervention	Stop giving corporations big tac breaks, trickle down economics doesn't work. The cost of living is not affordable. Families have less money to spend and contribute to economic growth. Affordable child care, groceries, insurance, utilities...there's not enough regulation around how much consumers can be charged for these services and are faced with exorbitant costs that unfairly benefit suppliers (often out of province).
	Education and health care. Also invest in the future -solar, wind and geothermal.	Cut the war room. Bring back the carbon tax. Quit eliminating jobs (hint unemployed people don't pay taxes...) Stop taking actions you have no mandate for. Respect the people of this province.	Invest in clean energy. Forget the pipeline rhetoric. No one wants our very low quality oil. Leave it in the ground and pursue development of clean energy.
T0M	Health Care subsidy, education funding (public/postsecondary), infrastructure	PST, provincial carbon tax	Diversify energy sector (natural gas, wind, solar), economic diversity (encourage tech and retail growth)
T5C	Climate change, children, vulnerable populations,	Instead increase revenue by creating a PST, stop subsidizing oil and gas, make oil and gas companies pay for well clean up and pay their municipal taxes	Diversify our energy sector so oil and gas workers don't get left behind. Support secondary education so we can be leaders.
T6M	Health Education Social Services Employment Diversifying Alberta's businesses	Reduce upper management of government services Reduce benefits to corporations Combine public and separate school boards Reduce the number of small universities and colleges Stop spending on the Alberta Separation panel Less government travel	Consider a small sales tax Diversify away from oil and gas Don't cut public service employees across the board- evaluate performance of individuals Educate, educate, educate! Encourage farming and ranching
T0c	Education Healthcare Diversifying economy	Stop giving tax breaks to big corporations. Bring in provincial taxes, get rid of your “war room”	Diversifying, invest in arts, agriculture, innovation, tourism, green companies and small business
	Education and healthcare. Also fixing and building infrastructure. Conservative governments tend to neglect infrastructure.	Well, the “war room” is not only an embarrassment to our province that scares investors away it is also a profoundly ridiculous waste of taxpayer money. How many more of these obnoxious UCP government programs exist under the radar? Chop them all! I see a profound waste of money on government members travel expenses. Another idea would be to force government members to report and return the kickbacks they receive. Oh, and why not stop funneling tax payer money into for profit businesses? These seem obvious....	Invest in the future, which you haven't seemed to figure out is clean, sustainable energy -solar, wind and geothermal energy. Alberta can continue to be a leader in energy we just have to move forward.

T2E	Education (this is an investment in our long-term economy), Social safety-net for unemployed, disabled and disadvantaged Albertans (this reduces our vulnerability to the boom-and-bust cycles characteristic of an economy that depends on the oil industry), and incentives to alternate energy and tech-sector development (to wean us off dependence on the oil industry and create a balanced economy)	Primarily and most important, DO NOT GIVE TAX CUTS TO CORPORATIONS. Remember, corporations pay for all their expenses in *pre-tax* dollars. High corporate taxes encourage corporations to spend on their own long-term viability: on wages, plant maintenance, training, expansion, hiring -- things that put Albertans to work. Low corporate taxes just encourage corporations to pay dividends to already-wealthy shareholders, many of them outside of Alberta, who are unlikely to increase their spending and thus will not benefit the economy.	Maintain a living minimum wage, putting more money in the hands of people who are living week-to-week: they are the ones who will spend any increase they get. Wealth "trickles up" in a supply-and-demand free-trade economy that -- like ours, thanks to continuing unemployment and underemployment -- has a deficit of *demand*. Putting money in the hands of those who don't have enough creates demand -- and as that living-wage money gets spent locally, it creates wealth and boosts demand further.
T6H	The environment, health, and education.	Slash boondoggle consultation panels. Stop giving away money to corporations via corporate tax cuts.	By getting out of the way ... slash red tape.
T6C	Focus investments on health care, public education, public service workers. Green technology subsidies, clean energy, and diversifying away from oil and gas dependence.	Smaller oil and gas subsidies. Abolish the embarrassing CEC war room. Do not move forward with provincial police, provincial tax agency. Investing in safe consumption sites are proven to reduce costs on policing, health care/EMS, and social services.	Investing in green technology, the tech sector, renewable energy. True job creation is in diversification away from dependence on oil and gas sector. Helping Alberta energy companies move to alternate energy sources.
T6G	Health care, education, climate crisis.	Ditch the war room. It is a waste of money. Eliminate redundant middle management jobs in government and health care.	Invest in green energy. Support IT development. Stop thinking that fossil fuels will return to their glory days.
T2M	Top three: Reduce debt, reduce debt, reduce debt.	Ditch the energy "war room", stop subsidizing religious education (it's 2020 for crying out loud), cut health care costs by charging a minimal user fee for every doctor's visit to discourage the runny nose and ear ache brigade. Allow private health care to take the pressure off publicly funded health care. Stop funding capital projects that don't have the long-term operating budget funding in place. So - no more arenas and no c-train expansion for Calgary.	It shouldn't. Job "creation" by government is not sustainable and economic growth in Alberta is reliant on the world price of oil and is beyond provincial control. The best bet is to invest in education in STEM (and encourage lots of international students to come to Alberta).
	health ,education, child services,	stop giving corporations 4.7 billion dollars of our tax money, shut down the 30 million dollar war room, stop sending your right hand man to the UK for nothing, stop giving sole sourced cash to law firms your sons a partner in?	Hire more teachers, hire more nurses, stop trying to privatize the province, start building the infrastructure that Klein ignored and is now falling apart, come to the realization that other people work in Alberta besides oil and gas workers
	Education. Health care.	Political staffers	Fund something other than oil.
	Advanced education and the research/ innovation sector should be the top priority of the Alberta government. Alberta needs to become an innovation leader so that it can reap the benefits of future technologies, the green economy, and the bio-economy (e.g. a green new deal).	-Ending corporate tax giveaways -UCP energy "war room" (Canadian Energy Center) should be decommissioned	Better fund advanced education and the research/ innovation sector

	I believe education- both K-12 and also advanced education- should be a top priority. The shift to a knowledge economy is clear, and low skill jobs are rapidly being automated. We need to recognize that shift and rise to it! We want to be world leaders in education and innovation.	Eliminate the strange war room as step 1. I think it is always good to look for efficiencies, but what we really need is a small sales tax to generate more revenue.	DIVERSIFICATION. Tax cuts to tech industry, green industries, film industries.
T2X	Cleaner energy, health care- taking care and appreciating the front line staff that deal with the burden of an ever increasing population that require and deserve the best care possible. Investing in our children's education. This is our future and if we make education unattainable in this province we risk pushing away our bright young future to other provinces/countries where they will find better education options.	Mainstreaming management positions within Alberta health services. Stricter criteria for children requiring pre-k educational assistance (this doesn't mean getting rid of altogether). Still asking these parents to pay for a portion of their preschool. Bring back requiring everyone to pay a health care premium.	Diversifying our economy to bring in new jobs, and new educated workforce.
T4j	Healthcare and improving same. More nurses and treat them well to keep them.	Upper management in health care. Seems very top heavy and overpaid	Encourage pipeline growth
T2R	Health and Education	Restore the corporate tax rate to 12 percent	Implement policies and programs to transition from a high dependence on fossil fuels to a low-carbon economy
T1J	Education, Healthcare, Libraries, environment	Taxing the rich, cutback on politician and CEO positions pay	By putting funding into education
T5C	Social programs - healthcare and education	Progressive corporate tax reforms and overall tax fairness	Budgeting properly to support those already in their fields. Allow those individuals to grow so that whichever field they are working in can prosper as well. Working an individual thin to save money does not leave room for growth.
T8N	Healthcare and education	Corporate tax PST GST	Healthcare and education funding
T5J	Healthcare, Education, Infrastructure, Social services	Eliminate corporate tax cuts. Government ads.	Increase government spending and run a more efficient government
T6A	Health mental health child welfare and education	Do not lower corporate taxes raise them. The tax break to corporations was unnecessary and produced no results. It is based on faulty disproven economics. Shut down the 30 million war room it is unnecessary and a waste. Makes Alberta look foolish.	Fund diverse economy like AI and green energy and tec companies and small businesses. Clean up and pay for orphan wells. Fund infrastructure deficits created by neglect during 44 years of government focused on oil and gas. Build the pipeline but realize we need to diversify as oil is a transitional resource. Have a sales tax. Don't depend on oil prices rising.
T4R	Healthcare Education - this is an investment in our future generation who eventually be leaders.	Trim upper management in Healthcare, not front line care and services. Take more tax back from corporations!!	Diversify into another area...alternative energy sources, technology
T9S	Primary and secondary education Post-secondary education Healthcare Renewable energy sources	Increase corporate taxes Increase taxes on the wealthy Stop investing in oil and gas	Invest in green and renewable energy Invest in technology Invest in education and healthcare Invest in childcare

T6V	Education/schools, childcare funding (bring kinship funding back), and family resources like parent link! We have lost so many important things!!!	Stop giving raises to people who already get paid a very high salary. They don't need more money. Stop giving tax cuts to wealthy people and taking away resources from the poor and middle class!	Assist people who are unemployed in finding work faster and put a time limit of people who are using Alberta works. Also make it more difficult to get in AISH as many people are on it who can absolutely work! Open up more jobs in different fields instead of cutting them like health and social work. More financial assistance to new and small businesses in order to grow and therefore create jobs.
T8W	Major infrastructure- finish the grande prairie hospital. Health care	Scrap the low income tax rebates. Scrap the childcare subsidy. Lower the child care allowance. Get rid of useless government committees.	Invest in new energy projects. Make our tax rates competitive for businesses and residents
T5k	Healthcare Education Lower cost childcare Diversification of the economy Scheduled infrastructure projects	Implementing a provincial sales tax Reducing administrative redundancy within AHS Reduce public sector wages including that of doctors, nurses, teachers to an appropriate cost of living adjusted national average.	Industrial and economic diversification Supporting the technology sector Continue scheduled infrastructure projects
	Education Health Community services - police, fire, ambulance	It's helpful to know exactly what our money is being spent on, to see where a few dollars here and there could add up to a lot.	Support people with disabilities to gain employment - perhaps some employer subsidies to encourage them to hire
T6C	The government should prioritize spending on public education and post-secondary institutions, such as the university of Alberta. We should also invest in green//climate initiatives. Spend on public health improvements, such as maintaining the workforce.	We can reduce expenditures through ceasing corporate tax cuts especially to the oil and gas industry. Rather than cuts, we could also implement a provincial carbon tax and use revenues it generates.	We should not use corporate cuts/bailouts to spur economic growth - rather, continuing to invest in a well (and publicly) educated Alberta population whose skills can then be applied outside the oil industry; create a more diverse Alberta economy by investing in tech, research and development in the health and sciences fields.
T7X	Education and healthcare	Focus groups, revival of the oil industry, administration positions.	Diversification away from oil and gas.
T5N	Healthcare & Justice	Reduced tax breaks to large private sector businesses	Take the excess from the private sectors breaks and funnel it to the essential services sectors (health, Justice, education). Make budgetary restraints and cuts on non essential things, not jobs where were already short staffed. Cutting these areas does not improve our province it will only put us in a worse position that it's currently in. The taxpayers pay for these services and expect they will receive services (Are we receiving much of the GOA motto?? No.) Cutting these sectors so much is providing Albertans with mediocre, barely operational services.
T0M	Libraries, Income supports, Drug and alcohol programs, Education(all), Infrastructure.	Bureaucrats, changing ministries, travel	Infrastructure programs, put corporate taxes back, support diversification
t2r	Jobs and new industries	smaller tax breaks for large corporations	Encouraging new industries and better support for education both for youth and adults who need to retrain for future positions.
T8N	Health Care & Education	Technological efficiencies	Fund technology, health care, education & solar
T3A	Education and health care	Quit fighting for pipelines and handing out huge tax breaks to Suncor, Cenovus and Husky Oil. Shut down your 'war room'. Skype instead of travelling.	Research for new technologies

	<p>STOP GIVING AWAY BILLIONS OF TAX DOLLARS TO PRIVATE CORPORATIONS!!!!</p> <p>Use tax revenue where it is intended to be used, to support public services.</p> <p>Stop wasting money on your war room.</p>	<p>Get rid of your war room. Boom, there's \$120 million over four years.</p> <p>Stop doing stupid things like cancelling the crude by rail contract. There's another billion and a half you wasted.</p> <p>Increase corporate taxes!</p> <p>Royalties.</p>	<p>Start supporting the diversification of Alberta's economy. There are many other profitable industries other than oil and gas.</p> <p>You should ask Rachel Notley, or any member of the previous NDP government.</p>
T6V	Education And healthcare	Making part timers work full time hours before getting overtime	By putting money into education we are helping these kids coming out of school to get jobs and wanna stay in Alberta to work instead of leaving
T1K	Paying off debt.	Every department.	Lower taxes, no subsidization of private enterprises.
T5A	<p>Education</p> <p>Health care</p> <p>Infrastructure</p> <p>Economy</p> <p>Security</p>	<p>Being more efficient in spending</p> <p>Getting value for money on projects</p> <p>Having compelling business case before committing tax dollars</p> <p>Partnering with the federal government to get what is due to Alberta</p> <p>Working with multilateral and global agencies to attract funds for key projects that have impact on the people of Alberta</p>	<p>Investing in infrastructure</p> <p>Municipal transfers on core priority projects</p> <p>Investing in key projects to open up the rural communities</p> <p>Partnering with the oil companies for more investments in oil and gas projects</p>
T6M	Health and education	Reduce wasteful spending	Diversify
	Give back the money you attempting to steal from front line workers.	Decreasing salaries of provincial court judges, city council members and other government staff that are vastly overpaid.	Allowing ministries to fill front line vacancies as we are literally DYING you evil fucks.
T6L	<p>-Schools/Education (grade, trades, and post secondary)</p> <p>-Health Care</p> <p>-Sustainable Transportation (Transit, pedestrian, bicycle)</p>	<p>Corporate taxes</p> <p>Carbon tax</p> <p>less spending on promoting oil and gas</p>	<p>-Diversify economy</p> <p>-Provide incentives for investments in Alberta</p> <p>-Invest in people and local communities</p>
T1K	<p>1) healthcare - including universal prescription plan</p> <p>2) education - more money to schools to lower class sizes</p> <p>3) post-secondary education - fund basic and applied research that will help generations after us</p>	1) salaries of high-level employees earning >\$100,000	<p>1) expand healthcare, lower wait times</p> <p>2) expand education, lower class sizes</p>
T4J	<p>First: Economic diversity - look at other ways to make money besides oil and gas</p> <p>Second: Education - an educated population can help further Alberta's interests</p> <p>Third: Health - without our health, we can't work, and that includes oil and gas work.</p>	Health is important, however, you can probably reduce duplication of roles (costs) looking at the work of the the Ministry of Health and Alberta Health Services. Where can the ministry reduce its duplication?	Oil and gas is in such a boom/busy cycle it would be great to invest in a variety of industries such as tourism in the Big Country, technology, film and arts and more. Alberta's too reliant on an industry that has no control over U.S. shale and OPEC
T1K	Education. It's an investment in the future.	Close down the useless "Canadian Energy Centre".	Pay public employees competitive wages. Prepare the province for the economy of the future by encouraging diversification of the economy, especially growth of agricultural processing industries, but also high-tech businesses that can take advantage of the highly educated workforces in our cities.

T0H	Oilfield, Agriculture & Forestry	Top end administrators in government positions. Stop cutting from the bottom end.	Build the pipeline. Stop making cuts to front line healthcare workers and teachers.
T3H	Education and health care	Stop lowering corporate taxes Consider a pst	Find ways to diversify. I support oil and gas but feel we should consider alternatives as well.
T4V	1) Public sector - health and education 2) Environment 3) Industry	1) Introduce a provincial sales tax!!! It's time, Alberta needs it 2) Properly taxing private business and the energy sector 3) Quite giving out free money to Husky trying to keep them in the province, just to see them cut jobs and move operations out Don't rob some of hardest workers teachers and health care workers. I thought the UCP government was pro jobs but you're actively pushing trained professionals out of the province.	1) Review your Econ 101 notes - spend when the economy is struggling to boost it, save when it's doing well. It sure would be nice to have the billions of dollars invested from Ralph Klein's \$400 handout now wouldn't it? Our current situation is 100% self induced by years of short sighted thinking. 2) Invest in new industries - think about more than the next years, set Alberta up for hundreds or years not another 10 years of fossil fuels
T8A	Education, Health Care, AISH, Daycare,	Reduce govt employees at the top!	Continue the good progress started by our former NDP govt.
T1H	Healthcare, specifically mental health care for all. Our big big industries have high suicide rates and depression rates. Primary education, post secondary education	Corporate tax increases. Carbon tax. PST.	Help get laid off workers from the oil and gas industry into renewable energy sector and tech. Offer incentives for large tech companies to start up in our cities. Look into geothermal or safe nuclear energy in northern Alberta.
T7P	Roads and buildings while Alberta is in a slump and labour is available.	-Cut the war room. People don't tend to listen to someone who says, "Hey! I'm at war with you." -Change the reduced tax incentive to make the tax cut dependent on increase in jobs and permanent investment in Canada -Restore and align with inflation money given to government workers including nurses, doctors, teachers. That money circulates making it possible for other ventures to survive. -structure tax incentives for other work to be situated in Alberta -5% tax (consumption tax) on luxury (non-essential) spending -reduce spending by political government workers by spending as if it is coming out of their own pockets. Or maybe have it come out of their own pockets.	See answers above
T5R	Education and health care	No where. There's not enough money for basic support services. Need to raise taxes - on corporations and sales tax.	By investing in alternative energy and sustainable practices. That's the future. Oil and gas is not.
T8n	Healthcare and education	Increase taxes slightly to higher incomes. Make better choices about our economy to save money. Maybe spend short term to save long term. You need to diversify the economy instead of focusing on the oil field. Education will help.	Education!
T7Z	Education, Environment, Health Care	Finding savings takes investing in change. Invest in more efficient processes in government, consider where subsidies are going. Savings is a long term plan.	Support small business, consider building better modes of transportation besides single passenger vehicles which will reduce emissions making more room for business that emits, etc.

T5L	Education- formal & post secondary middle class -Tax cuts & relief for high energy costs, fuel and groceries Health care Stop nickle & dimeing the middle and lower class	Within the government- Pensions, travel, assistants upper class- increase taxes Stop giving multi million businesses breaks	Education Training diversify
T9H	Education, Health Care and Job creation by (i) diversifying the energy sector namely via development of Renewable Energy Industies / Systems, and (ii) Sustainable Oil Sands development / Global Market penetration (that restricts the toxic emmissions, restricts the use of fresh water and maximizes reclamation) ~	Reduction of government policy transitions in terms of new policy printing (should be far more paperless); less tax cuts to the wealthy; reduction of governmental perks (especially while attempting to claw back frontline teaching and nursing salaries ~	Job creation by diversifying the energy sector namely via (i) development of Renewable Energy Industies / Systems; (ii) Environmental Sustainable Oil Sands development / Global Market penetration (that restricts the toxic emmissions, restricts the use of fresh water and maximizes reclamation) ~
T5K	Health Care, education, social services	Not giving big corporations tax breaks and charging them higher taxes than small businesses.	Investing in health care, clean energy like solar and wind, doing more to attract new technology innovators and the gaming and entertainment industries.
T8R	Education and healthcare	By stopping corporate handouts. Why do the richer need to get richer? Why is there such an emphasis on privatization? Why is the public sector being targeted? People are only losing jobs by attacking the public sector, which is hurting economic growth because people aren't buying. If people don't buy, then the big wigs don't make they're money.	Give back to the middle class - stop hurting students, post secondary. Targeting the middle class won't create jobs - while the richer get richer.
T6W	Education and health care and affordable housing for everyone	By ditching the Energy "War Room," taxing corporations more and stop sucking up to big oil. What part of non-renewable resource don't you understand? Let's not even talk about Climate Change....	By paying EVERYONE a living wage and cutting the costs of operating a household. The middle class is disappearing, there is only the rich and the poor!
T4n	Education, health care, public service workers and job creation	AISH / IS overpayments. Government spending in all areas aside from cutting employees. Higher taxes for wealthy companies.	Work on finding finding a new industry for Alberta
T4R	Healthcare, ER wait times, surgical wait times, expanding red Deer hospital. Education, smaller class sizes, more support within the classroom, cutting down on redundant paperwork teachers are required to do on top of teaching planning and assessment. Tech sector, encouraging growth within this industry to further diversify the workforce and keep us competitive with other provinces and countries around the world	Cutting down on needless spending (energy war room), lessen tax loopholes for large cooperations, keep carbon tax (use money to fund clean initiatives to further improve energy regulations	Adequately funding education, including post secondary, innovation/job creation grants for start up companies, healthy educated workforce
T5K	I think the government should focus on sustainability, I also think it should focus on people. We need jobs but not at the expense of the hard working people. We didn't need to make so many cuts to business taxes.	I think we don't need to cut the business tax by so much over the next 3 years. I don't know if we need to find savings, I know that wages tend to be higher in Alberta, why not simply institute a small sales tax.	Diversify and invest in new energy initiatives. I understand that oil still has life left in it but the writing is on the wall. Seriously institute a sales tax like every other province to help fund it. The government needs to do more than support the oil industry if they want to turn this economy around. We have a burgeoning nano technology sector and more. Also that doesn't mean stop supporting the oil industry.
T2Y	Education and healthcare	The government should find middle ground with tax cuts, tie them to oil price or some other mechanism	Need to support the current jobs and don't promote cuts in order to try and fund other growth initiatives

T4X	Education	Corporate tax breaks	Stimulate the economy. Many tradespeople are out of work. Incentives to go back to school to learn a new program.
T6W	Education, health - first responders and front line, and supporting long term care in the community to avoid overwhelming hospitals	Invest in long term solutions so our future spending can be less	Implement a sales tax. Even 2% would go a long way
T2W	Health, environment and education.	Reduce subsidies to fossil fuel companies.	Encourage renewable energy.
	Education, healthcare, and public service	Major corporations not getting tax breaks and shutting down the "war room"	Introducing a provincial sales tax
T4T	Reducing overall spending. Improve assets. Elk cows should be relocated instead of issuing late season (pregnant) cow tags. wildlife hunting is already a huge draw for the province but it could be much better if our resources weren't poached and prematurely harvested.	Administration at AHS.. AHS always go after nurses when budget constraints are placed on them.. not sure how but we should micro manage them so they can't just fire front line workers..	Invest in infrastructure
T6H	Healthcare, post secondary education, primary education, human rights initiatives, the tech sector, green technology	MLA salaries, cancel the war room, stop tax giveaways to oil and gas, fire the premier, stop pandering to religious zealots and pro-lifers	The tech sector and environmentally friendly "green" tech is huge everywhere but here due to cuts
T6w	Reducing class sizes, making Alberta attractive to doctors again, infrastructure	Instead of saving, cease tax breaks	Diversify economy. Go back to grants in tech, film, etc to have other industries gain traction
T3M	Education and healthcare.	Stop giving out oil and gas subsidies. Consolidate the Alberta school systems into one system. Stop funding private schools.	Providing support to growing industries such as the tech and digital industries and developing our other energy industries as we move away from oil and gas.
	Healthcare, public education, and social supports for the vulnerable.	By raising the corporate tax rate. (It's also pretty imperative that oil companies actually pay their property taxes.)	Diversification of the economy, including in the energy sector. Providing incentives for researchers and companies who are already finding innovative ways to employ oil workers in renewable energy projects with minimal or no retraining. Also, providing incentives for the tech sector, film and arts industries.
T6R	Healthcare and Education need funding (not cuts) in order for us to have proper Healthcare and proper Education. Keep Healthcare and Education publicly funded. Do not add extra costs to these areas. Infrastructure also needs to be kept up. Diversification would also be a good place to focus on as we put ourselves at risk by only focusing on oil and gas. (do not put all your eggs in one basket as the saying goes) We need to be fiscally responsible by "priming the pump". It will lead to growth instead of economic collapse. Stop blaming the federal government, the previous NDP government and the environmentalists for Alberta problems. Stop talking separation as it is fueling hate. Instead focus on ways to make Alberta better or at least as good as it has been.	Stop giving huge tax breaks to the already wealthy companies and the very wealthy. Especially since many of the oil and gas companies are leaving the province and taking our money with them. You have been providing socialism for the rich and capitalism for the poor and middle class. No more welfare for the rich. I do not know why you would think that trickle down economics would work as it have been proven NOT to work. You could also put in an Alberta sales tax.	The more people that have jobs, the more they will give a boost to economic growth. The more people that have money the more people will purchase goods. Keep Healthcare and Education sectors well employed. That way we will have better Healthcare and better Education as well as more people able to purchase goods to keep the economy going. Cutting jobs just leads to a recession or a depression (a total collapse of our province). We all know that the oil and gas workers will not be getting back their jobs. Help them with job training in new renewable energy sectors or other such endeavours. Provide incentives in different businesses such as IT, entertainment, and renewable resources to name a few.

T3B	Maintain and index AISH. Do not attempt to balance the budget at expense of vulnerable Albertans such as those who are AISH and PDD recipients. Transition from non-sustainable industries to sustainable. Education and health care that is accessible and affordable across economic levels. Education can be a bridge to help decrease poverty. Health care (including preventative) can lead to decreased health problems and therefore decreased expenditure. Childcare and empathy training in schools to help decrease cost of potential incarceration for future generations.	Calculate the percentage represented by the amount of a dollar a day for an individual on AISH. Take that percentage and decrease the salaries of government members by that percentage amount. The saved funds could be utilized for social programs to ensure positive quality of life for all Albertans. The more disposable income an individual is able to have equates to more finances entering the economy.	Education and lower interest on student loans. I attended U of A 17(1) The amount of approx. one year's tuition was forgiven if the student began repaying the loan immediately following graduation. Retain the education tax credit. Retain CPP (Canada Pension Plan) and Old Age Pension (Seniors Pension). Cap fees for utilities so families and individuals have disposable income and do not have to choose between utilities and groceries.
T6J	Children, education, healthcare	Not rebranding anything in the government for at least 5 years, nor switching up ministry divisions, just keeping everyone accountable.	Don't cut jobs in the first place
T2K	Education, healthcare, and infrastructure.	Focus on bringing in more revenue. 2 or 3 % sales tax, no decrease of corporate tax rate.	Leave corporate tax rate at 2018 levels, incorporate caps of CEO and top executive compensation. Support women in the workplace.
T9A	Education and healthcare	Not cutting taxes for corporations, government salaries	Not make so many cuts to services that employ people
T5C	Education and health care! The two most important areas, that make everything else work the way it should.	Stop giving tax breaks to the rich!!!!	Support education and health care... people come to places where their children will get quality education and where they will receive adequate health care.
T5L	Healthcare Education Diversify the economy	Get rid of the war room Reverse the tax cut for corporations	Diversify the economy - solar, wind, tech Tax incentives for tech industry
T3Z	Education, public only no funding for private religious schools at all. Full funding for post secondary education, expanded programs not reduced. Health care is a top priority with an aging population and should not be cut.	I do t believe in saving in these times; it's time to INVEST monies previously saved. Unfortunately AB has had 40 years of abdicating it's responsibility to save for future.	Diversification strategies is to growth areas. Incentives and tax credits and breaks that DIVERSIFY towards a new economy. Interesting you don't ask where can we find new revenue. My recommendation is to eliminate existing tax cuts, and impose a provincial consumption tax.
T6w	Local refineries focused on developing various petroleum products that can be used in Alberta for Albertans. Stop importing petroleum products. invest in infrastructure to be independent not inter dependent.	Refining and using our oil provincially rather than importing petroleum products and exporting ours. Other potential savings ...stop paying for Quebec's dirt cheap day care and through the roof child tax benefits.	Develop other industries by promoting growth through subsidies. Reduce taxes on companies innovating renewable energy tech not on companies already making billions. If big oil want to leave let them and find a way to fill the void publicly.
T5N	Restoring the jobs that were lost to the massive cuts to industries like health care and other essential services, then focusing on investing money and creating jobs in new industries that can bring Alberta back on top by using what little oil revenue is left to develop renewable energy resources because the oil boom is not coming back. A Conservative government's focus should be on preserving the status quo and the jobs within them, not cutting back on industries that are essential to our way of life.	Not giving \$6 billion dollar tax cuts to corporations because trickle down economics does, has not, and will never work. Cut out the trips to London to drum up business that didn't work, and cut back on some of the salaries of the highest paid members of parliament, and start investing our money smarter in developing industries. Find ways to help the hard working unemployed people of Alberta by providing them with a basic universal income, thereby removing and saving billions of dollars in areas such as general welfare, AISH, and other support systems. Additionally, the implementation of a 2% PST would go a long way to helping the Province, while all it would do is make it feel like we have a 7% GST again. Those kinds of cuts only help the ultra wealthy.	Investing money in developing sectors to make Alberta a forerunner and developer in renewable energy resources and advanced sciences. Give more tax cuts to areas that need it, such as in small developing businesses and businesses that take the steps to try new things. The government's focus should be on helping it's local entrepreneurs and developers rather than giving money to big businesses in the hopes that they will bring jobs to Alberta because they will always find a way to go with the cheapest alternative, the nature of business. Help certain industries, such as the Marijuana industry, make more money by, for example, deregulating some of the ridiculous packing requirements so that people are more willing to actually purchase from the stores so that it can be cheaper for them, allowing there to be more sales back and forth, therefore more growth.

t7z	Please do not shut down safe injection sites, the amount budgeted for this, far exceeds the the treatment, and strain on our health care system.	i think corporate tax breaks are not going to bring back business	Let the experts continue to work on this
T5h	Spending that actually creates jobs instead of this disgusting mess you've created.	Certainly not in people's jobs. We need infrastructure, education, and healthcare to be a strong province. I know Kenny is excited to get out of here and run for PM in four years, but the rest of us still have to live here.	By undoing this joke of a budget.
	Increase funding to hospitals and schools (both k-12 and post-secondary)	REDUCE CORPORATE TAX CUTS. STOP GIVING CORPORATIONS BIG BREAKS. THEY DO NOT NEED IT. the government won't need to find savings when there is a bigger influx of tax dollars from those who can VERY CONCEIVABLY pay them!!!	by funding education and training programs, and providing social supports that help people get back on their feet! people who are not lacking in their basic needs tend to contribute more to the economy.
T6w	Health care, education,	Bring in a pst or health care premiums. Talk to the actual nurses where spending could be cut. Look at the patients who abuse the system. Maybe think of charging patients who are cleared to return home but abuse their stay at the hospital and won't leave. Talk to the employees and not the employers. Stop with all the panels and do something productive.	Maybe look at industries that are booming like tech and film. Give them incentives to come here. Maybe start looking at solar production plants. Maybe try and get an electric car company to build a plant here.
T4X	Education.	So called "job creation" in the oil and gas industry.	By not cutting Education jobs but creating more.
	Education, healthcare, social services.	Government ministers/government officials (premier, MLA, House representatives etc) having lower salaries, taxing high earners over 150k. Reducing travel of government officials, use video conferencing instead of face to face meetings. Move to a paperless system. Tax big corporations.	Continue with green energy programs. Continue with the medical lab project.
T3B	Climate change initiatives are very important. We are experiencing natural disasters such as flooding and fires. As a resident of Calgary, I am very concerning about flooding potential and resilience. It is important to protect the city from flooding and encourage continued study of the Bow River Basin Upstream mitigation project. Phase 1 is near completion and phase 2 must be funded. Also in the shorter term, extension of the the agreement with TransAlta utilities is required to partially reduce risk.	Tough. Education is our future. Health care costs have risen but the population is living longer, and many many medical conditions are more treatable. I think we need a sales tax.	The government should support and promote clean energy technologies and jobs related to this, while also helping the oil and gas industry support the ongoing needs of the province, country and world for non renewable energy as clean energy becomes more available. Consider initiatives for current oil and gas companies to rebrand as "energy companies" and undertake renewable projects so that eventually they are invested in all types of energy, ie more than the non renewables. In this way, the companies become less dependent on their non renewables as they grow assets in renewables.
	Public healthcare, education and post secondary. These are our cornerstones and should be protected at all costs and so far, I'm unimpressed with what UCP is doing. IF an election was held tomorrow, I would vote left just to protect these. After those, small business tax breaks and diversification. I'm pro pipelines but we need to balance both.	Lower wages for MLAs and Premiere! Get rid of the War Room! Your PR people make way above pay grade. Don't cut other public servants until you show leadership by cutting your own fat first. I voted UCP but I didn't vote for what has been done so far.	Small business incentives, bring back STEP for post-secondary, attract diversification through tax credits. Don't just lobby for Oil and Gas. It's huge but we need to be business-friendly on more than one front. Thing bigger - Albertans need you to!

T7Z	Public health and education. 17(1)	Removing funding of homeschooled& private school students. Possibly look at a PST?	Take a look at minimum wage? Continue to push for the oil industry to get back on its feet. Work with the federal government to remove equalization payments. Until Alberta is back on its feet we are in no position to help others. Especially when they're continuously voting against our natural resource products
T5W	Education Healthcare	Its so called 'war room'	Stop focusing only on oil and gas. While they're a major part of the economy, Alberta was diversifying under the previous government. Don't be so afraid!
T8n	Education and medical	Private school	Give more money to education as this will drive the future
	Social services such as healthcare, education - both public and advanced, supports for the disabled, justice participants, should receive adequate funding so that the future wellbeing of Albertans is not jeopardized. Cuts to these services is short sighted and will result in long term negative impacts as children are raised in overcrowded classrooms, the aging population does not have access to proper healthcare, and the justice system crumbles into chaos.	Tax cuts to large corporations are not going to improve the economy. Trickle down economics does not work because the people at the top receiving the benefits do not care to share the profits with those below them. The government should be collecting additional revenue from these corporations. The government should also be looking at renewable energy to diversify our economy.	Cutting budgets for nearly all public services results in job loss. Alberta lost thousands of jobs in 2019 because of budget cuts. That clearly isn't the answer. The government must consider policies other than trickle down economics. The government should be incentivizing innovation in the energy industry so individuals negatively impacted by the downturn in oil can be retrained and find related jobs in the industry but for other types of energy.
T3B	Stimulating the economy, responsible environmental management policies, funding upstream mitigation strategies (reservoirs) to protect the Bow from flooding	Top Heavy Administration of AHS and Government Agencies.	Work with businesses. Advocate for our oil and gas industry.
T2Z	Health and education. Don't cut the wages of the people who work in health either.	Cut politicians salaries and spending.	Not by increasing education costs so that people can afford to get educated
T0M	Health care & education	By reducing some of the multiple management levels of Alberta Health Services.	By creating jobs instead of eliminating front line jobs. Get oil field workers back to work.
T2E	Debt reduction, support for the oil and gas industry.	3rd party audits/management consultants brought in to find efficiencies in AHS and school Boards. Giving these organizations a flat/reduced budget will just result in frontline cuts rather than removing administrative red tape that is targeted. Frontline cuts will creat animosity towards the UCP	Continue to fight for pipelines (especially energy east), changes to equalization, and promote Alberta to attract international investment.
T8w	Police, specifically solutions to rural crime as well as assisting municipalities with cost of maintaining their forces. With the continued economic uncertainty, expect higher crime rates due to layoffs. Invest more into economic diversification	More efficient internal structure, higher performance expectations for all govt employees. Similar to private sector. Dump the Canadian Energy centre, or at least focus it's efforts on promoting positive aspects of hydrocarbon development rather than trying to paint others in a negative light.	Invest more into economic diversification. Tax breaks for small businesses, grants or other motives to increase technological and renewable energy startups. We can't be dependent on one or two pipeline projects happening.
T6W	The wellness, health, education, and care of Albertans	Oil and gas propaganda and handouts would be a good place to look	That's above my pay grade
	Public education Healthcare	-Re-instating taxes for large corporations -PST	Properly fund public and post secondary education. These children are our future.
T5A	Education, Health Care (including mental health).	Corporate taxation mild increases, freezing or modifying high-rank government official pay rates above 60k per year. Adjustment of benefits also, where such benefit payments are not adequately used or implemented.	Linking of minimum wage to inflation rate such as other countries follow; observe and implement. Greater available money for low, middle incomes provides more incentive to spend (and not hoard, such as higher-income misers) and thus support local industries, jobs, and economy.
T5T	Health care, education	Billion dollar corporate giveaways.	Stop giving money to oil companies and laying off nurses and teachers. People can't spend money if they have none.

T2E	Social welfare, health, education	Tax cuts for multi-million dollar corporations, executive salaries.	Employ people in health, social welfare, and education.
	Education, and Health Care...public service projects, the environment.	high profile politicians, oil and gas investments.	disey from oil and gas, start investing in environmental sustainable industries.
	Public education, public health, supporting Alberta's transition to a diversified, lower carbon economy. I know this makes us sound like pinkos, but we're middle of the road, pragmatic people that care about giving our children a future.	Why savings? You aren't looking at the big picture. Every other province gets considerable revenue from a sales tax. We strongly support a provincial sales tax.	Reduce cuts to education and public services (keep existing jobs) and encourage innovation and diversification of the economy. Your own analysis showed the carbon tax had very little impact on provincial GDP but stimulated considerable investment in low carbon solutions.
T6K	Increase health, education, wage salaries and operating budgets with inflation.	End the CDA Energy Centre. End the associate ministry of red tap reduction. End the legal battles over the carbon tax. End the senseless separation and transfer payment rhetoric. End the tax giveaway to already wealthy corporations. End tax breaks unless new employment is proven. Cut funding private schools. Amalgamate public and catholic schools. Leave the ATRfund with ATRF instead of moving it to AIMCO.	Restore funding to green tech and energy programs. Hire more teachers. Hire more nurses. Make childcare a good and secure (and legitimate) profession by fully funding childcare. Do not lay off public sector employees. Build the Edmonton lab. Fund social agencies. Don't be evil.
T5y	Health, education, ei	Building art museum, spending money on making the edmonton public library ugly. Stop spending tax payer money on useless things	Offer better business developement plans so more entrepreneurs can start up
T2W	Education, health care.	Not foolishly giving away money to corporations. Raising taxes to par with the national average.	Investing in diversified energy producing industries.
T2m	Education and health care Climate change and transitioning our economy to more renewables Tech innovation	Eliminate the "Energy war room" and transfer that money into education	training and transition to renewables Innovation and technology Stop ramming oil and gas while ignoring the problem of diversity. We have a highly educated populace - help make the plan for the future!
T6K	Energy	CEO Salsries	New technology
T5K	Public education and public health care (not promoting privatisation of social services). Grants to incentivise green and other technology sectors. Upskilling for unemployed workers to support their transition into other industries.	Reducing health care overtime costs through improved scheduling and hiring of more staff rather have cutting the workforce and having larger and more stressed out personnel. Elimination of the energy war room.	Reimplement tax incentives and grants for emerging green and technology sectors. Look at increasing revenue and not just cost cutting.
T3A	Healthcare!!! And Improving wages for journeyman, which have stayed stagnant for years, despite the HARD work	Reduce administration wages at AHS, instead of cutting from the actual important employees.	Cut from higher up jobs in the government sector that are making a ridiculous amount of money, so that jobs don't need to be cut in the more essential roles that are "lower" on the pyramid
A1A	Maintaining quality education and health care. Stop the asinine cuts that our only going to hurt the people of this province. Teachers, nurses, health care professionals and other public sector workers deserve to be respected and not taken advantage of.	We don't need to find savings. We need to: -implement a PST -adequately tax big polluters -stop giving huge tax cuts to giant corporations	Diversify!!!! Climate change is real. Yes, oil and gas has been a staple of the Alberta economy for decades. But the reality is we need to turn more and more to alternative energy sources and thus We as a province need to start bringing in revenue from other areas. Stop providing tax cuts to giant oil and gas firms. Start supporting tech, renewable energy companies and more environmentally conscious initiatives. If we don't look ahead we're going to get left behind.
T6I	Health care. Education. Green power infrastructure. Who cares if climate change is real. Lets just change ours anyway. New jobs.	Bureaucratic waste. Executive Council. Municipal Affairs. Legislative Assembly. Automation and IT should replace many functions.	Promotion of new tech education and automation.

	Health care, education, social services for the needy	Government salaries and pensions. Revenue taxes. Cut subsidies for large corporations.	Support small business and arts.
T5J	Education, Health Care, and more public services.	The government could save 30 million dollars by not having a "war room to fight internet trolls.	Invest in re training and more public sector jobs.
T9H	Health, Education, Research & Development, Environment.	Cut projects such as the War Room, Red Tape Reduction & scale down your ministry. Stop redoing what previous governments have done by rewriting curriculums, policies & regulations. Why is it that every government needs to reinvent the wheel every 4 years? Stop implementing new department, division & district names. It is not only wasteful but rebranding costs money. Hold the premier's office accountable for personal expenses. Look to the experts for advice. Your doctors, nurses, teachers, principals front line government employees know best where savings can be found.	By reinstating support for University-based research & development. Try and attract the technical, medical & agricultural companies and intellect that left Alberta during the Klein administration. Many who were on the cusp of groundbreaking discoveries that would have brought a great deal of wealth to our province. Make use of the South Edmonton Research Park. Quit looking to the USA for education and business advice and consultation but rather use some of the expertise here. Support Education. Creative well-educated people go on to develop products, markets & businesses. Help secure jobs rather than cut them. People without income are not spending. Promote the arts, entertainment, sports as this encourages tourism, business and is what makes people want to live here. Promote, support & encourage Alberta grown products, services, business, ideas & consultants first, but when attracting business and industry from elsewhere ensure that there is a long term investment of the 100-year kind. Especially where our environment and resources are concerned. Promote green technology. It is what the world will be asking for. We need to look to more than oil but we could explore the possibility of refining it here. Find creative uses for existing infrastructure after industry ends. Equipment, mine sites & so on.
T9K	Making life better for Albertans. This includes all Albertans, especially the children, who have little power. Supports for very young children such as Parent link centres were cut, which will affect many's day to day life. Since the education budget was frozen, but the schools are growing this means less money per student. Children will feel these cuts everyday while trying to receive an education.	Implement a PST. Increase taxes for people with the highest incomes in the province.	Not cutting public sector work like nurses, cutting funding to social services, or to educational assistants. These public sector cuts affect people, Albertans, and jobs.
T9h	Universal, preventative support for families with young children	Utilize things that were done by a previous government like the curriculum and ELCC centres instead of reinventing them	More jobs in social services
	Education, Healthcare and Infrastructure funding! Pharmacare	1. Get rid of the 30M a year war room. 2. Stop giving tax breaks to big corporations that should be paying their fair share of tax. 3. Stop giving Oil and Gas companies a pass on royalty rates. We charge the lowest royalties among the biggest producers. 4. Stop fighting court cases that have already been determined.	1. Invest in Albertans, not just oil and gas! Stop cutting education funding, from K to University funding. 2. Promote diversification, especially in the tech industry. Stop putting all the eggs in one basket with oil and gas. We need a variety of jobs for the future. 3. Promote green energy, as well as oil and gas! Again we need jobs for the future.
t0a	no use..	no use...	follow what trump is doing going further into debt. as hyper inflation will set in

T8N	Education, Health care, infrastructure, protective services	Corporate pay outs or hand outs, increase taxes for corporations and highest income bracket	Diversify our portfolio (i.e., not just oil and gas), money into education
T4c	Healthcare The vulnerable population, especially the elderly, are just increasing. We need to put more towards that than the opposite.	In the politicians own pockets.. Oh and decreasing bail outs for corporate companies.	By decreasing taxes for everyone. Let the economy thrive without wanting so big of a cut.
t3k	Renewable energy incentives Education-increase funding to public schools Increase funding to healthcare Environmental protection	Cut subsidies to oils and gas Tax corporations more	Increase business incentives to renewable energy More affordable tuition Increased spending to public infrastructure projects
T6H	Health care, education, social services	No 'war room', stop with the 'consultation groups' when the work has been done multiple times.	Put money into healthcare and education to adequately fund needs of society's young and vulnerable. Diversification away from oil and gas as it is not a sustainable source of income.
T6E	Health care, education, climate emergency, post secondary, social services	sales tax, corporate taxes	new green deal
T3G	Education and healthcare	CBE administration, introduce PST	Support development of industries outside of oil and gas sector (i.e, wind, solar, recycling). Promote post secondary educational development for these sectors
T6W	Education, healthcare, the elderly, infrastructure, economy diversification.	Money giveaways, specifically to large corporations and oil companies. Reduce salaries of overpaid government managers and MLAs.	Invest in economic diversification. This includes investing in jobs in the public sector, research and innovation. Invest in diverse post secondary education programs and provide scholarships for students in new or highly demanded programs/fields. Provide job programs for recent post secondary graduates.
T5S	Health care and Education	- Get rid of the 'war room' - Reverse the huge corporate tax cut - Implement a PST - Stop creating panels to review things that don't need to be reviewed	Create more jobs in the public sector, instead of cutting them. It will not only increase employment, but will also stimulate the economy as those people will have money to spend in the private sector, thus helping them as well.
T4V	Health care, Education, Universal Childcare Subsidies, diversifying the economy.	NOT GIVING 4.7 BILLION TAXPAYERS DOLLARS IN A PAYOFF TO OIL&GAS. Tax the rich at 70% on every million earned after 1 million. Tax big business and industry. Raise royalties on natural resources to 50% gross earnings.	BY DIVERSIFYING THE ECONOMY AND ENERGY INDUSTRY.
T5p	Child education	Budget cuts in jails ex cable	Stop bringing people in the country and start letting the people how live here work

	<p>Invest money to make the Healthcare and education systems work the way that they should and see returns down the line. No more cuts for the sake of cuts or bandaid fixes. Take a look at what the modern day systems really should be and create a plan to get us there. Connect Care is a great example of forward thinking even though it bid costing money up front.</p> <p>Also I think it was a mistake to remove money from the tech industry. This is a smart area to diversify the economy in and we MUST diversify. Oil may be our short term industry but we need something to fall back on when prices drop again or the industry is no longer needed. We need to be positioned ahead of time for this.</p>	<p>There is too much management at the board level of education. But they are not going to let themselves go so you have to be the ones who do it.</p>	<p>Any tax breaks given to big companies need to be linked to the number of jobs created so that they don't take the money and run.</p>
T8x	<p>Education and Health Care Not having a good plan for future enrolment isn't responsible.</p>	<p>I believe that going back over anything the NDP government put in place is a place you could find savings. (ie: new curriculum) Just because the previous government implemented something doesn't mean it won't work. Be more intentional in what you're choosing to put your money into and remember that Alberta isn't only about oil and gas. Other sectors are important as well.</p>	<p>Continue to fight for pipelines and pushing forward towards a more diverse economic portfolio.</p>
T4S	<p>Economy - Job Creation - Pipeline Education Health Care</p>	<p>Health Care management of Over Time shifts - the amount of abuse by staff in only taking O/T is astronomical! reduce middle management in ALL gov't funded jobs including Education and Health Care</p>	<p>Pressure the Federal Government to proceed with Pipelines Educate the general public in our safe energy production so there is less resistance in allowing us to continue with "harvesting" our natural resources Re-educate/train those who have lost their jobs so that they can continue to contribute to society and our tax base.</p>
	<p>Education, health care (repairing the damage that has been done with the first UCP budget), and job creation.</p>	<p>In their own wages and pensions for starters. Take from those that prosper during the boom (you want the opportunity to make big money, you should feel the weight when our economy dives). Why should health care and education always be the first cut? Front line workers in education and health care chose a stable career. They gain nothing in compensation when our economy thrives and therefore should not have to take a hit when it under performs.</p>	<p>Work on creating a diverse economy. Stop with the polarization. Why can't we invest both in oil and gas and green solutions? Why can't we be concerned with Oil and gas while still being concerned with health care and education. We need balance.</p>
T9K	<p>Education Research Technology</p>	<p>Public health</p>	<p>Low tax rate for starting businesses</p>
T6L	<p>Education and healthcare</p>	<p>Transportation expansion</p>	<p>Stop the cuts to healthcare and education that are resulting in job loss</p>
	<p>Cleaning up the environment. Education and health care. Affordable housing.</p>	<p>By encouraging alternate energy projects and building urban transit infrastructure.</p>	<p>By listening to experts on what the future requirements to live are. So much talk around the world about phasing out fossil fuels of all types. We need to listen!</p>

T5Y	Indigenous language revitalization, funding a cree immersion school, right now cree class are not efficient	Cut the war room crap.. embarrassing bullshit	Kenny stop bending over to oil companies and throwing money at them. Look at more diverse projects and give students in university more support- fund the student employment programs again
T5b	There needs to be more front line workers in CSS ministry and other public access points.	Eliminate managers. They make 4 times more than someone who does the hard work of front line workers, and they sit in their offices making nonsense out of touch decisions	More incentives for start up companies
T3L	Health care, infrastructure, education, oil and gas but also diversify to other options	Bring back health care tax, get public input before making huge decisions like giving oil and gas companies big tax cuts only to have them cut Jobs.	Diversify Albertas portfolio, start refining our own oil, support education
T6H	SUPPORT Climate change initiatives, green initiatives, family pre/after school care, health care, primary, secondary and post secondary education, look for opportunities to diversify Alberta's tech/business culture with a view to harmonizing with Alberta's resource-based and agriculture foundation. Oil and gas aren't four letter words, but denying equally aggressive support to energy alternatives to carbon-based will not endear Alberta to the investment community, witness pension fund withdrawals from heavy oil projects.	Lose the 30 million war room, reinstate corporate taxes. Stop fighting everything that isn't "oil and gas", reduce subsidies to oil and gas operations and stop investing in projects such as TECK Frontier Mine. It's a dog, and will never break even.	Support and incentivize diversification opportunities instead of doing the same old thing expecting a new and better result! Current policy track is costing job loss in Alberta and driving business (tech, etc.) away, yet those are long-term sustainable opportunities. UCP is banking 100% on what their AB Conservative predecessors did by putting all the eggs in the oil and gas "basket". This thinking is out of line with foreign policy in many of our equally developed peer democracies. Alberta is missing the boat and risks becoming global trade pariah because UCP continues to let the tail wag the dog. FYI, I was a card-carrying Conservative for years and actively campaigned for Ralph Klein.
T2V	Public free for all education, public free for all health care and helping to break the cycles of poverty	get Rid of the war room, paying money to high	Invest in the youth, their education and helping people out of
T8h	Accessible, high quality, and publicly funded health care and education (all levels, including post secondary)	Get rid of the war room, do not giving out massive tax breaks to wealthy companies	Diversify our economy away from relying solely on oil and gas. Support education and research to develop alternative energy sources
T8A	Health care...start PLANNING for the tsunami of seniors. Acute care professionals need to be deployed throughout the province. Salaries are required to be more than competitive. Education must take into consideration class sizes and special needs. Overall demonstration that care is being shown for the most vulnerable members of OUR society. Housing ... can we bring back a policy for allowing those on a low income to access decent living arrangements? Working with the federal government in a collegial manner to do our share of actions. While I totally support the energy industry, I want to see equal attention given to green energy. I am convinced that Alberta could be a world leader in alternative energy development. We can build on our entrepreneurial spirit that also models sharing ideas and business acumen.	Attrition of provincial employees rather than overall targeting. Reinstate some charges for Health Care - ones that don't target vulnerable. Quarterly Blue Cross coverage could help. ***consider a temporary sales tax to fund the education/health scenarios.	Do NOT do numerical layoffs given unemployment rates already. Retraining considerations important...for what though? The price of a barrel of oil is not coming back to previous levels, so let's get real and do some creative designing of the economy instead of moaning and groaning! Artificial intelligence will be important but so will the Arts and Engineering. I want a made in Canada/Alberta response.

T2x	Security, education, health care	Allowing private business to support community based needs	Reduce taxes on small business
T6E	Building healthcare	If they stopped giving tax breaks to the already wealthy big businesses when it doesn't actually bring business to Alberta.	Promoting job stability
T8N	Quality healthcare and Education	Not by providing tax cuts for the wealthy and businesses. Wage freezes for a year or two for all public employees (Not 4 years as proposed). Decreasing salaries of ALL employees not just unionized but managers as well. Make cuts at the top first not on the front line.	Push for the pipeline to be built.
T6w	Health care Education Justice (policing, prosecutions and legal aid) Child care	Raising corporate taxes to prior levels Introducing a provincial sales tax	P3 projects Stimulating the economy with projects
T2z	Schools, healthcare	Levels of management in AHS. For my nursing unit I have one patient care manager, one supervising manager, and a manager above that.	Make sure citizens are taken care of before others
T6G	Improving infrastructure, supporting social programming (such as health care), improving education	Increase taxation for corporations, especially those involved in oil and gas	Invest in education, healthcare, culture and heritage
T5T	Education; ensuring that supports are in place for all student's needs (currently lacking beyond acceptable levels). Reducing class sizes 17(1) Hiring teachers and support staff to provide the very best for our students. Heathcare; Diagnostic wait times, emergency/urgent care wait times, doctor availability.	Their own staff (are they necessary?), salaries (should be dependent on economic realities), office expenditures (we don't care if your desk is old or the wrong colour), and being more responsible with overall procurement processes. Federal equalization payments need to be renegotiated. Assistance programs for low income people who use drugs, alcohol, or refuse to work because living off of the system is easier need to stop. With that said, the provincial priority needs to be job creation. Many of these solutions come with a stronger economy.	Corporate tax cuts and incentives. Infrastructure. Work to incentivize doing business in Alberta.
T1M	Diversification from oil. I am a big fan of oil but to be repeatedly handcuffed but the economy of the same single sector over and over again is harmful. Keep Alberta oil strong as well as everything else. Why are you focusing on shallow ports for pipelines such as Burnaby. Aim for deep water ports that allow for the use of bigger ships. Also, locally refine more products in the oil industry. Sells at a higher price, keeps jobs in Alberta and is a more favorable product as far as pipelines are concerned.	Alberta Provincial sales tax. I am a 17(1) Albertan Conservative member and I am sorry to have to say those words. Let's look at the Alberta advantage in more ways than "no provincial sales tax' because in this economy, a sales tax would be Alberta's advantage, and it need it.	Again diversification. There are some great examples of diversification with government support. We need more. Also, support for small business in general (incentive to growl incentives to borrow). Middle class tax relief. You have to get the public sector on side. There are many public sector workers who voted conservative but they feel attacked. And it seems they are the only ones attacked. You have lost a lot of public sector support, similar to the late Jim Prentice, and look where that got us. You got to encourage everyone to be on the same side. You need a better strategy and way better marketing/socializing of the ideas.

T9K	Education Health Support for the Oil and Gas Industry Support Fort McMurray victims of the 2016 Wildfire (ie Condo owners who cannot get insurance, go after contractors who did not fulfill contract obligations to build people's homes -restore AISH subsidy	- Implement a 5% budget reduction in each dept. except Health - Reduce Govt Waste - Introduce a Sales Tax - Heritage Fund	Work with Federal Govt and corporate Interests to get pipelines built. Tourism - especially in the North, promote Northern Lights observation tours, or wildlife watching tours (ie wolves, - they do this in the States in Yellowstone National Park)
T9H	-TEACHER SALARY!!!! -educational assistants in the classroom, especially to assist pre-kindergarten & kindergarten teachers in the classroom	-reduce the LARGE salaries of execs -reduce the amount of paper sent to us -GET RID OF PATs & Diploma Exams (what a waste of time and resources) -avoid redundancy	-ensure that the curriculum readies students for the workforce
T3M	Education & health care	Cease funding the Catholic school board	Parents returning to the workforce after maternity leave is good for the economy, but the outrageous cost of daycare makes it difficult. The tax deduction for daycare should reflect the full amount paid.
T8N	Health, education, technology, economic diversification, families and refining our own resources	Energy war room... Review panels that strictly support ucp preconceived ideas of savings aka blue panel review. Red tape reduction will bring in savings By collecting adequate taxes from big corporations so that Albertans get their fair share reinvested aka limit corporate tax cuts Savings could be found limiting legal actions against those opposed to ucp ideology	Encourage diversity in new up and coming sectors and small businesses. Bring back tech sector subsidies
T3G	Supporting schools, teachers, staff and students Supporting health care workers and health care programs Getting our oil to market	Allow budget surpluses to be carried over to next year, eliminating stupid purchasing to spend money Increasing revenue from our oil will help us keep up with our debt	Getting our oil to market Funding for post secondary education to create skilled workers for job creation
T2P	Maintaining the arts division.	To be honest I am not sure. Though I do know the current budget cuts are not by any means helping the economy. Oil and gas is not what it used to be and never will be the same.	By investing in the arts. Film and television brings in a lot of money every year.
	-Healthcare -Education -Legal Aid	-Obtain legal advice from Alberta Justice and Solicitor General counsel, as opposed to private counsel billing higher rates -Cut unnecessary middle management positions in the public sector	-Maintain public sector positions for teachers, nurses, health care workers, lawyers, peace officers, fire fighters, and others -Support small businesses -Help parents, particularly mothers and single parents, stay in the work force by funding childcare initiatives and ensuring adequate minimum wage -Support diverse industries to protect against boom-bust economic cycles
T4N	Education, health care, resources for vulnerable individuals, low income housing, supports for seniors. Proactive programs for children and youth to end the cycle of poverty.	Not give billion dollar bailouts to corporations.	Not sure.

T3R	<p>Forming an Alberta Provincial Police and Alberta pension plan.</p> <p>Combating eco-terrorists and foreign anti-oil/resource groups. Going after foreign businessmen who fund them.</p> <p>Forcing a federal election.</p>	<p>Roll back nurses and teachers wages. Energy sector workers have been laid off so why should government sector be so cushy and guaranteed stable. Stop lucrative governments funded pensions- do RRSP contributions like the majority of private sector.</p> <p>Reduce grants and this crazy socialist \$25/day daycare.</p> <p>Enforce more laws and follow through with prosecutions.</p> <p>Charge criminals financial service fees for using correctional facilities.</p> <p>Get Trudeau and the liberals out of office. Distancing Alberta from eastern Canada and the Royal family.</p> <p>Toll roads coming from BC into Alberta. Tax all BC commerce and goods traveling across Alberta lands.</p>	<p>Build pipelines. Create more manufacturing and high tech jobs.</p> <p>Creating shell companies and developing a railroad to Alaska/north but a new company - not CP or CN rail.</p>
	<p>Education, health care and job creation should be priorities. I see first hand what this budget is doing to our schools and students. Larger class sizes with fewer educational assistants is going to have a negative effect in our children. Secondary students will have even more debt when starting out after graduating - if they can find a job.</p> <p>I see how long people are having to wait for important medical tests. If a person can't afford to pay they can be waiting a year to find out that they have serious illness. Jobs are disappearing rather than being created. This is not what the UCP was elected to do.</p>	<p>As much as taxpayers don't want to be taxed more, increased taxes on alcohol, tobacco, cannabis, etc. could go a long way to assisting with paying for essential services.</p> <p>We do not want to follow in the footsteps of the US where people who can't afford it don't have access to proper health care and education follows the credit system. We have some of the best educated students in the world. Why change what is working well?</p>	<p>Build the pipeline. Encourage businesses to stay in Alberta rather than move south. Keep our wealth here rather than allowing it to flow east.</p>
T1W	<p>Education</p> <p>Early childhood education and childcare services</p> <p>health</p>	<p>Stop the subsidies for oil companies.</p> <p>No more "War room"</p> <p>remove the committee for the place of Albert in the constitution.</p> <p>Force schoolboard to share buses.</p> <p>Do not finance private & charter school.</p>	<p>Fund services such as Education, Childcare, health so we can get back to work, have our children taken care of and be healthy.</p> <p>Promote and fund education.</p>
T1J	<p>Education and R&D</p>	<p>Cut out high level management</p>	<p>Spend more on research and development</p>
t9h	<p>Health care - Education - saving for the future</p>	<p>paperless</p> <p>modified work schedules for schools (4 day week.. cuts down on bussing, heating.. ea costs). or longer days by 15mins finish earlier in JUNE less AC costs..</p> <p>quit allowing so many appeals/ and delays of the court system (accused firing lawyers repeatedly... no shows to family court.. ..shoudl be a strike system)</p>	<p>diversify</p>
T3j	<p>Infrastructure-roads</p> <p>Healthcare facilities</p> <p>Leisure facilities</p>	<p>Wages</p>	<p>They should be fully involved with this, open our industries up, remove hurdles, find new industries</p>
